Concerning exchange, money in general is divided into two ſorts, real and imaginary: by the former is meant any real ſpecies current in any government; defined to be a certain quantity of metal, coined by the authority of the ſtate, and paſſing at a certain price, by virtue of that authority, and of its own intrinſic value: and by the latter is underſtood all the denominations uſed to expreſs any ſum of money which is not the juſt value of the real ſpecies. See *Money*.

This real money conſiſted of gold and ſilver, which, being introduced for the facility of commerce, became the price and meaſure of whatever was tranſacted among traders and negotiators. To make negotiations and computations the more eaſy and certain, money of accompt or exchange was invented; as pounds, ſhillings, and pence, ſterling, in England; crowns, livres, and ſols, in France; and ſuch other denominations in other countries, as are particularly ſet forth under the article of *Money*.

Theſe two ſorts of money furniſh two ſorts of compariſons, equalities, or proportions; firſt, between the weight, ſtandard, and value of the real monies of one country, and thoſe of another: which equality is called the real par, being the moſt eſſential point, and yet the leaſt known in the commerce of exchange. The ſecond equality is between the monies of exchange of one country and thoſe of another; which admit of frequent variations as to the quantity of the one which muſt be given to equal the other: theſe variations proceeding from the arbitrary value which ſovereigns fix to the real money in their dominions, and from the plenty or ſcarcity of bills of exchange of one place upon another: which are more preciſely called exchanges.

Exchange, is the moſt myſterious part of merchandiſe, being chiefly grounded upon cuſtom and experience: the neceſſity and utility whereof has been long eſteemed, by the general conſent of mankind; becauſe, it prevents the danger, or hazard, of carrying, or tranſporting, of money, not only from one town or country to another, but to almoſt all parts of the known world: all which is done by a bill of exchange, whereto men of credit pay the ſtricteſt honour and regard, on account that it is ſo noble and excellent in its nature. And though a bill of exchange cannot properly be called a ſpecialty, becauſe it wants thoſe formalities required by the common law of England, as a ſeal, delivery, and witneſſes; yet it is equivalent thereto, and may be reckoned to exceed any ſpecialty, carrying a commanding power with it, although directed from a ſervant to his maſter; for if the maſter accepts it, the concern is as great in reſpect to his honour and credit, to pay it when due, as the ſervant can deſire, or the party to whom it is made payable can expect; becauſe, if it is not paid, it is an imputation on the credit of the acceptor. Such is the excellency of a bill of exchange, that, according to the cuſtom or law of merchants, no witneſs is required to be preſent to ſee the drawer ſubſcribe his name, or when any party underwrites an acceptance: for it is ſuppoſed, that perſons dealing by exchange are men of credit, whom it concerns to acknowledge their ſubſcriptions, and pay as punctually as the deliverer, or party to whom it is made payable can expect.

The true exchange for monies by bills of exchange, uſed at this day in England, is according to the par, which is value for value: ſo that Engliſh exchange is grounded on the weight and fineneſs of Engliſh money, and the weight and fineneſs of that of other countries, agreeable to their ſeveral ſtandards, and proportionable in their valuation; which being juſtly and truly made, reduces the price of exchange to a ſum certain, for exchanging of monies to any nation or country whatſoever: as for example, if a merchant receives 100 l. in London to pay 100 l. in Exeter, this is by the par; but if it be to pay the 100 l. at Paris, there the party is to examine and compare the Engliſh weight with that of France; as alſo the fineneſs of one ſtandard with the other; and if that at Paris and that at London differ not in proportion, then the exchange may run at one price, taking the denomination according to the valuation of the monies of each country. But here, if the weight and fineneſs of the money exchanged differ, the price of exchange accordingly riſes or falls; and the ſame may be eaſily diſcovered, by knowing and examining the real fineneſs of a French crown and an Engliſh one, and the difference which is to be allowed for the want of fineneſs or weight therein, which is the exchange; and ſo accordingly for any monies of any other country; which is called *par*, or giving value for value: for by the par of real money is underſtood the equality of the intrinſic value of the real ſpecies of any country with thoſe of another: however, this courſe of exchange is of late years abuſed, and monies are become a merchandiſe that over-rule commodities, riſing and falling in price according to the plenty and ſcarcity of coin: from whence ſome are of opinion, that there can be no certain rate ſet on the par in exchange, to anſwer juſtly the value of the coins of foreign parts, by reaſon of their great diverſity, and of their intrinſical values: and it is ſaid, there is not, at this time, any peculiar or proper money to be found in ſpecie, whereupon outland exchanges can be grounded; therefore all foreign coins are called imaginary.

As money is the common or public meaſure of things between man and man within any government; ſo is exchange for money between merchants in different countries for all commodities bought and ſold: though this meaſure of exchange between different nations, is very tender and delicate: and the difficulty of it proceeds from the payments of bills of exchange beyond the ſeas; which are made by coin upon the valuation of it, at the pleaſure of ſome arbitrary princes, whereby their money is not proportionably valued. But although the foreign coins beyond the ſeas are received at a higher rate than their values, yet they ſhould not be ſo taken in payment; becauſe the commodities of the realm are, or ought to be, ſold agreeable to the price of exchange, which countervails the ſame according to other princes or ſtates, enhancing their coins, or embaſing thereof by allay.

The eaſtern and northern nations keep the prices of their exchange high, and above the valuation of their money; ſo that they have no trade but only for goods and commodities: by which means, they have prevented the overballancing of foreign goods with theirs, as alſo the exporting of their monies; and this remedy is the only one effectual in theſe caſes. From whence it is worthy obſervation, that the monies in Europe, which have their ebbing and flowing, ſufficiently ſhew their operation upon commodities, in making the ſame dear or cheap, in proportion to their plenty or ſcarcity: but exchange has a contrary way of working; for when money is plenty it occaſions a low exchange, and when ſcarce it riſes the price, which is of great conſideration.

The Britiſh trade to Portugal has been of ſuch a magnitude, ſays the Britiſh Merchant, vol. III. p. 107, as beſides ſhewing the nature of an over-balance of exchange, that it is notorious to the world we have had a vaſt importation from thence. As our trade increaſed, ſo the exchange declined; and in ſome years when corn was cheap here, and dear in Portugal, our balance was ſo very great that, notwithſtanding we paid ſubſidies to the King of Portugal, and paid for troops, there were alſo vaſt ſums for ſupplies of our armies in Valencia and Catalonia: ſtill the over-balance lay ſo much againſt them, that the exchange has been at 5 s. 2 d. and 5 s. a millree: a millree in Portugueſe gold weighs, according to the Engliſh ſtandard, 5 s. 9 d. ſo that there was 10, 12, 15 *per cent.* difference between the exchange and the intrinſic value of the money. In ſome years, when we had a want of corn ourſelves, and therefore could

ſupply Portugal, the exchange immediately found the want of ſo great an overbalance, and roſe to 5 s. 4 d. 5 s. 5 d. and 5 s. 6 d at which laſt price, in time of war, gold would not turn to account; nor now, conſidering that there is 3 *per cent.* at leaſt charges, without inſurance, and that 5 *per cent.* will make 5 s. 6 d. coſt 5 s. 9 d. which is the ſtandard of the millree; ſo that there is but 2 *per cent.* for the time and hazard.

The ſame author, vol. III. p. 108, ſpeaking of an under-balance of exchange, ſays, our trade to Holland during the war, was on a contrary foot, notwithſtanding our vaſt over-balance againſt them in commodities; yet, by our paying ſuch a ſum to ſubſiſt the armies in Flanders, and ſubſidies to ſeveral princes, the balance lay during the whole war againſt us: ſo that as faſt almoſt as we brought gold from Portugal, it was carried over to pay the balance. The exchange immediately found the balance of trade, and went declining from 36 s. 8 d. and 37 s. as it was in the peace; and as our expence increaſed abroad, by augmenting the number of troops in our pay, ſo the exchange went declining as the balance againſt us was greater: and though in ſome exigencies it was 32 s. 6 d. and 33 s. yet that being but caſual, it came to a medium of 33 s 8 d. and 34 s. ſo that there was 9 *per cent.* difference betwixt the time of peace and time of war; and ſince the ceſſation, as our expence went decreaſing, ſo the exchange went advancing, and has come to 36 s. and 36 s. 4 d.

Thus far the Britiſh Merchant ſhews that exchange is the ſtandard by which we may know where the balance of trade lies: after which he proceeds to ſhew, in the following manner, that the exchange in Spain was above the ſtandard.

Though the exchange has been in Spain at 52 d. *per* piece of eight, yet it has alſo been at 50 d. ſo we will take the medium of 51 d. Though it could be proved that ſeveral quantities of pieces of eight which were brought into England, coſt the importer 52 d. and ſome by draughts made on Holland more. Now 1000 pieces, remitted by bills at 51 d. *per* piece of eight is 212 l. 10 s. ſterling: 1000 pieces of eight will weigh 870 ounces: and though ſome were ſold that came by men of war from Cadiz at 5 s. 2 d. *per* ounce; yet others were ſold at 5 s. 4¼ d. but the Eaſt India company, who were the greateſt purchaſers, fixed the price at 5 s. 3 d. for what they bought; and after they had bought the quantity they wanted, they gave liberty to the private traders to buy, who before they had made up their quantities advanced it to 5 s. 4 d. and 4 d. farthing.

		l. s. d.
870 ounces ſold here at 5 s. 3 d. *per* ounce is		228 7 6
Premio to purchaſe pieces of eight in Spain, 5 *per cent.*	50 pieces	
Carrying on ſhip-board and riſque 2 *per cent.*	20	
Commiſſion 1 *per cent.*	10	
Freight 1 *per cent.*	10	
Inſurance 1 *per cent.*	10	
Commiſſion where landed, and charges to London	10	
110 at 51 d. =		23 7 6
		205 0 0
Loſs by bringing 1000 pieces of eight from Spain in ſpecie, which has not produced ſo much as if remitted by bill of exchange		7 10 0
		212 10 0

So that if they bought their pieces of eight at above 1 ¼ d. *per cent. premio*, a bill of exchange was more profitable. Now he affirms, that the major part of the pieces of eight that we imported coſt from 3 to 5 ½ *per cent.* premio. Suppoſe then, they had carried it to the mint at 5 s. 2 d. the loſs would be 2 *per cent.* more than the above calculation. He appeals therefore to any reaſonable man, if the pieces of eight thus imported, could be the balance of our trade? Had it been, that would neceſſarily have ſhewed

itſelf in this trade, as well as in the facts laid down in that of Portugal and Holland: ſo that till the exchange in Spain is under the par of the ſilver, he aſſerts, the balance of that trade is againſt us. And notwithſtanding the entries in the cuſtom-houſe, yet if the goods cannot find expence at a market, it will be no proof. When they do, and Spain conſumes more of our imports than we export from them, the exchange will be in our favour, and we ſhall have an over-balance. See *Balance* of Trade.

The Britiſh Merchant, vol. II. p. 114, afterwards makes ſome obſervations on the courſe of exchange, and ſhews how the courſe of exchange between two countries proves which of them pays the balance upon trade; or whether we buy or ſell the over-balance of goods and merchandiſes, and are accordingly to pay or receive the balance in gold or ſilver; which the author propoſes to be done by the courſe of exchange between two countries; as this is a way of paying the debts due from each to the other, by exchanging the debtors of both countries as far as the debts of one are ſufficient to anſwer and diſcharge the debts of the other; which he ſhews by the following common inſtances.

Suppoſe, the tenant in Wiltſhire is to pay 100 l. for rent to his landlord in London; and the woollen-draper in London is to pay the like ſum to his clothier in Wiltſhire: both theſe debts may be paid, without tranſmitting one farthing from one place to the other by bills of exchange, or by exchanging one debtor for the other thus: that is, the tenant may receive his landlord's order to pay 100 l. to the clothier in the country; and the woollen-draper may receive his clothier's order to pay the like ſum to the landlord in town. Theſe two orders are properly called bills of exchange; the debts are exchanged by them; that is, the woollen-draper in town, inſtead of the tenant in the country, is become debtor to the landlord; and the tenant in the country, inſtead of the woollen-draper in town, is become debtor to the clothier; and when theſe orders are complied with, the two debts between London and the country are diſcharged without ſending one ſhilling in ſpecie from one to the other.

In like manner, the warehouſeman in London is indebted in 100 l. for ſtuffs, to the weaver in Norwich; and the linen-draper in Norwich is indebted in the like ſum to the Hamburgh merchant in London: both theſe debts may be paid by bills of exchange, or by the exchange of one debtor for the other, by placing one debtor in the other's ſtead; that is, the warehouſeman may receive the order of his weaver to pay 100 l. to the Hamburgh merchant; and the linen-draper may receive the order of the Hamburgh merchant to pay the like ſum to the weaver. Theſe orders are bills of exchange; the debtor in one place is changed for the debtor in the other: and thus both debts may be paid without ſending one ſingle ſhilling in ſpecie from the one city to the other.

If the debts reciprocally due between London and Norwich are equal, whether they are 100 l. or 100,000 l. they may be all diſcharged in this manner by bills of exchange, without ſending any money in ſpecie from the one to the other. But if the debts due from both places are not equal, then only the ſame quantity of debts on both ſides, can be paid by bills of exchange. The balance muſt be ſent in money from the city from whence the greateſt ſums are due. For example; if by the trade between London and Norwich, the former owes 10,000 l. to the latter, and the latter no more than 9,000 l. to the former, it is manifeſt, that only the debts of 9000 l. on each ſide can be diſcharged by bills of exchange: the balance of 1000 l. muſt be ſent either from London, or ſome other place indebted to London, to even the accompt between both cities.

Theſe examples are taken from two Engliſh cities where the money is of the ſame denomination, and the ſame quantities are equally a par in both: but the caſe is the very ſame between two cities where the denominations of the money are different, as long as any certain quantity of money in the one can be reduced to a par or equality with any certain quantity of money in the other: for example, the old French crown was juſt equal, or par, to 54 d. Engliſh; and 444 of thoſe crowns were juſt par or

equal to 100 l. ſterling; every farthing given more or leſs than 54 d. for a crown in a bill of exchange between London and Paris, amounts to 9 s. 3 d. upon 444 crowns, or upon ſo many times 54 d. Suppoſe then, the courſe of exchange ſtood thus formerly between London and Paris; if a merchant in Paris, indebted to London, paid a farthing leſs than the par for a bill of exchange upon London, to pay 54 d. there; the Pariſian paid his debt to London of 100 l. by a bill of exchange that coſt him in Paris 9 s. 3 d. leſs than that ſum; and if a merchant in London gave a farthing more than the par for a bill of exchange upon Paris, to pay a French crown, the Londoner gave 9 s. 3 d. more than 100 l. for a bill of exchange to pay that ſum in Paris. If ſuch was the courſe of exchange between London and Paris, if the one gave above the par, and the other leſs, for bills of exchange to pay their reſpective debts, there can be no doubt that bills of exchange were more eaſily to be had in Paris than at London; and conſequently, that greater ſums were due from the latter than the former, and that Great Britain paid a ballance upon its trade to France; and as the price roſe here to a penny or two-pence above the par, or fell there ſo much below it, ſo much the greater ſcarcity was ſhewn here, and the greater plenty there of bills of exchange; and that ſo much the greater ballance of bullion was going from Great Britain by means of its trade to France.

So that the exchange between London and Paris, as alſo between Paris and Amſterdam, or any two other cities, is, in effect, carried on juſt as it is between London and Wiltſhire, or London and Norwich; only with this difference, that the accompts are kept in another manner, or by other denominations; and that the charge and riſk of ſending money from London to Paris, or from Paris to Amſterdam, is greater than that of ſending it from London to Wiltſhire or Norwich: and when the ballance of trade with Amſterdam is againſt Paris, the exchange at Paris will be from 5 to 6 *per cent.* above the par by bills on Amſterdam; whereas it will ſeldom exceed one half *per cent.* above par between London and Norwich. When exchange is lower than the ſpecie, a profit may be made by ſending it abroad; for the ſame reaſon, when it is higher than the ſpecie, there is a profit in cauſing it to return: thus exchange is become a kind of traffic, the difference of the par to what is given making the courſe of exchange, which ſkilful merchants and negotiators may convert to a great national advantage, by taking opportunities of the riſe and fall of the par; as they may thereby govern the general courſe of exchange in favour of their own country, and promote its intereſt by preſerving the general ballance of trade.

The prices of the exchange at London, Amſterdam, and Hamburgh, have a great influence upon all the reſt of Europe, which occaſioned his late Majeſty's privy council to order Sir Iſaac Newton, then mint-maſter of the Tower of London, to make actual aſſays, weights, and values, of moſt foreign gold and ſilver coins, in order to judge how the courſe of exchange between Great Britain, and the other principal countries of Europe, correſponded from time to time with the intrinſic value of the foreign monies of thoſe ſtates; of which Sir Iſaac Newton drew up a report to the following effect.

Almoſt all the foreign exchanges made for England, Scotland, or Ireland, are made at London; the courſe or price of exchange being fixed there for the moſt eminent places of trade in Europe.

The par of the monies of London with the following places.

Amſterdam, 9 l. ſterling is the par of 100 guilders or florins, or 1 l. ſterling is the par of 11 guilders, 2 ſtivers, $2\frac{2}{3}$ peningens.

Antwerp, 9 l. ſterling is worth 16 l. Flemiſh; ſo that 1 l. ſterling is the par of 1 l. 15 s. $6\frac{3}{4}$ d. Flemiſh.

Cadiz, 51 l. ſterling is worth 1900 rials; ſo that 1 l. ſterling is the par of 37 rials 8 marvedis.

Dantzic, 3 l. ſterling is worth 40 florins; ſo that 1 l. ſterling is the par of 13 florins, 10 groſs of Dantzic.

Francfort, 3 l. ſterling is the par of 20 florins or goulds; ſo that 1 l. ſterling is the par of 6 florins 40 cruitzers.

Hamburgh, 3 l. ſterling is worth 40 marcs; ſo that 1 l. ſterling is worth 13 marcs, 5 ſchillings, 4 pheningſlubs.

Leipſic, 9 l. ſterling is worth 40 rixdollars; ſo that 1 l. ſterling is the par with 4 rixdollars, 10 groſs, 8 phenings.

Paris, 3 l. ſterling is ſaid by Hayes to be worth 40 livres; ſo that 1 l. ſterling is the par of 13 livres, 6 ſols, and 8 deniers; ſuppoſing the crown in ſpecie to be valued at 3 livres, or 60 ſols tournois: but this is too little.

Venice, 3 l. ſterling is worth 100 livres of Venice; ſo that 1 l. ſterling is the par of $33\frac{1}{3}$ livres.

The current prices of the exchanges which London gives to the following places.

Holland, Antwerp, and Hamburgh, 1 l. ſterling for between 30 and 40 ſchillings Flemiſh.

France, between 30 and 40 d. ſterling for 1 ecu of 60 ſols tournois, and ſometimes 1 l. ſterling for between 20 and 30 livres of France.

Portugal, between 50 and 60 d. for 1 millrea, or 1000 reas.

Spain, between 30 and 40 d. for 1 dollar of $\frac{8}{8}$ new plate.

Venice, between 55 and 65 d. for 1 ducat of 24 groſs Banco.

Genoa, the ſame for a peſſo of 5 livres.

Leghorn, the ſame for a piaſter, or dollar of 6 livres.

Ireland, 100 l. for 101 to 112 l. in Ireland.

London exchanges with the other cities and towns of Great Britain, by receiving a ſmall matter in the pound, to repay the like ſum in other places; but if the ſum is large, it is commonly returned at ſo much *per cent.* See *Money* of accompt.

It is remarkable, that in London, although there is plenty of foreign monies, particularly in gold, daily paſſing from hand to hand in trade, at certain prices, according to their weights and fineneſs; yet no perſon is obliged, according to law, to take them in payment; ſo that it may truly be ſaid, that all payments in London are made in the current coin of Great Britain; nor will the bank of England receive any other but the native ſpecies of Britiſh gold or ſilver: ſo that although diverſity of coins are daily paſſing, they no way affect trade, or cauſe any difference between current money, and the money to be received or paid for foreign bills of exchange, as they do in other countries where banks are eſtabliſhed, for there the difference amounts to 4 and 5 *per cent.* and in ſome places to above 30 *per cent.* which is what foreigners call the agio. See *Coin*, and *Bank*.

It is neceſſary to obſerve, as rules for London to remit or draw by, that to Spain, France, Portugal, or any other place where they exchange by the piece, ſuppoſe at 3s. 5 d. *per* piece of eight, 34½ d. *per* crown, or 5 s. 3d. *per* millrea; the lower the price is, the better it is for London to remit; becauſe if a merchant delivers 100 l. ſterling for a bill upon Spain, France, or Portugal, he can have more pieces of eight at 3 s. 2 d. than at 3s. 5 d. a piece, or more crowns at 32 d. than at 34½ d. *per* crown, for this 100 l.; and the contrary is to be obſerved in drawing.

But to Holland, Flanders, and Hamburgh, where the exchange is at ſo much *per* pound ſterling, the higher the price is, the more advantageous it will be for London to remit to thoſe places; for it is better to get 35 s. 6 d. Dutch money for 20 s. ſterling, than 34 s. 6 d. for the ſame; and the contrary is alſo to be obſerved in drawing. So for Ireland and the Weſt Indies, where the exchange is by the 100 l. the higher the courſe is between London and theſe places, it is better for London to remit than to draw; becauſe it is better to pay 100 l. in London, and receive 112 l. in Ireland, than to pay the ſame ſum in London, and receive only 105 l. in Ireland; which may alſo be ſaid of the Weſt Indies.

Though, to the greater part of mankind, exchange may ſeem to be a metaphyſical word, and not proper to expreſs any thing that has true and real exiſtence; yet if they reflect with proper attention, they will be fully convinced that commerce is that which gives exchange its being, and that this exiſtence is not imaginary, but real and practical. To ſet this matter in a fuller light, it muſt firſt of all be laid down as a definition, that by the word *exchange* nothing elſe is meant but the price of foreign money.

Now, ſince this price derives its motion from commerce only, hence it is that it is in its own nature ſuited and adapted to the diſcovery of the true ſtate of one kingdom, in compariſon of another, with reſpect to trade. And, to ſay the truth, if money is nothing elſe but a meaſure invented, to determine the proportions of ſuch things within a kingdom, as come within the reach of commerce; exchange is that which intrinſically diſcovers whether the trade of that kingdom with foreigners ſtands on equal terms, or whether the ballance is againſt it, or on the favourable ſide.

That this may be the better underſtood, it is proper to keep cloſe to the maxim, that exchange had its riſe from

no other ſource but the invention of money. Now, ſince it is alſo unqueſtionably true, that the ſole intention of the introduction of money was, that it might be employed as a compenſation for thoſe commodities, that could not be compenſated by other ſpecies of commodities; it follows, that where-ever ſuch commodities cannot be produced in kind, to compenſate others that are wanted, money is, by the very nature of commerce, put in motion: and as this motion impels the money from the ſide on which commodities are wanting in kind, to be given in compenſation of others, to that ſide upon which ſuch commodities abound; ſo, from the want or ſcarcity of money, foreign money riſes in its price; and if, on either ſide, this price riſes above, or falls below par, it becomes a kind of ballance, by means whereof it may be immediately diſcovered, whether the impulſe is the effect of a beneficial, or loſing commerce.

Since then, when money is to be procured in foreign countries, the price of exchange riſes or falls reſpectively, according as the exportation of money is greater or leſſer; and as this exportation of money is greater or leſſer, according as the quantity of commodity given in compenſation is leſſer or greater, who ſees not that the paſſive commerce of a kingdom is greater than the active, when to procure foreign money in another kingdom, to pay for goods purchaſed there, it ſubmits to a very high exchange?

Moreover, that, by means of exchange alone, can be had a juſt view of kingdoms, in the light juſt now mentioned, may be illuſtrated by an obvious example, for the more thorough conviction of every underſtanding. Suppoſe then, a kingdom has contracted a debt to foreigners; but that it has, at the ſame time, ſuch a plentiful crop of corn, as is ſufficient for its own ſupport, and may afford a conſiderable ſupply to foreign countries; though as to manufactures, it is almoſt entirely unprovided; ſo that all the money it can acquire by the exportation of corn, will not be an equivalent to that which foreigners muſt draw out of it, on account of the above mentioned debts, and its want of manufactures. Suppoſe further, that this ſame kingdom, beſides its corn, has alſo ſome particular ſorts of commodities, which are exported ſometimes in greater, and ſometimes in ſmaller quantities; if then, in ſuch a ſtate of affairs, it ſhould be deſired to give a preciſe calculation of the exact value of the active commerce of this kingdom, when compared with its paſſive commerce, ſo as to have the balance in money, it would be impoſſible to ſolve the problem but by the courſe of exchange.

And indeed, if at any time the active commerce of a kingdom is greater than its paſſive, in that event it may well be concluded, from the extraordinary quantity of money obſerved in circulation, that trade is in a flouriſhing condition: as, on the other hand, when the paſſive commerce is greater than the active, the contrary may be concluded from the remarkable penury of money that will be viſible: but the preciſe ſtate of the affair cannot be had, as it may be by the courſe of exchange, when all the great and ſmall branches of commerce are reduced, as it were, to their proper centre, and valued at their reſpective rates, by the courſe of exchange, which weighs them internally as in a ballance, and thereby diſcovers the true ſtate of that kingdom, with reſpect to foreign trade. For when commerce ſtands even, or is in equilibrio, the exchange will be at par; or, which is the ſame thing, the price of exchange will be equal to the intrinſic value of the money: if the ballance of trade is againſt the ſuppoſed kingdom, the price of exchange will be above par, or riſe above the real value of the money: and, finally, if the ballance be on the favourable ſide, the price of exchange will then be below par, or fall ſhort of the real value. From all which it may, with the greateſt juſtice, be concluded, that in the firſt of thoſe events, that is, when trade is in equilibrio, the money continues in the kingdom; in the ſecond, when, inſtead of this equilibrium, the ballance is on the contrary ſide, the money goes into the poſſeſſion of foreigners; and if the third ſuppoſition takes place, and the ballance is on the favourable ſide, the money not only continues in the kingdom, but alſo increaſes greatly.

Leſt any one ſhould poſſibly ſuſpect, that this exchange, becauſe it has not an exiſtence of the ſame kind with other material things, cannot therefore be the means of conveying ſo much knowledge; that is, that it cannot diſcover the ſtate of one kingdom as to trade, in relation to that of another, nor ſhew when trade is in an equal poſition; or if the equilibrium is diſturbed, whether the ballance is on the favourable or contrary ſide, the matter may be illuſtrated by the example of a pilot; who finding himſelf in the midſt of the ſea, can by no means diſcover the place where he is, without the aſſiſtance of ſome mathematical inſtrument; and though the pole, and the equinoctial line, whereby he regulates his obſervation, have no ſort of exiſtence, but what they owe to imagination, they are nevertheleſs the means of leading him to a certain knowledge of the poſition of his ſhip, in reſpect of its real and poſitive diſtance from true and known ſhores: and, in like manner, tho' it is the eye that makes the obſervation, yet the truth of this obſervation cannot be aſcertained without the means of the inſtrument, nor even this effect it, if it is not directed and regulated by the imaginary equinoctial and pole. Now, what this imaginary circle and pole are to the inſtrument, that preciſely is exchange with reſpect to money. For though the former of theſe two has only an ideal, while the latter has a phyſical exiſtence, yet this latter of itſelf is not ſuch an accurate or expeditious means of communicating knowledge, as when applied to the touch-ſtone of exchange, which, by its activity, penetrates, as it were, into the nature and ſoul of commerce; effectually demonſtrating what it is. From which it may be concluded, with great ſecurity, that money and the rate of exchange are the two principal inſtruments of trade; the former being the meaſure of commerce; the other determining the value of money, and thereby diſcovering the ſtate of commerce; and both together ſhew, in a very clear light, a ſeries of effects that could not poſſibly be diſcovered by calculation, giving ſufficient evidence that the one of them derives its being and exiſtence from the other, and that both together depend entirely upon commerce.

Bills of exchange are either inland or foreign: inland bills being ſuch as are drawn and payable in the ſame country; which ought to be payable a certain time after date: and foreign bills are ſuch as are drawn in one country, to be paid in another; which are generally payable at ſingle, double, or treble uſance; and there is likewiſe a cuſtomary allowance of certain days after the uſance before a bill is payable. See *Uſance*.

With regard to foreign bills there are theſe things to be conſidered, 1ſt, what uſance is eſteemed, with reſpect to ſeveral countries; 2d, what places reckon their time by old, and what by new ſtile; and, 3d, what days of grace are allowed for payment of a bill in ſeveral countries over and above their uſance. As to the firſt, the uſance of London to and from France, the United Provinces, the Netherlands, and Hamburgh, is one kalender month; to and from Spain, or Portugal, two kalendar months; and to and from Italy three kalendar months. Concerning the ſecond; Amſterdam, Rotterdam, Antwerp, Harlem, Middleburg, Ghent, Bruſſels, Brabant, and moſt of the Netherlands, France, Portugal, Spain, Italy, Poland, all the Romiſh electorates in Germany, and lately Great Britain, and Sweden, reckon their time and date by new ſtile: and the places that reckon their time and date by old ſtile, are Ruſſia, Denmark, the proteſtant Electorates and Principalities in Germany, the proteſtant cantons of Switzerland, Geneva, Embden, Hamburg, Lubeck, and Strasburg. And as to the third; the European merchants cuſtomarily allow a certain time to the acceptor after a bill is due, which is called time of grace or favour; and differs according to the cuſtom of the place drawn upon: for Great Britain and Ireland allow three days; Amſterdam, Rotterdam, Middleburg, Antwerp, Cologne, Breſlaw, Nuremberg, and Venice, ſix days; France ten, Spain fourteen, Portugal ſix, Geneva thirty, Naples eight, Frankfort four, Leipſic five, Augsburg five, Dantzick ten, Koninsberg ten, Hamburg

Hamburg twelve, and Sweden twelve days; but at Leghorn, Milan, and other places in Italy, the bearer gives days of grace at diſcretion; or proteſts the firſt day, if he thinks proper.

A bill of exchange being drawn, there are commonly three bills made of one tenor, for every ſum of money taken up, that if one bill ſhould be loſt, or miſcarry, the other may take place; and, ordinarily, there are four perſons requiſite to be employed in remitting money on bills of exchange; as the party which delivers the money, or the banker; the taker, or he who receives the ſame by exchange, uſually called the drawer; the party is to repay the money, or on whom the bill is drawn; and the perſon to whom the money is made payable, or the bill is ſent to get it accepted, and receive the ſum: but there may be bills of exchange made where three perſons, or only two, are concerned; eſpecially inland bills, and ſuch as a man negotiates himſelf; though when four perſons are uſed, the drawer of the bill is bound to the deliverer, and the acceptor is bound to the party to whom the bill is payable.

The right way of judging upon bills of exchange, is purely by the laudable cuſtom of merchants, frequently reiterated over and over; by which means it has obtained the force and ſanction of a law; for bills of exchange are of extraordinary moment in commerce, and therefore ought to be judiciouſly governed, as they have been generally approved of and adjudged in former ages. But an inland bill of exchange has been ſaid to be only in the nature of a letter; and an outland bill is more regarded in the eye of the law, becauſe it is for the advantage of commerce with other countries, which makes it of a more public concern.

Every indorſement of a bill of exchange is a new bill; for ſo long as the bill is in agitation, and ſuch indorſements are made, all and every of the indorſers are liable as a new drawer; and, by the law, generally, every indorſer of a bill will be always anſwerable like the firſt drawer thereof, and cannot be diſcharged by the indorſee's acceptance of the bill, without an actual payment: but, by the cuſtom of merchants, the indorſee is to receive the money of the firſt drawer, if he can; and if he cannot, then it is underſtood that the indorſer ſhall anſwer the debt, and not before; as where the drawer is inſolvent at the time of the indorſement, or upon demand refuſes to pay it, or cannot be found; for the indorſer is only a warrantor for the payment of the drawer, on his default: though if the indorſee does not endeavour to receive it in time, and the firſt drawer becomes inſolvent, in ſuch caſe the indorſer may be diſcharged, if the money is unpaid: however, if the drawer of a bill fail, it is reaſonable that the creditor ſhould reſort to the firſt indorſer to make it good; and the party has liberty to bring his action againſt any of the indorſers of a bill of exchange, if it is not paid by the acceptor; but if he ſues the drawer, he waves his liberty of proſecuting the indorſer.

If a bill of exchange be drawn at ſight, in default of payment at preſentation, the bearer is immediately to cauſe it to be proteſted for non-payment: and the bill being proteſted, is to be returned with the proteſt with all convenient ſpeed, to the laſt indorſer, if there be any, who is obliged to make good the value, with the exchange, charges of proteſt, and other contingent expences; for all which he may have his remedy againſt the former indorſer, where there are ſeveral indorſers; and he againſt the drawer of the bill, who is anſwerable for the whole: but if the bearer neglects to make ſuch proteſt, he himſelf is to be anſwerable. For the general rule is, that though the drawer is bound to the deliverer till the bill is ſatisfied, yet it is with this proviſo, that proteſt be made in due time; as alſo a lawful and ingenious diligence uſed for obtaining payment of the money, and it would be unreaſonable that the drawer ſhould ſuffer through his neglect. See *Proteſt*.

Where bills are drawn payable at ſome days ſight, it is uſual to leave them in the hands of the merchant, if he be a reputable man, a convenient time to be accepted, not exceeding twenty-four hours, which time is allowed him to conſider whether he will accept the bills or not; though, among merchants who know one another, ſometimes bills are left two or three days for acceptance, if the poſt does not depart in the interim: but, to prevent forgeries and impoſitions, it is not cuſtomary for merchants to accept or pay bills of exchange, without particular advice from the drawers: however, in ſtrictneſs, a bill may be immediately preſented; and if not accepted, it may be proteſted the ſame day; and, on a poſt day, the preſenter may demand an anſwer, that if the bill ſhould not be accepted, he may have time to cauſe the ſame to be proteſted, and return the bill and proteſt by the poſt; wherein he is exactly to obſerve orders, otherwiſe he runs all the hazards. If a bill is not paid within three days after it becomes due, though it be forborn five or ſix days, or more, proteſt muſt be made for non-payment; but it is ſafeſt if made the third day after it is due, for fear of inſolvency of the party who accepted it: and if a merchant having accepted a bill, happen to be non-ſolvent, or abſents himſelf, demand muſt be made by a notary-public, for better ſecurity; in default of which, a proteſt is to be made and ſent away, that ſecurity may be given by the party who drew the bill.

To accept a bill of exchange, is for the acceptor to take upon himſelf the payment of the ſame; and he that accepts the bill muſt pay it. The acceptation of bills payable at a limited day, or at one or more uſances, after date, by the cuſtom of Holland, is commonly with the expreſſion of the word *accepted:* but bills of exchange that are at ſome time after ſight, are accepted with the addition of the time when they are ſeen, or preſented. And if a drawer is dubious, whether the perſon upon whom he draws will accept his bill, he may at the ſame time get it recommended to ſome other merchant, reſiding at the ſame place, that in caſe the other ſhould refuſe, he may do it.

Upon receipt of any bill of exchange, the party is to go to the perſon to whom directed, and preſent the ſame for his acceptance; who, on tender of the bill, ſubſcribes *accepted*; or, being on the exchange, ſays, "I accept "the bill, and will pay it according to the contents;" this is an acceptance: as alſo if one merchant, having a right underſtanding with another, ſays, "Leave your "bill with me, and I will accept it;" or, "call for it to-"morrow, and it ſhall be accepted;" it obliges him as effectually, by the cuſtom of merchants, as if the party had actually ſubſcribed or ſigned it, though that is uſually done. But if a man ſays, "Leave the bill with me; I "will look over my accompts between the drawer and I; "call to-morrow, and accordingly the bill ſhall be ac-"cepted;" this does not amount to a complete acceptance: for the mention of his accompts muſt be intended to ſee if there are effects in his hands to anſwer; without which, perhaps, he would not accept the bill. And if the ſame be refuſed, the party then muſt procure a proteſt, and remit the ſame to the deliverer of the money, who is to reſort to the drawer for ſatisfaction for the principal coſts and damage.

If a bill is drawn upon a merchant in London, payable to a perſon at double uſance, he is not bound, in ſtrictneſs of law, to procure an acceptance; but only tender the bill when the money is due: though merchants, who generally have honourable ſpirits, rather than ſurprize a man, will firſt procure an acceptance, or leave the bill for the party to conſider before he gives his anſwer, and then give advice of the ſame; but if the money is not paid, then it is cuſtomary to proteſt.

A bill may be accepted for part; becauſe the party upon whom the bill was drawn, had no more effects in his hands; and, in this caſe, after the payment of ſuch part there muſt be a proteſt for the remainder; yet ſome are of opinion, that it will go for want of acceptance to the whole. And in caſe a bill of exchange be made at thirty days ſight, and the perſon to whom directed will not accept it to be paid at the exact time, but at ſixty days; there the party to whom the bill is made payable, muſt proteſt for want of acceptation according to the tenor, and then he may take the acceptance offered: nor can the perſon after accepting, after he has ſubſcribed the bill for a longer time, or the other party alter the ſame, although it is not according to the tenor of the bill; for, by his acceptance

e makes himſelf debtor, and owns the draught made pon him by his friend, whoſe right another man cannot ive away. Beſides, this caſe will admit of two proteſts, r, perhaps three, as things may happen: firſt, one proeſt is to be made for non-acceptance, according to the ime: a ſecond, for that the money, being demanded at he time mentioned in the bill, was not paid: and a third roteſt, if the money is not paid according to the time hich the acceptor ſubſcribed or accepted.

No perſon, whether wife or ſervant, can accept of a bill f exchange to bind the maſter, without a lawful authority o do it; as a letter of attorney, or the like, under hand; nleſs it has been formerly and uſually done by them in uch caſe, when the maſter has been out of town, and he as approved of the ſame by anſwering payment: but if a erchant to whom a bill is payable be abſent, or ſick, his iend, or ſervant, may cauſe a proteſt to be made. And ne partner may accept for another; as if there are three oint-traders, for the common ſtock and benefit of all; nd their factor, or any other perſon, draws a bill upon hem, the acceptance of one will oblige the reſt of the ompany: in like manner, as in drawing bills, where here are partners in merchandiſe, the ſigning of one of hem for ſelf and company, obliges the other partner to lfil the contents of the inſtrument ſo ſigned; and he is qually bound with the other that ſigned it. But where bill is drawn on two others jointly, it muſt have a joint ceptance, otherwiſe it ſhould be proteſted; though if it on two, or either of them, then if it be accepted by e, it is purſuant to the tenor of the bill, and ought not be proteſted but in caſe of non-payment, when the acptor is liable to an action.

bill of exchange, when accepted, cannot be revoked him who accepted it; though immediately after the ceptance, and before the money becomes due, he has vice that the drawer is broke. It has been held, that ceptance of a bill of exchange, after the time of payent is paſt, amounts to a promiſe to pay the money: t if a bill of exchange, by contrary wind, or other acdent, is ſo long upon the way, that the time limited by e bill is expired, and being preſented to the party for yment, he will not accept or pay for the ſame; then e notary is to make a proteſt for non-acceptation, and e non-payment.

a bill is accepted, and the acceptor happens to die be- e the time of payment, there muſt be a demand on his ecutors or adminiſtrators; and, in default, or delay of yment, a proteſt is to be made, although it may fall t that the money become due before there can be adniſtration, or a probate of the will granted; becauſe s delay is ſufficient for proteſting in caſe of non-payent; however, on demanding the money, ſecurity ſhould offered to indemnify the repreſentative of the deceaſed. t, on the other hand, if the party be dead to whom the ney is made payable, and the money ready to be paid, a teſt ought not to go for non-payment, till there is a ſon that can give a legal diſcharge; ſo that if the notary kes it in this caſe, and the party receives any damage reby, he may have his remedy againſt the notary by on of the caſe.

here a bill being left with a merchant to accept, and loſes or miſlays the bill, the party may inſiſt upon a e from the merchant for payment, according to the e limited in the bill of exchange; and, if he refuſes, proteſts muſt be made thereupon, one for non-actance, and the other for non-payment; as alſo, if a e is given for payment of the money, and a failure pens, in that caſe there muſt be a proteſt for non-payt of the note.

poſſeſſor of any bill of exchange, by any accident s it, he is immediately to cauſe intimation to be made notary-public before witneſſes, that the bill is loſt, or aid; requiring that payment be not made of the ſame ny perſon, without his privity. Alſo, if any bill of ange drawn in, or dated at or from any place in at Britain, ſhould be loſt, or miſcarry, within the limited for payment thereof, the drawer muſt give her bill of the ſame tenor, upon ſecurity being given ndemniſation if the bill ſhould be recovered again.

ording to the laws and cuſtoms of France, if a bill of exchange is proteſted, no exchange ſhall be due by the drawer, but for the place where the remittance was made, and not for the other places; the bearer being always to have his recourſe to the indorſers for payment of the re-exchange to the places it has been negotiated by their order; unleſs the power of negotiating, given by the bill, be indefinite, and in general for every place.

A foreign bill of exchange, let it be drawn for what ſum ſoever, if not accepted and paid, muſt be proteſted, in order to recover the ſame from the drawer: and if the drawer, or acceptor, fail before the bill becomes due, the poſſeſſor may claim a dividend of both their eſtates; and if that ſhould not be ſufficient to pay him the whole ſum, he may come upon any one of the indorſers. But an inland bill of exchange, or promiſſory note, has no occaſion to be proteſted, unleſs the value amounts to 20 l. or upwards: and though for a foreign bill of exchange, the acceptor ſhould not be indulged above one poſt; yet, for an inland bill, the acceptor may be indulged fourteen days before proteſted.

According to the law of the Britiſh plantations, if a perſon draws a bill of exchange upon any merchant in England, without having any effects in his hands; and the bill is proteſted, and ſent back; the drawer of the ſame, if required, will be obliged to pay or allow 20 *per cent.* together with all coſts, charges, and intereſt.

Inland bills were never uſed to be proteſted until an act made for that purpoſe in the 10th year of King William III. whereby it was enacted, "That the value ſhould be mentioned to be received: the money to be payable at a limited time: the acceptance to be in the hand-writing of the acceptor: the proteſt not to be made until three days after the bill is payable; and to be returned to the drawer within fourteen days after proteſt is made. But this act was not extended to bills under 5 l. See *Proteſt*, *Notary*, and *Note*.

EXCHANGE is ſaid alſo of the profit of a banker, or trader, in a certain ſum, for which he draws a bill of exchange payable in ſome place, and by another perſon, both for the intereſt of his money, and the fees of his negotiation. This profit is never equal, being ſometimes 2, 3, 4, or 10 and 15 *per cent.* purſuant to the different alloy of the ſpecie, the plenty of money, or the greater, or leſs ſcarcity of bills of exchange upon certain places. It is this kind of change which is uſually called real exchange; and by ſome mercantile, or mixt: the price whereof is regulated according to the currency of the place where the bill is drawn.

EXCHANGE is likewiſe ſaid of what is given for the changing of one coin for another; and ſignifies ſometimes the ſmall money which is given for gold and ſilver.

EXCHANGE, is ſaid alſo of the profit of the money borrowed, or lent, among merchants, upon the footing of ſo much *per cent.* for a month; as half *per cent.* for a month.

EXCHANGE, is ſaid ſometimes of the agio, or profit for advance money in commerce for ſome perſon; and is often likewiſe taken for the agio of bank, which conſtitutes the difference between bank and current money.

EXCHANGE likewiſe denotes a public place, in moſt conſiderable cities, wherein the merchants, negotiants, agents, bankers, brokers, interpreters, and other perſons concerned in commerce meet, on certain days, and at certain hours, to confer, and treat together of matters relating to exchanges, remittances, payments, adventures, aſſurances, freightments, and other mercantile negotiations both by ſea and land: and, even in the time of the antient Romans, there were places for the merchants to meet in moſt of the conſiderable cities of the empire.

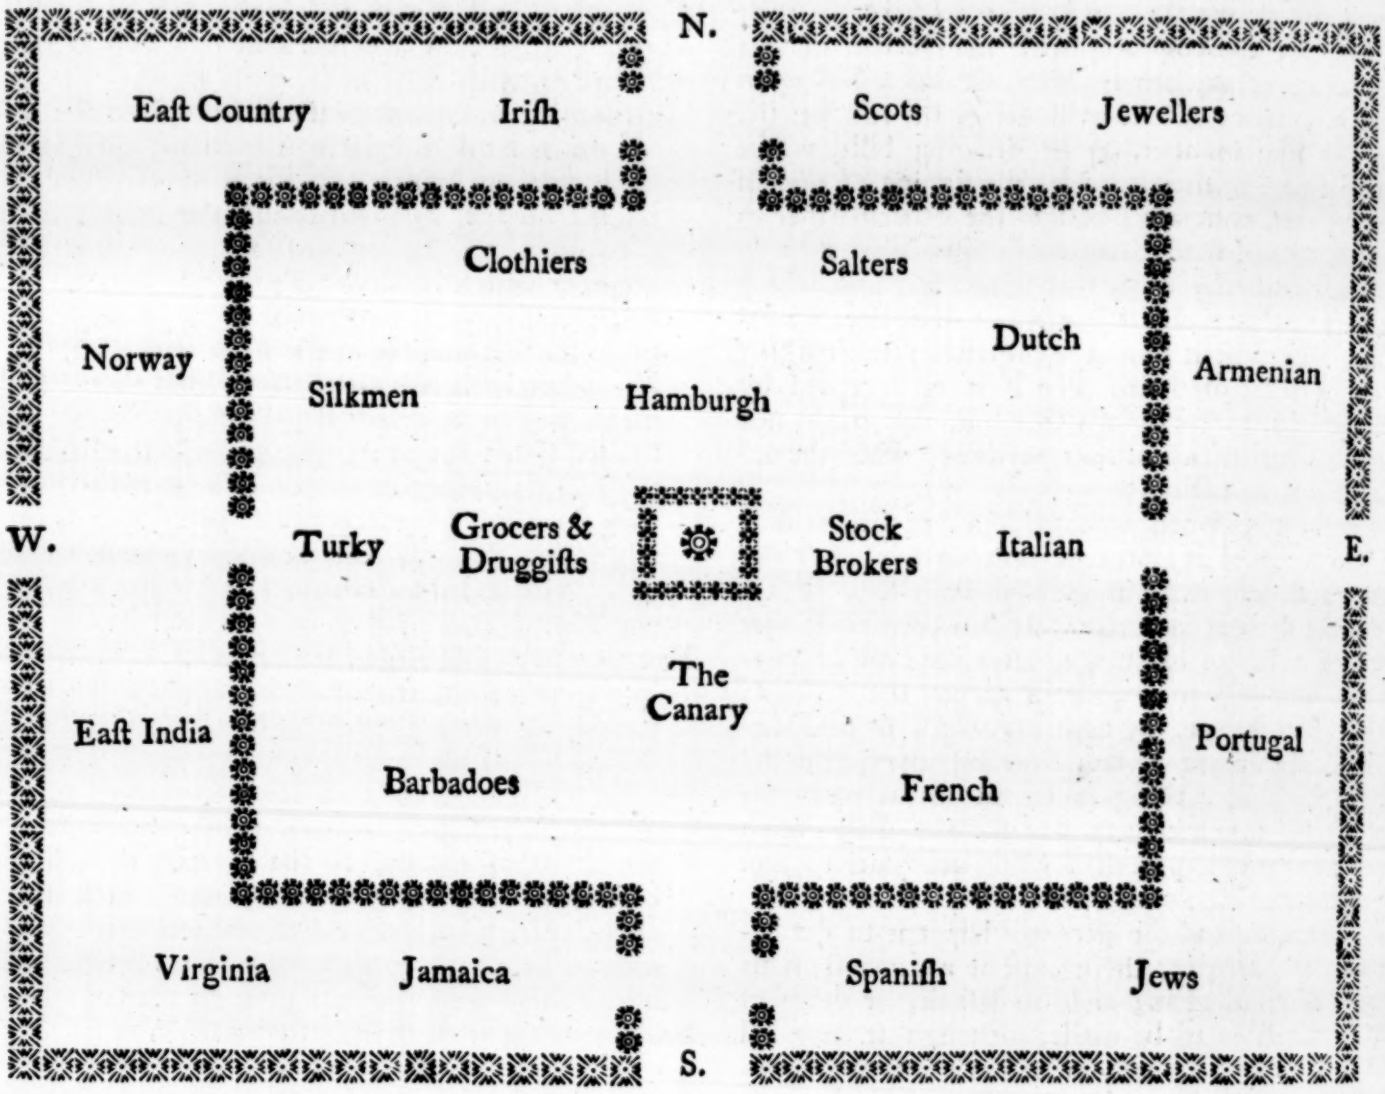
In Flanders, Holland, and ſeveral cities of France, theſe places are called *burſes*; at Paris and Lyons *places du change*; and in the hans towns, *colleges of merchants*. The moſt conſiderable exchanges in Europe, are thoſe of London and Amſterdam: but that of Antwerp was little inferior to either of them, till the port of this city was rendered impracticable by the Hollanders, to bring the commerce thereof to themſelves: and there has lately been erected a magnificent exchange at Briſtol.

The exchange of London was firſt built in the year 1566, at the charge of Sir Thomas Greſham; and in a ſolemn manner, by herald with ſound of trumpet, in preſence of Queen Elizabeth, proclaimed the *Royal Exchange*,

where the merchants, who before that time met in Lombard-ſtreet, afterwards aſſembled. It was built of brick, yet then eſteemed the moſt ſplendid burſe in Europe: it was burnt down in the great fire of London; but ſoon raiſed again in a ſtill more magnificent manner, the expence thereof amounting to 58,962 l. the charge of building; and 7,017 l. 11 s. for a piece of ground purchaſed for enlarging the ſame; one half of this ſum being diſburſed by the chamber of London, and the other by the company of mercers; who, to reimburſe themſelves, let to hire 190 ſhops above ſtairs, at 20 l. each; which, with other ſhops, and profits, on the ground, formerly yielded a yearly rent of above 4000 l. yet the ground it ſtands on does not exceed three quarters of an acre; whence it was obſerved, at that time, to be much the richeſt ſpot of ground in the world: but theſe ſhops, which were once ſtored with the moſt valuable and choiceſt ſorts of merchandize, and were remarkable for their great trade, are now forſaken.

This royal exchange is built quadrangular, with walks around, wherein the merchants of the reſpective countries aſſociate themſelves, by whoſe countries, or commerce, they are denominated. In the middle of the area, or court, is a fine marble ſtatue of King Charles II. in the habit of a Roman Cæſar, which was erected by the ſociety of merchant-adventurers; and, in niches round the ſide of the quadrangle, are ranged the ſtatues of the ſeveral kings and queens ſince the Norman conqueſt.

The following is a plan of the ſeveral walks frequented by the merchants on the Royal Exchange.



And this is the inſcription on the South-ſide of the pedeſtal on which the ſtatue of King Charles II. is erected.

Carolo II. Cæſari Britannico, patriæ patri, regum optimo, clementiſſimo, auguſtiſſimo, generis humani deliciis, utriuſque fortunæ victori, pacis Europæ arbitro, marium domino, et vindici. Societas mercatorum adventur. Angliæ (quæ per CCCC jam prope annos regia benignitate floret) fidei intemeratæ, et gratitudinis eternæ hoc teſtimonium poſuit, anno ſalutis humanæ, MDCLXXXIV.

To
CHARLES II.
The
Britannic Cæſar, the Father of his country,
The
Beſt, moſt Clement, moſt Auguſt of Kings,
The Delight of Mankind,
Superior to
Adverſe and proſperous Fortune,
The
Umpire of the peace of Europe,
The Lord and Maſter
Of the Seas, and Ocean,
The
Society of Engliſh Merchant-adventurers, which for almoſt
CCCC years has flouriſhed under
Royal Protection,
Has exhibited this Teſtimony
Of
Unviolated Faith, and eternal Gratitude,
In the year of our Lord MDCLXXXIV.

The exchange at Briſtol was erected by a ſubſcription among the merchants and citizens, and the firſt ſtone was laid for the foundation on the 10th of March 17[illegible] under which were put ſeveral pieces of gold and ſilver coin of King Geo. II. and on it were engraved the following words:

Regnante GEORGIO II.
PIO, FELICI, AUGUSTO,
LIBERTATIS
ET
REI MERCATORIÆ
Domi Foriſque
VINDICE,
Primarium Lapidem hujuſce Ædificii,
Suffragio Civium, & Ære publico extructi,
POSUIT
HENRICUS COMBE, Prætor,
A. C. MDCCXL.

During the Reign of George II.
Pious, Happy, Auguſt,
Both at Home and Abroad,
The Protector
Of
Liberty and Commerce,
The Foundation of this Edifice,
Erected at the Requeſt and Expence of the Citizens,
Was laid by
Henry Combe, Mayor,
In the year of Chriſt 1740.

Arbitration of EXCHANGE, is a combination, or aſſemblage, made of ſeveral exchanges, to know what place is moſt advantageous for draughts and remittances.

Mr. Ricard ſays, that arbitration is the negotiation of a ſum in exchange, one or ſeveral times reiterated; for which a banker does not determine himſelf, till he has examined, by ſeveral rules, after what manner it will turn beſt to his account.

M. de Mondoteguy defines arbitrage of exchange, a mutual permutation among bankers of their bills of exchange upon different towns, at the price and currency of the ſtipulated exchange. Theſe two definitions are in effect much the ſame; and the latter may be properly held as a text, to which the former ſerves as an explanation.

Bill of EXCHANGE, is a ſhort note, or writing, ordering the payment of a ſum of money in one place, to ſome perſon aſſigned by the drawer, or remitter, in conſideration of the like value paid to him in another place; and in theſe bills of exchange the whole eſtate and effects of merchants uſually conſiſt, of which the ſkilful negotiator makes a conſiderable profit.

Bills of exchange were unknown in the ancient Roman commerce, as well as juriſprudence; and, according to the common opinion, they are the invention of the Jews, who, being baniſhed France, for ſome enormous crimes charged on them, retired into Lombardy, about the twelfth century, and found means, by the aſſiſtance of merchants and travellers, to withdraw their effects, which they had lodged in the hands of friends, by ſecret letters and bills conceived in ſhort preciſe terms, like the modern bills of exchange. The faction of the Gibellins, being expelled Italy by the Guelphs, retired to Amſterdam, and uſed the ſame means, for the recovery of their effects in Italy, as the Jews had done: from whence the Dutch merchants took the hint of negotiating bills of exchange, and ſoon ſpread the practice throughout all Europe. The ſame Gibellins are ſaid to be the inventors of the re-change, on account of damages and intereſts, when bills of exchange, which they called *polizza di cambio*, are not paid, but returned on proteſt. See *Re-exchange*.

The King's EXCHANGE, is the place appointed by the King for exchange of plate, or bullion, for the King's coin; of which there were formerly ſeveral places in England, but now there is only that of the Tower of London, joined with the mint. See *Coinage*.

EXCHANGE-*brokers*, and *Agents of Exchange*, are perſons who make it their buſineſs to know the alteration of the courſe of exchange: their fees being 2 s. for 100 l. ſterling; though of late the humour of gaining, and dealing in ſtocks, has ſo prodigiouſly increaſed the number of perſons who act as brokers, that their buſineſs, and their pay is very uncertain. See *Broker*.

EXCHANGERS, are thoſe who return money beyond ſea, by bills of exchange, called antiently excombiators, and ſince remitters.

EXCHEQUER, is a term formerly much uſed in Normandy; whence it paſſed into England, where there are two exchequers eſtabliſhed in Weſtminſter; one called the court of exchequer, and the other the lower exchequer. The court of exchequer is properly a court of judicature, where cauſes regarding the treaſury and the King's revenues are demanded: and the lower exchequer, called alſo the receipt of the exchequer, is under the direction of the Lord High Treaſurer, or five commiſſioners, nominated by the King, and called Lords of the Treaſury, who have each of them a ſalary of 1600 l. a year.

The other officers of the exchequer receipt, are the chancellor and auditor; chief clerk, clerk of the debentures, clerk of the iſſues, and four meſſengers; two pay-maſters of the bill-office; two comptrollers, with their chief clerk, and two under-clerks; firſt clerk of the firſt annuity office, with five under-clerks; four clerks of the ſecond annuity-office, and two porters; four clerks of the third annuity-office; uſher of the exchequer, his deputy, and clerk, with four clerks of the new pells; chief clerk of the old pells, his deputy and ſix clerks; two chamberlains of the tally-court, their two deputies, ſix clerks, and two tall-joiners; the firſt teller, his deputy, and three clerks; the ſecond teller, his deputy, and three clerks; the third teller, his deputy, and three clerks; the fourth teller, his deputy, and three clerks; with three porters to the four tellers; ſix commiſſioners of the tax-office, their ſecretary, ſolicitor, aſſiſtant-ſecretary, four clerks, a meſſenger, houſe-keeper, comptroller of the ſurveyors, eight general ſurveyors for England, and two for Wales; and 162 ſurveyors of the counties; two auditors of the impreſt, each with his deputy and five clerks. See *Treaſury*.

When the funds of the treaſury are deficient, the commiſſioners are authorized to give ſuch bills as are negotiated in the following manner.

When there is a ſufficiency of funds in the treaſury to make payments, the lords of the treaſury publiſh the payment of the bills at a certain time, as from 10 l. ſterling to 50 l. ſterling, and ſo of the other funds, according to what money they have; when thoſe who have ſuch bills bring them to the treaſury, and receive the principal, with the intereſt.

But as it is not always known when there are funds in the exchequer, it is uſual with thoſe who have theſe bills to negotiate them at a greater or leſs loſs, according as they have an occaſion for their funds.

Theſe bills regard directly the credit of the King; and it is the buſineſs of the lords of the treaſury to circulate and animate them, when the exchequer ſeems to be ſo low as to give them little or no currency.

The immenſe ſubſidies which the Engliſh nation furniſhed King William and Queen Anne, during the long wars between France and England, were partly employed for circulating the exchequer bills, then fallen into much diſcredit; but they are now perfectly reſtored to their uſual credit.

By the ſtatute of the 8th and 9th of William III. it was enacted, That when any money ſhould be brought into the receipt of the exchequer, the teller, as ſoon as the officers belonging to the tally-court ſhould attend, ſhould receive the ſaid money; and after weighing the ſame, and making entry thereof, ſhould throw down bills, written upon parchment and ſigned, into the tally-court; whereby a tally might be duly levied according to the nature of the payment; and ſuch teller, his clerk or ſubſtitute, ſhould not for ſuch money give a note importing a depoſitum or other private note or ſecurity, to prevent the due charging thereof in the exchequer. That the chamberlains, or deputy chamberlains, and ſuch other officers, clerks, and deputies, as belong to the tally-court, ſhould daily, except Sundays and holydays, conſtantly attend, at leaſt from eight o'clock to one from Lady-day to Michaelmas, and from nine to one from Michaelmas to Lady-day, yearly, unleſs they are ſick, or have leave from the commiſſioners of the treaſury, or under-treaſurer of the exchequer; in which caſe the room ſhould be ſufficiently ſupplied as accuſtomed, upon pain to anſwer to the King, or party that ſhould ſuffer by reaſon of ſuch abſence, double damages and full coſts. And the auditors of the receipt, writer of tallies, clerk of the pells, the four tellers, and other officers of the receipt, ſhould by themſelves, or their deputies, give attendance in their places, under the like penalties of double damages and full coſts. That the firſt clerk in the office of the auditor of receipt, the clerk of the pells, and the four tellers, ſhould be ſworn for the due performance of all matters, to be by them performed in the ſaid offices; the oath to be adminiſtred by the commiſſioner of the treaſury, or under-treaſurer of the exchequer, or by the barons, or any of them. That none of the monies which ſhould be in the receipt of the exchequer, ſhould be then iſſued, but in purſuance of ſome grant under the great ſeal, or under the privy-ſeal, or purſuant to ſome act of parliament. That tables ſhould be ſet up, at the door of the auditor of receipt, ſhewing how far the officers there have proceeded in the re-payment of loans upon the credit of revenues; and how far the monies paid in by the receivers extend, to charge principal and intereſt upon the ſaid taxes. That all the money in the receipt ſhould be kept in cheſts, under three locks and keys; the tellers to keep one, the clerk of the pells one, and the other ſhould be kept by the eldeſt of the two deputy-chamberlains; and that no orders or drafts ſhould be paid the ſame day they were ſent up from the

auditor's office to the clerk of the pells, except for the navy, ordnance, forces, or for money regiſtred. And that the clerk of the pells, and deputy-chamberlains, ſhould every morning, except Sundays and holydays, cauſe the cheſts to be opened in their preſence, and ſo much money to be taken out and left with the tellers, as would ſatisfy the orders ready to be ſatisfied, and the reſt to be locked up again; and every day ſee all the money which was received that day, except what ſhould be paid away, weighed, in the bags, a ticket of the content put in each bag, and ſo ſecured in the cheſts. That the auditor of the receipt, or his chief clerk, ſhould, at leaſt once in 28 days, viſit every teller's caſh; and by numbering the bags, opening ſome of them, and, if he thinks fit, by weighing or telling the money, ſee that the tellers have the remains wherewith he charges them; and, at leaſt once in three months, he ſhould examine the tellers vouchers for the payments which he allows them in his weekly certificates.

By the ſtatute of the 12th of George I. it was enacted, That the commiſſioners of the treaſury ſhould cauſe to be prepared exchequer bills, not exceeding in the whole 500,000 l. ſterling. That the ſaid bills ſhould bear an intereſt of 2 d. *per cent. per diem*, payable to the bearers; but the intereſt ſhould be ſaved on ſuch of the bills as ſhould at any time be in the receipt of the exchequer, or the bonds of any receiver or collector of the taxes. That the bills ſhould be numbered arithmetically, and regiſtered accordingly; ſo that the principal ſums might be paid off in courſe, and the intereſt ſhould be payable every three months; and on every bill ſhould be indorſed the ſum, after which the principal to be contained therein ſhould be paid in courſe; and the bills ſhould be marked with ſuch cheques or counterfoils as the treaſury ſhould direct; and the perſon who was to have the paying of the bills ſhould have one part of the cheques, and the contractors for circulating the bills, the other; and all the parts of the cheques, or counterfoils, ſhould be delivered back into the exchequer, when the bill ſhould be cancelled. That theſe bills ſhould be placed as caſh in the tellers offices; and the tellers ſhould be chargeable with the proportion of the bills ſo placed. That all theſe bills ſhould be charged on the monies that ſhould ariſe by the duties charged on the retailers of beer and ale, and the ſame ſhould be iſſued towards taking in, circulating and diſcharging theſe bills, as the treaſury ſhould think fit.

By the ſtatute of the 7th of George II. it was enacted, That there ſhould be kept in the office of the auditor of the receipt, a regiſter, in which all the money payable upon the act for granting the duties upon ſalt ſhould be entered, and it ſhould be lawful for any perſons to lend to his Majeſty, upon the credit of the ſaid duties, ſums of money, not exceeding in the whole one million, which lenders ſhould have intereſt not exceeding 4 *per cent.* ſo as ſuch loans were allowed by three commiſſioners of the treaſury, the intereſt to be paid every three months, and the money lent ſhould not be aſſeſſed in any tax. And every ſuch lender ſhould have a tally of loan, and an order for repayment; and ſuch orders ſhould be regiſtred in courſe, and all perſons ſhould be paid in courſe. That all perſons to whom money ſhould be due for loans by this act, by aſſignment indorſed on their order, might aſſign ſuch order, or any part thereof; which being notified in the office of the auditor, and an entry made in the regiſtry, ſhould entitle ſuch aſſignee, and ſo *toties quoties*. That the commiſſioners of the treaſury might raiſe the ſaid ſum of one million, or any part thereof, by exchequer-bills.

By the ſtatute of the 8th of George II. it was enacted, That it ſhould be lawful for any perſons to lend to his Majeſty ſums not exceeding 500,000 l. upon credit of the duties upon ſalt, by this act continued; upon orders of loan to be made out, as in the 7th of George II.

By the ſtatute of the 11th of Geo. II. it was enacted, That it ſhould be lawful for any perſons to lend to his Majeſty at the receipt, upon credit of the duties upon malt, by this act granted, ſums not exceeding 750,000 l. at 3 *per cent.* to be ſecured by orders of loan or exchequer-bills. That the ſaid exchequer-bills ſhould be current to all receivers and collectors of the cuſtoms, exciſe, or any revenue, and at the receipt of the exchequer; and ſuch of the bills as ſhould be received at the exchequer, ſhould be locked up as caſh; and all receivers and collectors of the revenue, ſhould out of any money in their hands, pay ſuch of the ſaid bills as ſhould be brought to them; and in caſe any ſuch receiver or collector ſhould neglect to exchange ſuch bills for money, by the ſpace of 24 hours, the perſon demanding the ſame might bring an action of debt, or on the caſe, for the monies due upon ſuch bills, againſt ſuch receiver or collector, having money in his hands. That as any of the bills ſhould be paid or lent into the exchequer, the officers there ſhould cauſe tallies to be levied and delivered to the payers or lenders, as if they had made ſuch payments or loans in ſpecie. That the perſons who ſhould pay any ſuch bills to any receivers, or collectors, or into the exchequer, ſhould, at the time of making ſuch payment, on each bill put their names, and write thereupon in words at length, the day of the month and year, in which they ſo paid, lent, or exchanged ſuch bills; all which the ſaid receivers, or collectors, and alſo the tellers of the exchequer, ſhould take care to ſee done. That the bills might be re-iſſued; and the teller, from whoſe office ſuch bills ſhould be re-iſſued, ſhould indorſe on the ſame, in words at length, the day of the month and year in which the ſame were ſo re-iſſued; and alſo on what account the ſame were laſt received in the exchequer, and ſign the ſame, from which time the intereſt of the ſaid bills ſhould revive. That the ſame bills ſhould be ſo re-iſſued for the principal money contained therein, and for ſo much money as was due thereon, and allowed by the teller, when ſuch bills were laſt paid into the exchequer. That in caſe any of the exchequer-bills aforeſaid ſhould be filled up by indorſement, or ſhould by accident be defaced, it ſhould be lawful for the commiſſioners of the treaſury to cauſe new bills to be made forth at the receipt of exchequer, in lieu of ſuch bills filled up or defaced; and ſuch bills ſhould bear the ſame numbers, dates, and principal ſums, and carry the like intereſt, as the bills cancelled. That it ſhould be lawful for the commiſſioners of the treaſury to cauſe exchequer-bills for large ſums, not exceeding 5000 l. each to be made forth, and to be placed as caſh in the receipt, in lieu of the like value of the principal contained in bills made forth for leſſer ſums. That if any perſon ſhould forge any exchequer-bill made forth by virtue of this act, before the ſame ſhould be paid off and cancelled, or any indorſement thereupon, or tender in payment any ſuch forged bill, or any exchequer bill, with ſuch counterfeit indorſement, or ſhould demand to have ſuch counterfeit bill exchanged for money, knowing the bill or the indorſement thereon to be forged, and with intent to defraud his Majeſty, or any other perſon; ſuch perſon ſo offending, being thereof convicted, ſhould be adjudged a felon without benefit of clergy.

By another ſtatute of the 11th of Geo. II. it was enacted, That it ſhould be lawful for any perſon to lend his Majeſty ſums not exceeding one million, upon credit of the land-tax granted in the year 1738. And, that it ſhould be lawful for any perſons to advance into the receipt of his Majeſty's exchequer ſums not exceeding 500,000 l. for purchaſing annuities at 3 *per cent.* charged upon the ſinking fund till redemption by parliament; or the commiſſioners of the treaſury might raiſe the money, or any part of it, by iſſuing exchequer bills with the uſual directions.

In the year 1750, the ſum of 312,000 l. was due to the proprietors of certain annuities payable at the exchequer; and, as a part of the national debt, was at that time reduced to 3 *per cent.* but as 182,250 l. part of the above-mentioned ſum, remained unſubſcribed for accepting this reduction of intereſt, the ſame was paid off by the bank of England, and exchequer-bills iſſued to the company for the ſame, charged on the ſinking fund at 3 *per cent. per annum.*

By the ſtatute of the 23d of George II. it was enacted, That towards a further ſupply granted to his Majeſty, the treaſury might contract with any perſons, bodies politic or corporate, to advance into the exchequer any ſum not exceeding 176,893 l. 11 s. 7 d. for exchequer bills, to be made forth, as the treaſury ſhould think moſt con-

convenient, for the advantage of the public; and that the ſame ſhould be charged on the ſinking-fund, with intereſt not exceeding 3 l. *per cent. per annum*, to commence from the reſpective times the ſaid ſum ſhould be advanced, and the principal ſums contained in the ſaid bills ſhould be repaid out of ſuch monies of the ſaid fund, as ſhould be applied to the payment of the principal. See *Bank*, National *Debt*, *Annuity*, and *Lottery*.

The exchequer had its name from the party-coloured or chequered-cloth which covered the board. It is the great check upon all the others offices relating to the public revenue: all the receipts and payments which paſs through the various channels of the revenue ultimately terminate here; from whence the monies are iſſued, and applied to the ſeveral articles to which they are appropriated by the authority of parliament. See *Revenue* and *Treaſury*.

EXCISE. A duty, or impoſition, charged on beer, ale, cyder, and other malt-liquors made for ſale, within the kingdom of England, Wales, and town of Berwick upon Tweed; but all foreign wines are exempted from this duty, which was firſt ſettled in Great Britain by the parliament in 1643, for carrying on a war againſt the King, which was afterwards granted to King Charles II. by act of parliament in the year 1660, during the life of that prince; but it has been ſince continued and augmented by diverſe parliaments, under the ſeveral ſucceeding princes, and extended to Scotland.

The exciſe is one of the moſt conſiderable branches of the revenue belonging to his Britannic Majeſty; which was formerly farmed out, but is now managed for the King by nine commiſſioners, who ſit in the general exciſe-office in the Old Jury, within the city of London; receive the whole product of the exciſe of beer, ale, and other liquors; as alſo of malt, and other things collected all over England; and pay it into the exchequer. Their ſalary is 1000 l. *per annum* each; and they are obliged upon oath to take no fee or reward but from the King only: they determine every thing belonging to this branch of revenue; but from the whole number of commiſſioners there lies an appeal to five others, called commiſſioners of appeals, who have each a ſalary of 200 l. a year.

The number of officers employed in the exciſe is very great: for, beſides the commiſſioners, and their ſubordinate officers, as regiſters, meſſengers, and others, there are an auditor of the exciſe, with his clerks; a comptroller, with his clerks; a regiſter, ſecretary, ſollicitor, caſhier, teller, clerk of ſecurities, houſe-keeper, door-keeper; an accomptant for the impreſt money, general gauger, general accomptants, with their aſſiſtants; meſſengers; a clerk for ſtationary wares; examiners; clerks for ſupervisor's diaries, accomptants, examiners, and other officers for the London-diſtillery, vinegar, cyder, and other things; alſo examiners for malt, general and other ſurveyors of the London brewery, with aſſiſtants, and other officers, to the number of 100; general, and other ſurveyors of the London diſtillery, with other officers, to the number of 40; a collector and ſurveyor of imported liquors; with a land-ſurveyor at the cuſtom-houſe belonging to the ſeveral ports. Beſides which, there are in the country 50 collectors, and 150 ſupervisors, with a great number of inferior officers, called gaugers, or exciſe-men, which may make the number of officers employed in this revenue between 3 and 4000; whoſe reſpective annual ſalaries muſt be very conſiderable, ſince thoſe in the general exciſe office of London amount to 23,650 l. but the following duties are all thoſe which belong to the exciſe.

1. The temporary exciſe, firſt introduced during the uſurpation in the reign of King Charles I. and after the reſtoration firſt granted to King Charles II. during his life; from whoſe death it has been continued to his preſent Majeſty for life; and, as it makes a part of the civil liſt revenue, it will probably be continued during the life of every future King or Queen of Great Britain; being 15 d. *per* barrel, upon every barrel of beer or ale above 6 s. the barrel; and 3 d. *per* barrel for every barrel of 6 s. or under, brewed for retail; 15 d. for every hogſhead of cyder or perry ſold by retail; 1 d. for every gallon of ſtrong water, or aqua vitæ, &c.

2. The hereditary exciſe, granted to King Charles II. his heirs and ſucceſſors for ever, in recompence for the profits of the court of wards and purveyance, then aboliſhed by act of parliament; being the very ſame with the temporary exciſe; whereby the poor tradeſmen, manufacturers, and labourers, and in a great meaſure they alone, were loaded with a tax, in recompence for what never could have affected any but the rich and great. Theſe two exciſes, according to Dr. Davenant, produced 666,383 l. a year, clear of all expences.

3. A new exciſe granted in 1692, for 96 years; being for every barrel of beer or ale above 6 s the barrel 9 d and for every barrel of 6 s. or under, 3 d. for every hogſhead of cyder or perry, &c. 1 s. 3 d which duty was mortgaged, as a ſecurity for the payment of 10 *per cent. per ann.* until the year 1700, and 7 l. *per cent.* afterwards, with the benefit of ſurvivorſhip, for the lives of the nominees; or 14 *per cent. per annum* for a ſingle life, to the contributors towards advancing the ſum of one million to the government: and in 1704 it was continued for 15 years longer; ſo that it will not expire till the year 1803.

4. A ſecond new exciſe granted in 1693, until 1713; but, in 1705 continued to the year 1808; being for beer or ale the ſame with the firſt new exciſe; and 1 s. *per* hogſhead for cyder, perry, &c.

5. A third new exciſe, granted in 1693 for ever, being the very ſame with the ſecond new exciſe.

6. An exciſe upon ſalt, granted in 1693, and ſoon afterwards continued for ever; being 3 half pence *per* gallon upon all home-made ſalt, or rock-ſalt; out of which three laſt duties, the yearly ſum of 140,000 l. was eſtabliſhed as a fund for borrowing a million by way of lottery, at 10 l. a ticket; being the firſt time we fell into that Dutch cuſtom of raiſing money by lottery, which is the bane of induſtry, frugality, and virtue: another yearly ſum of 140,000 l. was alſo charged on theſe duties for borrowing 1,500,000 l. of which 100,000 l. was payable to the bank of England for a loan of 1,200,000 l. at 8 *per cent.* and the other 40,000 l. was applied to the payment of annuities to the contributors for advancing 300,000 l. for the purchaſe of annuities for lives, at the rate of 14 *per cent.* for one life, 12 *per cent.* for two lives, and 10 *per cent.* for three lives.

7. A ſecond exciſe upon ſalt, granted in 1697 for ever; being $3\frac{1}{2}$ d. *per* gallon for all home-made ſalt, or rock-ſalt; which was mortgaged to the Eaſt India company.

8. An exciſe upon malt, granted in 1697, being 6 d. the buſhel on all malt made for ſale, or not for ſale; and over and above former duties, 10 s. a barrel for mum, 12 s. for ſweets, and for cyder and perry 4 s. the hogſhead, all if made for ſale. This duty was afterwards continued to the year 1715; and has ſince been eſtabliſhed as an annual perpetual tax, called the malt tax, which brings in about 750,000 l. a year; and upon the credit of this fund 1,400,000 l. was raiſed by way of lottery, at a farthing a day intereſt for every 10 l. advanced, except the fortunate tickets, which were to bear no intereſt.

9. An exciſe on ſweets, granted in 1698 until 1701, and afterwards continued to the 25th of March 1808, being an additional duty of 36 s. the barrel upon all ſweets made for ſale.

10. An exciſe on low wines or ſpirits, granted by the ſecond parliament of William and Mary; and afterwards continued to 23d June 1807, being an additional exciſe of 6 d. a gallon, upon ſpirits drawn from foreign materials, and 1 d. on thoſe drawn from Engliſh materials.

11. A fourth new exciſe upon home-made liquors, at firſt granted in 1709, from Lady-day 1710 to Lady day 1742, being an additional exciſe of 3 d. upon every barrel of beer or ale brewed for ſale above 6 s. the barrel, and 1 d. for every barrel at 6 s. or under; 5 d. for every hogſhead of cyder and perry, and 1 d. for every gallon of ſtrong waters or aqua vitæ; which, with other duties, was eſtabliſhed for paying 81,000 l. yearly, in diſcharge of 900,000 l. raiſed by annuities at 9 *per cent.* but this duty was not laid upon any ſuch liquors imported.

12. An exciſe on candles, granted in 1709, and afterwards continued for ever, being a duty of 4 d. the pound on wax, and a halfpenny the pound on tallow candles, made in Great Britain for ſale or not for ſale; but makers

for their own uſe might compound at 1 s. a head for every perſon in their family. This tax ſubjected a new and very numerous body of people to the laws of exciſe, and laid a moſt heavy burden upon all the Britiſh manufactures: upon which, with the tax on all ſums received with clerks and apprentices, 500,000 l. was borrowed at 6 *per cent.*

13. An additional exciſe on candles, granted from 1711 to 1743, and afterwards made perpetual; being an additional duty, the ſame with the former in every reſpect: which, with other duties, was a fund for paying 135,000 l. a year, the intereſt of 1,500,000 l. raiſed by way of lottery at 10 l. a ticket: but it was afterwards made part of the South Sea fund for raiſing the yearly ſum of 568,279 l. 10 s.

14. An exciſe upon hides and ſkins tanned, &c. in Great Britain, granted from 1711 to 1743, being an exciſe of ſeventeen different kinds, upon ſo many different ſorts of hides and ſkins particularly named, and upon all others not named 15 *per cent.* of their value; which, with the duty upon paper, vellum, and parchment, was put under the management of commiſſioners and officers appointed for the purpoſe, with the ſame power as commiſſioners of exciſe; but by the 3d of George I. theſe duties were made perpetual, and part of the general fund.

15. An exciſe on home-made vellum and parchment, granted for the ſame time as N° 14, being 1 s. the dozen on vellum, and 6 d. the dozen on parchment.

16. An exciſe on hops of home growth, granted from 1711 to 1715, being 1 d. the pound; upon which 180,000 l. was borrowed at 6 *per cent.* but by 1ſt George I. was made perpetual, and part of the aggregate fund; whereby many country farmers, and all dealers in hops, were brought under the laws of exciſe.

17. An exciſe on paper, paſte-boards, mild-boards, and ſcale-boards, granted from 1712 to 1744, being a duty of eleven different kinds on ſo many different ſorts of paper particularly named, made in Great Britain; on paſte-boards, &c. 3 s. the hundred weight; and on all ſorts of paper not named, 12 l. *per cent.* of their value.

18. An exciſe on ſoap, granted for the ſame time as N° 17, being 1 d. the pound on all ſoap made in Great Britain.

19. An exciſe upon printed ſilks, calicoes, linens, and ſtuffs, made in Great Britain, and printed, painted, ſtained, or dyed here; granted for the ſame time as N° 17, being a duty of 3 d. on ſilks and calicoes, and 1 ½ d. on linens and ſtuffs the yard ſquare; excepting ſilk handkerchiefs and calicoes, linens and fuſtians, dyed of one colour, and ſtuffs made of woollen, or the greateſt part in value of woollen; which, with N° 17 and 18, and ſeveral other duties, was made perpetual by the 3d of George I. and made a part of the general fund for paying annuities: whereby all the ſoap-boilers, paper-makers, and calicoe-printers, were ſubjected to the laws of exciſe; while the crown was empowered to appoint no leſs than three new ſetts of commiſſioners, one for the exciſe on home-made ſoap, one for that on home-made paper, and one for that on home-made calicoes, with ſuch ſubordinate officers as they might think neceſſary for each board and each collection.

20. An additional exciſe on hides and ſkins, &c. of Great Britain, granted from 1712 to 1744, being an additional duty of ſixteen different kinds upon ſo many different ſorts of hides and ſkins, particularly named, and on all others not named 15 *per cent.* of their value; which, by the 3d of George I. was made perpetual, and made a part of the general fund for paying annuities.

21. An additional exciſe on home made vellum and parchment, granted for the ſame time, and perpetuated in the ſame manner as N° 20, being an additional duty of 2 s. the dozen on vellum, and 1 s. the dozen on parchment.

22. An exciſe on ſtarch made in Great Britain, granted and perpetuated as N° 21, being a duty of 1 d. the pound.

23. An exciſe on gilt and ſilver wire made in Great Britain, granted and perpetuated as N° 21, being 8 d. an ounce on gilt-wire, and 6 d. an ounce on ſilver-wire. Thus ſtarch-makers for ſale, or not for ſale; and wire-drawers, were ſubjected to the laws of exciſe, and to two new ſetts of commiſſioners and officers to be appointed by the crown; one for levying this exciſe upon ſtarch, and the other for that on wire.

24. An additional exciſe on paper, paſte-boards, &c. granted from 1714 to 1746, being an additional duty of eleven different kinds on ſo many different ſorts of home-made paper particularly named; on paſte-board, &c. 1 s. 6 d. the hundred weight; on all ſorts of paper not named 6 *per cent.* of their value; and on painted paper for hangings a halfpenny the yard ſquare.

25. An additional exciſe on home-made ſoap, granted for the ſame time as N° 24, being an additional duty of a half-penny the pound.

26. An additional exciſe on home-made ſtarch, granted for the ſame time as N° 24, being 1 d. the pound.

27. An additional exciſe on printed ſilks, calicoes, &c. granted for the ſame time as N° 24, being an additional duty of 6 d. *per* yard of half yard broad ſilks; 1 d. *per* yard ſquare of ſilk handkerchiefs; 3 d. *per* yard ſquare of calicoes; and 1 ½ d. *per* yard ſquare of linens and ſtuffs; except as before in N° 19. All which four laſt mentioned duties, with ſome others, were appropriated towards eſtabliſhing a yearly fund of 105,000 l. for paying off 1,875,000 l. with intereſt at 4 *per cent.* raiſed by lottery at 10 l. a ticket; which were made perpetual by the 6th of Geo. I. in order to be ſubſcribed into the South Sea ſtock; and, by the ſecond of George II. the ſurplus was charged with annuities payable to the bank.

28. An exciſe on home-made plate, granted in 1719 for ever, being 6 d. an ounce troy; on which 312,000 l. was borrowed at 4 *per cent.* with the ſinking fund as a collateral ſecurity; whereby the crown was empowered to appoint a new ſett of commiſſioners and officers, who were to have ſuch ſalaries as the treaſury ſhould think fit to allow, and were armed with all the powers of exciſe.

29. The exciſe on tea, granted in 1720 for ever, whereby ſome of the former duties payable on the importation of coffee, tea, cocoa-nuts, chocolate, and cocoa paſte, were aboliſhed; and in lieu of theſe, the inland duties, or exciſes following were impoſed; on all coffee to be ſold 2 s. the pound; on all tea to be ſold 4 s. the pound; and on all chocolate to be made and ſold 1 s. 6 d. the pound; but chocolate ready made, or cocoa-paſte, were prohibited to be imported: however, theſe goods were ſtill liable to the 1ſt, 10th, 16th, 23d, and 25th branches of the cuſtoms, beſides this exciſe, which might increaſe the revenue; but the merchants and retailers were thereby made liable to more and greater vexations than they were ever before.

30. The exciſe on ſpirituous liquors, granted in 1743 for ever, whereby the high prohibitory duties on ſpirituous liquors, and upon licences for retailing the ſame, were all aboliſhed, and ſuch moderate duties impoſed as might raiſe a conſiderable revenue, without leſſening the conſumption, or even the immoderate uſe of ſuch liquors.

31. The exciſe on home-made glaſs, granted in 1745 for ever, being a tax upon all ſorts of glaſs made within Great Britain; whereby the glaſs-makers were ſubjected to the laws of exciſe, and a great diſcouragement was laid upon the manufacturing of any glaſs for exportation.

32. The additional duty on ſpirituous liquors, granted in 1745 for ever, being a new tax on all ſpirituous liquors made, extracted, or manufactured in Great Britain.

All theſe duties of exciſe are to be levied and collected by the commiſſioners and the ſubordinate officers of exciſe; they are alſo regulated by particular laws which ſubject thoſe liable to them to many hardſhips, inconveniencies, and dangers: beſides, as the commiſſioners have a power to mitigate the penalties incurred, it gives them almoſt an arbitrary power over the dealers in exciſeable commodities, who are always in danger of incurring ſome of the penalties by the fault or fraud of their ſervants, and in ſuch caſes depend upon the arbitrary will of the commiſſioners for a pardon, under the name of a mitigation, which muſt make them more ſubmiſſive in their way of voting at elections, than any Briton ought to be. To theſe branches of exciſe, an attempt was lately made to add the traders in tobacco: but that ſcheme has not been yet carried into execution.

The exciſe of liquors imported being under the direction of the commiſſioners of exciſe, it is uſual for them, by

ir deputation, to empower the collector and surveyor the customs in each out-port, to levy, collect, and nage it on their behalf, in conjunction with their own rt-gauger: and therefore, at the time of the entry of y exciseable liquors for the customs, the collector of t revenue must likewise demand and receive the duty reon; for which purpose a bill must be drawn from the stom-entry, dated and numbered in course, beginning new number at each quarter-day. A bill of entry be- formed, and the excise-duty received, the collector the customs must, besides the customhouse-warrant, ant a distinct warrant to the proper officers, who are to amine, gauge, and deliver such imported liquors on behalf of the commissioners of excise, as a voucher to m for so doing. This warrant must be delivered to officers to whom directed, who are to be very care- in examining, gauging, and discharging the liquors erein specified; demeaning themselves in all respects re- ing thereto, as is practised by the officers of the cus- ms in discharge of the like goods; and the bill of try from whence the warrant was drawn must be pre- rved upon a file, that it may be daily entered in a pro- r book kept for that purpose.

nd in consideration of the trouble in levying, collect- g, and accounting for this duty, the commissioners of cise make the following allowances out of the duties ceived, to the several officers concerned; to the col- ctor, 6 d. in the pound, but not to exceed 40 l. a year: the surveyor, 6 d. in the pound, but not to exceed 0 l. a year; to the gauger, 6 d. in the pound, but not exceed 20 l. a year: which the collector must deduct, nd pay out of the duty by him collected.

n 1689, the whole duty of excise amounted to 694,476 l. s. $5\frac{3}{4}$ d. and the produce of each county was as fol- ws.

	l.	s.	d.
Total of the eleven home counties, Surry and Southwark, Hertford, Bedford, Cambridge, Kent, Essex, Norfolk, Suffolk, Berks, Bucks, and Oxford -	184520	19	$5\frac{1}{4}$
Total of the rest of England, excluding London, Westminster, and Middlesex -	369596	9	$10\frac{1}{2}$

Thus it appears, that the north and west of England, or the counties that lie towards the north and west, are two thirds of England, excluding London, Westminster, and Middlesex; for, in the excise on beer and ale, the north and west, compared with the eleven home counties, are as 554,117 l. is to 184,520 l. which is full 2-3ds. And in the excise on ale and beer, London, Westminster, and Middlesex, compared with the rest of England, are as 140,358 l. is to 694,476 l. which is about 1-5th; though these two cities and county are not a fifth of the kingdom, but about a tenth: because in London almost all persons pay excise for their drink, which is otherwise in the country; though, in the consumption of malt, London, Westminster, and Middlesex, will be found about a tenth part of the whole.

The excise in the reign of King William III. was as follows.

The whole amount of the excise, from 5th November 1688 to Michaelmas 1691, was 2,429,750 l.; from Michaelmas 1691 to Michaelmas 1692, it was 1,213,510 l. to Michaelmas 1693 it was 904,860 l. to Michaelmas 1694 it was 866,289 l. to Michaelmas 1695 it was 930,752 l. to Michaelmas 1696 it was 917,541 l. to Michaelmas 1697 it was 1,049,979 l. to Michaelmas 1698 it was 1,350,732 l. to Michaelmas 1699 it was 1,411,516 l. to Michaelmas 1700 it was 1,030,220 l. to Michaelmas 1701 it was 986,004 l. and from thence to Ladyday 1702 it was 558,171 l.: so that the total, from the 5th of November 1688 to Ladyday 1702, amounted to 13,649,328 l. which was 352,495 l. more than the customs produced in the same time.

The duty of excise during the reign of Queen Anne was as follows.

From Ladyday to Michaelmas 1702,	854,621 l.
to Michaelmas 1703,	1,745,860
1704,	1,653,632
1705,	1,804,043
1706,	1,679,431
1707,	1,742,076
1708,	1,680,124
1709,	1,568,158
1710,	1,526,622
Total from Ladyday 1702 to Michaelmas 1710 -	14,254,568

Which was 3,570,749 l. more than the customs produced in the same time.

In the year 1726, the duty of excise amounted to 2,677,354 l. which was 1,146,993 l. more than the customs: but it should be observed, that though the malt-tax is given for 750,000 l. it seldom produces above 680,000 l.

Dr. Davenant, who was an advocate for a general excise, says, that the proper commodities to lay excises upon are those which serve merely to luxury, because that way the poor would be least affected: but things of that nature are of little bulk, easily hid, vended by a number of different traders, and require many officers to inspect the making, selling, and retailing of them.

In Holland, they easily gather the duty upon things of luxury, where the people are shut up within a narrow compass,

compaſs, and where the execution of the laws is ſtrict and ſteady: but the Doctor obſerves it would be otherwiſe in England, where the people are diſperſed about in a large country, and where they have been long uſed to a ſlack and unſteady execution of the laws: beſides, in Holland, the laws that ſecure ſuch exciſes to the government are more ſtrict and penal than our conſtitution will bear; and yet a duty upon all the vanities and luxuries of this kingdom may be collected by a far leſs number of officers, and with leſs difficulty, than is commonly imagined.

The commodities with us proper to charge exciſes upon, he ſays, are ſuch as are bulky, not eaſily hid or conveyed away, and where as few travellers as poſſible may be peſtered and vexed with the ſearch and inſpection of the officers, and where the revenue may be ſufficiently ſecured to the King by mild and gentle laws. Such a ſum as is wanted may be levied, and the things of luxury reached, for the yearly charge of about 100,000 l. and by about 1400 officers; caſting England into 800 diſtricts, as it is laid out for inſpecting the victuallers in the duty upon beer and ale, the remaining 600 are ſufficient to take an account of ſuch goods as are made, ſold, and retailed, in great towns and cities; on all which goods the Doctor would have exciſes laid.

But the Doctor alſo remarks, that all taxes whatſoever are in their laſt reſort a charge upon land; and though exciſes will affect land in no degree like taxes that charge it directly; yet exciſes will always lie ſo heavily upon the landed men, as to make them concerned in parliament, to continue ſuch duties no longer than the neceſſity of the war continues.

Doctor Davenant was a very judicious writer; but his zeal for the court, whoſe favourite view under King William was the introduction of a general exciſe, occcaſioned him to aſſert ſuch things as, was he now living, every thing before him would convince him of his miſtakes. Inſtead of exciſing articles of luxury, we have thrown exciſes upon our ſtaple manufactures, and heavily clogged every branch of our trade, which enables other nations to underſel us at foreign markets. Inſtead of 1400 officers, we have double the number; and, inſtead of ſuch exciſes as were laid in the Doctor's time, being taken off after the war, we have ſeen them continually encreaſing to their preſent enormous and dangerous bulk.

So that the commodities now ſubject to this revenue are, malt, beer, ale, mum, cyder, and perry; verjuice, vinegar, metheglin, or mead; and arrack, brandy, rum, ſherbet, and other ſpirituous liquors, imported from abroad; beſides coffee, tea, chocolate, cocoa-nuts, and cocoa-paſte, hides, ſkins, vellom, parchment, candles, ſoap, ſtarch, paper, paſte-board, mill-board, and ſcale-board, made in Great Britain; glaſs, ſilks, calicoes, linens, ſtuffs, ſalt, paper printed, painted, ſtained, or dyed in Great Britain; whereby the following different trades and occupations are affected by this tax: 1. Brewers, diſtillers, inn-keepers, victuallers, coffee-men, vintners; mum, cyder, and perry makers, maltſters, ſweet wine-makers, vinegar makers, and all other perſons making, importing, or dealing in exciſeable liquors. 2. Soap-boilers, druggiſts, grocers, tallow chandlers, ſtarch-makers, perfumers, peruke-makers, barbers, chandlers, and all other perſons concerned in tea, coffee, chocolate, ſtarch, and powder. 3. Hop-planters, tanners, owners of ſalt-pits, leather-ſellers, linen-drapers, paper-makers, paper-ſtainers, calico and linen printers; paſte-board, mill-board, and ſcale-board makers; goldſmiths, ſilver-ſmiths, workers of plate, wire-drawers, refiners of gilt and ſilver wire, card-makers, dice makers, glaſs-makers, and ſeveral other perſons concerned in making or vending theſe commodities.

The exciſe on beer, ale, ſpirituous and other exciſeable liquors, even during a time of war, is computed to amount to 1,100,000 l. *per annum*, and is collected from above 300,000 people. The duty on malt, with the additional duty on mum, cyder, and perry, is taken to amount annually to 750,000 l. which is collected from more hands than the former: and the duty on ſoap, candles, and ſkins, amounts to a conſiderable ſum annually. But the exciſe on ale and beer in Scotland is farmed at only 33,500 l. a year.

By the ſtatute of the 12th of Charles II. it was enacted, That all forfeitures and offences relating to the revenue of exciſe, and committed within the immediate limits of the chief officer in London, ſhould be heard and determined by the commiſſioners of exciſe, or by the commiſſioners for appeals, and regulating of this duty, in caſe of appeal. That all ſuch offences within other places, ſhould be heard and determined by any two juſtices of peace reſiding near the place: but, in caſe of neglect of ſuch juſtices by the ſpace of 14 days after complaint, and notice to the offender, the ſub-commiſſioners ſhould hear and determine; and the party aggrieved by the ſub-commiſſioners might appeal to the next quarter-ſeſſions, whoſe judgment ſhould be final. Which commiſſioners for appeals, commiſſioners for exciſe, juſtices of peace, and ſub commiſſioners, were, upon information, to ſummon the party accuſed; and, upon his appearance, or contempt, to proceed to the examination of the fact; and, upon proof thereof, either by confeſſion of the party, or by oath of one witneſs, to give judgment, and iſſue out warrants for the levying of forfeitures, upon the goods of the offender, and to cauſe ſale to be made, if they ſhould not be redeemed within 14 days; and, for want of diſtreſs, to impriſon the party till ſatisfaction: provided that it ſhould be lawful for the juſtices of peace, commiſſioners for exciſe, or their ſub commiſſioners, to mitigate ſuch forfeiture, ſo as the ſame ſhould not be made leſs than double the duty, beſides coſts of officers, to be allowed by the juſtices or commiſſioners; which forfeitures, after neceſſary charges deducted, ſhould be 3-4ths to the King, and 1-4th to the informer.

By the ſtatute of the 15th of Charles II. it was enacted, That the commiſſioners ſhould depute, under their hands and ſeals, ſuch perſons as they ſhould think neceſſary in each market-town, to be there every market-day, in ſome public place, for receiving the entries and duties of exciſe; which perſon ſhould attend ſuch office on every market-day, and keep the ſame open from nine in the morning until 12 at noon, and from two until five in the afternoon. But in caſe ſuch office ſhould not be ſo kept, the commiſſioners, or other perſons neglecting, ſhould for every market-day forfeit 10 l. the one half to the King, and the other to him that would ſue for the ſame: and ſuch perſon as ſhould come to ſuch market-town to make entry or payment of the duties, who ſhould tender the ſame, and be able to prove ſuch tender by the oath of one witneſs, ſhould not be liable to any penalty for ſuch weekly or monthly entries or payments. That no appeal in cauſe of exciſe ſhould be admitted, until the appellant ſhould have depoſited the ſingle duty in the hands of the commiſſioners, and given ſecurity to the commiſſioners of appeal, or juſtice of peace where ſuch cauſe was to be finally adjudged, for ſuch penalty as was adjudged againſt him: and if, upon the hearing ſuch appeal, the original judgment ſhould be reverſed, the commiſſioners ſhould reſtore as much as ſhould be adjudged to the appellant, and the party originally proſecuting ſhould pay double coſts; but in caſe the firſt judgment ſhould be affirmed, the party appealing ſhould pay the like coſts unto the commiſſioners complained of. That all complaints ariſing between party and party, in order to the payment of the exciſe, ſhould be heard and determined in the proper county, and the juſtices of peace, or any two of them, ſhould meet once in every month, or oftener, to determine ſuch offences. And that no appeal in any cauſe of exciſe within the limits of the chief office of London, ſhould be admitted, unleſs the ſame was brought within two months after the firſt judgment, and notice thereof given or left at the dwelling-houſe of the party; nor ſhould any appeal in any matter of exciſe in any other place be admitted, unleſs the ſame was brought within four months after the firſt judgment, and notice given.

By the ſtatute of the 7th of King William III. it was enacted, That the commiſſioners of exciſe and juſtices of peace, upon any information for any offence againſt the laws of exciſe, might ſummon any perſon, other than the party accuſed, to appear before them, and to give evi-

dence

dence, under forfeiture of 10l. for neglect of appearance, or refuſal to give evidence.

By the ſtatute of the 6th of King George I. it was enacted, That if any perſon ſhould obſtruct any officer of exciſe, in the due execution of the powers granted by any act relating to the duties of exciſe, ſuch perſon ſhould forfeit 10l.

By the ſtatute of the 11th of George I. it was enacted, That it ſhould be lawful for the officers of exciſe, to go on board any veſſel within the limits of any port, and to continue on board, and rummage, in like manner as the officers of the cuſtoms, for arrack, rum, brandy, or other exciſeable liquors; and for coffee, tea, cocoa-nuts, chocolate, and cocoa-paſte; and to ſeize for the uſe of his Majeſty, all ſuch of the ſaid commodities as ſhould be found there forfeitable by law, together with the package; as alſo to ſeize ſuch of the ſaid commodities as, before due entry, and without paying or ſecuring the duties on the importation, ſhould be found unſhipping or unſhipped. That if any officer of exciſe ſhould have cauſe to ſuſpect that any of ſuch commodities ſhould be fraudulently concealed, with intent to defraud his Majeſty of the duties; if the place be within London or Weſtminſter, or within the bills of mortality, on oath made by ſuch officer before the commiſſioners of exciſe, or two of them; or in caſe the place ſhould be in any other part, then, upon oath made by ſuch officer before a juſtice of peace, ſetting forth the ground of his ſuſpicion; it ſhould be lawful for the commiſſioners or juſtice, by ſpecial warrants, to authoriſe ſuch officers, by day or by night; but if in the night-time, in the preſence of a peace-officer, to enter into any ſuch place, and to ſeize and carry away all ſuch commodities, together with the caſks; and if any perſon ſhould hinder ſuch officer in the executing ſuch powers, ſuch perſon ſhould forfeit 100l. That if any perſon ſhould take out permits for removing brandy, arrack, rum, ſpirits, ſtrong waters, coffee, tea, cocoa-nuts, and chocolate, and ſhould not, within the times limited in ſuch permits, either ſend away the commodities, or return ſuch permits; ſuch perſon ſhould for every gallon of ſuch liquors, and for every pound of ſuch coffee, tea, cocoa-nuts, and chocolate, mentioned in ſuch permits, and not removed, forfeit treble the value, to be eſtimated according to the higheſt rates; and if ſuch permits were not returned, and there ſhould not appear a ſufficient decreaſe to anſwer the removal, the perſon out of whoſe ſtock the commodities ſhould be authoriſed to be removed, ſhould forfeit the like quantity, to be ſeized by the officers: provided that no perſon ſhould take any permit for removal of the ſaid commodities, without the direction in writing of the perſon, or the known ſervant of the perſon, from whoſe ſtock the ſaid commodities were to be removed, upon pain of forfeiting 50l. or, in default of payment, to ſuffer impriſonment for three months. That if, upon requeſt made by any officer of the duties of exciſe to any conſtable, or miniſterial officer of the peace to go along with him, or to be preſent where his preſence is neceſſary, ſuch officer of the peace ſhould neglect to go, he ſhould forfeit 20l. That if any perſon liable to any of the duties of exciſe, in order to corrupt any officer, ſhould offer to give, or ſecure, to any ſuch officer, any bribe or reward, the offender ſhould forfeit 500l. to be recovered and mitigated as any penalty by any laws of exciſe; one moiety to the crown, and the other to the poor of the pariſh where ſuch offence ſhould be committed.

By the ſtatute of the 1ſt of King George II. it was enacted, That the act of the 6th of George I. ſhould not extend to take away the right of appealing to the commiſſioners of appeals from judgments given by the commiſſioners of exciſe, in cauſes of offences relating to the exciſe, or the liberty of appealing to the quarter-ſeſſions, where judgments ſhould be given by juſtices in cauſes of offences, in relation to the duties on malt, or on hides and skins, and on vellom and parchment. That all complaints depending at the chief office of exciſe, might be heard and determined by any three of the commiſſioners, whoſe adjudication ſhould be valid: and that every ſuch adjudication ſhould be executed by warrant of any three commiſſioners.

And, by the ſtatute of the 23d of King George II. it was declared, That the reſtrictions of time for tranſacting the buſineſs of the office of exciſe had been found very inconvenient, and attended with extraordinary expences to perſons charged with the payment of the duties of exciſe: wherefore it was enacted, That the ſaid office ſhould be kept open from eight o'clock in the morning till two in the afternoon, and no longer.

The inhabitants of England have been frequently alarmed at the apprehenſions of a general exciſe. The noble Hambden preferred a land-tax, or even a revival of the chimney-money, to any kind of new exciſes: which may end, as he obſerved, in a general exciſe: therefore it may not be improper to give a little deduction of this kind of tax.

Thoſe loads upon induſtry, high cuſtoms, and what are called exciſes, were on foot in the Roman empire, and among the eaſtern Kings, but not thought of in theſe Gothic ſettlements. It is true, from the time Kings have deſired greater armies than their crown-revenues would maintain, ſuch impoſitions have been revived in this part of Europe.

Theſe kind of taxes, from which this ſide of the world had been exempt for ſeveral ages, were renewed by ambitious princes, who had great thoughts and a ſmall territory; of which kind were Ferdinand and Alphonſo of Arragon, kings of Naples, and Lodowic Sforza, Duke of Milan; who harraſſed their countries with theſe ſorts of duties to ſuch a degree, that at laſt it produced an univerſal defection of their people. By theſe ways and means of raiſing money, Lodowick Sforza had heaped up ſuch a maſs of wealth, that, not eight years before Milan was taken, he ſhewed ſeveral foreign miniſters, by way of oſtentation, beſides jewels, and other ſorts of riches, in no ſmall quantities, to the value of one million, five hundred thouſand ducats; a vaſt ſum for thoſe times. The Kings of Naples had likewiſe ſcraped up a great treaſure, by the like methods; but what did all this end in? Theſe exactions had ſo provoked the people, that neither the innocence and virtue of Ferdinand, Alphonſo's ſon, nor the dark wiſdom and ſubtleties of Lodowick could avail them in time of danger; inſomuch, that they both loſt their dominions to the French, without hardly ſtriking a blow. The neceſſities, introduced by the long wars in Italy, brought theſe ſorts of taxes more in vogue, and they were chiefly made uſe of by the little princes there, who erected to themſelves tyrannies in ſeveral cities. Not long after, this way of raiſing money got footing in Spain, and the tax was called the *alcavala*; by which the King was to have the tenth part of all that was ſold, or exchanged; which was firſt laid towards defraying the expences of the wars of Granada againſt the Moors, and continued for ſome time, though the war was ended; but, by the authority of that great miniſter, Cardinal Ximenes, it was aboliſhed. They had likewiſe taxes upon the conſumption, long ago, in France, as in the reign of Chilperic; which the people thought ſo burthenſome, that many deſerted their country upon that account, and they are not heard of again in their hiſtories till ſome ages after.

And as to exciſes, gabels, and high duties upon trade, they were unknown amongſt the founders of the Engliſh government, or of the kingdoms round about them.

France was once upon a right foot, in relation to its liberties; but they who peruſe their hiſtories with care, will find that arbitrary power did not ſo much bring in high taxes, as that high taxes introduced arbitrary power; for when that golden idol of an immenſe revenue was ſet up, all the nation bowed to it.

The tributes, aids, or ſubſidies, formerly granted to the King of England, for the current ſervice of the government, upon the alienation of crown-lands, conſiſted in certain duties on the importation or exportation of goods and merchandiſe; which, in length of time, obtained the denomination of cuſtoms, becauſe thoſe duties had been uſually or cuſtomarily paid. But exciſes are inventions

of ſo modern a date in England, that the very name is not to be found in the law-books till about the middle of the laſt century. The firſt attempt to introduce theſe taxes into England, was in the year 1626, by way of commiſſion under the great ſeal: but the parliament remonſtrated againſt it as illegal, becauſe without the conſent of the people; and the ſcheme was defeated by parliament, out of regard to trade, and a tenderneſs for the Britiſh merchants: however, the next effort had more ſucceſs, in the times of the civil wars, when the parliament, having tried all other methods of raiſing money to pay their army, were obliged to make uſe of an exciſe; though nothing but a large ſtanding army could have forced it down the people. Exciſes being thus introduced during the civil war, we cannot be ſurpriſed to find the ſame method of taxing continued and eſtabliſhed after the reſtoration; when an exciſe upon beer and ale was granted; one moiety whereof was ſettled in fee on the crown, as a recompence for aboliſhing the court of wards, and the other moiety on the King for life.

Thus was one grievance entailed on Britons in the room of another: whether they gained any thing by the bargain, let the public determine; but ſenſible men are of opinion, that if the exciſe upon beer and ale ſhould ever be made the foundation of a general exciſe, the contniuance of the court of wards, arbitrary as it was, would have been a more tolerable evil; for that chiefly affected the richer ſort of people: and a general exciſe will not only be a gnawing canker on our lands, but likewiſe ſuch a burthen on manufactures and navigation, as muſt in time deſtroy the trade, and with it the riches, power, and liberties, of the whole nation.

More than one attempt was made, in the reign of Will. III. to extend the tax upon beer and ale into a general exciſe; but this deſign was ſo vigorouſly oppoſed by many perſons, the moſt zealouſly affected to liberty and the revolution, that the projectors were obliged to lay it aſide; as they alſo were in the year 1733, and notwithſtanding the miniſter had a majority in the houſe of commons, who reſolved, that the cuſtoms paid upon tobacco ſhould be changed into an inland duty of 4 d. *per* pound, and three farthings old ſubſidy at the cuſtomhouſe, ſuch was the univerſal reſentment which prevailed every where againſt this pernicious meaſure, that he was obliged to drop it, to the general joy of the whole nation.

Perhaps ſome people may readily aſſert that exciſes contribute to the increaſe of the revenue. But every man who underſtands the conſtitution of his country, and would endeavour to preſerve it, muſt know that exciſes are incompatible with the freedom of trade; and, as our country is entirely dependent upon traffic, no true Engliſhman can ever bear the thought of a general exciſe. Exciſes differ ſo much from other taxes, that every man muſt be ſenſible how prejudicial they neceſſarily are to trade; which ought to be ſeriouſly conſidered, becauſe the trading part of Great Britain is not only a very large and opulent, but likewiſe the moſt valuable part of it. To their labour and induſtry it is owing that the Britiſh nation is raiſed from a wild, uncultivated deſart, to its preſent height of riches, grandeur, and ſtrength: therefore the wiſdom of the nation formerly was always employed in the encouragement of trade; and, whenever the neceſſities of the ſtate required the impoſition of any burthen on it, by way of ſubſidy, the legiſlature took care that the trader ſhould be protected, at the ſame time, in his perſon and property, againſt the oppreſſions of the officers employed in collecting thoſe ſubſidies; but, ſince the introduction of exciſes, both are become more precarious.

In all diſputes between the crown and the ſubject, in caſes relating to the cuſtoms, the merits of the cauſe are left to the deciſion of law, according to ancient uſage, in the ordinary courts of juſtice; but the converſion of ſubſidies into exciſes, puts the trader under a new ſet of laws, formerly unknown to the Britiſh conſtitution, and perhaps not altogether agreeable to it; for the powers given to the commiſſioners of exciſe, in ſome meaſure, diſfranchiſe every free-born Engliſhman, as far as he is a dealer in exciſeable commodities. One of the moſt eſſential parts of the Britiſh conſtitution, as well as the ſtrongeſt bulwark of it, is that of trials by juries; a privilege which the Engliſh nation hath aſſerted and preſerved for ſeveral ages, with an immenſe profuſion of blood and treaſure. It is this which ſcreens the ſmall from the oppreſſion of the great, the ſubject from the unjuſt reſentment of the prince, or the violence of his miniſters; and therefore all attempts to ſuppreſs this privilege affect the conſtitution in one of its tendereſt parts, and may be made uſe of by bad miniſters to the introduction of arbitrary government. This great and fundamental privilege is preſerved to the ſubject in all the laws relating to the cuſtoms, or duties on importation; but turning the cuſtoms into exciſes on home conſumption, is putting the trader under a ſett of officers, who have power to interpret and execute the laws in a ſummary manner; for here the ſubject is condemned without trial by juries, in the uſual manner, and left without any dernier reſort of juſtice, unleſs it be to the commiſſioners of appeal, which is a kind of ſine cure dependent commiſſion, under which the ſubject is tried by his adverſe party; the commiſſioners, and their inferior officers, being proſecutors, evidence, judges, and executioners.

In duties upon importation, a man hath full power over his goods, as ſoon as he clears them of the cuſtomhouſe, and gets them home. He may diſpoſe of them as he pleaſes, without any body's leave, and is not ſubject to the capricious humour of every little officer, who may take it into his head, or perhaps think it meritorious, to give him as much trouble as poſſible in the execution of his duty. The trader, in this caſe, is not liable to have his ſhop, or warehouſes, ranſacked, without information upon oath that ſome contraband goods are concealed in them; nay, even then, a warrant muſt be granted by a civil magiſtrate, and executed in preſence of a peace-officer in day-time only, according to the uſual forms of law. On the other hand, by the laws of exciſe, no man is at liberty to remove his goods, from the place where they were firſt depoſited, without leave from an officer for ſo doing, to the great interruption of his other buſineſs, and often to the prejudice of his particular dealings and contracts.

As the impriſonment of the body is next to the loſs of life, ſo the confinement of property is next to the taking it away; yet thus it is with exciſeable goods. They are ſhut up in ſhops and warehouſes, under ſevere keepers appointed by the crown, and cannot be moved from thence, or diſpoſed of in a fair way of trade, though the duties have been paid, without a permit, or habeas corpus being taken like felons, and condemned, if they are found without it; which is a great ſeverity and reſtraint upon trade.

Induſtry hath its foundation on liberty; and thoſe men who either are actual ſlaves, or have reaſon to believe their freedom precarious, will never ſucceed in trade, which thrives and flouriſhes moſt in climates of liberty and eaſe. Theſe keep the preſent inhabitants at home, and invite others to ſettle among them, more than the pleaſantneſs of ſituation, or the wholſome temperature of the air. There are many inſtances of fruitful and delightful countries, which have been impoveriſhed, and almoſt depopulated, in ſpight of nature, by ſeverities in government. To this it is owing that trade hath been loſt to one nation, and obtained by another. Britons have particularly experienced this in former ages, to their great infinite advantage; and it is to be hoped they will never act ſo weak a part as to adopt thoſe methods of government, which have deſtroyed trade in other countries, and to withdraw thoſe privileges and encouragements, which have carried it to ſo great a height in their own.

It ought likewiſe to be particularly conſidered at this time, that all nations in Europe are turning their thoughts to traffic; and even in thoſe countries where the government is abſolute in other reſpects, they make it their ſtudy to eaſe the merchants, and encourage both natives and foreigners to ſettle commerce with them.

Shall Britons, on the other hand, encourage their attempts, by laying all the burthens and reſtraints they can

ent on their trade? Is this a time to clog it with new difficulties, or to put the British merchants under any further uneasinesses, after all the embarrassments, interruptions, and depredations, which they suffered with so much patience, for several years before the last war? How prejudicial must this be to a trading nation? Will it not take off the ablest hands from the interest of trade, and oblige them to turn their money into other channels? Is it not eternally true, that the greater the stock, and the more people are employed in commerce, the more extensive and beneficial it will be in any country? This is certainly the only true method of increasing national stock; and this stock is the foundation of the national strength and grandeur.

People are not ignorant that excises have been introduced in the republics of Holland and Venice, but under very different circumstances to those in Great Britain; therefore it may be proper to draw a short comparison between the excises of those commonwealths and Great Britain.

The officers of excise in those countries are empowered only to collect the duties, and not allowed to harrass the people afterwards; whereas excisemen in England may put the trader to infinite trouble and vexation, after the crown is fully satisfied; which frequently proves of worse consequence to him than paying double duty.

The Dutch excisemen have no power of entering and searching houses as the English have. The officers in Holland are not appointed by the Stadtholder, nor in Venice by the Doge; but in England they are nominated by the King, or his subordinates, and removable at pleasure. In Holland and Venice, the duties collected by excise are entirely applied to the public service of the respective states; whereas, in England, great part of the fines and forfeitures comes into the pockets of the crown-officers, and for that reason tempts them to oppress the subject.

But to shew how absolutely disconsonant excises are to the freedom of trade, and how repugnant to the wishes of the mercantile part of the British nation, it is only necessary to have a retrospect to that zeal and unanimity wherewith the merchants and traders of the city of London opposed the scheme for a general excise in the year 1733; when the reasons for this their opposition were set forth, by the court of common council, in a representation, which was delivered to their representatives in parliament, as follows.

"That this court apprehended, from the experience of "the laws of excise then in being, that extending those "laws to any commodities not then excised, must ne"cessarily be very prejudicial to trade; both as it would "probably diminish the consumption of the commodity "to be excised, and subject the fair trader to the fre"quent and arbitrary visitation of officers, and judicial "determination of commissioners removable at pleasure, "and from whom there is no appeal. That the exten"sion of such laws must necessarily increase the number "and power of officers; which would be inconsistent "with those principles of liberty on which their happy "constitution was founded, and would farther deprive "the subjects of England of some of those valuable pri"vileges which had hitherto distinguished them from the "neighbouring nations. Wherefore the court earnestly "recommended it to their representatives, to use their "utmost diligence in opposing a scheme of this nature, "should any such be offered in parliament, in any shape, "or however limited in its first appearance; being fully "convinced, that an inland duty on goods then rated "at the customhouse, could not be effectually collected, "even with the extension of the powers, or the severest "exercise of all the rigours of the present laws of excise."

This representation was soon copied by several of the counties, cities, and boroughs of the kingdom: and the common council of London also presented a petition to the house of commons; wherein they represented, "That "the burthen of taxes already imposed on every branch "of trade, however chearfully borne, was severely felt; "but that they apprehended this burthen would grow too "heavy to be borne, if it was increased by such vexa"tious and oppressive methods of levying and collecting

"the duties, as they were assured by melancholy expe"rience, that the nature of all excises must necessarily "produce. That the merchants, tradesmen, and manu"facturers of the kingdom, had supported themselves "under the pressure of the excise-laws then in force, by "the comfortable and reasonable expectation, that laws, "which nothing but public necessity could be a motive "to enact, would be repealed in favour of the nation, "and of the liberty of the subject, whenever that mo"tive should be removed, as they presumed it effectually "was by an undisturbed tranquillity at home, and a ge"neral peace so firmly established abroad. That if this "expectation was entirely taken away, if the excise"laws, instead of being repealed, were extended to other "species of merchandise not yet excised, and a door "opened for extending them to all; the petitioners could "not, in justice to themselves, to the merchants, trades"men, and manufacturers of the whole kingdom, and "to the general interest of their country, conceal their "apprehensions that the most fatal blow which ever was "given, would be given on that occasion to the trade "and navigation of Great Britain; that great spring "from which the wealth and prosperity of the public "flowed, would be obstructed; the mercantile part of "the nation would become not only less able to trade "to advantage, but unwilling to trade at all; for no "person who could enjoy all the privileges of a Bri"tish subject out of trade, even with a small fortune, "would voluntarily renounce some of the most valuable "of those privileges, by subjecting himself to the laws of "excise; and that the petitioners were able to shew that "these their apprehensions were founded both in expe"rience and reason."

EXCISEABLE. Any thing that is subject to, or may be charged with the duties of excise.

EXPORTATION, in commerce, the act of sending commodities out of one country into another; of which those annually exported from Great Britain are immense: the principal articles being corn, cattle, woollen cloth, stuffs, iron, lead, tin, leather, coal, hops, flax, hemp, hats, malt-liquors, fish, watches, ribbands, and several other things: the whole being so very considerable, that what is yearly exported of the woollen manufacture alone is computed to amount to 2,000,000 l. sterling, and lead, tin, and coals, to 50,000 l. But for the duty on exportation, see *Customs*, and book of *Rates*.

The exports of a nation increase as encouragement is given to manufactures: thus, in the year 1662, the whole exports of England to all the world amounted only to 2,022,812 l. 4 s. and in 1668 to no more than 2,063,274 l. 19 s. but in 1699 they amounted to 6,788,166 l. 17 s. 6 d. and in 1703 to 6,644,103 l. though in 1699 the trade between France and England was charged with high duties against the latter, and in 1703 Great Britain had a war with Spain. This increase in the national exports was very advantageous for the inhabitants of Great Britain, as thrice the number of people thereby received employment and subsistence: therefore, by taking off those duties of excise which affect the manufactoral part of the people, abating such high duties in the customs as are a load to the merchant, improving our lands, extending our manufactures, preserving our wool to ourselves, rearing silk in our American colonies, and exerting ourselves in every branch of trade where our rivals are endeavouring to exert and supplant us, will be the best means for the preservation of the British trade, the extension of our commerce, the exportation of our commodities, and the maintenance of that naval power which shall give security and protection to the whole. See *Importation*.

An encouragement is given for the vending of some of the British commodities, when there is a greater quantity than can be consumed in the nation; which causes the price to be so inconsiderable, as to threaten the impoverishment of the owners, who cannot keep their commodities, if perishable; or if not, their circumstances may be such, that they may not be able to wait till there is a greater scarcity to occasion a rising market: in consideration of which, provision is made, by some of the

Engliſh ſtatutes, when the goods are under ſuch a limited price, to allow the exporter ſo much *per cent.* or *per* quantity, exported, particularly of corn. See *Importation*, and *Bounty*.

Amid the variety of ſentiments upon any propoſal to regulate the duties upon exports and imports, miniſters, and others, have been found, both in their converſation and writings, to maintain the erroneous maxim, that high duties ought to be laid upon commodities exported, becauſe they are paid by foreigners; and, on the contrary, very moderate ones on ſuch as are imported, becauſe they are at the charge of the natives. But the great diſadvantages of this maxim are ſo well underſtood in Great Britain, France, the United Provinces, and all other well conducted kingdoms and ſtates, that they fly from it, and purſue the contrary; giving leave to export their commodities duty free, or on payment of ſuch trifling duties, that ſome of them amount to leſs than 1 *per cent.* and ſometimes they grant bounties for exporting commodities. See *Balance* of trade, and *Commerce*.

Exporting goods by certificate, is to ſend abroad ſuch foreign goods as were formerly imported, and paid duty; for the greateſt part of which a denizen is allowed 12 months after importation, but a foreigner only 9; though for tobacco, ſugar, ginger, pepper, bugle, caſt and bar iron, dying woods, dying wares, and drugs, Britiſh merchants are allowed 18 months, and aliens 15. There is alſo a drawback allowed to ſuch importer of part of the duty paid, according to the nature of the goods, and direction of the ſtatutes: but this drawback is not allowed unleſs the exporter produces a certificate ſigned by the collector, or comptroller of the cuſtoms, that ſuch goods paid the duties inwards, within the limited time; upon which certificate a cocket is granted the exporter, which is called a certificate cocket. See *Drawback*.

EYDE. A town of Norway. See *Denmark*.

F.

FAC

F The ſixth letter of the alphabet, uſed by merchants, bankers, and book-keepers, for abridging references to different pages, or the folio of their books and regiſters: thus, F°. 2°. ſignifies *folio ſecundo*, or ſecond page; and florins are alſo marked by an F, in the two following manners, F L, or F s.

FABRICATE, to build, invent, or manufacture, a houſe or art, or commodity.

FABRICK. A building of any kind; and metaphorically applied, ſignifies any invention, art, or manufacture.

FACTITIOUS, ſignifies any thing made by art, in oppoſition to what is the produce of nature; thus, diſtilled waters are factitious liquors; falſe gems, are factitious ones; and cinnabar is divided into natural and factitious: it alſo ſignifies any made or compound bodies; ſuch as glaſs, paper, braſs, ſteel, and pewter.

FACTOR, in commerce, an agent, or perſon who acts and negotiates for a merchant by commiſſion; called alſo commiſſioner, on ſome occaſions broker, or agent, and throughout the Levant coagis.

Factors are generally charged either with the buying or the ſelling of goods, or both. Thoſe of the firſt kind are uſually eſtabliſhed in places of conſiderable manufactories, or cities of great trade; their office being to buy up commodities for merchants reſiding elſewhere, to ſee them packed, and ſend them to the perſons for whom they were bought. Factors of ſale are alſo uſually fixed in places where there is a conſiderable vent; to whom merchants and manufacturers ſend their goods to be ſold for them, according to the price, and other conditions, expreſſed in the orders delivered them: but the wages, or allowances for ſelling, are generally clear of all expences of carriage, exchange, remittances, and other charges, excepting poſtage of letters, which are never put to account.

The duty of a factor is, to be very exact in obſerving the orders of commiſſion ſent him by his employer; to give frequent advice to his employer of the riſe and fall of the commodity he deals in; what ſpecies of that commodity fetches the beſt price; and of the courſe of exchange: to obſerve a great punctuality in anſwering letters from his correſpondents; as alſo immediately to adviſe his employer of the receipt of his goods; and to give notice when he buys, ſells, or ſhips off goods, on account of his employer.

A commiſſion to a factor is the order, or conditions, given him by his employer, for buying or ſelling any merchandiſe, whereby he is to act; and which is either abſolute or limited. If a commiſſion is abſolute, then the employer gives his factor free power to buy, ſell, or barter, any commodity as he ſhall think proper: but if the commiſſion is limited, then the factor muſt take care to act punctually in conformity to it: becauſe, the commiſſion is what empowers the factor to act; and he muſt abide by the conſequence of it, if he is guilty of breach of orders.

If a factor has orders to ſell the goods of his employer for ready money, he has no authority to ſell them on truſt, although he may ſell them at an advanced price, in conſideration of the credit to be given; for if the buyer ſhould prove inſolvent, the factor muſt make good the loſs to his employer. Alſo, when the factor has authority to ſell goods on credit, if he ſuffers the day of payment to elapſe, and diſpoſes of his own goods to the ſame perſon for ready money, before the goods of his employer are paid for, the factor is obliged to make the payment good to his employer, if the buyer ſhould prove inſolvent.

No factor acting on account of another in merchandiſe, can juſtify receding in any manner from the orders of his principal, though there may be a probability of advantage by another management; unleſs the principal give him a general commiſſion to act for the beſt. Therefore, if four or five merchants remit to one factor four or five diſtinct parcels of merchandiſe, and the factor diſpoſes of them jointly to one perſon, who pays one moiety of the money down, and contracts to pay the remainder at the expiration of a certain time, ſhould the vendee break before the payment of the other moiety, every one of the principals muſt bear an equal ſhare of the loſs ſuſtained.

If a factor, by order or commiſſion of his principal, buys any goods above the price limited to him; or they are not of that goodneſs and quality, as by the authority they ought to be; the factor is to keep the ſame for his own account, and the merchant may diſclaim the buying of them: he may alſo do the ſame, if the factor, having bought a commodity according to his commiſſion, ſhould ſhip the ſame for another place than where he was commiſſioned to do; beſides, in ſuch caſe, if the price of the goods is advanced, and the factor thereupon fraudulently lades them for ſome other port, to take the advantage thereof, the principal merchant may recover damages of the factor.

As fidelity, diligence, and honeſty, are expected from the factor; ſo the law requires the like from the principal, judging the act of the one to be the act of the other: therefore, if a merchant remits counterfeit jewels to his factor, who diſpoſes of them for the ſame valuable conſideration as if they were genuine; if the factor receives any loſs or prejudice thereby, by impriſonment or other puniſhment, the principal is not only to make good the damage to the factor, but alſo to render ſatisfaction to the party to whom the jewels were ſold: for the principal muſt anſwer for his factor in all caſes where he is privy to the act or wrong. And ſo it is in contracts, as if a factor buys goods on account of the principal, eſpecially where he is accuſtomed ſo to do, the contract of the factor will oblige the principal to a performance of the bargain; and he is the proper perſon to be proſecuted for non-performance: but if a factor buys things generally, without declaring upon the contract that he bought only as a factor, he is chargeable in his own right in ſuch a contract.

As the actions of factors depend on buying and ſelling, and in general relate to entering goods, freighting ſhips, inſurances, with all other maritime and commercial matters; and as their truſt and authority is very conſiderable, they ought to be provident in their actions, for the benefit of their principals: therefore, if goods and merchandiſe are ſent to a factor, and upon arrival he ſhould, through negligence or otherwiſe, be guilty of making a falſe entry at the cuſtom-houſe, or ſhould land the commodities without an officer of the cuſtoms, whereby they ſhould incur a ſeizure or forfeiture; in this caſe the factor muſt make good the damage to the principal: but it is otherwiſe if the factor make his entry according to the invoice or advice received by letter, and there ſhould happen to be a miſtake.

If a principal gives orders to his factor to make an inſurance on the ſhip and goods as ſoon as laden, and the factor, having money in his hands, neglects to make ſuch inſurance, if the ſhip happens to miſcarry the factor muſt anſwer it: ſo if the factor after he has inſured the goods, makes any compoſition with the inſurers, without order or commiſſion from his principal, he is anſwerable for the whole aſſurance to the merchant.

A factor is accountable for all lawful goods that come ſafe to his hands; and if he has orders not to ſell any commodities particularly ſpecified, which he diſobeys by ſelling them, he muſt be anſwerable for any damage received.

In caſe goods are bought or exchanged without orders, it is at the courteſy of the merchant whether he will receive them, or return them on the hands of his factor: ſo that where a factor has bought or ſold merchandiſe, purſuant to orders, he ſhould immediately give advice of it to his principal, leſt the former orders ſhould be contradicted before the time of his giving notice: and the goods bought he is to ſhip and ſend away by the firſt opportunity, giving the ſpeedieſt advice, and ſending a bill of lading.

If a factor, by any error, in his accompts, wrongs either himſelf or his employer, ſatisfaction muſt be made from the one to the other, not only for the principal, but alſo for the intereſt of the ſum erroneouſly charged or omitted; becauſe a factor uſually concludes his invoice by writing *errors excepted*.

Such factors as have no conſtant reſidence in foreign countries, but to go and return from place to place, generally enter into a bond for a proper diſcharge of their truſt, to their principal: but ſuch factors are more properly called ſupercargoes.

Among European merchants it is the general cuſtom to act as factors for each other; which is more properly called commiſſion buſineſs, and is carried on entirely by the intercourſe of letters and invoices; the invoice containing an accompt of the prime coſt and charges of the merchandiſes to be ſold, whereby the factor is the better able to diſpoſe of the ſame to advantage.

By the ſtatute of the 9th and 10th of King William III. it was enacted, That no governor, or deputy-governor, of any of the Britiſh plantations in America, or the judges there, or any other for their uſe, ſhould be factor or agent for the African company, or others, for the ſale or diſpoſal of negroes; and any perſon offending therein ſhould forfeit 500 l. And by the ſtatute of the 5th of Geo. II. factors and brokers are declared liable to the ſtatutes concerning bankrupts. See *Broker*, and *Agent*.

FACTOR *in France*, is of a ſimilar nature to the factor in England for buying and ſelling: but the French have alſo theſe three other kinds of factors; factors of bank, factors of ſtaple, and factors of carriages.

Factors are thought ſo neceſſary for carrying on trade in Spain, that Don Geronymo de Uztariz, in the 107th chapter of his theory and practice of commerce, recommends it to the King of Spain to ſettle public factors at Liſbon, Bourdeaux, Bayonne, Nantz, Roan, London, Oſtend, Amſterdam, Hamburgh, Copenhagen, Dantzic, Stockholm, Peterſburgh, Marſeilles, Genoa, Leghorn, Naples, and Meſſina, to be maintained at the public expence, and each of them to be allowed 800 dollars, or about 143 l. ſterling yearly, for himſelf, deputy, houſe, and ware-houſes.

FACTORAGE. The wages of a factor, called alſo commiſſion, which is variable at ſeparate places, and for different voyages: but at a medium it may be fixed at 3 *per cent.* of the value of the goods bought or ſold, excluſive of the charge of package, which is paid over and above. At Virginia, Barbadoes, and Jamaica, the factorage is from 3 to 5 *per cent.* and the like throughout the greateſt part of the Weſt Indies: at Smyrna, Aleppo, and other places in Turky, it is 3 *per cent.* at Leghorn, and other places of Italy, 2 and a half: Spain, Portugal, or France, 2 *per cent.* Hamburgh, and other parts of the Eaſtland countries, 2 *per cent.* Rotterdam, and other parts of the United Provinces, 1 and a half: and inland factors have uſually 1 and a quarter *per cent.*

FACTOR-*book*. See *Book-keeping*.

FACTOR-*ſhip*. The office, duty, or employment, of a factor.

FACTORY, is a place where a conſiderable number of factors reſide, to negotiate, or officiate, for their maſters, or principals, which is a term generally uſed in ſpeaking of the Eaſt Indies, and other parts of Aſia, whither the Europeans annually ſend their ſhips, and keep factors to buy the commodities of the country, and ſell thoſe brought from Europe.

The greateſt and nobleſt factory in the world, is that of the Engliſh at Smyrna, which is a ſort of ſeminary of merchants, conſiſting of 80 or 100 perſons, moſt of them young gentlemen of the beſt families, and frequently younger ſons of the nobility. As there is a neceſſity [illegible] ſerving an apprenticeſhip of ſeven years to be intitled [illegible] trade to the Levant, the cuſtom is, for perſons of fortune [illegible] to bind their younger ſons to ſome merchant, who, [illegible] conſideration of 3 or 400 l. ſterling, agrees, after [illegible] three firſt years of their apprenticeſhip are expired, to ſend them to Smyrna; where they have not only the management of their maſters affairs with very plentiful a lowance, but are likewiſe permitted to trade for themſelves; whereby they are enabled to live ſplendidly during the remainder of their apprenticeſhip, and at length come out the beſt qualified for buſineſs of any young perſons in the world.

The Engliſh factories at Liſbon and Hamburgh are [illegible] very conſidetable: but the Portugal trade is now ſo greatly altered from what it was formerly, that inſtead of factors the Engliſh gentlemen at Liſbon are become the greatest merchants trading there, and ſend more commiſſions to England than they receive from thence.

FACTOTUM. The chief, or head manager, of a trade or buſineſs.

FAG. The waſte, or worſt part of a piece of cloth, from whence the fag-end is that which has the entring of the loom parted by a ſtripe to be cut off.

FAGGOT. A ſmall bundle of ſticks bound up together, ſuch as bakers buy to heat their ovens. See *Fuel*.

FAGGOT *of ſteel*, expreſſes the quantity of 120 lb. weight. See *Weight*.

FAILURE, or *Failing*, a ſpecies of bankruptcy, popularly called breaking, or ſtopping payment. See *Bankrupt*.

FAIR. A public place where merchants, traders, and other perſons aſſemble from ſeveral parts on ſome fixed day of the year, to buy and ſell commodities, and to partake of the diverſions uſually accompanying ſuch aſſemblies: which fairs are either free, or charged with tolls and impoſitions: and it is the ſovereign alone that has a right, by his letters patent, to eſtabliſh fairs, whether free or ſubject to duties, and the other ordinary laws and penalties. See *Market*.

The privileges of free fairs principally conſiſt in three articles: 1ſt, in that all merchants and traders, whether natives or foreigners, are allowed to enter the kingdom, and are under the royal ſafeguard and protection in coming and returning; as alſo are their agents, their merchandiſes, and their effects. 2d, In that the ſaid perſons, and their effects, are exempt from all duties, impoſitions, tolls, and ſervitudes. And, 3d, that merchants in going to, or returning from the fair, cannot be arreſted, or their goods ſtopt.

Several fairs are held in the open fields, or on heaths and commons, under tents, booths, and barracks, erected for the purpoſe; as Sturbridge fair, which is annually held in a field near Cambridge, on the 7th of September, and continues a fortnight; where all ſorts of tradeſmen reſort, from different parts of England, either to buy or ſell commodities. Some are held in places walled in for the purpoſe, and formed into regular ſtreets and lanes for the occaſion; as the fair of St. Lawrence in Paris. And others are held in the open places and ſtreets of cities; as Bartholomew fair in London, Briſtol fair, and the fair of St. Germains in the ſuburbs of Paris.

Fairs, particularly ſuch as are free, make a very conſiderable article in the commerce of Europe; eſpecially thoſe of the inland parts, as Germany, and the North, where the continual paſſage and repaſſage of veſſels are impracticable. But the moſt celebrated fairs in Europe are the following: 1ſt, That of Francfort in Germany, held twice a year, in ſpring and autumn; the firſt commencing the Sunday before palm-ſunday, and the other on the Sunday after the 8th of September; each of which continues two weeks, the firſt being called the week of acceptance, and the ſecond the week of payment: they are remarkable for the ſale of all kinds of commodities, but particularly the immenſe quantities of curious books no where elſe to be found, and whence the bookſellers throughout all Europe uſed to furniſh themſelves: and before each fair, there is a catalogue of all the books to be ſold thereat, printed and diſperſed, to call purchaſers together; though the learned complain of ſeveral unfair practices therein; as fictitious titles, names of books pure-

purely imaginary, beſide great faults in the names of the authors, and the titles of the real books. 2. The fairs of Leipſic in Saxony, which are held three times a year; one beginning on the 1ſt of January, another three weeks after Eaſter, and a third after Michaelmas, which hold twelve days a piece, and are at leaſt as conſiderable as thoſe of Francfort. 3. The fairs of Novi, a little city on the confines of the Milaneſe, under the dominion of the republic of Genoa; of which there are four in the year, commencing on the 2d of February, the 2d of May, the 1ſt of Auguſt, and 2d of September: but what chiefly contributes to render them ſo famous, is the vaſt concourſe of the moſt reſpectable merchants and negotiants of the neighbouring countries for the tranſacting of affairs, and ſettling accompts; though the commodities bought and ſold here are very conſiderable. 4. The fairs of Riga on the north-weſt coaſt of Ruſſia, whereof there are two in the year, one in May, and the other in September: they are much frequented by the Engliſh, Dutch, and French ſhips, as alſo from all parts of the Baltic; becauſe the beſt time for the ſale of goods at Riga, is during the fairs; but ſince Peterſburgh has flouriſhed in ſo ſplendid a condition, theſe fairs have been greatly diminiſhed. 5. The fair of Archangel, on the northern coaſt of Ruſſia, during which all the trade foreigners have with that city is managed, it continuing a month, or 6 weeks at moſt, commencing from the middle of Auguſt; when the Muſcovite merchants attend here from all parts of that extenſive empire; and the Engliſh, Dutch, French, Swediſh, Daniſh, and other ſhips in the port of that city, on this occaſion, ordinarily amount to 300; but this fair is not free, as the reſt are, the duties of importation and exportation being ſtrictly paid, and on a very high footing. 6. The fair of St. Germain, one of the ſuburbs of Paris, commencing on the 3d of February, and holding till Eaſter; though it is only free for the firſt 15 days. 7. The fairs of Lyons in France, which Monſieur de Cheme, in his antiquity of cities, would inſinuate, from a paſſage in Strabo, were eſtabliſhed by the Romans; though it is certain the fairs, as they now ſtand, are of a much later date: there are three of theſe fairs at Lyons in the year, each continuing 20 days, commencing on Eaſter Monday, the 26th of July, and the 1ſt of December, all three being free for ever. 8. The fair of Guibray, a ſuburb of the city of Falaiſe, in the Lower Normandy, which is reported to have been eſtabliſhed by William the Conqueror and King of England, in conſideration of his being born at Falaiſe: it commences on the 22d of July, and holds fifteen days, being free by charter, and longer by cuſtom. 9. The fair of Beaucaire, held partly in a city of that name, in Languedoc, a province of France, and partly in the open country, under tents and booths; which commences on the 22d of July, and only holds for three days; yet it is the greateſt and moſt celebrated of all the fairs in that part of Europe, both for the concourſe of ſtrangers from all parts, and for the traffic of all kinds of goods, the money returned in theſe three days amounting ſometimes to above 6 millions of livres, or about 250,000 l. ſterling.

The Spaniſh fairs of Porto-Bello, Vera Cruz, and the Havanna, are the moſt conſiderable of all thoſe in America; the two firſt continue as long as the flota and galleons remain in thoſe parts; and the laſt is opened as ſoon as the flota or galleons arrive there upon their return for Spain, this being the place where the two fleets join. See *Flota*, and *Galleon*.

The following is an exact alphabetical LIST *of the fixed and moveable* FAIRS *in England and Wales.*

N. B. The fixed fairs, with the dates of the days on which they fall, are in Roman letters; and the moveable fairs, with their perpetual directions, in Italic characters.

But the greateſt of theſe fairs are, Sturbridge, in Cambridgeſhire, for almoſt all kinds of goods; Briſtol, Exeter, and Cheſter, for cloths, and many other commodities; Wey-hill for hops, and Burford for ſheep; Bartholomew-fair, London, for lean and Welch black cattle; St. Faith's for Scots runts; Yarmouth, for herrings; Ipſwich, for butter; and Shrewſbury and Bridgnorth, for Welch butter and cattle.

According to the Engliſh laws, a fair muſt be kept no longer than the grant, or uſe by cuſtom, will warrant; and if goods are ſold after the expiration of the time, the ſeller is to forfeit to the King double the value of what is ſold, of which the proſecutor is to have the fourth part. The fair muſt be duly proclaimed by the ſheriff

or lord of the fair, when the time of its continuance muſt be mentioned; the place or ground appointed muſt be ſet out; and care is to be taken that there ſhall be no riots or diſturbance, but an orderly keeping of it during the time it continues. Where there is a beaſt-fair, for horſes, mares, geldings, and other cattle, they muſt have their appointed places, that ſuch people as reſort thither may have a certainty where to find them. One ſufficient perſon, or more, muſt be appointed to take toll, and keep the ſame place from ten in the forenoon every day till ſun-ſet, during the time of the fair; and in tolling, the perſon appointed for that purpoſe muſt have before him the parties bargaining, upon his tolling any horſe, or other beaſt, and muſt write in his book the chriſtian and ſirnames of all the parties; alſo their dwelling-places, with the colours, and ſome particular marks of the horſe, mare, or gelding, ſo ſold or bargained for, on penalty of forfeiting 40 s. for every default. The toll keeper is to have one credible perſon, known to him, to vouch the horſe or mare, and teſtify his knowledge of the ſeller; and his name, and place of abode, muſt be entered with that of the other in the book; together with the colour, mark, or price, of the horſe or mare ſold or exchanged; of which the buyer may have a note in writing out of the book, reciting the contract, with the hand of the toll-man thereto, for which he may take 2 d.

If any toll-keeper ſuffer a ſale to paſs without a voucher, unleſs he well knows the party, he is to forfeit 5 l.; as alſo is every party making a falſe teſtimony, or avouchment; or every ſeller unknown, not bringing a voucher, and cauſing the ſame to be entered; and the ſale of the horſe, or other cattle, to be void. But, notwithſtanding ſuch vouching, if a horſe is ſtolen, and ſold in this manner, the owner, upon claiming him within ſix months after ſtealing, may redeem him at the price he was ſold for, making proof, by two ſufficient witneſſes, of his property, and that it was ſtolen; ſuch proof to be made before a juſtice of peace, or the head-officer or magiſtrate of a corporation; and the price to be ſuch as the buyer upon oath ſhould teſtify before the juſtice he paid for him: though, if the ſtolen horſe is not ſold in open fair or market, and lawfully tolled, the right is in the owner from whom he was ſtole, who may ſeize or replevy him in any place where he finds him

For the rendering of juſtice between buyers and ſellers, and the redreſs of grievances ariſing therein, a court of pie-pouder was eſtabliſhed, by the antient laws of England, to be held in fairs. See *Pie*-pouder court.

By the ſtatute of the 1ſt and 2d of Philip and Mary, it was enacted, That perſons dwelling in the country, out of cities, boroughs, towns corporate, or market towns, ſhould not ſell by retail any woollen-cloth, linen cloth, haberdaſh-wares, grocery-wares, or mercery-wares, at any cities, boroughs, towns corporate, or market-towns, except in open fairs, upon pain of forfeiting 6 s. 8 d. and the wares to be ſold: provided that this act ſhould not be hurtful to any that brought thoſe commodities to thoſe places, to be ſold by wholeſale. See *Market*.

FAISANS, or *Pheaſants*. An iſland made by the river Bidoſſa, which ſeparates France from Spain, ſituated in 1 deg. 30 min. of W. lon. and 43 deg. 25 min. of N. lat. which iſland has been the ſcene of ſeveral treaties between France and Spain, particularly in 1659.

FALKENBURG, or *Fauconberg*. A port-town of Sweden, in the province of Gothland, ſituated in 13 deg. of E. lon. and 57 deg of N. lat. See *Sweden*.

FALL, or *Foll*. A ſmall copper coin current in Egypt, worth about 3-20ths of a penny ſterling; but the Turks call it *mangur*.

FALMOUTH. A port-town of Cornwall, ſituated in 5 deg. 30 min. of W. lon. and 50 deg. 15 min. of N. lat. on a fine bay of the Engliſh channel, the entrance whereof is well defended by forts, and the town has very lately, from an obſcure place, become one of the moſt flouriſhing ſea-ports in the weſt of England.

FALSTER. A little iſland of Denmark, ſituated in 12 deg. of E lon. and 55 deg. of N. lat. near the entrance of the Baltic, and ſouth of Zealand, from which it is ſeparated by a narrow ſtreight. See *Denmark*.

FAMAGUSTA. A city of Aſiatic Turky, ſituated in 36 deg. of E. lon. and 35 deg. of N. lat. at the end of the iſland of Cyprus, anciently a ſtrong ſea-port town of great trade; but the harbour is now choaked up in ſuch a manner as to admit of no ſhips of burden. See *Turkiſh* iſlands.

FAMINE *Port*. A fortreſs ſituated in 80 deg. of W. lon. and 54 deg. of N. lat. on the N. E coaſt of the ſtreights of Magellan, where the Spaniſh garriſon periſhed by famine, and therefore it has been ever ſince deſerted.

FAMIS, is a term uſed at Smyrna, where what they call the famis gold cloths, is one of the ſorts of ſtuff mixed with gold ſent from Europe.

FAN. A machine uſed to raiſe wind, and cool the air by agitating it; though, among Europeans, and particularly in England, it is more properly a toy, being more conducive to ornament than utility. The cuſtom now prevalent among the ladies of wearing fans, was borrowed from the inhabitants of the eaſtern countries; where the intemperate heat of the climate renders the uſe of fans, and umbrellas, almoſt indiſpenſible: but at preſent, what is called a fan among Europeans, is a thin ſkin, or piece of paper, taffety, or other light ſtuff, cut ſemi-circularly, and mounted on ſeveral little ſticks of wood, ivory, tortoiſe-ſhell, or the like; the ſticks being uſually provided by the cabinet makers or toymen, and the fan-painters plait the papers, paint, and mount them. The common painting is gold leaf, applied on a ſilvered ground, both prepared by the gold-beaters; though ſometimes they paint on a gold ground, but it is rarely, moſt true gold being too dear, and falſe too paltry. The Italian mounts are moſt in requeſt; but a great part of the fan mounts are engraved, and afterwards coloured, which is a great diſcouragement to any improvement in that branch of trade in England.

FAN-*maker*, is a perſon whoſe trade conſiſts in making of womens fans.

FAN-*makers company of London*, was incorporated by letters-patent of the 8th of Queen Anne, dated the 19th of April 1709, by the appellation of The maſter, wardens, aſſiſtants, and ſociety of the art or myſtery of fan makers in the cities of London and Weſtminſter, and twenty miles round the ſame; which is a company conſiſting of a maſter, 2 wardens, and 20 aſſiſtants; but they have neither livery or hall.

FAN-*painter*, is a perſon who paints fans; which is a buſineſs that requires no great fancy, nor much ſkill in drawing or painting, to make a workman; a glare of colours being more neceſſary than a polite invention.

FANAM. A ſilver coin current in different parts of the Eaſt Indies, particularly along the coaſt of Coromandel, from the Cape of Comorin to Bengal; as alſo in the iſland of Ceylon, though not ſtruck there; being worth about 3 d. ſterling.

FANEGOS. A corn-meaſure uſed in Portugal, 15 of which make the muid, or about three Engliſh quarters.

FANEQUO, or *Fannaque*. A corn-meaſure uſed in ſome towns of Spain, particularly Cadiz, St. Sebaſtians, and Bilboa; being the ſame as the fanegos of Portugal, weighing by heap 144 lb. and by ſtroke 99 lb. Engliſh.

FANGOT. A pack, or parcel of goods from the Levant; from one to three hundred weight.

FANO. A ſmall weight uſed at Goa, and in ſome other parts of the Eaſt Indies, for the weighing of rubies, being about two caracts.

FANO is alſo a port-town of Italy, ſituated in 14 deg. of E. lon. and 44 of N. lat. on the gulph of Venice, and ſubject to the pope. See *Italy*.

FANTI, is a term at Venice for the clerks, or factors, of the college of commerce, by whoſe intervention merchants make proteſts of bills of exchange.

FARATELLE. A weight uſed in ſome places of the Eaſt Indies, being about 1 lb. 16 oz. avoirdupoiſe.

FARDEL. A bundle, or packet, ſuppoſed commonly leſs than a regular pack or bale.

FARDOS. A ſilver coin current at Bantam, in the iſland of Java, worth about 10 d. ſterling; and the fardos is alſo a money of accompt.

FARE. A voyage, or paſſage, or the money paid for paſſing by water, or carriage by land. See *Waterman*, *Coach*, *Carmen*, and *Carriage*.

FARE *of Meſſina*. The ſtreight between Italy and Sicily, being about 7 miles broad.

FAREWEL *Cape*, or *Cape Farewel*. The moſt ſoutherly promontory of Greenland, at the entrance of Davis's ſtreights, being ſituated in 50 degrees of W. lon. and 60 deg. of N. lat. See *Denmark*.

FARM. A certain portion of land occupied in tillage, either of a perſon's own, or rented, or leaſed, from ſome lord, or proprietor, at a certain rate, by the year; to which there is a houſe or habitation belonging; alſo the equivalent paid to a prince for the income or amount of ſome duty or exciſe upon commodities imported or exported: thus the duties in France are lett to farm, and the duty of exciſe in Scotland is farmed for 33,500 l. a year.

FARMER. One who rents or occupies himſelf in tilling and improving land, in order to its producing corn; as alſo in breeding cattle; likewiſe one who rents the cuſtoms, duties, or exciſe, of a place or kingdom. See *Agriculture*.

FARO. A cape on the north-eaſt point of Sicily, ſituated at the entrance of the ſtreight between the continent of Italy and Sicily. See *Pharos*.

FARO. A ſea-port town of Portugal, in the province of Algarva, ſituated in 9 deg. of W. lon. and 36 deg. 50 min. of N. lat. See *Portugal*.

FARO. See *Ferro*.

FARRAGO. A jumble or mixture of ſeveral ſorts of grain together.

FARRIER. A perſon whoſe office is to ſhoe horſes, and cure them when diſeaſed or lame.

FARRIERS *company of London*, was incorporated by letters-patent of the 25th of Charles II. dated the 17th of January 1673, by the ſtyle of The maſter, wardens, aſſiſtants, and commonalty of the company of farriers, London; which is a fraternity conſiſting of a maſter, 3 wardens, and 24 aſſiſtants, with 76 liverymen, who pay a fine of 5 l. at their admiſſion; but they have no hall, where they may treat of their affairs.

FARTHING. A ſmall Engliſh copper coin, amounting to one fourth of a penny, which was antiently called fourthing, as being a fourth of the integer or penny. See *Coin*, and *Money*.

FASHION, or *Mode*, is a term uſed among artificers, for the trouble, time, and labour employed in a piece of work; particularly any ſilver or gold utenſil, inſtrument, toy, or the like; for it is by the faſhion that the wages or ſalary of the workmen is regulated.

The term *faſhion* is alſo applicable to new ſtuffs, which pleaſing by their colour, their deſign, or their manufacture, are firſt eagerly ſought for, but give way in their turn to other ſtuffs that have the charms of novelty.

The word *faſhion* is therefore uſed with regard to every particular that enters the commerce of wool, and ſilk, either for cloathing, ornament, or furniture, or even things in no reſpect relative to commerce. Thus, it is ſaid, the colour of this cloth is the faſhion; this damaſk is a new faſhion; this deſign is new, but the faſhion will not continue long; theſe points, theſe laces are now the faſhion.

A ſtuff is ſaid not to be in faſhion when there is no call for it.

It is certainly advantageous for a tradeſman to invent new faſhions of ſtuffs, or ſilks, if he can have a prompt ſale for them; but it is dangerous for him to encumber himſelf with an abundance of novelties, which may eaſily become ſhopkeepers, or which he is obliged to ſell very often at a conſiderable loſs, either by a ſudden change of faſhion, or by public mournings, which ſometimes happen when leaſt expected.

FASHION-*pieces*, in the ſea-language, are two pieces of timber, which form the breadth of a ſhip, at the ſtern, being the outmoſt timbers of the ſtern on each ſide, except aloft, where the counters are. See *Stern*.

FAT. A white and unctuous matter, found in ſeveral parts of the bodies of animals.

Tho' it may ſeem that the different ſorts of fat are of no great utility in trade; yet there are ſome, which rendered and clarified, make a part of the druggiſt's trade; ſome being uſed in medicine, and others in the manufacture of candles, or in the preparation of certain ſorts of leather, under the name of tallow. See *Tallow*.

FAT. A ſea-term, denoting the ſame with broad: thus, if the truſſing in, or tuck of a ſhip's quarter, under water is deep, they ſay, ſhe hath a fat quarter.

FAT, or *Vat*, alſo expreſſes a large wooden veſſel, which, among brewers and malſters, is uſed to meaſure malt for expedition, containing a quarter, or eight buſhels.

FAT, is likewiſe a veſſel, or pan of lead, uſed in making ſalt.

FATHOM. A long meaſure, containing ſix feet, taken from the utmoſt extent of both arms, when ſtretched into a right line.

The fathom is principally uſed at ſea, in eſtimating the lengths of cables, and other ſhip-ropes, with the depths and ſoundings of the ſea: though it is alſo uſed in mines, quarries, wells, and works of fortification. But there are three kinds of fathoms, accommodated to the different ranks of veſſels: the firſt, which is that of men of war, contains ſix feet; the middling, or that of merchant-ſhips, five feet and a half; and the ſmall fathom uſed in fluyts, flyboats, and other fiſhing veſſels, only five feet.

FATHOM, is alſo uſed in ſeveral countries, particularly Italy, for the common yard, or ell, whereby things are ordinarily meaſured in commerce; in which ſenſe it is more commonly called *brace*, from *braccio*, an arm.

FAUCON, or *Falcon*. A ſmall piece of cannon, whoſe diameter is 2 ¾ inches; weight 750 pounds, length 7 feet, load 2 ¼ pound, ſhot 2 ½ inches diameter, and 2 ½ pound weight. See *Cannon*.

FAUCONET, or *Faulconet*. A very ſmall piece of ordnance, whoſe diameter at the bore is 2 ¼ inches, weight 400 pounds, length 6 feet, load 1 ¼ pound, ſhot ſomething more than 2 inches diameter, and 1 ⅛ pound weight. See *Cannon*, and *Ordnance*.

FAVOUR, in commerce, ſee the article *Grace*.

FAYAL. One of the Azores, or weſtern iſles, ſituated in the Atlantic ocean, in 31 deg. of W. lon. and 30 deg. 15 min. of N. lat. See *Azores*.

FAYALLE. A money of accompt uſed in Japan, about the value of 8 s. ſterling.

Since the year 1685, the Dutch were allowed to bring to Japan, to the amount only of 300,000 fayalles of merchandiſe; which is, however, common to them with the Chineſe, Siameſe, and other Indian nations who trade there, whoſe cargoes have likewiſe been fixt at a certain number of fayalles. See *Japan*.

FAYANCE, or *Fayence*. A kind of fine pottery made of varniſhed earth, or rather enamelled; ſo called from Fayance, a town of Italy, where it was firſt invented. In the cabinets of the curious, fayances are met with painted by the moſt celebrated painters, particularly by Raphael, and Julius Romanus, which renders them of an extraordinary price and rarity. See *Porcelain*.

FEATHER. That part of birds which covers them, and enables them to fly. The feathers of birds make a conſiderable article in commerce, particularly thoſe of the oſtrich, heron, ſwan, peacock, gooſe, and other poultry, for plumes, ornaments of the head, filling of beds, and writing-pens. See *Plumes*, and *Down*.

FEATHER-*edged boards*, and *Planks*, are thoſe which are thicker on one ſide than the other.

FEE, ſignifies a reward, or ordinary due, given a perſon for the execution of his office, or the performance of his part, in his reſpective art or ſervice: thus the lawyer and phyſician are ſaid to have their fees, or conſiderations for the pains taken with the client or patient.

FEES, alſo denote ſettled perquiſites or allowances paid to public officers, by perſons who have buſineſs with them; particularly among the officers of the cuſtoms, for whoſe fees on importation and exportation, entry and landing, See *Cuſtoms*.

No fee is to be paid in Great Britain for foreign coin and bullion inwards and outwards: nor for diamonds, precious ſtones, jewels and pearls, inwards and outwards; nor for fiſh by Britiſh ſubjects, in Britiſh ſhipping inwards, outwards, or coaſtwiſe. There is alſo none to be paid for goods under the value of 5 l. in the book of rates, paying for ſubſidy 5 s. or leſs: nor for corn exported; nor for debentures, for corn, fiſh, fleſh, gunpowder, and ſalt: nor for the premium on naval ſtores: nor for any entry, warrant, debenture, certificate, or cocket in relation to the ⅓ or ⅔ ſubſidies only, upon forfeiture of

0 l. for each duty; $\frac{1}{3}$ to his Majeſty, and $\frac{2}{3}$, beſides oſts of ſuit to the party grieved: nor for paſſing of de-entures for goods chargeable with any additional duties, nore than was before payable for debentures for repayment f the half ſubſidy; nor any fee for any oath adminiſtred pon the act of the 4th and 5th of Will. and Mary: nor or debentures, certificates, or payments, for the bounty n Iriſh linen.

n the cuſtoms of London there are the following rules.

Goods not paying 20 s. cuſtom, whether inwards or out-wards, to pay but half fees.

For butter, corn, grain, meal, and other goods, which nay be exported free, carried to or from any place within he port of London, to be only 3 s. 5 d. and ſuch goods o paſs by tranſire, without cocket or bond.

For corn not exceeding 50 quarters, or hops not exceed-ing 50 bags, to be only 1 s. 8 $\frac{1}{2}$ d.

For a cocket or certificate outwards, to be paid in one ſum to the officer granting the ſame.

n other ports than London, to be ſuch as were taken in he 4th year of the reign of Jac. I. till otherwiſe ſettled y parliament.

In any port, payable by 12 Car. II. or by any law ſince, to the officers of the cuſtoms in Great Britain, confirmed nd continued till altered by parliament.

Payable to the officers of the cuſtoms in any port. For a poſt-entry, when the cuſtom is under 5 s. nothing; ex-ceeding 5 s. and under 40 s. ſix pence; above 40 s. the ſame fees as for the prime entry. But one fee to be paid by Britiſh, for all the goods entered at one time in one ſhip, tho' the duty is diſtributed into ſeveral offices.

The merchants are to pay for weighing all goods ſhort-entered above 20 s. cuſtom; and for opening all goods ſhort-entered above 10 s. cuſtom; but if duly entered, not to be at any charge.

ET. See *Foot*.

LIN A ſmall weight, uſed by French goldſmiths, and coiners, weighing 7$\frac{1}{5}$ grains: the pound mark being com-poſed of 640 felins.

LL-MONGER, or *Felt-monger*. A perſon whoſe buſi-neſs conſiſts in buying ſkins of all ſorts, with the wool on, from the country people; and in ſelling the ſkins dreſſed to glovers and others, and the wool to the wool-ſtaplers.

LLOWSHIP, *Company*, or *Partnerſhip*, in arithmetic, is a rule of great uſe in ballancing accompts among mer-chants, and owners of ſhips, where a number of perſons putting together a general ſtock, it is required to give every one his proportional ſhare of his loſs or gain. The baſis of fellowſhip is only a repetition of the golden rule, which fully anſwers all queſtions of that kind: for, as the whole ſtock is to the total thereby gained or loſt, ſo is the particular ſhare of every man to his proper ſhare of loſs or gain: wherefore, the ſeveral ſums of money of every partner are to be gathered into one ſum, for the firſt term; the common gain or loſs for the ſecond; and the ſhare of every particular man for the third; when the golden rule is to be wrought ſo many times as there are partners.

But there are two caſes of this rule, the one without, and the other with time: the former being where the quantity of ſtock contributed by each perſon is alone conſidered, without any particular regard to the length of time, that any of their monies were employed: and the latter is, where the time wherein the money was employed enters into the accompt.

LLOWSHIP-*porters*. See *Porter*.

LOURS. A copper coin ſtruck at Morocco, 8 of which make a blanquil, or about 2 d. ſterling.

LT. A kind of ſtuff, either of wool alone, or of wool and hair, neither ſpun, croſſed, nor wove; but deriving all its conſiſtence from its being wrought, filled with lees and ſize, and afterwards faſhioned on a block or mould by help of fire and water: caſtors, camels, and coneys hair, with ſheeps wool, being the moſt uſual ingredients of felts; and hats of all kinds are the works they are prin-cipally employed in. See *Hat*.

LT-*maker*, or *Hatter*, is a perſon whoſe trade conſiſts in the manufacture of hats. See *Hat*.

FELT-*makers*, or hat-makers company of London, was an-tiently a branch of the company of haberdaſhers; but they applied in the year 1576 for an excluſive charter, in which, oppoſed by the haberdaſhers, their endeavours proved abortive; however all diſputes were at laſt happily adjuſted, and the felt-makers, by letters-patent of the 2d of James I. dated the 2d of Auguſt 1604, were incor-porated by the name of The maſter, wardens, and com-monalty of the art or myſtery of felt-makers of London: which is a fraternity governed by a maſter, four wardens, and 25 aſſiſtants, with a livery of 60 members, who at their admiſſion pay a fine of 5 l. each; but have no hall to manage their affairs in.

FELT-*monger*. See *Fell-monger*.

FELUCCA, or *Felucco*. A little veſſel with ſix oars, not covered, and much uſed in the Mediterranean; which has this peculiarity, that the rudder may be applied either in the head or ſtern, there being diſpoſitions in both to receive it; and for ſize it may be compared to a ſloop or ſhaloop.

FEMERIN. A little iſland in the Baltic ſea, ſituated in 11 deg. of E. lon. and 54 of N. lat. being near the coaſt of Holſtein, and ſubject to the ſovereign of that dutchy. See *Germany*, and *Denmark*.

FEN, in geography, a kind of lake, or rather moraſs; of which there are two ſorts: the one of a boggy con-ſiſtence, compoſed of water and earth intermixed, ſcarce firm enough to ſuſtain the tread of a man; and the other are pools, or collections of water, with pieces of dry land raiſed here and there, above the ſurface thereof: the former kind neither receiving or emitting any river; but the latter are frequently the heads or ſprings of rivers.

Several of theſe fens in England have of late years been undertaken to be drained: but the moſt remarkable is that called *the great level of the fens*, lying in the counties of Norfolk, Suffolk, Cambridge, Northampton, and Hun-tingdon, conſiſting of 95,000 acres: for the undertak-ing whereof, William Earl of Bedford, and his adven-turers and participants, their heirs and aſſigns, were in-corporated by an act of parliament paſſed in the 15th year of King Charles II. by the name of The governor, bailiffs, and commonalty of the company of conſervators of the great level of the fens; which corporation was to conſiſt of one governor, ſix bailiffs, twenty conſervators, and commonalty, who were to appoint a regiſter, receiver, ſerjeants at mace, and other officers. By this act, the company was enabled, without licence of mortmain, to purchaſe hereditaments, not exceeding 200 l. *per annum*; and the governor, bailiffs, and conſervators, or any five of them, whereof the governor or bailiffs to be two, might lay taxes upon the whole number of acres, and levy the ſame, with penalties for non-payment, not exceeding a third part of the tax, in order to the preſervation of the whole. The act alſo declared, that all conveyances by indenture of any part of the ſaid 95,000 acres, entered with the regiſter, ſhould be of equal force as if the ſame were for conſideration of money, enrolled within 6 months in the courts of record at Weſtminſter; and no convey-ance of, or charge upon the ſaid 95,000 acres, except leaſes for ſeven years or under in poſſeſſion, ſhould be of force but from the time it ſhould be entered with the re-giſter; the entry whereof being endorſed by the regiſter upon ſuch conveyance or charge, ſhould be as good in law as if the book of entries was produced. It was alſo enacted, that the company ſhould annually elect a new governor, bailiffs, and conſervators; provided that none ſhould be capable to be governor or bailiffs that had not 400 acres, nor to be a conſervator without 200 acres; nor ſhould any of the commonalty have a voice in elections that had not 100 acres.

FEND, in the ſea-language, imports the ſame as defend: whence the phraſe of fending the boat, that is, ſaving it from being daſhed againſt the rocks, the ſhore, or the ſide of the ſhip: hence alſo

FENDERS, any pieces of old cable-ropes, or billets of wood, hung over the ſide of the ſhip to fend, or keep other ſhips from rubbing againſt her.

FENIN. A ſmall coin, or money of accompt. See *Phening*.

FENNEL, or *Fennel-ſeed*, a longiſh ſtriated ſeed, flat on one

one ſide, and roundiſh on the other; of a ſweetiſh taſte, not unlike that of anniſe ſeed, and makes part of the commerce of the druggiſts and apothecaries.

FENNEL-*water*, is a ſtrong water, or brandy, made of the ſeeds of fennel, incorporated with liquorice, brandy, and white-wine, which are diſtilled together; to the eſſence whereof are added ſpirit of wine, ſugar, and ſweet almonds.

FENUGREEK, *Fœnum Græcum*, or *Fenigreek*, a medicinal plant, thus called becauſe anciently brought from Greece; though now cultivated in ſeveral parts of Europe. Its ſtem is about a foot high, its leaves ſmall, and diſpoſed ſomewhat like thoſe of trefoil, yielding a little white flower, from whence ariſes a long pointed pod, not unlike the horn of a bullock in ſhape; the grain, or ſeed, is incloſed in this pod, which bears the name of the plant, is leſs than muſtard-ſeed, very hard and ſolid, of a triangular form, and a ſtrong diſagreeable ſmell, being of a yellow gold colour when new; but when kept it is ruddy or brown.

The French, beſides the uſe they make of this ſeed themſelves, ſend conſiderable quantities of it to Holland, and other countries.

French dyers uſe it for the ſcarlet dye; and phyſicians order it in decoctions and cataplaſms; given to cattle, particularly horſes, it creates an appetite, and fattens them. The good choice of it conſiſts in being new, plump, and of a high gold colour.

FEODER, or *Fuder*, a liquid meaſure uſed in Germany, and reckoned to be a cart load drawn by two horſes; two feoders and a half make the roder; ſix awms the feoder; twenty fertels the awm; and the awm the $\frac{1}{7}$ of an Engliſh ton. But, tho' the feoder is the common meaſure of Germany, its diviſions, or diminutions, are not the ſame every where; and it may be ſaid that the likeneſs is wholly in the denomination.

FERABATH. A port-town of Perſia, ſituated on the S. coaſt of the Caſpian ſea, in 50 deg. of E. lon. and 38 deg. of N. lat. See *Perſia*.

FERANDINE. A light ſtuff, whoſe intire warp is of ſilk; but the woof of wool, hair, thread, or cotton: the uſual length of a piece being from 60 to 70 ells.

FERMO. A port-town of Italy, ſituated in 15 deg. of E. lon. and 43 deg. of N. lat. on the gulph of Venice, and ſubject to the Pope. See *Italy*.

FERNAMBUC, or *Fernambucca*, a port-town in Brazil, from whence the Portugueſe receive conſiderable cargoes of Brazil wood, and other commodities. See *Portugueſe* America.

FERNANDO, or *Juan Fernando*, a little uninhabited iſland in the Pacific ocean, ſituated in 83 deg. of W. lon. and in 33 of S. lat. being 300 miles W. of St. Jago, in the province of Chili, in South America. This iſland is viſited by all European ſhipping frequenting the South Sea, on account of its harbour, and the fruits, herbs, and other freſh proviſions, they meet with there; which were of ſingular ſervice to Lord Anſon in the year 1741, when he put in there to repair his ſhattered ſhips, and recover his ſick men, after effecting the tempeſtuous paſſage of Cape Horn.

FERNANDO-PO, is an iſland ſituated in 10 deg. of E. lon. and 3 deg. of N. lat. near the mouth of the river Cameron, on the coaſt of Africa, and ſubject to the Portugueſe. See St. *Matthew*.

FERRET. A ſort of ſilk ribband, uſed by women to bind the bottom of their garments, and for ſtrings to tye them.

FERRO, the moſt weſterly of the Canary iſlands, ſituated in 19 deg. of W. lon. and 28 deg. of N. lat. where the firſt meridian was lately fixt in moſt maps; but now every kingdom almoſt makes its own capital the firſt meridian, as the Engliſh do London. See *Canary* Iſlands.

FERRO, or *Faro*, is alſo a name given to ſome little iſlands ſituated in the Northern ocean, in 7 deg. of W. lon. and 64 deg. of N. lat. 200 miles N. W. of the Orcades, and as many S. E. of Iceland, ſubject to Denmark. See *Daniſh* Iſlands, under *Denmark*.

FERROL. A ſea-port town of Spain, in the province of Galicia, ſituated in 8 deg. 40 min. of W. lon. and 43 deg. 30 min. of N. lat. on a bay of the Atlantic oce... See *Spain*.

FERRY. A place in a navigable river, where a large ... bottomed boat plies to carry over any perſon or ... whether waggons, coaches, or horſes.

FERTEL, or *Schreve*. A German liquid meaſure, cont... ing 4 maſſes, 24 fertels making the awm, or $\frac{1}{7}$ of ... Engliſh ton. It is alſo a corn meaſure, containing ... fourth part of a buſhel; but uſed ſcarce any where ex... in Brabant.

FESCHAMP. A port town of France, in the province ... Normandy, ſituated in 25 min. of E. lon. and 49 ... 46 min. of N. lat. on the Engliſh channel. See *Fra...*

FETCH. A term in the ſea-language, for ſailors, in ... chaſing or purſuing of a ſhip, called fetching her up; ... in trade over-reaching, or charging more than one ou... is called fetching.

FETMENT. A ſmall copper coin, current in ſome p... of Germany, worth about a farthing.

FEVERSHAM. A port-town in Kent, oppoſite to ... Iſle of Sheppey, and 7 miles W. of Canterbury, be... a member of the cinque ports.

FEWEL. See *Fuel*.

FEZ. The capital of the empire of Fez, and Morocc... in Africa, ſituated on the river Cebu, in 6 deg. of W. ... lon. and 33 deg. 30 min. of N. lat. See *Morocco*.

FIASCO. A liquid meaſure uſed in ſome towns of Ita... making about the Engliſh pint, or flaſk.

FICTITIOUS *Exchange*. See *Exchange*.

FID, in ſhip carpentry, is an iron or wooden pin, ma... conical or tapering, to open the ſtrands of ropes that ... ſpliced or faſtened together; alſo the top-maſt that ... in upon the cheſs-trees.

FIDA, or *Whidah*. The capital of a territory of the ſa... name, on the ſlave coaſt of Guinea, in Africa. See Gui...

FIDDLE. The moſt muſical common inſtrument now ... uſe; called alſo a violin.

FIG. A ſoft, ſweet, delicious fruit, the produce of a t... of the ſame name, being of uſe in medicine: but the... are ſeveral kinds of figs, chiefly denominated from th... colours, which are white, black, purple, green, ... ruddy; the white being eſteemed the beſt, and the bl... and white coloured the worſt.

The beſt figs are the produce of Italy, Spain, and ... ſouthern provinces of France; though the iſlands of t... Archipelago yield figs in great abundance; but they ... much inferior in quality to thoſe of Europe. See Gu... inwards.

FIGIE-CAQUE. A Chineſe fruit, making a part of the ... trade to Siam.

FIGURE, in the manufactures, is applied to the vario... deſigns repreſented, or wrought on velvets, damaſks, ta... faties, ſattins, and other ſtuffs, and cloths. The m... uſual figures of ſuch deſigns are flowers, imitated fro... the life, or groteſques, and compartments, of a pa... fancy: but the repreſentations of men, beaſts, birds, ... landſkips, have only been introduced ſince the taſte ... the Chineſe ſtuffs, particularly thoſe called furees, ... been prevalent in Europe; and figured ribbands firſt ca... into faſhion about the year 1680, when one Chandel... a ribband-maker of Paris, invented a ready way of p... forming that kind of work.

FILE. An inſtrument of ſteel, ... full of lines or furro... whereby it is made rough, uſed chiefly by workers ... metal, to take away ſuperfluities in, and to ſmooth ... poliſh, their works; alſo a thread, or wire, whereon l... ters and papers are put for preſervation.

FILIGRANE, or *Filligree-work*. A kind of enrichment ... gold or ſilver, wrought delicately in manner of li... threads, or grains, or both intermixed.

FIMBLE. The female kind of hemp. See *Hemp*.

FIN. That part of a fiſh, made in faſhion of a feather... *Whale*-FINS, are commonly taken for that part of ... whale, which the populace call whale-bone; but whe... the miſtake ſhould ariſe, is not eaſy to determine; for ... is certain, that fibrous and flexible matter is not the ... of the whale, but rather its teeth, that ſpecies of wh... wherein theſe fins are found having no other teeth: t... are taken out of the throat, being uſually about a f... br...

broad, and 14 or 15 long, making the moſt valuable part of the animal. See *Whale*, *Whale*-bone, and Whale-*Fiſhery*.

NAL. A port-town of Italy, in the territory of Genoa, ſituated in 9 deg. of E. lon. and 44 deg. 30 min. of N. lat. See *Italy*.

NANCES, in the French policy, denote the revenues of the King and ſtate; being much the ſame with the treaſury, or exchequer, of the Engliſh, and the fiſcus of the Romans: they have alſo a council of the finances, and a comptroller-general, correſponding to the lords commiſſioners of the treaſury, and lord high treaſurer, in England.

NDERS, were formerly officers in the cuſtoms, now called ſearchers.

NE. That which is pure, and without mixture; but the term is particularly uſed in ſpeaking of gold and ſilver. Fine gold ſhould be of 24 carats, and fine ſilver of 12 penny-weights; but there is little, if any, eſpecially of the former, riſes to ſuch a degree of fineneſs. See *Gold*, and *Silver*.

NE, is alſo uſed to denote an amends, pecuniary puniſhment, or recompence, for an offence committed againſt the King, and his laws.

NE-*drawer*. A perſon whoſe buſineſs conſiſts in fine-drawing, which is a curious, neat, and uſeful way of mending rents in cloth, being a particular part of the taylors art, and commonly a diſtinct employment. See *Rentering*.

NE-*drawing*, or *Rentering*. A dextrous ſewing up, or rejoining the parts of any cloth, ſtuff, or the like, torn, or rent in the dreſſing or wearing; but it is now prohibited to fine-draw pieces of foreign manufacture upon thoſe made in Great Britain, as was formerly practiſed.

NISTERRA *Cape*, or *Cape Finiſterre*, is ſituated in 10 deg. 15 min. of W. lon. and in 43 deg. of N. lat. being the moſt weſterly promontory of the province of Galicia in Spain, and of the continent of Europe.

R, or *Firr*. The name of a tree, whoſe wood is much uſed in building, both of young and old trees; the young are uſed whole, and are then called baulks; the old are uſed as timber for the large beams of dwelling-houſes and warehouſes, or in boards or planks, called deals, for flooring, and weather-boarding; which baulks, timbers, or planks, are principally brought from Norway and Sweden; and this tree is alſo productive of turpentine. See *Turpentine*.

RE-*office*, is an office for inſurance from fire; of which there are ſeveral in London. See *Inſurance*.

RKIN. An Engliſh meaſure of capacity, for liquids, containing the fourth part of a barrel. The firkin of beer is 9 gallons, and that of ale only 8: two firkins of beer make the kilderkin, 2 kilderkins the barrel, and 2 barrels the hogſhead: and the firkins of ſoap and butter are on the footing of the firkin of ale; that is, a gallon *per* firkin leſs than that of beer.

RKIN-*man*. A perſon who takes up large quantities of beer from the public brewers, to retale it to particular cuſtomers, in ſmall quantities.

RMAN, in the Eaſt Indies, and particularly in the territories of the Great Mogul, is the paſſport, or permit, granted to foreign veſſels, to have trade within their juriſdiction.

RTH. See *Fryth*.

SC, *Fiſcus*, in the civil law, the treaſury of a prince, or ſtate, or that to which every thing falls that is due to the public: however, among the Romans, the treaſury, in effect, belonged to the people, and the fiſcus to the Emperor.

SCAL. Something belonging to the pecuniary intereſt of the King, the public, or a private perſon: but in Spain it is an officer who ſuperintends the treaſury, and mercantile affairs.

SH. An animal, living in water, as its proper place of abode; of which there are commonly reckoned three kinds; the ſea-fiſh, as the whale, cod, herring, and others; freſh-water fiſh, as the pike, the carp, and others; and fiſh, which equally reſort ſalt and freſh water, as ſalmon, ſhad, and others; to which may be added a fourth kind, as pond or lake-fiſh, as the carp, tench, and others; and there are alſo a fifth kind, which live indifferently on land or water, called amphibious fiſh, as the caſtor, otter, and others; but it is here only neceſſary to confine the ſubject to ſea-fiſh, upon account of the great commerce thereof, and the ſeveral merchandiſes and drugs accruing therefrom.

Of *ſalt fiſh* there are ſix principal kinds; as ſalmon, cod, herring, pilchards, anchovies, and mackarel.

Green fiſh is that which is juſt ſalted, and yet moiſt; thus they ſay, *green cod*.

Dry fiſh, are fiſh ſalted and dried, either before the ſun or by fire; ſuch are cod, ſtock-fiſh, herring, and pilchards.

Pickled fiſh, is that boiled, and ſteeped in a pickle made of ſalt, or vinegar, as ſalmon, cod, herring, mackarel, pilchard, anchovy, and oyſters.

Marinated, or *red fiſh*, is freſh ſea-fiſh, roaſted on a grid-iron, afterwards fried in oil of olives, and put into barrels, with a ſauce compoſed of new oil of olives, and a little vinegar, ſeaſoned with ſalt, pepper, cloves, laurel-leaves, or fine herbs: but the beſt red fiſh, whereof there is ſome traffic, are the tunny and ſturgeon.

Thoſe called *royal fiſh*, are dolphins and ſturgeons; as alſo, in France, are ſalmon and trout; ſo called, becauſe they belong to the King, when caſt upon the ſea-ſhore.

Blubber-fiſh, are whales, porpoiſes, tunnies, ſea-calves, and other fat fiſh.

Glue of fiſh, or *mouth-glue*, is made out of the nervous and mucilaginous parts of a kind of large-fiſh, uſually met with in the ſeas of Muſcovy.

Blubber is nothing elſe than the fat of fiſh melted, or drained from fiſh by preſſing; of which the greateſt quantities are extracted from the whale.

Fiſh exported from any part of Great Britain to foreign parts, enjoy the following bounty.

	l.	s.	d.
Pilchards, or ſcads, the caſk, containing 50 gallons - - -	0	7	0
Cod-fiſh, ling, or hake, if 14 inches, or upwards, in length, from the bone in the fin to the 3d joint in the tail, the hundred	0	5	0
Wet, the barrel, containing 32 gallons	0	2	0
Dried, called haberdines, the hundred weight	0	3	0
Salmon, the barrel, containing 32 gallons	0	4	6
White herrings, the barrel, containing 32 gallons - - -	0	2	8
Full red herrings, the barrel, containing 32 gallons - - -	0	1	9
Clean ſhotten red herrings, the barrel, containing 32 gallons - -	0	1	0
Dried red ſprats, the laſt - -	0	1	0

To be paid by the collector of the ſalt duty, at the port of exportation, within 30 days after demand, upon a debenture prepared by the collector of the cuſtoms, and verified by the ſearcher, with the oath of the exporter, that they were Britiſh taken, and really exported. But for the bounty granted to the ſociety of the free Britiſh fiſhery, ſee Britiſh *Fiſhery* companies.

And for the regulations of the different branches of the fiſhing-trade, reference muſt be had to the ſeveral acts of parliament relating thereto, which are inſerted, either particularly under the reſpective articles of each fiſhery, or together under the general head of *Fiſhery*.

FISHERMAN. A practiſer of catching fiſh, particularly ſpoken of thoſe who make a trade of it.

FISHERMENS *company of London*, was incorporated by letters-patent of the 3d of James II. in 1687, by the name of The free fiſhermen of London; but they have neither hall, arms, or livery.

FISHERY. A commodious place for fiſhing, or a place wherein great quantities of fiſh are caught. The principal fiſheries of Europe are for ſalmon, herring, cod, mackarel, and pilchards, which are more abundant along the coaſts of England, Scotland, and Ireland, than any other European country; the fiſhery for whales is about Greenland; for pearls in the Eaſt and Weſt Indies; and for coral on the coaſt of Africa.

FISHERY alſo denotes the commerce of fiſh, more eſpecially the catching them for ſale, which makes a principal

branch of the Britiſh commerce, and is alſo very advantageous to the trade of other countries. Great Britain employs a great quantity of veſſels and mariners in this trade, which is ſo conſiderable, that, excluſive of domeſtic conſumption, above 200,000 l. ſterling is annually returned merely for herring and cod exported to Spain, Italy, ſeveral parts of the Mediterranean, and to the iſlands of the Archipelago. Yet the inhabitants of Great Britain are reproached, and with a great deal of juſtice, for their remiſſneſs in this branch of trade; becauſe the advantageous ſituation of their coaſts might be of immenſe benefit to them, if their neighbours were not permitted to over-reach them in the fiſhery; for the Dutch, French, and Hamburghers, annually come, in great ſhoals, and not only take the fiſh from the very doors of the Britiſh inhabitants, but ſell their cargoes to them for money when they have done.

Scotland ſuffers incredibly on this account; for no country in Europe can pretend to rival it in the abundance of the fineſt fiſh, wherewith its numerous harbours, loughs, and rivers, are ſtored: it is alſo reported, that in the river Dee 170 head of ſalmon is not very extraordinary for the ſingle draught of a net; and the pickled ſalmon ſent from thence, is allowed to be the beſt in Europe: beſides, the Scottiſh iſlands, eſpecially thoſe on the weſtern ſide, certainly lie moſt commodious for carrying on the fiſhing-trade to perfection, eſpecially the herring fiſhery. See *Britiſh* iſlands, under Great *Britain*.

It is apparent, that the acquiſition of riches, and the increaſe of naval ſtrength, by means of the fiſhery, frequently drew the attention of the antient Engliſh monarchs, and was ſo very important an object in the eye of King Edward III. that it engroſſed the moſt ſerious thoughts of that ſagacious prince; ſeveral of his royal ſucceſſors entertained the moſt advantageous idea of this fiſhery; and the general opinion of the benefits that might accrue from the improvement of this maritime trade, prevailed among conſidering people in former times to attempt it.

About the beginning of the laſt century, the French, the Dutch, as alſo the citizens of Hamburgh, Embden, and Bremen, employed themſelves ſo very conſiderably in this trade, as to occaſion Sir Walter Raleigh to inform King James I. that the fiſh annually taken by ſtrangers upon the Britiſh coaſts, amounted to above ten millions ſterling. Since that time, the Dutch have principally engroſſed all the profits of the Britiſh fiſhery, and have long been without a rival, almoſt monopolizing all the immenſe wealth ariſing by this advantageous commerce: for, in 1688, when its glory was in its meridian, the ſubjects of the States General amounted to 2,450,000 people; of which 40,000 were employed, with 3000 buſſes, or fiſhing veſſels, in the Britiſh fiſhery, and 400,000 on the traffic depending upon this commerce; which gavé riſe to ſo many extenſive and valuable employments, that there was ſcarce any ſort or condition of people, but participated the benefits of this fiſhery, and the community moſt of all. It was this fiſhery that aggrandiſed the Dutch: their penſionary De Witte has aſſerted, that the inhabitants of the United Provinces formerly gained from two to five millions ſterling every year by the Britiſh fiſhery; and he affirms, that it was the poſſeſſion of this branch of commerce which enabled his countrymen to contend ſo gloriouſly with their inveterate, rich, and potent enemies, the Spaniards. This fiſhery has been publicly and ſolemnly called by the Dutch, in their placarts, "The golden mines of the United Pro-"vinces; the principal mine, and the chief ſupport, of Hol-"land." It really has been ſuch; for the whole product of the United States is ſcarce ſufficient to ſerve 1-8th part of its inhabitants; and well might the Dutch boaſt, that their proud city of Amſterdam is founded upon herring-bones. The Britiſh nation, ſurely, has the moſt unconteſted right to the free exerciſe of this valuable commerce; becauſe the ſovereignty of the Britiſh ſeas was always inſiſted upon as a right inherent to the Britiſh monarchs. The famous Edgar, with a navy of 400 ſail, vindicated his dominion on the adjacent ſeas; and records mention his ſucceſſor Canutus to have laid that antient tribute, called Danegelt, upon all, whether ſtrangers or denizens, trad[ing] on the Britiſh coaſts or ſeas. Egbert, Alfred, and Ethel-fred, all ſtyled themſelves *Supreme Lords and Governors of the ocean ſurrounding the Britiſh ſhore*. K. John challenged the honour, or rather duty, of the flag, which was univerſally paid him, not barely as a civility, but as a right, acknowledging his title and dominion. The remarkable record, intitled, *Pro hominibus Hollandiæ*, ſhews how obſequious the anceſtors of the Dutch were, not only in acknowledging the dominion of Edward I. on the ſea, but craving his protection and permiſſion to fiſh on the coaſts of England: and had not the ſovereignty of the Britiſh ſeas, in fact, been in the crown of England, why did the Earls of Holland petition Edward III. and the French alſo Henry VI. for leave to fiſh there? Why did the Dutch ſkippers uſe to purchaſe a licence from the governor of Scarborough-caſtle, before they preſumed to caſt a net upon the north-coaſts of England? Wherefore did Philip II. of Spain obtain a licence of Queen Mary, for his ſubjects to fiſh on the north-coaſts of Ireland, for the term of ſeven years, for which 1000 l. was annually paid into the exchequer of Ireland?

Upon theſe conſiderations, King James I. in the 7th year of his reign, publiſhed a proclamation concerning his general right and dominion of fiſhing, which imported, That although he ſufficiently knew, by his experience in the office of regal dignity, as alſo by obſervation which he had made of the exemplary actions of other Chriſtian princes, how far the abſoluteneſs of his ſovereign power extended itſelf; and that, in regard thereof, he needed not to yield account to any perſon under God, for any action of his which was lawfully grounded upon that ſole prerogative: yet ſuch had ever been, and ſhould be, his care and deſire to give ſatisfaction to his neighbour princes and friends, in any action which might have the leaſt relation to their ſubjects and eſtates, that he had thought good, by way of friendly premonition, to declare unto them all, and to whomſoever it might concern, as follows: That whereas he had been contented, ſince his coming to the crown, to tolerate an indifferent and promiſcuous kind of liberty to all his friends whatſoever, to fiſh upon his ſtreams, and on any of his coaſts of Great Britain, Ireland, and other adjacent iſlands, ſo far forth as the permiſſion or uſe thereof might not redound to the impeachment of his prerogative-royal, nor to the hurt and damage of his ſubjects, whoſe preſervation and flouriſhing eſtate he held himſelf bound to advance before all worldly reſpects; ſo finding, that his connivance thereat had not only given occaſion of over great incroachments upon his regalities, or rather queſtioning his right, but had been a means of much wrong to his own people exerciſing the trade of fiſhing; by reaſon whereof, as a multitude of ſtrangers preoccupied thoſe places, from whoſe hands they commonly received injuries, his ſubjects were conſtrained to abandon their fiſhing, or at leaſt become ſo diſcouraged in the ſame, as they held it better for them to betake themſelves to ſome other courſe of living; whereby divers of his coaſt-towns were much decayed, and the number of mariners daily diminiſhed, which was a matter of great conſequence to his eſtate, conſidering how much the ſtrength thereof conſiſted in the power of ſhipping, and the uſe of navigation. That he had then thought it both juſt and neceſſary to bethink himſelf of good and lawful means to prevent thoſe inconveniencies, and many others depending upon the ſame. In the conſideration whereof, as he was deſirous that the world might take notice that he had no intention to deny his neighbours and allies thoſe fruits and benefits of peace and friendſhip which might be juſtly expected at his hands in honour and reaſon, or were afforded by other princes mutually, in the point of commerce, and exchange of thoſe things which might not prove prejudicial to them; ſo, becauſe ſuch convenient order might be taken in the matter, as might ſufficiently provide for all theſe important conſiderations which depended thereon; he had come to the reſolution, firſt, to give notice to all the world, that his expreſs order was, that no perſon, of what nation or quality ſoever, not being his natural-born ſubject, ſhould be permitted to fiſh upon any of his coaſts

nd ſeas of Great Britain, Ireland, and the reſt of the djacent iſles, where moſt uſually heretofore fiſhing had been, until they had orderly demanded, and obtained licences, from him, or ſuch of his commiſſioners as he had uthoriſed in that behalf, at London for his realms of England and Ireland, and at Edinburgh for his realm of Scotland; which licences his intention was ſhould be yearly demanded for ſo many veſſels and ſhips, and the tonnage thereof, as ſhould intend to fiſh for that whole year, or any part thereof, upon any of his coaſts and ſeas aforeſaid, upon pain of ſuch chaſtiſement as ſhould be thought fit to be inflicted on ſuch wilful offenders.

Notwithſtanding this proclamation, the foreigners, and particularly the Dutch, continued to exerciſe an unauthoriſed right in the participation of the Britiſh fiſhery, while the Britiſh inhabitants neglected to reap the advantage which providence, in a bountiful maner, had wafted round all their ſhores; nor was any experiment tried, to obtain the valuable acquiſition of this fiſhery, till the reign of King Charles I. who, in conjunction with a company of merchants, began to put it into execution; but the civil wars ſoon ſet it aſide. King Charles II. renewed the attempt; but having preſſing occaſion for money, he was perſuaded to withdraw what he had employed in the fiſhery; at which the merchants joined with him, being diſpleaſed, did the like. Since the union ſeveral efforts were made to retrieve it; but though there was a corporation ſettled on that footing, called *The Royal Britiſh fiſhery*, it was always in a very languiſhing condition; and all hopes of a reſtoration of this kind were ſuſpended, all ſchemes relinquiſhed, till the year 1746, when they were induſtriouſly promoted by three worthy members of the houſe of commons, who knew the advantages reſulting from ſo beneficial a proceeding, and accordingly begun to put them into execution.

Animated by ſuch beneficent motives, theſe Gentlemen formed the noble reſolution of attempting the eſtabliſhment of the Britiſh fiſhery; which, as they had the happineſs to accompliſh, will give them unfading honours; becauſe they then opened the fountain which promiſed an inexhauſtible ſtream of opulence to an impoveriſhed nation; they formed a perpetual nurſery of bold, expert, induſtrious mariners, to ſupport the naval ſtrength, the pride, and moſt noble characteriſtic of the Britiſh nation; and they found the only method of giving a laudable employment to the highlanders, an employment that muſt convince them that liberty is the firſt of bleſſings, and loyalty to the eſtabliſhed government their chief intereſt. Admiral Vernon, Lieutenant-General Oglethorpe, and Stephen Theodore Janſſen, Eſq; alderman of, and at that time repreſentative for the city of London, were the honourable projectors, and indefatigable promoters, of this grand, this extenſive benefit to the whole nation in general, but more particularly advantageous to the northern inhabitants. Such ſingular emoluments, ſuch a noble acquiſition of riches, engroſſed their whole attention: through their zeal and aſſiduity the parliament was at length convinced what national profit and utility muſt be neceſſarily attendant on a due eſtabliſhment, and proper regulation, of the herring-fiſhery: the public applauded the deſign, as highly meritorious; many worthy and able men ardently wiſhed that ſo glorious an undertaking might be put in execution; and the parliament, at laſt, indulged their wiſhes; for, on the 12th of April 1750, an act was paſſed "for the encouragement of the Britiſh "white *herring fiſhery*;" and ſoon after a company was incorporated for that purpoſe; but, by ſome unaccountable fatality, almoſt inceſſantly attendant on every ſcheme for the promotion of the Britiſh commerce, this ſcheme, ſo ſalutarily begun, and ſo evidently calculated for the benefit of every Briton, has not been carried into execution agreeable to the intention of the original promoters, the expectations of the public, and the wiſh of every honeſt Engliſhman; though entirely agreeable to the wiſhes and expectations of the Dutch, and all the other interlopers in ſuch a profitable trade. But there is no neceſſity of inſiſting upon the perpetuity of this piſcatorial commerce, in excluſion to the exerciſe of it by other nations; the Britiſh ſeas, from the iſles of Shetland to Yarmouth, or Holyhead, have a ſufficient ſupply for all. The demand for herrings is not leſs conſiderable than formerly, and every good cargo may be profitably vended: but the Britiſh inhabitants, from the proximity to the fiſhery, have extraord nary advantages over all other nations, and, if the trade was properly conducted, the Dutch would ſee a very formidable rival in the ſeat of their opulence. But, that the worthy endeavours of thoſe honourable gentlemen, who originally concerted ſo gloriou , ſo important a project, may be properly and vigorouſly ſupported; that this valuable commerce may be eſtabliſhed on a wealthy and durable foundation, and that the Britiſh fiſhery may flouriſh, to the exoneration of a moſt grievous national debt, and the encouragement of mariners, ought to be the fervent prayer of every one who profeſſes himſelf a Chriſtian, a Briton, and a man.

Her ing FISHERY. Herrings are chiefly found in the north-ſea; though it is true, that there are fiſheries elſewhere, but none ſo copious. They uſually make two fiſhing ſeaſons; the firſt in June; the ſecond in autumn; the latter of which is the more conſiderable. See *Herring*.

The herring is a fiſh of paſſage; ſo that it is allowed to catch them on holidays and ſundays; they go chiefly in ſhoals, and are fond of following fire or lig t; though, in their paſſage, they reſemble a kind of lightening themſelves.

About the beginning of June every year, the Shetlanders diſcover, by ſeveral ſigns in the air, and on the ſea, a vaſt and incredible amazing ſhoal of herrings, advancing from the north. The place where they breed, their numberleſs multitude, their manner of coming, and eſpecially their regular, annual progreſs; all theſe are quite wonderful. With regard to the place they come from, and in which they may be ſaid to inhabit, breed, and increaſe; all we know is, that it is far north: that they are almoſt infinite in number, may be ſuppoſed from what is ſeen of them; and yet theſe, it may be concluded, are but as the ſwarm to the hive; a certain number of ſupernumeraries, detached from the ſtill far greater multitude of inhabitants who remain behind, and ſent abroad, as it were, every year, to ſeek their food in other places; as though there was not room for them in the countries inhabited by their anceſtors. Theſe fiſh never return, ſo far as can be perceived, to their native place, there to breed a farther ſupply for next ſeaſon; but, on the contrary, come from home big with their prolific ſpawn, when every fiſh produces many thouſand others. This ſpawn they caſt in thoſe ſeas; the herrings coming full to the Britiſh coaſt, and being ſhotten and empty long before they depart, their number may be reckoned among the infinites of finite nature, if this expreſſion may be allowed, that is, almoſt beyond the reach of figures. They come up, as it may be ſaid, on the breadth of the ocean; and it is thought that the bulk of the ſhoal may be more in extent than the iſland of Great Britain.

It is ſaid, that they are greatly ſtraitened in their progreſs ſouthward, by their being obliged to paſs between the ſhores of Greenland and the North Cape; which to them may be a ſtreight, though 200 leagues broad.

Advancing forward, and their amazing body meeting with an interruption, from the ſituation of Great Britain, it neceſſarily divides them into two parts, whether equal or unequal, cannot be known.

One part of them ſteer weſt or ſouth-weſt; and bearing the Orkneys and Shetland to the left, paſs on towards Ireland; where meeting with a ſecond interruption, they divide again, when part of them keeping to the coaſt of Great Britain, paſs away ſouth, down St George's, or the Iriſh channel; and thus advancing, between Great Britain and Ireland, they enter the Severn ſea, where they meet with part of their former companions. The other part, edging off, for want of room, to the weſt and ſouth-weſt, as before, rove along the Iriſh or weſtern ocean; and, ſtill keeping upon the coaſt, proceed to the ſouth ſhore of Irel nd; and then ſteering ſouth-eaſt, meet with their companions, who came down the Iriſh channel.

The other part of the firſt grand diviſion made in the north, parting a little to the eaſt and ſouth-eaſt, come down

into the German ocean; they then paſs by Shetland, and make the point of Buchanneſs in Scotland, and the coaſt of Aberdeen, filling, in their progreſs, all the bays, firths, creeks, and rivers, with their incredible multitudes; as though purpoſely directed, by heaven, to offer themſelves for the relief and employment of the poor, and the benefit of commerce. Hence coming away ſouth, they paſs by Dunbar; and, rounding the high ſhores of Berwick, are ſeen again off Scarborough, and not before. They are not diſcovered in bulk, till they come to Yarmouth roads, and thence to the mouth of the Thames; from whence, proceeding along the Britiſh channel, they are ſeen no more.

The ingenious author of the Spectacle de la Nature, expatiated thus, in his figurative manner, on the ſubject in queſtion: "Many kinds of fiſh come in ſhoals to our coaſts. Some are always with us, and others ſwim yearly to us in vaſt multitudes. The ſeaſon of their paſſage, as well as the track they take, are well known; and the greateſt advantages are reaped from that knowledge. To inſtance only in herrings. The capital of their nation ſeems to be between the points of Scotland, Norway, and Denmark. From that ſituation the Daniſh colonies take their progreſs annually, traverſing at different times the channel, and paſſing by Holland and Flanders. But theſe are not a troop of banditti, who coaſt about at random; their tour being preſcribed, and their annual march regulated, with the utmoſt exactneſs. The whole body begin their march at the ſame time; when none of them ſtraggle out of their proper track, none deſert to commit depredations; but they continue their progreſs, from coaſt to coaſt, till the appointed period.

They are a numberleſs people; they perform a long voyage; and, when the body of the army is paſſed by, they are all gone; and none of the ſame ſpecies make their appearance till next year. Attempts have been made to diſcover what it is that induces the herrings to undertake ſuch long voyages, and inſpires them with the policy they obſerve. The Engliſh, French, and Dutch fiſhermen declare, that the Channel teems every year with an incredible number of worms, and little fiſh, on which the herrings feed. The Britiſh coaſt is very rich, the ſoil of it breeding a ſullidge or ſurf that ſwims near it, and on which all floating fiſh, ſuch as mackarel, pilchards, and herrings, feed. This food draws the fiſh, and keeps them about this iſland, and no other country. This ſuſtenance may be conſidered as a kind of manna, which theſe fiſh come, at ſtated periods, to gather up. And, after having cleared the ſeas in the northern parts of Europe, during the ſummer and autumn, they proceed towards the ſouth, whither they are invited by a new ſtock of proviſions; but, if thoſe fail, they advance forward with greater ſwiftneſs, in order to accomodate themſelves elſewhere."

The Dutch were the firſt who began the herring-fiſhery, and obſerved the ſeveral ſeaſons of their paſſage, their firſt regular fiſhing being fixed to the year 1163; but the method of ſalting and barrelling of them was not diſcovered till the year 1416, though others date it from the year 1397. This fiſhery is only to be found on the coaſt of Great Britain, from St. John's to St. James's about Shetland, Pharil, and Bockneſs; from St. James's to the elevation of the croſs about Bockneſs, or Sevenoit; and from the elevation of the croſs to St. Katharine's in the deep water eaſtward of Yarmouth.

The Dutch begin their herring-fiſhery on the 24th of June, generally employing no leſs than 2000 buſſes therein, from 45 to 60 tons, and two or three ſmall cannon. None of them are allowed to ſtir out of port, unleſs there be enough of them together, to make 18 or 20 pieces of cannon; in which caſe they are allowed to go in conſerve, or company; but, before they ſet out, they make a verbal convention, which has the ſame force as if it was in writing.

Theſe regulations of the admiralty of Holland are partly followed by the French, and other nations, and partly improved and augmented with new ones; as, that no fiſher ſhall caſt his net within a hundred fathoms of another boat: that while the nets are caſt, a light ſhall be kept on the hind part of the veſſel: that when a boat is by any accident, obliged to leave off fiſhing, the light ſhall be caſt into the ſea; and that when the greater part of a fleet leaves off fiſhing, and caſts anchor, the reſt ſhall do the ſame.

The manner of fiſhing has nothing particular in it; but the nets wherein the fiſh are drawn, ſhould regularly have their maſhes an inch ſquare, that none of the leſſer fry may be taken. The Dutch reſort to the iſlands of Shetland about the 22d of June, and on the 24th of the ſame month they put to ſea, being prohibited, under a ſevere penalty to take any herrings ſooner, becauſe they are not in their full prime till then. Every one of their buſſes, on that day, directs her courſe to find out the ſhoal of herrings; and having laden their buſſes, they return to Holland, leaving them on ſhore, to be ſent immediately to the countries where they are vended; and, being furniſhed again with victuals, caſk, and ſalt, they return to ſea, in queſt of the ſhoal they left, and load again, returning to Holland as before; and this they repeat a third time each ſeaſon; every veſſel, the whole generally amounting to 2000, being computed to take 100 laſts of herrings at leaſt. And ſometimes this fleet is attended by other veſſels, called *yawgers*, or *jagers*, which carry ſalt, caſk, and victuals, to truck with the buſſes for their herrings, and carry them directly to the Baltic, without returning to Holland; for thoſe which come firſt to market bear the greateſt price: but the ſtates have ſometimes made an order that no herrings ſhall be carried to a foreign market till they are firſt landed in Holland.

However, for the better underſtanding the regulations of the Dutch fiſhery, which cannot be too thoroughly known, it is extremely neceſſary to conſider the placarts of the States General for this purpoſe; the principal of which are as follows.

The placart and ordinance concerning the catching, ſalting, landing, curing, packing, heightening, and laying of the herrings, &c.

The States of Holland and Weſt Friſeland, to all whom theſe preſents ſhall come, greeting.

Since by the obſoleteneſs of the laws, the orders formerly given for taking and loading of herrings are not duly maintained, as ſome people for their particular profit catch them before the due ſeaſon, and ſalt, ſend them to market, and ſell them, before they are of a proper growth, and fit for the market: and foraſmuch as ſome people, the better to cover their miſdemeanors, ſend them directly to the eaſtern markets, from ſea, and tranſport them inland, without their being firſt reported at the cuſtomary places, where daily attendance is for that purpoſe given, which not only cauſes in theſe, but in other countries, great diſguſt to the commodity, and diſhonour to the dealers therein, *the fiſh not being then in their full riſh and perfection, which occaſions thoſe which are good to be ſuſpected and unſold.*

And whereas thoſe ſo caught are neither well ſalted, ſorted, or properly laid in the barrels, to the great loſs, damage and prejudice of the merchant, the ruin of the herring trade, and of the general conſumption.

And whereas this great fiſhery is the principal mine, and chief ſupport of theſe countries, and of the inhabitants therein; therefore, and in order to remedy the growing evil, we, with the deputies of the cities, &c. concerned in the herring commerce, do make and eſtabliſh the following orders.

In the firſt place, no perſon ſhall wet their nets in the ſea, or begin fiſhing before the feaſt of St. John the Baptiſt, being Midſummer-day, N. S. or continue fiſhing from thence, longer than until the 31ſt of December following incluſive, under the penalty of 200 guilders, and loſs of the herrings taken, or value of the ſame; and the ſeveral veſſels ſo fiſhing, in conformity to this ordinance, is to be certified to us on the oath of the maſter and of two of their reſpective crews.

2. Excepting always from this prohibition, ſuch veſſels as go upon the Dogger-bank to fiſh for cod; thoſe may fail before Midſummer-day, and may catch herring, provided they take no more than may ſerve for the crew's preſent ſpending; but they ſhall not, before the ſaid 24

f June, ſalt them, in pots, jars, or barrels, or bring on hore any uncured, or unſalted, nor ſell any at ſea or on and, make preſents of, or otherwiſe diſtribute or diſpoſe f them. And the maſters of ſuch fiſhing veſſels, ſo degning for the Dogger-bank, are, before they ſail, to apear before the magiſtrate of the city or place from whence hey ſail, and on their ſolemn oath declare, that they will ot cure, ſalt, pot, or barrel, or otherwiſe preſerve the erring, or connive at any of their crews ſo doing, until fter the 25th day of June, the day next after the feaſt f St. John, or Midſummer-day, nor will bring them nto port, ſell, diſtribute, diſpoſe, or make preſents of hem, in any manner whatſoever.

And ſuch maſter, on his return, ſhall declare to the maiſtrate by ſolemn affidavit, that he has not broke, but ept holy and conſcientiouſly the oath taken by him on is outſet, under the penalty of 52 l. 10 s. ſterl. to be made ood by the ſhip and cargo, any time within one year nd a day, and the owners may have their redreſs over gainſt the maſter, who ſhall likewiſe ſuffer corporal puiſhment, according to the greatneſs of his crime. The ne to be divided; one third to the proper officer, one hird to the poor, and the other third to the informer; nd the herring to be forfeited, unleſs taken aboard the eſſels by the captain of the great fiſhery, who ſhall cauſe hem to be thrown into the ſea.

No ſhip or boat ſhall ſail out to catch herrings from olland or Weſt Frizeland to the north, nor go into eep water, without the maſter's having firſt taken out an *act of conſent*, who, on the procuring ſuch an act, ſhall ake oath, that they will not ſell or make preſents of ch herring at ſea, nor ſalt nor cure them on ſhore, or board, under penalty of confiſcation of the fiſh, and of e ſum of 2 l. 3 s. 9 d. ſterl. each barrel. And that the herng caught of the one night, ſhall be ſeparated from thoſe ught of another, and ſhall declare which are of each ght diſtinctly, on forfeiture of the veſſel and cargo, and egradation of the maſter.

f the ſecond outſet, the veſſels ſhall not put to ſea bere the 14th of September, nor fiſh before the 20th of e ſame month, at which time the maſters may put their erring aboard other ſhips, and aſſiſt one another in the auling in of their nets.

caſe any ſhall ſurreptitiouſly procure an ordinary act conſent, ſuch ſhall be liable to all the penalties above cited.

None ſhall ſell or truck for herring, but to thoſe who e authoriſed by the proper magiſtrate, nor but where e herring-trade is eſtabliſhed; and the maſter and two three of the mariners ſhall inſpect the printed ticket, reafter ſpecified, in order on their return to make their port, purſuant to the contents of the ſixth article. And caſe any body ſhall, when at ſea, put herring on board her ſhips than as above directed, the maſter ſhall forit the ſaid herrings, or their value, and beſides pay a fine 52 l. 10 s. ſterl. to be levied upon the ſhip or goods, and e owners to have their remedy over againſt the maſter, o ſhall likewiſe loſe his office, and be declared incable of future ſervice.

All ſuch as are inclined to follow the buſſes in Vent ggers to take off their fiſh, ſhall firſt procure of the rt-magiſtrate, where they ſail from, an act of conſent follow that traffic, until the 15th of July, of the firſt ry, and no longer: provided likewiſe that they take t from the proper office a ticket, with herring-buſs inted at the top, with the date of the year, ſealed with e ſeal of the great fiſhery, and ſigned by the city-ſecrey. Provided they promiſe at the ſame time upon oath, to take on board any pickled herring, but from the ſſes of Holland and Weſt Frizeland, and ſhall bring h them into port, certificates from the reſpective maſs from whom they purchaſe fiſh, ſigned likewiſe by o or three mariners of each veſſel, with the name of port they ſailed from, the ſhip's name, the quantity dered, that they were caught after Midſummer-day, and ed, cured, and laid in barrels in his ſhip, on forfeiture the herring, or the value of them.

any ſhould, without being ſupplied with an act of ſent, take aboard herrings, which they may do, if caught after Midſummer-day; they ſhall declare the ſame on their oath, and on the oaths of two or three of the mariners, that ſuch herring were caught after Midſummer-day, under the penalty aboveſaid.

And all maſters are hereby interdicted from putting any herring on board the vent jaggers, after the 15th day of July, under the penalty above, and alſo of the money received for ſuch herrings, at the riſk of the purchaſer, and the owners to be totally acquitted,

6. Neither the vent jaggers, nor buſſes, ſhall carry the fiſh they purchaſe or take, any where but to Holland or Weſt Frizeland, where the barrels, after viſitation, are to be marked or ſtamped with a hot iron, on forfeiture of the herring, or their value, and under the penalty of 17 l. 10 s. ſterling.

Before the maſter, at the compleating of his voyage, ſhall break bulk, he ſhall, with two or more of his crew, declare upon oath, in the form hereafter ſpecified, what herrings they have ſold at ſea, and to whom delivered; whether they had an act of conſent to purſue the trade; how much fiſh landed at each adventure, that they were caught after Midſummer-day, and cured, ſalted, and barrelled within their ſhips, only carried into Holland or Weſt Frizeland; alſo duly reported there, and that before Midſummer-day they neither wetted their nets, nor put any fiſhing-tackle into the ſea. Thoſe who refuſe the reporting, not only the laſt, but former voyages, ſhall forfeit the unreported herrings, or the value thereof. Every ſuch oath ſhall be regiſtered in due form, and the officers and committee of the great fiſhery may, on application, have authentic copies delivered to them.

7. No inhabitant of Holland or Weſt Frizeland ſhall engage in any ſhare or part of veſſels, ſet out as fiſhing buſſes, or vent-jaggers, the property of perſons inhabiting out of the ſaid provinces, under the penalty of 52 l. 10 s. ſterl. and the confiſcation of ſhip and cargo; the information to be deemed good, though made twenty years after the fact committed.

8. The captains of the men of war attending this fiſhery, are hereby authoriſed, That in caſe any maſter of a buſs ſhould, without an act of conſent, ſell any hearing to the Zealanders, or to any inhabitants of the United Provinces, not of Holland or Frizeland, or to any foreigners; or who ſhall ſail from the fiſhing-grounds directly eaſtwards. As ſuch facts ſhall come to their knowledge, they are hereby impowered to arreſt ſuch offenders, and ſend them in priſoners.

9. The firſt caught herrings ſhall not be ſold until they have lain ten days in pickle; and to aſcertain the ſame, the keur-maſters and overſeers ſhall mark the caſk with a circle round it, between the neck-hoop and belly-hoop, or in default thereof forfeit 26 l. 5 s. ſterl. for each barrel, one half to the informer, the other to the proper officer. And ſuch who cannot pay the fine, ſhall be confined to bread and water for a month; and all herrings which come into the provinces, without ſuch circular mark, for conſumption, ſhall be thrown into the ſea.

10. Each buſs-maſter ſhall have his particular mark on ſuch barrels as he intends to land, or that he puts on board other veſſels; which mark ſhall be put on the bung-ſtave, or the next to it; and he omitting ſuch mark, ſhall forfeit $6\frac{3}{10}$ d. ſterling each barrel.

11. Every buſs-maſter is to declare, at the ſecretary's town-clerk office of the port wherefrom he ſails, where they intend to fiſh, what port return to, and what mark they uſe, in order that the ſame may be duly regiſtered, under the penalty of 5 s. 3 d. ſterling.

12. Each buſs-maſter ſhall take care, that in packing the herring be laid cloſe and even; and that whoever is guilty of any fraud, by preſſing them with baſkets or trays, ſhall be fined 2 l. 3 s. 9 d. ſterl. ſuffer arbitrary correction, and be obliged to make good the damage to the merchant who may ſuffer by them. And that the buſs-maſter may not be injured by the roguery of the layer, the ſaid layer ſhall put his mark a hand breadth within the barrel, as alſo on the outſide on the uppermoſt part; and on neglect thereof ſhall ſuffer arbitrary correction, provided the ſame is not purpoſely neglected by the direction of the buſs-maſter.

13. No one ſhall lay the herring croſs-ways, or falſify, or change them, put the old under new, lay thoſe bit by ſharks, or that are ſickly, by the good, nor thoſe which are caught of the one night, by thoſe of another taking; nor ſhall any which are not ſalted the ſame evening they are caught, be afterwards cured, under the penalty of 2 l. 3 s. 9 d. ſterl. each barrel, and naval diſcipline.

14. Each buſs-maſter ſhall diligently attend to the ſorting of the fiſh by ſeparating the full from the poor ones, and not mixing the ſound with the night-*ſchaamel*, *gret-ſick*, *melch ſieck*, *ſtinck*, or *ſqueamiſh* herrings; nor to put either of thoſe with the other, in the ſame barrel, but to lay all the diſtinct ſorts in ſeparate caſks, and mark them accordingly.

15. Each fiſher ſhall be obliged to declare for what price he will ſell his different aſſortments, diſtinctly; and if they ſhould happen to fall ſhort of the contract, the keur maſter is to take an exact regiſter of them, and to decide the difference.

The buſs-maſter is not only to mark and diſtinguiſh the full ſound from the weak, but the great from the ſmall, and alſo thoſe of the like kind caught in different ſeaſons, from each other; and is, with two or three of his crew, to declare in the regiſter's office on oath, that all his cargo is properly and diſtinctly marked, and was ſo before the caſks were ſeverally ſtowed in the ſhip's hold.

16. The buſs-maſter, according as he finds the ſeaſons, may ſalt the herring at his own diſcretion, and cauſe the net to be laid as he finds the ſhoals to run.

Of curing, packing, repacking, &c. of the herring.

17. That from henceforth, the curing of the herring ſhall be perfected within three weeks after coming into port; or after they are ſold to the merchant, and ſhall be repacked once or more, according to the cuſtom of the place, and nature of the herring. But if the curing is not perfected within three weeks, the buyer ſhall not pretend to any abatement.

18. The buſs-maſter and book-keeper are expreſly interdicted from concerning themſelves in the ſale of the herring by taſte at the bung-hole, they are only to diſpoſe of them by pack and keur, that is, by wholeſale as they arrive, on penalty of paying 4 l. 7 s. 6d. ſterl. *per* laſt, and confiſcation of the fiſh; one third to the informer, one third for the officer who executes the proceſs, and one third to the poor.

19. No herring ſhall be *datumen*. If ſo found, they ſhall be confiſcated, one third to the informer, one third to the officer in execution, and one third to the poor. And the perſon who ſo cured them ſhall loſe his office.

20. No herring ſhall be heightned with freſh pickle, nor repacked but in the public ſtreet, on the keys, or in ſuch places as are cuſtomary, with open doors, where any body may go in or out. And whoever packs, &c. with the door ſhut, or hinders, any body coming in, ſhall forfeit 240 grote to the proper officer, as often as found guilty.

21. The keur maſters are to take ſpecial care, that no naſty, wrack, gutſick, milkſick, or other indiſpoſed herrings, ſhall be uſed to fill up or heighten the barrel; but each in their different order, to be filled with herrings of the like kind, in the penalty of 10 s. 6d. ſterl. each barrel, whereto the merchant, packer, opheightner, and every one in particular concerned in packing are alike liable. And that this may be more commodiouſly effected, it is ordered for the future, that no herring ſhall be packed or heightened to be ſent beyond ſea, before that the keur maſters inſpect and aſcertain, that the herring are packed in due order as aboveſaid. And further, to prevent fraud, the place-maſter where the herrings are packed, &c. ſhall ſet his mark on the caſk, between the third hoop and the neck-hoop.

It is likewiſe expreſly forbid to pack ſmall ſweet-wrack herrings with the great, but each ſhall be heightened by thoſe of the like nature, and ſeaſon of taking; and according to the different ſorts and takings, the caſk is to be branded with ſuch different marks upon the belly, as is by this ordinance ſpecially directed, as alſo the city mark.

22. The coopers are in packing to diſpatch the bad and unfitting barrels firſt, for preſent expending; but for the keeping herrings, they are to take good barrels, to the liking of the merchant, or of the keur-maſters who are to ſee it done, and in default the herring are to be taken out and repacked without any expence to the merchant, and the offender to pay four grote *Flemiſh* each barrel.

23. The coopers ſhall not hoop branded or other repacked caſks with half barrel or green hoops, but with good whole barrel hoops, made the March preceding.

24. No barrels which are to be ſent abroad ſhall have leſs than fourteen hoops.

And whereas it has been diſcovered to have been heretofore a practice, to pack the ſeveral ſorts of herrings in unlawful barrels, to the great detriment of this profitable commerce, it is therefore forbid that any body hereafter do pack herrings in ſalmon casks, or other unfit veſſels, but ſolely and ſimply in barrels, made and burnt, conformable to the ordinance publiſhed, concerning the making, curing, and burning of the barrels, on penalty of confiſcation of the herrings, and for each ſtave, ſmall or large, 1 l. 15 s. ſterl. for the informer, officer, and poor.

25. Alſo, that any ſervants of the packers, coopers, or other officer, who may pack in ſalmon or other unlawful caſk, ſhall immediately be diſcharged their places.

26. We alſo forbid to pack in any barrel, ſalt, ſpice, or other commodity, under cover of brand, wrack, or other kind of herrings to be ſent weſtwards, under pain of loſing the ſaid barrels, and all which is therein contained, beſides to pay 8 l. 15 s. ſterl. and to ſuffer corporal correction; as alſo to make good the damage which the merchant or ſkipper may ſuffer thereby. And the porters or ſervants employed therein, ſhall ſuffer as in the foregoing article.

27. The herrings caught after St. James's day, and ſalted with fine ſalt, may be exported for wrack weſtward, as has been formerly accuſtomed; the barrel to be bound with ſixteen hoops, the date of the year upon the belly thereof, without letters or cyphers, and the mark of the purchaſer thereon.

Of SALT.

28. No Spaniſh or Portugal ſalt ſhall be ſtowed into chefts or barrels before the keur-maſter has examined and found it good, under the penalty of 2 l. 3 s. 9 d. ſterl. for every hundred weight.

29. No buſs-maſter ſhall carry to ſea, for the uſe of the herring-fiſhery, any other but Spaniſh or Portugal ſalt, twice examined by the keur-maſter, who ſhall open every barrel before it goes on board, ſee them filled up, and ſtamp his mark thereon. And the buſs-maſter being proved to have cured herrings with ſalt not twice inſpected, to forfeit 3 l. 3 s. ſterl. And the ſaid buſs-maſter is in his certificate to declare, that the herrings are cured with approved Spaniſh or Portugal ſalt, before they are ſet to ſale, or the barrels filled up.

30. The buſs-maſter is, at the requeſt of the keur-maſters to open his barrels, and cloſe them again, in his view who may have two inſpections, and at each time the ſum of half a farthing each barrel; the firſt time to be paid by the ſeller, the laſt by the buyer.

31. If any fraud ſhall be diſcovered in the barrelling of the ſalt, the ſeller ſhall forfeit 17 l. 10 s. ſterl. one third part to the officer, one third to the fiſhery, and one third to the poor.

32. Any perſon found curing of herrings with French ſalt, whether from Senters, Olderdome, Borcus, St. Martins, Brouwart, South France, Weſt Indies, or the Isle of May, ſhall forfeit the herrings.

33. Fiſh caught after St. James's and Bartholemew-tide ſhall be ſalted with fine ſalt, made from boiled ſea-water, according to the contract made with the city of Cologn.

34. No white, ſmall ſalt ſhall be received, but with certificate from the maker, and taking an oath before the uſe it, that the ſalt is not changed after receiving it board, on forfeiture of the ſalt, or value thereof; and found guilty of perjury, to be puniſhed according to direction of the ordinance heretofore agreed upon with the deputies of Cologn.

35. There ſhall not be ſent abroad, to France, Flanders, Brabant,

Brabant, and ſo on weſtward, any barrels of herrings otherwiſe marked than with the grand Rouen brand, and fiſhed and packed after Bartholomew-tide.

Nor ſhall any herrings be exported to Bremen, Hamburgh, Cologn or other places that way, cured with courſe ſalt, whether full or ſlender fiſh, wrack or refuſal, under penalty of forfeiting the herrings, or value of the ſame, and a fine of 10 s. 6 d. ſterl. each barrel, and naval correction.

36. Packers, coopers, and place ſervants, for the ſame crime, to be diſcharged, and declared infamous; nor ſhall they afterwards be admitted into any ſervices in theſe provinces.

37. All herring ſent to Hamburgh, and in that courſe, muſt be branded with the ſeller's mark, and the cypher of the year. All others with the ſingle brand only, as is before directed.

38. Herrings once exported abroad, ſhall not be received back, to be filled or cured anew, on pain of confiſcation.

39. For the preſervation of this moſt important and advantageous branch of commerce, no one ſhall, in theſe provinces, land, pack, or otherwiſe cure or prepare any Maeſterlandiſh or other foreign herrings, but only coopered up in caſks, and ſent away, in the ſame condition as imported, under pain of confiſcation.

40. All penalties, the diviſion whereof is not previouſly ſpecified, are to be one third to the informer, one third to the officer executing the proceſs, and one third to the poor.

41. And that no buſs-maſter may plead ignorance of theſe our ordinances, they ſhall be obliged to take authentic copies with them to ſea.

42. No officer or fiſcal ſhall compound with delinquents, without the expreſs approbation of the burgo-maſter or treaſurer of the city, or place where the crime was committed; and if ſuch compoſition be made without their conſent, the ſame is hereby declared illegal and void; and the burgo-maſters, &c. may purſue the offender, and recover the penalty notwithſtanding; and apply the one third part, uſually appropriated to the officer who executes the proceſs, to the uſe of the city.

43. The deputies of the cities trading in the great fiſhery, may, in the future, make ſuch bye laws, as they find conducive to the welfare of this lucrative branch of commerce.

And as we are clearly appriſed, that all the foregoing articles are for the preſervation and bettering this beneficial branch of trade, therefore we do command all and every one, whom it may concern, punctually to obſerve theſe our regulations, under the pains and penalties affixt to each article, in caſe of contravention. And as we well underſtand theſe our ordinances, ſo will they be duly executed againſt the contraveeners. And that no one may plead ignorance of the ſame, we do hereby command and authoriſe our head door-keeper, or beadle of our court of juſtice in Holland, to publiſh the ſubſtance of theſe in all the cities and places of Holland, and Weſt Frizeland, wherever it ſhall be neceſſary.

Done at the Hague in the form of a placart gereſumeert, and atteſted under the common ſeal of the States of Holland, the 10th of May 1651, and again renewed, and the ſecond article amplified the 30th of May, 1656.

By order of the ſtates,
Herbt. Van Beaumont.

The form of the oath to be taken by the buſs-maſter, trafficking in the herring-fiſhery, in order to his obtaining the act of conſent.

I A. B. maſter of a herring-ſhip, and two or three of my ſeamen, do promiſe and ſwear, that we will not, before the 24th of June, nor after the 31ſt of December next enſuing, any herring nets throw into the ſea, nor before wet them to catch herrings.

Secondly, That I will not perſonally, or by connivance, do, or permit any herrings to be delivered at ſea, to any perſon or perſons whatſoever, out of my veſſel, directly or indirectly, but only to ſuch ſhips from Holland and Weſt Frizeland, which have and produce the due act of conſent. At the top printed a buſs, and underneath the ſeal of the great fiſhery, and ſigned by one of the ſecretaries of the under-mentioned cities; Delft, Rotterdam, Schiedam, Briel, and Enchuyſen, to whoſe ſhips I ſhall, to the 15th of July, and no longer, deliver herrings. Nor put on board each Vent Jagger more than one ſmall barrel of fiſh for the book keeper.

Thirdly, The barrels ſhall not be more than once packed and heightned; and ſpecial care taken to preſerve the bloody pickle, nor waſte the ſame as little as poſſible.

Fourthly, I will take due care t at the herrings are laid even in their rows, not thrown in with baſkets or trays confuſedly, nor the kinds mixed, bloom laid, or falſified.

Fifthly, That I will not, new herrings caugl t in the one night, mix with thoſe taken of another; but will ſpecially declare what herrings are taken each night diſtinctly.

Sixthly, That I will not ſell or barter in Shetland, or at ſea, to or with any foreigner, ſalt, pickle, barrels, hoops, ſtaves, fiſhing tackle, yarn, lines, or any other fiſhing appurtenants, for any kind of merchandiſe whatſoever; nor make preſents, or connive at any being made by the ſhip's crew, directly or indirectly. And farther, that my ſhip's crew ſhall have no more for a preſent, than each a ſmall kinelkin, or one eighth of a barrel for each voyage. And that I will in all things govern me according to the directions of the placarts and ordinances regarding the herring trade, which have been delivered me.

So verily help me God Almighty.

The form of the buſs-maſter's oath, after his return from fiſhing.

Appearing this day before the lords N. N. N. N. in the city of I A B, and C D, E F, G H, my own mariners, reſpectively on our ſolemn oaths declare, that we did, in conformity to the act of conſent, duly equip a ſhip for the herring trade; and no fiſhing tackle, before the 24th of June, did throw into the ſea, or ſhot out, or wetted: nor have delivered out of the veſſel, herrings to any perſon or perſons whatſoever; nor have cauſed or connived at any ſuch thing being done, directly or indirectly, in any manner or form whatſoever; except only to ſuch ſhips or vent jaggers of Holland and Weſt Frizeland, who have produced a qualified act of conſent, which we peruſed: nor to them after the 15th of July laſt: nor have fiſhed for, or caught, any other herrings but what are ſpecified in our report, delivered into the treaſurer.

Laſtly, I A. B. do declare, that no more has been given to each mariner of my crew, than one kinelkin, or eigthth part of a barrel of herrings each voyage.

So verily as God Almighty muſt help us.

The oath taken by the buſs-maſter and his crew, on their outſet to the Dogger-bank.

I A. B. ſailing with fiſhing-tackle upon the dogger trade, and all my mariners, promiſe and ſwear, That we will not carry with us this voyage any more than twenty nets: that we will not catch any herrings before St. John's day; nor before that time will gut, ſalt, nor put any in pots or barrels; nor deliver any at ſea, gutted or not; nor bring any home to ſell, make preſents of, or otherwiſe diſtribute.

So verily help us God Almighty.

The oath of the ſame, on their return from fiſhing on the Dogger-bank.

We do hereby declare on our ſolemn oath, in conſequence of that previouſly taken, that we have not, during this voyage, had on board any more than twenty nets; nor before St. John's day did gut, ſalt, pot, barrel, lay up in any veſſel, give away or bring home; nor have nor ſhall bring aſhore any herrings for to ſell, make preſents of, or diſtribute in any wiſe howſoever.

So help us, &c.

Oath of the Vent-jaggers.

We promiſe and ſwear not to take on board, from any ſhips or buſſes, but thoſe of Holland and Weſt Frizeland, any

herrings

herrings, nor purchaſe from them, but ſuch wherewith a due atteſtation is given, ſigned by the maſters and two or three of their mariners reſpectively; and wherein is contained the quantity, and an aſſurance of their being gutted, ſalted, and laid, according to the direction of the placart: nor ſuch herrings taken on board will we carry any where, but to ſuch cities or places in the ſaid provinces, where brands and certificates are given: nor will we our act of conſent deliver or lend to any perſon, to make uſe of at ſea; nor after the 15th of July will take any herrings on board, directly or indirectly, except one eighth of a barrel from each buſs for the book-keeper, under the penalties in the placarts and ordinances, concerning vent-jaggers, contained.

And we do further promiſe and ſwear that we will not ſell, make preſents, barter, truck, or otherwiſe howſoever diſpoſe of any ſalt, pickle, barrels, hoops, ſtaves, fiſhing-tackle, nets, yarn, fiſhing-line, or any other materials in the fiſhery, nor merchandiſes of any kind or denomination, to the people of Shetland, or other foreign nation whatſoever, nor connive at the ſame being done, directly or indirectly.

And finally, we promiſe, immediately after our return home, to take the oath of purgation.

So verily, &c.

The oath of Purgation.

I A. B. and two of my mariners ſwear, that the oath taken by me on receiving the act of conſent, has been duly obſerved in every point, without neglecting the leaſt part thereof.

So verily, &c.

The act of Conſent. 1755.

We the burger-maſters and regency of the city of conſent, that may ſail with his herring-buſs to the North ſea, there to follow the herring-trade, and has ſworn before us, that he is duly equipped with fiſhing-takle, ſalt, barrels, mariners, and all other requiſites belonging to that commerce, according to the burthen of his veſſel; and that he will not, before the 24th of June, nor after the 31ſt of December next enſuing, put into the ſea any fiſhing-tackle, nor wet them to catch herrings; nor will himſelf, nor connive at others putting fiſh on board any veſſels, other than of the provinces of Holland and Weſt Frizeland, having an authentic act of conſent, with an herring buſs printed on the top, and at the bottom the printed ſeal of the great fiſhery, and ſigned by the ſecretary of the city from whence he ſailed; in which veſſel he may, to the 15th of July incluſive, put on board the herrings he has taken. And that he will exactly ſet down upon the ſchedule the mark of the barrels, and the night of fiſh being taken, which he ſo diſpoſes of; and that he will not pack or heighten the barrels with crooked herrings more than once, and take care that as little pickle be ſpilt as poſſible, that he will land his fiſh only in the provinces of Holland or Weſt Frizeland, and with three of his mariners report his cargo within three days after his return. That his herrings are laid in even rows from end to end, not flung in with baskets or trays, nor mixed, laid croſsways, or falſified: that he, no ſalt, pickle, barrels, hoops, ſtaves, herring-tackle, yarn, lines, other fiſhing-furniture, or merchandiſes of any denomination, will ſell or otherwiſe diſpoſe of in Shetland, Scotland, at ſea nor on ſhore, to any foreign nation whatſoever, or connive at the ſo doing, directly or indirectly, under the penalties in the ordination mentioned; and that he will always govern himſelf according to the placart and ordinances made in behalf of the herring-trade, the which are given him for his better direction herein.

So verily muſt God Almighty help him.

In witneſs whereof the ſeal of the great fiſhery is hereunto affixed and ſigned by our city ſecretary, the 1ſt day of June, 1755.

N. N.

1755. (*A printed herring-buſs.*)

We the burgo-maſters of the city of conſent and admit with his ſhip to ſail amongſt the buſſes, and herring ſhips, and take aboard herrings from them, until the 15th of July, and no longer, conform to the ordinances made in the behalf of the vent-jaggers. And that all the herrings which he ſhall take on board at ſea, ſhall be only from the buſſes and ſhips of Holland and Weſt Frizeland, and that he will of each maſter take an atteſtation ſigned by him and two or three mariners, mentioning the quantity of herrings put on board, and that they were caught, gutted, ſalted, and laid in the barrels, according to the direction of the placart. As alſo that he will not receive on board any herring to make preſents of, except a ſmall kinnelken for the book-keeper, nor carry his herrings any where, but where there is brand and certificate, nor will lend to any one his act of conſent, nor will ſell or make preſents of, barter or exchange any ſalt, pickle, barrels, ſtaves, hoops, fiſhing-tackle, nets, yarn, line, or any other thing belonging to the fiſhery, nor any kind of merchandiſe, either at Shetland, Scotland, nor any where elſe, at ſea or on ſhore, nor to any foreigner directly or indirectly, and that he will take the oath of purgation immediately after his return. So verily God muſt help him. In witneſs whereof, at the top is printed a buſs or ſhip, with the date of the year, and at the bottom is printed the ſeal of the great fiſhery, and ſigned by our ſecretary, the 1ſt day of June, 1755.

Inſtructions for the mates, againſt not rightly managing, ſorting, ſalting, and laying the herrings.

The deputies of the great fiſhery and herring navigation of Holland and Weſt Frizeland, being credibly, and with great indignation, informed, that ſome mates, neglecting their duty, do not rightly manage, ſort, ſalt, or lay the herrings, notwithſtanding the good orders inſtituted by the general placart, relating to the catching, ſalting, and managing of herrings, by their noble great mightineſſes, dated May 10, 1651, renewed and explained May 30, 1659, eſpecially by the 12, 13, 14 and 15 articles; a copy of which, agreeably to the 41ſt article of the ſaid order, is yearly delivered to the ſaid mates, and which they ſolemnly ſwear to, as a warning, in order to prevent all abuſes and miſdemeanours, as it is ordered by the ſaid deputies, by virtue of the ſaid placart; by which it is to be feared, that the vending and good reputation of Dutch herrings in foreign markets, already decreaſing, may entirely come to ceaſe, and on the contrary be deſpiſed, to the great loſs and damage of the trade, and of conſequence to the ruin of the common herring and great fiſhery, it being ſo eſſential a branch of the commerce and welfare of theſe countries, and inhabitants thereof, if it is not ſpeedily and ſtrictly prevented; the ſaid deputies, with the advice and concurrence of ſome of the owners, ſtewards, and merchants in the herring-trade, have agreed and ordained, in order to prevent thoſe groſs abuſes and neglect of duty, for the preſervation and reeſtabliſhing the herring and great fiſheries, as they do by theſe preſents ordain, by way of renewing and explaining the before mentioned good orders, that the mates of the herring veſſels ſhall not mix ſeveral ſorts of herrings together, but ſhall ſort them properly, as full with full, meaſure with meaſure, and ſmall with ſmall. The mates ſhall, upon account of extraordinary large quantities catched, and want of time to ſort the herrings properly, upon their arrival, enter them as unſorted herrings. Further, they ſhall ſalt the herrings properly, and the large ones not leſs than four barrels of ſalt to a laſt, excepting only the ſmall barrels; as likewiſe clean them, and afterwards lay them croſſways in the barrels. Commanding every mate to govern himſelf exactly, upon the penalty, over and above the action upon the caſe of perjury, of 25 l. 5 s. ſterl. for every mate whoſe herrings ſhall be found not ſorted in the manner above mentioned; and he ſhall not have any certificate to go on the herring-fiſhery afterwards. But with regard to the not laying the herrings croſſways in the barrels, a penalty of 10 s. 6d. ſterl. each barrel. The ſaid penalties to be applied agreeably to the 40th article of the above placart, one third to the informer or informers, whether mariners or other perſons, one third to the officer who ſhall take the information, and

and laſtly, one third to the poor. Moreover, the bad ſorted herrings, that is, the full mixt with meaſure, as alſo meaſure mixt with full, ſhall be marked as unſorted, and with regard to the full and meaſure mixt with ſmall, they are to be ſold as ſmall, and ſhall be accounted and paid for as ſuch by the buyer. The above orders and penalties to remain in full force, and at the riſque and charge of the mates. And to the end that no body ſhall plead ignorance, the deputies have ordered theſe to be publiſhed and affixed at the proper places. Done at Delft, the 23d of May, 1749. By order of the ſaid deputies.

1749. The burgomaſters and rulers of the city of Scheidam, do give conſent to Marten Panlaſte Brook, that he with his herring-veſſel may ſail to the northern ſea, to exerciſe his herring-fiſhery there; and he has ſwore by ſolemn oath, that he is equipt with proper tackle, ſalt, barrels, men, and other utenſils proper for the herring-fiſhery, according to the bigneſs of his veſſel; as alſo, that he will not throw out any herring-tackle, or make any before the 24th of June, nor after the 31ſt of December next; alſo that he will not deliver to any body whatſoever any herrings at ſea, nor ſuffer any to be delivered out of his ſhip by any other perſon directly or indirectly, in any ſhape, but to ſuch veſſels only coming from Holland and Weſt Frieſland, as ſhew a proper certificate, with a herring-buſs at the top and at bottom, the ſeal of the great fiſhery, and ſigned by the ſecretary of the town where he comes from, to which veſſels he may deliver his herrings until the 15th of July, 1749, and no longer. That he ſhall expreſs in the liſt exactly the marked barrels, and what night the herrings he delivers were catched: further, that he ſhall not fill up his barrels more than once with other herrings, and take care that as little of the blood-pickle as poſſible ſhall be let off: and further, that he ſhall bring all the herrings he catches into the province of Holland, and Weſt Frieſland, as likewiſe together with three of his ſeamen, faithfully to enter the ſaid herrings, three days after his arrival at the longeſt; alſo that he ſhall take as much care as poſſible that the herrings are laid even from one bottom to another, and that they are not thrown into the barrels with baſkets or ſhovels, nor mixt or falſified. That he ſhall not carry on ſhore in Shetland, Scotland, or other places, nor to ſell to any foreign nation at ſea, nor exchange or make preſents of any ſalt, pickle, barrels, hoops, tackle, thread, hook-tackle, or any other fiſhing-tackle, nor any merchandiſe under what denomination it may be, nor take any goods upon freight out or homeward bound, nor ſuffer it to be done directly or indirectly, on pain as mentioned in the inſtructions; and ſhall farther regulate himſelf according to the placarts made relating to the herring-fiſhery, which are delivered to him for that purpoſe.

So truly might God Almighty help him.

In witneſs whereof, the ſeal of the great fiſhery is put thereto, and ſigned by the ſecretary of the town, the 10th of June 1749.

This fiſhery is ſo valuable to the Dutch, that, according to Sir William Monſon, who lived in the reign of King James I. they vended annually at Koningsburgh, Stetin, Dantzick, and another town within the Sound, between 30 and 40,000 laſts of herrings, amounting in value to above 620,000 l. In Denmark, Norway, Sweden, and Livonia, 10,000 laſts of herrings, worth 160,000 l. In Ruſſia, 1500, amounting to 27,000 l. At Stade, Hamburgh, Bremen, and Embden, 6000 laſts, amounting to 100,000 l. In Germany, 22,000 laſts, amounting to 340,000 l. In the Spaniſh Netherlands 9000 laſts, amounting to 160,000 l. At Rouen, 500 laſts, worth 10,000 l. So that here he has reckoned up above a million and a half ſterling made of herrings by the Dutch upwards of 100 years ago; beſides a vaſt quantity conſumed in their own country, to the amount of ſeveral hundred thouſand pounds more. And theſe herrings are the more valuable to the Dutch, becauſe whatever any country yields they take in lieu of them, having ſeldom occaſion to export any other treaſure: for in Holland there is a ſtaple of all commodities, their ſhips continually going out and coming in, to and from every country on the face of the globe, which bring them in an ineſtimable profit.

Upon the late eſtabliſhment of the Britiſh fiſhery, the Dutch were threatened with a diminution in this part of their commerce: for it was intended that the new company ſhould fit out 200 buſſes; the charge whereof, new from the ſtocks, and furniſhed at all points for the fiſhery, together with victuals and wages for one whole year, would come to about 90,000 l. or at ſecond-hand perhaps 30,000 l. cheaper; which expence, according to Sir Roger L'Eſtrange, would be cleared the firſt year, if attended with ordinary ſucceſs, and money towards a ſtock over and above. He ſtates the proportion of ſailors and fiſhers for 200 buſſes to be 2000 men, which might be ſupplied from the Britiſh coaſts without any difficulty; beſides, theſe 200 buſſes might train up annually 1200 landmen for ſea ſervice.

It is to be obſerved, that the Engliſh can build and rig out a veſſel cheaper than the Hollanders; becauſe their country affords none of the materials: for the Dutch fetch their timber, planks, iron, hemp, cordage, pipe-ſtaves, bread, and malt, from foreign countries; whereas England produces moſt of theſe. The hazards alſo, and the difficulties of the Dutch, in this fiſhing voyage, muſt be much greater than thoſe of the Engliſh; becauſe the former are at a great diſtance from their ports: whereas the latter have harbours all along the coaſts where the ſhoals of herrings lie, and can ſend them ſooner to market into the Baltic, where moſt of them are vended, than the Dutch poſſibly can. But, notwithſtanding theſe advantages, the Britiſh company at firſt ſent out only 10 buſſes; though theſe had very conſiderable ſucceſs, and they were intended to be augmented to 67.

It is greatly to be lamented that this fiſhery ſhould be impeded by any artifices to be thrown in the way of the ſociety: for if the Britiſh navigation ſhould fall, every thing valuable to Engliſhmen muſt be loſt; and how to ſupport and ſupply it without the fiſhery, a very eminent gentleman formerly declared he could not comprehend. The man of war and merchantman conſume ſeamen but breed none; the collier brings up now and then an apprentice, but ſtill ſpends more than he makes: the only and the common nurſery of ſeamen is the fiſhery; ſo that this fiſhery is juſt as neceſſary to the Britiſh navigation, as navigation is to the ſafety and proſperity of Britain; and it is well enough obſerved, that all princes and ſtates are ſtronger and weaker at ſea according to the meaſures of their fiſhery.

The fiſhery would abundantly ſupply the Britiſh mariners with pilots, whoſe ſervices would more than countervail the charge; for their buſineſs lies where moſt danger is to be found: they know all the rocks and ſhelves, and there is no coaſting without them. Beſides, a farther advantage would enſue, by enlarging and improving ſeveral of the Britiſh manufactures, and conſtantly employing a great number of hands, which would tend to exonerate the country of vagrants and idle people: ſix trades particularly would be concerned in this undertaking, which are at preſent but little uſed, as hempſters, ſpinſters, carders, rope-makers, weavers of ſail-cloth, and net-makers; and there would alſo be a fuller employment for coopers, ſmiths, ſhipwrights, caulkers, ſawyers, ſeamen, fiſhermen, baſket-makers, and other trades: to all which may be added, that when the herring-buſſes are not employed in fiſhing for herrings, they may fiſh for cod on the north of Scotland and Ireland; which is an advantage the Dutch cannot ſo conveniently take.

The commerce of herrings, both white or pickled, and red, is very conſiderable; but there are ſo many ſorts prepared in ſuch different ways, and different places, that it is difficult to ſay any thing preciſely upon this ſubject. See *Herring*.

The white herrings cured by the Dutch, were, till lately, in the greateſt repute; being diſtinguiſhed into four kinds, according to their ſizes: the goodneſs of this commodity conſiſting in its being fat, fleſhy, firm, white, ſalted the ſame time it is taken, with good ſalt, and well barrelled. But the herrings cured by the buſſes belonging to the Britiſh ſociety are in greater reputation than thoſe taken

by the Dutch. The Iriſh herrings are the next in value, and principally thoſe of Dublin, which are ſcarce inferior to the beſt herrings of Rotterdam, or Enchuyſen. The Scotch herring is not ſo well prepared, gutted, ſalted, nor barrelled as the Dutch, and yet its taſte is excellent: nor is it doubted, but that, if the Scots were as careful in theſe circumſtances as their neighbours, their herring would be the beſt in the world. A conſiderable number of herrings are alſo fiſhed on the coaſts of England and Wales, particularly off Yarmouth, and the coaſt of Cardigan; but they are not altogether ſo proper as the others for exportation; the fiſh being too dry and freſh for the market.

For curing the white, or pickled herring, one of the crew, appointed for this office, as ſoon as the fiſh are taken out of the ſea, cuts them open, taking out the guts, and every thing but the milts and roes, which are always to be left in the body of the fiſh: then, waſhing them in freſh water, they are left, the ſpace of 12 or 15 hours, in a tub full of ſtrong brine, made of freſh water and ſea-ſalt. When they are taken out they drain them, and when well drained put them in barrels, taking care to diſpoſe and range them evenly in rows or layers, preſſing them well down, and ſtrewing a layer of ſalt both at top and bottom. When the barrel is full they ſtop it up very cloſe, that no air may get in, nor any brine flow out; either of which is very prejudicial to the fiſh.

The curing and preparing of red herrings is done in this manner: the fiſh being caught, they proceed to waſh, gut, and lay them in brine, as for pickled herring; only they let them lie double the time in brine, that is, 24 hours, becauſe they are to take all their ſalt here; whereas the other kind takes half its ſalt in the barrel. When the herrings are taken out of the brine they ſpit them, that is, ſtring them by the head on little wooden ſpits, and thus hang them in a kind of chimney, made for the purpoſe; and when the chimney is as full as it will hold, which leſs than 10 or 12,000 ſeldom effects, they make a little fire underneath of bruſh-wood, that yields a deal of ſmoke, but no flame, where the herrings remain till they are ſufficiently ſmoked and dried, which ordinarily is in 24 hours; when they are taken down and barrelled up for keeping. Their goodneſs conſiſts in being large, freſh, fat, oily, ſoft, and pliable, their outſide of a yellow golden colour, their roes or milts within them, and well ſalted and barrelled.

By an authentic liſt of white, or pickled herrings, imported into Hamburgh from 1731 to 1750, it appears, that in the year 1737 there were 2800 laſts of Dutch

1738	2040	herrings imported there.
1739	1680	
1740	1520	
1741	1730	
1742	1500	
1743	1930	
1744	1660	
1745	2340

1747	1610	
1748	1516	
1749	1798	
1750	1364	
Average	1892	laſts annually.

This average of 1892 laſts yearly, gave employment to 54 buſſes, computing 35 laſts, at 12 barrels the laſt, containing 12000 herrings, to a buſs; which is as little as can be given to each, during the two fiſheries off Shetland and Yarmouth: but Hamburgh could make a greater conſumption; and when it is conſidered what numbers of laſts are annually vended in Denmark, Peterſburgh, Stockholm, Riga, Gottenburgh, Dantzick, Stetin, Bremen, Embden, Berlin, and other parts of Germany; as likewiſe in Flanders, and the Weſt Indies; all of them open markets for Britiſh herrings; what an idea may be formed of the utility of this fiſhery, if properly conducted by the ſociety eſtabliſhed for ſo ſalutary an undertaking? For, from thence it will appear, that if due care is taken in working this more than golden mine, it muſt neceſſarily be productive of immenſe riches, as well as of great ſtrength, to the Britiſh dominions.

The towns of France, from whence the herring-fiſhery is carried on, are Calais, Boulogne, St. Vallery, Treport, Dieppe, Fecamp, Havre, and Honfleur; and the fiſhers of theſe towns generally fit out yearly 120 veſſels, with 15 hands one with another, aboard.

Britiſh FISHERY *companies.* The company of *the royal fiſhery of England* was eſtabliſhed by commiſſion under the great ſeal of England, in the reign of King Charles II. who conſtituted his Royal Highneſs James Duke of York, Edward Earl of Clarendon, Thomas Earl of Danby, and ſeveral other perſons of diſtinction, to be a council for this royal fiſhery; his Majeſty authoriſing them with ſeveral powers, declaring himſelf their protector, and granting them ſuch extraordinary privileges, that, in the 29th year of his reign, he incorporated them, and others who were traders and adventurers, into a company, calling them The company of the royal fiſhery of England: but it was never properly carried into execution. However, by the ſtatute of the 9th of Queen Anne it was enacted, That the crown might, by letters-patent, direct a ſtock, to conſiſt of 20 s. on every hundred pounds of the capital ſtock of the South Sea company, and to be raiſed by the members thereof in proportion to their adventures, to be employed in the improving, enlarging, and carrying on, the fiſhery of England; and this likewiſe dropt into nothing.

Among the great number of ſchemes for eſtabliſhing companies at London in 1720, that for the Britiſh fiſhery was not the leaſt conſiderable.

The great funds deſigned for its execution, the quality of the ſubſcribers, the importance of the deſign, which tended to nothing leſs than to ruin the commerce of all other nations, made the world believe at firſt, that it was to be eſtabliſhed upon more ſolid foundations than ſeveral others, whoſe very names ſeemed to ſhew their impending ruin; yet it ſeems that it came not ſhort of its project, and if it is here mentioned, it is only to ſhew the vaſt ſtretch of the ideas of commerce wherewith all nations flattered themſelves upon obſerving how far the French India company had advanced the credit of its actions.

The funds of this company were fixed at three millions of pounds ſterling. More than 150 members of the houſe of commons were the firſt ſubſcribers; and, to perfect the form, a charter of eſtabliſhment was requeſted from his Majeſty, whoſe expediting ſeemed ſo much the more eaſy, as this enterpriſe had already been acceded to by a committee of the houſe of commons.

The requeſt preſented to the King was digeſted into thirteen principal articles, the moſt eſſential of which were as follows. By the firſt, a truth not to be conteſted was eſtabliſhed, that the power and opulence of the Britiſh iſlands are founded upon commerce and navigation.

2d, That there was a great proſpect of ſeeing both encreaſed by the peace already eſtabliſhed in Europe.

3d, That the Engliſh obſerving their neighbours buſied about reaping an advantage from ſo favourable a juncture to augment their trade already ſo conſiderable, it would not be prudence in the nation to remain idle ſpectators of their new efforts, and not to imitate their ardour for extending their commerce and navigation.

4th, That the ſureſt means to ſucceed therein, is the encouragement of the fiſhery; which ſuits better the Britiſh nation than all other people of Europe.

5th, That if the woollen trade is the baſis, and principal reſource of the Britiſh commerce, fiſhing is chiefly that of the Dutch; and it is thereby more than by any other way, that their maritime power almoſt equals that of England.

6th, That it was for theſe conſiderations a fund had been eſtabliſhed by ſubſcription, large enough to give the Britiſh fiſhery all the extent it was capable of having.

7th, That, by this eſtabliſhment, all the maritime towns of the three kingdoms may bear a part in the fiſhery, and that an infinite number of poor, who ſtarve for want of employment, ſhall find thereby wherewithal to keep them in action, and live handſomely.

8th, T

That this fiſhery ſhall be carried on with all poſſible
re and diligence, no fiſhing-buſs being authoriſed to put
o any Engliſh port, unleſs a member of the company
eſtabliſhed there to take care thereof.

That this fiſhery employing a great number of ſea-
en, there will be always ſome ready for the ſervice of
e King's ſhips, or thoſe of merchants, who often want
em, without having recourſe, as uſual, to the boatmen
the Thames, who turn out the worſt of ſeamen; and
at a competent judgment of the vaſt number of theſe
w ſailors trained aboard the buſſes of this univerſal
hery might be formed from thoſe the Dutch employ
the herring and whale fiſhery, who amount to up-
ards of 3000.

. That the new company hoped to make its commerce
perior to that of its neighbours, ſo much the more as
could ſupply with fiſh ſeveral great cities of Germany,
the means of the ports which his Britannic Majeſty
s at preſent upon the Elbe in quality of Elector of Ha-
over; and that it could underſel the Dutch, becauſe this
mmerce is contiguous to them.

. That the company being obliged to have ſeveral
nds of artiſans in its ſervice, undertook to keep them
their duty, and to put a ſtop to thoſe murmurings ſo
ual to them when out of work, and which in certain
rcumſtances may prejudice the ſtate.

2. That, laſtly, beſides the fiſhery the company pro-
oſed to eſtabliſh towards the weſt-coaſt of Great Britain,
would alſo undertake the whale-fiſhery in Greenland,
nd thereby ſave the nation more than two hundred
ouſand pounds ſterling *per annum* paid to the Hollan-
ers for oil and whale-bone imported to England.

Society of the free Britiſh fiſhery. The above propoſals,
pon the declenſion of the South Sea company, were neg-
ected till the year 1723, when they were ineffectually re-
ewed; nor was there any appearance of the fiſhery be-
g promoted, till it was undertaken by Admiral Vernon,
eneral Oglethorpe, and Alderman Janſſen, who ſup-
orted it ſo vigorouſly, that, in the 23d year of King
George II. an act of parliament was paſſed, "for the en-
couragement of the Britiſh white herring fiſhery;"
hereby it was enacted, That his Majeſty might incor-
orate the ſeveral perſons therein particularly mentioned,
or raiſing the capital ſum of 500,000l. to be eſtabliſhed
s a fund for this company, by the name of The ſociety
f the free Britiſh fiſhery; with ſeveral privileges therein
entioned, and afterwards more amply expreſſed in the
harter. That his Majeſty might empower the ſociety to
ake by-laws; and that the ſociety might direct what
eals or marks ſhould be put on the barrels or caſks of
heir fiſh; and if any perſon ſhould counterfeit the ſame,
r ſhould knowingly affix ſuch counterfeited ſeal to any
aſk of fiſh not belonging to the ſaid ſociety, he ſhould
orfeit 500l. for each offence. That the ſum of 3l. *per*
nnum for every 100l. actually employed in the ſaid
ſhery, and proportionably for any greater or leſſer ſum,
hould be paid to the proprietors of the ſaid ſtock for 14
ears from the date of the charter, out of the cuſtoms by
he Receiver-General, by equal half yearly payments; and
n account of the ſums which ſhould be expended by the
ociety in the fiſhery, ſhould be delivered to the commiſ-
oners of the cuſtoms, who, upon proof of ſuch expen-
iture, ſhould order ſuch payment to be made, for the
ums which ſhould appear to be employed in the fiſhery.
That the ſociety ſhould employ 100,000l. at leaſt in
he ſaid fiſhery, within 18 months after the date of the
ubſcription; and accounts of the monies ſo employed
hould be annually laid before parliament; and if loſs
hould ariſe by adventure in any year, and there ſhould
e gain in the ſucceeding year, the gain ſhould be ap-
plied to make good the veſſels and fiſhing-ſtock to the
ull value of the ſum of 100,000l. before any dividend
hould be made. That a bounty of 30s. a ton ſhould
e paid annually out of the cuſtoms, to the owners of all
decked veſſels, from 20 to 80 tons burthen, which ſhould
e built after the commencement of this act, for the uſe
of, and fitted out and employed in the ſaid fiſheries, whe-
ther by the ſociety, or any other perſons. That every
ſuch veſſel, which ſhould be intitled to the ſaid bounty of
30s. a ton, ſhould be a decked buſs veſſel, built in Great Britain, after the commencement of this act, and ſhould proceed on the ſaid fiſhery from ſome port in Great Britain, manned and navigated according to law; and before ſhe proceeded on ſuch voyage, or was intitled to the benefit of this act, ſhe ſhould be viſited by ſuch officer of the cuſtoms belonging to the port as ſhould be appointed by the commiſſioners of the cuſtoms, who ſhould take an account of her tonnage by admeaſurement, and ſhould certify the ſame, and his viſitation, to the ſaid commiſſioners, and that ſhe had on board ſuch a quantity of fiſhing-nets, and other ſtores, as were directed by the act, and otherwiſe was a proper veſſel to be employed in the ſaid fiſhery; and upon its further appearing, by the oath of one or more owners, or their agent, or of a proper officer of the ſociety appointed for that purpoſe, and of the maſter or chief officer of ſuch veſſel, written at the foot of the certificate, and made before the collector and comptroller of the port, that it was their firm purpoſe and reſolution that ſuch veſſel ſhould proceed reſpectively ſo manned, furniſhed, and accoutred, either to Braſſey's ſound in Shetland, and be at the rendezvous of the fiſhery there, on or before the 11th of June, and ſhould not ſhoot or wet their nets before the 13th of the ſame month, and ſhould continue fiſhing amongſt the ſhoals of herrings as they moved ſouthward to the 1ſt of October; or ſhould proceed to Campbell-town in Argyleſhire, and be at the rendezvous of the fiſheries there on or before the 1ſt of September, and ſhould continue fiſhing among the ſhoals of herrings as they moved to the 31ſt of December, unleſs they ſhould ſooner have completed their loading of fiſh; and ſhould fiſh in an orderly manner, without obſtructing other veſſels employed in the ſaid fiſhery, and keep a journal of their proceedings, and an account of the quantities of fiſh they ſhould diſpatch away to foreign markets in their tenders before they come into port, beſides the particular quantity they ſhould bring into port with them; and if, after ſuch certificate and oath, ſuch owner, or officer, or agent of the ſociety, and maſter or chief officer of ſuch veſſel, alſo became bound, with two ſufficient ſecurities, unto his Majeſty, in the penalty of a ſum equal to treble the bounty on the tonnage of his veſſel, which bond the collector was to take, with the approbation of the comptroller, and the ſame ſhould be in force for three years againſt the maſter and his ſureties, for the faithful dealing of the ſaid maſter, and the company of his ſhip, in regard to the ſaid veſſel and voyage; then the collector and comptroller of the port ſhould give to the maſter and owners of ſuch veſſel, full licence to proceed on ſuch voyage. That veſſels which ſhould be deemed properly qualified, and fitted out, for the herring-fiſhery, according to the intent of this act, ſhould be decked and built in Great Britain after the commencement of this act, and ſhould have on board 12 Wincheſter buſhels of ſalt for every laſt of fiſh which ſhe was capable of holding, barrelled up in new barrels, and as many more new barrels as ſhe was capable of carrying; and ſhould have two fleets of tanned nets proper for the herring-fiſhery; that is, every veſſel of 70 tons ſhould, on her proceeding to ſea, have on board one fleet of 50 nets, each net to be 30 yards full upon the rope, and 7 fathoms deep, and ſo in proportion for veſſels of a greater or leſſer tonnage; and be provided with another fleet of like nets, on board a jagger or tender, to attend the ſaid fiſhery, or left on ſhore in a proper place for the uſe of the ſaid veſſel. That every veſſel of 20 tons ſhould have on board, at the place of rendezvous, not leſs than 6 men; and every veſſel of greater burthen ſhould, over and above the 6 men aforeſaid, have one for every 5 tons which ſhe exceeded 20 tons. That, on the return of ſuch veſſel into any port of Great Britain, for her diſcharge, the chief officer of the cuſtoms, or ſuch officer as he ſhould appoint at ſuch port, ſhould immediately repair on board, and view the condition of the veſſel and her lading, and certify the ſame, together with his obſervations thereon; as alſo her real tonnage, with the name of the maſter, and other perſons on board; and the maſter ſhould make oath before the collector and comptroller of the port, that ſuch veſſel was

at

at one of the places before mentioned at the time appointed by this act, and had not ſince been on any other voyage, or purſued any other deſign, or view of profit; and that they remained fiſhing according to the direction of this act, and had, at the time of their rendezvous, the limited quantity of nets and other ſtores, and number of men; which, together with the account of the fiſh taken by the ſaid veſſel, ſhould be tranſmitted by the collector and comptroller of the port, to the commiſſioners for that part of Great Britain from whence the veſſel departed with her licence; who, being ſatisfied of the faithful dealing of the maſter, and other perſons employed in ſuch veſſel, with reſpect to the voyage and fiſhing, ſhould on demand cauſe payment to be made to the owners, or their agent, of 30 s. *per* ton, according to the admeaſurement certified as aforeſaid. That the ſaid bounty of 30 s. *per* ton ſhould be paid annually for 14 years from the commencement of this act, and no longer, upon conforming to the aforeſaid regulations. That this act ſhould not exclude any ſubjects of Great Britain, who were not members of the ſaid ſociety, or employed by them, from fiſhing, or carrying on white herring and cod fiſheries, and any other whatſoever, as they might have done before this act. That any number of perſons, who ſhould ſubſcribe 10,000 l. or upwards, into the ſtock, and ſhould carry on the fiſhery under their own management, and on their own account of profit and loſs, conformably to the directions of this act, and of the charter, except as to their being obliged to uſe the marks of the ſociety, and from the port named by them, if they ſubſcribed under the name of the *fiſhing-chamber* of ſuch city, town, or port reſpectively, and ſhould ſend their account of monies expended in the ſaid fiſheries, atteſted by three of the commitee, who ſhould be appointed for managing the matters of the ſaid chamber; and be alſo ſigned by their accomptant, who ſhould make oath before ſome juſtice, that he believed the ſame was a true account, the vouchers whereof he ſhould produce, if required; which account ſhould be tranſmitted to the governor and council of the ſociety at London, where the accomptant of the ſociety ſhould enter the ſame as a ſum expended in the ſaid fiſheries by the ſociety, in the accompt which he ſhould deliver in to the commiſſioners of the cuſtoms as, aforeſaid, and the chamber ſhould receive 3 l. for every 100 l. as the ſociety did for other monies employed by them in the ſaid fiſhery, after deducting the neceſſary charges ariſing from the receipt of the ſame. That ſuch chambers as ſhould trade or fiſh on their own account, ſhould not have any profit or loſs ariſing from the trade of the ſociety; and that the receiver-general of the cuſtoms ſhould annually pay the ſaid ſum of 3 l. for every 100 l. to the ſociety in London, or to ſuch perſon as they ſhould empower to receive the ſame; and the ſociety ſhould pay over the ſame, deducting charges, to the reſpective fiſhing-chambers intitled thereto, or to ſuch perſons as they ſhould impower to receive the ſame.

In purſuance of this act, a charter of incorporation paſſed the great ſeal in 1750, reciting, That whereas the carrying on, and improvement of the Britiſh white herring fiſheries were of great importance to Great Britain and Ireland, as they might be of great advantage to the trade and navigation thereof, and might be a means of employing and providing for great numbers of induſtrious poor, provided the ſame could be carried on with a ſufficient ſtock, under proper regulations, and that reaſonable encouragement be given to ſuch perſons as were willing to carry on the ſaid fiſheries. Therefore, for the encouragement of ſuch perſons as were willing to carry on the ſaid fiſheries, and for the better regulation of the ſaid trade, and for preventinig frauds and impoſitions in the management thereof; his Majeſty declared, That, by virtue of his royal prerogative, and in purſuance of an act of parliament paſſed in the 23d year of his reign, intitled, "An act for the encouragement of the Britiſh white herring fiſhery," for himſelf, his heirs, and ſucceſſors, he had granted, conſtituted, declared, and appointed, Sir James Lowther, Sir Nathaniel Curzon, Sir Bourchier Wrey, Sir Walter Blacket, and Sir Cyril Wich, baronets; Sir Richard Lloyd, knight; Edward Vernon, Eſq; William Whitaker, Stephen Theodore Janſſen, and

Slingſby Bethel, Eſqs; aldermen of the city of London; Lieutenant-General Roger Handaſyd, Lieutenant General Richard Onſlow, and Lieutenant-General James Oglethorpe; Thomas Fonnereau, Velters Cornewal, William Willy, George Dodington, William Northey, Charles Gray, William Davis, Edward Stevenſon, Paul Humfrey, John Edwards, and Francis Craieſteyn, Eſqs; Meſſ. Neufville, and Schuman; Andrew Drummond, Eſq; Capt. George Stevens, Robert Drummond, and Jeffery Freinch, Eſqs; Mr. Michael Miller of Briſtol, Mr. Robert Macky, Mr. Jonathan Perrie, Mr. Richard Baker, and Mr. William Bowden; John Bance, Eſq; Mr. Peter Simond; Theodore Cock, George Dunbar, and Taylor White, Eſqs; Mr. John Patoun, and Mr. Samuel Clarke, of the Old Jury; Michael Wilkins Conway, John Spooner, and Arthur Beardſly, Eſqs; Mr. Roger Hogg of Baſinghall-ſtreet, Mr. William Crammond, Mr. Hutchinſon Muir, Mr. Robert Scott, Mr. George Spence, and Mr. Robert Cady; Richard Taunton, William Belchier, William Thornton, Francis Gwynn, Peter Delme, Jonathan Watſon, Thomas Salisbury, Richard Gildart, John Hardman, Lawrence Dundas, Thomas Curtis, Michael Beecher, and Joſeph Percival, Eſqs; Edward Ironſide, Eſq; alderman of the city of London, and George Walker, Eſq; and all and every perſon or perſons, bodies politic and corporate, who in their own right, or as executors, adminiſtrators, ſucceſſors, or aſſigns, derived, or to be derived from, by, or under the original proprietors, at any time or times thereafter, ſhould have and be intitled to any part, ſhare, or intereſt of, or in the capital ſum of 500,000 l. therein after mentioned, ſo long as they reſpectively ſhould have any ſuch part, ſhare, or intereſt therein, to be one body politic and corporate, in deed, and in name, by the name of "The ſociety of the free Britiſh fiſhery;" and by that name to have a ſucceſſion for the term of 21 years, to commence from the date of theſe his letters-patent. That he had granted them a common ſeal, with leave to alter it, and alſo liberty to ſue for any thing belonging to the company during the 21 years. That he had granted them the liberty to make by-laws, for the regulation and government of the ſaid ſociety; as alſo for the regulation and management of the ſaid trade and commerce, which ſhould be carried on by them; and for the curing, ſalting, and packing their white herrings, in ſuch manner as might effectually ſecure the credit of the ſaid commodities in foreign markets; and for the government of ſervants, and others employed by the ſociety in the ſaid fiſhery. That he had alſo granted them the liberty for the ſaid 21 years, to elect a governor, preſident, and vice-preſident; as alſo a council, conſiſting of 30 perſons, to be elected as after mentioned, for the managing and carrying on the buſineſs and affairs of the ſociety. That his Majeſty had thereby nominated and ordained his moſt dearly beloved ſon Frederick, Prince of Wales, to be the firſt governor of the ſociety; Slingſby Bethel, Eſq; to be the firſt preſident; and Stephen Theodore Janſſen, Eſq; to be the firſt vice-preſident; Roger Handaſyd, Eſq; Lieutenant-General of his forces, John Edwards, Francis Craieſteyn, Edward Vernon, Robert Bootle, George Dunbar, Velters Cornewal, George Dodington, Robert Crammond, Samuel Clarke, William Northey, George Stevens, Richard Baker, and Claude Johnſon, Eſqs; Sir Nathaniel Curzon, Baronet, William Davis, Andrew Drummond, Michael Wilkins Conway, and Jonathan Watſon, Eſqs; James Oglethorpe, Eſq; Lieutenant General of his forces, Roger Hogg and William Bowden, Eſqs; Sir Bourchier Wrey, Baronet; John Lidderdale, John Turner, Simon Rogers, Charles Raymond, John Vaughan, Francis Gwynn, and George Bowes, Eſqs; to be the the firſt council of the ſociety, and to continue in their reſpective offices for the ſpace of three years from the date of theſe letters-patent, and until ſome others ſhould be elected into their ſaid offices of governor, preſident, and vice preſident, and council, reſpectively, in ſuch manner as after mentioned; with power, during the ſaid term, to hold a general court, in ſome convenient place, within or near the cities of London and Weſtminſter; and there to aſſemble and meet together as often as the governor, preſident, vice-preſident, and council

r the time being, or any ſeven or more of them, hereof the governor, preſident, or vice-preſident, al-ays to be one; or as nine other perſons qualified to ote as after directed, each having 1000 l. in the capi-l ſtock after mentioned, in writing under their hands, ould demand of the governor, preſident, vice-preſi-ent, or any ſeven or more of the council, ſuch council be held to treat and conſult, or make and eſtabliſh aſonable laws, orders, and rules, concerning the af-irs of the ſociety, or for the good government thereof; e time and place of holding and keeping all which ouncils ſhould be eight days at leaſt before the ſame ere held and kept, publiſhed in the London Ga-ette, or in ſuch other manner as the ſociety, and eir ſucceſſors, ſhould direct. That the governor, reſident, vice-preſident, or any ſeven or more of the ouncil, whereof the governor, preſident, and vice-pre-dent, to be one, ſhould make and be called "The court of the council of the ſaid ſociety;" and that it ſhould lawful for the ſaid court of the council, or the major rt of them then preſent, to appoint proper officers and rvants for the ſervice of the ſaid ſociety; and to ap-oint and allow their reſpective fees or ſalaries, and to in-reaſe or diminiſh, or otherwiſe alter the ſame; and to move and diſplace them, and every of them, when and often as they, or the major part of them then pre-nt, ſhould think fit; and to order, direct, manage, nd tranſact, all and every the affairs and things of or elonging to the ſociety, except what ought to be or-ered and done only in and by a general court of the id ſociety; and ſhould and might appoint committees r the better management of their affairs, and make -laws for the regulation and government of the ſociety, nd for the regulation and management of the trade and ommerce which ſhould be carried on by them; and for e curing, ſorting, and packing their white herrings as ffectually to ſecure the credit of the ſaid commodities foreign markets; and for the government of the ſer-ants and others employed by the ſociety in the ſaid ſhery; and the ſaid by-laws, or any of them, to alter and nnul, as the ſaid court of council, or the major part of em preſent, ſhould ſee requiſite; and, by ſuch by-laws, ſet and inflict reaſonable pains and penalties upon any ffender or offenders, who ſhould tranſgreſs, break, or iolate the by-laws, and to mitigate the ſame as they hould find cauſe; which ſaid pains and penalties ſhould nd might be levied, ſued for, taken, retained, and re-overed by the ſaid ſociety, during the ſaid 21 years, or y their officers and ſervants, by action of debt, or other awful ways and means, to the uſe of the ſaid ſociety, and eir ſucceſſors; all which by-laws his Majeſty willed hould be duly obſerved and kept, under the pains and enalties therein to be contained; ſo always as the ſaid -laws, pains, and penalties, were reaſonable, and not ontrary to the laws or ſtatutes of the realm, and if ſuch -laws, pains, and penalties, and any repeal or alter-ion thereof, ſhould be confirmed by the general court ext after the ſame ſhould be made. That, during the id term of 21 years, the ſociety ſhould elect yearly, on e 5th of November next after the expiration of three ears from the date of the patent, or within 30 days af-r, a governor, preſident, vice-preſident, and a coun-l of 30 perſons, out of the members of the ſociety; 8 f which council ſhould be out of the members of the ociety, not being of the council within the preceding ear, and the reſidue among the laſt preceding council of e ſociety; to be elected by plurality of votes of all ch members qualified to vote as after directed, 15 days otice at leaſt being given in public manner, by the go-ernor, preſident, or vice-preſident, of the time and place election; which governor, preſident, vice-preſident, nd council, ſo elected, ſhould continue in their offices ll the 5th of November next following, his or their ection or elections, and from that time till others were hoſen in their ſtead. That the governor, preſident, or ice-preſident, ſhould yearly call and hold a general ouncil, on the ſaid 5th of November, or within 30 days fter, for ſuch elections, and give 15 days notice of the me and place of election; or, in default of ſuch notice, hat ten or more of the ſociety, qualified to vote, might aſſemble, upon the 14th day after the ſaid 5th of November, unleſs the ſame ſhall be Sunday, and in ſuch caſe the next day, when they, or the major part of them, ſuch major part not being fewer than ſeven, might order a general court to be held within 15 days after ſuch meeting, 14 days notice being given; and then, and there, by the majority of voices, ſhould make ſuch election or elections as aforeſaid. That every ſuch member, who had, or ſhould have, in his or her own right, the ſum of 300 l. in the joint ſtock of the ſociety, ſhould have, in every general court of the ſociety, one vote; and every perſon who ſhould, in his or her own right, be poſſeſſed of 1000 l. in the ſaid joint ſtock, ſhould have two votes; and that every perſon who ſhould be poſſeſſed of 2000 l. in the joint ſtock, ſhould have three votes; and that every perſon who ſhould be poſſeſſed of 3000 l. in the joint ſtock, ſhould have four votes in every general court of the ſociety; and that the ſociety ſhould have power to hold general courts in like manner during the ſaid term, on the death, reſignation, removal, or any other vacancy of the governor, preſident, vice-preſident, or any of the council, for electing others, who ſhould continue till the next general election. That the firſt general court ſhould be held within 30 days after the date of the patent; and whenſoever there ſhould be an equality of votes, the governor, or in his abſence the preſident, and in his abſence the vice-preſident, ſhould have the caſting vote. Provided that no perſon ſhould be capable of being elected a preſident, who ſhould not, at the time of ſuch election, have in his own name, and in his own right, for his own uſe, and not in truſt for any others, 3000 l. or more, in the joint ſtock to be raiſed in purſuance of this charter: that no perſon ſhould be vice-preſident, unleſs he had 2000 l. or more in the ſtock; and that no perſon ſhould be a member of the council, without having 1000 l. or more in the joint ſtock.

That his Majeſty granted to the ſociety a full power and authority, by a voluntary ſubſcription of their members and others, to raiſe a joint ſtock, not exceeding 500,000 l. without licence from the crown, to be applied for the carrying on and effecting the purpoſes of this charter; and the ſame joint ſtock to order, manage, and conduct, for the purpoſes aforeſaid, and to receive the benefit and advantage of the ſame, to the uſe of the ſociety, according to ſuch ſhares as they ſhould have therein. Provided that no dividend of the profit of the ſociety ſhould be made but by order of a general court, and all and every perſon or perſons ſo ſubſcribing and contributing any ſum or ſums of money to the joint ſtock of 500,000 l. except ſuch who ſhould ſubſcribe under the name of the fiſhing-chamber of any city, town, or port, ſhould, by virtue of ſuch ſubſcription, become a member or members of the ſociety, and ſhould be intitled to a ſhare or ſhares in ſuch joint ſtock, in proportion to their reſpective ſubſcriptions; ſuch perſons paying ſuch parts of their ſubſcriptions, in ſuch manner, and at ſuch times, as ſhould be directed by the council, in purſuance of the powers veſted in them by the act of parliament.

That all perſons intitled to ſuch ſhare, ſhould be enabled to ſell, aſſign, and transfer the ſame, or any part thereof, by transfer in the books of the ſociety, as after directed; and the perſons to whom ſuch aſſignment, or transfer, ſhould be made, ſhould, by virtue thereof, become members of the ſociety. Provided that no transfer ſhould be made within five years from the date of the charter; and all transfers made in that time ſhould be void; excepting only, that it ſhould be lawful for the executors and adminiſtrators of any perſons, who ſhould die poſſeſſed of, or intereſted in any ſuch ſtock or ſhare, and alſo for the aſſignees under any commiſſion of bankrupts, to transfer ſuch ſtock or ſhare, and diſpoſe of the produce thereof, within the ſpace of five years, in ſuch manner as they might after the expiration thereof, or if the ſaid years were expired.

Provided alſo, and for the aſcertaining and limiting how and in what manner the joint ſtock ſhould be transferred and alienated, by ſuch perſon and perſons as ſhould have any intereſt or ſhare in the ſame, it was appointed that there ſhould be forthwith provided, and conſtantly kept

in the public office or offices of the ſociety, a book or books, wherein all transfers ſhould be entered; and the method and manner of making all transfers ſhould be by an entry, in ſuch book or books to be kept as aforeſaid, ſigned by the parties ſo transferring, in the words, or to the effect following. "I *A. B.* this day of "in the year do transfer "being my intereſt or ſhare, or, as the caſe "may be, part of my intereſt or ſhare in the joint ſtock "of the ſociety of the free Britiſh fiſhery, and all bene- "fit ariſing thereby, unto *C. D.* his executors, admini- "ſtrators, and aſſigns. Witneſs my hand *A. B.*" Or in caſe the party transferring ſhould not be perſonally preſent, then by an entry in the ſaid book or books, ſigned by ſome perſon thereunto lawfully authoriſed, by letter of attorney, or writing under hand and ſeal, atteſted by two or more witneſſes, in the words following. "I *A. B.* "this day of in the year "do, in the name, and on the behalf of "transfer being the in- "tereſt or ſhare, or, as the caſe may be, part of the in- "tereſt or ſhare of the ſaid in the joint "ſtock of the free Brtiſh fiſhery, and all benefits ariſing "thereby, unto his executors, adminiſtra- "tors, and aſſigns. Witneſs my hand ." Under which transfer the perſon or perſons, bodies politic or corporate, to whom ſuch transfers ſhould be made, or ſome other perſon by him or them lawfully authoriſed thereunto, ſhould ſign his or their name or names, atteſting that he or they did freely and voluntarily accept of the ſame; and which entry, ſigned as aforeſaid, and no other way or method, ſhould be uſed in transferring the intereſt or ſhare in the joint ſtock; and every ſuch transfer ſhould be valid, and convey the eſtate and intereſt of the party aſſigning, of and in the ſtock ſo transferred, to the aſſignee or aſſignees thereof.

Provided that no executor or adminiſtrator ſhould tranſfer the ſhare or intereſt of the teſtator or inteſtate, or be intitled to receive any dividend, until an entry, or memorandum of the probate of ſuch will, or the letters of adminiſtration, ſhould be made in the book or books of the ſociety for that purpoſe.

That the ſociety, or the major part of them, as ſhould be aſſembled, being no leſs than ſeven, whereof the governor, preſident, or vice-preſident, to be one, ſhould have power to make calls, and direct the payments of any part of the ſaid 500,000 l. which any perſon ſhould ſubſcribe towards carrying on the ſaid undertaking, at ſuch times as the ſociety, or the major part aſſembled together, ſhould direct; ſo as the firſt payment directed to be made ſhould be made within 30 days after the time of ſuch ſubſcription, and ſhould be after the rate of 10 l. by the hundred of the whole ſum ſubſcribed; and ſo as the ſecond payment ſhould be after the rate of 10 l. by the hundred; and that the other payment ſhould be purſuant to the direction of a general court, which ſhould be for that purpoſe aſſembled, or a majority of them; and in caſe any perſon ſhould refuſe or neglect to pay any money which ſhould be ſo called for by the ſociety, at the times when the ſame ſhall be appointed to be paid, notice of ſuch call being publicly given 30 days before, it ſhould be lawful for the ſociety to ſell, diſpoſe of, and transfer, ſo much of the ſhare or ſtock, of the perſon ſo neglecting or refuſing as ſhould produce the ſum, which ſuch perſon or perſons ought to have paid on ſuch call.

Provided that all ſuch money ſo ſubſcribed and directed to be paid, ſhould be paid into the bank of England on account of the ſociety.

And further reciting, that whereas it had been, by the ſaid act of parliament, provided, That the fiſhing-chambers therein mentioned, which ſhould ſo trade or fiſh on their own account, ſhould not have any profit or loſs ariſing in the trade of the ſociety: therefore his Majeſty further declared, That his will was, that no perſon or perſons, who was, were, or ſhould be adventurers, or ſubſcribers, in ſuch chambers, or in any foreign fiſheries, ſhould be capable of being elected preſident, vice-preſident, or member of the council, of the ſociety.

Provided, and for the effectually preventing the ſociety from intermeddling or interfering with the buſineſs, or affairs, of the corporation, of the governor and company of the bank of England, or of the corporation of the governor and company of the bank of Scotland, or of the corporation of the Royal Bank of Scotland, and from dealing in any trade or merchandiſe; his Majeſty directed, that the ſociety thereby eſtabliſhed ſhould not diſcount or deal in bills of exchange, or inland bills or notes; nor receive monies, or keep the accompts or cash of any perſon or perſons, other than their own proper money accompts and caſh, being the real produce of their joint ſtock or fund, or ſuch monies as ſhould be paid to them for the purpoſes therein mentioned; nor ſhould deal in banking, or any ways uſe the banking trade or buſineſs; nor ſhould upon their common ſeal, nor by their caſhiers, officers, or ſervants, or any other perſon on their behalf, give, or iſſue out, any bills or notes payable upon demand for the loan of money, with or without intereſt; nor ſhould advance, or lend any money at intereſt, upon any account or pretence whatſoever; nor ſhould, by way of trade or merchandiſe, directly or indirectly, buy or ſell, or deal in any goods, wares, or merchandiſes, or any bullion, gold, ſilver, mineral, metal, or ore, other than and except ſuch as ſhould be the produce of the fiſhery, which ſhould belong to the ſociety; and that, in caſe the ſociety ſhould act contrary thereto, that then, and in any of the ſaid caſes, his Majeſty, for himſelf and his ſucceſſors, reſerved full power, by his or their order, in his or their privy council, at any time after three months notice to the ſociety, to determine this his preſent charter, and the corporation thereby made, and from three months after ſuch order of council made in any of the ſaid caſes, this charter, and the corporation thereby made, ſhould ceaſe, and be void; and in caſe the corporation ſhould, contrary to the reſtrictions before mentioned, offend in any matter aforeſaid, or in any particular or particulars exceeding the ſum or value of 500,000 l. within the compaſs of any one year, to be reckoned from Ladyday yearly, that then the Attorney-General, and the Advocate in Scotland, ſhould, and were hereby authoriſed, without any further warrant or order, at the requeſt of the governor and company of the bank of England, or of the governor and company of the bank of Scotland, or of the Royal bank of Scotland, by information or otherwiſe, as the law ſhould allow of, to proſecute the corporation thereby eſtabliſhed for ſuch offence and breach of any of the reſtrictions aforeſaid, and for the Attorney-General to proceed againſt the ſociety, by *Scire facias* or otherwiſe, in order to procure theſe letters-patent, and the corporation thereby created, by judgment thereon, to be determined and made void.

His Royal Highneſs the Prince of Wales died ſoon after this incorporation; when his eldeſt ſon George, the preſent Prince of Wales, ſucceeded his father in the government of the ſociety, who have an apartment in the Royal Exchange for their office; and the herring is become ſo much in vogue, ſince the eſtabliſhment of the new fiſhery, that it is allowed a place at the politeſt tables, in imitation of the ſignal honour done it at the table of his Majeſty. See *Ladog*.

Cod-FISHERY. The cod is a fiſh of paſſage, pretty large, with a frightful head, and teeth in the bottom of the throat; its fleſh white, its ſkin browniſh on the back, white under the belly, and covered with thin tranſparent ſcales: it eats excellently when freſh; and, if well prepared and ſalted, will keep a long time, which is commonly eaten in England in time of Lent, under the denomination of ſalt-fiſh, or ſtock-fiſh. But there are two kinds of ſalt cod; the one called green, or white; and the other dried, or cured; though it is all the ſame fiſh, only differently prepared.

Green cod. The fiſheries for green cod are in the bay of Canada, on the great and little banks near the iſland of Newfoundland, the iſland of St. Peter, and the iſle of Sable; where veſſels are annually ſent from ſeveral parts both of America and Europe; being from 100 to 150 tons, which will bring 30 or 35,000 fiſh a piece.

The moſt eſſential articles in this fiſhery, are three per

ſons who know how to open the fiſh, to cut off the heads, and to ſalt them; upon the ability of which laſt the ſucceſs of the voyage principally depends.

Several authors will have it, that the Biſcayans, in purſuing their whales, made the firſt diſcovery of the great and little bank of cods, Newfoundland, Canada, and Nova Scotia, 100 years before the time of Columbus; and that it was a Biſcayan Newfoundlander that gave the firſt intimation thereof to Columbus. Others ſay, that the great bank was diſcovered by a native of St. Malo's, named Cartier. But be the diſcoverer of what name or nation he will, the invention is certainly highly valuable; for every trading nation in Europe allows the commerce of cod-fiſh to be one of the moſt ſecure and gainful that is known.

The beſt, largeſt, and fatteſt cod, are thoſe taken on the ſouth-ſide of the great bank, which is a kind of ſubmarine mountain, 150 leagues long, and 50 broad, being 25 leagues diſtant from Newfoundland; but the fiſh taken on the north-ſide are much ſmaller.

The beſt ſeaſon is from the beginning of February to the end of April; when cod, which during the winter had retired to the deepeſt parts of the ſea, return to the bank, and grow very fat. Thoſe caught from March to June keep well enough; but thoſe in July, Auguſt, and September, ſoon ſpoil.

The fiſhing is ſometimes done in a month, or ſix weeks; ſometimes it holds ſix months. As Lent draws on, if the fiſhermen have but half their cargo, they ſtrive to make homeward the firſt, the market being then the beſt; but ſome will make a ſecond voyage, before others have got loading for the firſt.

Each fiſher only takes one cod at a time; and yet the more experienced will take from 350 to 400 a day. But this is the moſt; for it is very fatiguing work, both on account of the weightineſs of the fiſh, and of the extreme cold which reigns on the bank. They ſalt the cod on board; the head being cut off, the belly opened, and the guts out, the ſalter ranges them in the bottom of the veſſel, head to tail; and having thus made a layer thereof, a fathom or two ſquare, covers it with ſalt; over this he lays another, which he covers as before; and thus he diſpoſes all the fiſh of that day, taking care never to mix the fiſh of different days together. By that time the cod has lain thus to drain three or four days, they are moved into another part of the veſſel, and ſalted afreſh: after this, they are no more to be touched, till the veſſel has its burden; though ſometimes they put them in barrels for the conveniency of carriage.

In the fiſhing of *dry cod*, veſſels of all ſizes are uſed; though ſuch are generally choſe as have large holds, becauſe this ſort of fiſh incumbers more than it burdens.

As cod is only to be dried by the ſun, the European veſſels are obliged to put out in March or April, to have the benefit of the ſummer for drying: however, the Engliſh ſend veſſels for cod in June and July; but thoſe only buy what had been fiſhed and prepared by the inhabitants of the Engliſh colonies of Newfoundland, and the neighbouring parts; in exchange for which the Engliſh carry them meal, brandies, biſcuits, pulſe, molaſſes, woollen, linen, and other things.

The principal fiſhery for dry cod is along the coaſt of Placentia, from Cape Roſe to the Bay des Experts; in which compaſs there are ſeveral commodious ports for the fiſh to be dried in. The fiſh intended for this uſe, though of the ſame kind with the green cod, is much ſmaller; whence it is the fitter to keep, as the ſalt takes more hold. The method of fiſhing is much the ſame in both; only this latter is the more expenſive, as it takes up more time, and employs more hands, though ſcarce half ſo much ſalt is ſpent in this as the other.

As faſt as the captains arrive, they unrig all their veſſels, leaving nothing but the ſhrouds to ſuſtain the maſts; and, in the mean time, the mates provide a tent on ſhore, covered with branches of fir, and ſails over them, with a ſcaffold 50 or 60 feet long, and one third as much broad. While the ſcaffold is making ready, the crew are a fiſhing; and, as faſt as they catch, they bring their fiſh, open them, and ſalt them on moveable benches; but the main ſalting is performed on the ſcaffold. When the fiſh have taken ſalt, they waſh them; and, to drain them again, lay them in piles on the galleries of the ſcaffold: when drained, they range them on hurdles, a fiſh thick, head againſt tail, with the back uppermoſt; obſerving, while they lie thus, to turn and ſhift them four times every 24 hours. When they begin to dry, they lay them in heaps, of 10 or 12 a piece, to retain their warmth, and continue to enlarge the heap every day, till it becomes double its firſt bulk; at length, they join two of theſe heaps into one, which they turn every day, as before: laſtly, they ſalt them over again, beginning with thoſe that had been ſalted firſt; and thus lay them in huge piles, as big as hay-ſtacks. In this manner they remain till they are carried a ſhipboard; where they are laid on branches of trees, diſpoſed for that purpoſe in the bottom of the veſſel, with matts all around, to prevent their contracting any moiſture.

There are four kinds of commodities drawn from cod; the tripes, and tongues, which are ſalted at the ſame time with the fiſh, and barrelled up; the roes, or eggs, which being ſalted and barrelled up, ſerve to caſt into the ſea, to draw fiſh together, particularly pilchards; and, laſtly, the oil, which is uſed in the dreſſing of leather.

This trade is extremely beneficial to the French, who, by the advantage of Cape Breton, carry on an unbounded fiſhery, annually employing at leaſt 1000 ſail, from 200 to 400 tons, and 20,000 ſeamen; the produce of their labour being ſo great, that, in the year 1730, there was a computation made of 220,000 quintals, containing 23 989 000 lb. Engliſh avoirdupoiſe, of fiſh, at Marſeilles only, for a market; though it has been affirmed, that, one year with another, they cure above five millions of quintals, each quintal being 112 lb. Engliſh avoirdupoiſe; which, if true, would produce, at 10s. a quintal, a return of 2,500 000 l. for this fiſhery of the ſubjects of France, which afforded them a formidable ſeminary of ſeamen.

The French ſend to the cod-fiſhery, ſhips from Bourdeaux, Rochelle, Grandville, Havre-de-grace, Dieppe, Honfleur, St. Malo's, Nantz, and ſome other places; one of theſe ſhips, of 200 tons, with 24 hands, being ſuppoſed to get commonly 400,000 fiſh, whoſe chief deſtination is for Spain, Portugal, Italy, and the Levant.

The ſalary uſually allowed the captain and ſailors, is one third of the cod they bring home ſound.

The Scotch catch a ſmall kind of cod on the coaſt of Buchan, which is highly prized, though very much like ling. They ſalt it, and dry it in the ſun upon rocks, and ſometimes in the chimney; but the greateſt part of it is ſpent at home. Cod are alſo taken, in large quantities, along the Britiſh and Iriſh coaſts; and they are taken in abundance on the Dogger's bank off Holland, from whence moſt of the fiſh come that ſupply the market at Billingſgate with freſh cod.

But it ſhould alſo be obſerved, that this fiſh is diſtinguiſhed into ſix different ſorts, from the manner of curing, and places from whence it comes; as green-fiſh, ſtock-fiſh, north-ſea cod, Iceland-fiſh, Aberdeen-fiſh, poor jack, and barrelled cod; beſides, it is called bacalao, particularly among the Spaniards.

By the ſtatute of the 10th and 11th of William III. it was enacted, That all the ſubjects of Great Britain reſiding in the realm, or the dominions thereunto belonging, trading to Newfoundland, ſhould have free trade and fiſhery there; and the freedom of taking bait, and fiſhing in any of the adjacent ſeas, rivers, lakes, or places, and to go on ſhore there for the curing their fiſh, and making oil; and to cut down wood for making and repairing of ſtages, ſhip-rooms, train-vats, hurdles, ſhip-boats, and other neceſſaries: but no alien ſhould take any bait, or uſe any trade of fiſhing in Newfoundland, or the iſlands adjacent. That every Engliſh fiſhing ſhip, or the maſter thereof, as ſhould firſt enter any harbour or creek in Newfoundland, ſhould be admiral of the ſaid harbour for that ſeaſon, and reſerve only ſo much beech or flakes, as were needful for his boats, and one over; and the maſter of the ſecond ſhip ſo entering, ſhould be vice-admiral; and of the third, rear-admiral;

and

and the perſons poſſeſſed of ſeveral places, in ſeveral harbours or creeks there, ſhould chuſe which they would abide in, within 48 hours after demand of any aftercomer; and, in caſe of any difference, the admirals of the harbours, or any two of them, ſhould ſettle the ſame.

That no perſon ſhould deſtroy, or deface, any ſtage or cook-room, or any thing thereto belonging; but ſhould uſe ſuch only as were uſeful for him, and leave the ſame undamaged: and no fiſherman, or inhabitant, in Newfoundland, or other perſon, ſhould ſeize, or poſſeſs, any ſuch ſtages, which ſhould belong to any fiſhing ſhips, before the arrival of the fiſhing ſhips from England, and until ſuch ſhips be provided therewith. That the maſter of every by-boat ſhould carry with him at leaſt two freſh men in ſix; that is, one who had made but one voyage, and one who had never been at ſea before; and every inhabitant ſhould employ two ſuch freſh men, for every boat kept by them; and the maſters of the fiſhing ſhips ſhould carry with them one freſh man, that never was at ſea before, in every five men they carried; and the maſters of ſuch by-boats, and fiſhing ſhips, were to make oath before the collector, or principal officer, of the cuſtoms of the port they ſailed from, that they had ſuch freſh or green men as this act directed, of which they ſhould have a certificate *gratis* from ſuch officers. That no perſons ſhould eraſe, or alter, the mark of any boat or train-fat, to defraud the owner thereof, or convert the ſame to their own uſe, or remove or take away the ſame, without giving notice to the admiral of the harbour. That no perſon ſhould rind any trees growing there, nor ſet on fire any of the woods, or damage the ſame, except for neceſſary fuel for the ſhips and inhabitants, and the building and neceſſary repairs of houſes, ſhips, boats, train-fats, and of the ſtages, cook-rooms, beeches, and other things; nor caſt anchor, or annoy the haling of ſayns, in the accuſtomary baiting-places; or ſhoot their ſayns upon thoſe of others, or ſteal the nets or baits of other perſons: and no ballaſt, ſtones, or other annoyance to the harbours there, ſhould be thrown out of any ſhip or otherwiſe, but carried on ſhore. That the admirals, in every port and harbour, were to ſee the rules and orders of this act for the regulation of the fiſhery duly put in execution; and to keep a journal of all ſhips, boats, ſtages, train-fats, and ſeamen, in their reſpective harbours, and at their return to England ſhould deliver a copy thereof to the privy council: and all differences ariſing in Newfoundland between the maſters of fiſhing ſhips and the inhabitants there, or the by-boat keepers about the fiſhing-rooms, ſtages, or other things, ſhould be determined by the fiſhing admirals in the ſeveral harbours; an appeal being reſerved to the commanders of the men of war appointed convoys for Newfoundland. However, by the treaty of Utrecht, the French were allowed the liberty of curing their fiſh on the northern coaſt of the iſland of Newfoundland. See *Britiſh* America.

Whale-FISHERY, or *Greenland-fiſhery*. This enormous fiſh is principally caught in the north-ſea; the largeſt ſort are thoſe about Spitzbergen, ſome of them being 200 feet in length; thoſe on the coaſts of America are about 90 or 100 feet long: but thoſe on the coaſts of Guyenne, and the Mediterranean, are the ſmalleſt of all. See *Whale*, Whale *fiſhery* company, *Greenland*, and *Greenland* company.

The Dutch have, for more than a century, had the whale-fiſhery almoſt to themſelves; and it is now eſteemed one of the principal branches of their flouriſhing trade; becauſe the chief merchants of the ſeveral provinces aſſociate themſelves into a body, for the carrying it on; and ſend, every year, a great fleet of veſſels to the north-ſeas for that purpoſe. They attempted to make their firſt eſtabliſhments in Greenland; but, not ſucceeding, they have ſince fixed their fiſhery about the weſtern coaſt of Spitzbergen, from the northern latitude of 76 degrees 40 minutes, to 80 degrees. However, the Engliſh South-ſea company, in the year 1725, began to participate in the advantages of this trade with the Dutch, which had been unſucceſsfully attempted by the Eaſt India and Ruſſia companies before: the Swedes, Danes, Hamburghers, Bremeners, Lubeckers, and the inhabitants of Embden, have alſo adventured in this trade, which lies under no excluſive reſtriction; but none of theſe have had ſuch extraordinary ſucceſs as the Engliſh.

To give ſome idea of the manner and importance of this trade, it is neceſſary to ſubjoin the diſcipline accuſtomed to be obſerved by the Dutch in the whale-fiſhery; the method of fiſhing, the cargo and equipage of a veſſel, and the produce thereof.

The diſcipline is adjuſted by a ſtanding regulation, conſiſting of 12 articles; the principal whereof are, That in caſe a fiſhing veſſel be ſhipwrecked, and the captain and crew ſaved, the next veſſel they meet ſhall take them in, and the ſecond veſſel take half of them from the firſt; but no veſſel is obliged to take any of the loading of a veſſel ſhipwrecked. That what effects of a ſhipwrecked veſſel, which are abſolutely relinquiſhed, another captain ſhall find, and take up, on his arrival in Holland, he ſhall account for one half of them to the proprietor of the ſhipwrecked veſſel, clear of all expences. That if the crew deſert a ſhipwrecked veſſel, they ſhall have no claim to any of the effects ſaved; but the whole ſhall go to the proprietor; though, if they are preſent when the effects are ſaved, and aſſiſt therein, they ſhall have 1-4th thereof. That if a perſon kill a fiſh on the ice, it ſhall be reputed his own, ſo long as he leaves any perſon with it; but the minute he leaves it, it becomes the due of the firſt captain coming that way; though, if a fiſh is tied to an anchor, or a rope faſtened to the ſhore, it ſhall remain to its firſt proprietor, notwithſtanding he leaves it alone. That if any perſon is wounded, or lamed, in the ſervice, the commiſſioners of the fiſhery ſhall make him a reaſonable ſatisfaction; to which the whole fleet ſhall contribute.

Beſide this general regulation, which all the captains, pilots, and maſters of veſſels, are obliged to ſwear to ſee obſerved, before they put to ſea; there is alſo a particular one for the crew of every ſhip, which they are all ſworn to execute, in preſence of one of the commiſſioners, who goes aboard every ſhip to receive the oath. This regulation is a kind of charter-party, importing, that they will attend prayers morning and evening, on pain of an amercement, at the diſcretion of the captain: that they will not get drunk, nor draw their knives, on forfeiture of half their wages; nor fight, on forfeiture of the whole: that no body ſhall lay wagers on the good or ill ſucceſs of the fiſhing; nor buy, or ſell, on theſe conditions, in caſe they take one or more fiſh, on penalty of 25 florins: that they will be contented with the proviſions allowed them; and that they will never light fire, candle, or match, by night or day, without permiſſion from the captain, on the like penalty. After the reading of this regulation, the crew are all called, to receive the cuſtomary gratuity before their ſetting out, with an aſſurance of another ſum at their return, in proportion to the ſucceſs of the fiſhing. The captain, on this occaſion, receives from 100 to 150 florins, the pilot from 40 to 60 florins, each harpooneer from 40 to 50 florins, the other officers from 26 to 36 florins, the elder ſailors 20, and the younger 12; each florin being 1s. 9d. ſterling.

The fleet, which conſiſts principally of fluyts, from 2 to 300 tons, and from 35 men to 41, uſually ſets ſail about the beginning of April, and takes its courſe by the iſle of Iceland, from 60 to 61 degrees of latitude; after which, leaving that iſland to the weſt, it ſteers northward, through 73, 74, and 75 degrees of latitude, where they begin to find the ice. It is through theſe mountainous piles of ice, wherewith the whole quarter is filled, that they firſt begin to diſcover the whales; and there most of the veſſels fix their abode for the fiſhing: but as the fiſh are larger and fatter as they are further north, ſome captains will venture as far as 80 or 82 deg. of N. lat. Each veſſel of 300 tons has ſix ſhaloops; and each ſhaloop has ſix harpooners, with five ſeamen to row it. To every ſhaloop there are ſeven lines, of three inches circumference, five of them in the hind part of the veſſel, and two before; the hind lines together making 600 fathoms

nd, with the addition of the other two, 880: but if the whale dives deeper, or runs further underneath the ice, he line muſt be cut, leſt the ſhaloop be drawn after it.

The inſtrument wherewith the execution is done, is a arping iron, or javelin, 5 or 6 feet long, pointed with teel, in a triangular ſhape, like the barb of an arrow. The harponeer, upon ſight of the fiſh, from one end of he ſhaloop where he is placed, flings the harping iron with all his might againſt the back of the whale; and if e is ſo happy as to make it penetrate the ſkin and fat into he fleſh, he lets go a ſtring faſtened to the harping iron, t the end whereof is a dry gourd, which, ſwimming n the water, diſcovers whereabout the whale is; who, he minute he is ſtruck, plunges to the bottom.

f the whale returns to breathe in the air, the harponeer akes occaſion to give him a freſh wound; till, fainting y the loſs of blood, the men have an opportunity of ap-roaching him, and thruſting a long ſteeled lance under is gills into his breaſt, and through the inteſtines, which iſpatches him: when the carcaſs begins to float, they cut ff the fins and tail; and tying a rope to the place where he tail was, ſwim to the veſſel, where he is taken in.

When they have got their quantity of whales, they be-in to take the blubber, or fat, and the fins, or whale-one. In order to this, the whale is hoiſted overboard, nd kept ſuſpended above the water by two ropes, the ne tied around his neck, the other about his tail; and nder the carcaſs are two ſhaloops, placed to receive what nay chance to drop. When this is effected, 3 or 4 men o down upon the whale, with a kind of calkers, or irons n their feet, to prevent their ſlipping; who begin to pen him on the ſide, and proceed downwards to the elly, cutting off all the lard or fat, in pieces of about hree feet broad, and eight long: they alſo cut off the fat f the throat, and the under lip, leaving all the lean be-ind; and they afterwards proceed to the whalebone, which they cut off with a hatchet made for the purpoſe, rom the upper jaw of the fiſh, and make it up in pac-ets: the fat and bone thus procured, what remains of he whale they leave for the bears, who are extremely ond of it. See *Fin*.

In proportion as the large pieces of fat are cut off, the reſt of the crew are employed in ſlicing them ſmaller, and picking out all the lean; which, when they have pre-pared, they ſtow under the deck, where it lies, till the fat of all the whales is on board; then cutting it ſtill ſmaller, they put it up in tubs in the hold, or bottom of the veſſel, cramming them very cloſe and full: ſo that nothing remains after this, but to ſail homewards, where the fat is to be boiled, and melted down into train oil. See *Oil*, and *Whale*.

To ſtate the produce of this fiſhery for one year, choice has been made of that of 1697, as being the greateſt and moſt fortunate that ever was known; for, in that year, there were 197 veſſels of ſeveral nations; whereof 129 were Dutch, 47 Hamburghers, 2 Swediſh, 4 Daniſh, 12 of Bremen, 2 of Embden, and 1 of Lubeck; but, in the year 1725, there were 226 veſſels; whereof 144 were Dutch, 12 Engliſh, 43 Hamburghers, 23 of Bremen, 2 of Bergen, and 2 of Flenſberg: their captures each year being as follows.

In 1697.

129 Dutch veſſels took	1255	whales.
47 Hamburghers	449	
2 Swedes -	113	
4 Danes -	52	
12 Bremen -	96	
2 Embden - -	2	
1 Lubeck -	1	
In all, 197 veſſels took	1968	

In 1725,

144 Dutch veſſels took	248½	whales.
12 Engliſh -	25½	
43 Hamburghers	46	
23 Bremen -	29	
2 Bergen -	0	
2 Flenſberg -	0	
In all, 226 veſſels took	349	whales.

The Dutch captures in 1697

produced -	41,344	puncheons of blubber.
The Hamburghers	16,414	
The Swedes -	540	
The Danes - -	1710	
The Bremeners -	3790	
The Embdeners -	28	

The Engliſh captures in 1725 produced 1000 puncheons of blubber, and 20 tons of whalebone.

Now, eſtimating the puncheon of blubber at 2 l. 15 s. ſterling, the current price in the year 1697, the total produce of the oil, obtained by the fiſhery of that year, amounted to 175,521 l. 10 s. ſterling. As to fins, or whalebones, ſetting them at 2000 weight *per* whale, and 100 weight, at 4 l. 4 s. they will yield 171,233 l. which added to the former ſum, amounts to 346 754 l. 10 s. whereof the ſhare belonging to the Dutch was 228,737 l.

In the year 1751, there were 167 veſſels employed in this fiſhery; whereof 31 were Engliſh; 52 from Amſterdam, 2 from Dordrecht, 4 from Rotterdam, 1 from Erimpen, 2 from Alkmaar, 2 from Monnikendam, 30 from Zaandam, 4 from Ooſaanen, 6 from Waſſaneen, 3 from Zaandyck, 2 from De Koog, 1 from Cromnenie, 1 from Thiſp, and 7 from De Ryp, being 117 Dutch veſſels; 13 from Hamburgh, 3 from Altena, 2 from Bremen, and 1 from Embden.

But Monſieur Savary ſays, that the Dutch have upwards of 300 ſhips employed in the whale fiſhery, and the French of Bayonne 18 or 20.

The Engliſh Whale FISHERY, *or Greenland company*, was eſtabliſhed by the ſtatute of the 4th and 5th of William and Mary; whereby it was enacted, That a joint ſtock of 40 000 l. at leaſt, ſhould be raiſed, by ſubſcriptions, by Sir William Scawen, knight, and ſeveral other perſons, to be paid to the uſe of the company eſtabliſhed by this act: and the ſaid Sir William Scawen, and the reſt of the perſons named, and all and every other perſon and perſons, ſubjects born, or naturaliſed, or made denizens, who ſhould have any ſhare in the ſaid joint ſtock, ſhould be incorporated by the name of "The company of merchants of London trading to Greenland;" and have a common ſeal, with ability to purchaſe lands and tenements, ſo as the ſame did not exceed the yearly value of 100 l. and might do and execute all matters and things which any other body corporate might lawfully do or execute. That the company, during the continuance of the joint ſtock, ſhould freely uſe the trade and merchandiſe of catching whales in the Greenland ſeas, and in all ſeas and places whatſoever, except in the ſeas belonging to the Britiſh colonies and plantations in America, without interruption or diſturbance. That a governor, deputy-governor, and 16 committees, ſhould be elected, to have the management and direction of the trade; and any 13 perſons named in the act might call a court of all the ſubſcribers and others, that ſhould have any ſhare in the joint ſtock, who ſhould meet and chooſe one fit perſon, having ſubſcribed 1000 l. or upwards, to be the governor, and another perſon ſo qualified to be deputy-governor; and 16 others, having ſubſcribed each 500 l. or upwards, to be the commitees; all of whom ſhould take an oath to maintain the company, and for the faithful execution of their truſts. That no perſons who ſhould ſubſcribe, or have leſs in the ſtock than 500 l. ſhould have any voice at the general court of the company: but every perſon ſo ſubſcribing ſhould have one vote; and ſuch as ſubſcribed, or had 1000 l. in the ſtock, ſhould have two votes, and no more, though their ſubſcription exceeded that ſum. That no private contract of the ſale of any goods, ſhould be made by the company to any member thereof; but all goods belonging to the company ſhould be ſold publicly by inch of candle, once a year at the leaſt; of which ſales public notice ſhould be given three weeks before on the Royal Exchange, and no lot be expoſed to ſale of more than 300 l. value in the allotment. That the money ariſing by the ſale of the company's goods ſhould be applied to the advantage of the joint ſtock, and of the perſons concerned therein, according to their proportions, and not to the private advantage of any particular perſon; and the dividends of

the profits ſhould be made in money only. That perſons intereſted in the ſtock might transfer their ſhares to ſubjects born, perſons naturaliſed, or made denizens; and ſuch aſſignments were to be entered in the books of the company, which ſhould lie open for the view of all perſons concerned: but all other aſſignments and diſpoſitions were to be void, except deviſes by will, or where part of the ſtock ſhould come to a perſon as executor, or adminiſtrator. That no perſon ſhould agree for, bargain, or ſell, any greater part of the ſtock, than ſuch ſum only as they ſhould be poſſeſſed of, and have ſtanding in their own names, in the books of the company; and all agreements, contracts, bargains, or ſales, for any part of the ſtock, not executed within ten days after ſuch agreement, ſhould be void.

By the ſtatute of the 7th and 8th of William III. it was enacted, That the Greenland company ſhould not be charged with the payment of any cuſtom, duty, or impoſition, for any oil, blubber, or whale fins, which ſhould be caught and imported into the kingdom, by any veſſels belonging to the company.

The Greenland company having neglected that trade, it was, for the encouraging and enlarging the ſame for the good of the kingdom, by the ſtatute of the 1ſt of Queen Anne, ordained, That it ſhould be lawful for any ſubjects of Great Britain, that would adventure to Greenland for fiſhing of whales, to have and enjoy all privileges granted by the act of the 4th and 5th of William and Mary; and that they ſhould not pay any further or other duty than if they had been of the company, any law or ſtatute to the contrary notwithſtanding; and that no harponeer, or other foreigners, permitted by that act for carrying on this fiſhery, ſhould be impreſſed for the royal ſervice.

By the 5th of George II. it was enacted, That any perſons might import whale-fins, oil, and blubber of whales, ſeal-oil, ſeal-ſkins, or any other produce of ſeals, or other creatures taken in the Greenland ſeas, in Britiſh ſhips navigated according to law, without paying any duty; but nothing therein ſhould be conſtrued to extend to give liberty for importing ſuch whale-fins, oil, or blubber, duty free, unleſs the maſter of the ſhip who imported the ſame, firſt made oath before the commiſſioners, or other principal officers of the cuſtoms in the port of importation, that all the commodities imported in ſuch ſhip, were really thoſe caught and taken in the Greenland ſeas by the crew of the ſame ſhip only, whereof the maſter, and one third part of the mariners, were Britiſh ſubjects.

By the ſtatute of the 6th of King George II. it was enacted, That every Britiſh ſhip of 200 tons, that ſhould proceed from any port of Great Britain on the whale-fiſhery to the Greenland ſeas, or Davis's ſtreights, and the adjacent ſeas, manned and navigated according to law, ſhould, before ſhe proceeded on ſuch voyage, be viſited by the officers of the cuſtoms, who ſhould examine into ſuch ſhip, and take an account of the tonnage thereof by admeaſurement: and if it appeared that ſhe had on board ſuch a number of men, proviſions, boats, fiſhing-lines, and inſtruments to be uſed in ſuch fiſhery, as therein were mentioned; and had a ſufficient number of harponeers, ſteerſmen, and line-managers, who had before been employed in ſuch voyages; and if it further appeared, by the oath of one owner and the maſter of the ſhip, that it was their purpoſe to make a voyage to the Greenland ſeas, and there, in the approaching ſeaſon, to uſe their endeavours to take whales, ſeals, or other creatures, in thoſe ſeas, and on no other deſign of profit; as alſo to import the fins, oil, and blubber, into Great Britain, naming the port to which it was their intention to return; and if the maſter became bound, with two ſureties, for the faithful dealing of himſelf, and the company of the ſhip, then three of the commiſſioners of the cuſtoms ſhould, on receiving certificates thereof, grant a licence to proceed on ſuch voyage. That every ſhip being 200 tons, deſigned for this fiſhery, ſhould have forty fiſhing lines, of 120 fathom each; 40 harpoon irons, 4 boats with 7 men, including a harponeer, a ſteerſman, and a line-manager, to each boat, making in the whole 28 men, beſides the maſter and the ſurgeon, with ſix months proviſions: and every ſhip of larger burthen ſhould have an increaſe of ſix men, one boat, ten lines, and ten harpoon-irons, for every fifty tons. That on the return of ſuch ſhips, the maſter and mate ſhould make oath, before the collector and comptroller of the cuſtoms, annexed to the licences, that they did, in purſuance thereof, proceed in a voyage to the places aforeſaid; and had not ſince been on any other voyage, or purſued any other deſign of profit; and that they did there, mentioning the time of their continuance in thoſe ſeas, uſe their endeavours to take whales, and other fiſh, in the ſaid ſeas; and that all the fins, oil, and blubber, imported in ſuch ſhips, were really caught in thoſe ſeas by the crews of the ſaid ſhips only: and then, upon certificate of ſuch oath tranſmitted to the commiſſioners of the cuſtoms, they ſhould cauſe payment to be made to the maſter or owners of every ſuch ſhip, by the receiver-general of the cuſtom-duties, a bounty of 20 s. *per* ton, according to the admeaſurement of the ſhip.

By the ſtatute of the 13th of King Geo. II. it was enacted, that the laſt mentioned act ſhould be continued to the 25th of Decembrr 1750: that during the war then carried on againſt France and Spain, the bounty-money ſhould be increaſed 10 s. *per* ton, over and above the other bounty of 20 s. *per* ton: that no harponeer, line-manager, boat-ſteerer, or ſeaman, engaged in the Greenland fiſhery trade, ſhould be impreſſed from that ſervice: and that any ſuch ſeamen might ſail in the colliery at leiſure times, giving ſecurity to the commiſſioners of the cuſtoms that they would ſail to Greenland, or Davis's ſtreights, on the whale-fiſhery, the next ſeaſon.

As the enlargement of the whale-fiſhery would be of great advantage to the trade and navigation of Great Britain; for the further encouragement thereof it was enacted, by the ſtatute of the 22d of Geo. II. that the before-mentioned acts ſhould be continued unto the 25th of December 1757; and from thence to the end of the then next ſeſſion of parliament: that, over and above the allowance of 20 s. a ton bounty, the reſpective commiſſioners of the cuſtoms in Great Britain ſhould, until the expiration of this act, upon their being ſatisfied of the faithful dealings of the maſter and other perſons employed in any ſhip with reſpect to this fiſhery, cauſe payment to be made to the maſter or owners, or aſſigns, by the receiver-general of the cuſtoms in that part of Great Britain from whence ſuch ſhip ſhould depart, of the additional ſum of 20 s. *per* ton. That every ſhip built or fitted out in any of the Britiſh dominions in America of 200 tons and upwards, and not being more than two years old from the firſt building thereof, that proceeded from any port of the Britiſh dominions in America, on the whale-fiſhery, manned and navigated according to law, which ſhould, before ſhe proceeded on ſuch voyage, be viſited by the proper officer of the cuſtoms, who ſhould take an account of the tonnage thereof as directed by the act of the 6th of Geo. II. and ſhould certify the ſame to the governor, or commander in chief of the place where ſuch veſſel ſhould be fitted out, or to the naval officer of the port; and if it ſhould appear by the ſaid certificate, that ſhe had on board, at the time of giving the ſame, ſuch a number of men, proviſions, boats, fiſhing-lines, and inſtruments, to be uſed in ſuch fiſhery as the ſaid act requires; and that ſhe was a ſhip ſtrongly built, and otherwiſe proper for ſuch voyage and fiſhery; and had among her crew ſuch a number of harponeers, ſteerſmen, and line-managers, who had before been employed in ſuch voyages as the act requires; and if the owner and maſter, or chief officer of ſuch ſhip, ſhould, at the foot of ſuch certificate, make ſuch oath, before the governor or naval officer, as directed, and likewiſe that ſuch ſhip was no more than two years old from the firſt building thereof; and if the maſter ſhould alſo afterwards become bound, with ſuch ſureties as the act requires; which bond ſhould be taken by the governor or naval officer; then the governor, or commander in chief, or naval officer, ſhould grant them full licence to proceed on ſuch voyage: that on the arrival of ſuch ſhip at the port in Great Britain, to which the maſter and mate declared on oath they intended to proceed after their voyage to the Greenland ſeas, or to

Davis's ſtreights, or to the ſeas adjacent, or at their arrival at ſome other port in Great Britain where they ſhould unload, the proper officers of ſuch port ſhould proceed in ſuch manner, and make ſuch ſchedule as directed by the act of the 6th of Geo. II. concerning Britiſh ſhips intitled to the benefits of the ſaid act; and the ſame ſhould be tranſmitted to the reſpective commiſſioners of the cuſtoms for that part of Great Britain in which ſuch ſhip ſhould arrive, who being ſatisfied of the faithful dealings of the maſter and other perſons employed, with reſpect to ſuch voyage and fiſhery, ſhould cauſe payment to be made by the receiver-general of the cuſtoms of the ſum of 20 s. and 20 s. *per* ton, according to the admeaſurement of ſuch ſhip: that all ſhips that ſhould be fitted out for the whale-fiſhery in America, after having conformed to the rules and regulations of the act of the 6th of Geo. II. ſhould ſail from ſuch port where ſurveyed directly on her intended fiſhery, on or before the 1ſt of May, and ſhould not leave Davis's ſtreights, or Greenland, and the ſeas adjacent, before the 21ſt of Auguſt, unleſs they ſhould have filled ſo many caſks with blubber as would amount to not leſs than 200 hogſheads for a ſhip of 300 tons, and ſo in proportion for a ſhip of 200 tons and upwards, or ſhould meet with ſome unavoidable accident ſo as to endanger the lives of the crew; the ſame to be declared on the oaths of the maſter, mate, carpenter, harponeers, line-managers, boat-ſteerers, and ſurgeon, or ſuch of them as ſhould be living at the time of their arrival in port to the ſatisfaction of the commiſſioners of the cuſtoms; and in caſe of any irregular proceeding contrary thereunto, every ſhip ſo offending ſhould loſe the benefit of this bounty. That every perſon born out of the allegiance of his Majeſty, being a proteſtant, who ſhould ſerve for three years on board any ſhip belonging to Britiſh ſubjects, which ſhould be lawfully fitted out, and employed in this fiſhery, ſhould, upon taking the proper oaths, be deemed a natural-born ſubject of Great Britain: but if any perſon naturalized by virtue of this act, ſhould go out of Great Britain or Ireland, or the Britiſh plantations in America, for more than 12 months at any one time, he ſhould loſe the benefit of this act.

The Dutch have a company for this fiſhery in Davis's ſtreights and Greenland, and alſo for the fiſhery of Nova Zembla; but theſe fiſheries are not therefore prohibited thoſe who are willing to undertake them: all the difference between the fiſhermen of this company and other fiſhers conſiſting only in this, that the latter are not permitted to land, cut up, or prepare their blubber; being obliged to cut their whales in pieces, and ſo bring them to be prepared in Holland; whereas the fiſhermen belonging to the company are allowed thoſe privileges, which occaſions their lading to be leſs cumberſome, and more abundant.

The eſtabliſhment of the Engliſh Greenland company ſo greatly alarmed the Dutch, that their high mightineſſes reſolved upon prohibiting, in the countries of their juriſdiction, the importation of whales not of their own fiſhery: which, however, was of no conſequence; becauſe the Engliſh ſoon abandoned the deſign of their new company; and, beſides, the ſtates-general were prevailed upon to alter this reſolution, by the remonſtrances of the Marquis de Monteleon, embaſſador from Spain, who, upon the rumour of prohibiting the whale commerce in Holland, preſented them with a memorial repreſenting the injuſtice of ſuch a prohibition, eſpecially with regard to the Spaniards, thoſe of Biſcay being the firſt whale-fiſhers in all Europe, and having always enjoyed the liberty of importing their fiſh and oil into all the European ſtates, and particularly Holland.

Salmon-FISHERY. The chief ſalmon fiſheries in Europe are along the coaſts of England, Scotland, and Ireland; where the fiſhing uſually begins about the 1ſt of January, and ends by the laſt of September. See *Salmon*.

The Thames, Severn, Tine, and Tees, in England; the Dee in Wales; the Don, Dee, Clyde, and Tweed, in Scotland; and the Shannon, Boyn, and Sure, in Ireland, are the moſt remarkable for ſalmons. The Thames, Severn, and Dee ſalmon are chiefly ſent freſh to the fiſhmongers of London, to whom they are ſold by the pound; but thoſe from the north of England, and Scotland, are pickled and ſent up in kits, marked and valued according to the fiſh they contain; ſome kits having only two ſalmon, which are eſteemed the beſt, and others three: but theſe ſalmons are not ſent whole, the jouls and body being ſeparated for the ſake of the package.

This fiſhery is performed with nets, in the places where the rivers empty themſelves into the ſea, and along the ſea coaſts adjacent; where the fiſh are ſeen frequently to croud in ſhoals from all parts, in ſearch of the freſh water: they alſo fiſh for them higher up in the rivers; ſometimes with nets, and ſometimes with a kind of locks, or wears, made for the purpoſe, with iron grates therein, ſo diſpoſed as that the fiſh, in going up the river, open them with their head; but are no ſooner entered, than the gate claps to: ſo that the ſalmon are incloſed as in a reſervoir, where it is eaſy taking them. In ſome places they fiſh for ſalmon in the night-time, by the light of torches, or kindled ſtraw; when the fiſhermen watch the fiſh drawing towards the light, whereof he is naturally a great lover, and ſtrikes him with a ſpear, or liſter. In ſome parts of Scotland they ride a-fiſhing up the rivers, and when they ſpy them in the ſhallow parts, ſhoot them with fire-arms; and in the river Severn, the ſalmon are frequently ſpeared.

When the fiſh is taken they open them, take out the guts and gills, and ſalt them, in large tubs for the purpoſe; out of which they are not taken before October, to be packed up in caſks from 300 to 450 pounds weight.

By the ſtatute of Weſtminſter, the 13th of Edward I. it was enacted, That the waters of Humber, Owſe, Trent, Don, Arre, Derwent, Wherfe, Nid, Yore, Swale, Teeſe, Tine, Eden, and all other waters wherein ſalmons were taken, ſhould be in defence for taking ſalmons from Lady-day to Martinmas; and the young ſalmons ſhould not be taken by nets, nor other engines at mill pools from the middle of April unto the nativity of St. John the Baptiſt; and in places where ſuch waters were, there ſhould be aſſigned overſeers of this ſtatute, who, being ſworn, ſhould often enquire of the offenders; and for the firſt treſpaſs they ſhould be puniſhed by burning of their nets and engines; for the ſecond they ſhould have impriſonment for a quarter of a year; for the third treſpaſs they ſhould be impriſoned a year; and as the treſpaſs increaſed ſo ſhould the puniſhment.

By the ſtatute of the 1ſt of Geo. I. it was enacted, That if any perſon ſhould lay or draw any nets or engines, or do any other act in the Severn, Dee, Wye, Team, Were, Tees, Ribble, Merſey, Dun, Air, Owſe, Swaile, Calder, Wharfe, Eure, Derwent, and Trent, whereby the ſmall fry of ſalmon, or any kepper or ſhedder-ſalmons, or any ſalmon not 18 inches long, from the eye to the extent of the middle of the tail, ſhould be taken or killed; or ſhould ſet any bank, dam, hedge, ſtank, or nets, croſs the ſaid rivers, whereby the ſalmon might be taken, or prevented from going up the rivers to ſpawn; or ſhould, between the laſt of July and the 12th of November, take, or wilfully hurt, any ſalmon in the ſaid rivers; or ſhould, at any time after the 12th of November, fiſh there for ſalmon, with any net the meſh whereof ſhould be under two inches and a half ſquare, and not extended from knot to knot, allowing to each meſh four knots, or which ſhould be above twenty yards in length, and ſix in breadth or depth in the wing of the net, and ſhould be convicted thereof, before one juſtice of peace, he ſhould forfeit 5 l. for every offence, together with the fiſh and the nets.

By this laſt act it was alſo enacted, That no ſalmon ſhould be ſent to London from any of the above-mentioned rivers to fiſhmongers, that weigh leſs than ſix pounds each fiſh: and every perſon buying, ſelling, or ſending, a ſalmon of leſs weight, ſhould forfeit 5 l. beſides the fiſh; or to ſuffer three months impriſonment.

Sturgeon FISHERY. The ſturgeon is a large ſea-fiſh, which, at its ſeaſon, runs up the rivers; having a ſharp-pointed ſnout, flat belly, and bluiſh back; of which there are all ſizes, ſome being 20 feet long; but the middle ſized are reckoned the beſt. Sturgeons are reckoned among the royal fiſhes, and, when left on ſhore, belong to the King:

it ſhould be lawful for the watchmen, balcors, huors, condors, directors, and guides, for the uſe of the taking of herrings, pilchards, and other ſea-fiſh, within the counties of Somerſet, Devon, and Cornwal, and ſuch fiſhermen and others, as ſhould neceſſarily attend the ſeas, or nets, at the times of fiſhing, to go into any lands near ſuch fiſhing places, fit to watch and walk in, or to draw the fiſh on ſhore, and there to watch for the fiſh, balk, hue, cond, direct, and guide the fiſhermen, and draw the fiſh on land.

By the ſtatute of the 3d of James I. it was enacted, That every perſon that ſhould erect any new wear along the ſea-ſhore, or in any haven or creek, or within five miles of the mouth of any haven or creek, or ſhould willingly take or ſpoil any ſpawn, fry, or brood of ſea-fiſh, in any wear or other device, ſhould forfeit for every time 10 l.

By the ſtatute of the 13th and 14th of Charles II. it was enacted, That no perſon ſhould in any year, from the 1ſt of June till the laſt of November, take fiſh in the high ſea, or in any bay, port, creek, or coaſt of Cornwal or Devon, with any drift-net, trammel or ſtream-net, or other nets of that ſort, unleſs it was one league and a half from the ſhore, on penalty of forfeiture of the nets, or the value thereof, and impriſonment for a month. That if any perſons, being neither owners, partners, or adventurers, in fiſhery, and in the boats and ſaynes thereunto belonging, ſhould make pilchards or ſumathoes in caſk, to be ſold or tranſported, except they openly bought the fiſh of the owners, partners, and adventurers, in the pilchard-craft, or with their conſent, they ſhould forfeit all ſuch pilchards and ſumathoes, or their value; one half to the King, and the other to the proſecutor. That if any perſon ſhould fraudulently purloin out of the nets, boats, or cellars, any pilchard fiſh, without conſent of the owner, and major part of the company reſpectively, ſuch perſon ſhould pay treble the value in ſatisfaction to the parties wronged, and be ſent to the houſe of correction for three months. That if any idle or ſuſpicious perſons, ſhould, in the night, aſſemble about the boats, nets, or cellars, belonging to any pilchard craft upon the coaſts of Cornwal or Devon, having no buſineſs there, and being warned by the company or owner to be gone, upon complaint to any juſtice of peace, ſuch perſons refuſing ſo to do, ſhould pay 5 s. to the poor of the pariſh, or be ſet in the ſtocks for five hours.

By the ſtatute of the 15th of Charles II. it was enacted, That, for encouragement of the North ſea, Iceland, and Weſtmony fiſheries, no freſh herring, freſh cod, or haddock, coal-fiſh, or gutt-fiſh, ſhould be imported but in Engliſh built ſhips, having a proper certificate, being lawfully manned, and which fiſh had been caught in ſuch ſhips, and not bought of ſtrangers, under pain of forfeiture of all ſuch fiſh, and the ſhip in which it was imported.

By the ſtatute of the 18th of Charles II. it was enacted, That if any ling, herring, cod, or pilchard, freſh or ſalted, or any ſalmon, eels, or congers, taken by foreigners, ſhould be imported, it ſhould be lawful for any perſon to ſeize the ſame; one half to the poor of the pariſh, and the other half to the uſe of the ſeizor.

By the ſtatute of the 1ſt of Queen Anne it was enacted, That if any cod-fiſh, ling, or hake, or any pilchards, ſcads, white herrings, red herrings, ſalmon, or dried ſprats, ſhould, after the ſame were exported, be fraudulently relanded or reimported, the fiſh ſhould be forfeited, and double the value be recovered of the importer or proprietor.

By the ſtatute of the 1ſt of Geo. I. it was enacted, That no herring, cod, pilchards, ſalmon, or ling, freſh or ſalted, dried or bloated; nor any grill, mackarel, whiting, haddock, ſprats, coal-fiſh, gull-fiſh, congers; nor any ſort of flat fiſh or freſh fiſh, ſhould be imported, or ſold in England, which ſhould be taken by, or received from any foreigner; or out of any ſtranger's bottom, except proteſtant ſtrangers inhabiting the kingdom; nor ſhould any perſon give or exchange goods for fiſh ſo taken. That every maſter of any ſmack or veſſel in which fiſh ſhould be imported contrary to this act, ſhould forfeit 20 l. for every offence, or ſuffer 12 months imprisonment. But this forfeiture, by the 9th of Geo. II. augmented to 50 l. and a forfeiture of 100 l. was upon every perſon offending againſt the preceding That nothing therein contained ſhould prevent the porting eels, ſtock-fiſh, anchovies, botarge, or and it ſhould be lawful for any perſons, as well foreign as ſubjects, to import into, and ſell in Great Brit lobſters or turbits, whether of foreign or Britiſh catch That if any perſon ſhould uſe at ſea, upon the coaſt England, any traul-net, drag net, or other ſea-net, the catching of any fiſh, except herrings, pilchards, ſp and lavidnian, having a meſh of leſs than three and a half from knot to knot; or any falſe or double tom, cod, or pouch; or ſhould put any net, though legal ſize, behind the others, to deſtroy the ſmall he ſhould forfeit ſuch nets, and 20 l. for every offence or ſuffer 12 months impriſonment; and where illegal were proved to be forfeited they ſhould be publicly That if any perſon ſhould bring to ſhore in England, ſell, or expoſe to ſale, or exchange for goods, unſized fiſh, not of the lengths following, from the eyes to extent of the tail: bret, or turbot, 16 inches; brill, pearl, 14 inches; codlin, 12 inches; whiting 6 inches baſs and mullet 12 inches; ſole, plaice, or dab, 8 inches and flounder, 7 inches, he ſhould forfeit the fiſh to the of the pariſh, and 20 s. one moiety to the informer, and other to the poor; or to be impriſoned, ſeverely and kept to hard labour ſix days.

All fiſh taken by Engliſh ſubjects, and brought by Engliſh bottoms into the realm, are excepted out of the of the 12th of Cha. II. of tonnage and poundage, ſo to be free from duty: beſides, herrings, and other ſea-fish taken by ſubjects, may be tranſported in Britiſh veſſels without paying any duty for the ſame. But any ling, fish, pilchard, or other dried or ſalted fiſh, uſually caught by Engliſh ſubjects; or any cod-fiſh, or herring; or oil or blubber made of fiſh; or any whale-fins, or whale bones, imported into England, not caught in Engliſh veſſels, and the fiſh cured and dried, and the oil and blubber not made by Engliſh ſubjects are, purſuant to the ſtatute of the 12th of Cha. II. to pay double aliens cuſtom.

FISHING-*markets*. By the ſtatute of the 10th and 11th King Will. III. it was enacted, That Billingſgate market in London ſhould be every day, except Sundays, a market for all fiſh; and it ſhould be lawful for any perſon to buy or ſell fiſh in the ſaid market. That no perſon ſelling ſea-fiſh in the ſaid market ſhould pay other toll or duty for coming with his veſſel, or landing, ſtanding, or ſelling at the ſaid market, than as follows: every veſſel with ſalt-fiſh, for groundage 8 d. a day, and 20 d. a voyage for all demands: for every lobſter-boat, for groundage 2 d. a day, and 13 d. a voyage; the ſame for every veſſel of freſh ſea-fiſh, and the ſame for every dogger-boat, or ſmack, with ſea-fiſh; and for every oyſter veſſel, or cock, 2 d. a day for groundage, halfpenny for metage of every buſhel, and 13 d. a voyage, to be diſpoſed of as the lord mayor and court of aldermen ſhould annually direct, according to the right of the perſons intitled. That it ſhould be lawful for any perſon who ſhould buy fiſh in the ſaid market, to ſell the ſame again in any other place in London, or elſewhere, by retail, except that none but fiſhmongers ſhould ſell in public or fixed ſhops or houſes; provided that this ſhould not alter any law concerning fiſh caught by foreigners. That the evil practice uſed by the fiſhmongers in employing one or two perſons to buy up the fiſh brought to Billingſgate, and afterwards dividing the ſame amongſt the fiſhmongers by lots, ſhould be diſcontinued, and no ſuch practice uſed for the future. That no perſons ſhould employ, or be employed by, any other in buying at the ſaid market any quantity of fiſh, to be provided in order to be afterwards put to ſale; nor ſhould any fiſhmonger ingroſs, or buy, in the ſaid market, any quantity of fiſh, but what ſhould be for his own uſe, and not for any other fiſhmonger, under pain of forfeiting 20 l. for each offence: and no perſon ſhall bring on ſhore, or put to ſale, any lobſters that were eight inches from the peak of the noſe to the end of

middle fin of the tail, under pain of forfeiting 1 s. for every lobſter. But nothing in this act ſhould prohibit the ſelling of mackarel before or after divine ſervice on Sundays.

By the ſtatute of the 9th of Queen Anne it was enacted, That no fiſh ſhould be ſold more than once within the market, or within 150 yards of Billingſgate-dock; nor ſhould any perſons, other than free fiſh-mongers, in their houſes and ſhops within 150 yards of the ſaid dock, and not in the market of Billingsgate, and other than fiſhermen, or the firſt importers of, or perſons bringing up ſuch fiſh to the market, their wives, apprentices, factors, or ſervants, hired for that purpoſe, ſell, or expoſe to ſale, any fiſh at the ſaid market, or within 150 yards of the ſaid dock. That no fiſh ſhould be ſold, or expoſed to ſale, on board, or on ſhore, within the limits of the ſaid market, or within 150 yards of the dock, before three o'clock in the morning from Lady-day to Michaelmas, and before 5 o'clock from Michaelmas to Lady-day; and at thoſe times the proper officer ſhould ring the bell.

By the toll-books of Billingsgate market it appears, that, in the year 1729 there arrived there 991 oyſter-boats, 50 whereof, as meaſured by the city meters, contained 5976 buſhels; therefore the whole muſt have contained 115,536 buſhels. And, in the ſame year, from the 26th of May, the beginning of the mackarel ſeaſon, to the 6th of July the end thereof, there arrived at Billingsgate 589 boats, which, at a medium, carried about two laſts and a half each, each laſt containing 10,000; ſo that it thereby appears, that the number of mackarel brought to the city of London in that ſeaſon, amounted to 14,740,000. And alſo, in the ſame year, there are arrived at the ſaid market 1398 ſmall boats, with cod, haddocks, whitings, and other ſea-fiſh; beſides, there are vaſt quantities of other ſea-fiſh and river fiſh brought from many parts of the kingdom to London, without mentioning the great quantity of ſalt fiſh imported from all parts.

As a free and open market for fiſh in the city of Weſtminſter would greatly tend to increaſe the number of fiſhermen, and improve and encourage the Britiſh fiſhery, an act of parliament was paſſed in the year 1749, whereby it was enacted, That there ſhould be an open market held in the city of Weſtminſter, for all ſorts of fiſh, and any perſons might buy or ſell any ſorts of fiſh in the ſaid market, paying ſuch ſums as were therein after mentioned. That Lieutenant-general James Oglethorpe, Admiral Vernon, and 24 others, therein particularly named, ſhould be truſtees for putting this act in execution; and they, or any five or more of them, were inveſted with all the powers and authorities granted by this act. That there ſhould be paid to the truſtees, or ſuch perſon as five or more of them ſhould appoint, by every fiſherman, or other perſon ſelling fiſh in the ſaid market, the ſame ſums as were payable at Billingsgate, by the ſtatute of the 10th and 11th of Will. III. for the groundage and voyage of each veſſel laden with ſalt-fiſh; each lobſter-boat, dogger-boat, ſmack, or other veſſel, laden with freſh ſea-fiſh; and for every oyſter-veſſel or cock. That the ſaid ſums ſhould be veſted in the truſtees, and be applied as therein after directed; and five or more of the truſtees, or ſuch perſons as ſhould be appointed by them at a general meeting, might demand and take the ſaid ſums, and levy the ſame by diſtreſs of any boat, her tackle or furniture, belonging to any perſon liable, and not making payment, and after three days make ſale thereof, returning the overplus after deducting all charges. That five or more of the truſtees, at a general meeting for that purpoſe, might aſſign over the ſaid duties, as a ſecurity for any ſums of money which they ſhould borrow for the purpoſes of this act, with intereſt not exceeding 5 *per cent. per annum*. That out of the monies ariſing by the ſaid duties, or which ſhould be borrowed on the credit thereof, the truſtees, or any five or more of them, at a public meeting, ſhould, in the firſt place, pay all the expences and charges incurred in paſſing this act; and, in the next place, the charges of laying out, and erecting a commodious place for the market, and finiſhing and keeping the ſame in good repair, and all other neceſſary expences attending the execution of this act. That the truſtees ſhould appoint a collector of the duties, a treaſurer, and all other neceſſary officers; and ſhould allow them ſuch ſalaries, or other rewards, as they ſhould think reaſonable; and they might remove or diſplace them, and put others in their ſtead: and the collector and treaſurer ſhould, upon the firſt Monday in every month, or oftener, if required, give in, before five or more truſtees, an accompt under their hands, of all monies received and diſburſed by them to that time, on account of their reſpective offices, and produce vouchers for the ſame, and pay over the balance to ſuch perſon as the truſtees ſhould at ſuch meeting direct. That five or more of the truſtees ſhould yearly deliver to the juſtices for Weſtminſter, at any petty or ſpecial ſeſſions, an account, entered in a book to be kept for that purpoſe, and ſigned by five or more truſtees, of all ſums received and diſburſed on account of this act during the preceding year, with the balance in their hands; and the ſurplus of the ſaid ſums remaining in the truſtees hands ſhould be annually applied, within 12 months after delivering of ſuch accompt to the juſtices, in the apprenticing boys to fiſhermen, or to perſons employed in the ſea-ſervice; ſuch boys to be choſen by a majority of truſtees at a general meeting. That perſons who ſhould buy fiſh in the ſaid market, might ſell the ſame again in any other place within Weſtminſter, or elſewhere, being ſound and wholſome fiſh. That if any perſon ſhould contract for buying up fiſh, to be ſold again by retail, before ſuch fiſh ſhould be brought to an open market, and there expoſed to public ſale, the contract ſhould be void, and each of the parties ſhould forfeit 50 l. one moiety to the truſtees, and the other to the proſecutor: and if either of the parties ſo contracting ſhould, before any information made againſt him, inform againſt and convict the other of ſuch offence, he ſhould be acquitted of the penalty, and be intitled to ſue for, and recover the whole forfeiture incurred by the other; one half of which ſhould be for himſelf, and the other for the truſtees: but this act was not extended to make void any contracts in regard to freſh ſalmon, or ſoles brought by land-carriage; or to oyſters, or ſalt or dried fiſh. That if any fiſherman, or other perſon, natives or foreigners, ſhould keep any fiſh at Queenborough, Graveſend, or any other place, in any well-boat, ſtore-boat, or other manner, ſo as not to ſell off their whole cargo within eight days from their arrival on the Britiſh coaſt, between North Yarmouth and Dover, after their firſt arrival at the reſpective place or places as aforeſaid, he ſhould forfeit the whole cargo of fiſh belonging to him, and alſo the veſſel, with her tackle, apparel, and furniture; one moiety to the informer, and the other to the poor of the pariſh. That the commiſſioners for building the bridge at Weſtminſter, were impowered to make a grant of a piece of ground near Cannon-Row in Weſtminſter, to the truſtees, to be made uſe of for holding the ſaid intended market; for which the truſtees ſhould pay the commiſſioners 5 l. as the purchaſe money for the ſame. That all bonds, or other ſecurities, for not ſuing or recovering any penalty or forfeiture to be incurred by this act, ſhould be void: and that all actions which ſhould be commenced for any thing done in purſuance of this act, ſhould be brought within ſix months after the fact committed. That fiſh under ſuch dimenſions as were prohibited importation by the ſtatute of the 1ſt of Geo. I. might be expoſed to ſale, or exchanged for any other goods, provided they were taken with a hook, and ſo not fit or capable of being preſerved alive.

FISHMONGER. A perſon whoſe buſineſs conſiſts in the ſale of fiſh.

FISHMONGERS *company of London.* The fiſhmongers, as well as other victuallers of this city, were anciently under the immediate direction of the court of Lord Mayor and Aldermen; which power was confirmed to the ſaid magiſtrates, by act of parliament in the 7th year of Richard II. being the year 1384.

The dealers in fiſh of the city of London, then conſiſted of two communities, the ſalt-fiſh, and ſtock-fiſhmongers; the former were incorporated by letters-patent of the 11th of Henry VII. in 1433, and the latter by charter of the 24th of Henry VII. in 1509. But, this diviſion proving

proving prejudicial to the profeſſion in general, they united, and were incorporated, by letters-patent of the 28th of Henry VIII. in 1536, by the appellation of The wardens and commonalty of the fiſhmongers of the city of London.

This corporation conſiſts of a prime and five other wardens, 28 aſſiſtants, and 140 liverymen; who, when admitted, pay each a fine of 13 l. 6 s. 8 d. They have a very ſtately and magnificent hall in Thames-ſtreet, to tranſact their affairs in, and pay to charitable uſes about 800 l. a year.

FISHING-*veſſels*, or thoſe uſed in the ſeveral fiſheries at ſea, or on the coaſts, are the buſs, coble, cock, dogger, driver, eel-boat, fly-boat, fluyt, hooker, peter-boat, ſmack, ſtrand-boat, trawler, and trinker. See *Veſſel*, and *Boat*.

FITCH, or *Vetch*. A kind of pulſe, uſed for feeding of poultry.

FIUME, or *St. Veit*. A port-town of Iſtria on the gulph of Venice, ſituated in 15 deg. of E. lon. and 45 deg. 45 min. of N. lat. ſubject to the houſe of Auſtria. See *Italy*.

FIXATION, in chemiſtry, is a peculiar preparation of mercury, whereby it is fitted to bear the fire without evaporation, and the hammer without ſeparation or flying away. It is alſo applied to the binding together any volatile body, ſo as it may bear the fire, which it cannot naturally; for chemiſts make but two general diviſions of all bodies, fixed and volatile; the principal of theſe in a ſtate of fixation being gold, ſilver, precious ſtones, particularly diamonds, ſalts, and ſome others.

FIZGIG. A dart, or javelin, to ſtrike fiſh as they ſwim.

FLAG, is particularly uſed at ſea, for the colours and ſtandards borne on the top of the maſts of veſſels, for diſtinguiſhing the nations to whom they belong, the rank of the chief officers, and the quality of the ſhip with regard to its uſe and armament.

FLAGS, in general, are ſeveral colours delineated with the reſpective arms of princes, and nations, for diſtinguiſhing the rank of each veſſel in its fleet, or that of the commanding officer.

Merchants FLAG, is that which diſtinguiſhes a mercantile ſhip from a man of war.

Not only merchant ſhips belonging to the moſt powerful European nations which trade at ſea, as the Engliſh, Dutch, French, and Spaniards, have flags for diſtinguiſhing them from ſhips of war; but alſo all the Hanſe towns, and thoſe ſituated upon the German ocean, in the North, and in the Baltic.

Beſides the national flag, merchant ſhips frequently bear leſſer flags, on the mizzen-maſt, with the arms of the city, where the maſter ordinarily reſides; and on the fore-maſt the arms of the place where the perſon who freights them lives.

The admiral, or commander in chief, carries his flag on the main-top, or top of the main-maſt; the vice-admiral carries his on the fore-top; and the rear-admiral his on the mizzen-top, or top of the mizzen-maſt. The commanders of ſquadrons bear their flag on the mizzen-maſt, when in the body of a fleet; but on the main maſt when they command a party, which ſhould be cleft two thirds of its height, and terminate in a point: but the flags bore on the mizzen are particularly called gallants.

The faſhion of bearing the flags pointed, or triangular, which now obtains, according to Roderick Toletanus, came from the mahometan Arabs, or Saracens, upon their ſeiſing of Spain; before which time all the enſigns of war were ſquare, ſtretched, or extended, on croſs pieces of wood, like church-banners, on which account they were called in Latin *vexilla*, as if they ſaid, *velilla*, *a veli diminutione*, as is remarked by Iſidore.

The pirates of Algiers, and throughout the coaſts of Barbary, are the only people that bear a hexagonical flag; which is gules, charged with a moreſk head, coifed with its turbant; tho' this is expreſly contrary to their law, which prohibits the making any image, or repreſentation of a man; founded on an opinion, that they who make them ſhall be obliged at the day of judgment to find ſouls for them; and that, in defect thereof, they ſhall be damned: but this portrait is that of Hali, Mahomet's ſon-in-law, to whoſe party the Africans all retain; who ordered that his effigy ſhould be expreſſed on their flags and their ſtandards, believing himſelf ſo formidable to the Chriſtians, that the bare ſight of his image would carry undoubted victory over them.

To hang out the white FLAG, is to aſk quarter; or, it ſhews, when a veſſel is arrived on a coaſt, that it has no hoſtile intention, but comes to trade, or the like; the red flag, on the contrary, is a ſignal of defiance and battle.

To lower, or ſtrike the FLAG, is to pull it down, or take it in, out of reſpect or ſubmiſſion, when the weaker party meets a more powerful one. See *Striking*.

By an ordinance of Philip XI. King of Spain, in 1565, the captains are peremptorily commanded to periſh, rather than lower their royal flag, when once hung out.

The way of leading vanquiſhed ſhips in triumph, is to tie the flags to the ſhrouds, or the gallery in the hind part of the ſhip, and let them hang down towards the water, and to tow the veſſels by the ſtern: thus, Livy relates, the Romans uſed thoſe of Carthage.

FLAG-*officers*. Thoſe who command the ſeveral ſquadrons of a fleet; as admirals, vice-admirals, and rear-admirals. See *Admiral*.

The flag-officers in Britiſh pay, are the admiral, vice-admiral, and rear-admirals, of the white, red, and blue ſquadrons. See *Navy*.

FLAG *ſhip*. A ſhip commanded by a general or flag officer, who has a right to carry a flag, in contradiſtinction to the ſecondary veſſels, under command thereof.

FLAG-*ſtaves*, are ſtaves ſet on the head of the top-gallant-maſt, ſerving to let fly, and unfurl the flag.

FLAGELLET. A ſmall muſical pipe, or diminutive flute.

FLAGGON, or *Flagon*. A large veſſel, to contain wine, or water, for feaſts, or other public uſes.

FLAMBEAU, or *Flamboy*. A luminary made of ſeveral thick wicks of tow, covered over with bees-wax, ſerving to burn at nights in the ſtreets; as alſo at funeral proceſſions, and illuminations: they differ from links, torches, and tapers; for they are made ſquare, ſometimes of white wax, and ſometimes of yellow. They uſually conſiſt of four wicks, or branches, near an inch thick, and about three feet long, being made of a ſort of coarſe hempen yarn, half twiſted.

FLAMBOROUGH *Head*. A cape on the coaſt of Yorkſhire, ſituated on the German ſea, in 20 min. of E. lon. and 54 deg. 15 min. of N. lat. five miles eaſt of Burlington.

FLANDERS. See *Netherlands*.

FLANDERS *lace*. See *Lace*.

FLANEL, or *Flannel*. A kind of ſlight, looſe, woollen ſtuff, not quilted, but very warm; compoſed of a woof and warp; being wove on a loom, with two treddles, after the manner of bays; of which there are great quantities made in Wales, and ſold to the merchants of Shrewſbury, who ſend them to Flanders. See *Bays*.

French flannels are made of ſeveral breadths and lengths, but uſually of half an ell, 2 3ds, and 3-4ths; the piece containing from 24 to 70 ells.

France imported formerly great quantities of flannel from England; but ſince this commerce was interrupted by long wars between the two kingdoms, and the French manufacturers had applied themſelves to imitate them, there were ſcarce any more Engliſh flannels to be ſeen in France, even in time of peace.

The principal uſe of flannel is for placing it between two ſtuffs, inſtead of flocks, or cotton, to make cloathing the warmer; but ſome uſe it for waiſtcoats, drawers, ſhirts and ſhifts, and women moſt commonly for under-petticoats.

FLASK. A thin bottle, or glaſs-veſſel, to put wine in; particularly that of Florence, which is commonly covered with wicker, or withes, to defend it from blows or cracking; and, in gunnery, it is a ſmall horn curiously made to put gun powder in, for thoſe who go a fowling.

FLATS, in the ſea-language, a dangerous place for ſhips or boats to go over, for fear of ſticking; being the ſame with ſand-banks, ſhelves, and ſhoals.

FLATTER. A mechanic, whoſe buſineſs is to flat go

or ſilver wire, by paſſing the wire between two rollers in the flatting mill.

FLAW. A crack, deficiency, or imperfection in a thing; eſpecially applied to the breaking off ſhivers, or thin pieces, from precious ſtones.

FLAX, or *Line*, *Linum*. A plant with a ſlender hollow ſtem, uſually about two feet high, whoſe bark conſiſts of fibres much like thoſe of hemp; which being properly dreſſed and worked, makes that noble commodity linen-cloth.

There are upwards of thirty different ſpecies of this valuable plant; of which only two are in uſe for the linen manufacture: but it has been experienced in Great Britain, France, and other parts, that flax and hemp are much improved in their reſpective countries, by fetching the ſeed from more northern climates, and particularly from Courland: for though the ſeed brought from thence is dear, it repays the charges with abundance; one ſowing frequently producing two or three crops, before it is neceſſary to be renewed.

The ſeed of flax, called linſeed, has ſeveral conſiderable properties, by entering the compoſition of divers medicines, and yielding an oil by expreſſion. See *Linſeed*, and *Oil*.

Great quantities of flax, as well as linſeed, are imported into Great Britain, and many other countries, from Ruſſia and Holſtein, and ſome other parts of the Baltic; there is alſo ſome imported from Flanders, Egypt, and the Levant.

Three buſhels of linſeed will ſow an Engliſh acre; and the beſt time for ſowing it is in April. After it is pulled, wetted, dried, and ſweated, it muſt be beat, broke, and hackled; when it is fit for the market. As the linen manufacture depends upon the cultivation of flax, and as this manufacture is daily increaſing in Ireland, the growth of it ſhould be greatly encouraged in that kingdm, where 11,000 hogſheads of flax-ſeed are generally imported every year; which, at 2 l. the hogſhead, coſt 22,000 l.: but this expence might be ſaved to Ireland, if the Iriſh farmers would raiſe flax, inſtead of continuing their old cuſtom of neglecting all kinds of tillage; or it would come into Great Britain, if the growth of flax was properly encouraged in her northern colonies, where the lands are fit for it, and from whence conſiderable quantities are alſo imported in England.

Yarn ſpun of unripe or bad flax, will never make good cloth; and where it is mixed with other yarn, the cloth is not eſteemed: for which reaſon no flax-ſeed is exported from Ruſſia, and other places on the Baltic, without inſpection by officers appointed for that purpoſe, and the barrels marked with the arms, and other ſeals of the place.

Flax is well prepared in Flanders, where one acre produces from 800 to 1000 lb. weight, worth 2 s. ſterling the pound: but their manner of preparing it is not much followed in England; though it ought to be general, becauſe it would be greatly more advantageous than the Engliſh method of dreſſing it; whereby the cambric trade might be greatly promoted in Scotland and Ireland, as alſo the manufactures of thread, tape, and lace, in England: by which means great ſums of money might be kept at home, inſtead of ſending it away upon a loſing trade to the Baltic for flax and ſeed; or to Germany, Holland, Flanders, and France, for cloth and laces. See *Linen*, and *Yarn*.

By the ſtatute of the 15th of Charles II. it was enacted, That it ſhould be lawful for any perſons, in any place privileged or unprivileged, corporate or not corporate, to ſet up the trade of breaking, heckling, or dreſſing, of hemp or flax; as alſo for making and whitening of thread; alſo of ſpinning, weaving, making, whitening, or bleaching of cloth made of hemp or flax only; as alſo the trade of making twine or nets for fiſhery, or of ſtoving of cordage; and alſo the trade of making tapeſtry-hangings. That all foreigners who ſhould ſet up, and uſe any of the trades aforeſaid three years in England, ſhould, upon taking the oaths of allegiance and ſupremacy, enjoy all privileges of natural-born ſubjects, unleſs they ſhould uſe merchandiſe into and from foreign parts; in which caſe they ſhould be liable to pay cuſtoms as aliens during five years, and no longer.

By the ſtatute of the 7th and 8th of William III. it was enacted, That it ſhould be lawful for natives of England or Ireland, to import into England directly from Ireland, any ſorts of flax or hemp, and all the production thereof, as thread, yarn, and linen, of the growth and manufacture of Ireland, free from all duties: the maſter of the veſſel importing the ſame bringing a certificate from the chief officer of the port in Ireland, expreſſing the marks, number, tale, or weight, of the ſpecies in each bale mentioned in the bills of lading, with the names and places of abode of the exporters from Ireland, and of ſuch perſons who ſhould have ſworn the goods to be of the growth and manufacture of the kingdom, and where, and to whom in England conſigned; and the maſter of the ſhip, on arrival in England, making oath that the ſaid bales and goods were the bales and goods taken on board by virtue of the ſaid certificates.

By the ſtatute of the 1ſt of Queen Anne, it was enacted, That all flax or hemp, and the production thereof, as thread, yarn, and linen, imported directly from Ireland, being of the growth and manufacture of Ireland, upon producing certificates, and making oath as directed by the laſt mentioned act, ſhould be free from the additional ſubſidy of poundage, and all duties whatſoever.

FLAX-*dreſſer*, is a perſon who prepares the flax after importation, and makes it ready for the ſpinners, by combing it on heckles of different degrees of fineneſs, according to the nature of the flax, or the uſes it is deſigned for.

FLEECE. The covering of wool ſhorn off the bodies of ſheep; or it is as much wool as comes from one ſheep. See *Wool*.

FLEET. A number of veſſels going in company, whether on a deſign of war, or commerce. In times of peace, merchant-ſhips go in fleets, for their mutual aid and aſſiſtance. In times of war, beſides this ſecurity, they likewiſe procure convoys of men of war; either to eſcort them to the places whither they are bound, or only a part of the way, to a certain point or latitude, beyond which they are judged out of danger of privateers.

The Spaniſh fleet ſent againſt England by Philip II. conſiſted of a thouſand veſſels; and, in the eaſt, there have been fleets of 3000 veſſels aſſembled together.

Merchant-fleets generally take their denomination from the place they are bound to; as the Turky fleet, Eaſt India fleet, Baltic fleet, and Braſil fleet: but the Spaniards call ſimply the fleet, or flota, a certain number of veſſels, belonging partly to the King, and partly to merchants, ſent every year to Vera Cruz, a port of New Spain. The flota conſiſts of the captain, admiral, and patach or pinnace, which go on the account of his moſt Catholic Majeſty; and about ſixteen ſhips, from 400 to 1000 tons, belonging to particular perſons: they are all ſo heavy laden, both going and coming, that they have great difficulty to defend themſelves when attacked; and the fleet puts out from Cadiz about the month of Auguſt, making it 18 or 20 months before its return. The fleet ſent annually from the ſame port to Peru, they call the galleons, which goes out in company as far as the Antilles, where they ſeparate; the galleons for Carthagena and Porto Bello, and the flota for Vera Cruz; but, at their return, they join at the Havanna: and though, of the two fleets, the galleons are the moſt richly laden; yet it is to be obſerved, that the cargo of the flota is very conſiderable.

Chineſe FLEETS, or *floating towns*, are ſeveral barks, or buildings, uſed by the Chineſe for the interior commerce of their vaſt empire; eſpecially in places abounding with water, which is common in China.

Theſe barks ſail ſeparately, or ſome linked only together; but, when arrived at the place deſigned for carrying on a trade for ſome time, they are placed in regular order, forming ſtreets, and, as it were, ſquares between them: afterwards they are all joined with a kind of cordage interwoven with ſticks, and faſtened to large ſtakes: Theſe fleets, or little floating towns, have their magiſtrates and police; each boat being as a houſe, with its

ſtore-rooms, ſhop, and ſign, to inform purchaſers what kind of merchandiſe is ſold there.

The inhabitants of theſe floating houſes have no other abode; for they are uſually born, and alſo live and die in them. They never ſolicit the land-inhabitants to purchaſe their commodities, who come to the fleet in ſmall barges, and only in the day-time, the avenues of the fleet being ſhut up in the night.

Some of theſe fleets are met with alſo on the coaſt of Sumatra; but they are only hammocks, in compariſon to the Chineſe.

FLEMISH. Any thing belonging to the provinces of the Netherlands. The Flemiſh language, or Low Dutch, is ſo called, to diſtinguiſh it from the German, whereof it is a corruption, and a kind of dialect; but it differs from the Walloon, which is corrupt French.

FLEMISH-*bricks*. A neat, ſtrong kind of bricks, of a yellowiſh colour, brought from Flanders, and much uſed for paving. See *Bricks*.

FLENSBURGH. A port-town of Sleſwick, ſituated on a bay of the Baltic, in 9 deg. 45 min. of E. lon. and 55 deg. of N. lat. See *Denmark*.

FLESH. The eatable part of any animal, as beef and pork; both of which are intitled to a bounty of 5 s. the barrel on exportation, if cured with any ſalt in England, but only with foreign ſalt in Scotland: however, before laid on board for exportation, the caſks are to be marked by the ſalt officer; and if fraudulently relanded or reimported after exportation, the ſame are to be forfeited, and 40 s. *per* barrel.

FLETCHER. A perſon whoſe buſineſs conſiſted in making of bows and arrows; which was a trade much in requeſt formerly, before the invention of guns.

FLETCHERS *company of London*. Though it is only a company by preſcription, and not by charter, has nevertheleſs obtained a coat of arms, and a livery; being, in point of precedence, become the 39th company of the city; and ſeems, in all reſpects, as firmly eſtabliſhed as thoſe incorporated by royal letters-patent.

This fraternity conſiſts of 2 wardens, 10 aſſiſtants, and 25 liverymen, who pay a fine of 10 l. each upon their being admitted; and they have a ſmall, but convenient hall, in St. Mary Axe, where they manage their affairs.

FLIE, or *Fly*. That part of the mariners compaſs, on which the 32 winds are drawn, and over which the needle is faſtened underneath. See *Compaſs*.

FLIE, or *Uly-iſland*, is ſituated on the coaſt of Holland, at the entrance of the Zuider ſea. See *United* Provinces.

FLINT. A ſmall, hard, livid, or black pebble, chiefly uſed for yielding ſparks of fire by colliſion againſt ſteel, particularly in muſkets, guns, and piſtols; but flints are alſo one of the principal ingredients in the making of glaſs. Great quantities of flint-ſtones are ſold by the ironmongers of Shrewſbury, to the people of Wales; and great quantities are exported by the Eaſt India company, as alſo by the African traders.

FLIP. A ſort of ſailor's drink, made of malt liquor, brandy, and ſugar, mixed.

FLITCH. A name given to the ſide of a hog, when cured, dried, and made bacon of, without the head or legs. See *Bacon*.

FLOAT. A certain quantity of pieces of timber, joined together with rafters athwart, thrown into a river, to be conveyed down the ſtream, or to lie in ſome convenient part of the river, to keep them moiſt, and preſerve them from tearing or rending with the heat of the ſun, till they are wanted for making of maſts, building, or other purpoſes; and even ſometimes to carry burdens down a river with the ſtream; the invention of which is of great uſe, and is ſaid to have been firſt put in execution at Paris, in the year 1618.

FLOATING, among farmers, is the letting in of water upon a meadow, or low land, ſo as to overflow. In weaving, it is when ſome of the threads break; ſo that the ſhoot, or warp, is not bound down tight; but, lying up looſe, is ſubject to be eaſily broke.

FLOCK. A large number, or drove, of ſheep, goats, or geeſe.

FLOCKS. Tufts of wool, commonly of the worſt ſort, uſed to ſtuff chairs, or to make ordinary beds. See *Wool*.

FLOOD, is a term uſed in ſpeaking of the tides: ſo when the water is at loweſt, it is called flood; when riſing, young, or old flood; and when at higheſt, and beginning to fall, ebb-water. See *Flux*, and *Tide*.

FLOOK, *Flouk*, or *Fluke*, is the bearded end of an anchor. See *Anchor*.

FLOOR *of a ſhip*, ſtrictly taken, is only ſo much of her bottom as ſhe reſts on when aground. Such ſhips as have long and broad floors, lie on the ground with moſt ſecurity, being not apt to ſeel, or tilt, on one ſide; whereas others, which are narrow in the floor, or, in the ſea-phraſe, cranked by the ground, cannot be grounded without danger of being overturned.

FLOOR-*cloth*, is a cloth painted in oil colours, for covering rooms; which is performed by a particular claſs of painters, called floor-cloth painters. There is a conſiderable manufactory of floor-cloths at Knightſbridge; but they are generally ſold in the turners ſhops.

FLORENCE. The capital of Tuſcany, in Italy, ſituated in 12 deg. 15 min. of E. lon. and 43 deg. 30 min. of N. lat. See *Italy*.

FLORENTINE. A particular kind of marble; the veins of which have a natural reſemblance to houſes, buildings, &c. by ſome called landſcape marble.

FLORES. An iſland of the Azores, ſituated in 32 deg. of W. lon. and 39 deg. of N. lat. in the Atlantic ocean, almoſt in the midway between Europe and America: named from the variety of beautiful flowers its produces. See *Azores*.

FLORES, is alſo an iſland in the Indian ocean. See *Celebes*.

FLORIDA, was a name given by the Spaniards to all the part of the continent of North America, which lies north of the gulph of Mexico, bounded on the eaſt by the Atlantic ocean; which country now goes under many different names; for within theſe limits are contained moſt of the Engliſh colonies in North America, and thoſe countries which the French have denominated Louiſiana, and New France: all that retains the name of Florida, at preſent, being that peninſula between the colony of Georgia and Cape Florida, in 25 and 30 deg. of N. lat. and 81 and 85 deg. of W. lon. The chief and almoſt the only place, the Spaniards are poſſeſſed of within theſe limits, is the port-town of St. Auguſtin, with a fort a little diſtance from it; the town being a very ſmall one, and the fort not able to reſiſt ſuch a force as is uſually employed in ſieges; though it has baffled ſome attempts that have been made to take it by the Engliſh, with a force ſcarce equal to the garriſon, and the want of moſt neceſſaries requiſite for a ſiege. See *Spanish America*, under *Spain*.

FLORIN, is ſometimes uſed for a coin, or real money, and ſometimes for an imaginary money, or money of compt. See *Coin*, and *Money*.

FLORIN, as a coin, is of ſeveral values, according to the different metals and countries where it is ſtruck. Pieces under this denomination were anciently very frequent in commerce; but at preſent they are leſs common, though there were abundance of them ſtruck in Holland, of Engliſh ſilver, during the war which was terminated by the treaty of Ryſwick. In all appearance, they took their name from the city of Florence, where they were firſt ſtruck; and their æra is about the year 1251; though others aſcribe the name to a flower-de-lis, which is ſtruck on one ſide.

The gold florins were moſtly of a very coarſe alloy, and of them not exceeding 13 or 14 carats, and not above and a half, being about 2 dwts, and 13 grains. Some obſerves, that there were gold florins in the year 1252, from which time the names frank, or florin, became applied to the gold coins, which till that time had been called ſolidi, or ſhillings; but now there are none. As to ſilver florins, thoſe of Holland, or the guilder, worth 1 s. 9 d. ſterling; and pieces of 3 florins called ducatoons. See *Ducatoons*.

FLORIN, as a money of accompt, is uſed by the Dutch, and German merchants and bankers, in

eir books, and making up their accompts: but this florin very diverſe, and admits of ſeveral diviſions; becauſe Holland it is on the foot of the Dutch coin of that me, containing 24 deniers groſch, and divided into pards and penings; at Francfort, Nuremberg, and ſome her places in Germany, it is equivalent to three ſhilgs ſterling, and is divided into creutzers and pfennings; Liege it is equivalent to 2 s. 3 d. at Straſburg to 1 s. d. in Savoy to 11 d. at Genoa to 8¼ d. and at Geneva 6½ d.

DRIST. A perſon ſkilled, or delighting, in the ſtudy, ltivation, and nature of all ſorts of flowers.

DTA, or *Flotta*. A name the Spaniards give particuly to the ſhips which they ſend annually from Cadiz to e port of Vera Cruz, to fetch the merchandiſes gathered Mexico for Spain. Thoſe ſent to fetch the commoties prepared in Peru, are called galleons; and the name otilla is given to a number of ſhips, which get before e reſt in their return, to give information of the deriture and cargo of the flota and galleons. See *Fleet*, and *Galleons*.

DTAGES. All ſuch things as are floating on the top the ſea, or great rivers; a word principally uſed in the mmiſſions of water-bailiffs.

DTILLA. See *Flota*.

DTSON, *Flotzam*, or *Floatſam*. A term ſignifying y goods loſt by ſhipwreck, and ſwimming on the top the water; which, with jetſon, lagan, and ſhares, are ven the Lord High Admiral, by his letters-patent. See *Admiral*, *Jetſon*, *Lagan*, *Shares*, and *Wreck*.

DUR, or *Flower*. A powder of ſome ſort of grain, or alſe, ground, and ſifted from the bran. See *Corn*.

DWERED, in the manufactures, is a ſilk, ſtuff, or oth, which is ſaid to be flowered, flouriſhed, ſprigged, figured, when there are repreſentations of flowers, ther natural or imaginary, wrought thereon. There e ſtuffs flowered of almoſt all kinds of matters; as wers of gold, ſilver, ſilk, wool, thread, and cotton; hich ſtuffs and cloths are uſually denominated from the ound whereon the flowers are raiſed: thus, there are wered velvets, taffaties, damaſks, ſattins, mohairs, dimities, and other things; but thoſe flowered with gold d ſilver are more commonly called brocades.

WERS *of ſulphur*, or *Brimſtone*, are the vapours of elted brimſtone conveyed from an iron pot, in which it kept boiling, through a proper flew, into a cloſe room, here this vapour condenſes into flowers. See *Sulphur*.

OWING *of the tide*. See *Flux*.

UE. The ſoft or downy hair of a rabbet, or the feaers of a fowl.

ORES, among miners, a ſort of ſpar, ſoft, and anſparent.

USHING, or *Vliſſingen*. A port-town of the United rovinces, in the province of Zealand, ſituated on the coaſt of the iſland of Walcheren, in 3 deg. 25 min. E. lon. and 51 deg. 33 min. of N. lat. See *United Provinces*.

UTE. A muſical inſtrument; of which there are ſeveral kinds; as concert flute, octave flute, German flute, and others.

YTE, or *Fluyt*, is alſo a kind of long veſſel, with flat ms, or floor-timbers, round behind, and ſwelled in the middle; ſerving chiefly for the carrying of proviſions in eets, or ſquadrons of ſhips; though it is alſo uſed in erchandiſe.

UX, in hydrography, a regular, periodical motion of e ſea, happening twice in twenty-four hours; wherein e water is raiſed, and drawn violently againſt the ſhores: is flux, or flow, being one of the motions of the tide; e other, whereby the water ſinks and retires, being lled the reflux, or ebb. See *Tide*, and *Reflux*.

here is alſo a kind of reſt, or ceſſation, of about half hour, between the flux and reflux; during which the ater is at its greateſt height, called high-water. The x is made by the motion of the water of the ſea, from e equator towards the poles; which, in its proper proſs, ſtriking againſt the coaſts in its way, and meeting th oppoſition from them, ſwells, and, where it can find ſſage, as in flats and rivers, riſes up, and runs into the d. This motion follows, in ſome meaſure, the courſe of the moon; as it loſes, or comes later every day by about three quarters of an hour, or, more preciſely, 48 minutes; and by ſo much is the motion of the moon ſlower than that of the ſun; it is always higheſt and greateſt in the full moons, particularly thoſe of the equinoxes: in ſome parts, as at Mount St. Michael in Cornwal, it riſes 80 or 90 feet; though, in the open ſea, it never riſes above a foot or two; and in ſome places, as about the Morea in the Mediterranean, there is no flux at all. It runs up ſome rivers about 120 miles; and it flows up the river Thames to Kingſton in Surry, which is 80 miles from the ſea. Above London bridge the water flows 4 hours, and ebbs 8; but below the bridge it flows 5 hours, and ebbs 7. See *Tide*, and *Flood*.

FLUX, in chemiſtry, is the reducing metals that by nature are hard and ſolid, to a condition of flowing; when they are ſaid to be in the flux.

FLUX-*powders*, are thoſe prepared to facilitate the fuſion of the harder metals; as alſo to melt oars, in order to diſcover what proportion of metal they contain; and ſuch is powder of antimony, which will readily melt iron, or ſteel, in a crucible, with an ordinary charcoal fire. See *Antimony*, and *Foundery*.

FLY-BOAT. A large veſſel, with a broad bow, uſed by merchants in the coaſting trade; ſome of which are capable of carrying 800 ton of goods.

FLYBUSTER. See *Freebooter*.

FOAL. The colt of a mare or aſs.

FOANG. A ſmall ſilver coin, current at Siam; being the half of the mayon; and 800 coris are given for a foang, which is about 2 d. ſterling.

FODDER, or *Fother*. Any kind of meat for horſes, or other cattle; but, in ſome places, hay and ſtraw mingled together is more peculiarly underſtood by this denomination.

FODDER, is alſo the name of a quantity of lead, which in different places is of different weights; as in London it is 19 hundred, at Newcaſtle 21 hundred, and in Derbyſhire 24 hundred; ſometimes more, and ſometimes leſs, according to the cuſtom of the ſeveral liberties where it is melted or made.

FOGO. One of the Cape Verd iſlands, ſituated in 25 deg. of W. lon. and 15 deg. of N. lat. See Cape *Verd* iſlands.

FOILING, or *Foliating*, is the putting ſomething under real or factitious ſtones or jewels; and in looking-glaſſes it is the ſpreading a compoſition of ſomething that will firmly adhere to the back of the glaſs, and there reflect the image; being uſually made with quickſilver, mixed with ſome other ingredients. See *Glaſs*.

FOINES. A term for the furs, or ſkins, of weazels, and ſome other little animals.

FOLIO, in commerce, ſignifies a leaf, or page.

Merchants, bankers, traders, and all thoſe who are obliged to keep books, uſe this term, particulary in the alphabets of their regiſters, in order to find readily the pages where merchandiſe, or goods, bought and ſold, are ſet down in debit and credit, or where the names of creditor and debtor lie. In merchants ledgers, the double face, or right and left hand opening of the book, are numbered both alike.

In abridging, folio is thus marked, F°; and recto and verſo, R°, V°.

FOLIO is alſo a term uſed by bookſellers, when the printed ſheet is only folded in two, each leaf making half a ſheet.

FOLIO-*Chiroſe*. A medicinal drug, prepared in China, which has a good ſale in Japan.

FOLIUM *Caryophillatum*, or *Clove-leaf*. See *Cloves*.

FOLIUM *Indicum*, or *Indum*, called alſo *Thamalapathra* and *Malabathrum*, is a leaf brought from the Eaſt Indies, growing chiefly about Cambaya in India, produced by a tree not unlike the lemon-tree, uſed in the compoſition of Venice treacle. See *Theriaca*.

The good choice of it conſiſts in being beautiful, large, green, and as entire as poſſible.

FOLKSTONE. A market-town of Kent, on the Engliſh channel, ſituated in 1 deg. 20 min. of E. lon. and 51 deg. 6 min. of N. lat. 6 miles W. of Dover, of which it is a member.

FOLLICULI *Senæ*. The pods which encloſe the grain,

or ſeed of ſena, eſteemed as purgative as the ſena itſelf. See *Sena*.

FONT. A term given by printers to letters of one ſize, both great and ſmall; together with the points, ſtops, &c. to enable them to compoſe and print a work in that character, called engliſh, pica, brevier, &c. according to the ſize.

FONTARABIA. A port-town of Spain, in the province of Biſcay, ſituated in 1 deg. 35 min. of W. lon. and 43 deg. 20 min. of N. lat. at the mouth of the river Bideſſoa, on the bay of Biſcay, and on the frontiers of France. See *Spain*.

FONWA. A drug for dying ſcarlet, met with at Suez in Egypt, and its neighbourhood, making one of the merchandiſes of the royal ſhip, which ſails yearly, upon the Grand Signior's account, from Mocha in Arabia.

FOOL. A weight and meaſure uſed among the tinners in Cornwal, from 50 to 80 pounds weight, according to the goodneſs of the metal.

FOOT. A long meaſure, conſiſting of 12 inches in England; but is of different lengths in different countries; for the Paris royal foot exceeds the Engliſh by 7 lines, or 7-12ths of an inch: the antient Roman foot of the capitol conſiſted of 4 palms, equal to 11 inches and 7-10ths Engliſh; the Rhinland, or Leyden foot, by which the northern nations meaſure, is to the Roman foot, as 950 to 1000: but the proportions of the principal feet of ſeveral nations, compared with the Engliſh and French, are ſubjoined. See *Meaſure*.

The Engliſh foot being divided into 1000 parts, or into inches, the other feet will be as follow.

	Th. pts.	foot.	inc.	lines.
London foot -	1000	0	12	0
Paris, the royal foot	1068	1	0	8
Amſterdam foot -	942	1	11	3
Antwerp foot -	946	0	11	2
Dort foot - -	1184	0	2	2
Rhinland, or Leyden foot	1033	1	0	4
Lorrain foot -	958	0	11	4
Mechlin foot -	919	0	11	0
Middleburg foot -	991	0	11	9
Straſburg foot -	920	0	11	0
Bremen foot -	964	0	11	6
Cologn foot -	954	0	11	4
Francfort foot -	948	0	11	4
Spaniſh foot -	1001	0	11	0
Toledo foot -	899	0	10	7
Roman foot -	967	0	11	9
Bononia foot -	1204	1	2	4
Mantua foot -	1569	1	6	8

Prague foot - -	1026	1	0	3
Riga foot -	1831	1	9	9
Turin foot - -	1062	1	0	7
The Greek foot	1007	1	0	1
Paris foot, by Dr. Bernard	1066	1	0	1
Old Roman foot -	970	0	0	0

And the Paris foot being ſuppoſed to contain 1440 parts, the reſt will be as follow.

Venetian foot	$1540\frac{2}{5}$	Conſtantinopolitan foot -	3120
Paris foot	1440	Bononian foot	$1682\frac{2}{5}$
Rhinland foot	1391	Straſburg foot	$1282\frac{3}{4}$
Roman foot	1320	Norimberg foot	$1346\frac{1}{4}$
London foot	1350	Dantzic foot	$1721\frac{1}{2}$
Swediſh foot	1320	Hall foot -	1320
Daniſh foot	1403		

FOOT *hooks*. See *Futtocks*.

FORAGE. Proviſion for horſes, ſuch as corn, hay, or ſtraw.

FORBEARANCE, is a term given to the premium paid for the uſe of a ſum of money, called *forbearance-money*. See *Premium*.

FORBISHER's *ſtraits*. See *Frobiſher*'s ſtraits.

FORE-BOLTS. Iron pins made with an eye at each end, into which an iron forelock or key is driven, to prevent its ſtarting; particularly uſed in ſhip-building, to keep the timbers firm.

FORECASTLE *of a ſhip*, is that part where the fore-maſt ſtands, being divided from the reſt of the floor by a bulk-head; but that part of the fore-caſtle which is aloft, and not in the hold, is called the *prow*. See *Ship*, and *Prow*.

FOREFOOT, in the ſea-language, is when one veſſel ſails, or lies, acroſs the way of another; as if two ſhips being under ſail, and in ken of one another; one of them lies in a courſe with her ſo much a-weather of the other, that if both hold on, the windward ſhip will run a-head of the other: and ſuch ſhip is ſaid to lie with the fore-foot of the other; though, as ſoon as ſhe has paſſed, they ſay ſhe is gone out a head.

FOREIGN. Something extraneous, or that comes from another kingdom or dominion.

FOREIGN, or *Foraign traitte*, is a duty belonging to the King of France, of one twentieth of the value of all goods imported or exported into or out of the kingdom.

FORE-*knight*, in the ſea-language, a piece of wood, carved in the figure of a human head, and faſt bolted to the beams upon the ſecond deck.

FORELAND, or *Foreneſs*, in navigation, a point of land jutting out into the ſea; ſuch as the north and ſouth foreland in Kent. See *Cape*.

FORELOCKS, in a ſhip, are little flat wedges, like pieces of iron, uſed at the ends of bolts, to keep them from flying out of the holes.

FOREMAN, in trade, is a principal workman ſet over the others, both to direct and govern them.

FORE-*maſt of a ſhip*, is a round large piece of timber, ſtanding in the fore-part, on which the fore-ſail, and fore-top-ſail yard, are borne; the length of it being uſually one eighth of the main-maſt. See *Maſt*.

FORE-*ſail*. The ſail of the fore-maſt. See *Sail*.

FOREST. A certain territory of woody grounds, and fruitful paſtures, privileged for wild beaſts, and fowls of foreſt, chace, and warren, to reſt and abide in the ſafe protection of the King, for his diverſion. The antient Norman monarchs were the firſt who incloſed foreſts in England; which they did in ſo deſtructive a manner that the new foreſt in Hampſhire was raiſed by the depopulation of 22 pariſh-churches, and all the villages, manors, churches, chapels, and other places, for 30 miles together: however, though it was at that time extremely prejudicial to the inhabitants of England, it has conferred the greateſt advantages on their poſterity, by affording them ſuch valuable quantities of timber for the royal navy, as to render them the moſt formidable maritime people that ever contended for the dominion of the ſea: and beſide New Foreſt, there are now ſubſiſting 67 foreſts in England, 13 chaſes, and 781 parks, all well repleniſhed with timber for navigation. See *Tree*, and *Timber*.

FORE-*ſtaff*, or *Croſs-ſtaff*. An inſtrument uſed at ſea, for taking the altitudes of heavenly bodies; which has this denomination, becauſe the obſerver, in uſing it, turns his face towards the object, in contradiſtinction to back-ſtaff, where he turns his back to the object. See *Altitude*, and *Back-ſtaff*.

This inſtrument conſiſts of a ſtraight, ſquare, graduated ſtaff, with four croſſes, or vanes, ſliding thereon: the firſt, and ſhorteſt, of theſe vanes, is called the *ten croſs*, or *vane*, and belongs to that ſide of the inſtrument whereon the diviſions begin at 3 degrees, and end at 10: the next longer vane is called the *thirty croſs*, belonging to that ſide of the ſtaff, whereon the diviſions begin at 10 degrees, and end at 30, called the *thirty ſcale*: the third vane is called the *ſixty croſs*, and belongs to the ſide where the diviſions begin at 20 degrees, and end at 60: and the laſt, called the *ninety croſs*, belongs to the ſide where the diviſions begin at 30 degrees, and end at 90.

The great uſe of this inſtrument, is to take the height of the ſun and ſtars, or the diſtance of two ſtars: and the ten, thirty, ſixty, or ninety croſſes, are to be uſed according as the altitude is greater or leſſer, that is, if the altitude be leſs than 10 degrees, the ten croſſes is to be uſed; if above 10, but leſſer than 30, the thirty croſs is to be uſed; and ſo of the other two: but for altitudes greater than 60 degrees, this inſtrument is not ſo convenient as a quadrant, or ſemicircle. See *Quadrant*.

RESTALLING. The buying or bargaining for corn, ttle, or other merchandiſe, by the way, before it aches the market, or fair, to be ſold; or by the way, it comes beyond the ſeas, or otherwiſe, towards any ty, port, haven, or creek, of the realm, with deſign take advantage thereof, and ſell it again at a more adnced, and extenſive rate. See *Monopoly*.

y an old Engliſh ſtatute, it was enjoined, that no forealler ſhould be ſuffered to dwell in any town, who maifeſtly was an oppreſſor of the poor, a public enemy of e country, who meeting grain, fiſh, herring, or other ings coming to be ſold, ſhould buy them before other; irſting after wicked gain, oppreſſing the poor, and deceivg the rich; and by that means ſhould go about to ſell e ſaid things much dearer than he who brought them; ho ſhould come about merchant-ſtrangers, and offer em his help in the ſale of their wares, and inform them at they might ſell their wares dearer than they meant have done: he that was convicted thereof, the firſt me ſhould be amerced, and ſhould loſe the thing ſo ught, according to the cuſtom of the town: he that as convicted the ſecond time, ſhould have judgment of e pillory: the third time he ſhould be impriſoned and nſomed: the fourth time he ſhould abjure the town, d likewiſe they who gave him counſel, help, or faur.

y the ſtatute of the 6th of Edward VI. it was enacted, hat whoſoever ſhould buy any merchandiſe, or victuals, ming toward any fair or market to be ſold in the ſame, coming toward any city, port, creek, or road of the alm, or Wales, from beyond ſea to be ſold, or ſhould make y bargain for having the ſame before the ſaid merchanſe or victuals ſhould be in the market, ready to be ſold; ſhould make any motion for inhauncing the price, or ould move any perſon coming to the market to forbear bring the things to be ſold, he ſhould be judged a foreller.

hat whoſoever ſhould regrate, or get into his hands, in y fair or market, any corn, wine, fiſh, butter, cheeſe, ndles, tallow, ſheep, or other dead victuals, that ſhould brought to fair or market to be ſold, and ſell the ſame ain in any fair or market within four miles, ſhould be reted a regrator.

hat whatſoever perſon ſhould ingroſs, by buying or proiſe, taking, other than by leaſe of land or tithe, any rn growing, or other corn, butter, cheeſe, fiſh, or her dead victuals, within England, to the intent to ſell e ſame again, ſhould be reputed an unlawful ingroſſer.

hat if any perſon ſhould offend in the things before reed, and be thereof convicted, he ſhould for the firſt fence ſuffer two months impriſonment, and ſhould alſo feit the value of the goods ſo bought.

hat if any perſon convicted ſhould be thereof eſtſoons nvicted, he ſhould ſuffer impriſonment for one half ar, and ſhould loſe the double value of the goods.

hat if any perſon, twice convicted of the ſaid offences, ould offend the third time, and be thereof convicted, ſhould be ſet on the pillory near his dwelling-place, feit all his goods, and alſo be committed to priſon ring the King's pleaſure.

ESTIERI. A term of the *Linguo-Franco* at Cairo, d Alexandria, in Egypt, to ſignify linen made after the nner of Dutch cloth.

GE. A little furnace, wherein ſmiths and other artiers heat their metals red hot, to ſoften and render them re malleable, and manageable on the anvil: but this m is more properly uſed for a kind of furnace, wherein iron oar, melted down and ſeparated in a former nace, and there caſt into ſows and pigs, is heated, ed over again, and beaten with large hammers; ereby it is rendered more ſoft, pure, ductile, and fit for ; of which there are two kinds, that the iron ſucceſly paſſes through, before it comes to the ſmith; the t called the *finary*, where the pigs are worked into groſs n, and prepared for the ſecond, which is called the *ſery*, where it is further wrought into bars fit for uſe. *Iron*.

E, is alſo to faſhion, or make a thing, in iron, or er metal, by heating and hammering it. See *Forging*.

FORGE-*mills*. See the article *Mill*.

FORGERY ſignifies a fraudulent making, and publiſhing, of falſe writings, to the prejudice of the right of another perſon; which was ſo detrimental to the enjoyment of property, and the ſecurity of trade, that ſuch offenders were, by the ſtatute of the 5th of Queen Elizabeth, to be ſet upon the pillory, and there have both their ears cut off, and their noſtrils ſlit and ſeared; beſides which, they were to forfeit to the government the whole iſſues and profits of their lands during their life, and to ſuffer perpetual impriſonment.

But, in ſucceeding reigns, this pernicious practice was carried to ſuch a pitch of atrocity, that more rigorous penalties were neceſſary for the prevention of ſuch enormous evils, and the abolition of ſuch ſecret iniquity, not otherwiſe to be guarded againſt; aad accordingly, by the ſtatute of the 8th of George I. it was enacted, That if any perſon ſhould forge, or counterfeit, or procure to be forged or counterfeited, or knowingly and willingly aſſiſt in the forging and counterfeiting, any letter of attorney, or other authority or inſtrument, to transfer any ſhare in a capital ſtock eſtabliſhed by parliament, or to receive any dividend attending ſuch ſhares, or annuity, in reſpect whereof the proprietors had ſuch ſhares; or ſhould forge or counterfeit the name of any of the proprietors of ſuch ſhares, annuities, or dividends, to any ſuch inſtrument; or ſhould knowingly and fraudulently demand, or endeavour to have ſuch ſhares transferred, or ſuch annuities or dividends received by ſuch forged authority; or ſhould falſely and deceitfully perſonate any of the proprietors of the ſaid ſhares, annuities, or dividends, thereby transferring, or endeavouring to transfer, the ſtock; or receiving, or endeavouring to receive, the money of ſuch proprietor; every ſuch perſon ſhould be guilty of felony, without benefit of clergy.

By the ſtatute of the 12th of George I. it was enacted, That if any perſon ſhould forge, procure to be forged, or willingly aſſiſt in the forging, the name or hand of the accomptant-general, the regiſter, or the clerk of the report-office, belonging to the court of chancery, or any of the caſhiers of the bank, to any certificate, report, inſtrument, or writing, in order to the receiving any money or effects of any of the ſuitors of the court of chancery; or ſhould forge any bond under the ſeal of the Eaſt India company, or any indorſement or aſſignment thereon; or on any bond under the ſeal of the South-ſea company; or ſhould utter or publiſh any ſuch, knowing the ſame to be forged, with intention to defraud any perſon; every perſon ſo offending ſhould be guilty of felony, without benefit of clergy.

By the ſtatute of the 2d of George II. it was enacted, That if any perſon ſhould forge, cauſe to be forged, or willingly aſſiſt in the forging any deed, will, bond, writing-obligatory, bill of exchange, promiſſory note for payment of money, or any indorſement or aſſignment thereon, or any acquittance or receipt for money or goods, with intention to defraud any perſon; or ſhould utter or publiſh the ſame, knowing the ſame to be falſe; they ſhould be guilty of felony, without benefit of clergy. But this act was not extended to Scotland; nor does the attainder work corruption of blood: however, it was revived, and made perpetual by the 9th of George II.

By the ſtatute of the 4th of George II. reciting, That there being treaties ſubſiſting between the King and the ſeveral governments of Barbary, by which it was ſtipulated, that all ſhips belonging to his Majeſty or his ſubjects, might paſs the ſeas, and enter into the harbours of thoſe governments, without any ſeizure or moleſtation, upon producing paſſes of a certain form, under the hand and ſeal of the lords of the admiralty, called Mediterranean paſſes: It was therefore enacted, That if any perſon ſhould forge any ſuch paſs, for any ſhip; or ſhould alter or eraſe any ſuch paſs, or publiſh the ſame, knowing it to be forged; every ſuch perſon being convicted in Great Britain, Ireland, or the plantations, where ſuch offence ſhould be committed, ſhould be guilty of felony, without benefit of clergy.

By the ſtatute of the 7th of George II. it was enacted, That if any perſon forge, falſely make, or alter, any ac-

ceptance of any bill of exchange, or the number or principal ſum of any accomptable receipt for any note, bill, or other ſecurity for money; or any warrant or order for payment of money, or delivery of goods, with any intention to defraud any perſon, or ſhould aſſiſt therein, or ſhould publiſh the ſame, knowing it to be ſo; every ſuch perſon ſhould be guilty of felony, without benefit of clergy. Beſides the penalty of theſe ſtatutes, it is made felony without benefit of clergy, to forge bank-notes, and exchequer-bills, or orders, by the ſeveral acts of parliament relating to thoſe ſecurities: yet ſuch is the flagrancy of the age, that villains are deſperate enough to continue theſe abominable practices in defiance of the law, contempt of ſociety, and diſregard of their own lives.

FORGING, in the mechanic arts, the art of beating or hammering iron on an anvil, after having firſt made it red hot in the forge; to extend it into various forms, and faſhion it into works. Iron is hammered, and forged, two ways: either by the force of the hand; in which there are uſually ſeveral perſons employed, one of them turning the iron, and hammering likewiſe, and the reſt only hammering: or by the force of a water-mill, which riſes, and works ſeveral huge hammers, beyond the force of man, under the ſtrokes whereof the workmen preſent huge lumps or pieces of iron, which are ſuſtained at one end by the anvils, and at the other by iron chains faſtened to the cieling of the forge; but this laſt way of forging is only uſed in the largeſt works, as anchors for ſhips, which uſually weigh ſeveral hundred weight.

FORLE. A copper coin, ſtruck and current in Egypt, eight of which are worth about a penny ſterling.

FORMENTERA. See *Spaniſh* iſlands.

FORMOSA. An iſland in the Pacific ocean, ſituated between 119 and 122 degrees of E. lon. and between 22 and 25 degrees of N. lat. 100 miles eaſt of the province of Fokien and Canton in China, and ſubject to the ſovereign of that empire. See *Chineſe* iſlands.

FORTAVENTURA. One of the Canary iſlands, ſituated in the Atlantic ocean, in 14 deg. of W. lon. and 27 deg. of N. lat. See *Canary* iſlands.

FORTH, is one of the largeſt rivers in Scotland, antiently called Bodotria; which riſes near the bottom of Leimon-hill, and runs from eaſt to weſt, diſchargiug itſelf into the frith of Forth, which forms the harbour of Leith, near Edinburgh.

FOSSIL, in natural hiſtory, is uſed, in a general ſenſe, for any thing dug up, or found under ground; which are divided into ſimple, and compound; the former being all metals, ſalts, ſtones, both vulgar and precious, and earths; the latter being all ſulphurs, all ſemi-metals, or what is properly called minerals, and all bodies combined out of any two or more of the preceding, either ſimple or compound foſſils.

FOTAS. A ſort of wearing apparel, uſed by the women of the iſland of Java, and brought ready made from the coaſt of Coromandel, Bengal, and Surat: which makes a conſiderable part of the Dutch Batavia trade, as alſo of the Javaneſe.

FOTHER. See *Fodder*.

FOTTALONGEES. A ſtriped Indian ſtuff, mixed with ſilk and the bark of trees.

FOTTES. A cotton cloth chequered, brought from the Eaſt Indies, particularly from Bengal; the piece being one ell and a half in length, and 7-8ths in breadth.

FOUANG. A weight uſed in the kingdom of Siam; 2 fouangs make 1 mayon, and 4 mayons 1 tical, which weighs about half an ounce avoirdupoiſe weight.

FOUANG, is alſo a coin of the ſame kingdom, being the 8th of a tical, and worth 800 coris. See *Coris*.

FOUL, in the ſea-language, is uſed when a ſhip has been long untrimmed; ſo that graſs, weeds, periwinckles, barnacles, or the like, ſtick or grow to her ſides, under water: in which ſtate ſhe is ſaid to be foul.

A rope is likewiſe ſaid to be foul, when it is either entangled in itſelf, or hindered by another; ſo that it cannot run, or be haled.

A ſhip is alſo ſaid to make *foul water*; when being under ſail, ſhe comes into ſuch ſhoal, or low-water, that tho' her keel does not touch the ground, yet ſhe comes ſo near it, that the motion of the water under her r a mud from the bottom, and ſo fouls the water.

FOUNDER. An artiſt that melts or caſts metals into rious forms, for ſeveral uſes; as bells, ſtatues, bo types, or printing characters; beſides other ſmall wo as candleſticks, buckles, and other things; who are ferently denominated, from their different works or ductions, as founders of ſmall works, bell-founders, founders, letter-founders, and figure-caſters. See *dery*.

FOUNDER, in the ſea-language. A ſhip is ſaid to fou at ſea, when, by an extraordinary leak, or a great breaking in upon her, ſhe is ſo filled with water, ſhe cannot be freed of it; nor is able to ſwim it, but ſinks with the weight thereof.

FOUNDERS *company of London*, was incorporated by le patent of the 12th of King James I. dated the 14 September 1614, by the name of The maſter, wa and commonalty, of the myſtery of founders of the of London.

They conſiſt of a maſter, 2 wardens, 24 aſſiſtants, 132 liverymen, who pay a fine of 8l. 7s. 6d. when mitted; and they have a convenient hall in Lothb wherein they manage their affairs.

To prevent all frauds in the making and marking weights, all makers of braſs weights within the ci London, and three miles thereof, are obliged to hav ſeveral weights ſized by the company's ſtandard, marked with their common mark; and ſuch of the works as are of avoirdupoiſe, to be ſealed at the G hall of the city, and thoſe of troy at Goldſmiths- The company, by their charter, are alſo impower view and ſearch all braſs-weights, and braſs and c wares, within the diſtrict aforeſaid.

FOUNDERY, or *Foundry*. The art of melting, and ing, all ſorts of metals; particularly braſs, iron, bell-metal; but the word is alſo uſed for a place, work-houſe, furniſhed with furnaces, or forges, for purpoſe.

FOWEY, or *Foy*. A port-town of Cornwal, ſituate 5 deg. of W. lon. and 50 deg. 26 min. of N. lat.

FOWL, in its general ſenſe, is of equal import with b but is, in a more particular manner, underſtood poultry, or the larger ſort of birds, both domeſtic wild, either bred up, or hunted, for the table; ſuch turkeys, geeſe, cocks, hens, and ducks, both wild tame; pheaſants, partridges, ſnipes, and ſome others Tame fowl are a neceſſary part of the ſtock of a cou farm, yielding conſiderable ſervice, and profit, by eggs, brood, feathers, and dung. The oldeſt hea always the beſt for ſitting, and the youngeſt for la but no ſort will be good for either, if kept too fat. beſt age to ſet a hen for chickens, is from two year to five, and the moſt proper month to ſet them in is bruary; though it may be done, to good purpoſe, time between that and Michaelmas; one cock will ten hens; and a hen ſits 20 days; whereas geeſe, d and turkies, ſit thirty. Buck wheat, or French w or hempſeed, will make them lay faſter than any food; and the ſame buck wheat, either whole or gro and made into a paſte, fats them apace; though common food for that purpoſe is barley-meal, or w flour, ſoaked in milk or water, made into a paſte, crammed down their throats twice a day, till they hold no more.

The lighteſt coloured geeſe are the beſt; and thoſe begin to lay the ſooneſt, as they have a chance of h ing twice in one year: they begin to lay in the ſp and lay 12 or 16 eggs; though they will ſcarcely ſ any but their own; whereas a hen will ſit indiffer on all. Green geeſe are begun to be fattened at a m old, and will be fat in a month more; but old gee chiefly fattened at 6 months old, in or after the ha See *Feathers*.

FOWLING *piece*. A portable fire-arm, for the ſho of birds; of which thoſe are reputed the beſt that the longeſt barrel; as from five feet and a half, t with an indifferent bore under the harquebuſs; th for different occaſions, they ſhould be of different

nd ſizes: but, in all, it is eſſential the barrel be well po-iſhed, and ſmooth within; and the bore all of a bigneſs, rom one end to the other; which may be proved by hruſting in a piece of wood, cut exactly to the bore of he muzzle, down to the touch-hole,

ACTION. A rent in a piece of cloth.

AIGHT. See *Freight*.

AIL. A baſket made of ruſhes, or the like matter, wherein o pack up figs, raiſins, and ſuch kind of commodities.

AIL, alſo denotes a certain quantity of raiſins, being bout 75 lb.

AMES, are engines for the making and knitting of tockings, gloves, and other things: but they are not to be xported out of Great Britain, upon forfeiture, and 40 l.

AMEWORK-*knitter*, is the ſame as a ſtocking-weaver.

AMEWORK-*knitters*, or *Stocking-weavers*, *company of Lon-on*, was incorporated by letters-patent of the 15th of Charles II. dated the 19th of Auguſt 1663, by the name f The maſter, wardens, aſſiſtants, and ſociety, of the rt and myſtery of framework-knitters in the cities of London and Weſtminſter, the kingdom of England, and ominion of Wales; which is a company conſiſting of a naſter, 2 wardens, 18 aſſiſtants, and 58 liverymen, whoſe fine for the livery is 10 l. They have a ſmall, but onvenient hall, in Red-croſs-ſtreet, to diſpatch their af-airs in.

ANC *Language*, or *Lingua Franca*, is a kind of jargon, oke on the Mediterranean, and particularly throughout he coaſts and ports of the Levant; compoſed of Italian, paniſh, French, vulgar Greek, and other languages. The Lingua Franca is the trading language; and is thus alled from the Franks, a common appellation given in he Levant to all the European merchants and traders, who come thither to traffic. In this language, if it may e honoured with ſuch an appellation, nothing but the in-initive mood of each verb is uſed, which ſerves for all the enſes and moods of the conjugation; and yet this lame, nutilated diction, this barbarous medley, is learned and nderſtood by the merchants and mariners of all nations reſorting to this ſeat of diſſonance.

ANC, or *Frank*, alſo denotes an antient coin, ſtruck, and urrent in France; thus called from its impreſſion, which epreſented a Frenchman, ſometimes on horſeback, and ometimes on foot, being either of gold or ſilver: the ormer was worth ſomewhat more than the ecu d'or, r gold crown; and the latter was a third of the former; ut this money has been long diſuſed: however, the erm franc is ſtill retained as the name of a money of ac-ompt; in which ſenſe it is equivalent to a livre, 20 ols, or 1-3d of a French crown, or $9\frac{3}{4}$ d. ſterling; and hus they ſay indifferently, a hundred franks, or a hun-red livres. See *Money*, and *Livre*.

ANCS, *Franks*, *Frankis*, or *Franquis*. A name which he Turks, Arabs, Greeks, and Armenians, give to all he inhabitants of the weſtern parts of Europe; which ppellation is commonly ſuppoſed to have had its riſe in ſia, at the time of the croiſades, when the French made he moſt conſiderable figure amongſt the croiſees; from hence the Turks, Saracens, Greeks, and Abyſſinians, ſed it as a common term for all the Chriſtians of Europe, nd even extended it ſo far as to call Europe by the name f Frankiſton.

ANCE, is a large and populous kingdom, bounded by he Britiſh channel, and the Netherlands, towards the orth; by Germany, Switzerland, Savoy, and Italy, on he eaſt; by the Mediterranean, and Spain, on the ſouth; nd by the Atlantic ocean, on the weſt; extending rom the 42d to the 51ſt degree of N. lat. and taking up bove 11 deg. of lon. the moſt eaſterly part of Provence ying 7 degrees to the eaſtward of London, and the moſt weſterly part of Bretagne 4 degrees odd minutes to the weſtward; the whole extent being 600 miles in length, nd 500 in breadth.

rance abounds with towns and villages, being ſo well nhabited in the reign of Charles IX. in 1564, that above 0 millions of perſons contributed to the poll-tax; and, ac-cording to the computation of Cardinal Richlieu, this ation can raiſe 600,000 foot, and 150,000 horſe: but he perſecution of the Proteſtants, war, and famine, have diminiſhed their numbers to 15 millions of inhabitants, and impoveriſhed their finances.

The general income of France from land, trade, and manufacture, in times of peace, and before the perſecution of that kingdom, amounted to 110,000,000 of livres; but the interruption of trade, and the expulſion of the Proteſtants, ſunk the annual income to 77 millions of livres: however, by additional impoſts ſince the treaty of Utrecht, the French monarch, at the commencement of the laſt war with the Britiſh nation, enjoyed an annual revenue of 267,924,130 livres, or 13,396,206 l. ſterling, ariſing by the tailles, capitations, free gifts, tenths, aids, gabelles, and other caſual revenues; the aids being the duties and cuſtoms on all goods and merchandiſes except ſalt; and the gabelles are the taxes ariſing from ſalt. The circulating coin of the kingdom, in 1683, might amount to about 500 millions of livres: at preſent it may be about 1200 millions, according to the judicious Mr. Voltaire; which, if he means livres, muſt be greatly too much, as, according to the preſent ſtandard-valuation of money, it amounts to 48,750,000 l. ſterling: but the computation of the preſent time is almoſt double what it was in the time of Colbert; ſo that France is not above a ſixth richer in ſpecie ſince the death of that miniſter. The French army, in May 1748, conſiſted of 453 battalions, and 411 ſquadrons, being 395,382 men, whoſe annual pay amounted to more than five millions ſterling. The maritime forces of France were inconſiderable till the reign of Lewis XIV.; but, notwithſtanding the great augmentation of her navy, France was never able, at any time before the late war, to equip a fleet of more than 45 ſhips of the line, 67 frigates, and 55 gallies: beſides, France has little ſtore of timber proper for navigation, moſt of her ſhips being purchaſed of other nations; and, conſequently, were ſhe, by ſome inſtant blow, ſuch as was given to her by Admiral Ruſſel in 1692, to be deprived of her navy, the loſs would be almoſt irreparable, at leaſt it would be certainly ſo during the continuance of a war; which was ſufficiently manifeſt in the year 1748, when it appeared that the French had loſt 2185 ſhips during the war; and among theſe were 22 ſhips of the line, with 23 frigates, beſides ſloops of war: ſo that the whole royal navy of France was then reduced to two ſhips of 80 guns, ten of 74, two of 70, three of 64, three of 60, five of 60, two of 54, and four of 50, being 31 ſhips of the line, beſides 7 frigates; but of theſe, ſeven were old and unſerviceable: however, the French have been ſo vigilant in repairing their navy, that, by a liſt publiſhed in June 1751, it appears to have conſiſted at that time of 48 ſhips of the line, beſides 28 frigates. But this was not an authentic liſt of the whole navy of France; for they had, at the ſame time, ſeveral other capital ſhips in Rochefort, and other ports; beſides, they had 30 more capital ſhips on the ſtocks in France, and ſeveral others building in Canada; which the French were determined not only to ſupport, but they have been ever ſince increaſing their marine annually; ſo that a hard ſtruggle may be hereafter neceſſary to decide the ſovereignty of the ocean.

The legiſlative, as well as executive power in France, is ſolely veſted in the King; his edicts being of equal force with the Britiſh acts of parliament; and he appoints the judges and officers who are to put them into execution. Nothing of conſequence, in relation to the government, was formerly decreed or enacted, but by the conſent of the three eſtates, conſiſting of the repreſentatives of the clergy, the nobility, and third eſtate; but theſe aſſemblies are entirely laid aſide, having never been convened ſince the year 1614.

The common people of France are as little conſiderable in the government, as the children; ſo that the nobility and ſoldiers may, in a manner, be eſteemed the nation, whoſe intereſt and hopes carry them all to war; and whatever is the general humour and bent of a nation, ought ever to be much conſidered by a ſtate, which can hardly miſcarry in the purſuit of it.

The admiral of France is general of the royal blood, and takes cogniſance of all offences committed therein; he alſo conſtitutes the members of the admiralty, who adminiſter

miniſter juſtice, in his name, concerning all controverſies at ſea, either relating to war, the fiſheries, or merchandiſe; and he has a right to a tenth of the prizes taken at ſea: however, the King, at preſent, reſerves to himſelf the power of appointing the officers concerned in building and fitting out the fleet, as alſo in buying in proviſions and ammunition for the naval arſenals and magazines. The admirals had formerly a right to wrecks; but Lewis XIV. by an ordinance in 1681, decreed, that they ſhould be reſtored to the owners, if claimed within a year and a day, after charges paid. Prizes are adjudged by the admiral, and commiſſioners appointed by the King; the admiral having under him two vice-admirals, who are uſually marſhals of France; and under him are generally the lieutenants-general of the royal navy, who have the precedence of commanders of ſquadrons, and give them orders, which they communicate to the inferior officers: but there are eleven commanders of ſquadrons, who hold the ſame rank as the marſhals de camp at land. The captains of men of war are the next to the commanders of ſquadrons, and when they ſerve on ſhore have the ſame rank as colonels: though there are actually in France 170 captains of men of war, and 53 captains of frigates; and of all kinds of commiſſion-officers, not leſs than 1800, excluſive of the commanders of ſquadrons, and notwithſtanding the leſſer number of their martial ſhips. In time of war, there are 900 guards marine, diſtributed in three companies, at Toulon, Breſt, and Rochefort, who are gentlemen volunteers, taught navigation, and other parts of the mathematics, at the royal charge, out of whom the vacant commanders are ſupplied: beſides which, his Majeſty entertains 100 companies of marines, of 100 men each, commanded by the lieutenants of the men of war; and it appeared, in the year 1713, that there were 52,544 ſeamen employed in the royal navy, beſides officers, and a great number of workmen in their ports and magazines, employed in making and providing naval ſtores; as alſo upwards of 1200 invalids, with 10,000 cabin-boys. The royal navy is diſtributed in the ports of Toulon, Breſt, Port-Louis, Rochefort, and Havre-de-Grace; where there are magazines filled with all manner of neceſſaries and ammunition for building and rigging out a fleet: but in every port where the King has a magazine, there is an intendant of the marine, who takes cogniſance of civil and criminal cauſes, as alſo of the revenues relating to the ſea-ſervice, and takes care to furniſh the magazines with all manner of ſtores.

The galleys of France are another conſiderable force, of which there are thirty in the port of Marſeilles, and ten more in other ports. The general is ſtiled, *General of the galleys, and Lieutenant-General of the Levant ſeas*; having under him a lieutenant-general, and five commanders of ſquadrons; and, before the year 1748, was independent of the admiral; but in that year it was annexed to the admiralty. The principal galley, where the general goes on board, is called the *Reale*, on account of the royal ſtandard which it carries; the ſecond galley is called the *Patron*, in which the lieutenant-general commands; theſe two galleys being larger than the reſt, and having 300 ſlaves on board each; whereas the other galleys have only 200: but, beſides the crew, every galley has a company, conſiſting of 60 men, commanded by the officers of the galley. There is alſo a company of young gentlemen belonging to the galleys, called The guards of the ſtandard, who are inſtructed in navigation, at the royal expence. There are alſo belonging to the galleys, an intendant, inſpector, comptroller, commiſſary-general, ſecretary-general, and two treaſurers-general.

The guards of the coaſt are commanded by their proper officers on all the ſhores of the kingdom; being inſtituted to prevent any ſurpriſe from an enemy, who ſhould attempt to invade or harraſs the maritime provinces: they are exempted from ſerving in the ban, and the arrear-ban, which are the ordinary militia of France, and enjoy many other privileges, on account of their being always in readineſs, to prevent a deſcent from a foreign enemy; but they are ſubject to the admiral of the royal navy.

The ſituation of this kingdom is quite convenient for correſponding with the reſt of the world; the Britiſh channel waſhing all its northern ſhores, the Atlantic ocean its weſtern coaſts, and the Mediterranean the ſouth: therefore no country can be better ſituated for the advancement of trade and navigation. It is alſo extremely well watered with navigable rivers; the principal of which are the Loire, which falls into the ocean 40 miles below Nantz; the Rhone, which falls into the Mediterranean below Arles; the Garonne, which falls into the Bay of Biſcay, 15 leagues below Bourdeaux; and the Seine, which falls into the Britiſh channel, near Havre-de-Grace; beſides, ſince the French have been in poſſeſſion of Alſace, they have had the navigation of the Rhine, which for ſome hundred miles ſeparates their dominions from Germany.

Theſe rivers are indeed for the moſt part the work of nature; but their canals are the proper praiſe of the art and induſtry of the inhabitants of France; being equally deſerving of admiration, on account of their grandeur and contrivance, as for their utility to trade in lowering the price of carriage: among theſe, that of Languedoc, and the two canals of Orleans and Briare, are worthy to be particularly mentioned; for, by means of the former, a communication is opened between Bourdeaux and Marſeilles, with the Ocean and the Mediterranean, without paſſing through the ſtreights of Gibraltar, and coaſting along Portugal and Spain: and, by virtue of the latter, an eaſy intercourſe is maintained between all the great towns ſituated on the Seine and the Loire. But, beſides theſe, there are ſeveral other canals, and many more ſtill intended to be made, greatly advantageous to the commerce of France. Nor are their excellent roads, for travelling by land, of leſs ſingular advantage to their trade; their great roads being always in good order, and always carried on in a ſtreight line, where the nature of the ground will permit; which are made at a moſt prodigious expence; and yet there is no payment for turnpikes from one end of the kingdom to the other, each province being obliged to make and repair their own roads.

France is at preſent divided into 36 provinces, or general governments, which ordinarily go under the name of generalities; being the general government of Paris, of the iſle of France, Picardy, Champagne, Lyonois, Guyenne, Gaſcony, Burgundy, Dauphine, Limoſin, Provence, Languedoc, the government du Foix, Navarre and Bearne, Saintonge and Angomois, Aums, Bretagne, Normandy, Havre-de-Grace, Maine, and Perche, Orleanois, Nivernois, Bourbonois, Auvergne, La Marche, the government of Berry, Touraine, Anjou, Saumur, the Netherlands, Metz, and Verdun, Toul, Alſace, Franche Compte, and Rouſſillon; the commerce of which, both inland and maritime, is as follows; except the French Netherlands, which are done under the general article of *Netherlands*. See *Netherlands*.

Inland places of trade.

Paris, and the iſle of France. The city of *Paris*, the largeſt, the moſt populous, and the metropolis of the kingdom of France, is ſituated in 2 deg. 25 min. of E. lon. and 48 deg. 50 min. of N. lat. 200 miles eaſt of London.

This city is uſually divided in three parts: 1ſt, The town, which is the largeſt, ſituated on the north-ſide of the river Seine; 2d, The city, much the leaſt, but the moſt ancient, conſiſting of three little iſlands in the middle of the Seine; 3. The univerſity, which lies on the ſouth-ſide of the river. That part of the city which ſtands on the north-ſide of the river, and called the town, lies on a perfect level, and was formerly a bog; and that part called the city lies low; but that part called the univerſity, on the ſouth-ſide of the river, has ſeveral little hills in it. The whole town, according to the French writers, is of a circular form, ſix leagues in circumference, and the diameter three; conſequently it muſt ſtand on more ground than London; but thoſe who have viewed both are of another opinion: however, it is certain that London is more populous. The largeſt calculators will not make the inhabitants of Paris amount to much more than 700,000, and there are at leaſt 200,000 more in London. There are, according to a late French writer, 22,000 houſes in Paris, many of which are ſeven ſtories high,

h, and a family almoſt in every ſtory; 52 pariſhes; 4 monaſteries, of which 56 are inhabited by friers, and by nuns; 979 ſtreets, and 14,000 coaches. Paris is principal object, and the centre of all the commerce ried on in the reſt of the kingdom. To uphold ſo enſive a commerce, ſix corporations of merchants ve been eſtabliſhed at Paris; being the drapers, includ- linen and woollen drapers; grocers, including apo- caries, druggiſts, confectioners, and wax-chandlers; rcers, to which are annexed haberdaſhers and iron- ngers; ſkinners, with furriers and fell-mongers; ho- rs, with cap-makers; and goldſmiths, with jewellers. here has been alſo a ſeventh eſtabliſhed, that is, the rporation of wine-merchants: but the ſix other bodies ver would conſent to their incorporation.

ſides theſe corporations of merchants, there are 124 arts and trades eſtabliſhed, as well as the former, by al patents; and 17 others without letters-patents, as having ſeemed conſiderable enough to be erected into body; whereof the following is a catalogue.

he maſter — Needle, awl, chizzle, and punch-makers. rmourers. Gunſmiths. Ballance-makers. Barbers, bag- -keepers, and periwig-makers. Gold and ſilver beaters. urners, ſieve and ſearce makers. Hoſiers, and manu- cturers in knit-work. Butchers. Bakers of the city d ſuburbs. Flour-makers. Purſe-makers. Harneſs d ſaddle makers. Cord-makers. Brewers. Embroi- rers, and upholſterers. Bruſh-makers. Combers, rders, dreſſers of wool and cotton, hair-cutters, and inners of wick for lamps. Card-makers. Girdle- akers. Chain-makers. Cooks, who ſell all manner of gs-fleſh, with puddings, ſauſages, neats and hogs ngues. Tallow-chandlers, oil-men, and huckſters of lt and muſtard. Hatters. Carpenters. Cartwrights. rgeons. Braziers, and tinkers. Nailers, loriners, and on-mongers. Milliners. Trunk-makers. Rope-makers. oe-makers. Curriers. Cutlers, and engravers upon el and iron. Seamſtreſſes. Tylers. Cryers of old inkets and cloaths. Cooks, and ordinary keepers. Dan- ng-maſters, and muſicians. Pinkers. Copper-gilders. namellers. Spurriers. Writers. Pin makers. Fan- akers. Muſical inſtrument makers. Black-ſmiths. ounders in earth and ſand. Laſt-makers. Fullers and eſſers of cloth. Furbiſhers. Brokers. Fruiterers. orn chandlers. Glovers, and furriers. Engravers on etal. Perfumers. Clock-makers. Carpenters, and iners. Copper-plate printers. Gardeners. Lapidaries, ngravers, and workers on all kinds of precious ſtones. ox and deſk makers. Bookſellers, and printers. Bran- y-ſhop keepers. Linen-drapers. Flax and hemp mon- ers. Fencing-maſters. Maſons. Wholeſale wine- erchants, inn and tavern keepers. Tawers. Opti- ians, looking-glaſs and ſpectacle makers. Mat-makers. Workers in cloths of gold, ſilver, ſilk, and other mixed tuffs. Stocking-weavers. Bird-ſellers. Ginger-bread ellers. Feather-men. Paſteboard-makers. Parchment- akers. Button-makers. Bead-makers of wood and orn. Bead-makers of jet, amber, and coral. Paſtry- ooks. Paviours. Tennis-court keepers, and tennis- all makers. Skinners, and leather-ſtrainers. Painters, culptors, engravers, and illuminers. Plumbers. Tin- nen. Potters. Book-binders. Cooks. Midwives. Coblers. Coach-makers. Lock-ſmiths. Toymen, ca- inet and comb-makers. Iron-mongers. Taylors. Tan- ers. Tapeſtry-makers. Dyers of cloth, ſerges, and ther woollen ſtuffs. Silk-dyers, and dyers of wool and hread. Dyers in other reſpects. Gold and ſilver wire- rawers. Linen and canvas weavers. Silk-weavers. hear-men, and cloth-workers. Coopers. Turners. Baſket-makers. Glaſs, flaſk, and bottle makers. Gold- inders. Vinegar-men. And glaziers.

Beſides theſe 124 corporations, or communities, there re others without letters patent, or ſtatutes in form; whereof the principal are,

The watermen. Thoſe who ſell flowers. The milli- ners. The horſe-ſellers. The ſellers of Auvergne ta- peſtry. The writers for the public. The needle-makers. The image makers. The organiſts. The fiſhermen. The ſmall fruiterers. The retailers of fiſh. The tripe men and women.

Theſe corporations are now reduced to a hundred and twenty, upon account of the unions that have been made in them: the chief of thoſe are the maſter knit-workers united in 1716 with the corporation of hoſiers, the maſter ſtocking-weavers united alſo with the ſame corporation in 1723; the maſter needle-makers with the pin-makers, and enamel bead-makers with earthen ware mongers.

Theſe corporations are compoſed of upwards of 35,000 maſters all unequally divided; but the greater number is on the taylor's ſide, who have 1882 maſters.

Shoemakers 1800. Seamſtreſſes and mantua-makers 1700. Wine-merchants 1500. Coblers 1380. Gardeners 1200. Painters and ſculptors 967. Periwig-makers and barbers 700. Brokers 700. Linen-drapers 659. Carpenters and joiners 895. Bakers 580. Button makers 530. Ribbon-weavers 735. Tapeſtry-weavers 627. Surgeons 500.

Among the ſmaller ſort of corporations may be ranked thoſe whoſe maſters are not above 500. Such are dancing-maſters 442. Diſtillers 380. Leather gilders 360. The manufacturers of gold ſtuffs 318. Founders 330. Sword-cutlers 240. Fruiterers 321. Glovers 250. Corn chandlers 260. Paſtry-cooks 243. Butchers 240. Harneſs-makers 200. Embroiderers 265. Tallow-chandlers 269. Hatters 319. Curriers 260. Toy-men 209. Book-binders 229. Potters 215. Cooks 307. Sadlers 253. Lock-ſmiths 355. Silk and wool-dyers 240. Coopers 202. Sieve and ſearch-makers 382. Glaziers 300. Laſtly, the leaſt of theſe corporations have upwards of 100 maſters, and but a few under 50, except balance-makers 15. String-makers for muſical inſtruments 10. Preparers of ſhammy leather 8. Cryers of old cloaths, iron, and trinkets 35. Pinkers 20. Spurriers 22. Fullers 18. Fencing-maſters 14. Bird-ſellers 37. Feather-mongers 24. Paſteboard-makers 36. Parchment-makers 30. Bead-workers in jet 18. Bead-workers in wood 2. Plumbers 40. Gold-drawers 35. Bruſh-makers 29. Gold-finders 36. Armourers 1.

Through the hands of theſe ſeven mercantile corporations, and the maſters that compoſe thoſe of arts and trades, all the commerce of Paris paſſes; as well for the ſale of their own manufactures. as for thoſe which come to them from abroad; no other perſons but them being allowed to keep ware-houſes or open ſhops.

However, there are exceptions to this general rule, ſome celebrated manufactures, eſtabliſhed by royal authority, being not compriſed therein; as the Royal Hotel of the Gobelins, where tapeſtries and inlayed works have been brought to the greateſt perfection.

The Hotel de la Savonerie, where the rich carpets of wool and ſilk are manufactured.

The manufacture of glaſs at St. Gobin.

Laſtly, the new manufacture eſtabliſhed in the Fauxbourg St. Marcel, for the manufacture and dying of ſcarlet-cloths.

Among privileged artiſans are reckoned thoſe whoſe ingenuity and experience in their arts have merited for them lodgings in the galleries of the Louvre; as alſo, but in a much lower rank, the artiſans of the pretended privileged places; ſuch as the Fauxbourg St. Antoine, the Temple, and ſome others.

The principal manufactures of Paris are ſtuffs of gold, ſilver, ſilk, and wool mixed with ſilk; among others brocades, damaſks, velvets, taffeties, plain and flowered gauzes, ferrandines, otherwiſe called griſettes, ſtuffs of mohair, ribbands of gold and ſilver, gold and ſilver lace, ſtockings of all ſorts, caſtor and woollen hats, caps of all ſorts, perukes, blanketing, tanned leather, and laſtly all kinds of jewellers work.

Beſides markets every Wedneſday and Saturday in ſeveral places in Paris, there are alſo two free fairs; the one after Candlemaſs, held in the Fauxbourg St. Germain; the other in the Fauxbourg St. Laurent, the day after the feaſt of this ſaint.

The dealers of Amiens, Beaumont, Rheims, Orleans, and Nogent, are thoſe who frequent moſtly theſe fairs; eſpecially that of St. Germains: the merchandiſe they bring there being cloths, or other woollen ſtuffs, or ſtuffs mixed with ſilk and wool, or wool and thread.

This great trade, that flows in upon Paris from all quarters of the kingdom, is rendered more conſiderable by the commerce of money that is carried on by the merchants and bankers; to facilitate which, to the amount of 24 agents of bank have been erected, from time to time, for the city of Paris alone.

To what has been ſaid of the commerce of Paris, the three following remarks may be added,

1ſt, 'Tis the prevot of the merchants and the aldermen who have there the inſpection of, and juriſdiction over, all the commodities of grain, meal, wine, brandy, beer, and other liquors, wood, coal, plaiſter and lime, that arrive by the river, and are landed on its ſeveral quays.

2d, Before the lieutenant-general of the police are diſcuſſed all the differences ariſing among merchants, and the incorporated companies of arts and trades; whereof an account is given to the King's procurator, or attorney-general, at the Chatelet, who takes the oaths of the maſters, on their admiſſion into the company.

3d, To judge peremptorily of all theſe differences between merchants in matters of commerce, there is a conſular juriſdiction eſtabliſhed, being the ſecond in the kingdom for its antiquity; upon whoſe model all the reſt at preſent in France, to the number of ſixty, have been eſtabliſhed.

Paris is alſo the center of all the foreign trading companies; ſuch as the India company, African company, and Turky company.

There were conſumed in Paris in the year 1722, of

Salt 750 muids, or 3333 quarters of London.
Pickled mackarel 950 barrels.
Salmon 2400 barrels.
Herrings 26000 barrels.
Coal 22000 ton.
Swine 28000.
Oxen 60000.
Sheep 430000.
Wheat 100000 muids, or 800,000 quarters of London.
Cod 150,000 barrels.
Oats 22000 quarters of London.
Hay and Straw 8,000,000 truſſes.

The principal places for trade and manufactures in the diſtrict of Paris, and iſle of France, are as follow.

At St. Cloud there are three manufactures, that of porcelain, that of common earthen-ware, and that of glaſs. The French ſay, that the porcelains manufactured here are not in the leaſt inferior, for fineneſs, enamel, and colour, to the Chineſe and Japaneſe; and that, in the beauty and regularity of the form and deſign, they ſurpaſs them by far.

Sureine, and Argenteuil, are famous for their wines.

St. Denis for its two free fairs, frequented by the traders of Champagne, Picardy, and Poitou, who bring there cloths, ſeveral kinds of woollen ſtuffs, or ſtuffs mixed with wool and ſilk.

In general all the elections of the diſtrict of Paris, excepting thoſe that belong to Champagne, Burgundy, and Picardy, have few or no manufactures; their trade conſiſting chiefly in corn, wine, wood, wool, hay, leather, cattle, hemp, eggs, butter, fowls, and ſome linen.

Out of the vineyards of Meaux are made yearly near twenty thouſand hogſheads of wine, which, upon account of its bad quality, is only uſed by the inhabitants; however, what Meaux is chiefly famous for, is a kind of cheeſe, called *fromoge de brie*, of which great conſumption is made at the beſt tables in Paris.

Provins is remarkable for tanners.

The commerce of Dreux is partly carried on at Paris, and partly at Rouen: the cloths manufactured there are ſent to the Pariſian woollen-drapers, and are ſold by them for the cloathing of the troops; its corn and wine are ſent to Rouen, whence they are either exported for England or Holland.

The wines of Mante, conſtitute its principal commerce; and a celebrated traveller has obſerved, that, of all French wines, none ſtand the teſt of the ſea ſo well; ſome of them being tranſported by him to Agra, and Iſpahan, without ſuffering any diminution in their ſtrength, or quality; whereas thoſe of Burgundy, Bourdeaux, the Moſelle, and the Rhine, could not ſtand the ſame proof.

Of the principal commerce and manufactures of Picardy.

The natural productions of this province are grain, hemp and wool; and its manufactures are of woollen cloths, linens, caps, ſtockings, tapeſtries, and ſoap.

The towns of Picardy remarkable for the commerce of woollen cloths and ſtuffs, are Amiens, Abbeville, and Beavois; St. Quintin being famous for its linen manufacture.

Amiens is a large beautiful town, ſituated on the river Somme, 80 m. S. of Paris, where upwards of 129800 pieces of woollen ſtuffs are yearly manufactured; beſides 50000 other pieces in the ſuburbs; and none but the wool of the country, with that of England, Holland, and Germany is uſed; eſpecially that of the country and England. The French compute that the ſale of the ſtuffs manufactured at Amiéns amounts one year with another, to upwards of 160,000 livres, or about 60,000 l. ſterling: their exports to foreign countries, being uſually for Spain, Switzerland, Italy, and the French American iſlands.

There is alſo at Amiens, and in its neighbourhood, a manufacture of orris, whoſe produce amounts yearly to about 42,000 livres, or 1700 l. ſterling: beſides a manufacture of ſoft ſoap, wherein are made upwards of 10,000 quintals, or hundreds, uſed in the fulling of theſe ſtuffs, and whoſe ſale is computed annually to exceed 100,000 livres, or about 4000 l. ſterling.

Abbeville, is a large city, ſituated 90 miles N. of Paris, and 15 E. of the Britiſh channel; its principal manufacture being that of the Meſſieurs Vanrobais, for woollen cloth. It was eſtabliſhed by the Sieur Joſſe Vanrobais, a Dutch merchant, in conſequence of the King's letters-patent, in 1665. Fifteen years after, the ſame privilege was renewed in favour of the ſaid Joſſe Vanrobais, and his eldeſt ſon Iſaac. After the father's death the King granted a third prorogation to his children Iſaac and Joſie; laſtly upon Iſaac's death, the ſurviving brother, and Iſaac's widow, obtained, in 1708, a confirmation of the ſame privilege for 15 years more.

The French ſay that the cloths of this celebrated manufacture, imitate, in ſuch perfection, thoſe of England and Holland, that it is difficult to determine the preference.

It is computed that the produce of this manufacture amounts, one year with another, to about 20,000

There are alſo two other privileged manufactures at Abbeville; one for pluſh, and the other for tent-cloth or ticking; beſides, there are other manufactures kept up there, of camblets, or barracans, ſerges after the manner of London, druggets, and flannels.

Beavois, always reckoned as one of the towns of Picardy, tho' included in the government of the iſle of France, is a city 43 miles N. of Paris, which is famous for the manufacture of rateens, ſerges and flannels, half-hollands, tapeſtry, and lace.

It is computed that the two different corporations of drapers, the one called the great corps, and the other the ſmall one, incorporated in 1670, uſe in their reſpective manufactures, the former a hundred and fifteen thouſand pounds of Spaniſh wool, two thouſand pounds of Engliſh, and a hundred and ſixty thouſand of French, wherewith they make near thirteen thouſand pieces of ſtuff; and the latter conſume a hundred and eighty-five thouſand pounds of French common wool, whoſe produce is one third leſs than that of the others.

At St. Quintin there is no woollen manufacture, but the commerce of linnens, particularly cambrics, is very conſiderable there, amounting yearly to the value of about 80,000 l. ſterling. The whole trade is carried on by about twenty or twenty-five linen-drapers, who ſend conſiderable parcels to Paris, Rouen, Bourdeaux, Lyons, Spain, Italy, and ſome towns of Flanders, eſpecially Ghent, from whence they paſs into England.

Of the commercial commodities and manufactures of the province of Champagne, *and diſtrict of* Soiſſons.

The proximity of the two diſtricts of Chalons, and Soiſſons, with the great reſemblance of their natural productions, and the manufactures therein eſtabliſhed, ſeem to require but one article.

The lands of both are fruitful in all kinds of grain, eſpecially

cially in wheat and oats: their riſing grounds are covered with vineyards productive of excellent wines, ſuch are thoſe of Rheims, Sillery, Hautvilliers, Eſpernay, and Chateau Thierry, eſpecially the firſt, which are called more particulary Champagne wines, and are in great eſtimation throughout all Europe. There are alſo, in ſeveral other diſtricts of theſe provinces, wines leſs delicate, yet very good; as thoſe of Oxmery, Chatillon, Vertus, and Dormans, in Champagne; thoſe of Laon, Guichy, Pargnant, and Coucy, in the Soiſſonnois; the latter of which are carried into Picardy, Flanders, Hainault, and the former to Paris, where a great conſumption is made of them at the tables of the moſt opulent citizens.

The other commodities of theſe two provinces, are flax and hemp, whereof all ſorts of linens, and threads for laces, are manufactured; whereto may be added ſeveral iron mines, which keep a great number of forges, furnaces, and founderies, conſtantly employed.

The other productions and manufactures of Champagne and the Soiſſonois conſiſt in paper, for which there are eight mills: allum, whereof there are conſiderable mines at Bourg and Covin; ſalt-petre, which ſerves the powder-mill at Ferre; and glaſs, for which there are ſeveral glaſs-houſes near that town, and in St. Gobin.

Laſtly, ſeveral woollen, linen, and ſilk manufactures are eſtabliſhed in the principal towns of theſe provinces; ſuch as thoſe of Rheims, conſiſting of woollen ſtuffs, ſtuffs of ſilk and wool, ſilks, crapes, druggets, ſerges after the London manner, hats, caps, ſtockings, blanketing, flax and hempen cloths, beſides ſeveral tan-yards. Thoſe of Retel, Chateau Porcien, Mezieres, and Sedan, whoſe manufactures are much of the ſame nature with thoſe of Rheims, except that at Sedan they make ſome pieces of cloth after the Dutch, Engliſh, and Spaniſh manner.

The manufacture at Soiſſons is inconſiderable, conſiſting moſtly in hoſiery, hats, and the weaving of ribbands. The ſame may be alſo ſaid of the other towns in its diſtrict.

The woollen manufactures of Chalons are much of the ſame quality with thoſe of Rheims, except that at Chalons they uſe all wool, whereas the warp at Rheims is of ſilk; about four thouſand five hundred pieces of theſe ſtuffs being yearly manufactured there.

Troyes, the capital of the province, is ſituated on the river Seine, about 80 miles S. E. of Paris: its principal manufactures conſiſt in woollen ſtuffs; ſuch as ſerges, druggets; in damaſks of ſeveral kinds; in hoſiery; in the dreſſing of leather; and, laſtly, in the preparing of furs: but there is an inſpector of manufactures eſtabliſhed at Troyes, who alſo inſpects thoſe of Chalons.

Of the commerce of Lyonois, *with its appendances of* Foreſt, *and* Beaujolois.

Though little ſilk is gathered in the Lyonois, Lyons is as remarkable as any place in the world for the ſilk manufactures.

All the ſilks brought from the Levant, Perſia, Italy, Spain, and other places, into France, muſt be imported to Lyons, as a kind of ſtaple; it being from thence that they are ſent to Paris, Tours, and the other places of the kingdom, where there are ſilk manufactures, or where no ſilk is gathered.

The natural productions of the Lyonois, which make a part of their commerce, are hemp, wines, vitriol, and ſaffron.

The greateſt trade of Lyons conſiſts in the manufacture of gold and ſilver cloths, and all ſorts of ſilk ſtuffs; as velvets, damaſks, ſatins, mohairs, and taffetas, which, one year with another, are worth about 400,000 l. ſterling: beſides, the commerce of gold twiſt, and thread, is alſo very conſiderable.

The fuſtians and dimities of Lyons, the manufacture of which was introduced from Milan in 1580; that of ribbands, eſtabliſhed at St. Eſtienne, and St. Chaumont; that of hard-ware alſo at Eſtienne; the cheeſe of Roche, made in Foreſt, and brought from Rouen to Paris; the linens of Beaujolois, ſold in the markets of Tiſſy and Dampleplus; the book-ſelling and mercery of Lyons; laſtly, the various qualities of paper manufactured by ſeveral mills, are likewiſe a conſiderable portion of the commerce of this province.

Having ſtated this general idea, it will not be amiſs to deſcend to ſome particulars, with regard to the city of Lyons; which has always been, and is ſtill, one of the moſt celebrated cities in France for opulence and extent of commerce.

Lyons is ſituated 225 miles S. of Paris, upon four large rivers, that either waſh it, or are not at any conſiderable diſtance from it; theſe rivers are the Rhone, the Saone, the Loire, and the Doux: the city containing eleven pariſhes, and about 90,000 ſouls. By the Rhone it has a communication with Dauphiné, Provence, Languedoc, and even with Guienne by the canal of Languedoc; and it is from the latter that, by communicating with the Mediterranean, it trades with Italy, Spain, and all the port-towns of the Levant.

The river Saone, into which the Doux empties itſelf, opens a trade for it to Burgundy and Franche-comté, from whence the paſſage is but ſhort into Alſace, Lorrain, and Champagne.

The Loire, which begins to be navigable at Rouanne, 12 leagues from Lyons, facilitates a commerce for it with Paris, and all the inland provinces; beſides, being in the neighbourhood of Switzerland and Savoy, it can eaſily trade with Germany, Piedmont, and the Milaneze.

The foreign nations with whom the merchants of Lyons have any trade, are Spain, Italy, Switzerland, Germany, Holland, and England; Marſeilles being uſed for the Levant, and Poland.

But few of theſe merchants trade directly to Spain; the commerce they have there being chiefly in the hands of the Genoeſe, who extend it to the Spaniſh Weſt Indies.

Linens, fuſtians, ſaffron, and paper, are the commodities that Lyons uſually ſends to Spain; the return being in wool, ſilk, dying ſtuffs, piaſtres, and ingots of gold and ſilver.

It is computed that there comes to Lyons to the value of about 180,000 l. ſterling in gold and ſilver; but ſcarce the one half is the direct return of the goods ſent from Lyons to Spain, the other half accruing from all parts, by the means of the refining of gold.

The merchandiſe ſent from Lyons to Italy, and chiefly of its own manufacture and produce, amounts one year with another to about 260,000 l. ſterling; the return to not leſs than 350,000 l. ſterling. This balance might ſeem at firſt ſight of ſome diſadvantage to the Lyoneſe, the profit of commerce being uſually on his ſide whoſe greater return is in money: but this maxim cannot take place on this occaſion, the manufactures of Lyons wanting abſolutely Italian ſilk, and Spaniſh money, which, being employed by its artizans, produce a profit that makes up the deficiency.

The commerce of Lyons with Switzerland is chiefly carried on in the towns of Zurich, and St. Gall; and it alſo extends to Bern, Baſil, and Schaffhauſen.

All theſe cities furniſh Lyons with ſilks and ferrets, manufactured at Zurich; beſides linens, cheeſe, and horſes. They have in exchange ſeveral parcels of coarſe cloths, hats, ſaffron, wine, oil, ſoap, and haberdaſhery ware.

It is thought that the commodities ſent yearly from Lyons to Switzerland amount to about 40,000 l. ſterling; and, on the contrary, that thoſe imported, one year with another, amounted to about 56,000 l. ſterling in linens and cheeſe; and in war time to 37,500 l. ſterling in horſes: ſo that this commerce would ſeem diſadvantageous to the French, if the Switzers were not conſidered in more important reſpects than thoſe of trade.

The commerce of the Lyoneſe, with ſeveral cities of Germany, conſiſts in the ſame commodities they ſend to Switzerland; beſides ſeveral ſtuffs of gold and ſilver. This commerce is of vaſt advantage to Lyons, its annual exports amounting to about 60,000 l. ſterling, and the returns not to one fourth of this ſum, which are uſually in tin, copper, iron, and ſome haberdaſhery wares.

The greateſt commerce of Lyons with the Dutch conſiſts in the remittances of money and negotiations of bills of exchange, with Amſterdam and Rotterdam. However,

the

the Lyoneſe annually import ſome Leyden cloths, and Haerlem linens, to the value of about 40,000 l. ſterling.
The merchandiſe yearly exported for Holland amounts to about 18,000 l. ſterling, being for the moſt part in black taffetas, ſilk, gold and ſilver ſtuffs, ſome fruits of Provence, and garden-ſeeds of Languedoc.
The trade of Lyons with England is alſo pretty conſiderable, eſpecially with the cities of London, Exeter, and the town of Plymouth: with London for cloths; with Exeter for ſerges, and Plymouth for tin and lead; beſides ſtockings, ſome haberdaſhery-ware, pepper, dyeing-ſtuffs, nut-galls, campechy-wood, and ſometimes ſilks; but it is only when all theſe particulars are wanting at Marſeilles.
The exports of Lyons for England are luteſtrings, for the moſt part black; ſilk ſtuffs; with gold and ſilver brocades: the commerce of luteſtrings being ſo great, that often at one fair of Lyons to the value of 50,000 l. ſterl. are bought up, and exported. The commodities of Lyons for England amount yearly to about 110,000 l. ſterling; and thoſe of England for Lyons to about 30,000 l. only: ſo that the balance of this trade is greatly in favour of the French, which the Engliſh pay in money, or bills of exchange.
As for the commerce of the Levant, carried on by the way of Marſeilles or Genoa, the Lyoneſe are yearly intereſted therein for about 60,000 l. ſterling.
Their trade with Poland is inconſiderable; however, they keep a ware-houſe at Warſaw; but the ſtuffs they ſend there are of an indifferent quality.
There are four free fairs at Lyons; as alſo a royal office for the refining of gold and ſilver, which brings there vaſt quantities of theſe rich materials.
By way of recapitulation it may be ſaid, that the value of eleven millions of livres, or 412,500 l. ſterling, in ſilk, gold, and ſilver, uſed in the manufacture of Lyons, is annually imported there; that the preparation of theſe materials, and the manner of the different works manufactured out of them, amount to upwards of three millions of livres, or 112,500 l. ſterling: that the ſale thereof, by the merchants of Lyons, and by thoſe of the other towns of the kingdom of France, who have them from thence, produces alſo upwards of 3 millions of livres; and that of 17 millions, or 637,500 l. and upwards, that compoſe the total of theſe three ſums, foreigners pay about one third; which, notwithſtanding, muſt be underſtood of the time of peace, when the commerce of the kingdom is in a flouriſhing condition.

Of the commerce of Guyenne *and* Gaſcony, *comprehending the generalities of* Bourdeaux *and* Montauban.

Montauban, in the Quercy, is ſituated on the river Agout, 18 m. N. of Toulouſe, being famous for the great number of its fairs, and the rich trade its merchants carry on with their wines, brandies, and other productions of the country, to Bourdeaux; where they ſend them by the rivers that fall into the Garonne.
Montauban is the chief place of the inſpection of manufactures, extending throughout all Quercy and the Rouergue; in which diſtrict are yearly collected from 12 to 15 hundred quintals of wool of all qualities, which, with great parcels of foreign wools, are employed in different manufactures; not to mention ſilks of various colours, and ſerges which are ſaid to wear very well.
The other commerce of Guyenne is very conſiderable, eſpecially for wine and brandy, whereof, in a plentiful year, ſcarce leſs than a hundred thouſand tons are made.
The commodities of the produce of the country which the Engliſh, Dutch, and northern nations, take away with them, beſides wines and brandies, are prunes, vinegar, reſin, cheſnuts, oil, freſh fruits, and ſuch like commodities.
Guyenne alſo affords iron and copper manufactured, or unmanufactured, great quantities of paper, and a good quantity of hemp.
The cod and whale-fiſhery, and the exports for the Antilles, Cayenne, and St. Domingo, are alſo ſome of the principal parts of the Guyenne trade; but this is intirely in the hands of the merchants of Bourdeaux and Bayonne, the commerce of which places may be conſulted under their reſpective articles, in the deſcription of the maritime trade of this province.

Of the commerce of Limoſin *and* Angoumois.

Theſe two provinces, which compoſe but one generality, are very different from each other in fertility, and the produce of things neceſſary for life.
Angoumois produces corn, wine, and all kinds of excellent fruits: Limoſin, on the contrary, is cold, barren, and with difficulty ſupports its inhabitants, yielding but poor wines, with ſome barley and cheſnuts, of which they commonly make their bread.
Both provinces have a great number of paper-mills, whoſe manufacture is in great eſteem. The paper of Angoumois, at leaſt that for printing, is all intended for Holland; whereon the arms of Amſterdam are ſtamped; and ſome of it is alſo ſent to Paris; and, what ſeems pretty remarkable is, that the Dutch, with all poſſible care and expence, could never exactly imitate the paper of Angouleme. That of Limoſin is not leſs excellent for printing; it is admirable for the impreſſions of copper-plates; but not ſo good for writing, being not ſufficiently ſtiff.
The principal revenue of both the high and the low Limoſin conſiſts in the commerce of cattle, eſpecially horned cattle and horſes. Limoges is the chief city, which is ſituated on the river Vienne, and has a manufacture of bays, wherein are yearly made to the amount of 1300 pieces.
Wines are the principal and moſt important commerce of Angoumois, whereof the beſt are the produce of Cogniac, the red being ſold in Limoſin and Poictou, and the white burnt for brandy.
The ſale of Cogniac brandies varies according to the circumſtances of times. In war time they are bought up for the French garriſons, and the armies in Flanders and Germany; in time of peace their ſale is greater, the Engliſh and Daniſh ſhips taking them in at Charente above Rochefort, in great quantities; but it is apprehended that the duty on them at Charente is of ſome prejudice to the commerce.
Saffron, next to wine and brandy, is a great article in the commerce of Angoumois, vaſt exports being made thereof for Lyons and Germany; from whence it is ſent to Pruſſia and other northern countries.
Angouleſme, the chief city, beſides the trade of wine, brandy, ſaffron, and paper, has alſo a ſmall manufacture of ſerges and ſtamines: there being annually made 450 pieces of the latter, and of the former 650.

An account of the brandies throughout the diſtrict of Cogniac.

One year with another, throughout the diſtrict of Cogniac there are collected 200,000 bariques, or barrels of wine fit for burning, which make 50,000 hogſheads, proportion of 13,400 pipes of brandy of three bariques.
There are years when wines are weak; and, in ſuch caſes ſix barrels of wine are required to make one of brandy, a barrel of brandy being ſeldom made out of four barrels of wine; but, if the wine is tolerably good, nine barrels of wine make two barrels of brandy.
Cogniac brandy is ſuperior to, and more in eſteem, than all others; it being computed that foreigners take away yearly of it between 24 and 27 thouſand barrels.
Each barique of brandy pays at the office of Charente 15 livres, 16 ſols: ſo that if from Charente only there are yearly exported 27,000 bariques of brandy, the ſole duty of 15 livres 16 ſols *per* barique muſt produce a revenue for the King of 426,600 livres, or 15,747 l. *per annum*.

Of the commerce of Poictou.

The principal commodities of this province are corn, wine, cheſnuts, hemp, and ſalt. It is ſituated, for the moſt part, on the ſea, which ſituation, and the ſeveral ports its enjoys, might ſeem to put it in a flouriſhing condition for trade; however, it is one of the moſt inconſiderable in the kingdom, either for an exterior or interior commerce.
Poictiers is the capital city, which is one of the largeſt in the kingdom, being ſituated on an eminence, near the little river Clain, 70 m. N. E. of Rochelle: it has manufactures of ſtamines, camblets, ſerges, crapes, ſtockings, &c.

aps, and ſhammy leather. The other manufactures in he ſeveral towns of this province are much of the ſame ature, but of no great conſideration.

The commerce of Aunis and Xaintonge, are under their eſpective port towns, *Rochefort*, *Rochelle*, *Brouage*, and *onnai-Charente*, in the maritime ſtate of this kingdom.

Of the commerce of Orleans *and its diſtrict.*

The greateſt commerce of the diſtrict of Orleans, with hoſe of Blois and Beaugency, conſiſts in wines and randy, which are either ſold at Paris, or to the Engliſh nd Dutch when the vineyards in the neighbourhood of Nantz, and the iſland of Rhe, are deficient. 'Tis thought hat one year with another, Orleanois might afford a undred thouſand hogſheads of wine, and Blois and Beaugency about the ſame quantity.

The town of Orleans is properly the ſtaple of all the ommodities tranſported by the Loire, on which it is ſi-uated, either in going up or coming down.

The Loire, in deſcending, procures for it the merchan-izes of Provence, Languedoc, Lyonnois, Bourbonnois, Nivernois, and Berry; together with thoſe imported into rance in the Mediterranean; and the ſame river, in e paſſage up, brings to it the merchandiſes of the ocean, ith thoſe of Britany, Anjou, Poictou, and Touraine.

The manufactures of Orleans are of no great reputation; owever, a pretty briſk trade of linen and woollen cloths, rges, bays, ſtockings, ſhammy-leather, hats, and caps, driven on there, by the dealers of moſt of the towns in s diſtrict, who bring their reſpective manufactures there, nd find a conſiderable vent for them.

The ſaffron which is gathered at Boiſne, and Boiſcom-un, in Gatinois, forms alſo a conſiderable commerce this diſtrict: and there are likewiſe iron mines, which eep ſeveral forges employed.

f the commerce of Touraine, Anjou, Maine, *and* Perche.

The principal manufactures eſtabliſhed in this fruitful and greeable part of France, are thoſe of ſilk, ſome woollen oths, and leather.

The two laſt are inconſiderable; but the ſilk manufacture Tours, the chief city, is not inferior, as the French y, to any foreign manufacture; not even to thoſe of enice, Genoa, Florence, and Lucca.

'Tis pretended that the firſt calendar eſtabliſhed in France r watering tabbies, and other ſilk ſtuffs, was introduced ere by one Chomey, who brought the invention from taly.

The commerce of Anjou conſiſts almoſt entirely of wine, x, and hemp, of which two laſt ſeveral cloths are made; ines of coal and iron, bleaching of wax and linens, re-ning of ſugar, and ſalt-petre, iron forges, and glaſs-ouſes; laſtly, ſtamines and druggets of all kinds.

The principal commerce of Maine conſiſts in flax and emp, of which great parcels of linens are made; being ld moſtly at St. Maloes, for the conſumption of Spain. ans, the chief city, has a manufacture of double ſtamine d camblets, wherein are annually made to the amount 2500 pieces, which are chiefly ſold at Paris.

The manufactures and trade of Perche are much of the me nature with thoſe of Maine.

Of the commerce of Berry, Moulins, *and* Auvergne.

The chief trade of Berry conſiſts in ſheep, wool, grain, on-mines, hemp, walnut-oil, wine, and wood; but the ant of navigable rivers renders this traffic leſs conſiderable an it might be.

the diſtrict of Moulins there are forges and founderies r cannon, anchors, and other large iron works; beſides anufactures of earthen-ware, glaſs, enamel, hard-ware, peſtry and cloths. The natural productions conſiſt in ine, hemp, iron, coal, cattle, fiſh, and cheſnuts.

uvergne is uſually divided into the upper and lower, ing chiefly remarkable for its paper, whereof great rcels are ſent to Paris, Holland, and England, for eir moſt beautiful impreſſions of books.

ermont, its chief city, tho' not ſituated upon any na-gable river, is, notwithſtanding, the ſtaple of the greater rt of the commerce that is carried on from the lower nguedoc and Provence to Paris.

ormandy *and* Britany, *ſee their commerce under the ar-cle of their reſpective port-towns.*

Of the commerce of Burgundy, Franche-comté, *and* Dauphiné.

Generally ſpeaking the wines of Burgundy, and eſpecially thoſe of Dijon, Nuis, Beaune, Pomarre, Chaſſagne, Macon, Tonnere, and Auxerre, make its greateſt commerce; not ſo much for the quantity thereof, as their excellent quality, which has raiſed their reputation all over Europe.

As for its manufactures, one year with another, there are between 12 and 13000 pieces of ſtuffs made: there are alſo thirty-two forges in the province, beſides eight manufactures for paper.

Wheat, oats, and other grain, mines of iron, ſalt-petre, wood, ſalt, horſes, horned cattle, butter, and cheeſe, are the chief commodities of Franche-comte. The value of the ſalt-petre manufactured in this diſtrict, might amount one year with another to about 38,000 l. ſterling: the ſalt got out of two pits, on a mountain called the *golden mountain* upon account of its containing this rich treaſure, brings in a yearly revenue to the King of upwards of 18,000 l. ſterling.

The province of Dauphiné, being partly mountainous and partly a plain, the productions of the ſoil and the commerce, anſwer this diverſity of ſituation.

The mountains produce fir, and other trees, fit for building ſhips; beſides ſeveral metals and minerals, ſuch as copper, lead, iron, vitriol, copperas, coal, and ſalt-petre. The manufacture of all theſe different metals and minerals being diffuſed throughout the whole province.

As to the plains, they produce hemp, and grain; and the inhabitants plant mulberry-trees for the feeding of ſilk-worms.

Grenoble, the chief town, is the place where moſt of the manufactures of this province are eſtabliſhed, which conſiſt in working the above-mentioned metals and minerals, as alſo in making woollen ſtuffs, linen-cloths, ſilks, and paper.

For the trade of Provence, *ſee it under the article of its port-town* Marſeilles.

Of the commerce of Languedoc, *and its two diſtricts* Toulouſe, *and* Montpellier.

The commodities of the produce of this country are ſalt, oils, dry fruits, cheſnuts, and wines of ſeveral colours, ſorts, and qualities, exported to Italy, England, the north, Switzerland, Germany, and ſometimes for the coaſts of Barbary.

The woollen manufactures eſtabliſhed in the two diſtricts of Languedoc, are thoſe of cloths, druggets, ſerges, ratines, and bays; whereof the greater part is deſigned for the Levant; and the reſt for Switzerland, Germany, and ſeveral provinces of France.

In the ſilk manufactures eſtabliſhed at Toulouſe, Montpellier, Niſmes, and Allay, there are wrought taffetas, tabbies, crapes, ferandines, with ſome brocades and damaſks, which conſume, one year with another, 12 or 15 hundred quintals.

In Languedoc are alſo cultivated great quantities of paſtel, and ſaffron: the ſcarlet grain is found in the wood of Grammont, and turnſol in the dioceſe of Niſmes.

The verdigreaſe made at Montpellier, and cryſtal of tartar prepared at Aniane, are in great reputation in foreign countries.

There are ſome mines in this country of iron and tin; jet is alſo found there; and the diſtrict of Montpellier has a very conſiderable manufacture of hats.

Of the commerce of the Lower Navarre *and* Bearn.

If Bearn is but indifferently fertile, the lower Navarre is leſs ſo; and therefore their chief commerce muſt be owing to the induſtry of the inhabitants.

The valleys of Baretons, Aſpe, and Oſſant, produce fir-trees for the King's ſhips: they have alſo mines of lead, copper, and iron, which keep in action ſeveral forges and founderies.

The inhabitants of Oleron, who are all traders, buy up theſe metals manufactured or unmanufactured, ſending them to Arragon, and other frontier places of Spain.

The wines of Morlac are in ſuch great eſteem, that they are all bought by the Engliſh.

The wool of theſe provinces is good, and paſſes for Spaniſh

wool; of which the French dealers purchaſe the finer ſort, and ſend it into the other provinces of France.

Commerce of the three biſhoprics.

Under this denomination are comprehended Metz, Toul, and Verdun, three epiſcopal and imperial towns, placed under the protection of France in 1552, and afterwards fully ceded to the French by the treaty of Weſtphalia.

Wines, timber, grain, ſalt, leather, cheeſe, fruits, confects, brandy, linen, and ſeveral woollen manufactures, make the interior commerce of the three biſhoprics.

The imported commodities are horſes, cattle, carpenters timber, planks, furs, iron, butter, cheeſe, rape-ſeed, French and Dutch cloths, and various other articles of merchandiſe; of which a part are conſumed in the country; the other paſs into the neighbouring provinces, and even into Holland, by the Meuſe. The beſt woollen manufactures are eſtabliſhed at Metz, and in its neighbourhood, conſiſting chiefly of rateens of all ſorts, ſtuffs for women's apparel, a kind of frize for the peaſants, and ſome druggets and ſtamines; but the manufactures of Toul and Verdun are inconſiderable.

The chief commerce of theſe three biſhoprics paſſes thro' the hands of the Jews; but that of horſes, in war-time, is the moſt conſiderable.

Commerce of Alſace.

The indolence of the inhabitants of this province has given up to ſtrangers the greater part of its commerce; who bring there the commodities that are wanted, and export great quantities of thoſe it produces.

This commerce extends itſelf, on one ſide, into the interior part of Germany, towards the Upper Rhine; and, on the other ſide, into all the countries ſituated from Straſburg to the mouth of the river.

The foreign commerce of Straſburg, the capital of the Lower Alſace, conſiſts in tobacco, brandy, hemp, ſome dying ſtuffs, leather, tallow, and wood.

The manufactures of this city are tapeſtries, blankets, fuſtians, and ſome cloths of hemp and flax.

The commerce of the reſt of the province conſiſts in wood of the Lower Alſace, wine of the Upper Alſace, brandy, vinegar, corn, hogs, tobacco, ſaffron, turpentine, hemp, flax, tartar, tallow, gun-powder, cheſnuts, prunes, and other fruits; with all ſorts of legumes and plants, as onions, cabbages, poppy, aniſe, and fennel.

The commerce of all theſe particulars, eſpecially corn, is conſiderable in France and Holland; the other commodities being moſtly bought up by the Germans and Switzers.

The manufactures of Alſace are inconſiderable, buckram and canvas excepted; of which the greateſt part are exported for England, Holland, and Germany. Beſides, the Upper Alſace has ſeveral mines of ſilver, copper, iron, and lead: the ſilver mine of Guramain produces annually about 1600 lb. of purified metal; that of copper, or rather that of ſilver, which affords alſo copper, upwards of 24,000 lb. weight.

Commerce of Rouſſillon.

Wool, iron, and oil of olives, make the principal commerce of this county.

Of the oils, one year with another, are exported to the value of about 300,000 livres, or about 12,000 l. ſterling.

The reſt of the commerce conſiſts in corn, and large and ſmall cattle.

The manufactures are inconſiderable; being moſtly confined to ſome blankets, and coarſe linens.

Maritime places of trade.

The principal ſea-port towns of France, to begin with thoſe of *Picardy*, are St. Vallery, Calais, and Boulogne.

St. Vallery is a town, ſituated at the mouth of the river Somme; being of difficult acceſs, upon account of the banks that run more than a league into the ſea, and ſhift with the winds.

The port of St. Vallery has particular advantages for the Dutch trade; becauſe a ſhip with a favourable wind, may arrive there from Holland in 24 hours, and the merchandiſe wherewith this ſhip is freighted is capable of being tranſported to Amiens in two days and a half, and even in three days to Paris; being a conveniency of which Havre is defective.

When the exportation of corn is permitted in Fra great quantities are exported from St. Vallery: but as commerce is not always open, the commodities ſent uſual to foreign countries are ſail-cloths, woollen ſtuffs, or wool and ſilk manufactured at Amiens and Beauv Champagne and Burgundy wines, indigo of the Fren American iſlands, ſaffron of Gatinois, ſeveral ſilk-ſtuf and other manufactures, eſpecially from Lyons; laſt ſalt herrings and mackarel.

Of theſe various commodities, ſome are for Spain a Portugal, as the cloths and ſtuffs of Picardy; others England and Holland, as wines, ſilks, indigo, and fron; and others for Artois, Flanders, and Paris, ſalt-fiſh.

The commodities imported by foreign ſhips to St. Va lery, conſiſt in common aſhes of Denmark, for bleachin pot-aſhes of Holland, for the manufacture of ſoap; tra oil, Spaniſh wool, and wool from the Baltic; Campe wood, Brazil, and yellow wood, for dying; ſalt cod herrings, of the Dutch fiſhery, or at leaſt thoſe wh paſs for ſuch; Dutch cheeſe; white and black Hamb iron, Swediſh iron, and Hungary ſteel; whale fins; pla from the north; tools for artificers of various kinds, dru and groceries; Dutch cloths and camblets; Engliſh a Iriſh tallow and butter; coal, lead, tin, copperas, alu and Alicant ſoap; Dutch braſs, hard-ware, and horn combs and lanthorns; all theſe foreign commodities b ing imported to St. Vallery by the Engliſh, Dutch, Swed and Hamburghers.

The port of St. Vallery is one of the two ports France, fixed by ſeveral arrets of the King's counc eſpecially by thoſe of the 8th November 1687, and July 1692, for the importation of various commodi and manufactures from Spain, England, and Holla eſpecially for foreign cloths; as Dutch camblets of kinds, and all other camblets of foreign manufactur woollen cloths of all ſorts and colours; including rate of all kinds, ſerges, bays, blanketing, half-cloths, fl of wool and hair; ſtuffs mixed with wool, ſilk, thre hair, cotton; flannels, and frizes of all kinds, drugs, groceries, wax and ſugar excepted: but it ſhould be o ſerved, that it was after the years 1687 and 1692, t the port of St. Vallery was added to the other ports the kingdom, which had already been ſpecified for entry of the ſaid groceries and drugs.

There is at St. Vallery, as well as at Calais, a King's ſpector for foreign manufactures.

Calais, a town of Picardy, in the county of Oye, is ſitua 22 miles E. of Dover, and 140 N. of Paris, betwe Graveline and Boulogne; its port, with that of St. V lery, being the only places by which foreign draperies enter into the kingdom: ſo that what has been ſaid of Vallery, may ſerve to give an idea of the trade of Ca It is likewiſe one of the towns by which, purſuant to ordonnance of the farms of 1687, drugs and groce can enter France, either by ſea or land; the other be Rouen, Rochelle, Bourdeaux, Lyons, and Marſeil but St. Vallery, as appears from the foregoing article, afterwards added.

The ſituation of Calais, diſtant only from the En coaſt about 7 leagues, and where Dutch ſhips may rive in a few hours with a favourable wind, would be commodious for the Engliſh and Dutch trade, had no port been very dangerous, and that moſtly thro' neg However, propoſals were made for putting it in a dition to receive ſhips of greater burden, but wit taking place, though the expence was conſiderable. Calais has a communication up the country, by ca with Graveline, Ardres, St. Omer, Dunkirk, and ſe other parts of French Franders and Artois; which m the carriage of French and foreign merchandiſe arrive there very eaſy even to Ghent, and the other cipal towns of the Auſtrian Netherlands.

The difficulties found in entering the port of Calais greatly diminiſhed its commerce; which is not quite ſtructed for ſalt; wines, and brandies, are brought in French ſhips, from Bourdeaux, Rochelle, and N butter and hides from England, and beef from Ire

which are afterwards diſtributed by the canals into Artois, and French Flanders.

But this commerce is inconſiderable, compared to the clandeſtine traffic the merchants of Calais carry on with the Engliſh, either bringing to them woollen ſtuffs of a French manufacture, cambrics, gold lace, and ſeveral manufactures from Lyons; or, by the ſame means, bringing back Engliſh wool, and other commodities.

Boulogne, the capital of the Boulonois, is ſituated 16 miles S. W. of Calais. The port of this town is ſmall, and of difficult acceſs, the water riſing there ſcarce to ſeven feet in the higheſt ſea. There is only one place within cannon-ſhot, to the ſouth-eaſt of the new tower, that ſhips any way conſiderable can be ſecure; and it is there alſo that veſſels weigh anchor in low water, till the flood brings them into the harbour.

Its exterior commerce conſiſts chiefly in ſalt, white wine, and brandy, brought there from Bourdeaux, Rochelle, and Nantz; as alſo in Iriſh butter; but, of all together, what is only neceſſary for the conſumption of the country.

Its interior commerce is, for the moſt part, the produce of its different fiſheries; and, among others, that of ſalt herring and ſalt mackarel. It is computed, that the ſale of both theſe kind of fiſh, comprehending thoſe pickled at St. Vallery, but not in ſuch quantities as at Boulogne, might, one year with another, amount to about 18,000l. ſterling, which fiſh are bought up for Flanders, Paris, and Artois.

This place is a kind of aſylum for Engliſh bankrupts. There is a free fair held yearly at Boulogne, commencing the 8th of November, and continuing to the 27th.

Normandy. The port towns of Normandy are, Dieppe, Havre-de-Grace, Harfleur, Cherburg, and Honfleur.

Dieppe is a conſiderable mercantile town; its inhabitants carrying on a good trade, either in different works of their own manufacture, or the commodities that come to them from abroad upon their own bottoms, or thoſe of foreigners; or, laſtly, in their freſh and ſalt fiſh, which employ a great number of hands and ſhips.

The ſale of its commodities is not only at Paris, and the principal towns of France, but alſo throughout ſeveral other parts of Europe, and America, where it ſends conſiderable cargoes.

Spice is likewiſe a great article of its commerce, which the Dutch import there in vaſt quantities; and for which the town of Diepe ſerves as a ſtaple, to be from thence diſtributed into the neighbouring provinces, and eſpecially to Paris.

Havre-de-Grace is a ſmall fortified town, ſituated in a flat country at the mouth of the river Seine, 14 or 15 leagues north-weſt of Rouen, and as many north-eaſt of Caen. It is almoſt of a ſquare figure, divided into two parts by the port, ſurrounded by a wall and other works, and defended by a citadel; of great conſequence on account of its ſituation at the mouth of the Seine, its harbour, and foreign trade, being looked upon as one of the keys of the kingdom: the French uſed to arm out their privateers and ſmall ſquadrons from this place, which occaſioned its being bombarded by the confederate fleet in 1694.

Harfleur. This town is in the county of Caux, at the mouth of the river Seine; its principal commerce conſiſts in corn and hemp; its bleach-yards are alſo in great eſteem, where moſt of the Norman cloths are brought to be whitened.

There is a great concourſe of merchants to its two free fairs; one of which is held on St. Martin's in ſummer, and the other on St. Martin's in winter.

Cherburg is ſituated on a bay of the ſea, 15 leagues north of Coutance. It is a ſmall ſea-port, and fortified by Lewis XIV. who ordered the works to be demoliſhed in the year 1689; and this was one of the laſt towns the Engliſh poſſeſſed in Normandy.

Honfleur is ſituated on the weſt bank of the river Seine, near its mouth, three leagues ſouth-weſt of Havre-de-Grace, and 16 weſt of Rouen: the late King endeavoured to improve it, by making a baſon fit to receive ſhipping, and a large key about it. At this town, which is ſuppoſed to contain about 12,000 ſouls, the ſalt brought from the bay of Brouage is unloaded, and diſtributed to all the towns on the Seine.

To theſe may be added, Rouen, the metropolis of Normandy, and center of all the trade on that ſide of France; its principal commerce conſiſting in all kinds of woollen cloths, ſerges, tapeſtries, linen cloths, tanned hides, hats, combs, paper, playing cards, corn, cyder, cattle, hemp, flax, and the different fiſheries carried on at Diepe, Honfleur, Havre, and other places. One year with another, 9000 bales of wool are imported to Rouen; one half of which are Spaniſh wools of different qualities, and the other French wool, called common wool.

Britany. The principal port-towns of Britany are St. Malo, Morlaix, Breſt, Conquet, Coveron, Port Louis, Avray, and Nantz.

St. Malo. The greateſt commerce the merchants of St. Malo carry on in Europe, is that with England, Holland, and Spain: but they alſo ſend ſhips to the north ſea and the Baltic.

The commerce of St. Malo in America, comprehends the cod-fiſhery, the furniſhing of the French colonies with proviſions, and ſometimes the South-ſea trade: but this trade, for the general part, is contraband, and ſubject to conſiderable riſks.

The commerce upon the African coaſts is not leſs dangerous; and as all theſe coaſts, in a manner, are comprehended in the conceſſion of various trading companies, the traders of St. Malo ſend there only ſome interlopers, though in danger of being taken up by the companies to whom the excluſive trade thereof belongs.

Laſtly, the Aſiatic ſeas have ſeen alſo ſhips from St. Malo, ſince the diviſion made between the French Eaſt India company and the merchants of this town, of a ſhare of the returns, purſuant to a ſtipulation between both parties.

The trade of St. Malo employs yearly about 100 Engliſh veſſels, between 20 and 100 tons; the ports from whence they come being London, Lynn, Yarmouth, Southampton, Weymouth, Exeter, Plymouth, Briſtol, and the ports of the coaſts of Cornwal.

From Briſtol are brought coals and lead; the return being in linens, ſoap, honey, and a great quantity of oil.

The ports on the coaſt of Cornwal ſupply them with tin, coal, and ſome barrels of white herring. The Engliſh have 30 or 40 veſſels, of between 20 and 30 tons, for this trade; the return being in cloths of the manufacture of Halle, Languenau, Vilve, Fougeres, Pontorſon, Noyalles, and Quintin; ſoap, oil, wine, brandy, undreſſed calf and goat-ſkins, honey, and quills.

Exeter, Plymouth, Southampton, and Weymouth, trade in the ſame manner as the ports on the coaſts of Cornwal.

Lynn and Yarmouth ſend to St. Malo lead, coals, linſeed, and herrings; receiving in exchange, wine, brandy, and linens; which trade employs four veſſels of 40 or 60 tons.

Laſtly, London ſends there lead, copperas, nut-gall, and to the value of about 5000l. in coarſe cloths, peneſtons, and frizes; the return being in cloths of Laval, Rouen, Quintin, Halle, Vilve, Pontorſon, and Noyalles, with ſoap, oil, and Bourdeaux wine; this trade employing between 20 and 25 veſſels, from 20 to 100 tons.

St. Malo has not ſo conſiderable a trade with the Dutch as with the Engliſh; the Dutch ſhips that come there yearly ſcarce exceeding the number of 25 or 30. Their cargo conſiſts chiefly in planks, maſts, cordage, hemp, train-oil, whale fins, cheeſe, herrings, and ſpice; their returns being in honey, ſoap, Genoeſe and Provence oil, which the Dutch often take on their own account, or which the people of St. Malo freight their veſſels with for Holland.

The commerce to Spain is very rich, and the moſt conſiderable the merchants of Malo have on their own bottoms. The number of veſſels they ſend there is not certain, depending moſtly on the exigency of Spain, or the Indies for French commodities: however, they uſually employ in this trade to the amount of 15 frigates.

The time of the departure of theſe veſſels is regulated purſuant to the advice received from the galleons and flota

for Spaniſh America. The merchandiſe they freight their ſhips with, are cloths of all kinds, both linen and woollen, Caſtors, Lyons and Tours ſatin, gold and ſilver ſtuffs, woollen ſtuffs of Amiens, Rheims, and other manufactures of the kingdom. Their returns are, for the moſt part, in gold and ſilver; alſo in leather, cochineal, and indigo; Campechy wood, and Spaniſh wool. Theſe returns arrive not at St. Malo till 18 months, or two years, from the time of their departure for Cadiz: but they are always extremely rich, being ſcarce ever leſs than 230,000l. ſterling, and ſometimes amounting to double that ſum.

Next to the commerce of Spain, the cod-fiſhery at Newfoundland is one of the moſt conſiderable carried on by the merchants of St. Malo. The fiſhery of Chapeau rouge employs 15 or 20 ſhips, from 100 to 300 tons; that of the Petit Nord 40 or 50; and that of the Grand Bank much leſs than the two others.

To what has been ſaid may be added, that St. Malo drives a conſiderable trade with Nantz, in war-time, by the prizes the privateers bring in there; as alſo in time of peace by the returns of ſeveral veſſels belonging to St. Malo, that are employed in the cod-fiſhery; and, after having ſold their fiſh up the Streights, or in Italy, unload at Nantz the commodities they got in exchange, as Roman alum, Genoeſe oil, coffee, Parmeſan cheeſe, Levantine drugs, wine, ſoap, ſolder of Alicant, wine, and raiſins of Malaga, ſoap, ſulphur, and other commodities of Spain, Italy, and Provence. It is alſo the ſame commodities that the ſhips of St. Malo bring to Havre, from whence they are ſent to Rouen and Paris.

Morlaix is famous for its great commerce of linen cloth, though not ſo remarkable as formerly; the Engliſh being accuſtomed to take from them, one year with another, to the value of about 175,000 l. ſterling; but the long wars of Lewis XIV. obliged them to eſtabliſh manufactures among themſelves, or ſubſtitute, in the place of theſe cloths, thoſe of Holland and Hamburg, which are much dearer, and perhaps not ſo good. Next to the Engliſh, the traders of Morlaix ſent moſt of their linens, among other commodities, to Spain: great parcels of them are alſo ſent to Paris, and other towns of the kingdom.

The Engliſh give, in part of payment, for the cloths they have from them, lead, tin, and coal; the ſurplus being paid in bills of exchange on London, Paris, Rouen, and other places.

Theſe cloths, though denominated from Morlaix, are not manufactured there; the inhabitants enjoying the privilege of purchaſing them at the firſt hand from the weavers and dealers of the biſhopric of Leon; upon account of which privilege, all others muſt have them from an inhabitant of Morlaix; where the commerce of thread is alſo very conſiderable.

Breſt is ſituated on an eminence, to the north-ſide of a fine bay, called Breſt or Cameret bay. The harbour, in the phraſe of the French writers, is the fineſt in the world; ſeeming to have forgot that much finer of their own at Toulon; for their largeſt ſhips are always built and laid up at Toulon, becauſe Breſt will not eaſily admit of ſhips of that bulk. They have indeed a great number of men of war at Breſt, but not one of the firſt rate, the entrance of the harhour being either too rocky, or too ſhallow, to admit them; which is however a ſecurity againſt the fleet of an enemy. The town and entrance of the harbour are fortified as well as the nature of the ground will allow; and the port, it is ſaid, will contain 500 ſail of ſhips. The yards and magazines here are ſo conſiderable, if credit is given to French writers, that they can equip out 20 ſail of men of war from this port; but they muſt certainly mean of the leſſer ſort, from what has been hinted already. Their ſmall ſquadrons, and privateers, which ſheltered themſelves here, were extremely troubleſome to the Engliſh merchant-men in the late wars; for which, and other reaſons, it was thought proper by the confederates, to make a deſcent here in 1694, in order to have taken the town, and deſtroyed their ſhipping; but the attempt miſcarried, having been ſo long diſcovered before the Engliſh fleet ſailed from their ports, that the Britiſh government had intelligence that the deſign was betrayed, and yet were ſo ſanguine as to proceed in the expedition, to the no ſmall loſs and diſgrace of their fleet and forces: for there was an army more numerous than themſelves ready to receive them, and batteries of guns planted on the ſea-ſhore, where-ever there was any poſſibility of landing. Here the brave Talmaſh, who commanded the land-forces, received his mortal wound, as he was about diſembarking the firſt 600 men, who were moſt of them killed, wounded, or made priſoners, the tide leaving the boats they were in upon the ſand. It was a brave and wiſe attempt of the Engliſh, to endeavour the deſtruction of the French ſhipping, and the only two harbours they have of any conſequence, Breſt and Toulon, though neither of their enterpriſes ſucceeded according to expectation; for as the French, in one reign, increaſed their royal navy to ſuch a degree, as to diſpute the empire of the ſea with the united fleets of England and Holland more than once, what may not the Engliſh dread, if they ſhould ſee another enterpriſing monarch at their head?

Conquet, is a little port-town, in the moſt weſterly part of Britany, near the entrance of the bay of Breſt; the ſea between which, and the iſles of Uſhant, has obtained the name of Conquet road.

The pilchard fiſhery conſtitutes the principal trade of this place, which the inhabitants, and thoſe of Breſt, with Port Lewis, Belleiſle, and Audierne, ſend in great quantities to Spain, Portugal, Provence, and all the port-towns of the Mediterranean, ſalting yearly ſeveral thouſands of caſks.

Port Lewis. The ſituation of Port Lewis is very advantageous for trade; but this trade is inconſiderable, and reduced to almoſt the pilchard fiſhery, which employs, in the ſummer-ſeaſon, upwards of 300 ſloops, and all the ſeamen of the neighbourhood.

Port Lewis, one year with another, makes 4000 barrels of pilchards, each barrel conſiſting of nine or ten thouſand fiſh, which are ſold for about 11 l. 16 s. 6 d. the barrel.

Coveron. A large village, with a ſmall port, three leagues from Nantz. The brandy made of their white wines is the beſt of all Britany; and there is a conſiderable fiſhery here, as well as at Auray, a ſmall port, half a league below it; where the firſt ſhads that enter the river Loire are caught.

Auray. A ſmall port, but very commodious, upon account of the ſecurity the largeſt ſhips can be in there. Its trade is chiefly with the Spaniards, to whom its merchants ſend their fiſh, ox-hides, butter, and other commodities of the province; their returns conſiſting in wines, dry fruits, and particularly in Biſcay iron.

Nants, or *Nantz.* There is ſcarce a town in France better ſituated for commerce than Nantz. The ſea opens a communication for it with all the nations in the world; and the Loire makes it penetrate into the richeſt provinces of the kingdom, even to Paris, by canals that communicate with the Seine.

It is true, Nantz is not ſituated upon the ſea; but the road for ſhips at Pimbeuf, only eight leagues diſtance, where the largeſt ſhips can anchor with ſafety, and the facility wherewith veſſels of 50 or 60 tons, can get up the river, give it the commodiouſneſs of the beſt maritime towns.

The diſtrict of Nantz comprehends Pimbeuf, Bourneuf, Pornie, Croiſic, and Pouligen. About 50 ſhips are yearly employed in this diſtrict for the trade of the American colonies, 25 or 30 for Martinico, 8 or 10 for Guardeloupe, 1 or 2 for the turtle fiſhery, as many for Cayenne, and 8 or 10 for the coaſt of St. Domingo.

The following is a computation of the merchandiſe imported yearly by the ſhips of Nantz into France, from the French American colonies.

Of unprepared ſugar, ſix millions of pounds weight.
Molaſſes four hundred thouſand lb.
White lump ſugar from 3 to 5 hundred thouſand lb.
Cacao two hundred thouſand lb.
Ginger, about one hundred thouſand lb.
Cotton wool, 150 thouſand lb.

ndigo, 150 thouſand lb. or thereabouts.
Rocou of Cayenne, 10 thouſand lb.
Tortoiſe-ſhell, between 5 and 6 thouſand lb.
Caſſia, 50 thouſand lb.
The cod-fiſhery employs upwards of 30 ſhips belonging o Nantz, from 70 to 300 tons; 15 of theſe ſhips are or green cod, and the reſt for dry.
This cod is ſometimes ſold to the Spaniards and Portuueſe; and the commodities in return, if at Liſbon, or t Oporto, are Brazil ſugar and tobacco, ſumac, and oil f olives; if at Bilboa, St. Sebaſtian, Cadiz, Seville, or ome ports of Catalonia and Galicia, beſides gold and ſilver ſpecie, wool, oil, cotton, and cochineal.
As to the north, Dutch, Engliſh, Iriſh, and Scotch trades, which are ſome of the moſt important at Nantz, the merchants there never carry it on upon their own account; theſe nations, eſpecially the Dutch, having agents upon the ſpot, to ſell their merchandiſe, and prepare cargoes for their return.

te of the manufactures and commodities of the produce of Britany, which are yearly exported for the other provinces of the kingdom, and foreign countries.

Cloths of all kinds, to the amount of	12,000,000 livres:
White threads, raw, and coloured,	1,000,000

Tallow - - -	100,000
Total -	16,375,000 livres,
Or about	614,500 l. ſterling.

Aunis, and Xaintonge.

The port-towns of the province or government of Aunis are Rochefort, Rochelle, Brouage, and Tonnai-Charente.

ch fort was but a little caſtle in 1665; when Lewis XIV. obſerving that the coaſts on the ocean were generally very dangerous, and of difficult acceſs, and that there was ſcarce a road or port, except that of Breſt, where the royal navy might ride with any ſecurity, ordered ſeveral places to be ſounded; whereby he diſcovered, that a good port might be made in the mouth of the river Charente, and that there was depth of water ſufficient in that river for the largeſt veſſels: accordingly he purchaſed the caſtle of Rochefort, and ordered the plan of a town to be traced out, of the bigneſs of Bourdeaux; where, having ſurrounded it with a wall, and other modern fortifications, he erected an arſenal and magazines, and gave all manner of encouragement to his ſubjects to build and ſettle there: ſo that it is now one of the fineſt towns, and the beſt provided to accommodate the royal navy, of any upon the coaſt, except Breſt and Port Lewis; the entrance of the river, and the port, being defended by ſeveral forts, that render it inacceſſible to an enemy by ſea.

Rochelle. The chief trade of this town, is chiefly by ſea; the productions of the countries that compoſe its generality being ſalt, wine, brandy, and hemp.

The ſhips it ſends abroad are uſually for the French Leeward iſlands, that of Cayenne, for Canada, the coaſt of Guinea, the Azores, and Portugal: but, before the peace of Utrecht, ſhips were alſo ſent from thence to Hudſon's bay, and Nova Scotia.
The cargo of the ſhips ſent to the French Leeward iſlands, conſiſts in all that is neceſſary for the cloathing and ſuſtenance of the inhabitants; as wine, brandy, corn, Iriſh beef, cloths, and all kinds of dry commodities. The goods for Canada are haberdaſhery, grocery, and hard wares.
The returns from the Antilles conſiſt in ſugar, cocoa, rocou, ginger, caſſia, leather, Brazil wood, Campechy wood, citron wood, tortoiſe-ſhell, and ſeveral kinds of confects: beſides, St. Domingo furniſhes cochineal, quinquina, cocoa, vanille, pearls, emeralds, and piaſtres; but as theſe are conſequences of the captures made by the flybuſters, or freebooters, the proper commodities may be deemed leather, tobacco, and wood for dying and inlaid work.
Canada, and the northern colonies, afford green and dry cod, ſtock fiſh, ſalmon, ſalt eels, train-oil, maſts, and all kinds of furs; but theſe are only upon the Caſtor company's account.
Whatever is ſent from Rochelle for the French colonies, pays no duties of exportation; but what comes back, and all the commodities of any other deſtination, pay the duties of importation and exportation; as alſo the other duties. The number of ſhips the merchants of Rochelle employ in the commerce to the Leeward iſlands, is about 50, from 80 to 150 tons.
In war-time, the Swedes and Danes freight their ſhips at Rochelle with wine and brandy; in time of peace, the Engliſh and Dutch do the ſame; to which they add paper, cloths, ſerges, ſyrups, indigo, and caſtor.
Rochelle ſends alſo brandy into Normandy and Picardy, ſilks and ſtuffs to Portugal; and cocoa of the French American colonies into Spain.
The Rochelle trade to Africa brings in return for goods exported, leather, wax, and gold duſt; that of Portugal, molaſſes, chocolate, citron bark, oranges, and Brazil tobacco; England, lead, and tin; Ireland, ſalt beef, butter, tallow, and leather; Holland, ſpice, cheeſe, and train-oil.
The commerce of Africa, Spain, and Portugal, is upon no eſtabliſhed footing; the Rochelle merchants contenting themſelves to ſend their ſhipping there, as they ſee an occaſion; but the Engliſh, the Dutch, and thoſe of the north, uſually ſend the ſhipping of their own countries to Rochelle.
The refining of ſugar at Rochelle is very conſiderable; and this town would be one of the moſt flouriſhing places in the kingdom for commerce, had not its port and harbour been ſtopped up with ſand, pebbles, ſtones, and other obſtructions to the entrance of merchant-veſſels, which run great riſks, either at coming out or going in.

Brouage is a town of Xaintonge, ſix leagues from Rochelle, three from Rochefort, four from Tonnai-Charente, and ſeven from Xaintes, ſituated upon a canal formed by the flowing and ebbing of the ſea. Its port was formerly pretty good; but the Prince of Condé, during the wars in France on account of religion, quite choaked up its entrance; ſince which time it has been impoſſible to ſet the canal upon the ſame footing: however, ſhips of ſome burden enter there in high water, and are very ſecure.
The principal object of the commerce of Brouage is the ſalt-marſhes that ſurround it on all ſides; affording yearly ſuch quantities of ſalt, as to ſupply the whole kingdom, and all the northern countries.

Tonnai-Charente, is a village ſituated a league from Rochefort, wherein is eſtabliſhed an office for the revenue; whoſe receipts, for the duties of wine, brandy, and ſalt, amount yearly to about 36,000 l. ſterling, upon account of the great quantities exported from thence by foreigners. It is computed, that, one year with another, 35,000 barrels of brandy, and 7000 muids, or 168,000 buſhels, of ſalt, are ſent out of Charente; the brandy paying the duty of 15 livres, 16 ſols, or about 12 s. 10 d. ſterling,

per barrel; and the ſalt is bought at about 12 livres, or 9s. 8½d. ſterl. *per* muid, each muid containing 24 buſhels.

Guyenne, and Gaſcony.

The principal port-towns are Bourdeaux and Bayonne.

Bourdeaux, is ſituated on the river Garonne, 90 miles S. of Rochelle, and 260 miles S. W. of Paris, being one of the largeſt and richeſt cities of France, containing about 40,000 inhabitants. It has three principal objects of trade; the vent of its own wine and brandy to foreigners, its exports for the French American colonies, and its whale and cod fiſheries.

The commerce of wine and brandy brings to Bourdeaux ſo many foreign veſſels, that there are uſually in its port, throughout the whole year, upwards of 100 ſhips; and, in the time of its fairs, upwards of 150.

Thoſe who ſend their ſhips to Bourdeaux for wine and brandy, are the Engliſh, Iriſh, Scotch, Dutch, Swedes, Danes, and other northern nations; but the Engliſh and Dutch buy up more than all the reſt together.

The Engliſh, one year with another, take away with them 6000 tons of wine, and between 3 and 400 butts of brandy; beſides vinegar, prunes, reſin, turpentine, cheſnuts, walnut-timber, paper, cork, and honey. What they import to Bourdeaux conſiſts in woollen ſtuffs, tin, lead, coal, white and red herrings, all kinds of leather, ſalt beef for the French Leeward iſlands, butter, cheeſe, tallow, and dying ſtuffs. But when the ballance of the merchandiſe is not equal, the Engliſh pay the ſurplus in bills of exchange on London and Paris.

The wines the Dutch have from Bourdeaux amount, one year with another, to 50,000 tons, and the brandy to 10 or 12,000 butts; beſides vinegar, linſeed, ſyrup, and ſuch commodities as the Engliſh have from thence. Thoſe they leave in exchange, are planks, maſts for ſhips, hemp, copper, and cheeſe; the ballance being diſcharged either in ready money, or bills of exchange.

The Swedes and Danes import the ſame commodities with the Dutch, and their returns are much the ſame: however, each of theſe nations ſeldom take more than 3 or 4000 tons of wine, and brandy in proportion; becauſe they rely on the Dutch for ſupplying them with what they want, and as cheap as at the firſt hand.

The commerce carried on at Bourdeaux with the French American colonies, employs 24 or 28 ſhips, from 50 to 250 tons; as, 2 or 3 for Quebec, 3 or 4 for Cayenne, 4 or 5 for St. Domingo, and 12 or 15 for Martinico; the reſt being for the other Antilles.

Their cargo conſiſts in wine, cloth, linen, hats, hardware, and tools for artiſans of all kinds; the return being in ſugar, cotton, ginger, indigo, tortoiſe-ſhell, rocou, and cocoa.

As for the whale and cod fiſheries, the merchants of Bourdeaux import a part for their own conſumption, and diſtribute the other in the different ports of Spain, Italy, and other places of Europe.

There are two free fairs at Bourdeaux; the one on the firſt of March, the other on the 15th of October.

Bayonne, is ſituated on the rivers Nive and Adour, 85 miles S. of Bourdeaux, and 360 S. W. of Paris; being the moſt conſiderable port on this coaſt next to Bourdeaux: the town is tolerably large and populous, and of great conſequence on account of its foreign trade, as alſo for being one of the ſtrongeſt frontier garriſons on the ſide of Spain: the harbour is likewiſe pretty goad, but of difficult entrance.

To this town the Spaniards bring their wool, over the mountains, on mules, and take ſugars in return; and from Bayonne the Spaniſh wool is diſtributed to all the provinces of France, where there are woollen manufactures. Timber for ſhipping, as maſts and yards, are alſo brought down the rivers in floats from the Pyrenean mountains to Bayonne, and ſent from thence to Breſt and other ports, where the King's ſhips are built and repaired.

The merchants of this town fit out ſhips alſo every year for the whale-fiſhery in Greenland, and pretend to have been the firſt who diſcovered, and were engaged, in this branch of trade. It is true, their neighbours the Biſcayners of Spain, were the firſt the Engliſh were acquainted with that followed the whale-fiſhery; and, on account of their dexterity in that art, the Engliſh took ſe-veral of them into their ſervice, when they firſt eſta-bliſhed the whale-fiſhery in the Greenland ſeas; ſo that under the name of Biſcayners, it is highly probable the mariners of Bayonne, and other ports on this coaſt, might be included. But it appears they followed this employ-ment in more ſouthern latitudes, and not in the ſeas of New Greenland, till they were carried thither by the Engliſh.

Between 20 and 25 ſhips, from 200 to 300 tons, are em-ployed by the merchants of Bayonne in the cod-fiſhery, and 12 or 15, from 130 to 300 tons, in the whale fiſhery.

Provence.

The moſt conſiderable roads and harbours on the coaſt of Provence, are thoſe of Marſeilles, Toulon, Hieres, and Antibes.

Marſeilles, is ſituated on a fine bay of the Mediterranean, 20 miles ſouth of Aix, 30 north-weſt of Toulon, and 360 ſouth-eaſt of Paris. The town is well fortified, hav-ing ſo large and populous, that it is ſaid to contain 100,000 inhabitants: it has a ſecure, capacious harbour, being the ſtation for the French galleys, but will not ad-mit of large men of war; it has a good ſilk manufac-ture, and the warlike magazines are ſaid to equal any in Europe.

The French relate, that they export annually from the port of Marſeilles to Italy, to the value of about 140,000 ſterling, of the product and manufactures of Languedoc, Dauphiné, and Provence; as, 6000 bales of cloth, ſerges, and other woollen manufactures, being of the value of two millions of livres, or about 81,250 l. ſterling; of almonds, the value of about 8125 l. ſterling; 200 barrels of honey, amounting to about 2000 l. ſterling; and as much in prunes and figs, ſalted eels, olives, and anchovies; ſome oil, grain, and flour; 6000 bales of cotton linen made at Marſeilles; ſtrong waters, cotton waiſtcoats and ſtock-ings; as alſo thread and worſted ſtockings.

On the contrary, they import annually from Italy to Marſeilles, 6000 quintals of hemp of Piedmont, at 8 livres the quintal, or 100 weight; as many quintals of rice from the ſame country, by way of Nice and Oneglia; 2000 quintals of rice from Lombardy, by the way of Ge-noa, and that coaſt; 15,000 charges of bread-corn from Venice and Ancona, each charge being about 8 buſhels Engliſh; 1000 charges, or quarters, from Sardinia and Sicily, and as much from Civita-Vecchia; 1500 quintals of ſulphur from Civita-Vecchia and Ancona; 200 quin-tals of aniſeed from the eccleſiaſtical territories; 75 cheſts of manna, gathered in Sicily, the pope's territories and about mount St. Angelo in Calabria, of which the laſt is the beſt; 2600 bales of fine ſilk, of the growth of Savoy, Piedmont, the Milaneſe, Lombardy, Bologna, Ferrara, and Sicily, conſiſting of two quintals the bale; 1000 bales of fine ſilk, of two quintals each, imported into Marſeilles by ſea: all which merchandiſes, and ſome other ſmall articles, amount to 3,335,350 livres, or 135,498 l. ſterling.

The trade from Marſeilles to Spain is much more con-derable than that to Italy; for there is annually ſent to Spain to the value of about 40,000 l. ſterling, in linens of all ſorts, ſtuffs of Tours, brocades, taffetas, and other wrought ſilks; ſome galoons, gold and ſilver lace; coun-terfeit galoons, lace, and pins; box-combs, and other made at Marſeilles, and in the neighbourhood. But this is nothing, in compariſon of the trade of gold and ſilver ſtuffs from Lyons, brocades, wrought ſilks, gar-bands, Chaumont laces, Avignon taffetas, hard-ware, Puy laces, laces of Britany, Rouen, and other places; camblets of Liſle in Flanders, the ſerges and coarſe wool-len cloths of Niſmes and Auvergne, with their ſuffs and dimmities, which amount in the whole to the value of ſix millions, 280,000 livres, or about 250,000 ſterling; other merchandiſe of Marſeilles, conſiſting of hats, galls, paper, tobacco, prunes, and thread, amount-ing to 180,000 livres; cotton-thread of Jeruſalem, gum-arabic, galls of Aleppo, drugs of all kinds, ſaffron, and other articles, amounting to 1,500,000 livres: the total of all which ſums is 9,170,000 livres, or 366,00

366,000 l. ſterling. On the contrary they annually import from Spain to the value of eight millions, one hundred and fourſcore thouſand livres, or about 325,600 l. ſterling in cochineel, quinquina, indigo, Campechy-wood, wool of Segovia, and other places, ſarſaparilla, ſugar, vermillion, ſilk, liquorice, piaſtres, oil, dried raiſins, and other articles.

As to the Turky or Levant trade, they ſend annually to Conſtantinople twelve or fifteen ſail, whereof four or five are ſhips, and the reſt barks. The merchandiſes they carry thither of their own growth, or manufactures, are woollen cloths or ſerges, caps, paper, hard-ware, clocks and watches: the goods they carry which are the produce of other countries, are ſpice and cochineel, powder ſugars, indigo, ſarſaparilla, quick-ſilver, arſenick, Brazil and Campechy wood, white lead, tin plates, wire, and other ſmall articles. The goods imported from Conſtantinople to Marſeilles, are ſheeps wool, goats hair, buffaloes hides, and other ſkins, yellow wax, allum, maſtick, ſhagreen ſkins, box-wood, cotton, and other ſmall articles: the cuſtoms at the port of Conſtantinople amounting to no more than 3 *per cent.* either for goods imported or exported.

To the port of Smyrna the French ſend annually ſeven or eight ſhips, and about as many ſmall barks. The merchandiſes exported thither are much the ſame as thoſe for Conſtantinople; only the French find a greater vent for their caps, which the Armenians and Greeks take off their hands. The returns from Smyrna to Marſeilles are made in cotton, cotton-linens, ſponges, goats hair, camblets, Turkey carpets, yarn, galls, drugs, maſtick, and Scio turpentine, which is eſteemed the beſt in the Levant. To Salonichi, or Theſſalonica, they export from Marſeilles Engliſh cloth, or ſuch as they make in imitation of it, paper, cochineel, ſpice, tin, wire, and tin plates: they import from thence hides, wool, wax, ſilk, cotton-thread, allum, ſponges, and tobacco.

The number of ſhips which go to Canea, in the iſle of Candia, are very uncertain, depending moſtly upon the crop of corn and oil: ſome years 100 barks ſail thither, carrying Engliſh cloth, French cloth, ſerges, caps, ſpice, and ſome ſilver; making their returns from thence in oil for ſoap, wax, bread, corn, and ſome cheeſe.

They have alſo ſome little trade with the iſlands of the Archipelago; and there is a particular company of merchants at Marſeilles who trade to Satalia, a ſea-port town of Pamphylia, in the Leſſer Aſia, who carry only ſilver thither; and bring back wool, goats-hair, wax, cotton-thread, gum adraganth, opium, and currants.

About two or three ſhips in a year are ſent to Scanderoon, the port town to Aleppo, which carry and bring back the ſame goods as thoſe which trade to the other ports of Turky above-mentioned. The trade thither was formerly more conſiderable; but the exceſſive duties which the baſhaws lay on the caravans from Perſia and India, occaſion their travelling on to Smyrna, where the neighbourhood of the Port prevents thoſe extortions.

The trade to Tripoli and Sidon, in Syria, is inconſiderable; as is alſo that to Cyprus.

To Alexandria, the port-town of Grand Cairo in Egypt, they uſually ſend from Marſeilles ten or twelve ſhips, and four or five barks, with merchandiſe and money. The goods are caps, paper, ſpice, drugs for painting, coral, and wire; for which they bring back hides, flax, wool, thread, ſaffron, wax, aloes, incenſe, coffee, myrrh, white-plumes, herons feathers, elephants teeth, and gum lack: the cuſtoms here alſo are 3 *per cent.* upon all merchandiſes, but nothing is demanded for money.

Toulon, is ſituated in a valley, almoſt encompaſſed with hills on the land ſide, and on a bay of the Mediterranean, which forms a ſecure and commodious harbour, 25 m. S.E. of Marſeilles, 80 S. W. of Nice, and 400 S. E. of Paris. The town is not large, or beautiful; though it has ſome fine buildings, eſpecially the magazines and offices, which the late King erected for the uſe of the navy.

The French lay up their largeſt men of war, and have the fineſt docks and yards in the kingdom for fitting out a royal fleet at Toulon; ſuch as, in the ſtrain of the French writers, are not to be paralleled in the world: but thoſe who have ſeen Portſmouth and Chatham, or the Dutch magazines and yards in Holland, poſſibly may be of another opinion: however, the following is an abſtract of what the French ſay of their naval magazine, and works at Toulon.

They tell us, that there is a covered rope-yard of ſo ſurpriſing a length, that a man cannot ſee from one end to the other; and over it is an infinite number of workmen, employed in ſorting of hemp and ſpinning. That they have ſchools for the marine-guards, where they are taught navigation and their exerciſes: that the hall of arms is a noble fabric, where they make muſkets, piſtols, halberts, and other arms: that, in another magazine, they have all manner of utenſils for cannoneers and bombardeers: that the offices where the ſmiths, carpenters, and coopers work, are of a vaſt extent: that the park where the cannon, bombs, and bullets are piled up in a regular manner, and the vaſt number of anchors, aſtoniſhes a man: that the ſtore-houſe where the ſails and rigging for the men of war are laid up, is of a prodigious length; that the foundery, where all manner of cannon and mortars are caſt, requires attention; and the royal bake-houſe, with its numerous ovens, is admirably contrived; that the machine for putting maſts into ſhips at the old dock is the admiration of all that ſee it; and, laſtly, that there has been found in Toulon, at one time, near 600 braſs cannon, upwards of 3000 iron guns, 16 firſt-rates, 8 ſecond-rates, beſides frigates, bomb-veſſels, fire-ſhips, and others: nor were there leſs in the place when the allies came before it in the year 1707.

Hieres, is a pretty little town, ſituated near the ſea, about 3 leagues to the eaſtward of Toulon, which gives its name to the iſlands that lie oppoſite to it in the Mediterranean. It is conſiderable at preſent on account of its excellent ſalt, made both from the ſea-water and ſalt pools.

Antibes, is one of the moſt antient towns in Provence, ſituated on the ſea-coaſt, about 3 leagues S. W. of Nice, conſiderable on account of its port, and antiquities: it has alſo a pretty ſtrong citadel for its defence.

FRENCH *Netherlands*. See *Netherlands*: alſo ſee *Lorrain* and *Bar*.

FRENCH *Iſlands*. To begin with thoſe of Provence; there are firſt thoſe of St. Margaret and St. Honorat; ſecondly, the Hieres; and, thirdly, thoſe of Marſeilles. The iſles of St. Margaret and Honorat lie a little to the ſouthward of Antibes, which, with Cape Garoupe, form a noble road, called the Gourjean, where there is excellent anchorage. The iſle of St. Margaret lies 3 leagues to the S. E. of Cannes, being a mile in length, and a quarter of one broad; defended by three forts, and was known to the ancients by the name of Leras.

The iſland of St. Honorat, formerly Lerina, is a little iſland ſeparated from St. Margaret's by a channel, a quarter of a league over, and is defended by a great tower.

The iſlands of Hieres lie S. E. of Toulon, forming, with the oppoſite ſhore, one of the fineſt roads in the Mediterranean; being about 10 leagues long, and 6 broad; which is uſually the place of rendezvous for the royal navy. Theſe iſlands are three in number; the iſland of Porquerolle, the iſland of Portecroz, and the iſland of Levant. That of Porquerolle was called by the antients Proten, and is about four miles in length, and one in breadth. The iſland of Portecroz, known to the antients by the name of Pomponiana, and Alſen, lies ſix miles to the eaſtward of Porquerolle, and has a caſtle of the ſame name, ſituated on a rock. The iſland of Levant lies the moſt eaſterly of any of them, being four miles in length and one in breadth.

The iſlands of Marſeilles lie a little to the ſouthward of that city, and are three in number; If, Ratoneau, and Pomegues. The iſle of If took its name from the yew-trees which grew there; the word If, in the French language, ſignifying a yew-tree; where there is a caſtle in the middle, well furniſhed with artillery. The iſle of Ratoneau is a dry barren rock, about a mile and a half in length, and half a one in breadth, having a fort on the top of it. The iſle of Pomegues is almoſt as large as Ratoneau, and defended by a large tower.

Iſlands

Iſlands of the province or government of Aunis.

The iſle of Rhé, or Ree, lies five or ſix miles to the weſtward of Rochelle, being four or five leagues in length, and one and a half in breadth; producing plenty of wine and ſalt; tho' the wine is but indifferent, and ſerves chiefly to make brandy and ſtrong waters. They have neither corn, graſs, or trees upon the iſland; which, however, is populous, and ſtands very advantageouſly for a foreign trade: the chief town is that of St. Martin's, beſides which there are five or ſix pariſhes.

The iſle of Oleron lies two or three leagues to the ſouthward of Rhé, and as much to the weſtward of the continent, being about five leagues in length, two in breadth, and twelve in circumference; containing 6 pariſhes, and ten or twelve thouſand inhabitants. It is defended by a caſtle ſituated on the eaſt part of the iſland, and ſome other forts. The natives had formerly a great reputation for their ſkill in navigation; in conformity to whoſe cuſtoms it was, that Queen Eleanor, Dutcheſs of Guyenne, made thoſe conſtitutions relative to ſea-affairs which obtained the title of the laws of Oleron, and became a model for all other maritime powers on the ocean, as thoſe of Rhodes were in the Mediterranean, in the time of the Romans. Upon each of theſe iſlands of Rhé and Oleron, there is a pharos, or light-houſe, for the direction of mariners in the night. The ſoil of Oleron is very fruitful, producing corn and wine in abundance; beſides which the natives make great quantities of ſalt from the ſea-water.

Iſlands of Britany.

Belle-Iſle lies about ſix leagues S. W. of the continent of Britany, being ſix leagues in length, and two in breadth; but it is almoſt encompaſſed with rocks, which make it of difficult acceſs.

There is a pretty good road to the northward of the iſland, defended by forts and other works, in which there is always a good garriſon; and here the French fleet uſually rendezvous before they put to ſea. The moſt remarkable places upon it are the pariſhes of Zauzan, Palais, Locmaria, and Bangor.

The iſland of Uſhant, or Oueſſant, lies four or five leagues to the weſtward of Conquet, being about eight miles in circumference: there are ſome little villages upon it, and a caſtle for its defence. There are alſo a great many other leſſer iſlands near it, which, from the larger, have obtained the name of the iſles of Uſhant.

For the iſlands adjacent to Normandy, ſee Great *Britain*, and *Britiſh* Iſlands.

France, ſituated in a pleaſant climate, is generally very fertile, being productive of every thing neceſſary to life, and many delicacies. Scarce any metals are found in France; but this is ſufficiently made amends for, by the induſtry of the inhabitants, and folly of foreigners: for their manufactures, eſpecially ſince the eſtabliſhment of that for ſilk, by Henry IV. have brought great quantities of money into the kingdom. It has been calculated, that France receives annually from foreigners 40,000,000 of livres, or 1,625,000 l. ſterling for ſilks; 15,000,000 or 609,375 l. ſterl. for wines; 10,000,000 or 406,250 l. ſterling for ſalt; 5,000,000, or 203,125 l. ſterling for brandy, and ſo in proportion for the reſt of its commodities. It has been affirmed, that the yearly exports from France to England, exceed in value thoſe from England to France, above a million ſterling: and it is notorious, that great part of the treaſure from the Spaniſh Weſt Indies comes into France: however, maritime affairs were ſo neglected by the French, that, notwithſtanding the ſeamen were all regiſtered, and obliged to ſerve in the royal ſhips when called upon, no fleet could be fitted out equal to that of Great Britain or Holland.

The crown of France, conſidered in the extent of country, in the number of people, in the riches of its commodities, in the revenues of the King, the greatneſs of the land-forces, and the augmentation of the marine, the number and bravery of their officers, and the conduct of their miniſters, may appear to be deſigned for greater atchievements and empires than have been ſeen in Chriſtendom ſince that of Charlemagne. The preſent greatneſs of this crown may be principally derived from the fortune it has had of two ſuch great miniſters as Richlieu and Mazarine ſucceeding one another, between two great Kings, Henry IV. and Lewis XIV. ſo as during the courſe of one inactive life, and of a long minority, that crown acquired a great deal of ground both at home and abroad, inſtead of loſing it, which is the common fate of kingdoms upon thoſe occaſions. The latter greatneſs of this crown began in the time of Lewis XI. in 1477, by the ſpoils of the houſe of Burgundy, and the diviſions of the princes, which gave that King the heart of attempting to bring the government, as he called it, *hors de page*, or to be free, being before controuled by their princes, and reſtrained by their ſtates; as alſo, in point of revenue, kept within the bounds of the royal demeſnes, and the ſubjects voluntary contributions. It is unneceſſary to obſerve, by what difficulties and dangers to the crown this deſign of Lewis was purſued by many Kings, like a great ſtone forced up a hill, and, upon every ſlacking of either ſtrength or care, rolling a great way back, often to the very bottom of the hill; and ſometimes with the deſtruction of thoſe that forced it on, till the time of Cardinal Richlieu, who ſucceeded in eſtabliſhing the arbitrary power at preſent ſo deſpotically great in France.

Though Lewis XI. firſt laid the foundation of that abſolute power, which the French monarchs have ſo illicitably enjoyed; it was Henry IV. who effectually attempted to put in execution the ſchemes of Francis I. and to increaſe his power by the aſſiſtance of trade: it was this prince who eſtabliſhed the manufacture of ſilk; he encouraged Nicholas Cadeau in raiſing, and bringing to perfection, the woollen manufacture of Sedan; and he aſſiſted Joſſe Vanrobais in forming that of Abbeville, whereby France no longer envies the beautiful cloths of England, Spain, or Holland. Lewis XIV. made conſiderable improvements in every branch of trade, but particularly in the woollen manufactures, wherein he was aſſiſted by the zeal and abilities of that great miniſter John Baptiſt Colbert; and for which he aſſigned the annual ſum of a million of livres, or 40,625 l. ſterling. The whole life of Lewis XIV. was a continued and vigilant protection of commerce and navigation; in which he was imitated by the miniſters he had choſen for this important direction, and whom he alſo encouraged not only with repeated favours, but alſo ſupported againſt the ſtruggles of envy and emulation. He made ſeveral very ſalutary proviſions for the regulation and encouragement of commerce; as alſo for the increaſe and ſecurity of the royal navy. Though he poſſeſſed many good ports in the ocean, moſt of them large, abounding with ſeamen and other inhabitants; however, for a place to fit out, lay up, and winter the ſquadron for the ocean ſervice, he made choice of, and improved, the harbour of Breſt, where there was very little trade, and no great number of people; on which account men of war might be there fitted out with leſs difficulty, and more expedition, a conſiderable ſaving made in the purchaſe of materials, and other charges occaſioned by a great fleet; beſides, it was a great convenience to its officers, mariners, and ſailors, in reſpect to their maintenance, lodging, and other neceſſary articles. Some men of war were alſo fitted out in the port of Rochfort; but it was not ſo much with a view of laying them up there in the winter, as to take advantage of its fine docks, and convenient ſituation for materials; for, in this place, there is alſo much leſs trade than in any of the other cities upon that coaſt. Among others in the Mediterranean there are the two remarkable ports of Toulon and Marſeilles, ſituated on the coaſt of Provence, a very fruitful country, diſtant from each other but 8 or 9 leagues; which have equal advantages to recommend them to an inland, as well as foreign trade: however, Lewis XIV. favoured, and made Marſeilles a mart for the Levant, by the reſidence of a conſul, who is ſtill maintained in that city; though he made choice of Toulon only for a port to lay up, and fit out, his ſecond naval ſquadron; keeping alſo the ſame ſeparate from the other, for the very reaſons he had for employing it in the ocean: nor could it be ſaid, that he had found at Breſt and Toulon ſpacious and ſafe ports, for he improved and changed them ſo much, by conve-

ng conſiderable tracts of land into ſea, and ſea into and, beſides other vaſt works, that, it is aſſerted, they coſt him as many millions of livres as if he had made thoſe very ports anew, and as perfect as they are; and Monſieur de Vauvre, intendant of the marine, has ſaid, that the regular pay of the French naval armaments, during the war which ended at the peace of Ryſwick, was 18 millions of livres, or 731,250 l. ſterling yearly. Though the French galleys were laid up in winter, as they are at this time, in the port of Marſeilles, they did not occaſion any conſiderable obſtructions to trade; both as the fitting of them out was a thing of no great labour, or expence; and as moſt part of their hands conſiſt of criminals condemned to them, and who live on board, upon coarſe ſcanty diet; beſides, whilſt they are in port, it is cuſtomary for moſt of them to work conſtantly in the manufactories of rigging, and other naval ſtores, for the uſe of the galleys, and the ſhips of war; as alſo upon ſeveral other fabrics eſtabliſhed there. Nor did Lewis XIV. make it ſo far his only meaſure to keep his naval armaments ſeparate, and diſengaged from the concourſe, ſcarcity, and difficulties, trading towns are liable to, that he made choice of diſtinct ports, and at firſt ſettled other proviſions; but all thoſe that followed, during his long and happy reign, were uniform, and agreeable to this maxim: it was his conſtant care to prevent commerce from extending itſelf very much in thoſe places which he had ſet apart for fitting out, and laying up his ſhips of war, at the ſame time that he cheriſhed it in other cities, as may be ſeen in the many edicts and ordinances, which are collected in the French books, containing rules and proviſions made in favour of trade in that kingdom.

It may be neceſſary to ſhew how this great monarch, who ſo well knew how to gain his purpoſes, planned, and put in execution, his noble proviſions in this important affair; the origin and main ſpring of the vaſt power, riches, and ſtrength, his kingdom acquired, and which proved him ſuperior to all the great princes whoſe names are regiſtered in his palace, or tranſmitted down in the genealogy of his anceſtors. By the tariff of 1664 his moſt Chriſtian Majeſty laid a duty of 70 livres, or 2 l. 6 s. 17 ½ d. ſterling, upon the importation of 30 yards of Spaniſh cloth, and 40 livres, or 1 l. 12 s. ſterling, upon a piece of 25 yards of cloth from Holland or England; though, at the ſame time, he permitted 30 yards of French cloth to be exported upon paying only 20 ſols, or 9 d. ſterling: ſilk ſtockings exported paid only 2 *per cent.* but 20 *per cent.* when imported. By an arret in 1701, the duty on exporting linens of Marigny, and other parts about Coutance in Normandy, was reduced to leſs than 1 *per cent.* becauſe a larger duty was a diſcouragement to the trade in this commodity at Cadiz, for the Indies.

It was repreſented to the King, by his royal council of commerce, that it would be an effectual means to encourage and enlarge the commerce of his ſubjects, as well as the fabrics of the kingdom; and, at the ſame time, favour the exportation of their own manufactures, provided the duties upon the exportation of ſome of the principal commodities, that ſhould be manufactured in his dominions, were entirely taken off, and thoſe upon others reduced lower; it being certain that ſuch indulgencies, and abatements, far from turning out to the prejudice of the royal revenues, would conſiderably augment them, from the greater quantities of merchandiſe ſent abroad, by means of this exemption from the duties upon exports, which would cauſe a greater conſumption of materials, whoſe duties upon importation would be conſiderably augmented, and the revenue that would have been received upon exports be made amends for; and alſo, as the commodities, upon which the duty of exportation ſhould be reduced, would be ſent abroad in larger quantities to foreign parts, this increaſe would yield a revenue equal at leaſt to that of the ſmall quantity before exported, and which paid the higher duties chargeable at that time; upon which conſiderations, the King, by an arret in 1701, ordered that all gold and ſilver tiſſue, ribbons, ſatins flowered and plain, velvets, damaſks flowered with gold and ſilver, and all other gold and ſilver ſtuffs; as alſo plain ſilks, velvets, ſatins, damaſks, taffety, ribbons, and all other ſilks whatſoever, ſhould be exported out of France free of duty: and that ſtuffs made of thread, hair, or wool, mixt with ſilk; cloths, and other ſtuffs of wool or hair, or mixt; linens; and hats, be exported on paying only a moiety of the former duties: it was alſo permitted that paper, white, grey, blue, and other colours; printed books, cards, and paſteboard, ſhould be exported free of duty: and though afterwards, at the inſtance of the farmer-general of the revenue, ſome alteration was made in reſpect to their being exported duty free, the duties upon exportation ſtill remained upon a very moderate footing, ſince many of theſe commodities did not pay 1 *per cent.*

The long, very prudent, and glorious reign of Lewis XIV. has left ſo many, and ſuch illuſtrious examples to future ages, to ſhew how to inſure the ſame ſucceſs he himſelf obtained in the grand affair of commerce, and other policies of civil government, that they are highly meritorious of obſervation. This monarch, in an edict of the year 1664, was lamenting that moſt of his ſubjects were naturally inclined to a lazy inactive life: but the vigour and influence of his government was ſo prevalent, that his ſubjects, as it were changing their nature, ſhook off their indolence, ſhewing themſelves to be the moſt active, ingenious, and laborious people in Europe; particularly in manufactures, commerce, and navigation. The King, finding by experience, that nothing could contribute to the proſperity of his ſubjects like trade, reſolved to make it his principal concern to revive and improve it: therefore, he appointed commiſſioners, in every province, to examine into the debts and charges upon every trading company; the condition, management, and diſpoſal of their revenues, and what charges or expences might be remitted: thus, by a thorough acquaintance with their ſituation, he formed general and particular rules to prevent diſorders, eaſe their charges and expence, pay off their debts, and ſettle regular payments for the future, appointing officers of zeal and abilities to do it annually; by which proviſions and relief, the people found themſelves in a condition to improve their commerce.

He inſtituted ſeveral academies, under the direction of able engineers, for the inſtruction of youth in coſmography, the art of navigation, and the other branches of mathematics, which have a reference to war either by ſea or land; not omitting the architecture, or building of ſhips. He cauſed very preciſe and well-adjuſted ordinances, to be drawn up, for the ſervice, diſcipline, polity, pay, and fitting out of his fleet; the building of his ſhips; the government and preſervation of the ports; as alſo for the eſtabliſhment and direction of the arſenals, docks, and magazines: he alſo gave ſtated rules for the navigation, freights, contracts, polity, fitting out, and other concerns of merchantmen; the form of trafficking in them; and deciding all their cauſes and diſputes, in theſe, or any other points, by a ſhort proceſs. He invited and encouraged the nobles, either ſingle or in partnerſhip, to embark in trade as merchants, by ſea and land, declaring that it ſhould never be any imputation on their honour. He formed an independent general council of commerce, conſiſting of miniſters and others of great experience and credit in trade; which council was convened every 15 days in his preſence: for at Roan, Lyons, and other cities of large trade, he inſtitituted particular aſſociations of perſons ſkilful in this affair, in which was debated by men of experience upon the ſpot, and granted, every thing that favoured its improvement, according to the ſituation and advantages of each city and province: and an account was tranſmitted to his Majeſty of every thing they reſolved upon, as well as what occurred to them; which the King ordered to be examined in the general council of commerce; and, by this univerſal knowledge of the conſtitution of every one of his provinces, and the opinions of the moſt experienced men in all the kingdoms aſſembled together, and members of that council, he formed his decrees for the recovery, enlargement, and preſervation of trade in general, both at home and abroad, with an eye particularly to its manufactories; ordering the governor-general of the provinces, the intendants, and trading companies of the principal cities and towns, to encourage and pro-

tect all merchants and traders, by adminiſtring juſtice to them in a brief manner, in preference to all others, that they might not be drawn away from their buſineſs by the chicanery and tricks of the law: he alſo, by circular letters, encouraged all merchants and traders to apply directly to his Majeſty in every thing that ſhould occur to them: he invited them alſo to depute certain perſons of their own body to be near his royal perſon, and repreſent to him their complaints and propoſals; and, in order to render more effectual theſe proviſions, and ſecure the continuance of them, he appointed a miniſter for this purpoſe to be about his perſon, with a charge to hear their grievances, and ſolicit inſtantly the meaſures they ſhould ſtand in need of: beſides, in each of the ſeveral places where he uſed to reſide, he erected a court of commerce, where they might aſſemble and conſult about trade. He likewiſe appointed men of abilities, and fidelity, to be inſpectors, who were to uſe the utmoſt care and vigilance that all manufactures of ſilk, wool, cotton, and other fabrics, ſhould have the goodneſs, weight, quality, and other circumſtances preſcribed by his ordinances. So that Lewis XIV. added to his conqueſts, plenty and riches in the kingdom, making the commerce of the French flouriſh in all the four quarters of the world.

However, the perſecution of the proteſtants ſeems to throw a ſhade over all the luſtre of this great monarch: the conſtable Luynes firſt projected their fall, which was proſecuted by Richlieu, as his ſcheme was followed by Mazarine; but Louvois exceeded them all; for he projected and executed the deteſtable deſign of their extirpation; which was begun by dragooning them into apoſtacy; and completed by the revocation of the edict of Nantz, on the 22d of October 1684, the moſt open and ſcandalous breach of public faith that ever was committed: however, as unjuſt and inhuman as this act was, conſidered in the light of a religious perſecution, it fell every way ſhort of the imprudence thereof, when conſidered in a legiſlative light; and, therefore, did equal injury to its authors in their characters, as men of rank and conſideration in the court of the moſt Chriſtian King, as well as politicians of great penetration, and miniſters of long experience: for, by this means, 800,000 perſons were driven out of the kingdom, and obliged to take ſhelter in foreign countries; which, though in itſelf a prodigious debilitation to the ſtate, yet was much more ſo from the temper and employment of the perſons thus expelled, who were, for the general part, merchants, manufacturers, or officers of the middle rank in the land and ſea ſervice, being the moſt induſtrious and uſeful people in the kingdom. It may be eaſily conceived from hence, that the trade and manufactures of France ſuffered extremely; and a clear notion may be had of the miſchiefs reſulting from this important ſtep, when it is conſidered that theſe people carried out of the kingdom 5 millions ſterling in ready money, plate, and jewels: yet, groſs and apparent as this error was, ſuch was the meanneſs and ſervility of the French nation, that the King was complimented upon it, as on the moſt glorious action of his reign.

Many are the advantages of France with reſpect to trade; but the principal is, the ſubordination of the common people; for, by this means, the manufacturers are always kept induſtrious; they are not inclined to drunkenneſs, nor dare they run into ſhocking lewdneſs and debauchery, as in England: the law obliges all unmarried men to ſerve as common ſoldiers in the militia and the army, unleſs they have particular exemptions on account of their ſtations and profeſſions, whereby they raiſe up large families to labour, and keep down the price of it; and, conſequently, by working cheaper, enable the merchant to ſell the cheaper. The rules and regulations they are obliged to obſerve in manufacturing their goods, and expoſing them to ſale, is a great advantage to the credit of their manufactures: becauſe, all ſorts of goods for exportation muſt undergo an inſpection of the proper officer, in the public hall, where they are compared with the patterns or ſamples delivered in before; when the bad, and ſuch as do not anſwer to their ſamples, are confiſcated, with a fine levied upon the offender: by which means, the fraudulent deſigns of private traders, who would get rich at the public expence, are prevented, and the [illegible] manufactory conſtantly kept up in high credit. The neighbourhood to Spain, and preſent connection with it, is of ſo great advantage, as to be worth all their trade beſides; for it is certain they get more from the Spaniards than all the trading nations in Europe: becauſe, the poor from Perigord, Limoſin, and other places, go yearly into Spain to reap their corn, and gather in their vintage, carrying back what they have earned to ſpend in France: the fiſhermen from Bayonne, and the neighbouring places, ſupply the Spaniards with great quantities both of freſh and ſalt fiſh, to eat on feſtival days, and to keep lent: the pedlars and ſhopkeepers in Spain are generally French, who retire into their own country when they have made their fortunes: the towns of Languedoc ſupply them with cloth, ſilks, and ſtockings; Rouen with hats, and coarſe linen ſtuffs; Abeville with ſuperfine cloths; Amiens and Arras with worſted and camblet ſtuffs; and Lyons with all ſorts of rich ſilks, gold and ſilver lace, and embroidery, for their conſumption both in Europe and America: ſo that the greateſt part of the produce of the mines of Potoſi is brought into France, which occaſions their payments to be all in ſilver; for gold is more ſcarce in France, in the currency of coin, than ſilver is in England, which is a plain proof that the French have the great trade to Spain, as the Engliſh have to Portugal. Their addreſs in drawing raw materials from other countries, to work up in France, ſerves greatly to enlarge and extend their trade; for though France produces ſome wool and ſilk, it is not a fourth part of what they manufacture: becauſe they import wool from Barbary, the Levant, and Spain; they alſo bring this commodity from Switzerland; ſome is run from England, and great quantities from Ireland: the beſt of their raw ſilk they draw from Piedmont, Italy, Spain, and the Levant: their cotton is brought from the Levant, and their ſugar colonies; and the aſhes for making ſoap at Marſeilles, are chiefly imported from Egypt. Beſides, they reap inexpreſſible advantages, by the permiſſion and encouragement given to foreign merchants and manufacturers to ſettle among them; for, by this good policy, the price of labour is always kept ſufficiently low, and a competition and emulation are raiſed, who ſhall work and ſell the cheapeſt, which muſt turn out greatly to the national advantage, though it may not be ſo favourable to the private intereſt of individuals: for theſe reaſons, the government is particularly gentle and indulgent to foreigners; and the ſituation of the country is greatly aſſiſtant to this diſpoſition of the government; becauſe France is ſurrounded with populous, that is, prolific nations, who have no trade and manufactures of their own to employ their poor; which makes Flanders, all Germany on the ſide of the Rhine, Switzerland, Savoy, and ſome parts of Italy, pour their ſupernumerary hands every year into France, where they are received into the army, or the manufactures, according to their inclinations.

However, there are ſome great diſadvantages attending the commercial intereſt of France; the firſt of which ariſes from the deſpotical and arbitrary power of the government; and, therefore, ſuch as a merchant would not chuſe to live under, were he acquainted with the ſweets of liberty in another country, and had no attachment of family or intereſt to keep him in France: for though his property, generally ſpeaking, is ſecure enough, yet his perſon is not ſo: becauſe, though there are eſtabliſhed and ſtated laws, in France, to decide all caſes of property, and criminal cauſes, as in England; ſo that a man may know the rules he is to be governed by in thoſe reſpects, and can have an open trial for his life and fortune: yet there are no laws to aſcertain the nature of political offences, or to circumſcribe the power of the judge; which ſubjects the merchant entirely to the mercy of the Lieutenant de Police, and his deputies; who can impriſon him at will, without aſſigning any reaſon, or bringing any evidence to confront him: therefore, his only ſecurity conſiſts in being continually laviſh in the praiſe of the King and the miniſtry; and in ſaying nothing which may afford the leaſt pretence to the ſpies, who ſwarm all over the kingdom, to inform againſt him. The ſecond diſ-

advantage

dvantage to the freedom of trade, is the Romiſh reli-
gion; though the bigotry of the court of France is not
near ſo great as it was in former times. Another great
burthen, and conſequently a diſadvantage to the trade of
France, is the great number of religious of both ſexes;
the loweſt computation of theſe amounting to 300,000
perſons. A fourth diſadvantage, is their numerous
and poor nobility. A fifth inconveniency ariſes from
the nature of the taxes, which, in ſome provinces,
are arbitrary; in others heavy, and in all oppreſſive to a
ſpirit of induſtry. The French alſo ſuſtain ſome diſad-
vantages by their monopolies and excluſive charters: be-
ſides, they labour under no ſmall difficulties on account of
the expence they are at in the article of ſhipping; for
they have more men to navigate their ſhips than the
Engliſh, becauſe they are not ſo expert ſailors; they muſt
carry ſome ſupernumerary landmen; and they muſt have
many officers to govern theſe men, becauſe the merchant
is to be reſponſible for them when the ſhip returns: add
to this, that the officer belonging to the marine in France,
will find ways and means to occaſion great trouble to the
merchant, both as to the choice of ſailors and of officers,
unleſs he is properly conſidered; which is generally done
by purchaſing ſome ſhip ſtores of himſelf, or his friends, at
an exorbitant price.

In reſpect to the intereſts of France, the nature of the go-
vernment, and the views which the court propoſes to it-
ſelf, ought only to be conſidered; ſince theſe are very dif-
ferent from, or, to ſpeak the truth, directly oppoſite to,
the true intereſt of the nation: for conſidering the ſoil,
climate, and ſituation of the country, with the number
of its inhabitants; as they have no reaſon to fear, ſo they
have no cauſe to diſturb their neighbours; by whom, if
they apply themſelves induſtriouſly to manufactures at
home, and to foreign trade, they might be exceſſive
gainers; and, as the ſeveral provinces of the kingdom are
full of great towns, they might be all rendered populous
and rich, as well as the country about them. A govern-
ment, therefore, that conſulted the good of the people,
and the general benefit of its ſubjects, would labour to
preſerve tranquility, and be aſſiduous in cultivating the
arts of peace; which, perhaps, would tend as much to
increaſe the power, and fix the ſecurity, of ſuch a go-
vernment, as the contrary meaſures have tended to
ſtrengthen and aggrandize that abſolute monarchy, which
has been erected on the ruins of the French conſtitution
by the houſe of Bourbon. If there were any certain
height where the flights of power and ambition ought to
end, it might be imagined, that the intereſt of France
ſhould be only to conſerve its preſent greatneſs, ſo feared
by its neighbours, and ſo glorious in the world: but, be-
ſides that the motions and deſires of human minds are end-
leſs, it may perhaps be neceſſary for France, from re-
ſpects within, to have ſome war or other in purſuit abroad,
which may amuſe the nation, and keep them from re-
flecting on their condition at home, hard and uneaſy to
all but ſuch as are in charge, or in pay from the court:
for it may be improper to ſay miſerable, the term uſually
given it; becauſe no condition is ſo, but to him that
ſeems it ſuch; and if a peaſant of France thinks of no
more than his coarſe bread and onions, his canvas cloaths,
and wooden ſhoes; labours contentedly on working-days,
and dances or plays merrily on holydays; he may, perhaps,
live as well as a boor of Holland, who is either weary of
his very eaſe, or whoſe cares of increaſing his wealth
waſte his life in toils at land, or dangers at ſea; and, pro-
bably, fool him ſo far, as to make him enjoy leſs of all
mind in his riches, than the other in his poverty.

French America.

In treating of this ſubject it will be neceſſary to begin
with the commerce the French carry on in their American
iſlands, and afterwards proceed to that of their colonies
on the continent.

French American Iſlands.

Under this denomination are uſually comprehended
thoſe Antilles or Caribbee iſlands, of which the French
are in poſſeſſion: as alſo their part of Hiſpaniola, and
Tortuga. The iſle of Anticoſte, Cape Breton, and
Cayenne, may alſo be added: but the two former have
ſuch a connection with Canada, that it is not eaſy to ſe-
parate them; and as for the latter, tho' it is called an
iſland, upon account of the interpoſition of the river
Cayenne, yet, in reality, it conſtitutes a portion of the
ſouthern American continent. See *Caribbee* Iſlands.

The *Caribbee* iſlands are ſituated under the torrid zone,
taking them from the 11th degree of the equator to the
18th northwards, being 28 in number, whereof the
French poſſeſs 8: but, before the treaty of Utrecht,
in 1713, they were alſo maſters of one half of St. Chri-
ſtophers, which was ceded to the Engliſh by the 12th
article of that treaty.

Martinico is the moſt beautiful, moſt opulent, and moſt
flouriſhing of all the colonies the French have in theſe
iſlands.

Guardeloupe, or Guadelupe, is alſo very conſiderable;
but much inferior to Martinico.

Deſeada, or La Deſirada, Marigalante, or Maria Ga-
landa, Granada, or Grenada, and St. Bartholemew, come
after; yielding in different degrees of goodneſs and fertil-
ity to Guardeloupe.

Laſtly, the leaſt of all are St. Martin, and St. Croix, or
Cruz, which the French poſſeſs in common with the
Dutch.

Upwards of 200 French ſhips trade to theſe iſlands; and
it is no extraordinary thing to ſee 80 merchant-veſſels be-
fore Martinico. Theſe ſhips are uſually between 100
and 250 tons; which are preferred to thoſe of a larger ſize,
becauſe they are not ſo long in taking in their freight.

The ſeaſon for the departure of theſe ſhips from France, is,
from September to February; becauſe, tho' the navigation
for the French American iſlands might be performed at any
time, it is adviſeable to avoid the ſtorms that rage in theſe
iſlands during the months of July, Auguſt, and Septem-
ber; beſides the ſhips which depart in the months of Octo-
ber, November, December, and January, arrive at the
iſlands preciſely in the ſugar harveſt, which is the prin-
cipal object of this commerce.

Tobacco, for a conſiderable time, made the greateſt traf-
fic of theſe iſlands; but at preſent ſugar has the aſcendant,
tobacco being only cultivated there, eſpecially at Marti-
nico, for the conſumption of the country.

The other commodities brought from thence are indigo,
cocoa, rocou, cotton, ginger, caſſia, pepper, confects,
ſome medicinal gums, hides, tortoiſe-ſhell, and wood for
dyeing and inlaid work, ſuch as roſe-wood, Indian-wood,
brazil, fuſtick, and green ebony.

It is computed that Martinico furniſhes, one year with
another, about 5,500,000 lb. of ſugar: Guardalupe 4
millions: Marigalante between five and ſix hundred thou-
ſand pounds; and Granada and St. Croix, four or five
hundred thouſand between them: the other iſlands culti-
vate tobacco, and ſome of them nothing but pulſe, where-
in they carry on a pretty good trade at Martinico, St.
Kit's, and Guardalupe.

Before the eſtabliſhment of the French Weſt India com-
pany, in 1664, the European French reaped little or no
advantage from the flouriſhing commerce of thoſe colo-
nies; the Dutch having almoſt entirely engroſſed it to
themſelves: when Fluſhing and Middleburg ſent the
richeſt cargoes to Martinico, and employed yearly up-
wards of 100 ſhips in that trade.

The company's excluſive privilege having diminiſhed this
foreign commerce; the merchants of Rochelle, Bour-
deaux, Rouen, St. Malo, and Nants, even thoſe of
Marſeilles and Toulon, took a liking to theſe voyages,
for which it was no difficult matter for them to obtain
paſs-ports; and the company's privilege being revoked at
the expiration of eight or ten years, the whole commerce
remained to the French; which, notwithſtanding the
long wars of Lewis XIV. that frequently interrupted it,
is now one of the moſt opulent and flouriſhing that France
exerciſes in her ports on the Ocean and Mediterranean.

The commodities ſent by the French to theſe iſlands con-
ſiſt in all that is neceſſary for the nouriſhment and main-
tenance of the inhabitants, the culture of land, and the
employment of negroes; but they are different, according
to the ports of France wherein they are freighted.

If the ſhips are ſent from Rochelle or Bourdeaux, the
cargo

cargo is in beef, ſalt-pork, corn, brandy, Rochelle and Bourdeaux wines; ſometimes Madeira wine, taken in on the voyage, though its importation is prohibited in the French colonies; ſalt-cod, herrings, oil of olives, cheeſe, butter, ſoap, iron, linen-cloths, merceries, and hard-ware.

The Rouen ſhips take there all manner of cloathing for men and women: but Marſeilles and Toulon furniſh oils, olives, dry fruits, wines, and ſome ſlight ſtuffs of the manufacture of Provence.

'Tis computed that, one year with another, there are exported, from France, for theſe iſlands, to the value of four millions of livres, or 162,500 l. ſterling, in theſe manufactures and commodities; and that this return is near ſeven millions, or 284,375 l. ſterling.

The French of Canada alſo carry on a conſiderable trade with the iſlands, furniſhing them with the greater part of the cattle they have an occaſion for, beſides corn, pulſe, dry fiſh, and carpenters timber: for which they take ſugar, tobacco, and the other produce of the iſlands: all this commerce, as well as that of the European French, being moſtly carried on by exchange.

'Tis likewiſe by exchange that the trade of negroes is tranſacted; which is both conſiderable in itſelf, and neceſſary for others, becauſe agriculture, and the ſugar works, and plantations, are incapable of being ſupported without theſe unhappy ſlaves, with which the African companies, now incorporated with the great French India company, have continued to ſupply the iſlands.

It has been already obſerved, that Martinico is the chief, and, as it were, the capital of the French iſlands: but to give a juſter idea of an iſland ſo celebrated for commerce, a few particulars are inſerted here regarding its trade, which has made it the reſidence of the governor-general and intendant of the iſlands, as alſo the ſeat of a ſovereign conſul, whoſe juriſdiction extends to the other Antilles iſlands; as alſo to St. Domingo and Tortuga.

Martinico is about 18 leagues in length; its breadth is unequal, and its circumference 60 leagues.

In the creeks of this great extent of coaſt the iſland has three ports; Le Carmage, Fort St. Peter, and the Culde-ſac of the Trinity, where ſhips are ſecure in all the three; but Fort St. Peter has almoſt the whole trade; the King's farmers holding their offices there; the African and Senegal companies, with the richeſt merchants, alſo keep ware-houſes there, and the French privateers make it their place of rendezvous in time of war.

At preſent upwards of 10,000 whites, and near 20,000 negroes are computed to be in the iſland; which laſt are employed in the ſugar manufactures, as alſo in the culture of indigo, cocoa, rocou, cotton, and tobacco.

There are 300 mills for the ſervice of the ſugar plantations; and the refining of ſugars has now got footing in moſt of the French iſlands.

Guardalupe, is ſituated about 30 degrees N. of Martinico, and almoſt as much S. of Antegoa. It is ſaid to be the largeſt of all the Caribbee iſlands, being 22 leagues in length, and half as much in breadth at each end; but almoſt cut in two by a deep gulph or bay on each ſide; ſo that the ends are joined together by a very narrow iſthmus, and the whole circumference is about 50 leagues.

The French began to ſend colonies to this iſland about the year 1632; but knew ſo little what the ſoil was good for then, that for many years they were in danger of ſtarving; and afterwards the planters, by their diviſions, almoſt ruined one another; for though they had 1500 men bearing arms, and about 8000 negroes of both ſexes, the country became depopulated: ſo that this iſland did not make any great figure till the preſent century; ſince the beginning of which it has been repeopled, and ſo far increaſed as to make more ſugar now than any of the Britiſh iſlands, except Jamaica.

Deſeada, or *Deſirada*, the deſireable iſland, was ſo called by Columbus, becauſe it was the firſt land he diſcovered in his ſecond voyage to America, in the year 1493. It is ſituated in 61 deg. of W. lon. and 16 deg. 30 min. of N. lat. about 10 leagues N. E. of Guardalupe, being a little inconſiderable iſland, not ſo fruitful as the others which belong to the French.

Marigalante, is ſituated a little to the S. W. of Guardalupe, being about 5 leagues in length, and 4 in breadth. It was diſcovered by Columbus, in 1493, who named it Marigalante, or the Gallant Mary, after the name of his ſhip. The French began to ſend colonies here about the year 1647, and having expelled the natives, after ſeveral years war, the French remained in the peaceable poſſeſſion of the iſland; the produce of which is ſugar of the finer ſort, indigo, cotton, and ginger.

Granada, is ſituated about 30 leagues S. W. of Barbadoes, and about the ſame diſtance N. of Caribiana, or New Andaluſia; being 25 leagues in circumference, and having ſeveral good bays and harbours, ſome of which are fortified. It is eſteemed a fruitful ſoil, and well watered, producing ſugar, rocou, cotton, caſſet, and excellent indigo. There are alſo abundance of very ſmall iſlands, that lie at the N. end of Granada, which are called the *Granadilloes*.

St. Bartholomew, is a ſmall iſland about 10 leagues N. of St. Chriſtopher's, which was taken by the Engliſh, under the command of Sir Timothy Thornhill, in the year 1689, but reſtored to the French at the peace of Ryſwick.

St. Croix, or *Sancta Cruz*, is another ſmall iſland, ſituated about 20 leagues E. of St. Chriſtopher's, which has been contended for by the Engliſh, Dutch, Spaniards, and French; but is now in the peaceable poſſeſſion of the French Weſt India company.

St. Martin's, is another iſland of no great conſequence, belonging to the French, ſituated a little to the N. W. of St. Bartholemew.

But what has been ſaid of Martinico may ſerve for both the other iſlands, which, in proportion, produce the ſame commodities, and enjoy the ſame trade.

Hiſpaniola, or St. Domingo; and Tortuga.

The iſland of *Hiſpaniola*, as will be remarked in treating of the commerce of the Spaniſh American iſlands, is divided between the crowns of France and Spain; and as mention is made in that place of the part poſſeſſed by the Spaniards, as alſo of its trade, and all that regards the diſcovery, ſituation, riches, and productions of the iſland in general, the French part, which generally goes under the denomination of St. Domingo, and the various commerce thereof, is only to be diſcuſſed here; together with ſome occaſional remarks concerning the flybuſters, or freebooters, who ſeemed to have made choice of this iſland, and that of Tortuga, for their general rendezvous.

The French who firſt came to the iſland of *St. Domingo*, and eſtabliſhed themſelves there, came from St. Chriſtopher's, from whence they were expelled by the Spaniards, but rage, and deſire of revenge, for being diſturbed in their infant colony, firſt united them to the Dutch, who made ſome incurſions on the Spaniards, their common enemy; and their numbers increaſing by ſeveral ſuccours from France, theſe firſt adventurers went in queſt of a proper place for preſerving their booty, and giving them a retreat when they could not well weather it out at ſea.

The iſland of *Tortuga*, ſituated in 73 deg. of W. lon. and 20 deg. of N. lat. and three quarters of a league from the N. coaſt of Hiſpaniola, ſeemed to them convenient for the execution of their deſign; whereupon they took poſſeſſion of it, after having expelled about thirty Spaniards. This iſland, about 16 leagues in circumference, was divided between the adventurers, who diſtributed themſelves into three bands: the firſt applied themſelves to hunting, whence they obtained the name of *buckaneers*; the ſecond continued to cruize upon the Spaniards, and were called *flybuſters*, from the Engliſh fly-boat, which they imitated in their ſailing: and the laſt, addicting themſelves to tillage, were called *planters*, a common appellation to all thoſe that compoſe the American colonies, whoſe cultivated lands are called *plantations*.

From among theſe three bands the planters remained in Tortuga; the buckaneers paſſed over to St. Domingo, and the flybuſters kept the ſea; the laſt returning now and then to Tortuga, to divide their ſpoil with the two others; one of which ſupplied them with all kinds of fleſh; and the other with ſeveral proviſions, either in gumes or cattle, which they cultivated and reared in the iſland.

This ſmall iſland, which was to people the better part of St. Domingo with French inhabitants, and of which

ventu ers made themſelves maſters in 1635, was for a ng time diſputed by the Spaniards; who, after ſeveral ain attempts to expel the French buckaneers from St. Domingo, ſeemed to conſent to the diviſion of Hiſpaiola, having in a manner abandoned to them all from he Cape de Lobos in the ſouth of the iſland, to the Cape amana northwards; being one half of the iſland, and bout 250 leagues in circumference.

The towns ſubject to the French are, Petit Guaves, hich is a port-town, ſituated in a great bay, at the weſt nd of the iſland, the principal ſettlement the French ave upon it. Leogane, another port in the ſame bay. ort Lewis, a good harbour on the ſouth-weſt part of he iſland. And Cape St. Francis, the moſt eaſterly ſetlement the French have on the north-ſide of the iſland, ear which they have the Fort de Paix. Beſides theſe, here are now a great many more thriving French conies, on the north and weſt parts of the iſland.

When the Weſt India company was eſtabliſhed in France n 1664, and was put in poſſeſſion of the trade of the ſland of Tortuga, and the plantations of St. Domingo, none but the company's ſhips arrived there: however, the free and unconſtrained humour of the French iſlanders, who had ſtill an inclination to their former manner of life, could not brook the reſtraint laid upon them by the company; whereupon the company, not finding its account, abandoned the trade in 1665; and ſince that time all French ſhips are at liberty to trade there.

The reputation of the French colony of St. Domingo, already ſo flouriſhing, was ſtill augmented in 1698, by the eſtabliſhment of a new company, to complete the cultivation of the places where the French had no plantations. The conceſſion contained in the letters-patent given at Verſailles, comprehends all from Cape Tiberon to the river Naybe, both incluſively, three leagues into the land, beginning from the ſea-coaſt throughout this whole breadth.

The principal conditions for the commercial advantage of theſe iſlands were, that the company ſhould be obliged to people the new colony within the term of five years, with 1500 whites, and 2500 negroes; and, after the expiration of the ſaid time, to ſend there annually, during the remaining 50 years of its privilege, 100 whites, and 200 negroes only; without permitting any inhabitant of the French Cape of Leogane, the little Goare, and other places already peopled, to eſtabliſh themſelves in any part of the extent of its conceſſion.

The commodities common to St. Domingo and Tortuga, are tobacco, ſugar, indigo, ginger, rocou, cotton, and cocoa, but eſpecially tobacco. Thoſe proper to St. Domingo only are hides, brazil wood, cedar, and wood for dying and inlaid work; beſides, ſome medicinal plants are alſo found at Tortuga.

The cargoes of ſhips for theſe two iſlands are almoſt the ſame with thoſe for the Caribbees, except ſalt fleſh, which is neceſſary there; St. Domingo abounding in that commodity, and carrying on a great trade therein with the other French iſlands: but, on the other hand, brandy and wines are imported in great quantities, whereof the flybuſters and buckaneers make a conſiderable conſumption. All theſe commodities pay 3 *per cent.* duty of importation and exportation.

Upwards of 40 ſhips are employed in this commerce, without reckoning the ſix ſhips which the company is obliged to keep on footing both in peace and war, for the ſole trade of its conceſſion.

Till the peace concluded at Ryſwick in 1697, the Spaniards always looked upon the new French inhabitants of St. Domingo as uſurpers; and, upon this footing, very frequently attempted their expulſion; but, on the diviſion of this iſland, ſtipulated between the two nations by an article of this treaty, the French remained maſters of the northern and weſtern parts of the iſland, and of a third of thoſe to the ſouth; the Spaniards having only reſerved to themſelves the eaſtern parts, which notwithſtanding makes almoſt an equal diviſion, at leaſt for the coaſts, each nation poſſeſſing about 200 leagues, reckoning from point to point; and near 300, according to the different windings of the ſea.

In all the French parts of this iſland, there are excellent ports, very ſpacious, ſafe, and eaſy to be fortified at little expence; an advantage in which the coaſts belonging to the Spaniards are deficient, wherein there are only a few ports, and ſome indifferent places for landing.

The ports belonging to the French are, to the north, that of Bayaha, not much inhabited; and the port of Cape François, which is the beſt peopled of all their colonies; having, in the year 1700, 900 men bearing arms, and about 2000 blacks of both ſexes.

In the W. N. W. the port of Paix, which is the leaſt of all, and has few inhabitants in it.

In the weſtern part, the port of Little Goare, which is excellent, and well peopled.

Laſtly, in the ſouthern part, there are three very commodious ports; being Port St. Louis, which is well fortified, and inhabited; Port Haquin, from whence this company had been expelled by the Engliſh, who began to eſtabliſh themſelves there in 1692; and the Port Jaemel, where there are alſo ſeveral handſome plantations.

Generally ſpeaking, the lands of St. Domingo are very good; the ſea ſhore is a plain, and, farther up the country, there are ſome mountains; the French reſiding in the iſland being about 4000 families.

Though the Spaniards were almoſt a century in the iſland before the French, yet their colony is far from being as well eſtabliſhed: having 2000 men only that bear arms, and between 5 and 6000 others, including men, women, and children.

The lands poſſeſſed by both nations are almoſt of an equal fertility, though the culture is not equal; the French plantations being in greater number, well planted, and well kept up; whereas thoſe of the Spaniards remain uncultivated, being ſcarce deſtined for any other uſe than the grazing of their cattle, whoſe fleſh ſerves them for food, and their hides for trade; for they ſlaughter yearly to the amount of 30 or 40000 oxen, whoſe green hides they ſell to the Engliſh, Dutch, and French, who give the Spaniards what proviſions and wearing apparel they have occaſion for.

It ſhould be obſerved, to put an end here to whatever regards the Spaniſh colony of Hiſpaniola, that it is more than 30 years ſince the King of Spain, or the European Spaniards, ſent a ſhip to this iſland: all the ſuccours it has are from the continent of America, which conſiſt in one only veſſel ſent annually to the viceroy of Mexico, to pay the garriſon his Catholic Majeſty maintains there, which ſhould be compoſed of 200 men, but ſeldom made up 20 effective ſoldiers.

The firſt plantations which the French eſtabliſhed at St. Domingo, were for tobacco; which acquired ſuch reputation, that the Dutch, and moſt of the northern nations, preferred it to any other kind. But theſe plantations have been abandoned ſince the excluſive farming of tobacco in France, by a miſtake on both ſides, difficult to be conceived; yet it is the cauſe of the entire deſtruction of the tobacco plantations, whoſe trade would actually employ upwards of 100 ſhips, and which it would not be impoſſible to re-eſtabliſh, without any prejudice to the farming of tobacco.

The ſugar of this iſland is greatly eſteemed, and ſells in France ſometimes for 3 and 4 *per cent.* more than that of the Caribbee iſlands. It is true, there was ſome difficulty at firſt in eſtabliſhing the ſugar-plantations, upon account of the too great nouriſhment given to the ſugar-canes by the richneſs of the ſoil; which made them fat, and hard to be purged; but experience has made it appear, that the ſecond or third crop has afforded excellent ſugar. That of the plain of Leogane is in great reputation; and the only thing that can prejudice the ſale of theſe ſugars, is the too great quantity that is made of them.

Indigo has been alſo for a conſiderable time one of the principal commodities of St. Domingo; but the preparation thereof being ſomewhat neglected, renders it worſe than formerly; though, the French ſay, if a little attention was given to its culture, it would equal in goodneſs that of Guatimala on the continent of Spaniſh America, or even that of Agra in the Eaſt Indies.

What at this time ſupports the cultivation of this drug, is the cuſtom of beginning with the planting of indigo and tobacco; which requires few implements, and no great

number of negroes; beſides, the profits are ſo prompt and conſiderable, as ſoon to put the inhabitants in a condition to make ſugar: a thing to which they all aſpire; becauſe it is the principal object of the commerce belonging to the iſland.

Cotton, cocoa, vanilla, rocou, and ginger, are alſo cultivated in St. Domingo, and ſucceed perfectly well; yet made in ſmall quantities, becauſe the inhabitants are chiefly employed in their plantations of ſugar, tobacco, and indigo,

They have alſo made ſome attempts to plant coffee, in which they have had but indifferent ſucceſs.

Rice, potatoes, and all ſorts of French pulſe, grow there in great abundance, and are very good; which may likewiſe be extended to all kinds of herbage, whoſe ſeeds have been brought from Europe.

However, the ſoil is ſomewhat ungrateful to corn and wines; grapes ſeldom arriving there at an exact maturity; and the wheat ſown in the plains bearing ears, of which ſome ripen ſooner than others, and fall as they ripen: the wheat on the mountainous parts is not ſubject to this inconveniency; though, far from holding the failure of wheat and wine as diſadvantageous to the colony, intelligent perſons are of opinion, that the inhabitants of St. Domingo, and the merchants of France, find therein equally their account; becauſe theſe two articles, ſo neceſſary to life, and which France can furniſh abundantly, may be a ſufficient means to keep up a commerce between both.

There are few manufactures in St. Domingo; and perhaps it would be a point of good policy not to encourage ſuch an eſtabliſhment in the iſland.

As to cattle, French authors ſay, there is not any place in the world fitter for rearing them than St. Domingo: thoſe the Spaniards brought there to breed, as ſoon as they made the diſcovery, eſpecially oxen and ſwine, having multiplied in ſuch a manner, that the French buckaneers and Spaniſh hunters, who, with a kind of emulation, ſtrove to deſtroy them, could not accompliſh their deſign. Several of theſe cattle are reared in the plantations, beſides conſiderable flocks of ſheep bearing fleeces of a pretty good quality; ſo that if the colony knew how to uſe this advantage, a good trade could be promoted by the commodities accruing from theſe animals, ſuch as leather, tallow, and wool.

The iſland is likewiſe ſo well ſtocked with horſes, that there are quarters, particularly thoſe of Leogane, Eſterre, and the Cape, wherein the inhabitants would bluſh at any other carriage than a coach, a ſingle horſe not ſeeming to them ſufficiently honourable.

All the mountains and plains not as yet grubbed up, are covered with all kinds of wood, either fit for carpenters, dying, or inlaid work: but thoſe who inſpected, or made theſe grubbings, managed them improperly; being accuſtomed to burn all indifferently, in order to make the more ſpeedy work; whereas ſome ſhould have been reſerved for ſawing, upon account of the facility there might be in eſtabliſhing ſeveral ſawing mills; which would prove no ſmall advantage for the ſeveral buildings wanted for the ſugar manufactures, and frequently for the refitting of ſhips.

As to the wood fit for dying, the company of the iſle of Vache, or Cow-iſland, have ordered, by their regulations, the planting of them along the high roads, and thoſe that run acroſs to ſeparate the plantations.

To conclude; St. Domingo lies very commodious for a rich contraband trade with the Spaniards of the continent, which the Engliſh of Jamaica, and the Dutch of Curacao, know ſo well how to turn to their advantage: a conveniency which ſeemed ſo great to the famous F. Labbat, that, ſpeaking of the eſtabliſhment of a French colony in the Cow iſland in 1698, he ſaid, that the ſole view of this company ſeemed to be not ſo much for peopling this part of St. Domingo, as to have a commodious ſtaple for the goods ſent to the coaſts of Terra firma: but the nature of this commerce is fully treated of in ſpeaking of that of the Dutch to the Weſt Indies, under the article of the *United* Provinces; as is alſo the trade of the French ſugar colonies, in a comparative light with thoſe belonging to the crown of Great Britain, under the article of *Sugar*.

Commerce of the Continent, or Terra firma, of French America.

The French poſſeſſions on the continent of North America are Canada, or New France; and Louiſiana, called alſo Miſſiſſipi: on the continent of South America, they have Cayenne, with ſome plantations upon the river of Surinam.

They were alſo maſters of Acadia, or Nova Scotia, ſituated between Canada and New England; this country having been reſtored to them by the Engliſh, by virtue of the treaty of 1629, confirmed by that of 1632, and ſince by that of Breda in 1667. But this colony, remarkable for the trade of dry cod, and its furr-commerce, having returned under the Engliſh government in 1713, in conſequence of the 12th article of the peace of Utrecht, is treated of in the article of *Britiſh* America; where alſo what regards Newfoundland is diſcuſſed, which was likewiſe ceded by the French to the Engliſh, in conſequence of the 13th article of the ſaid treaty. But it ſhould be obſerved, that although the French are not now allowed to eſtabliſh plantations there, to fortify themſelves, or even to land at Newfoundland; yet their fiſhermen enjoy always a full liberty, in the fiſhing-ſeaſon, of erecting ſcaffolds and hutts, for the drying of their fiſh; but this is only from the Cape of Bona-Viſta to the northern extremity of the iſland, and from thence along the weſtern part, to a point called the *Riche*.

Canada, or New France.

Canada, computed by ſome to be as extenſive as one half of Europe, reaches in latitude from the 39th degree to the 65th; that is, from the lake Erie to the north of Hudſon's bay; and in longitude from the river Miſſiſſipi to Cape Race in Newfoundland, according to Baron Hontan. But others extend it from the 25th to the 53d deg. of N. lat. and from 76 to 93 degrees of W. longitude; being bounded, on the north, by the land called Labrador, or New Britain; on the eaſt, by the northern ſea, and New England; on the South, by Florida; and on the weſt, by New Mexico, with the unknown tracts to the north of it. Some others extend this colony from 33 to 63 degrees of N. lat. quite from Florida to the northern boundaries of America: though Canada, properly ſo called, is only a ſmall province of this whole tract, ſeated on the ſouth and eaſt ſide of the river St. Lawrence, and eaſt of its mouth. This great river of St. Lawrence, which is 22 leagues broad at its mouth, and whoſe ſource is as yet unknown, though traced more than 800 leagues up the country, almoſt entirely croſſes Canada; forming, in its courſe, ſeveral great lakes, ſome of which are of ſuch an extent, that they may be taken for ſeas.

Theſe lakes, ſo commodious for the French commerce with the Indian nations that border thereon, and which ſerve theſe nations to viſit the French in their capital of Quebec, are the lakes of Frontenac, or Frontigniac; Erie, or Conti; the lake of the Hurons; the Upper Lake, or Superior; Michigan; Nipiſſing; and Temiſcaming. The Upper Lake is ſituated moſt to the north; being 100 leagues in length, and about 70 in the broadeſt part; having ſeveral iſlands on it, the principal of which are the Royal iſle, Philipeau, Pont Chartrain, Maurepas, St. Anne, St. Ignatius, and the Tonerre.

The Indians affirm, that there is alſo another lake, greater than any of the reſt, and farther up the country, which they call the lake of Aſſinipouals, wherein the great river of St. Lawrence has its ſource; but the French have not penetrated ſo far, and the Indians are too uncertain in their relations to be depended upon.

It is from the waters of the lake Frontenac, which is the laſt in deſcending towards the ſea, that the regular courſe of the river St. Lawrence is properly formed, continuing near 200 leagues; and, after having waſhed Mont-real and Quebec, the two principal French colonies, diſcharges itſelf into the ocean, 100 leagues and upwards from Quebec.

If it was not for the ſeveral cataracts and water-falls in this river, Canada would lie very commodious for an extenſive trade; nor would it be a difficult matter to paſs from Quebec to the gulph of Mexico, by the lakes and rivers that

hat join the river of St. Lawrence to that of Miſſiſſipi, which empties itſelf into this gulf.

The iſland of Anticoſte, ſituate at the mouth of the river of St. Lawrence, is inhabited by the French, who give arms and proviſions in exchange to the natives, for their ſea-wolf pelts, and other ſkins.

Canada, in its largeſt ſize, is divided into eaſtern and weſtern; the former of which is commonly known by the name of Canada, or New France; and the latter, which is of much later diſcovery, Louiſiana, in honour of Louis XIV.

The eaſtern Canada, according to the French account, contains the provinces of Canada, properly ſo called; Sanguenay, Acadia, Atrurumbeg, New England, New Holland, and New Sweden; the five laſt of which have been diſmembered from it; ſo that now only Canada proper, and Sanguenay, belong to the French.

Canada proper, including all to the north and weſt of the great river and lakes, contains 28 tribes of Indians; being the Quovatavata, Illinois, Quinquiai, Miamis, Attiquemeques, Maſkontens, Aentordac, Ontovagarmis, Errahonanoate, Hurons, Chiantonati, Outoavatz, Chavuanear, Enchek, Aoſſendi, Nipiſirinians, Eachiriovacheon, Taranton, Quiſnontareon, Algonkins, Elſovataizonan, Oavechiſſaton, Skiarenons, Aſtakouvanda, and Oronons, Nadoveſſoveronons, Kiriſtincas, Iramnadous, and Jaetous. Some of theſe tribes are very numerous and brave; they feed themſelves by hunting, and ſell the ſkins to the French; who have divided the country into the ten following provinces, moſt of them named from their capital towns or ports; as Gaſpe, St. Jean iſle, Miſcon iſle, Richlieu, the three rivers, or treble river, Montreal iſle, Fort Frontenac, De Conti, St. Francis, Notre Dame des Anges, Alexis, St. Michael, and St. Joſeph.

Sanguenay contains the four tribes of Eſkimaux, Berſiamites or Oupapinachois, Oumionquois, and Coucochaquois; but the French have divided it into the ſix provinces of Quebec, Silleri, Tadouſſac, Port Neauf, Chichequedec, and Port St. Nicholas; but the three laſt, together with Port Quartier, belong to the Eſkimaux.

The climate and ſoil of this country are different in many places: but all that part which is inhabited by the French, being chiefly along the banks of the great river of St. Lawrence, is very cold in winter, and warm in ſummer; and the other known ports of the country being interſected with large woods, lakes, and rivers, which render it ſtill colder: however, there are great quantities of good fertile lands, which may produce corn, barley, rye, and other grain, fruit, and almoſt every thing that grows in France; but their chief product is tobacco, which the country yields in large quantities.

There is plenty of ſtags, and other deer; elks, bears, foxes, martins, wildcats, and other wild creatures in the woods; beſides wild-fowl, and other game; the ſouthern parts in particular breeding great numbers of wild bulls, ſmall deer, roebucks, goats, wolves, and other animals, both wild and tame. The meadow-grounds yield excellent paſturage, and breed great quantities of large and ſmall cattle; and where the arable land is well manured, it produces good crops. The marſhy grounds ſwarm with otters, beavers, and other amphibious animals; and the rivers and lakes with fiſh of all ſorts: the mountains abound with coal-mines, and ſome of ſilver.

The whole country is well watered; but the two principal rivers are thoſe of St. Lawrence, and the Miſſiſſipi.

The entrance into the bay of St. Lawrence lies between Cape de Retz on the iſle of Newfoundland, and the North Cape in Cape Breton: that of the Miſſiſſipi, which runs through the greateſt part of the province of Louiſiana, from north to ſouth, is called by the French the river of St. Louis, and by the natives the Miſchiſipi, Miſſiſſipi, and Meſchagamiſii, on account of the vaſt tract of ground which it overflows at certain ſeaſons: it is alſo called by the Spaniards La Paliſſada, from the great quantities of timber which they ſend down upon it in floats to the ſea. The ſpring-head of this river is not known; but it is navigable above 450 leagues up from its mouth, and diſcharges itſelf into the gulph of Mexico by two branches, which form an iſland of conſiderable extent.

The French are computed to be at preſent in Canada to the amount of 200,000; all opulent, according to their authors, or at leaſt all at their eaſe. They have but few towns; and they ſcarce give this name to any, except Quebec, Mont-real, and Trois rivieres, or the Three rivers; which, though two leſſer towns, are as opulent, and as mercantile as Quebec.

Quebec is ſituated on the north-ſhore of the river of St. Lawrence, about 200 leagues ſouth-weſt of the mouth of it; being divided into the upper and lower town, both of them about three miles in circumference, and defended by a caſtle, which ſtands on an eminence; there being in the upper town 5 churches, beſides the cathedral; the biſhop and 12 prebends reſiding together in the chapter-houſe, which, it is ſaid, is a moſt admirable fine ſtructure. This city is the metropolis of the French dominions in North America, as well as a biſhop's ſee; the viceroy who reſides here aſſuming the title of Governor and Captain-General both of New France and Louiſiana; which, according, to the French, comprehends all Canada and Florida; except ſome little portions they are pleaſed to permit Great Britain to poſſeſs, till they are in a condition to drive our colonies from thence into the ſea, in the language of one of their writers.

Mont-real is ſituated on an iſland in the river of St. Lawrence, 60 leagues ſouth-weſt of Quebec; the iſland being about 14 leagues in circumference. The whole iſland is full of fine plantations, and the town ſtrongly ſituated; at leaſt it was ſtrong enough to defend itſelf againſt the attacks of the Iroquois, or five nations, when they burnt and plundered all the French ſettlements in the iſland but this town, in the year 1688. It is the principal frontier garriſon of the French againſt the Iroquois, or Indians under the protection of New York; but the river St. Lawrence is not navigable above Mont-real, on account of ſome cataracts.

Trois rivieres, is a town ſo named, from its ſituation at the confluence of three rivers; one whereof is that of St. Lawrence, and lies almoſt in the mid-way between Quebec and Mont-real: it is a well built town, and a conſiderable mart, where the Indians exchange their ſkins and furs, for European goods.

The French colony conſiſts in a great number of plantations, ſituated on both ſides of the river, from Quebec to Mont-real; which being only a muſket's diſtance from each other, compoſe, as it were, two kinds of large villages of upwards of 50 leagues in length.

The leaſt accommodated of theſe planters have four acres of land front-ways, and 30 or 40 up the country: but for large conceſſions, which are properly the ſeignories of the country, whereon the plantations are dependent; they have frequently three, four, and five leagues front-ways, with as many as they pleaſe up the country; of which the perſon to whom the grant is made, retains but a part, for a chief place or reſidence; farming the reſt at 2 s. 6 d. ſterling an acre to other planters.

There are alſo plantations in ſome iſlands formed by the river; whereof thoſe of the iſle of Orleans, at a league and a half diſtance from Quebec, are in ſome repute; this iſland, which is about ſeven leagues in length, and three in breadth, being very fruitful, eſpecially in the produce of wheat.

A part of the Canada commerce conſiſts in grain, and legumes of all kinds; as alſo in planks and timber for carpenters; of which great quantities are conſumed in the country, and exported for the French iſlands; the return being in ſugar, tobacco, and ſuch like commodities as are wanted by the inhabitants of Canada, or not cultivated by them.

However, ſkins, and furs, eſpecially caſtor, make the principal object of the commeree of theſe colonies; a commerce which paſſes entirely through the hands of the Indians; who receive, in exchange for their caſtor, ſeveral European commodities: but the profits are immenſe on the French ſide, though not ſo great as formerly; eſpecially ſince the Engliſh found means to treat with theſe Indians for the ſame commodity.

Theſe Indians, the original inhabitants of Canada, are almoſt

almoſt perpetually at war with each other, conſtantly jealous of their liberty, and always regretting the eſtabliſhment of ſtrangers among them.

The Iroquois, who compoſe but five ſmall nations, are the moſt deſperate, and the braveſt of all, equally dreaded by the Europeans and natives. They carry an appearance of friendſhip towards the Engliſh, who know how to manage them better than the French; and it is to the former that they bring almoſt all their caſtor-ſkins; for which they are better paid than at Mont-real, and the Three rivers, where they deſcend ſometimes to treat with the French.

However, when the French are not at war with them, they trade frequently at the fort of Frontigniac; where it is more commodious for them to convey their ſkins by the lake in canoes, than to tranſport them by land to New York.

The French have alſo from them, for the ſupport of the garriſon of this fort, all kinds of veniſon, Indian fowls, and fiſh; for which they get, in exchange, needles, knives, gun-powder, and ball.

Among the other Indians, there are ſeveral nations in friendſhip with the French; ſome even who have embraced Chriſtianity, and fixed their reſidence in the midſt of the French colonies; ſuch are the Hurons, and the Abenakis; the one eſtabliſhed at Loretto, and the other taking up their abode in Sillery, and Sault-Chaudiere, villages not much diſtant from Quebec. There are alſo two villages of Chriſtian Iroquois near Mont-real; but for the moſt part compoſed of the children taken from theſe Indians, during their wars with the French. It is with theſe nations, who are leſs troubleſome, and leſs ſuſpicious, than the Iroquois, that the French trade for ſkins; which they carry on two different ways; the one is made by the Indians, who come yearly with their caſtors, and other ſkins, and furs, to the French plantations; the other is made by the French wood-rangers, who bring the neceſſary European commodities to all the Indian nations of this continent.

Mont-real is the chief place of rendezvous for this commerce; ſcarce a year paſſing without the arrival of thirty or forty canoes, conducted each by three of theſe wood-rangers, and laden with the caſtors they obtain in exchange from the Indians in their huts: the Indians alſo annually fail down theſe great lakes, about which they dwell, with a prodigious quantity of rich furs; which they exchange for arms, kettles, hatchets, knives, and an abundance of other commodities; whereby the profits are uſually 200 *per cent.* in favour of the French.

When their canoes are unladen, their huts erected, and their merchandiſe ranged in order, they demand an audience from the governor-general; or, in his abſence, from the particular governor of the place where they arrive.

The governor having granted their requeſt, places himſelf the ſame day in a two-armed chair, in the midſt of the public market; when each nation, forming its peculiar circle, ſeat themſelves about him, every one wirh a pipe in his mouth.

All being ſettled, and ſilence enjoined, the orator of one of the nations ſays, in the form of an harangue, addreſſing himſelf to the governor, "That his brethren are "come to viſit him, and to renew their antient friend-"ſhip: that the chief motive of their journey was to be "of ſome advantage to the French, who would be at "great difficulties to get beaver-ſkins, if the Indians "had not made it their buſineſs to bring them into their "colonies: that they know how much eſteemed beavers "are in France, and how inconſiderable the value is of "the commodities given them in exchange: that, not-"withſtanding, the friendſhip they have for the French "engages their treating with them; and to be in a condi-"tion to bring them another year greater ſtores of their "furrs, they come to take in exchange, fuſees, powder, "and balls, either to make the emoluments of their hunt-"ing more abundant, or the more to torment the Iro-"quois, in caſe of their attacking the plantations of their "friends the French: and, laſtly, that for a pledge of "their fidelity, and ſincere dealing, they throw down "a collar of porcelain with ſeveral caſtors for the k-"chiokima, or the general governor; whoſe protection "they requeſt, in caſe of being plundered, or ill uſed in "the town."

The diſcourſe finiſhed, and the orator having reſumed his ſeat and pipe, the governor ſpeaks in his turn, making also his preſent: after which, the liberty of commerce being granted, the aſſembly breaks up; when the Indians, returning to their huts, prepare themſelves for the exchange which they begin the next day.

All this commerce is carried on by truck, where gold and ſilver never interfere; and, as it is very free, the Indians not brooking the leaſt conſtraint, all the inhabitants become dealers; nor is any merchandiſe reputed contraband, wine and brandy excepted, upon account of the quarrels theſe nations are ſubject to when intoxicated with ſuch liquors: their bargains concluded, and their goods exchanged, each nation returns home, after having taken leave of the governors.

Quebec, Mont-real, the Three rivers, Tadouſas, Richelieu, and Chambli, are the principal places reſorted to by the Indians for this commerce: Chambli being formerly in ſuch great reputation, that it was the chief rendezvous of the Soccokis, Mahingans, and Openangos; but the dread of the Iroquois obliged them to trade with the Engliſh: however, ſome nations viſit this place, and the French have even a ſmall fort there; though not ſo much for the maintaining of this commerce as for obſtructing the contraband trade which the French carry on with the Engliſh of New York, to whom the wood-rangers bring their caſtor preferably to the Canada company, becauſe their profits are much greater: but at preſent, as has been mentioned, Mont-real is the principal place of the French plantations, where this trade is carried on.

The moſt precious of theſe ſkins, aud the principal object of commerce with the Indians, are caſtors; but the different kinds of theſe make a wide difference in their price; theſe kinds being the winter-caſtors, called alſo Muſcovy-caſtors, becauſe proper for Archangel; fat caſtors, or old coat; moulted, dry, and ſummer caſtors: there are alſo white caſtors; but as theſe are ſcarce, they make a diſtinct kind.

See the articles of *Beaver* and *Hats*, as likewiſe the *North* companies, for a more ample information of all theſe kinds of caſtor, their value, uſe, and commerce.

The other furs got from the Indians are,

Common foxes, black and ſpeckled.

Common martins, and thoſe called ſables.

Otters, ſome reddiſh, and others brown, called winter-otters.

Bears, black and white.

Peſkans, or wild cats, called alſo the devil's children.

Ferrets, pole-cats, and weazles.

Laſtly, wolves, ſquirrels, and muſk-rats, with their teſticles.

The Indians alſo ſupply the French with the ſkins of ſeveral animals, ſome green, and others dreſſed after the manner of the country; ſuch as the ſkins of elks, ſea-wolves, ſtags, fawns, and goats.

It ſhould be obſerved, that when, according to their manner of trafficking, they ſpeak ſimply of ſkins, without ſpecifying the name of the animal, elk-ſkins ſhould be underſtood, theſe being the deareſt of all thoſe in Canada.

The French of Quebec ſend alſo, during the ſummer-ſeaſon, ſome barks to trade for ſea-wolf ſkins with the Eſkimaux, who are ſo diſtruſtful, as never to come aboard the French barks: ſo that the entire commerce with them is carried on in a ſingular manner; the Indians expoſing, from their canoes, on the top of a pole, the ſkins they would ſell; and demanding, at the ſame time, what they would have in exchange, as knives, powder, balls, fuſees, hatchets, kettles, and other things: the French, on their ſide, having as little confidence in the Indians, faſten alſo their merchandiſe to the tops of poles, remaining always in their barks; whence they deliver what is required, and receive ſkins in return: but they never ſuffer theſe Indians to flock about them in any conſiderable number, leſt they ſhould make off with any of their unguarded barges, which has often happened.

has been already ſaid, that all theſe ſkins and furs are changed for other commodities; wherefore it will not amiſs to lay down the ſtate of theſe commodities, extracted from the memoirs of Baron Hontam, but rectified ſome places, according to the obſervations of the merants who traded chiefly in this particular.

ate of the merchandiſe proper for the caſtor trade of Canada.

ort and light fuſees; gun-powder for fowling; balls, ſmall ſhot; ſmall and large hatchets, and bill-hooks; ives in ſheaths; ſword-blades, for making darts; ket- and pots of all ſizes; ſhoemakers awls; hooks of all es; ſteel and flints for ſtriking fire; ſhort cloaks of e ſerge: ſhirts of common Britany linen; ſhort and ck worſted ſtockings; Brazil tobacco; thick whipd for nets; ſewing-thread of different colours; packead for nets; drinking-glaſſes; a few arrows; ſome ad ſwords; a little ſoap; with ſome needles and pins.

he beſt commodity, and of moſt certain vent, is brandy. it was not prohibited; yet it is one of thoſe wherewith canoes of the wood-rangers are not the leaſt laden; which canoes, made of birch-bark, all the commerce the great river, and lakes, is carried on, during the mmer-ſeaſon: but, in winter, ſledges are uſed, drawn horſes and dogs; which is the uſual carriage from uebec to Mont-real, whilſt the river of St. Lawrence frozen.

ſhould not be forgot, that the commerce of the lakes ſt belong only to ſuch of the planters, who, for this rpoſe, have obtained permits from the governor-gene-; and that thoſe permits are fixed at a certain number ery year: but this trade, confined thus to particulars, o' very lucrative for them, is exceeding prejudicial to general trade of the colony; as it hinders great nums of the Indians from bringing their ſkins and furs to ublic mart, where all the inhabitants, rich or poor, vileged or not privileged, might have a ſhare.

hat has been thus diſcuſſed, regards only the interior mmerce of New France: ſo that now it will not be proper to add ſomething concerning the trade promoted ere by foreign importations.

he Normans were the firſt that traded to Canada; and, ring an entire century, none but the ſhips of Rouen, ieppe, and Havre, were ſeen at Quebec. The merants of St. Malo and Nants afterwards divided this trade ong themſelves; but at laſt it wholly remained in the nds of the Rochelle merchants: however, thoſe from ourdeaux and Bayonne frequently ſend ſome other ſhipng there; whereby the Canadeans receive the greater t of their wines, brandy, and iron, from France.

here are two ſeaſons for the departure of French ſhips Canada; one towards the end of April, or the beginng of May; the other in the month of September: the ter being to arrive there when the ice is melted; and e former to arrive before it is formed.

he French ſhipping deſtined for this trade, pay neither the ty of exportation out of the kingdom, nor the duty of portation at Quebec, except for Brazil tobacco.

he cargo of theſe ſhips is partly the ſame with that ſent the Caribbee iſlands, and partly different; tobacco, gar, and ſeveral other commodities, from the Caribes, being of the number of thoſe imported to Canada, here the ſoil and climate are not proper for their cultiion. There is alſo ſome difference in the cloths and ffs, ſo cold a country as New France requiring them rmer and thicker than the Caribbees ſituated under the rid zone.

hough vaſt profits accrue from all the commodities imted to Quebec in French bottoms, ſcarce amounting leſs than 50 *per cent.*; yet ſuch as are leaſt neceſſary, d moſtly for ornament and curioſity, ſell beſt; as ribnds, lace, ſnuff-boxes, watches, and a variety of ſuch nkets; of which a ſufficient quantity ſeldom arrives, ough uſually ſold at four times their juſt value, when expences are deducted.

hen ſhips arrive at Quebec, the merchants of this town, o keep ſailors at Mont-real and the Three Rivers, load ne barks with a part of the merchandiſe imported on eir account, and ſend it to be ſold by the retailers.

However, there are ſeveral rich traders in both theſe towns, who receive various commodities at the firſt hand; coming themſelves to make their market at Quebec, and freighting ſeveral barks, which bring back themſelves, and their merchandiſe, to the place of their reſidence.

All this merchandiſe is paid for, either in money, or bills of exchange on Rochelle; or in ſkins and furs, ſuch as martins, bears, wild cats, foxes, and others above mentioned, caſtors excepted, which are brought to the company's office, and ſent in their ſhips to France; or, laſtly, in corn and legumes, particularly in dry peaſe; as alſo in carpenter and joiners timber, and in madder. The returns in furs and ſkins are the beſt; but there is never, either of theſe or any other commodities, a ſufficiency to freight all ſhips that come from France; beſides, there are only ſome privileged ſhips allowed to have a full freight for their return.

The Rochelle ſhips, not to return empty, frequently take in coals at Cape Breton for Martinico and Guardaloup, where great quantities are conſumed in the refining of ſugar; of which they afterwards make the cargo of their return. Others went for dry-cod to Placentia, which they paid for in ready money; but, ſince the ceſſion of Placentia and Newfoundland to the Engliſh, they bring corn to Cape Breton, where they are paid in bills of exchange, till the cod-fiſhery eſtabliſhed there can furniſh them with a ſufficiency for an ample return in dry fiſh.

It is in the lower town of Quebec, that the richeſt traders of Rochelle have their warehouſes and factors; where it is alſo that the merchants of the other towns, and even of Quebec, not capable of having correſpondents in France, come to ſupply themſelves with all the merchandiſe they have an occaſion for.

There are alſo merchants of the country who keep ſuch warehouſes at Quebec; but theſe are furniſhed with ſhips of their own, which go and come from Canada to France, bringing backwards and forwards all neceſſary commodities.

Miſſiſſippi, or Louiſiana.

According to Savary, a vaſt tract of land, extending 1800 leagues and upwards, ſituated in North America, between Canada, Carolina, and New Mexico, and the Ocean, has received the name of Louiſiana, becauſe diſcovered by the French in the reign of Lewis XIV. It is alſo called the Miſſiſſippi, from a great river, which, having croſſed it by a courſe of more than 800 leagues, empties itſelf into the gulph of Mexico.

But other authors differ about the boundaries of this country; ſome of the French geographers aſſert, that its bounds are too extenſive to be known; while others ſay, it is bounded on the ſouth, by the gulph of Mexico; on the north, by the Indian nations called the Illinois, the Paniaſſus, Poaducas, Oſages, Tionontetecagas, Chavanons, and other wild nations; on the eaſt, by part of Florida, Georgia, and South Carolina; and on the weſt, by New Mexico, and New Spain. They alſo ſay it extends itſelf from north to ſouth about 15 degrees, that is, from the 25th to the 40th degree of north latitude; and from eaſt to weſt about 10 or 11, that is, from 86 to 96 or 97: for, according to father Charlevoix, the boundaries are certain; though theſe boundaries, according to the maps of De Liſle, are carried much farther, eſpecially on the north-ſide, where they make Louiſiana contiguous to Canada; ſo that part of it is bounded, by theſe maps, by New York, Penſilvania, and Virginia; and on the weſt, by the rivers called Rio Brave and Salado. The boundaries on the north-weſt are not much leſs uncertain; for the Miſſouri, a great river, which gives name to a great tract of the land, flows from that point into the Miſſiſſippi, more than 400 leagues above its mouth: ſo that, except the ſouth, where the ſea bounds it, all the reſt muſt be left uncertain; and ſo it is like to remain, till theſe boundaries are ſettled on the eaſt with the Engliſh, and on the weſt with Spain; for till that time they will be liable to diſputes among the three nations.

However, it is certain, that Louiſiana contains the greateſt part of theſe new-diſcovered lands eaſt and weſt of the Miſſiſſippi river, which were at firſt called Florida, by Sebaſtian Cabot, who was ſent upon this deſign by Henry VII

of England. The Spaniards alſo lay claim, if not to the firſt diſcovery, at leaſt to the firſt ſettlement on this continent in 1512, when John Pontio de Leon landed and built a fort there: but the Indians prevented the Spaniards from ſettling there, who were alſo diſturbed by the French: however, the French could not form any ſettlement here till 1684, when Monſieur de la Sale diſcovered the mouth of the Miſſiſſippi, and built Fort Louis on that bay; and, in 1698, Capt. Ibberville called the whole country Louiſiana, which has been greatly improved, eſpecially ſince the year 1720.

This country is well watered by ſeveral large rivers beſides the Miſſiſſippi; particularly the Mobile, whoſe banks are inhabited by the Chicachaws, Catas, Nanibas, Mobilans, and other nations. The river Mobile runs a courſe of 200 leagues, deſcending from the mountains in the country of the Illinois, and emptying itſelf into the gulph of Mexico: the bay of this river is reckoned 30 leagues deep; it receives two others, that of the Alibamons, which comes from the eaſt; and that of the Chicachaws, which flows from the north; and it is on the weſt coaſt of this bay, that the moſt conſiderable colony belonging to the French in all Louiſiana is eſtabliſhed, which is alſo inhabited by the Tomez, Apachi, and ſome other Indian nations.

The chief bays of this country, beſides the Miſſiſſippi and the Mobile, are thoſe of St. Roſe, Penſacola, St. Andrew or Sandy bay, St. Joſeph, and St. Bernard or St. Louis: that of St. Roſe is guarded by an iſland of the ſame name, which extends to the bay of Penſacola; the channel between it and the land being wide and deep enough for any ſhips to ſail from one to the other of thoſe bays; beſides, the tide flows in here twelve hours, and is more regular than in any other parts of the Mexican gulph.

The climate and ſoil are good, there being an abundance of rich paſture and arable land: in ſome parts there are three or four crops in a year; becauſe the winter conſiſts of heavy rains, without nipping froſts. Moſt of the trees in Europe are to be found there; beſides, the country has ſome peculiar to itſelf, particularly its lofty cedars, which yield a very odoriferous gum; and the cotton-trees, which grow to a prodigious height. The whole country alſo abounds with variety of game, fowl, cattle, and moſt of the neceſſaries of life.

Along the banks of the river Miſſiſſippi, are the plantations of ſeveral opulent perſons of Paris, and the other provinces of France, purchaſed from the Weſt India company, containing from 10 to 20 ſquare leagues, and upwards; wherein corn is ſowed, tobacco planted, cotton cultivated, indigo made, ſilkworms fed, and every thing executed to inhance the value of a very fertile country; which requires but little labour to repay, with an hundred fold, whatever is in any ſhape expended.

Beſides the commodities ariſing from the cultivation of the land, a conſiderable commerce might be carried on with the natives; who are more cultivated than thoſe of Canada, ſeeming diſpoſed, with great familiarity, to make but one people with the French.

The chief of theſe Indians, with whom the French at preſent carry on a trade, are the Hannetons, the Iſſalis, the Chuas, the Tintonkas, and the Nadoneſſans, who live in the neighbourhood of the river Miſſiſſippi.

The commodities to be had from them are much the ſame with thoſe furniſhed by the Indians of Canada; though they have ſome peculiar to themſelves; as the green hides of bulls, called by the Spaniards *cibola*; as alſo the hair of theſe animals, which is a kind of long wool, fine and gloſſy, whereof the Indians make ſome ſtuffs for their own uſe; and the French have endeavoured to turn to ſome account in their manufactures: beſides, they have the ſkins of other animals, ſuch as bears, horſes, and roe-bucks; which laſt are ſo cheap, that each ſkin is ſold from 10 to 20 muſket-balls, according as lead is ſcarce or plentiful in the colony.

The French entertain great hopes of ſome of the ſilver mines in this colony; for, according to their account, upon trial in France, 6 lb. of ſilver have been extracted from a quintal of the mineral; which is a produce not to be equalled by any of the Spaniſh mines, the workers eſteeming thoſe good which yield 2 *per cent.*

As to the other mines diſcovered, or diſcoverable there, ſuch as mines of gold, copper, lead, quickſilver, and iron; their certainty depends moſtly upon the relations of the Indians; which, if proved to be true, might one day or other enrich this colony, whoſe real and undoubted wealth at preſent conſiſts in thoſe great numbers of cattle which fill the plains and foreſts, ſuch as horſes, cows, ſheep, goats, and hogs; as alſo ſeveral kinds of fowls; timber for the building of ſhips and houſes, ſuch as oak, walnut, cypreſs, black and white cedar, and mulberry trees for ſilkworms, yielding, according to French relations, as good ſilk as that of Meſſina; to which may be added, pitch and tar, prepared in ſeveral parts of the colony.

The French commodities proper for this colony are much the ſame with thoſe ſent to Canada, and the French iſlands; thoſe for trading with the Indians being coarſe blankets, ſerving for coats; Limburg cloths, red or white, dark colours not pleaſing them; coats ready made of these cloths; common hats; knives, hatchets, and pick-axes; ſmall looking-glaſſes, drinking-glaſſes, and vermillion: beſides, there is alſo a great trade of negroes in Louiſiana.

The coins of greateſt currency in the colony are piaſtres, accepted there upon the footing of 100 ſols, or about 4 s. ſterling; and all other ſilver pieces in proportion.

The French monarch has likewiſe ordained, that thoſe piaſtres brought from this colony, ſhall be received in the mints; and, in caſe of variation in the value of the coin of the kingdom, that the ſaid piaſtres ſhall be paid weight for weight, purſuant to the ſpecies then current, without any reſervation for the expences of coin; which is to be underſtood alſo of bullion, but in proportion to its title: the whole, notwithſtanding, with the injunction of producing certificates, in the form ordained by the arret, that the piaſtres, or bullion, have been embarked at Louiſiana, and that they belong to the company.

The two principal officers of the colony are, a director who has full authority over thoſe employed in commerce, navigation, and the eſtabliſhments made, or to be made; and a commander in chief of the troops, whoſe inſpection and power extends to all military affairs, as alſo to the Indians.

The ports, poſts, and eſtabliſhments, poſſeſſed by the French, are the ſixteen following.

Iſle aux Vaiſſeaux, or *The iſland for the Shipping*. The anchorage of the company's ſhips was formerly in the channel of the iſle Dauphine; but this channel being choaked up, the Iſle aux Vaiſſeaux was choſen for this purpoſe, being ſituated four leagues from the continent, and of conveniency for the loading and unloading of ſhips giving it a preference to all other places.

The building of a fort was ordered and began there, with caſerns, lodgments, and neceſſary warehouſes, where the company was to maintain a peculiar commandant and major.

The road of this iſland is excellent, where ſhips can ride in great ſafety, and anchor within gunſhot of the iſland.

Biloxi, or *Fort Lewis*. This poſt is ſituated on the continent, four leagues from the *Iſle aux vaiſſeaux*, which, in ſome ſhape, covers it.

Its ſituation is ſo happy, that it is not only eaſy to ſecure it with very few fortifications; but alſo, in war time, to convey merchandiſe and inhabitants to New Orleans, without any danger; which conſiderations and advantages have erected it into the principal eſtabliſhment for the reception of new cottons and merchandiſe from France.

Among the various buildings began there, an hoſpital is not the leaſt conſiderable, deſigned for ſuch paſſengers and ſailors as might have fallen ill during ſo tedious a voyage; and that no neceſſary refreſhment ſhould be wanting, a plantation has been formed, with gardens and paddocks; the one for the rearing of all ſorts of fowls with large and ſmall cattle; the other for the production of the different kinds of garden-ſtuff brought from France, and for the planting of all ſorts of fruit trees, either of the country's growth, or imported from Europe.

The lands in the neighbourhood of Biloxi are not equally proper for tillage, though ſome ſpots are

lent; but this port has its peculiar commandant and major.

w Orleans, and *Manchac*. These two eſtabliſhments are joined together, though 25 leagues diſtant from each other; becauſe the latter is the ſtorehouſe of the former; both being ordained for each other's ſupport, and either of them was to acquire the name of Orleans, according as it became the more conſiderable.

Monſieur de Bieuville, Governor-general of Louiſiana, was the founder of New Orleans, ſituated about 40 leagues from the mouth of the Miſſiſſippi, equally fitted for the commerce of this river, and that of the lakes. Its inhabitants in 1718 were 300; which number is ſince greatly augmented.

The chief view of the company in ſettling New Orleans, was to form large warehouſes, for the ſupplying of all the eſtabliſhments to be made on the Miſſiſſippi, and the rivers that empty themſelves into it: but experience having proved the difficulty of founding ſolid building on the banks of this river, upon account of its being ſubject to overflow, thoſe warehouſes firſt deſigned for New Orleans, were afterwards built at Manchac.

Manchac is a rivulet iſſuing from the Miſſiſſipi, and emptying itſelf into the lake of Maurepas, which communicates with that of Pontchartrain; this laſt communicating with the ſea; ſo that the boats going from the Iſle aux Vaiſſeaux, or Biloxi, to bring to the warehouſe of Manchac the merchandiſe imported from France, will be in no dread of either pirates or ſtorms, as they can coaſt along to get to the lake of Pontchartrain.

The port of Manchac is alſo very convenient for ſmall veſſels to navigate in the river Miſſiſſippi; becauſe, as they never deſcend to the ſea, they will not be worm-eaten, and of conſequence can be preſerved longer.

The ſoil of New Orleans is excellent for the produce of rice, and in ſome places for tobacco. The eſtabliſhment is in great forwardneſs, by the number of lands already cleared; and, in order to put it upon the beſt footing, the company has appointed ſettlements for all the ſoldiers who are willing to become planters.

All the juriſdiction there is in a particular commandant and major, whoſe authorities extend likewiſe over Manchac.

Natchez. The French have eſtabliſhed this poſt to make themſelves reſpected by the Indians, and to facilitate the navigation of the Miſſiſſippi, for the proviſions they take in here and there, as they coaſt along.

It is 90 leagues from New Orleans; the ſoil being pretty good for corn, and excellent for tobacco; as it is alſo in ſome places for rice.

The tobacco-planters ſent there by the company in 1719, were eſtabliſhed in the month of February 1720; and, for the ſecuring of the inhabitants and their navigation, a ſmall fort has been raiſed, where the company maintains a garriſon.

Natchitoches. This port is eſtabliſhed on the red river, with the view of being near the Spaniards, and preſerving the commerce of the Indians; whoſe inhabitants are pretty numerous along this river, where the ſoil is not ungrateful, and will admit of great improvement.

Yatſas. This port has it name from the river whereon it is eſtabliſhed, which is 15 leagues from Miſſiſſippi, and 30 below Natchez. Its ſoil is one of the beſt in Louiſiana, eaſy to be cultivated, and equally proper for the productions of America, ſuch as tobacco and indigo; as alſo for thoſe of Europe, as corn and garden-ſtuff.

The utility of this poſt is of two kinds; as furniſhing thoſe with proviſions who go up to the Illinois, and keeping in awe the ſcouts of the neighbouring nations.

Illinois. This poſt is ſituated upon the Miſſiſſippi, towards the mouth of the Miſſouri, and is thought to have ſeveral mines: the ſoil is capable of producing all the neceſſaries of life; and a conſiderable commerce of furs may likewiſe be promoted there. This eſtabliſhment, projected a long time before, was at laſt commenced in the year 1720; two companies of foot, and ſome workmen and planters, being tranſported there by M. de Boiſbriant, the King's lieutenant for Louiſiana.

The fort built there, called Fort de Chartres, is ſituated eight leagues above the village of the Kaſkaſſias upon the banks of the Miſſiſſippi: in whoſe neighbourhood there is a plain, upwards of ſix leagues in extent, fit for producing rice and corn in abundance, and almoſt without any labour; the ſoil being diſpoſed to admit the plough without any of thoſe preparations which, in infant-colonies, are the cauſe of ſo many fatigues to the planters.

The jeſuits of Illinois are thoſe who have been moſt ſucceſsful in the cultivation of corn: in 1718, they built a windmill, and were building a ſecond; they alſo diſcovered ſalt-marſhes in the country, productive of ſalt fit for the pickling of fleſh; of which they ſent to the colony in the lower part of the river, to the amount of 200 quintals.

There is a peculiar commandant and major, reſiding in the Fort de Chartres.

Ouabache. The eſtabliſhment of this port in 1710 was only in idea; yet ſome perſons were ſent to take poſſeſſion; and the plantation and fort for ſupporting it, were to be placed in an angle formed by the river Ouabache, which falls into the Miſſiſſippi 25 leagues below the Illinois.

This territory is ſo exceeding fertile, that its fine meadows graze an abundance of buffaloes, whoſe hides might turn out very advantageous in trade.

A company of foot was deſigned for the fort of Ouabache, whoſe captain was to command the whole diſtrict.

Iſle Dauphine. This poſt was abandoned; but a fort, containing one officer, with 10 ſoldiers, has been kept there, to hale the ſhips that appear on the coaſt.

The Fort of Conde. This poſt is ſituated upon the bay of the Mobile, and was firſt called Fort-Lewis; but, ſince Biloxi became the principal eſtabliſhment of the French upon the coaſts of Louiſiana, it has been called Fort Condé, the name of Fort Lewis beging given to the fort erected in the plantation of Biloxi.

As this port was the firſt the French poſſeſſed in Louiſiana, it is the moſt populous, and beſt eſtabliſhed of all the colony: it is even ſo happily ſituated ſince the choaking up of the Iſle Dauphine, that a fortification is uſeleſs; being inacceſſible on the ſide of the ſea, and having nothing to dread on the ſide of the land.

There are ſeveral ſand-banks extending all along the coaſts; bnt the commerce of the Alibamons is ſufficient to ſupport this port; which has a peculiar commandant and major.

The Alibamons. This eſtabliſhment has its name from a river which empties itſelf into the Mobile; whoſe banks are inhabited by the Alibamons, a very conſiderable Indian nation in that part of America.

The ſoil is kind for corn, and all kinds of garden-ſtuff; beſides tobacco, the plantations of which are in a thriving condition.

This poſt being of the laſt importance for protecting the colony from the inroads of the neighbouring people, a ſtrong garriſon is maintained there, having a peculiar commandant and major.

St. Bernard's bay. This bay is to the weſt of the Miſſiſſippi, ſerving as a boundary between the French and Spaniards, who may eaſily keep on footing a very conſiderable commerce, either by land or ſea.

Several rivers empty themſelves into this bay, adjoining to which are the moſt fertile lands of Louiſiana; which the company intended for one of their principal eſtabliſhments, and prepared to ſend there ſome Germans and Switzers for inhabitants.

It was in this bay, and the ſame place the French are now poſſeſſed of, that the Sieur de la Salle made his eſtabliſhment in 1685: the Spaniards alſo ſeemed inclinable to eſtabliſh themſelves there, but they never had either fort or plantation.

The country abounds in all kinds of cattle; and it is reported, that even cochineal is found there in great quantities.

La Riviere aux Cannes, or *The River of Reeds.* This poſt borders upon New Mexico; the river having its ſource in the mines of this rich part of Spaniſh America, where it empties itſelf into St. Bernard's bay.

The eſtabliſhment of this port was began in the month of Auguſt 1720; when it was deſigned to be peopled with French, Switzers, and Germans.

The fort has its peculiar commandant and major; being to keep the Mexican Spaniards in awe, aud protect the commerce that might be carried on with them; which is in no likelihood of failing, through the neceſſity the Spaniards of this frontier are under for European commodities, which the French might furniſh them with; as alſo upon account of the great number of piaſtres they have in their poſſeſſion, which they can give in exchange, and which otherwiſe would remain uſeleſs in their hands, as having no one to treat with.

Padoucas. The eſtabliſhment of this poſt was began in 1719, by the Sieur Diron, inſpector-general of the troops of Louiſiana, being ſituated in the upper part of the river of the Akancas, which falls into the Miſſiſſippi, 80 leagues below that of the Yaſous.

This river of the Akancas has its ſource in the country of the Padoucas, an Indian nation, upon the north of New Mexico: the country is very fertile, and abounds in mines of gold, ſilver, and precious ſtones; where the Spaniards go in caravans, and keep a regular kind of commerce with the nations.

To deprive them of this commerce, or at leaſt to divide it with them, the French have ſettled themſelves in a poſt on the upper part of the river, in one of the villages of the Padoucas; where they laid the foundations of a fort, and intended to maintain a ſtrong garriſon with a peculiar commandant and major.

The name of a Spaniard, which is odious to all the Americans, eſpecially to thoſe not as yet ſubject to them, and the conveniency of the river for the conveyance of merchandiſe, were motives inducing the French to believe, that the Padoucas would give them at leaſt the preference in the trade they were deſirous of with the Europeans.

The *Miſſouris.* The Sieur de Bourmont, who made himſelf acknowledged the chief of all the Indian nations inhabiting the banks of the river Miſſouris, and all the others that empty themſelves into it, was charged to eſtabliſh this poſt in ſome commodious place bordering upon this river.

The view of the French, in this eſtabliſhment, was to ſupport that of the Padoucas, by hindering the Indians to incommode it, and by engaging them on the contrary to favour it, in conſideration of the traffic to be promoted among them.

Penſacola. This poſt is not included among thoſe poſſeſſed by the French in Louiſiana, tho' at preſent in their hands, and belonging to them by the right of conqueſt.

M. de Bienville, general governor of Louiſiana, took it from the Spaniards in the month of July 1719. A ſquadron from the Havanna retook it the 10th of the month of Auguſt following; but Monſieur de Champmelin, ſoon took poſſeſſion of it again.

The port of Penſacola is the fineſt on the coaſt of Louiſiana: it is ſituated to the Eaſt; but, being at too great a diſtance from the river Miſſiſſippi, to unload the ſhips from France, all the ſervice it can be of is chiefly for a place of ſafety to the royal ſquadrons.

The ſoil produces nothing; nor has it any thing to recommend it but a ſmall river, whoſe banks are ſhaded with beautiful trees, fit for maſts.

Louiſiana being of ſuch an immenſe extent, the company could not well do without the above-mentioned number of poſts, either to preſerve the lands of their conceſſion, or to protect their commerce againſt foreign and domeſtic enemies; or, laſtly, to make themſelves reſpected by the Indians.

The chief officers of Louiſiana are a commandant-general, two lieutenant-generals, a major-general, and an inſpector-general of the troops, and militia; beſides a particular commandant and major in every important poſt, as already mentioned.

The troops generally kept up there conſiſt of 21 companies of French infantry of 50 men each, and a company of Swiſs labourers of 210 men; in all compoſing 1260 ſoldiers, excluſive of officers.

Some reformed officers are alſo eſtabliſhed, who were judged neceſſary for diſciplining the ſoldiery, and commanding the militia, in caſe of any emergency; which officers, according to their reſpective degrees, fill all vavant places.

Beſides theſe officers, there are, for the direction and conducting of the fortifications, an engineer-general, two ſubaltern ones, and another for ſupplying the default of the reſt; as alſo a company of near 200 workmen, who, as well as the Switzers, were deſigned for working at the fortifications.

From the time the French firſt diſcovered the river Miſſiſſipi, they have, with great care, endeavoured, and, at length, have actually ſettled, a communication between Canada and the ſouthern countries on the ſaid river. Firſt, they ſail in canoes from Mont-Real above 3 leagues, to the fall of St. Louis, where they have a portage, or carrying-place, by land, about half a league; then they reimbark and row up the ſtream about 60 leagues to Frontenac, on the north ſide, at the beginning of the lake Ontario. From thence they proceed on the lake Ontario, generally reputed to be about 80 leagues in length, to the dreadful falls of Niagara, which oblige them to land: the portage is about three leagues; after which they reimbark and go up the ſtreight, about 6 leagues into the lake Erie, reputed to be about 130 leagues in length; and from this lake they have three different routs to the river Miſſiſſippi.

The firſt and ſhorteſt paſſage by water is to go up the river Miamis, or Ouamis, that enters the lake Erie, on the S. W. about 150 leagues, where is the higheſt land; and from hence the waters divide their deſcent, between Miſſiſippi and that lake. Here they embark on a ſmall ſhallow river, called La Riviere de Portage, down which they row 40 leagues to the river Onabache, or Wabaſh; and on that river, as the traders reckon, 120 leagues to the river Ohio, into which the other falls; then 80 leagues down Ohio to Miſſiſſippi, and thence 350 leagues to the bay of Mexico. Some call both theſe rivers by the ſame name, and generally Wabaſh; but they ought to be diſtinguiſhed; becauſe the head of the Ohio comes more eaſterly towards Virginia or Carolina; and, among ſeveral other large ſtreams, it receives the river Pereſipi on the ſouth ſide, not far from the mouth of Wabaſh; which river Pereſipi is ſaid to ariſe from the mountains of Virginia or Carolina.

The other two paſſages are to ſail from the N. E. of lake Erie, to Pontchartrain, on the lake of St. Claire, a French ſettlement, where 400 traders often meet. Here is a garriſon of 30 French, and a vaſt concourſe of merchants, ſometimes no leſs than 1000, beſides Indians; this being a common place of rendezvous, near which the Outawas are ſettled.

From the lake Huron they paſs by the ſtreight of Miſſilimakina 4 leagues, being two in breadth, and of a great depth, to the lake Ilinois; thence 150 leagues on the lake to Miami, ſituated on the mouth of the river Chigagou, which runs into Erie. Up the river Chigagou they ſail but 3 leagues to a portage of a quarter of a league; then they enter a ſmall lake of about a mile, and have another very ſmall portage, and again another, of two miles to the river Ilinois, down the ſame, 130 leagues to Miſſiſippi.

The third is from Miſſilimakina on the lake Ilinois to the lake Des Puans, thence 90 leagues to the river Puans, 80 leagues up the ſame, to a portage about 4 miles over to the river Ouiſconſing, and thence 40 leagues to Miſſiſippi.

From the mouth of the river Ouiſconſing to that of Ilinois is reputed 150 leagues on Miſſiſippi, and from thence to the mouth of Ohio 70 leagues: ſo that from the mouth of Ouiſconſing to the bay is near 500 leagues. Theſe diſtances are according to the traders computation, but appear generally to be much overdone, which may be owing to their coaſting along the ſhores of the lakes, and taking in all the windings of the rivers.

They have another much ſhorter paſſage from Mont-Real to lake Huron, by the French river on the north of St. Lawrence, which anſwers the two latter routs; but as it abounds with falls, and not anſwering trade ſo well, it is ſeldom uſed. They have alſo by this river a much ſhorter paſſage to the upper lake: but of all the paſſages that by Oubache is the ſhorteſt and eaſieſt.

The ſhips which go to Louiſiana anchor no more at the *Iſle aux Vaiſſeaux*, becauſe the eſtabliſhment of Biloxi be-

been transferred to New Orleans: ſo that they go directly to the iſle of Baliſe, ſituated at the mouth of the river St. Lewis, whence they go up to New Orleans, unleſs they have orders for unloading in the iſle of Baliſe.

It is obſervable, that the inhabitants of the Britiſh colonies are, or affect to be thought, under ſome apprehenſions, that the French are ſo ſituated on the back of the Engliſh ſettlements, that it is, or will ſoon be, in their power to ruin the Britiſh trade with the Indians; and by haraſſing the Britiſh dominions on that ſide, oblige the Engliſh coloniſts to quit that continent: they alſo ſeem to think, that the French will draw a line from the mouth of the river St. Lawrence to the gulph of Mexico; and ſo ſtrengthen it with forts and redoubts, that they will in time drive the Engliſh into the ſea: and to heighten this terror from the French, their colonies are repreſented conſiſting of two hundred thouſand ſouls at leaſt, ſupported by great bodies of regular forces from France, againſt which it is impoſſible, they ſuggeſt, to defend the Britiſh frontiers. Indeed, ſeveral Weſt India merchants formerly ſeemed to be in the ſame way of thinking; but, upon taking a more particular ſurvey of the country, and the circumſtances of each nation, a perſon may be readily inclined to think, that this is an event which there is great reaſon to ſuppoſe will never happen, unleſs the Britiſh colonies ſhould find themſelves ſo ill uſed by their mother country, as voluntarily to throw themſelves into the arms of France, which, on many accounts, can never be ſuppoſed.

The frontiers, it is true, of ſome of the Britiſh colonies may be expoſed to the ravages of the French Indians; and it will be prudent to erect forts, or keep ſome troops on foot in ſuch places as lie moſt open to their incurſions; particularly on the lake of Champlain, on the frontiers of New York, and on the lakes of Ontario and Erie; as alſo to have ſome armed veſſels on theſe lakes, which would not only defend the frontiers, but protect the Indians on that ſide, and prevent their deſerting over to the French. It might alſo be proper to erect forts on the paſſes of the Apalathian mountains, on the back of Virginia and Carolina, for the ſame end; but it is not adviſeable to extend the Britiſh plantations beyond this natural barrier: for there is as much land within it as the inhabitants can ever plant to advantage; and they will only weaken their ſettlements, by endeavouring to enlarge thoſe bounds. If the French are determined to eſtabliſh themſelves on the banks of the Miſſiſſippi, and in the bay of Apalachi; the beſt reaſon Great Britain can have to oppoſe this project is, leſt they ſhould one day penetrate to the Spaniſh mines, or make themſelves maſters of the navigation of the gulph of Mexico, which will enable them to put what terms they pleaſe upon Spain. It will then be in their power to compel his Catholic Majeſty to give them the trade of Old Spain, and of the Spaniſh Weſt Indies; as alſo to exclude the ſubjects of Britain, and all other European nations, from ſending their manufactures to the Spaniſh Weſt Indies, by the flota, or otherwiſe; and poſſibly they will not reſt ſatisfied till they have compelled his Catholic Majeſty to let them have a ſhare of his mines.

The Spaniards, both on the E. and W. of Florida, are much more in danger of the French than the Britiſh colonies are, and they will probably be one day made ſenſible, that their ſafety conſiſts in a ſtrict union with great Great Britain; as alſo that there is no other way left to defend their mines in North America from the encroachments of the French, if they eſtabliſh themſelves on the northern ſhores of the gulph of Mexico, and on the banks of the Miſſiſſippi.

Commerce of L'Iſle Royale, *or the* Royal Iſland; *more commonly known by the name of* Cape Breton.

The colony of Cape Breton is of a later date than that of Louiſiana; the French commencing their eſtabliſhments there in 1714; that is, ſince they ceded to the Engliſh, by the treaty of Utrecht, the fort of Placentia, and the other poſts they poſſeſſed in Newfoundland.

This iſland always belonged to France, under the denomination of Cape-Breton, as making a part of Canada; and the French, ſome time before the year 1640, had forts and plantations there, which they afterwards abandoned; becauſe their eſtabliſhments in Newfoundland were ſufficient, both for their merchants and fiſhermen, to erect a fiſhery there, and promote the commerce of dry cod.

The ceſſion of Newfoundland to the Engliſh induced the French to reſume their antient project of peopling the iſland of Cape Breton; and, for a further aſſurance of its poſſeſſion, the ſame article of the treaty of Utrecht, which takes from France Placentia, cedes to her Cape-Breton, in the following terms: "That the iſle called "Cape Breton, and all others whatſoever, ſituated in the "mouth, and in the gulph of St. Lawrence, ſhall re-"main for the future to France; with an entire power "and authority, in his moſt Chriſtian Majeſty, to for-"tify therein one or more places."

It is, therefore, from the wrecks of the French colony of Newfoundland, and the remains of that of Acadia, ceded alſo to the Engliſh, that Cape Breton is repeopled; compoſing, at this time, a flouriſhing colony, not only by the cultivation of lands, but alſo by the cod-fiſhery; which, as the French flatter themſelves, is not inferior to that they were obliged to abandon.

Cape-Breton is ſituated between 61 and 62 deg of W. lon. and between 45 and 48 deg. of N. lat. and, with Newfoundland, about 16 leagues diſtant from it, forms the S. entry of the bay, or gulph of St. Lawrence: the ſtreight of Canſo, which ſeparates it from Nova Scotia, is little more than 5 leagues in length, and one in breadth: ſo that the poſſeſſion of this iſland commands the navigation to Canada, by the river of St. Lawrence. The iſland is about 150 miles in length, from N. E. to S. W. and about 99 broad, from E. to W. its ſhape is very irregular, being ſo deeply indented with rivers and lakes, that the N. and S. parts are only joined by an iſthmus of about 600 yards over, which ſeparates the bottom of the bay of Touloufe, near the mouth of the ſtreight of Canſo, from the lakes of Labrador, that diſcharge themſelves into the Atlantic ocean, by two channels of unequal breadth, formed by the iſle of Verderonne, or De la Boularderie, which is about 22 miles in length. The climature of this iſland is not very different from that of Quebec, and Canada: and, tho' the fogs are more frequent here, the air is not reckoned unhealthy: the ſoil is tolerably good, and the mountains may be cultivated even to the tops; but the beſt lands are ſuch as incline to the S. being defended from the N. and N. W. winds, by the river of St. Lawrence. The Marquis du Maiſon Fort has reported, that, in the year 1732, the iſland produced a conſiderable quantity of grain; but tho' there were more than 4000 inhabitants, they found their account much better in fiſhing than huſbandry, which conſtantly occaſioned the land to lie waſte, the natives procuring all neceſſaries by their fiſh. Here are oaks of a prodigious ſize, pine-trees fit for maſts; and, in general, all ſorts of timber, eſpecially the cedar, the aſh, the maple, the plane, and the aſp. Domeſtic animals, ſuch as horſes, black cattle, ſheep, ſwine, and poultry, thrive very well: tho' hunting and fiſhing yield the inhabitants a plentiful ſubſiſtence for a great part of the year; for no place in the world abounds more plentifully with cod, or has greater conveniencies for drying it; and the fiſheries for ſeals, porpoiſes, and ſea-cows, is both eaſy and profitable: here are ſeveral good mines of excellent coal, which, as they lie on the mountainous part of the iſle, require no neceſſity of digging for them; and there is alſo a good quantity of lime-ſtone. All the frequented ports of this iſland lie from the E. inclining to the S. for 55 leagues, beginning from port Dauphin to port Touloufe, and are, the bay of Gabaron, the port of Louiſburg, and port de Baleine; the bays of Panadon, Miray, Morienne, Indiana, Spaniſh bay, and port Dauphin: the northern coaſt is very ſteep and inacceſſible; as is alſo the weſtern ſide, to the ſtreight of Canſo, and all the reſt of the coaſt ſcarce affords anchorage, but for ſmall barks, in the little bays between the iſles.

The French had ſtrongly fortified Louiſburgh, the principal town in the iſland, which, they were ſenſible was naturally ſeated for a ſtaple of trade, between Old and New

France: they found it was able, of its own growth, to ſupply Old France, with fiſh, train-oil, pit-coal, lime, and timber for building; and to furniſh New France with European commodities, at a cheap and profitable rate; whereby the two colonies, mutually aſſiſting one another, were equally beneficial to themſelves, and the whole nation of France; beſides, there was no ſafer, or more convenient retreat for ſhips bound from all parts of America, whether chaſed by enemies, ſurpriſed by bad weather, or in want of water, wood, or proviſions: and, in time of war, this port might ſend out cruizers to ruin the trade of New England, and ſeize upon the whole of the cod-fiſhery; which would enable the French to furniſh Spain and the Levant with that commodity; and ſo introduce a wider channel of opulence into the dominions of France. This ſufficiently demonſtrates the expectation of the French from the colony of Cape-Breton, what encouragement it had, how faſt it grew, and how greatly beneficial it muſt have been, in a number of years more, to France; from whence the coloniſts muſt have received every neceſſary of life, and paid for them out of this valuable fiſhery; for, ſince the treaty of Utrecht, the French, by the advantage of this iſland, carried on an unbounded fiſhery, annually employing at leaſt 1000 ſail, from 200 to 400 tons, and 20,000 ſeamen; and the produce of their labour was ſo great, that, in the year 1730 there was a computation made of 220,000 quintals of fiſh, at Marſeilles only, for a market; though it was affirmed, by a gentleman converſant in this branch of commerce, that, one year with another, they cured above five millions of quintals; which, if true, would produce, at 10 s. a quintal, a return of 2,500,000 l. for this fiſhery of the ſubjects of France; but poſſibly this calculation was exaggerated, to ſhew what an extraordinary commerce, in a manner, entirely depended on the poſſeſſion of Cape Breton.

Louiſburg. The port of Louiſburg is but a league diſtant, by ſea, from the bay of Gabaron, one of the beſt in all America, being about four leagues in circumference, and having in every part of it ſix or ſeven fathom water: the anchorage is good, and ſhips may run aſhore on the ſands, without danger: the entrance is not above 400 yards broad, between two ſmall iſles, and is known 12 leagues off at ſea, by the cape of Larembec, which lies a little to the N. E. In the N. E. end of the harbour is a fine careening wharf for men of war to heave down, and very ſafe from all winds: on the oppoſite ſide are the fiſhing ſtages, with room for 2000 boats to make their fiſh; and on the ſtarboard ſide of the harbour, going in, is a light-houſe, on a high rocky point, which may be diſtinguiſhed, in a clear night, five leagues off at ſea. The city is built on a point towards the ſea, on the S. ſide of the harbour, being improved by fortifications that coſt upwards of two millions of livres, or more than 81,250 l. ſterling in building; the ſtreets are regular and broad; principally compoſed of ſtone-houſes, with a ſpacious citadel, on the weſtern part of the town, near the ramparts erected for the ſecurity of the land ſide.

How dangerous a nurſery of ſeamen this has therefore been, and ſtill will be, while in poſſeſſion of the French, is too obvious to a Britiſh conſtitution; and it was as demonſtrable, that the recovery of ſo important a place would entirely break up their fiſhery, and deſtroy this formidable ſeminary of ſeamen; which occaſioned the colonies of New England to attempt the reduction of it in the late war, wherein they were ſo ſucceſsful as to take it with an inconſiderable loſs; but the town and iſland were re-delivered to the French, in purſuance of the treaty of Aix la Chapelle.

Iſles of St. John, conſiſt of a pretty large iſland and ſome ſmall ones, in the bay of St. Lawrence. The cod fiſhery has been always very conſiderable there, and the fiſh are equally good with thoſe of Newfoundland; this being formerly the place where the inhabitants of the S. W. diviſion of the province of Gaſcony in France eſtabliſhed their fiſhery.

The large iſland of St. John is about 25 or 30 leagues in length, and but one league in breadth; being almoſt like a creſcent in figure. The other iſles are inconſiderable; though they ſupport a tolerable good fiſhery.

The conveniency of Newfoundland and Placentia for the cod-fiſhery, made the French abandon the eſtabliſhments they had in theſe iſlands; but, ſince Cape-Breton became the chief place of their cod fiſhery, they re-entered upon their poſſeſſion in theſe iſlands; and the French merchants, who ſend ſhips there, have obtained, for the importation of their fiſh into France, the ſame exemptions that were before granted for the green and dry cod, and the oils of the Cape-Breton fiſhery.

Generally ſpeaking, the coaſts of theſe iſlands are not very ſafe, eſpecially between the great iſland and that of St. Mary's; however, there are ſeveral good ports in the great iſland; as the Whale-port, the Engliſh harbour, the Spaniſh bay, and St. Anne's harbour, where ſhips may remain in great ſecurity: but the beſt of all is the harbour of St. Anne, called at preſent port Dauphin, where ſhips of 3 or 400 ton may enter at any time, which abounds with ſalmon and mackarel, and might contain 1000 ſhips and upwards.

About four leagues into the Spaniſh bay there are mines of coal; as alſo in the entrance of the little Chibou, beſides ſome other places.

The French, who firſt inhabited the iſland of St. John, to avoid the danger of the coaſts, and to ſpare themſelves a long circuit, opened a way at the bottom of the Labrador, thro' which they hawled ſloops from one ſea to another, in order to facilitate their fiſhery; the fiſh, in great ſhoals, during the ſummer ſeaſon, frequenting all parts of the iſland. This paſſage was again uſed in 1722, veſſels of 25 tons being conveyed on rollers drawn by oxen.

The moſt remarkable places for this fiſhery, which is the principal object of the colony, are the green Iſle; the Iſles Michaux, 3 leagues from port St. Peter; and Engliſh harbour, 15 leagues from it: 'tis here that the Oleneſe mariners took up formerly their winter quarters, to be the firſt at the grand bank, and the firſt who returned to France, where cod has a conſiderable vent when newly imported.

The fiſh alſo greatly frequent Tourillon, which lies backwards of Cape-Breton; as alſo Niganiche, and the north Cape. Theſe laſt places are of difficult acceſs, the one having room only for three ſhips, and the other but for one: however, theſe places are firſt reſorted by the fiſhermen, becauſe the fiſhery there is good, and prime; that is, the fiſh frequent it, and can be fiſhed for early in the ſeaſon: but it muſt be obſerved, that ſhips are not in ſafety at Niganiche, now called the port of Orleans; becauſe the rocky bottom cuts the cables.

Some Indians formerly inhabited this great iſland, which abounded in elks; and the French uſe their endeavours to bring them back, upon account of the commerce of furr and ſkins.

Since the re-eſtabliſhment of Cape Breton, the ſhips which go to Canada paſs by the great iſland of St. John in returning, and take in the commodities of the iſland; eſpecially cod, which they pay for either in ready money or corn, or other commodities of Quebec, and Europe. Some Norman, Nants, and Rochelle veſſels come there alſo laden with merchandiſes of a like nature with thoſe imported to New France, and the iſlands. Laſtly, the King ſends his ſhips there regularly every year, which ſtore the warehouſes with all that is neceſſary for the nouriſhment and ſupport of the officers and troops in the garriſons; from whence the inhabitants ſupply themſelves when the colony is deficient.

Cayenne, or *Equinoctial France*. The colony of Cayenne is the only one poſſeſſed by the French in South America, except ſome plantations on the ſide of Surinam, and the river of the Amazons, which form a kind of government of upwards of 100 leagues along the coaſt.

The iſland of Cayenne, which gives its name to this government, and which takes the ſame itſelf from the river where two branches ſeparate it from the terra firma, ſituated 100 leagues from the great river of the Amazons, and at a much leſs diſtance from the Dutch colony of Surinam.

This iſland is about 17 leagues in circumference, five of which are waſhed by the ocean, and the reſt by the two branches of the river of Cayenne.

The French firſt eſtabliſhed themſelves there in 1635, under the Sieur Poncet of Bretigny, who was maſſacred there by the Indians.

The remains of his colony defended themſelves in fort St. Lewis, built upon an eminence jutting out into the ſea, at the mouth of the Cayenne; and the new company, formed at Paris in 1651, by the Abbot of Marivaux, took poſſeſſion thereof in 1652, but abandoned it two years after.

The Engliſh, finding it without maſters, took poſſeſſion of it; but kept it only till 1664, when they were expelled by Meſſieurs Tracy and Barre, whom Lewis XIV. ſent there with troops to re-eſtabliſh his ſubjects.

In 1676 the Dutch took it from the French; but M. de Eſtrees, the Vice admiral of France, replaced the French in poſſeſſion thereof in 1677, to whom it has ſince remained.

The chief trade of Cayenne conſiſts in ſugar, rocou, indigo, cotton, and vanilla: but the want of negroes, whoſe number ſeldom exceeds 500, hinders the inhabitants from carrying on a trade to any advantage.

'Tis true, they might remedy this defect by treating for ſlaves with the Indians on the river of the Amazons; but the Portugueſe having interrupted this commerce by maſſacring thoſe Indians who adventured to come to Cayenne, the colony remained in the ſame indigence of manufacturers for their ſugar, and culture for their indigo, and other commodities; ſo that the ſhips are obliged ſometimes to wait a whole year before they can take in a ſufficient cargo.

Beſides ſlaves, the French alſo had from theſe Indians dry fiſh, and a quantity of other proviſions; as alſo ſome ſamples of ſilver-mines which the Indians ſaid were near their villages.

It was to renew with them their antient commerce, and to penetrate to theſe mines, that the French opened a road thro' the heart of the country, from Cayenne to the river of the Amazons; without being obliged to paſs near the plantations of the Portugueſe, who have three great forts towards the mouth of this river.

The commodities from France for Cayenne conſiſt chiefly in corn, wine, brandy, linen cloth, ſtuffs, mercury, hardware, and eſpecially ſalted fleſh; large cattle being ſcarce in the iſland, and no oxen being allowed to be butchered without a ſpecial licence from the governor.

The inhabitants, without reckoning the ſoldiers of the garriſons, the negroes and ſlaves, amount to 1200, or 1500 men, diſtributed through ſeveral plantations; the chief of which compoſes a town of 200 houſes, with 350 white inhabitants, where the warehouſes are kept.

Among the whites 60 Jews are reckoned, all reſiding in the plantation of Lance de Remire, where 80 negroes are employed in the culture of their plantations. See *Portuguese* America, and *Dutch* America.

Upon the whole, the French have rendered themſelves extremely powerful in America; their iſland colonies are become rivals to the Britiſh ſugar-iſlands; and their colonies on the continent have been ſo numerouſly peopled, and ſo well improved, as to make the French think of extending themſelves cloſe upon the back of the Britiſh ſettlements, to erect forts there, and cut off all communication of trade between the Indian nations and the Britiſh colonies.

About the year 1660 the French were little acquainted with commerce, and little ſkilled in navigation. The Engliſh, but more eſpecially the Dutch, ſays Mr. Voltaire, carried on almoſt the whole commerce of France in their ſhips; the Dutch in particular loaded their veſſels with French commodities, and diſtributed them throughout Europe. But Lewis XIV. began to exempt his ſubjects from an impoſt, called the right of freight, paid by all foreign veſſels; and he enabled them to tranſport their merchandiſes themſelves at a leſs expence, which made the maritime commerce of France ſoon begin to increaſe. The Weſt India company was formed, and greatly encouraged; great indulgencies were given to the planters, and many good laws made in favour of the merchants. There was almoſt an univerſal reparation, or even a creation of things, in the reign of Lewis XIV. while he was forming his numerous and well-diſciplined land armies, even before he engaged in war, he was alſo intent on gaining the dominion of the ſea; being deſirous of rendering France properly a maritime power, well knowing that trade is not to be advantageouſly proſecuted without a proper naval force for its protection. The few ſhips which Cardinal Mazarin had ſuffered to rot in the ports, were immediately repaired; others were purchaſed in Holland and Sweden; and in the 3d year of his government he made trial of his maritime forces at Gigri on the coaſt of Africa: the Duke of Beaufort cleared the ſeas of pirates in 1665; and two years after France had 60 ſhips of war in its ports.

Though this was only a beginning, yet theſe new regulations and efforts inſpired Lewis XIV. with ſuch a ſenſe of his increaſing power, that he would not ſuffer his ſhips to lower their flag before thoſe of England. The council of Charles II. in vain inſiſted upon this right, which, as the celebrated French hiſtorian ſays, force, induſtry, and time, had given to the Engliſh: for Lewis XIV. wrote to his embaſſador, the Count d'Eſtrade, to this effect: "The King of England and his Chancellor may gain a "knowledge of my ſtrength, but they do not ſee my "heart: I regard my honour more than all other things." He ſaid no more than what he was reſolved to make good; in conſequence of which, the Engliſh tamely obſerved an equality in every thing at ſea between the two nations: but while Lewis thus inſiſted upon an equality with England, he maintained his ſuperiority in regard to Spain, and obliged the Spaniſh admirals to lower their flags before the French, in virtue of the ſolemn precedency granted in 1662: and, in the mean time, efforts were every where uſed for the eſtabliſhment of ſuch a naval force as might juſtify theſe high ſentiments: ſo that in 1672, the French had 60 ſhips of the line, and 40 frigates; and in 1681 they had 198 ſhips of war, including the ſmaller veſſels, and 30 gallies in the port of Toulon, either armed, or ready to be armed. With this force the French were ſucceſsful in ſeveral naval engagements, till the battle of La Hogue, in 1692, when the Count de Tourville, in obedience to orders from court, with 45 ſail attacked the Engliſh and Dutch fleets of 90 ſhips. The French were obliged to ſubmit to ſuch ſuperior force, and they loſt 14 of their largeſt ſhips: yet, ſays the ſame elegant writer, the French ſtill preſerved their maritime force; but it declined in the war of the ſucceſſion: he does not mention how formidable it was in the year 1743; and how much it was debilitated in the year 1748; but ſays the French did not begin effectually to reſtore it till 1751, in the time of a happy peace, which is the only time proper to eſtabliſh a good marine; for in time of war the French have neither leiſure nor power to do it.

Theſe naval forces ſerved to protect the commerce of France. The colonies of Martinico, St. Domingo, and Canada, which before had been in a languiſhing condition, began to flouriſh; not indeed ſo finely as at preſent; but yet better than had till then been hoped; for from 1635 to 1665, theſe eſtabliſhments had rather been chargeable than otherwiſe. So that Lewis XIV. uſed all the means in his power to repair the error and misfortune under which France had ſo long laboured, by a neglect of the ſea; while her neighbours had been forming empires in the moſt diſtant parts of the world.

But while that great miniſter Colbert was aſſiſting his maſter in raiſing the pillars of his ſtate upon trade, we cannot enough admire that the abbot de Choiſi ſhould condemn theſe eſtabliſhments in his memoirs; which, Mr. Voltaire ſays, ſhould be read with diffidence. The French are now perfectly ſenſible of what their miniſter Colbert did for the good of the kingdom; but then they knew it not. He laboured for the ungrateful; and ſuch an animoſity was raiſed againſt him in Paris, for the ſupreſſion of ſome rents upon the hotel de Ville, which had been meanly exacted ſince the year 1636, and for the diſcredit into which the exchequer orders fell, from their having been laviſhed under the preceding miniſtry, as all the good which he did to the public in general could not counterbalance. There were more cits than good citi-

zens:

zens; and few perſons extended their views ſo far as the public good. No one is ignorant how much private intereſt faſcinates the eyes, miſleads the underſtanding, and obſtructs the intereſts, not only of a ſimple merchant, but of a company, and even of a whole city. The coarſe reply made by a merchant, named Hazon, who, being conſulted by this miniſter, ſaid, "You found the machine overturned on one ſide, and you have overturned it on the other," was cited with applauſe: however, that philoſophical ſpirit which was at laſt introduced into France, corrected the vulgar prejudices, and perfect juſtice was at laſt done to the memory of this great man, who had the ſame regularity as the Duke de Sully, and his views were much more extenſive: the Duke was ſkilled only in the arts of oeconomy; but Colbert was the founder of thoſe very great and uſeful eſtabliſhments which have founded the commerce and naval power of France in a glorious and ſurpriſing manner.

From the death of Lewis XIV. the French miniſtry have trod in the ſteps of Colbert: ſo that now their naval force is great in Europe; their colonies in America in a very flouriſhing condition; their ſettlements in the Eaſt Indies very formidable; their poſſeſſions in Africa very extenſive; and their trade very great all over the world. However, the power of France is moſt to be dreaded on the continent of America, where they have ſo much ſtrengthened themſelves with a very politic alliance and intermixture with the Indians, as to keep all the Britiſh northern colonies in continual dread, and apprehenſion of danger; but it is not to be ſuppoſed, that Great Britain will ever abandon thoſe valuable colonies to the incroachments of the French, who have built many forts on the back of thoſe ſettlements in the places where it is heartily to be wiſhed they had been erected by the Britiſh coloniſts. See *Britiſh* America, under Great *Britain*; *Indian* America; and *Spaniſh* America under *Spain*.

Iſle of FRANCE. See *Iſle* of France.

FRANCHISE. A privilege, or exemption, from ordinary juriſdiction; eſpecially from tributes and taxes: being real or perſonal; that is, either belonging immediately to the perſon, or accruing on account of this or that place, or office of immunity.

ST. FRANCIS, or *Cape St. Francis*, a town belonging to the French, on the iſland of Hiſpaniola. See *French* America.

FRANGIPANE. An excellent kind of perfume, frequently given to the leather whereof gloves, purſes, bags, and other things are made; which takes its name from a Roman nobleman of the antient family of Frangipani, who was the inventor thereof. There is alſo a kind of perfumed liquor of the ſame denomination, reported to have been invented by a grandſon of Mutio Frangipani; as alſo a perfumed kind of ros ſolis, called by the ſame name. See *Ros ſolis*.

FRANCFORT. An imperial city of Germany, ſituated in 7 deg. 30 min. of E. lon. and 50 deg. 10 min. of N. lat. See *Germany*.

FRANCFORT, upon the Oder, is alſo another city of Germany, ſituated in 15 deg. of E. lon. and 52 deg. 22 min. of N. lat. ſubject to Pruſſia. See *Germany*.

FRANKINCENSE, or *Simple Incenſe*, an odoriferous aromatic gum, or reſin, anciently burnt in temples as a perfume, and ſtill uſed in pharmacy as an agglutinant and ſtrengthener.

Frankincenſe diſtils from inciſions made in a tree, called *arbor thuriſera*, during the heats of ſummer: but, notwithſtanding the great uſe of this gum, both in the ancient religion and modern medicine, the tree that produces it, or even the place where it grows, are but very imperfectly known: however, the moſt common opinion has always been, that it was brought from Arabia Felix, and was found near the city of Saba; whence its epithet Sabæum: yet the name *olibanum*, which it ſometimes alſo bears, ſeems to intimate that there are ſome of theſe thuriferous, or incenſe-bearing trees, in the Holy Land, near Mount Lebanon: and travellers are poſitive that there are others in the Eaſt Indies.

This gum is uſually divided into male and female: the male incenſe, or *thus maſculum*, called alſo *olibanum*, being in fair white bits, or tears, a little yellowiſh, of a bitter diſagreeable taſte; and when chewed promotes the flux of ſaliva: it is called male in reſpect of its tears, which are larger than the common, or female: however, it is frequently in a maſs, and ſomewhat reddiſh; which is often ſold for the true bdellium: but that brought from the Indies is of a much inferior quality to that from Arabia, or Mount Lebanon; and it is ſometimes called incenſe of Mocha, though it is not brought from that city.

But as for the female incenſe, or frankincenſe, Europeans know not what it is, nor how diſtinguiſhed; though ſome ſay it is ſofter, or more reſinous, but of leſſer virtue than the former.

Bark of incenſe, or *Cortex Thuris*, is the bark of the tree from whence the incenſe flows; which has the ſame qualities with frankincenſe itſelf: but there is another kind brought from the Indies, called alſo *bark of incenſe*, and ſometimes *Jews incenſe*, in regard the Jews frequently uſe it in their perfumes.

Manna of incenſe, is the flower or farina of incenſe, occaſioned by the friction of the grains againſt each other in the ſacks wherein they carry it.

There is alſo a *ſoot of incenſe*, which is a preparation of it, burnt like reſin, to make lamp-black.

Frankincenſe was formerly burnt in the temples of all religions, in honour of the divinities that were adored there: it is ſtill retained in many of the ceremonies belonging to the Romiſh church, particularly at ſolemn funerals: and it is annually offered at the altar, as an oblation, by all European monarchs, in commemoration of the Epiphany.

FRATERNITY, or *Brotherhood*, is uſed in a civil ſenſe for a guild, aſſociation, or ſociety of perſons, united into a body, for ſome common intereſt, or advantage. See Guild.

FREDERICA. A beautiful and commodious town of Georgia, in North America, ſituated in 81 deg. and [illegible] min. of W. lon. and 31 deg. of N. lat. on the iſland of St. Simon, in the mouth of the river Alatamacha, lately built and fortified by General Oglethorpe. See *Britiſh* America.

FREDERICKSBURG. A fort upon the gold coaſt of Guinea, near Cape Three Points, ſubject to the Dutch, being ſituated in 2 deg. of W. lon. and 5 deg. of lat. See *Guinea*.

FREDERICKSODE. A town of North Jutland, ſituated in 10 deg. of E. lon. and 55 deg. 40 min. of N. lat. ſubject to Denmark. See *Denmark*.

FREDERICKSTAT. A town of Norway, ſituated on Schaggerack bay, near the frontiers of Sweden, lying in 11 deg. of E. lon. and 24 deg. 59 min. of N. lat. See *Denmark*.

FREDERICKSTAT, is alſo a town of the duchy of Sleſwick, ſubject to the Duke of Holſtein. See *Denmark*.

FREE, is to be ſet at liberty, or to quit a perſon of ſlavery: alſo when the pump of a ſhip has the full command of the water that leaks into her, it is ſaid to *free* her.

FREE *Britiſh Fiſhery*. See Herring *Fiſhery*.

FREE, or *Imperial cities of Germany*, are thoſe not ſubject to any particular prince; but governed, like republics, by their own magiſtrates. See *Germany*.

FREE-*man*, is a perſon free of any trade, or corporation: alſo ſuch negroes or convicts in America who are under no ſervitude.

FREE *port*, is a place where no duties are paid. See *Port*.

FREE *ſtate*, is a republic governed by magiſtrates, elected by the free ſuffrages of the inhabitants. See *State*.

FREE *ſtone*. A whitiſh ſtone, dug up in many parts of England, that works like alabaſter; but more hard and durable, being a kind of greet, but finer ſanded, and ſmoother ſtone; and is called *free ſtone*, from its having ſuch a conſtitution as to be cut freely in any direction, which is of excellent uſe in building. See *Stone*.

FREEBOOTER, or *Flybuſter*. A name given to pirates who ſcour the American ſeas, particularly ſuch as make war againſt the Spaniards. The French call them flybuſters, deducing the word from the Engliſh flibot or flyboat; becauſe the firſt adventurers of this kind were the people of St. Domingo, who made their excur-

with flyboats which they had taken from the Engliſh. See *Buccaneer*.

FREEDOM *of a city, town*, or *corporation*, denotes a right, or capacity, of exerciſing a certain trade, or employment in a city, or town corporate; and of being elected to the dignities and offices thereof, procured regularly by ſerving an apprenticeſhip: but ſometimes purchaſed with money; and at others conferred as a favour or compliment.

FREESE. See *Frize*.

FREIGHT, or *Fraight*, in navigation and commerce, ſignifies the hire of a ſhip, or of a part of it; for the conveyance and carriage of goods, from one port or place to another, which is called *nolis* in the Levant: or it is the ſum agreed on between the owner and the merchant, for hire and uſe of a veſſel; which is one of the principal articles in the trade of the Hollanders, who are the carriers of all the nations of Europe, and their purveyors; notwithſtanding their country produces nothing at all, and that they are obliged to have every thing neceſſary for the building and equipping of a veſſel from other countries: this being ſo very eſſential a ſtep towards the advancement and preſervation of commerce, that the Dutch make it their ſheet anchor, upon account of the great emoluments they derive from it, far beyond all other nations: and freight is every where governed by the contract, when reduced into a writing, commonly called a charter-party; executed between the owners and merchant, or the maſter, in behalf of himſelf and owners, or himſelf and the merchant, or between them all; for the regulation whereof, the legiſlators of every maritime country have made the moſt prudential and ſalutary proviſions. See *Charter*-party.

Ships are freighted either by the ton or by the great; and, in reſpect of time, the freight is contracted for at ſo much a month, or at a certain ſum for the whole voyage. If a ſhip freighted by the great, happens to be caſt away, the freight is loſt: but if a merchant agrees by the ton, or at ſo much for every piece of commodities; then, if the ſhip is accidentally caſt away, and part of the goods is ſaved, ſome civilians are of opinion, ſhe ought to be answered her freight by the equal limited rate: though, when a ſhip is inſured, and ſuch a misfortune happens, the inſured commonly transfer thoſe goods over to the inſurers, towards a ſatisfaction of what they make good, by virtue of their ſubſcriptions.

By the Rhodian laws, and alſo by thoſe of Oleron, it was provided, That where a ſhip is freighted out and in, no freight is due till the whole voyage is performed; ſo that, if the ſhip is caſt away on her returning home, the freight outwards, as well as inwards, becomes loſt: but when goods and merchandiſe are fully laden aboard, and the ſhip having broke ground; if the merchant, after that, in conſideration reſolves not to adventure, but will unlade again, then, by the marine law, the freight is deſerved. Alſo, if a ſhip in her voyage happens to become incapable of performing it, without any fault in the maſter; or if the maſter or ſhip be arreſted by ſome foreign prince or ſtate, the maſter may repair his ſhip to make her capable of the voyage, or may freight another ſhip: and if the merchant will not agree to the ſame, then the freight will be due for ſo much as the ſhip hath earned: becauſe, the maſter is otherwiſe anſwerable for all damages that ſhall happen; and therefore, if the ſhip periſhes, to which the goods are removed, the maſter muſt be reſponſible; but if both the ſhips periſh then he is diſcharged: beſides, if the ſhip is in a ſinking condition, ſo that there is an extreme neceſſity, the goods may be put into any empty veſſel paſſing by, which in all appearance ſeems ſufficient; and he is excuſable if that ſhip ſinks or periſhes.

If part of the lading is on ſhip-board, and the merchant, through ſome misfortune, has not his full lading aboard in the limited time, the maſter is at liberty to contract with another, and may have freight by way of damage for the time thoſe goods were on board: becauſe theſe agreements are in law upon a condition precedent; and by failure, as to complete lading, will determine the ſame, unleſs afterwards affirmed by the conſent of the maſter: for it is the higheſt juſtice, that the ſhip and maſter ſhould be free in theſe caſes; and that, by the delay of the merchant, on ſhipping a ſmall quantity of goods, the maſter may not loſe the ſeaſon of the year, or be defeated of the opportunity of paſſage.

And, on the contrary, if the veſſel is not ready, and part of the goods are on ſhip-board, the merchant may ſhip the remainder of his goods aboard another veſſel, and diſcharge the firſt maſter; and may alſo recover damages againſt ſuch maſter, or the owners, for the reſt; which is grounded upon the like reaſon as the former: though, by the marine law, chance, or ſome other notorious neceſſity, will excuſe the maſter; but then he loſes his freight till ſuch time as he breaks ground, and until that time he ſuſtains the loſs of the ſhip. But if the fault be in the merchant, he is to anſwer for the damage to the maſter and the ſhip; or, according to the Rhodian laws, he is obliged to provide for the ſhip's crew ten days at his own charge; beſides, if there is any ſubſequent damage, the merchant muſt run the riſque of that, and not the maſter or owners; though, by the common law of England, it ſeems to be otherwiſe, for ſo long as the maſter has the goods on ſhip-board, he is to ſee them forth-coming; nor can he detain any merchandiſe in his veſſel, in default of payment of freight; but he may order them to be ſeized any time, or any where afterwards.

Where a ſhip is not ready to take in, or the merchant not ready to lade aboard goods, the parties are at liberty; but, nevertheleſs, the perſon damnified on either ſide may bring an action againſt the other, to recompence and make ſatisfaction for the detriment ſuſtained: it has been held by the common law of England, that the party thus damnified may recover damages on the agreement; though, by the Rhodian law, if there is an agreement, and earneſt given thereon, but no writing made, and the ſame is broke by the merchant, he loſes his earneſt; and, if it is broke by the owners of the ſhip, or the maſter, they are to forfeit double the earneſt given.

If any ſhip, or veſſel, is freighted from one port to another, and ſo to ſeveral ports, on what is called a trading voyage, this is all but one voyage, if it be in conformity to the charter-party: for, generally, the touching at ſeveral ports by agreement, imports not a diverſity, but a voyage entire: though, if the ſhip otherwiſe puts into any other port than what ſhe was freighted to, the maſter, by the laws of Oleron, is to anſwer damages to the merchant, unleſs he is forced in by ſtorm, enemies, or pirates; and then he muſt ſail to the port agreed at his own expence. However, where a maſter freights out a ſhip, and afterwards privately takes out other goods, unknown to the firſt laders, he loſes his freight: and if it happens, in this caſe, that any of the freighters goods are caſt overboard, for the ſafety of the ſhip; the reſt of their merchandiſe is not ſubject to the average, but the maſter is to ſatisfy it out of his own purſe.

Leakage, occaſioned by ſtorm, may in common caſes come into an average: ſo if the freight is taken for 100 tons of wine, and 20 of them leak out, leaving above 8 inches from the buge upwards, the freight becomes due notwithſtanding; and one reaſon thereof is, becauſe, from that gage, the King can demand his cuſtoms; but if, there is under 8 inches, the merchant may relinquiſh them, and the maſter be obliged to take them for freight: however, there is an objection againſt this rule, becauſe it has been held, that if all the wine had leaked out, without any fault of the maſter, there is no reaſon the ſhip ſhould loſe her freight; for the right ariſes from the tonnage taken; and in ſome foreign places, eſpecially at Bourdeaux, the maſter is not permitted to ſtow the goods, but it is done by a particular officer appointed for that purpoſe.

In caſe a ſhip is freighted for 200 tons, or any other number of tons more or leſs, adding, *or thereabouts*; this addition is commonly underſtood to be within 5 tons, the half of the number ten, whereof the whole number is compounded. And if a charter-party is made, reciting the ſhip to be of the burthen of 150 tons, and freight is agreed for, at a certain ſum, to be paid at her return; the ſum agreed is to be paid, though the ſhip falls ſhort of

that burthen; and if no burthen is expreſſed, the ſum muſt be paid: but if a ſhip freighted by the ton is found leſs than the burthen mentioned, there ſhould be no more paid than for the real tons.

If, without agreeing for the freight by charter-party, any goods are put on board, the maſter is to have freight according to cuſtom; and if the goods are ſent to the ſhip ſecretly, without the maſter's knowledge, the ſame may be ſubjected to what freight the maſter thinks fit. And as to the maſter's anſwering for any goods and merchandiſe, when coffers, packs, and veſſels, or other marked goods are delivered cloſe packed, or ſealed, and are afterwards received open and looſe, the maſter is to be charged for it, until, on due trial, he is acquitted thereof: alſo he muſt anſwer for the damage which the rats commit in a ſhip to any merchandiſe, for want of keeping a cat, as well as for any other damage.

And concerning the marking of goods, both the common law and civil law have great reſpect to it, in relation to the ſettling the property of the merchandiſe in the right owners; ſo if one man uſe the mark of another, to the intent to do him damage, or bring him into any trouble, an action of the caſe lies.

But this relates more to home trade in general, and to aſcertain the goodneſs of commodities, than to goods uſually freighted at ſea.

In caſe of a prohibition of commerce with the country whither the veſſel is bound, ſo that it is obliged to be brought back again, the maſter is only to be paid freight for going: but if a ſhip is ſtopped, or detained in its voyage, by an embargo, there is no freight to be paid for the time of the detention, in caſe it be hired by the month; nor can the freight be increaſed if hired by the voyage; but the pay, and the victuals of the ſailors during the detention, are to be deemed average.

Freight is the ſoul of navigation, as it employs ſhipping, and breeds nurſeries of ſeamen: the cheaper the freight the better the trade; as it carries goods cheap to foreign markets, and renders the merchant capable of ſelling them at an eaſy rate; therefore, the regulation and encouragement of freight ſhould be carefully attended to by every trading nation.

It is manifeſt, that the freight of all goods exported from Great Britain, is paid by foreign nations; and perhaps more than one fifth of the freight of all the Britiſh ſhipping is paid by thoſe nations with whom Great Britain has any trade. It is ſaid, there are about 500,000 tons of ſhipping belonging to Great Britain; and that the freight may be charged at 5 l. *per* ton *per annum:* therefore, if Great Britain pays the Eaſt countries about 200,000 l. a year for naval ſtores, ſhe gains above twice as much from other nations by her ſhipping, which could not be carried on without ſuch naval ſtores.

Eaſt India and Turky goods, to the value of 150,000 l. will lie in 200 tons of ſhipping; and 800 tons of ſhipping are ſufficient for 200,000 l. value of the Britiſh woollen manufactures. A million of pounds weight of ſugar or tobacco are not above 500 tons; and 5000 tons of ſhipping are ſufficient for about 40,000 l. value in corn. Nothing is more reaſonable than that all countries ſhould pay the carriage of thoſe commodities which they conſume: but if the freight is performed in foreign bottoms, the money muſt be paid to foreign countries: ſo that it ſhould be the principal view of all trading countries to carry goods in their own bottoms; and the more ſhipping they have, the more they will be conſidered as carriers for themſelves and others: from whence it is plain, that thoſe countries who have the leaſt ſhipping pay the moſt for freight.

In the valuation of goods clear on board outwards, the freight for the importation of ſuch as are brought into Great Britain from the plantations, Turky, the Eaſt Indies, and other places, is always reckoned as part of their value at their exportation: ſo that the cheaper the freight is paid at home, the cheaper the goods can be ſold abroad.

The freight from England to and from any part of France on the ocean is about 20 s. *per* ton: but to Italy, Spain, and Portugal, it is 4 l. *per* ton.

Whatſoever is the price of building, and fitting a ſhip to ſea, is the meaſure of her value; and whatſover annual freight ſhall be given for the uſe of this ſhip, is the meaſure of the annual profit. The money thus given pays the builder and his ſervants; the landed intereſt for timber, plank, and iron; the fellers, ſawyers, ſquarers, and carriers; the Weſt India and Norway merchants for their planks, maſts, and yards; for their pitch, tar, and oil; for their tallow, roſin, and brimſtone; as alſo all other people who beſtow either labour or materials upon this ſhip: whatſoever it is they ſell, whether of labour or materials, to this ſhip, is all paid for by the firſt coſt, or the annual freight. The price of building and fitting out is therefore the meaſure of her firſt value; but if her repairs, her wear and tear, amount to more than her yearly profit, ſhe will ſoon be laid up: ſo that for a nation to carry on trade by a cheap freight, is to build ſhips at an eaſy expence, and carry its own manufactures at leaſt to other countries.

FREIGHT, is alſo uſed for the burthen, or lading of a ſhip, or the cargo of goods ſhe has on board.

FREIGHT, is likewiſe a duty of 50 ſols, or about 2 s. ſterling a ton, paid to the crown of France, by the captains and maſters of all foreign veſſels, at their entrance in, and departure from, the ports and havens of that kingdom: and it is obſervable, that all veſſels not built in France, however they may belong to French ſubjects, are reputed foreigners, and ſubject to this impoſt, unleſs it be made appear that two thirds of the crew are French.

The Dutch, and the Hans towns, are exempted from this duty; and, by the 11th article of the treaty of commerce, concluded at Utrecht, between England and France, this duty of 50 ſols a ton was to have been remitted the Engliſh; and, at the ſame time, the duty of 5 s. ſterling was to have been ſuppreſſed in favour of the French; but the execution of that article, as well as the tariff ſettled between the two nations, has been ſuſpended. See *Treaty*.

FREIGHTER is a perſon who freights a ſhip; but an under-freighter is alſo called a cap-merchant.

FREJULES, or *Frejus*, a city of Provence in France, ſituated at the mouth of the river Argens, on the Mediterranean ſea, 35 miles N. E. of Toulon, and 30 miles S. W. of Nice. See *France*.

FRENCH. Any thing relating to the people, modes, faſhions, and cuſtoms of France.

FRENCH *America*. See *France*.

FRESCO. A kind of painting performed on freſh plaiſter, or on a wall laid with mortar, not yet dry; and with water colours; which ſort of painting has a great advantage by its incorporating with the cement.

FRESH. Any thing that has little or no ſalt in it; or that is new, pure, and good.

FRESH *gale*. A pretty ſmart wind that blows ſoon after a calm.

FRESH *man*. An unſkilful perſon, or novice at any buſineſs; or a ſailor juſt entered into the ſervice.

FRESH *ſhot*, in the ſea-phraſe, ſignifies the falling down of any great river into the ſea; by means whereof the ſea has freſh water a conſiderable diſtance from the mouth of the river: and, as this is more or leſs, it is called a great or ſmall freſh ſhot.

FRESH-*ſpell*, in the ſea-language, is a freſh gang, to relieve the rowers in the long-boat.

FRESH-*water*, is the water of rivers, free from the brackiſhneſs of the ſea.

FRIENDLY *ſociety*, for inſuring houſes. See *Inſurance*.

FRIESLAND, or *Eaſt Frieſland*, is a territory of Germany. See *Germany*.

FRIGATE. A ſmall ſhip, or man of war, generally built ſomewhat lower and ſtronger than common, for its more eaſy and ſwifter ſailing; conſiſting of but two decks, chiefly employed in cruizing and privateering: however in the Britiſh navy, all ſhips, from 50 guns downwards are included under the denomination of frigates, which are never admitted into the line of battle but upon ſome emergency; though it is otherwiſe with the French, who admit 50 gun ſhips into the line.

FRIGATOON. A Venetian veſſel, commonly uſed in the Adriatic, built with a ſquare ſtern, and without

foremaſt; having only a main-maſt, mizen-maſt, and bow-ſprit.

RINGE. An ornament applied to the extremities of furniture, and ſome wearing apparel; compoſed of three parts, a little warp, a head, and a body: but there are fringes of gold, ſilver, copper, braſs, ſilk, wool, hemp, flax, and of all other materials which can be ſpun.

By the ſtatute of the 13th and 14th of Cha. II. fringes of ſilk and thread are prohibited importation into Great Britain; as are alſo thoſe of gold, ſilver, copper, or braſs, by the ſtatute of the 15th of Geo. II. See *Gold* and *Silver lace*, and *Lace*.

RIO *Cape*. A promontory of Brazil, in America, ſituated in 44 deg. of W. lon. and 23 deg. 30 min. of S. lat.

RISCHAF A bay of the Baltic ſea, formed by the iſland of Friſch and the continent, at the mouth of the river Viſtula, on the coaſt of Pruſſia in Poland.

RIT, or *Fritt*, in the glaſs manufacture, is the matter, or ingredient, whereof glaſs is to be made, calcined, or baked in a furnace; of which there are three kinds: the firſt is cryſtal frit, or that for cryſtal metal, made with ſalt of pulverine and ſand: the ſecond, and ordinary frit, is made of the bare aſhes of pulverine, or barillia, without extracting the ſalt from them; which makes the ordinary white or cryſtal metal: and the third is frit for green glaſſes, made of common aſhes, without any preparation; which will require 10 or 12 hours baking. The materials in each are to be finely powdered, waſhed, and ſierced, then equally mixed, and frequently ſtirred together in the melting-pot: but for the reſt ſee *Glaſs*, and *Cryſtal*.

RITH. See *Fryth*.

RITHGILD, was anciently the ſame with what is now called a guild, or a fraternity, or company. See *Guild*.

RIZE, or *Freeze*, in commerce, a kind of woollen cloth, or ſtuff, for winter wear, being frized, or napt, on one ſide; whence, in all probability, the name is derived: but of frizes, ſome are croſſed, others not croſſed; the former being chiefly of Engliſh manufacture, the other of Iriſh; and ſome cloths are only frized on the back-ſide, as black cloths; but others on the right ſide, as coloured and mixed cloths, rateens, bays, and frizes.

The croſſed frizes are uſually 3-4ths in breadth, and 24 or 25 ells in length; the uncroſſed are 3-4ths and a half in breadth, and 24 or 25 in length.

There are French frizes manufactured in Languedoc, which are broader by half a quarter than thoſe of England: but of all frizes, generally ſpeaking, the Engliſh are the beſt.

RIZE, is alſo a term uſed at Smyrna, ſignifying the bad quality of ſilk, often met with among the Ardaſſine, in the choice of which care ſhould be taken of its rumpling or matting.

ROBISHER's, or *Forbiſher's ſtraights*, is a ſtraight a little to the northward of Cape Farewel, in Weſt Greenland, diſcovered by Sir Martin Forbiſher; being ſituated in 48 degrees of W. lon. and 63 deg. of N. lat.

RONTIGNIAC, or *Frontenac*. A town in France, whoſe neighbouring country is remarkable for its excellent wines, which are denominated from the town. See *France*.

RUIT, in its general ſenſe, includes whatever the earth produces, for the nouriſhment and ſupport of men, and other animals; as herbs, grain, pulſe, hay, corn, flax, and every thing expreſſed by the Latins under the name *fruges*: but fruit, in natural hiſtory, ſignifies the laſt production of a tree, or plant, for the propagation, or multiplication, of its kind; and, in gardening, fruit denotes the production of a fruit-tree; as the apple, pear, plumb, peach, apricot, cherry, grape, orange, lemon, currant, raiſin, fig, almond, and others, both foreign and domeſtic.

Fruit, with regard to commerce, are diſtinguiſhed into recent or freſh, and dry; the former being thoſe ſold juſt as they are gathered from the tree, without any further preparation; as are moſt of the productions of gardens and orchards ſold by the fruiterers: but the latter are thoſe dried in the ſun, or by fire, with other ingredients ſometimes added to them, to make them keep; imported chiefly from foreign countries, and ſold by the grocers; ſuch as raiſins, currants, figs, capers, olives, cloves, nutmegs, pepper, and other ſpices; beſides, apples, pears, almonds, and filberds, are frequently included under this denomination.

FRUITERER. A perſon who deals in, or ſells fruit; particularly reſtrained to apples, pears, plumbs, oranges, lemons, and the like, excluſive of all ſorts of grain and herbage.

FRUITERERS *company of London* was incorporated by letters-patent of the 3d of James I. dated the 9th of February 1605, by the ſtyle of The maſter, wardens, and commonalty, of the myſtery of fruiterers of London; which is a ſociety governed by a maſter, 2 wardens, and 30 aſſiſtants, with a livery of 63 members, whoſe fine of admiſſion is 5 l.; but having no hall, they uſually meet at that of the pariſh-clerks, to treat of their affairs.

FRUITS current for coins. See *Coin*.

FRUITERY. A place for the laying up and keeping of fruit; which ſhould be inacceſſible to any thing of moiſture, or even froſt.

FRYTH, *Frith*, or *Firth*. An arm of the ſea; ſuch as Solway firth, frith of Forth, Tay frith, and others in Scotland; where the word is uſed in the ſame ſenſe as eſtuary is in England.

FUDER. See *Feoder*.

FUEL, in the popular ſenſe of the word, is any body which contains the pabulum of fire, for common uſe; ſuch as coal, turf, peat, wood, furze, and other things, to be commodiouſly burnt in ovens, furnaces, and chimneys.

By the ſtatutes of the 7th of Edward VI. and the 43d of Elizabeth, proviſions were made for the ſale, aſſize, and marking of talwood, billets, and faggots: the latter ſtatute ordaining, That the aſſize for talwood, billet, and faggots, ſhould continue in all cities, boroughs, and towns corporate, where ſuch talwood, billet, and faggots, were accuſtomed to be ſold. That every talſhide marked of one, being round bodied, ſhould contain 16 inches in compaſs; being half round, 19 inches; being quarter cleft, 18½ inches: and every talſhide marked two, being round bodied, ſhould contain in compaſs 23 inches; being half round, 27 inches; being of a quarter cleft, 26 inches: and every talſhide marked three, ſhould contain in compaſs, being round, 28 inches; being half round, 33 inches; being of quarter cleft, 32 inches about: and every talſhide marked four, to contain in compaſs, being round, 33 inches; being half round, 39 inches; being of quarter cleft, 28 inches about: and every talſhide marked five, ſhould contain in compaſs, being round, 38 inches; being half round, 44 inches; and being quarter cleft, 43 inches: all which to be meaſured about within 6 inches of the middle, and to contain the length limited by the ſtatute. That all faggots that ſhould be made and put to ſale, ſhould contain, beſides the knot of the bond, 24 inches; and every faggot-ſtick, or bend, within the bond to contain in length three feet, or more, excepting only one ſtick, or bend, of one foot long, to ſtop or harden the binding.

By the ſtatute of the 9th of Queen Anne, it was alſo enacted, That all billet, which ſhould be expoſed on wharfs, or other places, where billet is uſually landed, laden, or unladen; or that ſhould be put to ſale, or that ſhould be in any hoy, or veſſel, within the port of London, or any other port, ſhould be aſſized and marked in manner following. All billets ſhould contain in length 3 feet and 4 inches: every billet, named a ſingle, being round bodied, ſhould contain in compaſs 7½ inches; every billet called a caſt, ſhould be marked one; and, being round, ſhould contain in compaſs 10½ inches; being half round, ſhould contain 12¼ inches; being quarter cleft, ſhould contain 12 inches: every billet called a trois, ſhould be cut with three notches in the middle; and, being round, ſhould contain in compaſs 13 inches; being half round, 15 inches; being quarter cleft, 14¾ inches: every billet called two caſt, ſhould be marked two; and, being round, ſhould contain in compaſs 15 inches; being half round, 17¼ inches; being quarter cleft, 17 inches: every billet called three caſt, ſhould be marked with a notch at each end, and another in the middle; and, being round, ſhould contain

in compaſs 18¼ inches; being half round, 21¼ inches; being quarter cleft, 21 inches: every billet called four caſt, ſhould be marked four; and, being round, ſhould contain in compaſs 21½ inches; being half round, 24½ inches; being quarter cleft, 24 inches: every billet called twenty-five caſt, ſhould be marked five; and, being round, ſhould contain in compaſs 23¾ inches; being half round, 27½ inches; being quarter cleft, 27 inches: every billet called ſix caſt, ſhould be marked ſix; and, being round, ſhould contain in compaſs 26 inches; being half round, 30 inches; being quarter cleft, 29½ inches: every billet called ſeven caſt, ſhould be marked ſeven; and, being round, ſhould contain in compaſs 28 inches; being half round, 32¼ inches; being quarter cleft, 32 inches: every billet called eight caſt, ſhould be marked eight; and, being round, ſhould contain in compaſs 30 inches; being half round, 34¾ inches; being quarter cleft, 34 inches: every billet called nine caſt, ſhould be marked nine; and, being round, ſhould contain in compaſs 31¾ inches; being half round, 36¾ inches; being quarter cleft, 36¼ inches: every billet called ten caſt, ſhould be marked ten; and being round, ſhould contain in compaſs 33½ inches; being half round, 38¾ inches; being quarter cleft, 38 inches: every billet called eleven caſt, ſhould be marked eleven; and, being round, ſhould contain in compaſs 35¼ inches: every billet marked twelve, and being round, ſhould contain in compaſs 36¾ inches: every billet called thirteen caſt, ſhould be marked thirteen; and, being round, ſhould contain in compaſs 38¼ inches: every billet called fourteen caſt, ſhould be marked fourteen; and, being round, ſhould contain in compaſs 39¾ inches: every billet called fifteen caſt, ſhould be marked fifteen; and, being round, ſhould contain in compaſs 41 inches: every billet, called ſixteen caſt, ſhould be marked ſixteen; and, being round, ſhould contain in compaſs 42½ inches: every billet called ſeventeen caſt, ſhould be marked ſeventeen; and, being round, ſhould contain in compaſs 43¾ inches: every billet called eighteen caſt, ſhould be marked eighteen; and, being round, ſhould contain in compaſs 45 inches: every billet called nineteen caſt, ſhould be marked nineteen; and, being round, ſhould contain in compaſs 46¼ inches: every billet called twenty caſt, ſhould be marked twenty; and, being round, ſhould contain in compaſs 47½ inches.——That all billet expoſed on wharfs, or other places, where billet is uſually landed, laden or unladen; or that ſhould be put to ſale, or that ſhould be in any hoy, or veſſel, within the port of London, or any other port, and ſhould not be aſſized or marked as before directed; upon information to any juſtice of peace of the county, or to the mayor, bailiff, or other head officer of the city, borough, or town corporate, ſuch juſtice, mayor, or other head officer, ſhould have power to call before them, ſix good men of the town, pariſh or city, where the billet is, and ſhould ſwear them, truly to inquire and preſent whether the ſaid billet be of good aſſize; and if they ſhould preſent, that any of the ſaid billets were not aſſized and marked as before directed, ſuch magiſtrate ſhould take ſuch of the ſaid billets as ſhould not be marked, or be falſe aſſized, as forfeited, and ſhould deliver the ſame to the overſeers of the poor, to be given to the poor. That any owner of trees might cut billets of what aſſize he pleaſed for the private uſe of the ſaid owner only. But, by the ſtatute of the 10th of Queen Anne, the laws appointing the aſſize of fuel, are not to extend to billet made of beech-wood; provided that no perſon ſhould ſell billet made of beech-wood by retail within London and Weſtminſter, or the weekly bills of mortality, unleſs the ſame was aſſized according to the uſage of marking beech billet, or by weight, if the buyer ſhould require the ſame to be weighed.

FULLER. A workman employed in the woollen manufactures; whoſe buſineſs is to mill and thicken cloth, lay the wool one way, and cut it off equal with the ſheers, ſmooth it with teazels, and then preſs it. In the city and ſuburbs of London, there is a ſpecies of them called ſcourers, who clean cloaths. Setters are the ſame with fullers, and are called ſo only becauſe they rent tenter-grounds, and ſtretch cloths, after they are milled, upon frames called tenters.

FULLERS *earth*. A fat, foſſile earth, abounding in nitre, of great uſe in the woollen manufacture; which ſerves to ſcour cloths and ſtuffs, by imbibing all the greaſe, and oil, neceſſarily uſed in the preparing and dreſſing of the wool.

This earth is dug in great plenty out of certain pits near Brickhill in Staffordſhire; alſo near Ryegate in Surry, near Maidſtone in Kent, near Nutley and Petworth in Suſſex, and near Wooburn in Bedfordſhire. It is abſolutely neceſſary to the well dreſſing of cloth; from whence foreigners, who can procure wool to be clandeſtinely exported out of England, can never arrive to the perfection of the Engliſh cloths, without fullers earth: for which reaſon it is made a contraband commodity, and the export made equally criminal with that of exporting wool: ſo that abroad, they make great uſe of urine, in lieu of fullers earth; though there is a ſoap-earth, or a kind of fullers earth, near Smyrna in Turky.

FULLERS *Weed*, *Thiſtle*, or *Teazle*. A kind of plant much uſed by the fullers, clothworkers, and ſtocking-weavers, to card or draw out the wool or nap from the thread of ſeveral kinds of cloths, ſtuffs, and ſtockings, in order to render them cloſer and warmer.

The thiſtle is carefully cultivated in ſeveral parts of France, particularly Normandy; and the exportation thereof is prohibited in England, upon forfeiture of 1*l*. for every pound weight, on account of its great utility in the woollen manufacture. The ſtem of the plant is very high; and its extremity, as alſo thoſe of its branches, bear an oblong prickly yelloviſh ball or bur, which is the part uſed: but the largeſt burs, and thoſe moſt pointed, are eſteemed the beſt; being called male teazles, principally uſed in the dreſſing and preparing of ſtockings and coverlets: the ſmaller kind, properly called the fullers or drapers, and ſometimes the female teazle, being uſed in the preparation of the finer ſtuffs, as cloths and rateens; and the ſmalleſt kind of all, ſometimes called linnots heads, are uſed to draw out the nap from bays, and other coarſe ſtuffs.

FULLERY. A workhouſe, or place where cloths are fulled, or ſcoured; which is principally underſtood of the fulling mill, when cloths are ſent to it to be ſcoured and fulled.

FULLING. The art, or act of cleaning, ſcouring, and preſſing cloths, ſtuffs, and ſtockings, to render them ſtronger, cloſer, and firmer; which is alſo called milling, being an art that, according to Pliny, was originally invented by Nicias the ſon of Hermias; and it appears, from an inſcription quoted by Sir George Wheeler, in his travels through Greece, that this Nicias was a governor of Greece in the time of the Romans.

The fulling of cloths, and other ſtuffs, is performed by a kind of water-mill; thence called a fulling, or ſcouring-mill: theſe mills, excepting in what relates to the mill-ſtones and hopper, being much the ſame with corn-mills; and there are even ſome which ſerve indifferently for either uſe; corn being ground, and cloths fulled, by the motion of the ſame wheel; whence, in ſome places, particularly France, the fullers are called millers; as grinding corn, and milling ſtuffs, at the ſame time.

FULLING-*mill*. See *Mill*.

FUMITORY. A medicinal plant, found commonly in gardens and fields; which, when pounded and infuſed into milk, is of great efficacy for driving out the meaſles and ſmall pox.

FUNCHALL. The capital of the Madeira iſlands in the Atlantic ocean, ſituated in 16 deg. of W. lon. and 32 deg. 3 min. of N. lat. See *Madeira* iſlands.

FUND, in commerce, is uſed for the capital, or ſtock, of a merchant, company, or corporation, or the ſum of money they put into trade: but the term is more particularly applied to the public ſecurity that is given to the people for money borrowed of them by the ſtate; which is, either by appointing a bank to repay the ſums borrowed, or appropriating certain taxes for the diſcharge thereof.

Theſe funds were a matter entirely unknown in England, till after the revolution; when the government exceeded the parliamentary proviſions, and ran the nation in

into debt by taking up loans, which they were obliged to ſatisfy by mortgaging ſeveral branches of the revenue as an eſtabliſhment, or fund of ſecurity, for the repayment of what had been advanced to the government, when the demands, or, as they were called, the neceſſities of the government, firſt began to riſe ſo high, that the miniſters, who made thoſe demands, did not think it ſafe for themſelves to raiſe ſuch ſupplies within the year as were ſufficient to anſwer them, but rather choſe to double that burthen gradually, and imperceptibly, by a proceſs of mortgage and anticipation; ſo little were the people in general aware of the conſequences of a national debt, that the riſe and progreſs of it were ſcarce attended to then, and ſince have ſcarce been touched upon by any general hiſtorian. In like manner, ſo little were they aware of the inconveniencies which might ariſe, either to trade, or to the conſtitution, from companies trading, or pretending to trade, on joint ſtocks, under the authority of an excluſive charter, that, alike during the great conteſt which held through ſo many years in the reign of King William, to take the Eaſt India trade out of the direction of one party, and transfer it to the other; and during that which the project of eſtabliſhing a national bank gave riſe to, they rather attended to the iſſue, as a matter of curioſity and amuſement, than as to what fundamentally affected the intereſt or prejudice of the kingdom. But ſoon became notorious, that, inſtead of cultivating the affections of the people, it was the great effort of the new government ſo to intertwiſt itſelf with the property of the people, that it ſhould be impoſſible to hurt one without hurting the other: and it became alſo notorious, that, in virtue of this alliance between power and money, thoſe who had the driving of the bargain, and their confederates, were enabled to carve out of the national ſtock almoſt what proportion for themſelves they pleaſed. To be more explicit: at the time when this great, but inſenſible, change was made in the habit of the body politic, there were but two ways of employing money, namely, in trade, and uſury: of theſe, the former, as it deſervedly ought, was held honourable; and the latter, if extended beyond the pale of the law, as deſervedly infamous: however, great ſums were withdrawn from trade, and placed in the funds; by which it appeared, that all the meaſures which had been taken to connect the whole moneyed intereſt with that of the court, not only in oppoſition to the landed intereſt, but thereby alſo to diſarm the city of London of the importance it began to derive from the frequent diſtreſſes of the crown; and the frequent applications made to the merchants for loans, ſerved at this time to veſt that importance in the miniſtry only; and that whoſoever had the management of it, might employ it, like a two-edged ſword, either againſt the crown or the people: but, from that time to this, the ſame maxims have been obſerved; and, in conſequence of them, the moneyed intereſt has been held in the ſame ſubſerviency to that of the adminiſtration. See National *Debt*.

Theſe funds are now increaſed to the ſix following: the *Aggregate* fund, the *General* fund, the *South-ſea* fund, the *Sinking* fund, the *Bank* fund, and the *Eaſt India* fund; as alſo the *Civil liſt* fund, appropriated to the private uſes of the crown.

The *Aggregate* FUND originally aroſe out of the ſubſidies of tonnage and poundage, called the two-third ſubſidies; and the duties, and additional duties, upon coffee, cocoa-nuts, chocolate, cocoa-paſte, tea, nutmegs, cinnamon, cloves, mace, and pictures; as alſo the duty upon bouſes, and muſlins, and the further rates impoſed upon white calicoes; porcelain, called China wares; and drugs; half the old ſubſidy, and all monies ariſing from the other half ſubſidies, over and above the annuities charged thereon: but afterwards a moiety of the inland duty on coffee, and all the duty on chocolate, were appropriated to this fund; which was eſtabliſhed, by an act of parliament in the 7th year of Queen Anne, for paying all ſuch monies as ſhould be due for intereſt on the Exchequer-bills, the premium of 3 *per cent. per annum*, and for raiſing the yearly ſum of 200,000 l. for paying off the ſaid bills. This fund was augmented, by the ſtatute of the 1ſt of George I. with the one half of the old ſubſidy upon import; the additional duties on French wines, French vinegar, and all other goods of the product or manufacture of France; the plantation-duties; and the duties upon hops: to which were added, all the ſurplus monies in the exchequer upon the one-third ſubſidy, the additional exciſe, the duties on low wines, and the ſtamp-duties; beſides the duties on hawkers and pedlars; the overplus monies of the five-ſeventh parts, and two ſeſeventh parts of the exciſe on beer, ale, mum, cyder, perry, ſpirituous liquors, and metheglin, which were appropriated by the 5th of William and Mary, to make good a fund to the bank, and to pay annuities: all which were made perpetual; and all other public monies, which ſhould be brought into the Exchequer, not being appropriated, and not ariſing from any branch of the revenue appointed for the civil government, ſhould be ſet apart for the uſes of this fund; which, by the 3d of George I. were declared to be as follows: firſt, to pay the bank the yearly ſum of 100,000 l. and other annuities; then to pay the yearly ſum of 120,000 l. for the civil liſt to his Majeſty, to be iſſued weekly; and, after ſatisfying theſe payments, the deficiencies on the original fund of 100,000 l. a year, payable to the bank out of the five-ſevenths parts of the duties of exciſe above mentioned, ſhould be ſatisfied out of this fund; after which the yearly ſum of 4000 l. ſhould be iſſued to the ſheriffs; and the yearly produce of the ſurplus of this fund is generally about 682,600 l.

The General FUND was eſtabliſhed, by act of parliament, in the 3d year of King George I. for payment of annuities in lieu of lottery-orders, and in lieu of the annuities given for the bankers debt; being founded upon the funds of the four lottery acts, which were the cuſtoms of poundage upon export granted by the 12th of Charles II. and not taken away by ſubſequent ſtatutes; and the other duties granted or continued by the 9th of Queen Anne, which were the duty of 12 d. a hundred weight upon leather, ſheep-ſkins, or calve-ſkins, tanned, tawed, or dreſſed, exported; the duties upon coals exported; with the additional duties upon coals, culm, and cinders, ſhipped and waterborn, and of coals imported, if any; the additional duty on candles; the hereditary duty of 1 *per cent.* on goods exported from ports capable of a ſhip of 200 tons to any place of the Mediterranean beyond Malaga, in a ſhip not built and manned according to the act of the 13th and 14th of Charles II. the hereditary duty of 5 s. for every white woollen broad-cloth exported, and the yearly ſum of 135,000 l. appropriated out of the ſaid duties, and the ſurplus of the ſame duties; the weekly ſum of 700 l. payable out of the revenues of the poſt-office; the duties upon ſkins and hides, vellom, and parchment; the duties on hackney-coaches and chairs; on ſtamped vellom parchment, on bills of lading, almanacks, and licences for ſelling ale and wine; the duties on paper, cards, and dice; and on rock ſalt exported to Ireland; with the yearly fund of 186,670 l. appropriated out of theſe laſt mentioned duties; all granted in the 9th year of Queen Anne; the duties on the additional hackney-chairs; and the other duties granted on ſoap, paper, paſte-board, mild-board, and ſcale-board, imported; on books, prints, and maps, imported; on paper, paſte-board, mill-board, and ſcale-board, made in Great Britain; on linnens printed, painted, ſtained, or dyed, imported; on ſilk, calicoes, linens, and ſtuffs, printed, ſtained, painted, or dyed in Great Britain; on the ſtamp-duties on ſurrenders, transfers, pamphlets, and news-papers; all granted by the 10th of Queen Anne: and alſo the yearly fund of 168,003 l. thereby appropriated out of theſe duties; the duties granted by the 10th of Queen Anne, and the 10th of George I. on dreſſed ſkins and hides imported; on ſkins and hides tanned, tawed, or dreſſed in Great Britain; on vellom and parchment; on ſtarch; a moiety of the inland duties on coffee and tea; the duties on gilt and ſilver wire; the ſtamp duties on policies of inſurance; and the yearly fund of 168,003 l. appropriated out of theſe duties by the 10th of Queen Anne; and alſo certain annual ſums, amounting to 39,855 l. 15 s. 7½ d. charged upon the hereditary exciſe by the 12th of William III. and the 2d of Queen Anne, in lieu of the bankers debt: all which duties were continued for ever, for the ſupply of this fund, but ſubject to ſuch redemption as in the act

was contained. It was alſo thereby enacted, That the ſaid yearly ſums of 135,000 l. 186,670 l. 168,003 l. 168,003 l. and 39,155 l. 15 s. 7⅕ d. adding thereto the above mentioned ſurplus of the duties granted by the 9th of Queen Anne, being generally about 27,317 l. a year, amounting in the whole to 724,849 l. 6 s. 10⅕ d. *per annum*, ſhould be this general fund: and if all the monies ariſing out of the ſaid duties, ſhould not amount to that ſum, then the monies ſo ariſing ſhould be part of the ſaid general fund for paying the annuities thereby chargeable thereupon; and, in caſe any deficiency ſhould happen, the ſame ſhould be ſupplied out of the firſt aid to be granted in parliament.

The South-ſea FUND was eſtabliſhed, by act of parliament in the 9th year of Queen Anne, to make a proviſion for the debts and deficiencies therein mentioned; which amounted to 9,471,325 l. and for paying the intereſt thereof: for which purpoſe, all the duties upon wines, vinegar, and tobacco; upon India goods, and wrought ſilks; upon whale-fin; upon wax and tallow candles imported, and the ſeveral rates upon monies given with clerks, apprentices, and ſervants, were made perpetual, and to be paid weekly into the receipt of the Exchequer for the ſupplies of this fund: but, if theſe were deficient, ſuch deficiency was to be made good out of the next aids to be granted by parliament; or, in caſe there ſhould be any ſurplus, it was to be applied towards diſcharging the principal of the capital ſtock belonging to the company; and this fund was to be iſſued at the exchequer, as an annuity for the intereſt of the 9,471,325 l. and the payment thereof to be made weekly to the company.

By the ſtatute of the 1ſt of George I. the capital ſtock of the company was increaſed to 10,000,000 l. which was the ſum then due from the government to the company, and for which the above mentioned revenues were applied, for making good the payments on the increaſed fund. If there ſhould be any deficiency, the treaſurer of the navy was to make it good out of any money in his hands, or firſt coming into his hands, for the ſervice of the navy, with preference to all other payments; or, in default of money, the treaſurer of the navy was to diſpoſe of any tallies, orders, or other parliamentary ſecurities, as ſhould be in his hands, for the ſervice of the navy, to diſcharge the deficiency due to the company, and within 20 days after demand to pay the ſame in money. And there was annually, within 20 days after the 25th of December, an eſtimate in writing to be made by the treaſury, by a medium of three preceding years, of how much the revenues ſettled for payment of this fund, would produce, from the 25th of December preceding ſuch account, and ending the 25th of December ſucceeding the ſame; as alſo how much it was like to fall ſhort; and the treaſury were to cauſe ſuch eſtimate to be laid before the commons in parliament, if ſitting, otherwiſe at their next ſeſſion, that ſufficient proviſion might be made for the navy for that year.

By the ſtatute of the 3d of George I. it was enacted, That if the produce of theſe duties ſhould be deficient to pay the yearly fund chargeable upon them, ſuch deficiences ſhould be made good out of the general fund, or out of money to be raiſed at the exchequer, for purchaſing annuities at 5 *per cent.* for every ſuch deficiency; which annuities ſhould be charged on the ſeveral funds, and be payable and transferable at the bank of England, till redemption by parliament: but, if there ſhould be any ſurplus of the duties, it ſhould attend the diſpoſition of parliament; and, after redemption, theſe duties ſhould not be applied without authority of parliament.

By the ſtatute of the 5th of George I. part of the duties on coals, culm, and cinders, and the window-tax, were made perpetual, as a fund for ſecuring to the company an annuity of 87,342 l. 4 s. 5 d.

By the ſtatute of the 6th of George I. the duties of exciſe upon beer, ale, cyder, and other liquors, granted by the 8th of Queen Anne; and the new duties upon pepper, raiſins, nutmegs, cinnamon, cloves, and mace, were made perpetual; the yearly ſum of 35,000 l. appropriated by letters-patent of Queen Anne, out of the exciſe, was continued for ever; the additional duties upon ſoap, paper, paſte boards, mill-boards, and ſcale-boards, and upon chequered and ſtriped linens, and upon linens printed, painted, ſtained, or dyed, after the manufacture, or in the thread or yarn before, in foreign parts; and upon ſilks, calicoes, linens, and ſtuffs, printed, painted, ſtained, or dyed, after the manufacture, in Great Britain; and upon ſtarch, coals exported, and ſeveral things engroſſed upon ſtamps; and the impoſitions which by the 5th of George I. were granted upon coals brought into the river Thames, within the liberty of the city, were made perpetual, as a fund for ſecuring to the South ſea company ſeveral annuities for the remainder of the terms of 96, 89, and 99 years, and ſeveral other annuities; as alſo the principal ſums whereon theſe annuities were due, amounting to 16,546,482 l. 7 s. 1¼ d. which the company were empowered to purchaſe, or take in by ſubſcription.

By the ſtatute of the 9th of George I. one moiety of the ſtock of the South ſea company, amounting to 16,901,241 l. 17 s. 0¼ d. was converted into a joint ſtock, attended with annuities payable out of the above funds, to be called *The joint ſtock of South ſea annuities*; and the other moiety of the capital ſtock was to remain in the company as a joint ſtock, attended with the reſidue of the yearly funds; but, if any deficiency ſhould happen in the produce of the duties, the company ſhould bear half of ſuch deficiency, till it was provided for by parliament.

By the ſtatute of the 3d of George II. it was enacted, That if, at the end of any quarter, the ſeveral duties appropriated to diſcharge the annuity, to the South ſea company, in reſpect of their original capital ſtock of ten millions, ſhould not be ſufficient, the ſame ſhould be made good out of the aggregate fund.

By the ſtatute of the 6th of George II. the capital ſtock of the South ſea company was to be divided into four equal parts; three-fourth parts whereof, amounting to 10,988,327 l. were to be converted into a joint ſtock, attended with annuities payable out of the above funds, to be called the *New joint ſtock of South ſea annuities*; and the other fourth part, amounting to 3,662,775 l. was to remain in the company as a trading or capital ſtock, attended with the reſidue of the annuities or funds. The new South ſea annuities were to be payable half yearly; and the trading capital was charged with the payment of the new annuities, as alſo for the payment of the former joint ſtock of South ſea annuities: but, if any deficiency ſhould happen in the funds of the company, the new South ſea annuities ſhould bear a proportional part of ſuch deficiency. And it was alſo thereby enacted, That the fund of the trading ſtock ſhould not, without the conſent of the company, be liable to be redeemed by parliament, until the new South ſea annuities ſhould be reduced, by parliamentary redemption, to 3,500,000 l. See South ſea company.

The ſinking FUND, was erected out of the ſurpluſſes ariſing from the aggregate fund, the general fund, and the South ſea fund; which generally produced, one year with another, 1,229,343 l. whereof the firſt produced 682,621 l. the ſecond 508,345 l. and the third 38,375 l. This fund was eſtabliſhed by Sir Robert Walpole, in the year 17[illegible], with an intention to reduce the national debt, retrieve the public credit, and exonerate the people from thoſe heavy taxes they were groaning under. And, by the ſtatute of the 9th of George I. it was enacted, That all the monies of the ſurpluſſes, called the ſinking fund, ſhould be appropriated for diſcharging the principal and intereſt of ſuch national debts as were incurred before the 25th of December 1716, and were declared to be ſuch national debts as might be redeemed in ſuch manner as ſhould be directed by future acts of parliament. However, this fund has ſince been made the general reſource of the miniſtry to ſupply any extraordinary expences of government, and make good the deficiencies of any appropriated duties; for the former of which a million was annually granted during the late wars, and ſeveral other large ſums were granted for the latter.

The Bank FUND was eſtabliſhed by act of parliament in the 5th and 6th years of William and Mary; whereby 100,000 l. out of the monies to ariſe by duties of tonnage, and the exciſe on beer and ale, was to be annually appropriated as a fund for the annuities therein mentioned

ioned, to be payable to the ſubſcribers of a loan of ,200,000 l. which occaſioned the incorporation of the overnor and company of the bank of England. See *Bank* of England.

By the ſtatute of the 8th and 9th of William III. the governor and company of the bank were empowered to enarge their ſtock by new ſubſcriptions; for which the appropriated funds were the duties of tonnage and poundage; thoſe on wine and vinegar; as alſo on tobacco and ſugar, granted by the 1ſt of James II. the additional impoſitions on goods and merchandiſe by the 2d of William and Mary; the ſtamp-act, and the duty on houſes.

By the ſtatute of the 3d of George I. the bank, in conſideration of delivering up exchequer-bills to the amount of 2,000,000 l. were allowed an annuity of 100,000 l. payable out of the aggregate fund, and duties on houſes: this annuity was to be preferred in payment before the yearly ſum of 120,000 l. to the civil liſt: but, after theſe were ſatisfied, the deficiencies on the original fund of 100,000 l. a year were to be ſatisfied out of the monies appropriated by this act; after which, the yearly ſum of 4000 l. was to be iſſued to the ſheriffs; and the ſurplus of theſe duties were to attend the diſpoſition of parliament: and for encouragement of ſuch perſons as were willing to advance monies for paying off 8,762,625 l. upon the lottery-acts of the 9th and 10th of Queen Anne, for redeeming annuities on an act of the 12th and 13th of William III. to patentees out of the weekly ſum of 3700 l. out of the exciſe, for which the perſons advancing the ſame were to have annuities of 5 l. *per cent.* redeemable by parliament, it was enacted, That, till they were redeemed, they ſhould be paid into the bank; and that all the monies ſo advanced ſhould be one capital or joint ſtock, on which the annuity ſhould be attending.

By the ſtatute of the 1ſt of George II. the bank had an annuity granted of 70,000 l. on paying 1,750,000 l. into the exchequer; which annuity was to be payable out of the duties on coals and culm; and, if there was any deficiency, it was to be ſupplied out of the ſinking fund; but the ſurplus was to be reſerved for the diſpoſition of parliament.

By the ſtatute of the 2d of King George II. the bank alſo purchaſed an annuity of 50,000 l. for 1,250,000 l. which was chargeable on the overplus monies ariſing out of the additional duties on ſoap and paper, and on certain linens, ſilks, calicoes, and ſtuffs; upon ſtarch, and exported coals; and upon the ſtamp-duties, after payment of what ſhould be due to the South ſea company on their annuity granted by the 6th of George I.

By the ſtatute of the 15th of King George II. the bank was to advance 1,600,000 l. more to the government; for which 3 *per cent.* was to be paid out of the duties on exciſe.

By the ſtatute of the 19th of King George II. the bank was granted an annuity of 39,472 l. for delivering up exchequer-bills to the amount of 986,800 l. which was chargeable on the duties on ſpirituous liquors: beſides, they advanced the further ſum of 1,000,000 l. to the government; for which they had 4 *per cent.* payable out of the malt and land tax.

ſt India FUND. This fund was originally eſtabliſhed by act of parliament, in the 9th year of the reign of King William III. whereby the Eaſt India company was incorporated for lending 2,000,000 l. to the government; for which an annuity of 160,000 l. was made payable out of the duties on ſalt, and the additional ſtamp-duties, by weekly payments. But, by the ſtatute of the 3d of George II. this annuity was reduced to 128,000 l. and transferred from the above duties to be charged on the aggregate fund. See *Eaſt* India company.

By the ſtatute of the 17th of King George II. the Eaſt India company were to advance 1,000,000 l. to the government; for which they were to receive an annuity of 30,000 l. payable out of the ſurplus duties on ſpirituous liquors: but, in caſe of any deficiency, the ſame was to be ſupplied out of the ſinking fund.

vil Liſt FUND. This was firſt granted to King Charles II. on his reſtoration to the throne; conſiſting of the duties ariſing from the poſt-office, the wine-licences, the hereditary and temporary exciſe, together with thoſe called the ſmall branches of the crown-revenue; which have been continued to his ſucceſſors, and amount generally to 8 or 900,000 l. a year; out of which the tradeſmen of the crown ſhould be paid their debts: but, though this fund has certain duties appropriated to it, the public is obliged to make good all deficiencies.

But it is to be obſerved, that all theſe funds appropriated to the South ſea company, the Bank, and the Eaſt India company, were, on the reduction of intereſt, by the ſtatute of the 23d of King George II. chargeable with only 3½ *per cent.* till 1757, and with only 3 *per cent.* afterwards, for all ſums due from the government; which, in the public debt of 57,703,475 l. was the annual ſaving of intereſt of 288,517 l. till 1757; and after that time, till redemption, 577,034 l. yearly; to be applied for the ſame purpoſe as the ſinking fund, to pay off the national debt; whereby the ſinking fund amounts annually to about 1,600,000 l. being an increaſe of 170,000 l. a year, which ought to be applied only towards redeeming the capital of the ſeveral public trading companies; and then the government might venture to annihilate the one half of it, as alſo of the aggregate and general funds, by freeing the people from the taxes upon coals, candles, ſoap, leather, and ſuch other taxes as lie heavy upon the poor labourers and manufacturers, and thereby enhance their wages in every part of the kingdom, but eſpecially in the city of London; by which the prime coſt of all the Britiſh manufactures is ſo much increaſed, that it is impoſſible for the merchants to ſell them in foreign markets ſo cheap as manufactures of the ſame kind and goodneſs are ſold by the merchants, even of thoſe countries where the intereſt of money is as high as it is in Great Britain. The remaining part of the ſinking fund might afterwards be applied towards paying off thoſe annuities, and public debts, which only bore an intereſt of 3 *per cent.* before the reduction; and, after that, towards diminiſhing the capitals of the ſeveral trading companies, when the ſinking fund would again amount to above a a million yearly, which would be ſufficient for paying them off, and of freeing the nation entirely of all its public debts, in the lifetimes of the preſent generation, or at leaſt of the next.

The national debt is, at this time, about 80,000,000 l. which was originally contracted in the reign of King William III. and augmented during that of Queen Anne, when Great Britain ſo far exceeded her proportion in the war againſt France, and being burthened above her natural ſtrength, was fallen under an immenſe debt; which, inſtead of being diminiſhed, was rather augmented in the ſucceeding years of peace; and was ſo amazingly increaſed during the laſt war againſt France and Spain, that, notwithſtanding the reduction, the intereſt amounts to 2,400,000 l. a year; for payment whereof the nation labours under an extenſive exciſe: the duties applied, in former times, to the ſupport of the government, and many others ſince impoſed, are alienated, for the payment of this intereſt; ſo that the taxes on land and malt, which every body underſtood to be for extraordinary uſes, are now to be applied to the maintenance of ſuch ſhips and guards as ſhall be neceſſary, even in time of peace, and are therefore in effect perpetual.

Some people affirm, that it is a vain hope, to imagine that the government can buy off, and redeem, in any moderate length of time, theſe long funds, or perpetuities: but this may be laid down as a certain truth, That England will never greatly flouriſh in trade and manufactures till the greateſt part of them are cleared, and till affairs are brought to ſuch a poſture, that the public may not pay to the government, either for the ſupport of the crown, or on account of funds, where the principal is ſunk, above 2,300,000 l. a year, or about a twentieth part of the general income of the nation; which was abſolutely the caſe before the revolution. And, unleſs this be compaſſed, it will be found, that, in no long courſe of time, the Britiſh nation will languiſh and decay every year, by ſteps evident enough to be perceived by ſuch people as take theſe matters into conſideration; gold and ſilver will be carried off by degrees, rents will fall, the purchaſe of land will decreaſe, wool will ſink in its price, the ſtock of ſhipping will be diminiſhed, farm-houſes will

go

go to ruin, induſtry will decay, and Britons will have upon them all the viſible marks of a declining people. See National *Debt*, *Bank*, *Eaſt* India, and *South* ſea companies.

FUNDI *Bay*, is a bay ſituated between New England and Nova Scotia; in which there is an excellent fiſhery for cod.

FUNEN. The ſecond iſland for magnitude, which belongs to Denmark, ſituated at the entrance of the Baltic ſea; being ſeparated from Jutland by the ſtraight called the Leſſer Belt, and from the iſland of Zealand by the ſtraight called the Great Belt, the chief town being Odenſee. See *Denmark*.

FUR. See *Furr*.

FURBELOE. An ornament of ruffled, or plaited ſilk, ſtuff, or other manufacture, ſewn on womens garments, ſometimes of the ſame colour with the garment, and ſometimes of different colours.

FURBISH. To cleanſe, poliſh, or fit a thing up for uſe; particularly ſpoken of the gunſmith's art.

FURBISHER. A perſon who furbiſhes or poliſhes arms, by giving them a brightneſs and luſtre; which is principally performed with emery: the term, in the general ſenſe, including armorers and ſword-cutlers; but, in a more reſtrained ſenſe, it is appropriated to thoſe who clean, and ſcour up, old ſwords, guns, and halberds, and put them in order; as is done at the Tower of London, and moſt other armories in England.

FURL. A ſea-term, ſignifying to roll, wrap, or bind up a ſail cloſe to the yard.

FURLING *lines*, in a ſhip, are ſmall lines made faſt to the top-ſails, top-gallant ſails, and the mizen-yard arms, ſerving to furl up thoſe ſails; though the mizen has only one furling-line, and all the reſt have two, having one at each end.

FURLONG. An Engliſh long meaſure, containing the eighth part of a mile; being equal to 40 poles or perches; and the perch to 16½ feet. See *Mile*, and *Meaſure*.

FURLONG, is alſo uſed for the 8th part of an acre, or half a rood. See *Rood*.

FURNACE. An utenſil, or veſſel, proper to contain fire; or to raiſe, and maintain, a vehement fire in; whether of coal, or wood: of which there are ſeveral kinds, of various forms, and for different uſes; the domeſtic furnace, uſed in making confections, and ſuch ſort of things, being uſually of iron, or earth; and thoſe uſed by the goldſmiths, refiners, and ſuch kind of artizans, being much larger, and of a different ſtructure.

FURNACE, is particularly uſed for a kind of oven, wherein the ores of metals, after beating, waſhing, and other preparations, are melted down by a ſtrong coal or wood fire: but the ſtructure and application of theſe furnaces, are ſomewhat different for the different metals. See *Gold*, *Silver*, *Copper*, *Tin*, and *Lead*.

FURNACE, is more ſtrictly applied to thoſe uſed in the melting of iron; which are frequently confounded with iron-forges, though there is a conſiderable difference between them. See *Iron*.

Coinage-FURNACES, are of two kinds; the one called the bellows-furnace; and the other, the wind-furnace; being both uſed in the fuſion of metals; though gold is uſually melted in the former, and copper in the latter: See *Coinage*.

Founders FURNACE, is of ſeveral kinds, according to the different kinds of work to be caſt.

Glaſs-houſe FURNACE, is the place wherein the ingredients, or materials, of glaſs, are fuſed and vitrified; of which there are three kinds: the firſt, called the *calcar*, ſerves to prepare or calcine the frit in; the ſecond, is *the working furnace*, ſerving to melt the metal in, or make the glaſs; and the third, is the *green glaſs furnace*, which is a kind of compound of the former. See *Glaſs*.

Hatters FURNACES, are of three kinds; a little one under the mould, where they form their hats; a larger, in in the ſcouring room, under a little copper full of water and lees; and a very large one, under the great copper, which they dye their hats in. See *Hats*.

Plumber's FURNACE, is of three kinds: in the firſt, they melt the lead, whereof ſheets are to be caſt; in the ſecond, they melt the lead to be caſt in moulds for pipes, which are not to be ſoldered; and the third, is the tinning-furnace, which ſerves them for the applying of thin tin leaves on their works. See *Lead*, and *Plumbery*.

FURNITURE. Any goods, neceſſaries, or materials whatever, that are proper or convenient to render a houſe, place, or thing, fit to do the office it is appointed for; and, in a maritime ſenſe, it is the equipage of a ſhip.

FURR. The ſkins of ſeveral kinds of wild beaſts, dreſſed with hair on; to be uſed as a lining, or doubling of garments, or robes; either for warmth, ornament, or diſtinction of rank and dignity: for the robes of kings, and noblemen, are lined with ſeveral kinds of furs, particularly ermine, to render them more magnificent; and the ſame may be obſerved of ſeveral chief magiſtrates, judges, and doctors of different faculties in the univerſities.

The kinds of furrs, or ſkins chiefly dreſſed in alum, and with the hair on, are thoſe of the ermine, ſable, marten, ſquirrel, coney, caſtor, otter, dog, fox, wolf, tyger, leopard, and bear. See *Skin*.

FURR *Company*. See *Hudſon*'s bay company.

FURRIER. A perſon who trades or works in furr, or lines robes therewith. See *Skinner*.

FURY. A ſatin, or Indian and Chineſe taffety, painted in the country, or imitated in Europe, particularly in France, Holland, and Flanders.

Theſe ſatins have been called *furies*, becauſe the firſt brought into Europe had ſuch extravagant deſigns interſperſed throughout the work, with ſo little order and proportion, that they might be well ſuppoſed the manufactures of furies.

The extravagance of the Chineſe deſigns were firſt imitated in Europe with ſucceſs; but the French inconſtancy having repreſented birds, flowers, and other things on the ſatins, or taffeties, the cuſtom of calling them furies continued their name, though not agreeable to the beauty of the deſigns of this new manufacture.

FUSTIAN. A kind of cotton ſtuff, which ſeems quilted or whaled on one ſide, chiefly made for frocks, or outer coats of men or boys.

Right fuſtians ſhould be made entirely of cotton thread, both woof and warp: but there are fuſtians of ſeveral kinds, wide, narrow, coarſe, fine, with ſhag or nap, and without it: there are alſo a great many made, whoſe warp is of flax or hemp.

By the ſtatute of the 11th of Henry VII. it was enacted, That no iron inſtruments, or other untrue ſlight, ſhould be uſed, but only the broad ſhears, upon forfeiture of 20 s. And, by the ſtatute of the 39th of Queen Elizabeth, it was made lawful for the Lord Mayor of London, or his deputy, and for the maſter and wardens of the clothworkers company, or ſuch perſons as they ſhould appoint, to enter and ſearch the workmanſhip of all perſons occupying the broad ſhear, as well fuſtians as cloth; and the perſons making reſiſtance ſhould forfeit 20 s.

FUSTIC, or *Fuſtock*. A yellow wood, uſed by dyers, yielding a fine golden yellow; but there ſhould be ſome other ingredients mixed to make it permanent.

The tree that yields it, grows in all the Caribbee iſlands, particularly Barbadoes and Tobago; where it riſes to a great height.

Dyers uſe it chiefly for black; but ſome of the ableſt and moſt honeſt among them, who would dye none but the beſt and moſt durable colours, have been of opinion it ſhould be excluded all kinds of dying.

There is another kind, of the growth of Italy and Provence, uſed for dying a coffee-colour.

FUTTOCKS, or *Foothooks*, in ſhip-building, are thoſe compaſſing timbers, which give the breadth and bearing to the ſhip, being ſcarfed to the ground timbers: but becauſe no timbers of that compaſs can be found long enough to go up through all the ſide of the ſhip, the compaſſing timbers are ſcarfed one into the other; and thoſe next the keel are called the tower, or ground futtocks; the other, the upper futtocks.

G.

GABEL, or *Gabelle*, in the French cuſtoms, ſignified formerly all ſorts of impoſts upon diverſe kinds of merchandiſe and commodities; but it was not then a royal duty, ſeveral of the nobility having impoſed it upon their vaſſals. At preſent the ſignification of the word is reſtrained to the ſalt-duty; and, by the Gabelle farm is underſtood a royal privilege of ſelling ſalt in the greater part of the provinces of France, which the King grants to ſome particular perſon, with an injunction of refunding to his Majeſty a certain number of millions of livres annually, purſuant to the conditions ſtipulated in the arret, and the contract.

Before the reign of Philip the fair, in 1286, the ſalt trade was free in France. This monarch being the firſt who laid an impoſt on that commodity, ſeveral of his ſucceſſors uſed the ſame reſource in the exigencies of the ſtate; till at laſt the whole ſalt-trade for the inland conſumption of the kingdom came into the hands of the King, who ſells, and diſtributes it by his farmers: the annual product of this farm being ſo conſiderable, that it is computed to make a fourth part of the royal revenue, or about 3,349,050 l. ſterling.

GABLOCKS, or *Gaffets*, falſe ſpurs made of ſteel, ſilver, or other mixed metal, and put over the natural ones, of game, or fighting cocks, at the time of fighting matches.

GAGE, or *Gauge*, is to find out the meaſure, or contents, of any veſſel of capacity. See *Gauging*.

GAGE, in the ancient cuſtoms of England, ſignified a pledge, or pawn, given by way of ſecurity; which was only properly uſed in ſpeaking of moveables; for hypotheca was always applied in reſpect of immoveables. See *Hypotheca*.

GAGE, in the ſea-language; if one ſhip is to windward of another, ſhe is ſaid to have the weather-gage of her. The ſeamen call trying how much water a ſhip draws gaging, or rather gauging of her; which is done by driving a nail into a pike, near the end, and putting it down by the rudder, till the nail catches hold under it; and then as many feet as the pike is under water is the ſhip's gage, or depth of water ſhe draws.

GAGE, in joinery, is an inſtrument made to ſtrike a line truly parallel to the ſtreight ſide of any board, or piece of ſtuff; its principal uſe being for an exact gaging of tenons, to fit into mortiſſes; and for gaging ſtuff of an equal thickneſs. It is made of an oval piece of wood, fitted upon a ſquare ſtick, to ſlide up and down ſtiffly thereon, and with a tooth at the end of a ſtaff, to ſcore or ſtriking a line upon the ſtuff at any diſtance, according to the diſtance of the oval from it.

GAGER. See *Gauger*.

GAIETA. A ſtrong maritime city of Italy, in the province of Lavoro, in the kingdom of Naples, being 35 miles N. W. of the city of Naples, ſituated in 14 deg. and 30 min. of E. lon. and in 41 deg. and 20 min. of lat. See *Italy*.

GAIN. The profit, or lucre, a perſon reaps from his commerce, trade, employment, or induſtry, which may be either honourable or infamous, lawful or illicit; therefore the gain they produce has alſo the ſame qualities; the moſt infamous gain, and leaſt allowed of, being that which proceeds from a uſurary commerce; and, on the contrary, the ſafeſt and moſt honourable is that of a lawful commerce, particularly by wholeſale, and when carried on by long voyages. See *Commerce*.

But the gain of a merchant and the gain of a nation are ſometimes different: for a merchant may have a diſtinct intereſt from that of his country; and may thrive by a trade which may prove its ruin. For example, ſuppoſe a hundred French merchants were to export annually the value of a million ſterling from Great Britain in bullion, for French wines, brandy, linens, ſilk, paper, and other manufactures of France, all for the conſumption of Great Britain; or, which is the ſame thing, ſuppoſe they ſhould pay for ſuch a value of goods by bills of exchange, whereby the receipt of ſo great a balance from other countries would be prevented; it cannot be denied that ſuch a trade as this would be very ruinous; that it muſt exhauſt the Britiſh treaſure, and leſſen the value of its native commodities and manufactures. And yet even by ſuch a trade the merchants themſelves may grow very rich; they may ſell the manufactures they import for 100,000 l. more than they coſt, which they may ſhare among themſelves: but from whom do they gain this ſum? Not from France, but from their own countrymen, who buy their goods: let their gain be what it will; yet ſtill, by this ſuppoſition, Britain loſes a million yearly to the French nation, and their manufactures of ſo great a value are imported into Britain, and ſold at the ſame markets with Britiſh manufactures; which muſt diminiſh to the like value the product of the Britiſh lands, and the manufactures of the Britiſh people.

The caſe will be the ſame in a greater or leſs degree, as the quantities of bullion exported, or the ſums remitted abroad, are greater or leſs, and as the manufactures imported for Britiſh conſumption are more or leſs. The nation in every ſuch caſe loſes all the balance that is paid abroad. The merchants who remit the money, or export the bullion, may perhaps gain the tenth part of that ſum; but they do not gain it from the country with which they trade in this manner. Their whole gain is ſhuffled to them out of the pockets of their own countrymen, from the landholders and the labourers, who in the mean while may loſe ten times as great a value of their own product and manufactures, by the payment of ſo great a balance to a foreign nation. See *Balance* of trade.

The Britiſh legiſlators therefore have had the wiſdom in every age to guard the nation from this detrimental gain of the merchants. The many prohibitions and high duties laid upon Eaſt India manufactures, are ſo many evidences of this matter. There can be no doubt but the Britiſh merchants have gained incredible ſums formerly for themſelves, by ſending bullion to the Eaſt Indies, and returning ſuch manufactures thence as were thought to interfere with thoſe of Great Britain. But the particular gain of thoſe merchants was no invitation to the Britiſh legiſlators to let them go on; and therefore from time to time they made laws to leſſen the conſumption of Eaſt India manufactures in Great Britain: ſome they totally prohibited; others they charged with ſuch duties as rendered them very little cheaper than Britiſh manufactures: ſo that now the Eaſt India company muſt derive a great part of their gain from the manufactures which are re-exported, and conſumed by foreign nations; very little being got by the conſumption of any of them in the Britiſh dominions.

Therefore, if the Britiſh merchants pay France a balance, ſo much of the Britiſh treaſure is exhauſted: they may gain eſtates to themſelves, but it muſt be by carrying on a trade that is detrimental to their country: the eſtates they gain are gained from their own countrymen; but the nation muſt pay very dear for the gain of thoſe merchants, and perhaps ten times as much as the whole value of their gain.

Further, all that the labour of the people, the product of the lands, and the gain of the merchants in one nation, exceed in value thoſe of another, is ſo much gain to the firſt, and ſo much loſs to the ſecond. If one ſells more goods than it buys, the balance muſt be coming to it in money, and that is ſo much gain: or if it buys more

goods than it ſells, it muſt pay the balace in money, which is ſo much leſs.

The only and certain ſcale of riches ariſing from trade in a nation, is the proportion of what is exported for the conſumption of others, to what is imported for their own; or in ſtating the balance between two countries, the prime coſt only in the ſaid reſpective countries ſhould be calculated; for it is no conſtant rule, that trade makes riches; becauſe there may be a trade that impoveriſhes a nation: as it is not often going to market that enriches the countryman; but on the contrary, if every time he comes there he buys to a greater value than he ſells, he grows the poorer the oftener he goes.

The vulgar miſtake, that importation of foreign merchandiſe, if purchaſed with native commodities, and not with money, does not make a nation poorer, is but what every man, ſays Sir William Temple, that gives himſelf leiſure to think, muſt immediately rectify, by finding out, that upon the end of an accompt between a nation, and all they deal with abroad, whatever the exportation wants in value to balance that of the importation, muſt of neceſſity be made up with ready money.

By this we find out the foundation of the riches of Holland, as of their trade; for never any country traded ſo much, and conſumed ſo little. The Dutch buy infinitely; but it is to ſell again, either upon improvement of the commodity, or at a better market. They are the great maſters of the Indian ſpices, and of the Perſian ſilks; but wear plain woollen, and feed upon their own fiſh and roots: nay, they ſell the fineſt of their own cloth to France, and buy coarſe out of England for their own wear. They ſend abroad the beſt of their own butter into all parts; and buy the cheapeſt out of Ireland, or the north of England: in ſhort, they furniſh infinite luxury which they never practiſe, and traffic in pleaſures which they never taſte; whereby they acquire a gain in their trade with all nations.

But in regard to the private gain of the merchant, it is all that part of the price of his goods in which his ſale exceeds his purchaſe; and this difference of the price is paid by the conſumer. If England is the conſumer, the merchant gains this difference in England; but England gets nothing by her conſumption. Though if a foreign nation, for inſtance Portugal, is the conſumer of the goods exported by the Engliſh merchant, he gains the whole difference from Portugal: and ſo in like manner does the Portugueſe merchant gain from England the whole difference of the price upon all goods which he buys in Portugal, and ſells to England. Suppoſe then, that the Engliſh merchants buy up ſo much of the product of their own lands, manufactured by the labour of their own people, at the coſt of 1,200,000 l. a year, and ſell the ſame to Portugal for 1,300,000 l. a year, the Engliſh merchants gain from that country 100,000 l. a year. On the other hand, if the merchants in Portugal buy there their wine, wine, oil, fruit, and other goods, at the coſt of 300,000 l. a year, and ſell the ſame to England for 325,000 l. a year, their gain from England is only 25,000 l. a year: ſo that in this very article of the merchant's gain, England would gain 75,000 l. a year from Portugal, and ſo much would be yearly loſt to that nation.

But a merchant ſhould be well acquainted with the difference of the price in the manufacturing of goods in each country, and with the neceſſity there is for any commodity: for the merchant in one county aſks and takes advice from his correſpondent in the other, what goods are likely to come to the beſt market; and accordingly receives orders to buy for him, or ſend to him, ſuch goods as are moſt demanded. But if this ſhould not be reciprocally obſerved on both ſides, if any merchant ſhould venture over his goods without ſuch previous advice; inſtead of gaining any thing upon the ſale of them in the other country, he may ſend them to a market where they are a drug, and loſe a very great part of his principal.

GALACTITIS. A ſtone ſaid to be found in Tuſcany, Saxony, and other parts, which has been recommended as good in defluxions of the eyes, and for ulcers: it is alſo ſuppoſed to make the milk more copious in nurſes; and when hung on the necks of children it promotes ſalivation.

The ſtone is of an aſh-colour, pretty ſoft, and ſweet to the taſte; yielding a white liquor like milk, when broke on the ground, from whence it receives its denomination.

GALANGA, or *Galangal*. A medicinal root, brought from the Eaſt Indies, being the produce of a tree of the ſame name; of which there are two kinds, the ſmall and the great.

The ſmall is a rough knotty root, of a ruddy colour, both within and without, and of a very pungent aromatic taſte and ſmell; which is brought from China, and is uſed with good ſucceſs in all diſorders of the ſtomach, bowels and womb, ariſing from the weakneſs of the nerves.

The greater galangal inclines more to the aſh-colour, and grows chiefly in Java and Malabar; its qualities being of the ſame kind with thoſe of the other, only leſs efficacious, though more common and eaſily come at: but both of them are uſed by the vinegar-makers. See *Acetum*.

GALATA. A great ſuburb belonging to Conſtantinople, oppoſite to the Seraglio, on the other ſide of the harbour, where the Greeks, Armenians, Franks, Chriſtians, and Jews inhabit, and have the liberty of their reſpective forms of worſhip. See *Turky*.

GALBANUM, in pharmacy, a gum iſſuing from an inciſion in the root of a ferulaceous plant, called in Latin *ferula galbanifera*, which grows in Arabia, Syria, and other eaſtern countries: but there are two kinds, the one in grains, or tears, and the other in maſs.

The former ſhould be choſen of a golden yellow without ſide, but much paler within; of a bitter taſte, with a ſtrong diſagreeable ſmell: and the latter is beſt when fulleſt of white tears, very dry, clear, and not ſlinking; which is eaſily ſophiſticated with broken beans, roſin, and gum armoniac.

GALE. A ſea phraſe, for the blowing of the wind; and when it does not blow ſo hard, but a ſhip can carry her top ſails a-trip, that is, hoiſted up to the higheſt, it is called a *loom gale*: when it blows very ſtrong it is called a *ſtiff gale*, or at leaſt a *freſh gale*; but when it blows hard, and violently, that a ſhip cannot bear any ſail, the ſeamen ſay, it blows a *ſtorm*: alſo, when two ſhips are near one another at ſea, and there being but little wind blowing, one feels more of it than the other; they ſay the ſhip *gales* away from the other.

GALE is alſo a term in Ireland, particularly in Dublin, for ſuch ſums of money as are paid in different payments, or diſcharge of any contract, or debt.

GALEASSE. A large, low built, heavy veſſel, uſing both ſails and oars, being the biggeſt of all the veſſels that go with the latter, which were anciently in uſe among the French; but are now only uſed by the Venetians: it may carry 20 guns; with a ſtern, capable of lodging a great number of muſqueteers: it has three maſts; the main, mizzen, and bowſprit, which are never to be taken down, or lowered, as they may be in galleys: it has 32 benches of rowers, and to each bench 5 or 6 ſlaves: and it has 3 tire of guns in the head, one over the other, of 2 guns each, bearing balls of 36, 24, and 10 pounds; though it has but two in the ſtern, each containing 3 guns, carrying balls of 18 pounds.

GALEGA. A plant which grows in rank and moiſt ſoil, cultivated alſo in gardens, and uſed ſucceſsfully for the cure of blotches, peſtilential diſorders, the meaſles, and falling ſickneſs in young perſons under twenty-five, when infuſed into white wine; or by way of decoction in water for the biting of ſerpents, or vermin.

GALEON, *Galleon*, *Gallion*, or *Galloon*, formerly denoted a large veſſel, or ſhip of war, of three decks; but is now only uſed in ſpeaking of the Spaniſh fleet; the galleons being a part of the ſhips employed in the commerce of the West Indies, where the Spaniſh annually ſend two fleets; the one for Mexico, which they call the flota; and the other for Peru, which they call the galleons. See *Fleta*.

The galleons are eight in number; the principal whereof are the Capitano, the Amirante, il Governo, the Patache and Marguarita, of 50 pieces of braſs cannon; by which there is a Patache of advice. Theſe are all ſhips of war, and go on the King's account; but are ſo loaded and embarraſſed with merchandiſes, that, in caſe of attack, they would find it difficult to render themſelves defen-

defenſible: however, beſides the royal galeons, there are uſually 12 or 16 merchant-ſhips, called *regiſter-ſhips*, belonging to private perſons, who obtain leave for the ſame, or rather purchaſe it; there being no Weſt India company in Spain. See *Regiſter-ſhips*.

The galeons are loaded at Cadiz, from whence they may put out at any time; and they are about two years in completing their voyage. Their departure is uſually ſome months before that of the flota, which cannot put out before Auguſt on account of the wind: but when they put out together, they ſeparate about the Antilles iſlands; the galeons for Carthagena, and Porto Bello; and the flota for Vera Cruz; though, on their return, they rejoin at the Havanna, in the iſle of Cuba.

The loading of the galeons is always the richeſt; which is evident from the following eſtimate of the yearly returns, or cargoes, both of the flota and galeons.

Of gold, the galeons bring yearly about 2 or 3 millions of crowns, and the flota about one. Of ſilver, the galeons bring 18 or 20 thouſand crowns, and the flota 10 or 12. Of precious ſtones, the galeons bring as follow; to the value of 200,000 crowns in pearls; of 2 or 300,000 crowns in emeralds; and of 20 or 30,000 crowns in bezoards, amythiſts, and other ſtones of inferior value: but the flota brings none at all. Of wools, the galeons bring to the value of 40 or 50,000 crowns, and the flota none. Of quinquina, the galeons bring to the value of 20,000 crowns; the flota none. Of ſkins and leathers, the galeons bring to the value of 70,000 crowns; the flota as much. Of Campeche wood, the galeons bring to the value of 60,000 crowns; the flota none. Of ſkins and leathers from Buenos-Ayres, the regiſter ſhips bring to the value of about 200,000 crowns; of cochineel, about a million of crowns; and of indigo about 600,000 crowns: the whole commerce of the Indies generally amounting to the value of about 6,070,000 crowns a year, or 1,517,500 l. ſterling. See *Regiſter-ſhips*.

This trade is under the regulation of the council of commerce for the Indies, who have provided excellent laws for its ſecurity; among which are the following.

1. No ſhips are permitted to go to any of the Spaniſh dominions in America, without a ſpecial licence granted by the King; which licences are iſſued by the council of commerce at Seville.

2. No foreigner can be permitted to go to the Spaniſh dominions in America in any licenſed ſhip, on any terms whatever, either to ſettle or trade there, Iriſhmen only excepted, and they muſt be all Roman catholics.

3. No perſon, not even a native Spaniard, is allowed to go to the Spaniſh Weſt Indies without ſpecial licence from the council of commerce.

This council regulates the time the ſeveral fleets of ſhips are to ſail, to what places, and when they ſhall be obliged to come away: they alſo limit the number of ſhips, and the quantity of goods, as the latter ſhould not exceed the demand, and glut the markets. See *Spain*.

GALEOT, or *Galliot*, is a ſmall galley, or a ſort of brigantine, built very ſlightly, and deſigned for chaſe, having but one maſt, with 16 or 20 oars; ſo that theſe veſſels can both ſail and row: they uſually carry 2 or 3 pedreroes, and are employed in the Spaniſh ſervice, to cruiſe againſt the piratical rovers of Barbary; each ſeaman acting as a ſoldier, having a muſket lying by him, to uſe upon quitting his oar.

GALET, is a French term for a cryſtal, found in ſome pebbles on the coaſt of Normandy; particularly near Harfleur.

GALL, or *St. Gall*, a town of Switzerland, in the territory of Turgow, 5 miles W. of the lake of Conſtance, and adjoining to the Abbey; but has now no dependance on it, the town having purchaſed the ſovereignty of the abbot: ſo that it is at preſent a republic, though no territory belongs to it, becauſe the abbot is ſovereign of the adjacent country.

The legiſlative power of this city is lodged in two councils; and it is computed that the inhabitants amount to 10,000 ſouls, who are moſt of them employed in the linen manufacture; the neighbouring country furniſhing them with great quantities of the beſt flax, out of which they annually make upwards of 40,000 pieces of linen, of 200 ells each, and are ſo much enriched by exporting it, that the town is reputed one of the moſt opulent places in Switzerland: but, for a further deſcription of their trading intereſt, ſee the general article of *Switzerland*.

GALL, that yellow bitter humour, commonly called bile, ſecreted from the blood in the glands of the liver, depoſited in a peculiar reſervoir, called the gall-bladder, or by way of emphaſis, the gall, which of many creatures, ſerves for various uſes; eſpecially ſheep and ox galls, for waſhing, and cleanſing the greaſe out of woollen cloths, or ſtuffs.

GALLERY, in a ſhip, is a kind of balcony, made upon the ſtern, without board, into which there is a paſſage out of the great cabbin: but thoſe galleries are for ornament, and the captain's pleaſure, rather than any other benefit; for in ſhips of war, all open galleries of this kind are to be avoided; in regard of the facility an enemy would have for entrance, and boarding of the ſhip that way.

GALLEY. A low built veſſel, going both with oars and ſails, chiefly uſed by the ſtates bordering on the Mediterranean: having uſually from 25 to 30 benches of oars, on each ſide, and 4 or 5 galley-ſlaves to each bench.

The galley carries a large gun, called the courſer; two baſtard pieces, and two ſmall pieces; being generally from 20 to 22 fathoms long, three broad, and one deep; having a main-maſt, and a fore-maſt, with two latin or ſquare ſails, which may be ſtruck or lowered at pleaſure.

All the galleys, both ancient and modern, are of a finer and ſlenderer make than ſhips: they were formerly of ſeveral kinds; but at preſent they are all alike: all the difference between them is only as to ſize, and nothing as to figure; their general uſe being for cruizing along the coaſts; though ſometimes they croſs the ſea.

The French monarch keeps up 40 galleys for the uſe of the Mediterranean, the arſenal thereof being at Marſeilles: and the general of the galleys bears a double anchor, placed in pale, behind the eſcutcheon of his arms, as a mark of his authority. The Spaniards have ſix galleys, which are ſtationed at Carthagena: the King of Sardinia has ſome galleys at Villa Franca: his Sicilian Majeſty has ſome at Naples: the Grand Duke of Tuſcany keeps ſome at Leghorn: there are ſome at Malta: and there are alſo a few at Genoa; all of which are principally maintained to prevent the depredations of the corſairs of Barbary.

Captain GALLEY, is the principal galley of a ſtate, commanded by the captain-general of the galleys: but, in France the royal galley is the firſt.

Patroon-GALLEY, denotes the ſecond galley, both of France, Tuſcany, and Malta; the ſecond general of the galleys being on board the royal galley, and the lieutenant on the patroon: but the terms peculiar to galleys are very numerous, and make a new ſyſtem of ſea-language, different from that uſed in ſhips.

Condemnation to the GALLEYS, is a penalty impoſed on criminals and delinquents, particularly in France, whereby they are adjudged to ſerve the King, or ſtate, as ſlaves, on board the galleys, either during life, or for a limited time; and if the former, the ſentence imports confiſcation of lands and goods: for, in France, he that confiſcates the perſon confiſcates the goods: ſo that a man condemned to the galleys for perpetuity is dead in a civil ſenſe; he cannot diſpoſe of any of his effects, nor can he inherit; and if he is married, the marriage is null, nor can his widow have any of her dower out of his effects.

By an ordinance of Charles IX. King of France, in 1564, the judges were enjoined not to condemn a criminal to the galleys for leſs than ten years: and Henry III. by another of 1579, enjoins the captains not to detain their galley-ſlaves after their time is expired: but both theſe laws are now entirely diſregarded.

The galley-ſlaves at Marſeilles are employed in the manufacture of rigging and ſail-cloth, under proper precautions to keep them ſafe while they are at work; for which they have a trifling gratification, over and above their ordinary allowance, as an encouragement for them to bear the fatigue.

GALLIPAGO *Iſlands*, are ſituated in the Pacific ocean, on both

both ſides of the equator, between 85 and 90 degrees of weſtern longitude, about 400 miles W. of Cape Lorenzo on the coaſt of Peru. They are eleven in number; thoſe on the north-ſide the line being called Lord Culpeper's iſland, Lord Wamman's iſland, Abington's iſland, Bindloes's iſland, and Eure's iſland; and thoſe on the ſouth-ſide the line are called Narborough iſland, Redondo iſland, Daſſigney's iſland, Duke of Norfolk's iſland, King Charles's iſland, and the iſland of St. Maria de la Aguada: they are frequently viſited by ſuch ſhipping as want refitment, water, or freſh proviſions; but the Spaniards have neglected to ſend any colonies hither, and they are too remotely ſituated from any other nation to turn to any account.

GALLIPOLI. A port-town of European Turky, in the province of Romania, or Thrace, ſituated at the entrance of the Propontis, or ſea of Marmora, 25 miles N. E. of the ſtreights of the Helleſpont, or Dardanels, and 100 miles S. W. of Conſtantinople, lying in 28 deg. of E. lon. and 40 deg. 45 min. of N. lat. There are two harbours for the reception of galleys, but they will not admit of large ſhips: it is computed that the inhabitants conſiſt of 10,000 Turks, and 4000 Chriſtians, beſides a conſiderable number of Jews; and this was the firſt town the Turks poſſeſſed themſelves of in Europe.

GALLIPOLI, is alſo a port town of Italy, in the province of Otranto, within the kingdom of Naples, ſituated on the gulph of Otranto, and 23 miles W. of the city of Otranto; lying in 19 deg. of E. lon. and 40 deg. 25 min. of N. lat.

GALLIUM. A plant, both white and yellow, growing in meadows and about hedges, reputed good for ſtopping the bleeding of the noſe, by blowing into it ſome of its powder; both kinds are alſo eſteemed excellent againſt the falling ſickneſs, either infuſed over night in good white wine, or the quantity of a drachm being taken in powder; or by way of decoction, by putting a handful in a pint of water.

GALLO. A ſilver coin of the kingdom of Cambodia, in the Eaſt Indies, worth about 10 d. ſterling.

GALLO. An iſland in the Pacific ocean, near the coaſt of Peru, 200 miles W. of Popayan, ſituated in 80 deg. of W. lon. and in 2 deg. 15 min. of N. lat. which was the firſt place the Spaniards poſſeſſed themſelves of when they attempted the conqueſt of Peru; and, as there are ſome good harbours in the iſland, with wood and water, the buccaneers uſed to put in here to refit.

GALLO, or *Punto Gallo*, is a ſea-port town and fort, on the S. W. part of the iſland of Ceylon, in the Eaſt Indies, ſubject to the Dutch; and ſituated in 78 deg. of E. lon. and 6 deg. of N. lat. See *Ceylon*.

GALLOCHES. A ſort of leather clogs that cover good part of the ſhoes, particularly at and about the toes.

GALLON. An Engliſh meaſure, for things both liquid and dry, containing 2 pottles, or 4 quarts, or 8 pints: but thoſe quarts, and pints, and conſequently the gallon itſelf, are different, according to the quality of things meaſured: the wine gallon, for inſtance, contains 231 cubic inches, and holds 8 lb. avoirdupoiſe, of pure water, purſuant to acts of parliament made in the 5th, 6th, and 7th years of the reign of Queen Anne. The beer and ale gallon contains 282 ſolid inches; and the gallon for grain, meals, and ſuch things, 272 inches, holding 9 lb. 13 oz. of pure water. The gallon of wheat is to contain 8 lb. troy weight, by 31ſt Edw. I. 11th Hen. VII. and 12th Hen. VII.

GALLON is alſo, in ſome parts of France, particularly in Normandy, a liquid meaſure containing 2 pots, or the half of a ſeptier. This gallon is not much different from that of England, and in all probability it paſſed from Normandy with William the Conqueror.

GALLOON, in commerce, a thick, narrow kind of ferret, ribband, or lace, uſed to edge or border cloths; the term being commonly underſtood of that made of woollen; ſometimes that of thread, or even gold, or ſilver.

GALLOWAY. The capital of the county of Galloway, and province of Connaught, in Ireland, ſituated on the bay of Galloway, in the weſtern ocean, 110 miles W. of Dublin; a good port, advantageouſly ſituated for a foreign trade, and lying in 9 deg. 12 min. of W. lon. and 53 deg. 12 min. of N. lat.

GALLS, or *Gall nuts*, in natural hiſtory, a kind of morbid tumours, or excreſcences, found on ſeveral maſt-bearing vegetables, as the oak and willow, in form of balls, cones, or little apples, ſometimes ſolid, and ſometimes perforated; which are occaſioned by the eggs of inſects hatched therein.

Aleppo GALLS, are a particular kind, uſed in dying, making of ink, and other things, which are produced on the hardeſt ſpecies of oak, called *quercus gallam ferens*; thoſe on the other oaks being leſs fit for that purpoſe. They are hard as ſhells; and yet are no other than the cafes of the inſects hatched there, which, when come to maturity, gnaw their way out: but there are three ſorts of thoſe galls; the firſt being blackiſh; the ſecond bordering upon green; and the third whitiſh: the dyers uſing them all according to their reſpective qualities; the green and black ſerving to dye in black; and the white for linens; though the black and green are thoſe only uſed in making of ink. The Engliſh and Dutch import annually from Aleppo 10,000 quintals of galls: but the Turks have likewiſe a kind of ruddy gall, of the ſize of a ſmall nut, which they mix with cochineel, and tartar, for the dying of ſcarlet.

GAMBIA. A great river of Africa, which, running from eaſt to weſt, falls into the Atlantic ocean in 14 deg. of N. lat. and 15 deg. of W. lon. ſuppoſed to be a branch of the river Niger; and is navigable for ſloops above 600 miles, according to the account of ſome Engliſh factors, who have ineffectually gone up it ſo far in hopes of a diſcovery of gold mines. See *Niger*.

James iſland, once the principal ſettlement of the Engliſh African company, lies 10 leagues up this river, almoſt in the middle of it, being 3 miles from the neareſt ſhore: nor is the iſland leſs than a mile in circumference; where the company have a fort mounted with cannon, and a ſmall garriſon, which preſerves their right of trading in the river, where they have alſo factors on either ſhore for ſeveral hundred miles up the river. See *African* company, and *Guinea*.

GAMBOGE, or *Gum-gutta*, is a reſinous gum brought from the kingdom of Siam, in large pieces faſhioned like ſauſages, hard, brittle, and very yellow: it oozes from inciſions made in a kind of prickly ſhrub, which climbs up the neighbouring trees. In medicine it purges violently both upwards and downwards: it is particularly uſed in dropſies, and the itch; but is dangerous. It ſerves alſo to make a yellow colour for painting in miniature.

GAMELO. A name whereby the Indians call the copivi balſam. See *Copivi*.

GAMMON. The thigh, or ham, particularly of a hog, which is a conſiderable article in commerce. See *Ham*.

GAMUTO. A kind of hemp, extracted from the heart of ſome palm trees in the Eaſt Indies, and ſerving for cordage; but it is not durable in the water. It is found chiefly in the Philippines, where the cords manufactured of it make a part of the commerce of the iſlanders, either with the Spaniards who poſſeſs ſeveral of theſe iſlands; or with other Europeans who frequent ſome of the more diſtant; particularly the Dutch, who export great quantities of them from Mindanao.

GANDIA. A port-town of the province of Valencia in Spain, lying on the coaſt of the Mediterranean, 25 miles S. of Valencia, ſituated in 20 min. of W. lon. and 38 deg. 5 min. of N. lat. See *Spain*.

GANG, in the ſea-language, ſignifies a crew; and to man a boat, is called to put a gang of men, which is a company, into her: but they are commonly called the coxſwain's gang, who has charge of the boat.

GANG-*way*, is applied to all the ſeveral entrances, ways or paſſages, from one part of the ſhip to the other; and whatſoever is put in one of theſe paſſages, is ſaid to be laid, or put in the gang-way.

GANGES. A river of the Hither India in Aſia, riſing in the mountains which ſeparate India from Tartary, and running from the N. W. to the S. W. for the ſpace of near

1500 miles through the dominions of the Great Mogul, discharging itself, by several channels, into the bay of Bengal.

This river is in great esteem in India, not only on account of the long course it runs, the depth of its several channels, and the pureness of its stream, but from the sanctity which the natives believe to be in the waters. It is visited annually by several hundred thousands of pilgrims, who pay their devotions to this river as a god; carrying their dying friends from distant countries, to expire on its banks; and, as soon as they die, heave them into the middle of the river. The water is lowest in April, or May; but, the rains beginning to fall soon after, the flat country is overflowed for several miles before the end of September, when the waters begin to retire, but leave a prolific mud behind, which makes Bengal the most fruitful province of India, for all kinds of grain. These waters keep better at sea than any other, except the Thames. The spring tides rise usually about ten feet here; but there have been terrible inundations and storms of late years, in which the towns near the shore suffered much, and the ships in the river were some of them cast away; for there are no safe harbours upon the east coast of India; therefore, when the monsoons, or stormy season, is expected, which is about the autumnal equinox, the shipping on the coast sail up the Ganges for their security. The Europeans use the most westerly branch of the Ganges, where the English have some settlements, particularly at Fort William and Huegly.

ANTAN, or *Grantan*. A weight used at Bantam, one of the capitals of the island of Java, and in some other parts of the East Indies, being about three pounds avoirdupois.

ANZAS. A coin of tin and copper, struck in the kingdom of Pegu; but not in a royal mint, each person being at full liberty to coin them, on paying the King's duties. There are some profits to be made by this coin, by staying for some time in Pegu, where the payments of gold, silver, spice, pearls, and other rich merchandise, are usually made in ganzas, which raises their price in the time of these payments. Their value is not fixed, but usually they are worth about 1 d. or $1\frac{1}{2}$ d. sterling: there are also half and quarter ganzas rated in proportion.

ARAS. A coarse white cotton cloth, brought from the East Indies, particularly Surat; the pieces being from 9 ells $\frac{2}{3}$, to 14 ells and a half long, and $\frac{7}{8}$ broad.

ARBLE, or *Garbling*, of spices, drugs, and other groceries, is the cleansing them from the dross and dust mixed therewith, and separating the good from the bad, according to the qualities of the several commodities.

ARBLER *of spices*, is an officer of great antiquity in the city of London, who is empowered to enter any shop, or warehouse, to view and search the drugs, spices, and other commodities; as also to garble, and cleanse them; which was an office granted by King Henry VI. to the Lord Mayor, Aldermen, and commonalty of London, with the advice of the merchants, as well as the grocers, for the conceiving and creating of such ordinances therein, as might be most conducive to the benefit of the merchant, the uttering and sale of the grocer, and the goodness of the commodity garbled, for the health of the people in general.

The garbler, after sorting and dividing the good from the bad commodities, was to seal them up, and to tare all such casks, hogsheads, barrels, bags, and other measures, wherein such spices, drugs, and merchandises were brought, truly, justly, and indifferently, between buyer and seller; and therefore, the workmen and labourers belonging to the garbler, were formerly swore to a faithful and honest discharge of their duty.

The garbler was also to keep all wet and defective commodities apart, without any mixture of good and bad; and, after they were sufficiently garbled, he was to seal them with a cross-bar; thereby to distinguish the good and merchantable commodities from such as were defective and unmarketable, which the buyer might readily observe by looking upon the seal. The garbler was likewise to give licence to any person to buy spices garbleable: but to licence one and not another, or to carry the same from place to place ungarbled, was unlawful; so it was to take money of merchants before their goods were garbled, or to take more money of one than another, or to take more for his fees than was limited by the acts of the common council: for the rates of the office of garbling were established by several acts of common council, at the first institution of the office; and the table of fees hung up in Guildhall, in public view, that all persons concerned might take notice thereof; which accustomed rates of all spices and drugs garbleable were as follow.

GARBLES. The dust, soil, or filth, separated from good spice, drugs, or other groceries.

GARBOARD-*plank*. The first plank of a ship that is fastened to her keel on the outside.

GARBOARD-*strake*. That seam in a ship which is next her keel.

GARDENER. A person employed in gardening; which is a healthful, laborious, ingenious, and profitable business; particularly about London, where the skill lies in bringing the best and earliest garden products to market.

GARDENERS *company of London*, was incorporated by letters-patent of the 14th of James I. dated the 9th of November 1616, by the title of The master, wardens, assistants, and commonalty of the company of gardeners of London; who are governed by a master, two wardens, and 18 assistants; but have neither hall or livery.

GARI. A kind of money of accompt used in several parts of the East Indies, particularly in the Mogul's territories: a gari of rupees being 4000, or about 500 l. sterl. See *Rupee*.

GARLAND, in a ſhip, denotes a collar of ropes, wound about the head of the main-maſt, to keep the ſhrouds from galling.

GARLICK. A ſtrong ſcented hot plant, like an onion, but ſtronger; uſed in ſauces, and on other occaſions.

GARNET. See *Granate.*

GARNET. The tackle with which goods are hoiſted into and out of a ſhip.

GARONNE. A river of France, which riſes in the Pyrenean mountains, and, running north-weſt, paſſes by the city of Tholouſe; then, continuing the ſame courſe, divides the provinces of Guienne and Gaſcony; and, after viſiting Bourdeaux, diſcharges itſelf into the bay of Biſcay, about 60 miles below that city; having received the river Dordonne, and ſeveral others in its paſſage. The uſual tides come up the Garonne, 20 miles above Bourdeaux; and this river has alſo a communication with the Mediterranean ſea by the royal canal made by Lewis XIV.

GAUDIVIS. A white cotton cloth brought from the Eaſt Indies, being a kind of baffeta, but narrower, and not ſo fine. See *Baffetas.*

GAUGER. An officer of the exciſe, appointed by the commiſſioners to gauge, or meaſure all caſks, tuns, pipes, barrels, hogſheads of beer, wine, oil, or exciſeable commodities; and to give them a mark of allowance, which is a circle burnt with an iron, before they are ſold in any place within the extent of this office. See *Exciſe.*

GAUGING, is the art or act of meaſuring the capacities, or contents of all kinds of veſſels; and determining the quantity of fluids, or other matters contained therein; which is properly the art of reducing the unknown capacity of veſſels of ſeveral forms, cubical, parallelepepedal, cylindrical, ſpheroidal, or conical, to ſome known cubic meaſure; and of computing, for inſtance, how many gallons, quarts, pints, or the like, of ale, beer, wine, brandy, or any other liquor, are contained therein: this being a branch of ſtereometry; and the principal veſſels that come under its operation are pipes, barrels, rundlets, and other caſks; as alſo backs, coolers, fats, and other large veſſels. All the varieties whereof caſks are capable lie between the $\frac{5}{10}$ and $\frac{7}{10}$ of the difference between the bung and the head diameters; ſo that all the gauger has to do, is to take ſuch a part of the difference between theſe two diameters as he thinks beſt for the curvature of the caſk; which added to the head diameter, gives the diameter of the mean cylinder. However, the buſineſs of gauging is very uncertain: though it comes near enough the truth for the purpoſes of common life. In Spain there are officers for gauging of ſhips, who are to take their dimenſions for calculating their tonnage and freight.

The laws of England relating to gauging are thoſe of the 27th and 31ſt of Edward III. the 4th of Richard II. the 18th of Henry VI. the 4th of Richard III. the 28th of Henry VIII. and the 31ſt of Elizabeth; whereby all wines imported for ſale are to be gauged, upon forfeiture of the goods; the contents of the veſſels are aſcertained; as alſo what other liquors are ſubject to gauge, and how it is to be taken. See *Meaſure.*

GAURIES. A people diſperſed all over India and Perſia, who pretend to be deſcended from the ancient Perſians, tho' they differ from the modern in ſeveral material articles: but, as their employment is only huſbandry, they are no ways conſiderable, either as promoters of trade, or members of ſociety.

GAUS. A kind of copper drums made in China, being a part of the cargoes of ſuch ſhips as go from Canton to Siam.

GAUT. A kind of buſhel, uſed by the Moors in ſome places of the coaſts of Barbary, particularly among the Anledalis, a tribe of Moors, not far diſtant from the Baſtion of France; thirty of which are about 20 buſhels Wincheſter meaſure.

GAUZE, in commerce, a very thin, ſlight, tranſparent kind of ſtuff, wove ſometimes of ſilk, and ſometimes only of thread: but there are alſo figured gauzes; and ſome of them with flowers of gold and ſilver, on a ſilk ground, which are principally brought from China, and ſeveral parts of the Eaſt Indies. The pieces are uſually 19 or 20 ells long; and thoſe from China ſometimes 11 ells long and $\frac{2}{3}$ broad: their chief uſe being for women's ornaments.

GAYOC. See *Guaiacum.*

GAZANA, or *Gaſava.* A term for one of the different kinds of rupees current in the Mogul's territories, particularly at Amadabat, being worth about 2 s. 6 d. ſterling.

GAZE. A ſmall copper coin, current in Perſia, worth about $\frac{1}{6}$ d. ſterling.

GAZUL. An Egyptian weed, uſed as the principal ingredient in making the fineſt glaſſes.

GE, or *Je.* A long indian meaſure uſed in the Mogul's territories; which is not a real meaſure, but a meaſure of accompt, making about 40 Engliſh ells.

GEAILOYE. A ſort of liquid meaſure uſed in ſome provinces of France; but different according to the place. The largeſt contains 16 pints, the middleſt 12, and the ſmalleſt 8.

GEDENG. An Indian meaſure for pepper, containing about 4 lb. avoirdupois.

GEET. A river of the Auſtrian Netherlands, which riſes in the S. E. part of Brabant, and runs north near the confines of Liege; after which, paſſing by Lande and Leaw, it falls into the Demer a little below Halen.

GELLY. See *Size.*

GEM, or *Gemm.* A common name for all precious ſtones, or jewels; among which the principal are the diamond, ruby, ſapphire, jacinth, emerald, topaz, amethyſt, granate, jaſper, onyx, turcoiſe, opal, agate, cryſtal, porphyry, and marble.

Pearls are alſo ranked among gems, though not ſtones: for a deſcription whereof, ſee each under its proper article; as alſo the article of *Precious ſtones.*

Several authors, both ancient and modern, relate wonders of the virtues and medicinal properties of gems: but their reputation, in this reſpect, is greatly diminiſhed, and many even deny them any virtue at all; which occaſioned Mr. Boyle to write a treatiſe on the origin and virtues of gems, the purport whereof is to make appear, that ſuch ſtones were originally in a fluid ſtate, or made up of ſuch ſubſtances as were formerly fluid; and that many of their general virtues are probably derived from the mixture of metalline, and other mineral ſubſtances uſually incorporated with them, while the great variety, and the particular efficacy of their virtues ariſe from ſome happy concurrent circumſtances of the peculiar nature of the impregnating liquor, and the proportion wherein it is mixed with the petreſcent juice.

The knowledge of gems depends upon two principal things; their hardneſs and their colour: the diamond is the hardeſt of all; and in point of colour the diamond is valued for its tranſparency, the ruby for its purple, the ſapphire for its blue, the emerald for its green, the jacinth for its orange, the amethyſt for its carnation, the onyx for its tawny; the jaſper, agate, and porphyry, for their vermillion, green, and variegated colours, and the granate for its blood-red: all of which, by the ſtatute of the 5th of Geo. II. are to paſs inwards and outwards, without warrant or fee; and may be imported or exported in any ſhip or veſſel.

Mr. Boyle ſays, that upon knowing the different methods of producing the adventitious colours of metals and minerals in bodies capable of vitrification, depends the art of making counterfeit gems: for whilſt pure ſand, or calcined cryſtal, gives the body in their preparation, it is for the moſt part, ſome metalline or mineral calx, mixed in a ſmall proportion with it, that gives the colour.

GEMMÆ, *Sal-Gem*, or *Sal Gemmæ*, is a term for the rock ſalt, extracted from pits, and mines of ſalt, being derived from the Latin word *gemma*, which ſignifies a precious ſtone; becauſe this kind of rock-ſalt is uſually tranſparent and brilliant, like rock cryſtal, which is ranked among precious ſtones.

The mines where the greateſt quantity and beſt kind of ſal-gem is found, are thoſe of Wiliſca in Poland, Eperies in Upper Hungary, and Cardonna in the principality of Catalonia in Spain.

The greateſt uſe of this ſalt is for pickling, in thoſe places where there is no other kind of ſalt; but dyers alſo conſume great quantities of it. See *Salt.*

NEQUIN, or *Cotton Genequin*, is a kind of ſpun cotton, eſteemed but little, as having no conſiderable vent.

NERAL, in one ſenſe, ſignifies common, frequent, nd univerſal; in which light is to be underſtood a general ourt among trading companies: but general, in another enſe, implies various, of all ſorts or kinds; in which ght is to be underſtood what is called the general fund. ee General *Court*, and General *Fund*.

NEVA. A republic in alliance with Switzerland, con- ining a ſmall territory divided into eleven pariſhes, ex- luſive of the city of Geneva, the capital of the re- ublic, ſituated near the confines of France, Savoy, and witzerland, on the river Rhone, at the weſt end of the Leman lake, or lake of Geneva, 70 miles S. W. of Bern, 45 N. of Chamberry, and 60 N. W. of Lyons; ying in 6 deg. of E. lon. and 46 deg. 20 min. of N. lat. This city is ſurrounded with a wall, and other fortifica- ions, about 2 miles in circumference; being tolerably ell built, but moſt admired for its ſituation on the lake nd river. The inhabitants are computed to amount to 0,000; but they are not in the greateſt ſecurity from heir potent neighbours of France and Savoy, whoſe erritories come up to their very walls, and whoſe princes nake ſome pretenſions to the dominions of this republic, which is protected by its allies, the cantons of Friburg, Bern, and Zurich, againſt the attacks of both.

This city was the reſidence of Calvin, and is now the reat reſort of the calviniſts from France, and other na- ons, for education: for the ſake of which religion the Geneveſe expelled their biſhop, in the year 1553, who as their ſovereign at that time, and erected a republic, lacing the legiſlative authority in a council of 200, and ſenate of 25, who have the executive power or admi- iſtration of the government.

The language of the common people is the Savoyard, or very bad dialect of the French tongue; though people f condition ſpeak French in greater purity: they have an niverſity, and carry on a conſiderable foreign trade; heir principal manufactures being gold and ſilver lace, lks, books, piſtols, watches, and ſhammy leather; for more particular account whereof, ſee the general article f *Switzerland*.

NEVA, is alſo a popular name for a compounded water, rocured from the berries of the juniper-tree, diſtilled ith brandy or malt-ſpirits, which is more commonly alled gin.

The foundation, or principal ingredient of this liquor, is ure malt ſpirit, which is made by the malt-diſtillers; han which no liquor of equal ſtrength is reputed to be more wholeſome: ſuch ſpirits they ſell to the rectifiers or ompound diſtillers, and ſeldom or ever trade with any ther people: thoſe rectifiers infuſe the juniper-berry, nd the other ingredients, that conſtitute gin for common le, which they diſpoſe of to the retailers. See *Diſtiller*.

The Britiſh diſtillery annually conſumes ſeveral hundred houſand quarters of corn in this branch of buſineſs, to the reat benefit of the landed intereſt, and to the ſupport of he government, by the duties laid upon the liquor: but he frequent uſe of it among the inferior people was ſo rejudicial to the general part of the community, as to all for the interpoſition of the legiſlature, who paſſed ſe- eral acts of parliament to prevent the pernicious conſe- uences reſulting from the unlimited exerciſe of this in- reaſing evil; which are mentioned, together with ſeve- l other material circumſtances relating to this trade, nder the articles of *Spirituous* Liquors, and *Diſtillery*.

of GENEVA. See *Leman* lake.

NOA. An Italian republic, and the capital city be- nging to it; to which the iſland and the kingdom of orſica is ſubject. See *Italy*.

NOUIN. A ſilver coin of Genoa, worth 6 s. 6 d. ſterl.

NTIAN. A medicinal root, the product of a plant of e ſame name; the root being of a yellowiſh colour, and tolerably bitter; ſometimes as thick as the arm, but ore commonly divided into branches no bigger than the umb of a man.

This root is held excellent againſt poiſons, and even gainſt the plague: it ſtands at the head of the ſtomachics, arming and ſtrengthening the ſtomach, and helping digeſtion: it is ſudorific, and uſed with ſucceſs in inter- mitting fevers, whence ſome call it the European quina- quina: it is alſo an ingredient in treacle: and is externally app'ied to wounds.

The plant affects moſt places, being found commonly enough in Burgundy, the Alps, and Pyreneans, where it is called by botaniſts, *gentiana vulgaris major*, *ellebori albi folio*; but the gentians growing in England are rather gentianellæ.

The root ſhould be choſen dry, new, of a moderate thick- neſs, free from earth, and furniſhed with five little branches or fibres: but that which is dried by the air ought to be held as far preferable to that dried in the oven, which are eaſily diſtinguiſhed by the colour; the former being of a golden yellow within ſide, and the latter ſomewhat blackiſh.

GENTIAN-*water*. See the general article of *Water*.

GEOGRAPHY. The deſcription of the ſurface of the natural terraqueous globe, conſiſting of earth and water, which is repreſented by the artificial globe. See *Globe* and *Earth*, *Sea* and *Ocean*.

General, or univerſal GEOGRAPHY, is that which conſiders the earth in general, without any regard to particular countries.

Special, or particular GEOGRAPHY, is that which conſiders the conſtitution of the ſeveral regions or countries; their bounds, figure, &c. with the mountains, foreſts, mines, waters, plants, animals, &c. therein; as alſo their climates, ſeaſons, weather, diſtance from the equator, &c. their inhabitants, arts, foods, commodities, cuſtoms, language, religion, policy, cities, &c.

Nera, King of Egypt, ordered the Phænicians to make a ſurvey of the whole coaſt of Africa, which they ac- compliſhed in three years: Darius procured the Ethiopic ſea, and the mouth of the Indies to be ſurveyed. And Pliny relates, that Alexander, in his expedition into Aſia, took two geographers, Diognetus and Bœton, to meaſure and deſcribe the roads; and that from their itineraries the writers of the following ages took many particulars: but the art was very defective among the ancients.

By means of geography, the ſituation of kingdoms, pro- vinces, cities, ſeas, &c. and their reſpective diſtances are known: therefore, this ſcience is abſolutely neceſſary to be known by all merchants, eſpecially thoſe who trade by ſea. If a merchant trades to the Levant, he ought to know exactly the ſituation of all the port-towns of the Mediter- ranean; their diſtance from each other; the ſituation of iſlands, gulphs, ſtreights, and capes; the knowledge of their different ſovereigns, their intereſts, religion, forces, and manners; without all which he is in great danger of taking falſe meaſures.

If a merchant undertakes the commerce of the North, he muſt be acquainted with all the ports of the Northern ocean, and thoſe of the Baltic ſea; the intereſts of the princes to whom they belong; the merchandiſe and ma- nufactures of the country; the weights and meaſures which are uſed; beſides an infinity of other circumſtances. Such examples may ſuffice; and it may be ſaid, with ſome foundation, that geography is indiſpenſibly neceſſary for a merchant to underſtand, as well for the knowledge of trading places, as making aſſurances; as alſo for carrying on the cod, whale, and coral fiſhery; for without this knowledge a merchant is often liable to be deceived by the perſons he confides in; beſides, it is ſhameful for a trader not to ſpeak pertinently of his buſineſs.

ST. GEORGE's *Channel*, is that which ſets from the At- lantic ocean into the Iriſh ſea, ſeparating Pembrokeſhire, and the whole weſtern coaſt of Wales, from the county of Waterford, and the eaſtern part of Ireland as far as Drogheda.

ST. GEORGE *del Mina*. The capital of the Dutch ſettle- ments on the gold coaſt of Guinea, in Africa, lying in 5 deg. of W. lon. and 5 deg. of N. lat. See *Guinea*.

Fort ST. GEORGE. The preſidency of the Engliſh Eaſt India company, on the coaſt of Coromandel, in the Hither India, which is ſituated in 80 deg. of E. lon. and 13 deg. of N. lat. See *India*, and *Madraſs*.

ST. GEORGE's. The largeſt of the Bermuda, or ſummer- iſlands, lying in 65 deg. of W. lon. and 32 deg. 30 min.

of

of N. lat. See *Britiſh* America, under the article of Great *Britain*.

GEORGIA, in Aſia. See *Perſia*, and *Turky*.

GEORGIA, in America. See *Britiſh* America, under the article of Great *Britain*.

GERGENTUM. The antient Agrigentum, a town of Sicily, ſituated in the province of Mazara, on the ſouth ſhore, 55 miles ſouth-eaſt of Palermo, in 13 deg. 30 min. of E. lon. and 37 deg. 20 min. of N. lat.

GERMANY. The bounds of modern Germany, including Bohemia and Sileſia, are the Baltic ſea, Denmark, and the German ocean, towards the north; Poland and Hungary, on the eaſt; the gulph of Venice, and the Alps, which divide it from Italy, towards the ſouth; and France, and the Low Countries, towards the weſt; extending from 5 deg. to 19 deg. of E. lon. and from 45 to 55 deg. of N. lat. being about 600 miles long from north to ſouth, and 500 broad from eaſt to weſt. The air in the ſouthern provinces is temperate and healthful, and the ſoil extremely fruitful: but towards the north, the cold is very ſevere in winter; the land producing neither wine nor oil, and but moderate crops of grain. The ſeas of Germany are the Baltic, and the German ocean; but the gulph of Venice may alſo now come into the number of the German ſeas, the Empreſs-Queen being in poſſeſſion of the port of Trieſte, and ſome other towns on that ſide, where ſhe has lately attempted to eſtabliſh a trade. The ſea waſhes but a ſmall part of the German ſhores at preſent, though Germany gives name to that ſea; indeed the ſeventeen provinces of the Low Countries were made part of the empire by Charles V. by the name of The circle of Burgundy, and then Germany might be ſaid to have had a pretty large ſea-coaſt; but theſe provinces are now eſteemed no part of the empire.

The principal rivers in Germany are, firſt, the Danube, which is augmented by the Iſer, the Lech, the Regen, the Iſar, the Inn, the Ens, the Rab, the Drave, the Save, and the Teyſſe: beſides theſe, there are ſeveral conſiderable rivers in the Turkiſh provinces, as the Morava, the Alauta, and the Pruth, all which fall into the Danube.

The ſecond great river is the Rhine, which riſes from two ſprings in the Alps, receiving the Neckar, the Maine, and the Moſelle. The third is the Elbe, which riſes near Hirchburg in Sileſia, from eleven ſeveral heads, which, after they are united, run northward between Miſnia and Luſatia into Saxony, receiving the Moldau, Egra, and other rivers. The fourth is the Weſer, which riſes in the mountains of Thuringia.

The Emperors, like other ſovereigns, are the fountains of honour in their dominions; and not only conſtitute Dukes, Marquiſſes, Counts, and the like, but have frequently taken upon them to make Kings. They have not, indeed, the power of making peace and war, or of levying taxes, without the conſent of the electors, and other princes of the empire; neither can they make laws, or ſuſpend them, without the conſent of the diet, or aſſembly of the ſtates: but the hereditary dominions of the houſe of Auſtria are now ſo much enlarged, this family has ſuch a number of profitable poſts and honours at its diſpoſal, that the princes or the empire are very much devoted to it, and ſeldom oppoſe any thing which his Imperial Majeſty propoſes: for, ſince the late acquiſitions in Hungary, the Low Countries, and Italy, the Emperors have made a figure equal almoſt to their greateſt anceſtors.

The next perſon to the Emperor is the King of the Romans, who has little authority but what he derives from the Emperor. In the Emperor's abſence, indeed, he uſually takes upon him the adminiſtration of the government; and, after the Emperor's death, ſucceeds without any further election. The firſt occaſion of electing a King of the Romans, proceeded from a contrivance of ſome Emperors to ſecure the Imperial crown to their own families; they made uſe of their authority while they were in poſſeſſion of the throne, and eaſily influenced the electors to chuſe a ſon, a brother, or ſome other near relation, to be King of the Romans; which is now grown ſo cuſtomary, that the empire ſeems to be entailed on the males of the Auſtrian family, it being much the ſame thing to elect a King of the Romans, or to chuſe an Emperor.

The principal members of the empire, after the King of the Romans, are the nine electors; of whom the three firſt are eccleſiaſtical, namely, the electors of Mentz, Triers, and Cologne, who are alſo arch-chancellors of the empire; the King or Queen of Bohemia, the Duke of Bavaria, the Duke of Saxony, the Marquis of Brandenburgh, the Prince Palatine of the Rhine, and the Duke of Brunſwick.

The right of election is annexed to their electoral principalities and eſtates; and as long as there is any male iſſue in any of the electoral families, the power of electing the Emperor cannot be taken from them, but by the ban of the empire, or a decree of eſtates.

Every elector is ſovereign in his dominions; they make laws, eſtabliſh courts of juſtice, coin money, levy taxes, and make alliances with other princes of the empire, or foreigners, raiſe fortifications, and make war or peace under ſome reſtrictions; but they cannot alter the value of money, or lay new tolls or cuſtoms in their reſpective territories, without the conſent of the diet; neither can they enter into ſuch confederacies as tend to the prejudice of the empire, or are contrary to the fealty they have ſworn to the Emperor; and, if they do, the ſtates of the empire may proceed againſt and diveſt them of their inheritances, and the privileges of electors.

When a general diet, or an aſſembly of the ſtates of the empire, is to be held, the Emperor iſſues out his ſummons to the ſeveral princes, and other members of the diet, acquainting them with the time and place of their ſitting; and they are bound by their allegiance to appear at the day appointed, either in perſon, or by way of proxy. But as the princes of the empire took advantage of the neceſſities, or indulgence of the German Emperors to erect the governments they held in the capacity of viceroys, or governors, into independent principalities; ſo did the cities now called free and imperial. The Emperors frequently wanting ſupplies of money to carry on their wars, and for other occaſions, borrowed large ſums of the wealthy trading towns, and paid them again by munificent grants and privileges; making them free ſtates, and independent of the governors of the province where they ſtood. Accordingly theſe cities exerciſe all kinds of ſovereign power; they make laws, conſtitute courts of juſtice, coin money, raiſe forces, and enter into alliances and confederacies for their defence. They have alſo their ſeats in the diet, only acknowledging the Emperor for their ſupreme lord, and contributing their ſhare towards the common defence of their country.

There are alſo ſeveral cities, which have obtained the name of Hans town, being cities remarkable for their commerce. They were formerly 72 cities; but now are reduced only to Hamburg, Bremen, Lubeck, and Dantzic. See *Hans* towns.

Hamburg, is an imperial city, or ſovereign ſtate, in the circle of Lower Saxony, and duchy of Holſtein. It is built partly on iſlands, and partly on the continent, on the north-ſide of the river Elbe; being ſituated in 9 deg. min. of E. lon. and 54 deg. of N. lat. 40 miles S. W. of Lubeck, 55 N. E. of Bremen, and about 73 S. E. of the German ocean, where it receives the Elbe. The territory ſubject to it is ſmall: but there are ſeveral large villages, and noblemen's ſeats in it; beſides, there are ſeveral little iſlands in the Elbe ſubject to the Hamburghers. This city is large and populous; but lies ſo low, that in ſome ſpring-tides they receive great damage in their houſes, to whoſe doors the ſhips can come up, to deliver or take in their lading; the tide flows 16 miles above the city; but there is a ſand-bank about four miles below it, which ſomewhat impedes the navigation of large ſhips, who are obliged to come to anchor at a place called New Mills, and unlade their merchandiſe into ſmaller veſſels. They have plenty of all kinds of proviſions, which are either brought down their rivers from the interior parts of Germany, or imported from abroad; their markets being well ſtored with ſea and river fiſh, as alſo with garden-ſtuff. There are five churches in the city, and ſeveral well-endowed hoſpitals and

e foundations, particularly one for diſabled ſeamen their families. The eſtabliſhed religion is Luthe-iſm; and they were formerly ſo much bigotted to ir religious opinions, as to tolerate no other ſect, ether Popiſh or Proteſtant, except in the chapels of eign miniſters; but the Engliſh being firſt indulged the exerciſe of their public worſhip, the Dutch and er nations have been favoured in like manner.

e magiſtrates of Hamburg are, 4 burgomaſters, 20 epins or aldermen, choſen out of the moſt conſider-e merchants or tradeſmen; 12 common council men, enators, who not only conſtantly attend the ſervice the city, but upon extraordinary occaſions aſſemble more of the principal citizens, called burger alten, or ers of the city; and if the caſe is very important, the ole body of freemen are aſſembled, in whom ſeems to the laſt reſort. But this has been frequently diſputed; ſenate pretending, that though the freemen are called advise with upon extraordinary occaſions, their ſupe-rs only have the power of determining what ought to done; and theſe controverſies have ſometimes roſe high, that the Emperor has been obliged to take cogni-ce of them, and command the forces of the circle to rch into the city, and preſerve its tranquillity.

owever, the King of Denmark, as Duke of Holſtein, ſometimes laid claim to the dominion of this city; rticularly in the year 1724, when his Daniſh Majeſty ived this claim, and called Hamburg his hereditary y; which the Hamburghers denied. Indeed the Danes once pretenſions to this city; but now they have none. oldemar, Duke of Sleſwick, by the aſſiſtance of his other Canutus VI. King of Denmark, took this city from e Emperor Otho IV. and Woldemar being afterwards anced to the Daniſh crown, transferred the ſovereignty Hamburgh to Albrecht Earl of Ortemund, who aſ-ned his right to the citizens in conſideration of 1500 arks of ſilver, or 112l. 10s. ſterling; whereby the y became a free and independent ſtate. Adolph IV. arl of Holſtein, confirmed their rights and privileges, his ſucceſſors alſo did down to Adolph XIV. the laſt arl of Holſtein and Scawenburg of that family, who ed in 1459; when the province of Holſtein put them-lves under the protection of Chriſtian I. King of Den-ark, whom they elected their ſovereign, under the title Duke of Holſtein; and the citizens of Hamburg en-red into an alliance with the King of Denmark, en-ging to maintain the ſame friendſhip and correſpon-nce with him they had done with the Earls of Hol-ein and Scawenburg his predeceſſors, if he would con-rm their rights and privileges; which he did accordingly. ut his ſucceſſors were perpetually reviving their claim the ſovereignty of this city; and ſome of them com-elled the citizens to pay large ſums to purchaſe a con-rmation of their liberties; ſometimes appearing before e city with a numerous army, and at other times block-g up the mouth of the river Elbe, by means of the for-reſs of Gluckſtaſt, taking their ſhips, and obſtructing eir traffic: but the imperial diet in 1510 declared Ham-urg a free imperial city; and the powers intereſted in reſerving the liberties of this city have hitherto inter-poſed, and preſerved them from being ſwallowed up by Denmark.

eſides the Elbe, the Hamburghers have a channel opened the river Trave, for the ſake of a communication with ubeck, and the Baltic ſea, to avoid toll and other diffi-culties of the Sound; veſſels lying in the Trave being within 40 miles of the Baltic; whereas it is upwards of 00 round the coaſt of Jutland by the Daniſh ſound.

By the Havel and Spree they have a trade with the elec-orate of Brandenburg; and by a canal from the Spree the Oder, their trade is extended to Sileſia, Moravia, nd Poland, almoſt to Hungary; while the Elbe, and ther rivers, carry its commerce on to Auſtria, Bohemia, nd Saxony.

The merchandiſes proper for Hamburg, are French, cotch, and Lunenburg ſalts; white wine, brandy, and inegar; woollen cloths, ſilks, ſpice, drugs, haberdaſhery ares, prunes, and other dry fruits; laſtly, paper, which ells at a conſiderable advantage.

The merchandiſes brought from Hamburg are, linens of ſeveral countries and ſorts, linen yarn, corn, tin plates, braſs, ſteel, and iron wire made in Saxony; all ſorts of Braziery ware, carpenters timber, clap-boards, and kid-ſkins in great quantities from Brandenburg; beſides al-moſt all the merchandiſe of the north and the Baltic, are to be met with there, but not ſo cheap, as they are had only at the ſecond hand.

Hamburg principally exports its linens to Great Britain, from whence it receives moſt of its woollen cloths and ſtuffs: from Hull in Yorkſhire they generally have woollen goods to the value of 100 000 l. a year; they pay about 20,000 l. yearly for Engliſh worſted ſtockings, and have a great demand for tobacco, ſugar, ginger, Eaſt India goods, tin, and lead; all the Engliſh goods ſold there amounting to ſeveral hundred thouſand pounds a year.

The Engliſh merchants make a great figure at Ham-burg; having extraordinary privileges granted them in preference to other nations: they appear as a body, with particular juriſdiction and powers among themſelves; and as they are called in London the Hamburg company, ſo they are called at Hamburg the Engliſh houſe or ſo-ciety; upon which account the Engliſh are pretty nume-rous here; this being really, as it was anciently called, the ſtaple of the Engliſh trade for this part of the world.

The Hamburghers alſo carry on a great trade with Ruſſia and Livonia, receiving their commodities in ex-change. They likewiſe ſupply moſt parts of Germany with merchandiſe; receiving from the north part of the empire, and Poland, linen yarn and fine flax, honey, wax, anniſeed, linſeed, and drugs. They have generally about 400 ſhips employed; of which 30 are kept in the trade to and from London, about 40 are kept trading to and from Bourdeaux in France, 50 or 60 are in the Green-land trade, ſome navigate the Baltic, and others are ſent into the Mediterranean.

The Hamburghers are fond of trade; and, ſenſible that na-tional manufactures are the life of it every where, they have lately erected ſeveral; particularly the weaving of damaſks, brocades, velvets, and the richeſt kind of ſilks, ſugar-baking, callico-printing, and the making of gold and ſilver wire: they have alſo begun to print linens, and brew great quantities of beer for exportation, which ſtands the heat of the warmer climates; by which means the city of Hamburg carries on the moſt extenſive inland trade of any city in Europe, except London and Amſterdam.

The Britiſh factory, which is removed from Flanders to Hamburg, is incorporated into a company, conſiſting of 13 members, a governor, and deputy-governor; who are poſſeſſed of particular privileges granted by the regency in 1610. Till 1688 they had an excluſive privilege of im-porting cloth; but this liberty is now free to any of the inhabitants of the city. The Britiſh merchants decide all diſputes among themſelves by a majority of voices: they alſo judge with regard to their demands on burghers; but in this caſe a deputation of two ſenators is required, to act in concert with them; though the deciſions of the Britiſh merchants are ſo juſt and ſummary, that the burghers generally make application to them, when they have demands upon any of the Britiſh factors, preferring their determinations to any other court in the juriſdiction of the city. See *Hamburg* company, under *North* com-panies, and Merchant *Adventurers*.

The trade of Hamburg is not ſo conſiderable at preſent as it was formerly; becauſe Peterſburg, and other places in the Baltic, have become remarkable for traffic: but Al-tena has done it the moſt prejudice; for this town was built, by the King of Denmark, upon the Elbe, within two miles of Hamburg, to rival it in trade. It has been made the mart for the ſale of the merchandiſe brought from the Eaſt Indies by the Dutch Eaſt India company; and it has obtained a great part of the commiſſion-buſineſs out of the hands of the Hamburghers: beſides, the King of Denmark hurt the Hamburghers by coining money of a baſer alloy than uſual, which the citizens have re-moved by coining a ſufficient quantity of money them-ſelves, and fixing it at an invariable value, whereby their exchange is certain.

For the coins, monies of accompt and exchange, cuſtoms, meaſures, and weights, of Hamburg, ſee *Coin*, *Money*, *Exchange*, *Cuſtoms*, *Meaſures*, and *Weight:* alſo for the bank of Hamburg, ſee *Bank* of Hamburg.

Bremen is a flouriſhing and populous town of trade; being the third in rank among the hans towns, and a free imperial city. It is the capital of the duchy of Bremen, in the lower circle of Saxony; being ſituated in 8 deg. 20 min. of E. lon. and 53 deg. 25 min of N. lat. on the river Weſer, 70 miles N. W. of Zell, and as many S. W. of Hamburg. The city is ſtrong by nature, as well as art; the whole country round it being eaſily laid under water by cutting the banks of the Weſer, which annually overflows, and enriches the land. It has ſeveral privileges granted it by the Emperor Wencelaus about the year 1400; particularly, that no goods ſhould be allowed to go down the Weſer, without being firſt landed here. The citizens are generally Calviniſts; being governed by 4 burgomaſters, and 24 ratſheri or ſenators. The city is well ſupplied with fiſh, both from its rivers and the ſea; particularly ſalmon and lampreys, which are caught in great quantities within the walls of the town; the former are dried and ſmoaked, the latter pickled, and ſent throughout all Germany, where they are in great eſteem. The Weſer is navigable about 30 miles from the ſea; though not for ſhips of burden any higher than Fegeſack, 6 miles below the city, where is a cuſtom-houſe, and where all ſhips load and unload; for above this place, the floods throw up great banks of ſand, which render the navigation dangerous; ſo that all goods are brought up from thence in flat-bottomed veſſels.

The commodities exported from Bremen are timber, wool, and minerals: they have alſo an excellent way of dreſſing cloth and leather, which are ſent from other countries to be manufactured here. It ſends great quantities of Weſtphalia linens every year to England; for which it receives Engliſh woollen manufactures in exchange, and diſperſes them into other parts of Germany. The Bremeners alſo receive large quantities of calicoes and ſugar in exchange for their linens; they print and refine theſe goods, which they ſend to the great fairs and marts of Germany. They ſend annually five ſhips to the whale-fiſhery in Greenland; and their harponeers are eſteemed ſo expert, that they are frequently hired both by the Engliſh and Dutch. They alſo ſend ſeveral ſhips to France, Spain, Portugal, and Italy, chiefly with linens, ſome corn, and wool; for which they receive ſilks, ribbands, woods for dying, brandy, and ſtrong wines, particularly thoſe of Anjou, Cogniac, and the upper country of Guyenne in France. The duties of importation and exportation are very low, which gives the Bremeners an advantage over the Dutch: they have a council of trade; they coin a piece of money called a groat, which is worth about a halfpenny; and their city is eſteemed the next port to Hamburg in the whole empire for commerce.

Lubeck is an imperial city, and was formerly the principal of all the hans towns; it is ſituated in 10 deg. 35 min. of E. lon. and 54 deg. 20 min. of N. lat. in the circle of Lower Saxony, and duchy of Holſtein; lying on the river Trave, 10 miles S. W. of the Baltic ſea, 40 miles N. E. of Hamburg, and 36 W. of Wiſmar. The city is rich and populous, pleaſantly ſituated, and elegantly built, containing 20 parochial churches, beſides the cathedral; though it was an inconſiderable borough, till enlarged and beautified by Adolph, the ſecond Earl of Holſtein, in 1140; from whom it was taken by Henry Duke of Saxony and Bavaria: Woldemar Duke of Sleſwick afterwards made himſelf maſter of it; but the citizens being unkindly treated by him, they put themſelves under the protection of the Emperor Frederic II. who confirmed and enlarged their antient privileges and immunities; ſince which time Lubeck has continued a free imperial city; its territories being about about 60 miles in circumference, containing ſeveral ſmall towns and villages.

The preſent government is in the hands of 12 burgomaſters, elected out of the nobility and civil lawyers; and the ſenate or council conſiſts of ſixteen members, half noblemen and lawyers, and the other half merchants: but two brothers, or a father and ſon, cannot be admitted at the ſame time into the ſenate; nor is any handicraft or mechanic permitted to ſit among them; the latter of which perhaps has contributed to their great declenſion in trade to what it was formerly, when they could fit out upwards of 200 ſhips of war, and hold the balance of power among the northern nations.

The biſhopric of Lubeck has been enjoyed by Proteſtant princes ever ſince the year 1561, when the Lutheran religion was introduced here, and devolves as an appanage, or inheritance, on the younger ſons of the Duke of Holſtein-Gottorp, who are ſtiled Dukes of Holſtein-Eutin, from a town where the palace of this prelate ſtands about 4 miles from the city; this being perhaps the only Proteſtant biſhopric in Germany which has not been ſtripped of the revenues and privileges belonging to it; for the other Lutheran biſhops are rather ſuperintendants, having little to diſtinguiſh them from the inferior clergy, but the point of precedence.

Travemund, at the mouth of the river Trave, is a port-town to Lubeck, which is about 3 leagues from it, and eſteemed a very good harbour; from whence the goods are conveyed in flat-bottomed veſſels, or lighters, carrying 8 feet of water.

The commodities exported from Lubeck are hemp, flax, iron, anchors for ſhips, carpenters timber, corn, wax, and moſt of the goods to be found at Hamburg. The commodities imported there are Engliſh and Dutch woollen cloths, drugs for dying, pepper, Dutch ſpices, and Engliſh ſugar: paper is a profitable article, which the Lubeckers re-export to Ruſſia: the French alſo ſupply them with ſugar, haberdaſhery ware, and ſome ſilk ſtuffs, beſides ſalt, wine, brandy, and vinegar.

The duties of importation and exportation are very low, which are paid equally by burghers and ſtrangers; neither of them amounting to 1 *per cent.* but ſtrangers are allowed to ſell their goods only to burghers: however, they find burghers ready enough to permit them to make uſe of their names for a very ſmall commiſſion, which prevents any prejudice this privilege might occaſion among ſtrangers.

For the trade of Dantzic. See *Poland*.

It is proper to treat of the other principal trading towns in Germany, under their reſpective circles, as they ſtand in the following order.

The circles of

1. Auſtria.
2. Bavaria.
3. Franconia.
4. Upper Saxony.
5. Lower Saxony.
6. Suabia.
7. The Upper Rhine.
8. The Lower Rhine.
9. Weſtphalia.
10. Burgundy.

1. *The circle of Auſtria.*

Within the circle of Auſtria are comprehended, not only the archdukedom of Auſtria, but the duchies of Styria, Carinthia, Carniola, the counties of Gorz, Cilley, and Tyrol, and the biſhopries of Brixen and Trent; which territories are bounded by Bohemia and Moravia on the north, by the kingdom of Hungary on the eaſt, by the dominions of the republic of Venice towards the ſouth, and by Bavaria towards the weſt; being in length from eaſt to weſt near 300 miles, and about 200 broad from north to ſouth. It received the name of Auſtria, or Oſtria, on account of its eaſtern ſituation, with regard to other parts of the empire, and was antiently called Pannonia Superior. After the Romans quitted it, the Boiarii poſſeſſed themſelves of the country; and it became part of the great dukedom of Bavaria. The Emperor Otho firſt erected it into a ſeparate marquiſate; and the Emperor Rodolph I. made his ſon Albert, the firſt archduke of Auſtria, a title which was never given to any other principality. From this time Auſtria was erected into an archduchy, it increaſed in grandeur every day; for not only the counties of Carinthia, Styria, Tyrol, and Alſatia, were added to it, but, by the marriage of Maximilian of Auſtria with Mary of Burgundy, the ſeventeen provinces of the Low Countries, with the Franche Comte, were added to the dominions; and, by the marriage of Philip, ſon of the ſaid Maximilian, with Jane of Spain, great part of Spain with Naples, Sicily, and the Spaniſh dominions in A-

rica, devolved on the Auſtrian family; but that branch became extinct by the death of Charles II. King of Spain, in 1700, who appointed Philip Duke of Anjou to ſucceed him, whereby the Spaniſh monarchy came into the poſſeſſion of the houſe of Bourbon.

Auſtria Proper is divided into the Upper and Lower Auſtria; the Lower Auſtria being ſo called from being ſituated lower down the Danube than the other, and is ſeparated from the higher by the river Ens, which falls into the Danube near a city of the ſame name.

The chief towns in Lower Auſtria are, 1. Vienna, or Wien, the capital of the province, and the metropolis of the empire, ſituated in 16 deg. 20 min. of E. lon. and 48 deg. 28 min. of N. lat. on the ſouth ſide of the Danube, on a branch of that river, which here divides itſelf into many ſtreams, forming ſeveral ſmall iſlands. The river Wien, which gives its name to the place, flows on the eaſt part of the city, falling into the Danube a little below it.

Vienna lies 130 miles S. E. of Prague, 200 miles E. of Munich, 600 S. E. of London, 550 E. of Paris, 300 N. W. of Belgrade, and 700 N. W. of Conſtantinople. The city, within the walls, is not above 3 miles in circumference; but the ſuburbs are much larger than the city; which though it is ſo far within land, has in ſome parts of it the appearance of a ſea-port; for here are magazines of naval ſtores, and ſhips of war built and fitted out, which ſerve upon the Danube againſt the Turks in time of war, and carry on a trade in time of peace.

The country about Vienna is very fruitful in corn and ſaffron; and the city is alſo well ſupplied with fiſh by the Danube. They have wines of their own growth, though they import great quantities from France and Italy: they receive ſheep and oxen from Hungary, and the frontiers of Turky, for the ſupply of the city; becauſe Auſtria itſelf is not very well ſtocked with cattle. They have not only ſalt enough for their own uſe; but the Empreſs-Queen draws a good revenue from the ſalt-works of Halſtadt in Auſtria.

Baden, about 18 miles from Vienna, is greatly reſorted to by the nobility, on account of its natural baths.

Haynburg, or Haimburg, ſituated on the utmoſt limits of Auſtria towards Hungary, ſouth of the Danube, and about 30 miles eaſtward of Vienna, is now reduced to a declining condition; but ſtill they have plenty of corn and wine, which they tranſport to other countries.

Krembs, ſituated on the river Krembs, on the north-ſide of the Danube, 40 miles W. of Vienna, is a large well-built town, and has a good trade, particularly at the two annual fairs, which laſt 14 days each, when their ſtreets are crouded with merchants from all parts of Germany, Hungary, and Poland.

The chief towns of Upper Auſtria are, 1. Lintz, the capital of the province, lying on the ſouth-ſide of the Danube, 100 miles eaſt of Vienna; and very pleaſantly ſituated; having a good manufacture of gun-barrels, a tolerable trade in linen cloth, and large plantations of hops in its neighbourhood. 2. Ens, ſituated on a river of the ſame name, which falls into the Danube two miles below it, and is about 80 miles weſtward of Vienna. There are ſeveral other towns in Upper and Lower Auſtria, but no ways conſiderable for trade.

The duchy of Styria, including the county of Cilley, is bounded by Auſtria, on the north; by Hungary and Sclavonia, on the eaſt; by Saltzburg, on the weſt; and by Carinthia and Carniola, on the ſouth; extending in length 108 miles from eaſt to weſt; in breadth, in ſome places 80, and in other places not 40 miles, from north to ſouth; being divided into the Upper and Lower Styria, in regard to the courſe of the river Muer.

In Lower Styria, the chief towns are, 1. Gratz, the capital of the dukedom, ſituated on the banks of the river Muer, in a pleaſant fruitful country, 80 miles ſouth of Vienna. It is a ſmall well built city, regularly fortified, and defended by a caſtle, which ſtands on a high hill, and is the archduke's palace. 2. Rakerſburg, a ſtrong fortreſs on the banks of the Muer, 28 miles to the eaſtward of Gratz, being the place where the duties are paid for the goods that come from and are ſent to Hungary. 3. Pettaw, ſituated on the river Drave, 30 miles S. E. of Gratz. 4. Marksburg, ſituated on the Drave, 20 miles W. of Pettaw, formerly the capital of a county, till purchaſed by the Auſtrian family.

In the earldom of Cilley, which lies ſouth of the river Drave, extending to the banks of the Save, the chief town is Cilley, a place of conſiderable ſtrength, once the capital of a territory, governed by its own earls; but now under the dominion of the houſe of Auſtria, and united to Styria; being ſituated on the river Soana.

In the Upper Styria the chief towns are, 1. Judenburgh, ſituated in a pleaſant fruitful country, on the river Muer, 50 miles W. of Gratz; a fair well built town, having two fairs yearly for cattle and merchandiſe. 2. Iſenartz, ſo called from its mines and forges of iron, ſaid by a Styrian writer to afford ſteel enough for all Germany. The mines are really very conſiderable, and were diſcovered in the year 712, having been wrought in ever ſince without any ſenſible decay. The other towns in Upper Styria are not worth a particular deſcription.

In Lower Styria there is plenty of corn, wine, fruits, fiſh, and veniſon. Upper Styria is more mountainous, where the natives feed large flocks of ſheep, which afford good wool. Their valleys are rich, and ſtocked with herds of black cattle; the air being much more healthful than in Lower Styria, where the Hungarian fever and peſtilence is too common. There are no vineyards in this part of the country; but they import the little wine they uſe from abroad.

The dukedom of Carinthia is bounded by Styria and Saltſburg on the north, by Styria on the eaſt, by Carniola on the ſouth, and by Tyrol on the weſt; extending 100 miles in length from eaſt to weſt, and about 30 from north to ſouth. The country is mountainous and barren, but plentifully watered with lakes and rivers; the Drave particularly runs croſs the province, receiving many other leſſer ſtreams into it. The chief towns are St. Veit, Villach, Clagenfurt, Gurck, Lavanmud, St. Andrews, and Freyſac; at which laſt place were formerly mines of gold, that have been exhauſted.

The duchy of Carniola, with Windeſmarch, or the marquiſate of Windes, is bounded on the north by Carinthia and Cilley; on the eaſt, by Croatia; and by a ridge of mountains, which ſeparate it from the territories of Venice, on the ſouth; extending 110 miles from eaſt to weſt, and about 40 from north to ſouth.

This province is divided into the Upper and Lower Carniola, the Windeſmarch, and the county of Goritia. The chief towns of Upper Carniola are, Laubach, Crainburg, and Biſchoffslack: in the Lower are Oberlaubach and Zirknitz: in Windeſmarch the chief towns are Metling and Rudolphſworth; and the principal town of Goritia is of the ſame name.

Laubach, the capital of Carinthia, is ſituated on the banks of a little river of the ſame name, which diſcharges itſelf into the Save 10 miles lower, and lies 30 miles to the northward of Trieſte. 2. Crainburg is ſituated on the Save, 20 miles northward of Laubach. 3. Lack, or Biſchoffslack, a well built town, 10 miles ſouth of Crainburg. 4. Oberlaubach, a town about 16 miles to the weſtward of Laubach, conſiderable for its trade in Italian goods, which from hence are diſperſed all over Germany. 5. Rudolphſworth, or Newſtat, ſituated on the river Gurk, 12 miles N. W. of Metling, an antient town, honoured with great privileges, and famous for the beſt wine in the country.

Goritia is a ſmall diſtrict, being a part of Friuli, but ſubject to the Emperor, which occaſions its being introduced here; for the reſt of Friuli is under the Venetians, and is deſcribed under the article of *Italy*. The chief town of Goritia, is Goritz, or Gortz, ſituated on the river Lizono, 20 miles from the gulph of Venice, and 50 weſtward of Laubach, conjectured to be the Roman Noricia. It was taken by the Venetians in 1608, and recovered by the Emperor the year after, in whoſe poſſeſſion it now remains.

The Emperor having made himſelf maſter of Trieſte, in the province of Karſtia, or, as ſome ſay, Friuli, this town alſo muſt be taken notice of here. Trieſte lies at the bottom of a bay, in the gulph of Venice, to which it gives name. It is a ſmall town, but has the honour

of

of being a biſhop's ſee, under the patriarch of Aquileia. The Emperor was very deſirous of making it a free port, and turning the trade of the Levant that way, which would be a great detriment to the Venetians; but could not ſucceed in this ſcheme: however, he made it a free port, and ſome merchants ſettled there from Venice, who carried on a little trade to the Levant and the Black ſea. The harbour is large, but very unſafe, and perhaps may coſt a great deal of time and labour before it is fit to receive veſſels of any burthen. Proſeg is a town about 7 miles N. W. of Trieſte, where great quantities of rich wine are made.

St. Viet-am Flaum, though it is in Iſtria, a province of the Venetians, and accounted part of Italy, is at this time ſubject to the houſe of Auſtria, and united to their German dominions; ſituated at the mouth of the river Flaum, which diſcharges itſelf into the gulph of Venice, and ſtands 30 miles S. W. of Metling. It is a place of ſome ſtrength, ſurrounded by a wall and ditch, and defended by a caſtle; being another port, whereby the Imperialiſts propoſed to eſtabliſh a trade with the countries in the Mediterranean.

The country of Carniola is mountainous, but agreeably diverſified by a mixture of large pleaſant valleys, affording plenty of corn and wine: it is well watered by abundance of good rivers, particularly the Save, the Layback, and the Gurk; the Save riſing in the weſt, and running the whole length of the province.

The preſent inhabitants of Carniola are a mixture of Germans, Italians, and Sclavonians; they generally ſpeak the High Dutch in towns, except Laubach, where the Italian prevails; but neither of them are ſpoken with any purity; and in the villages, the peaſants ſpeak a kind of Sclavonian, or Wendiſh; but their acts of ſtate, law-proceedings, and inſtruments, are all in the High Dutch or German tongue.

Tyrol, ſuppoſed to be the antient Rhætia Superior, is bounded by Bavaria, and part of Swabia, to the north; by Carinthia and Friuli, towards the eaſt; by the Griſons, and Trent, towards the ſouth; and by Switzerland, on the weſt; extending 120 miles in length from eaſt to weſt, and 60 from north to ſouth. The chief rivers are the Eiſeck, the Inn, and the Etſch, or Adige; which laſt river riſes in this province, and flows through the territories of Venice.

The county of Tyrol is uſually ſubdivided into Tyrol Proper, the biſhopric of Brixen, and the diſtricts of Meran, Pludentz, Bregentz, Feldkirk, and Monfort. The chief town in Tyrol Proper is Inſpruck, the metropolis, and uſual reſidence of the Counts of Tyrol, and of the preſent governor, ſituated in a pleaſant valley, on the banks of the river Inn, from whence it takes its name, being 70 miles north of Trent, and about 80 S. W. of Saltſburg. The town is generally well built, eſpecially the ſuburbs, which are ſeparated from the city by a river. 2. Hall, called Inithall, to diſtinguiſh it from Hall in Saxony, has its name from the ſalt-works here, and is ſituated on the river Inn, 10 miles N. E. of Inſpruck. 3. Tyrol, an antient caſtle, which gave name to the whole country; but is of no conſequence at preſent.

This province has mines of ſilver, iron, and copper; the latter of which formerly employed 30,000 people; though now not above 2000: the ſalt-works are alſo conſiderable, and bring in a good revenue to the government.

Brixen, the chief town of the biſhopric of that name, is ſituated on the river Eiſeck, about 30 miles S. E. of Inſpruck. The city is ſmall, and not very populous, yet is pretty much reſorted to on account of the mineral waters near it; and it is alſo remarkable for excellent wine, being the ſtation of ſome merchants between Germany and Italy for this commodity.

The other diſtricts have each of them a town of the ſame name, but no ways conſiderable for trade.

The territory of *Trent* is ſometimes eſteemed part of Italy: but as the biſhop is a prince of the empire, it is by the Germans accounted part of the circle of Auſtria. The country is ſituated among the Alps; having Tyrol on the north, the territories of the ſtate of Venice on the eaſt and ſouth, and the country of the Griſons on the weſt; extending 70 miles in length from eaſt to weſt, and 50 from north to ſouth, the river Adige running quite through it, and receiving ſeveral other ſmall rivers into it, which fall from the mountains on each ſide. The chief towns are, 1. Trent, ſituated in a pleaſant valley, on the banks of the river Adige, about 70 miles S. of Inſpruck, but encompaſſed with mountains on every ſide. It is a ſmall city, ſurrounded by a ſingle wall; but pretty well built of a kind of red and white marble, ſuch as the rock is whereon it ſtands. The ſecond town in the biſhopric of Trent, is Pozen, or Bolzano, ſituated on the Adige, 25 miles north of Trent; a place of good trade, where the German and Italian merchants traffic and exchange their merchandiſe, eſpecially at the four fairs, which are held every year, on account whereof great privileges have been granted to the place. 3. Noveredo, a little city, famous for its trade in ſilk, and its ſpinning-houſe for that manufacture, where raw ſilk is ſpun by a water-engine. As to the country of Trent in general, it produces good wine and oil, cattle, and fruits: their wine is well taſted and ſtrong; but they have very little corn or grain of any kind.

Though Auſtria is enumerated among the circles of the empire, it is ſubject only to its own prince, and does not come within any of the rules or orders by which the other circles are governed. The general laws of the empire, or acts of the diet, do not affect Auſtria; neither is it obliged to contribute to any charge for the defence of the empire: for the Emperors of this houſe ſeeing that their male-line might fail, or at leaſt another family might be elected to the imperial dignity, were continually heaping new favours on this and their other hereditary countries, that, if ever they ſhould come to be ſeparated from the empire, they might be formed into a great body, and be able to ſubſiſt independently of any other power.

As to the commerce of the hereditary ſtates of the houſe of Auſtria, it was not regarded till the treaties of Utrecht and Raſtadt were concluded, which ratified for the Emperor Charles VI. a great part of the ſucceſſion of Spain in Italy and the Low Countries; upon which the court of Vienna intereſted itſelf much in commercial matters; for ſince theſe treaties were made, in 1713 and 1714, it may be ſaid, that the principal application of this court was to aſſure, and extend the trade of its ſubjects, either by a free port eſtabliſhed on the Adriatic, or by companies of commerce projected in the Low Countries; or, laſtly, by invitations made, and privileges granted, by virtue of ſeveral Imperial decrees, to the merchants and traders of the ſeveral ſtates of the Emperor, to animate them to mercantile enterpriſes.

Among the commercial views of the Emperor, and his miniſters, the treaty concluded between the Imperial plenipotentiaries, and thoſe of the Porte, at Paſſarowitz, in 1718, may be taken notice of; wherein, among other things, are the following ſtipulations.

That the ſubjects of the Emperor, in whoſe number are comprehended, not only the Hungarians and Germans, but alſo the Italians, and the people of the Low Countries, of what religion ſoever, ſhall freely trade to the ſtates of the Ottoman empire.

That as to the commerce carried on by the Danube, the ſhips bearing the Imperial flag ſhall not navigate lower than Vidin; from whence the Imperialiſts ſhall make use of Turkiſh ſaicks, to tranſport their merchandiſes through the Black ſea, either to Conſtantinople, Tartary, Trebiſond, or Sinope.

That the ſhips bearing the Imperial flag, and trading in the Mediterranean, may arrive at, and import merchandiſes not contraband, into all the ports of Turky, paying only 3 *per cent.* of their value, as well for importation as exportation, without any exaction of other duties from the cuſtom-houſe officers, commandants of towns, ports, and caſtles, belonging to the Grand Signior.

That the Emperor ſhall be allowed to eſtabliſh conſuls, agents, interpreters, and factors, in all the places, where other nations allied to the Porte have already ſuch, wherein they ſhall enjoy the ſame privileges, liberties, and protections granted to theſe foreign nations.

That in caſe of the death of the Imperial merchant

eir goods and effects ſhall not be ſubject to confiſ-
ation.
That no ſubject of the Emperor ſhall be brought to juſtice
efore the Ottoman judges; but before the Imperial con-
l, who alone ſhall have the power of puniſhing them.
That the ſubjects of his Imperial Majeſty ſhall not be
able to any repriſals, for the damages ſuſtained by the
urks from the Malteſe, or other Chriſtian nations.
That the Imperial merchants, in order to promote their
ade, ſhall go with a paſſport through all the lands, towns,
nd ſtates of the Grand Signior, without being obliged
the payment of any tribute, and without any moleſta-
on, as to their perſons, goods, and merchandiſes.
aſtly, that the advantages granted to the Imperial mer-
hants ſhall be common to all the Ottoman merchants
roughout the extent of the Auſtrian dominions.

emia, including Sileſia and Moravia, is bounded by Sax-
ny and Luſatia, on the north; by Poland and Hun-
ary, towards the eaſt; by Bavaria and Auſtria, towards
e ſouth; and by the palatinate of Bavaria, and electo-
te of Saxony, towards the weſt; lying between 12 and
7 deg. of E. lon. and between 48 and 52 deg. of N. lat.
xtending 300 miles in length from north to ſouth, and
50 in breadth from eaſt to weſt. The country is
ountainous towards the ſouth and eaſt, but lies more
pen on the north and weſt; and there are alſo great
ountains between Moravia and Bohemia.
The principal rivers of this country are the Elbe, the
Oder, the Muldaw, the Moraw, the Teya or Teyſſa,
nd the Igla.
The three grand diviſions of the kingdom of Bohemia are,
ohemia Proper, the duchy of Sileſia, and the marquiſate
f Moravia.

mia Proper is bounded by Luſatia on the north, by
leſia and Moravia towards the eaſt, by Auſtria on the
outh, and by Miſnia and Bavaria towards the weſt.
The capital of this province, and of the whole kingdom,
the city of Prague, ſituated on the river Muldaw, in
4 deg. 20 min. of E. lon. and 50 deg. of N. lat. about
40 miles N. W. of Vienna, and 70 S. of Dreſden. The
ty is one of the largeſt in this part of the world, and
ompoſed of three towns, Old Prague, New Prague,
nd the Leſſer Prague. Beſides theſe three quarters, there
a ſuburb called the Jews town, where great numbers
f thoſe people reſided, who trafficked chiefly in jewels,
recious ſtones, particularly topazes, and ſuch other
ones as are dug in the Bohemian mines; but they were
aniſhed the kingdom for aſſiſting the French during the
te war, on their invaſion of Bohemia.
gra is a large town, ſituated on the river Eger, about
0 miles W. of Prague. Without the city are large ſub-
rbs, inhabited by a great number of tanners, who ſend
eir ſkins all over Hungary and Auſtria. The city was
rmerly remarkable for making excellent mead; and in
s neighbourhood there are now mines of ſilver and
opper.
The Eger is broad and deep, and bears large veſſels up
the city.
oningratz is ſituated on the Elbe, 50 miles E. of Prague;
ing a large town, but of no trade.
latz is the capital of a rich diſtrict, ſituated at the foot
f the hills which divide Sileſia from Bohemia, 100 miles
aſt of Prague: it has ſome trade in ſilver ore, iron,
mber, coals, cattle, butter, and cheeſe; it has alſo the
rivilege of coining money, in the name of the magiſtrates;
ut they ſeldom coin any above the value of a farthing
a halfpenny.
arelſbadt is remarkable for its baths and mineral wa-
rs, which are much frequented; but the town is chiefly
habited by armourers, and other artificers in iron,
ho work neat and cheap.
uttenberg has about 30 mines in its neighbourhood,
ontaining ſilver and copper; and Kadan is a town
r excellent beer.
marquiſate of *Moravia* is bounded by Sileſia on the
orth and eaſt, by Auſtria on the ſouth, and by Bohemia
the weſt; the chief towns being Olmutz, Brin, and
glaw.
lmutz is ſituated in 16 deg. 45 min. of E. lon. and
9 deg. 40 min. of N. lat. on the river Moravia, 75
miles N. of Vienna, and 94 S. of Breſlau: it is ſmall
but ſtrong, and well inhabited; having ſome trade with
Hungary, Poland, Sileſia, and Auſtria.
Brin is a large town, 30 miles S. W. of Olmutz; and
Iglau is 38 miles S.W. of Brin; the former has little trade;
but the latter has a manufactory of coarſe woollen cloth.
Sileſia is now ſubject to the King of Pruſſia, Elector of
Brandenburg, and is therefore deſcribed under the circle
of *Upper Saxony*.
The hills, which take up a great part of Bohemia, are
generally rocky and barren; but the valleys produce
both corn and wine, not in ſo great quantities however as
to export either; on the contrary, they import wine and
fruit from Hungary. The wines of Bohemia, though
tolerably good, will not keep, but ſoon turn ſour, as they
do in all other countries which lie ſo far north: to make
amends for which, as the ſoil produces plenty of barley
and hops, they make and export a great deal of ſtrong
beer. Their ſoil alſo is proper for flax and hemp; they
have a coarſe ſort of wool, and make both linen and
woollen cloth; but tranſport part of their wool and flax
unwrought to other countries. A good ſort of ſaffron
grows in great plenty here; and their foreſts abound
with ſerviceable timber, as their gardens do with fruit-
trees, herbs, and roots; but their greateſt riches are in
their mines of ſilver, copper, lead, tin, and iron. In
their mountains alſo are found precious ſtones, particu-
larly topazes, carbuncles, amethyſts, jaſper, ſaphires, and
others, which are bought up by the Jews, and ſent
abroad: ſulphur and ſaltpetre alſo are found here, but
they have ſo little common ſalt, that they are obliged to
import that commodity; they make very good glaſs, and
they export ſome of their own commodities; but their
foreign trade does not ſeem to be very conſiderable.
The north and weſt parts of Moravia are woody and
mountainous; but the reſt is fair and champain good ſoil,
yielding plenty of corn, and ſome wine. The paſtures
are filled with horſes, black cattle, ſheep, and goats: the
woods are full of hares, foxes, wolves, and beavers;
and the rivers abound with many ſorts of fiſh.
The revenues of this kingdom and province brought in
about a million ſterling to the Imperial treaſury, before
Sileſia was diſmembered from it; but the inhabitants are
little inclined, either to arts, arms, or trade: however,
they have a good breed of horſes, which are frequently
bought up to remount the French cavalry.
The eſtabliſhed religion is Popery; but there are a parti-
cular ſect of Proteſtants in Moravia, who have received
great encouragement in England.
The government was formerly elective, but is now he-
reditary in the Auſtrian family. The kingdom is gene-
rally deſcribed as a part of Germany; though it is not
included in any of the circles; neither does it contribute
any thing towards the forces or revenues of the empire,
or is ſubject to any of its laws. What gives colour to this
miſtake, is, that the King of Bohemia is the firſt ſecular
elector of the empire, and their monarchs have been Em-
perors of Germany for many years.

The circle of Bavaria.

This circle does not only contain the proper dominions of
the Duke and Elector of that name; but alſo the terri-
tories of the Archbiſhop of Saltſburg, and thoſe of the
biſhops of Paſſau, Ratiſbon, Freiſinghen, and the lands
of ſeveral abbeys and convents which have little or no
dependance on the elector.
The circle of Bavaria is uſually divided into three parts,
1. The Upper; 2. The Lower Bavaria; 3. The Upper
Palatinate. The Upper Bavaria lies between the country
of Tyrol and the Danube, and is generally a mountainous
barrel ſoil; the chief towns whereof are Munich, Frei-
ſing, Ingolſtat, Donawert, Rain, Landſperg, Oetten-
gen, Fegernſee, Scheyren, Waſſerburg, Hay, Muldarf,
Burkhauſen, Branaw, and Sharding.
The Lower Bavaria ſtretches along the Danube, to the
confines of Auſtria; being as fruitful a province as moſt
in the empire; the chief towns whereof are Ratiſbon,
Straubingen, Landſhut, Paſſau, Moſpurg, and Abach.
The Upper Palatinate of Bavaria, ſo called from its nor-
thern ſituation, in reſpect of the Elector's other dominions,
is bounded by Voitland on the north, by Bohemia and Auſ-

tria towards the eaſt, on the ſouth by the Danube, and on the weſt by Suabia, and part of Franconia. This is generally a rocky, uneven country, though in ſome places there are valleys which afford good corn and paſture. They have alſo a pretty good ſhare of vineyards, but their wine has a ſharp unpleaſant taſte. Their greateſt riches lie in the bowels of the earth, in the mines of copper and iron, of which they forge and vend a great deal. The chief towns in the Upper Palatinate of Bavaria are Amberg, Sultſbach, Cham, Waldaſſen, Caſtel, Newburg, Lutchenburg, and Averbach.

The chief rivers are, the Danube, the Lech, the Inn, the Amber, the Iller, the Saltz, the Nab, and the Iſar. Munich, or Munichen, the capital of Bavaria, is pleaſantly ſituated on the river Iſar, in 11 deg. 32 min. of E. lon. and 48 deg. 5 min. of N. lat. 200 miles W. of Vienna. The town is large and well built, the ſtreets broad; and it is the opinion of ſome travellers, that this is the faireſt, though not the largeſt city in Germany. The ſplendour and beauty of its buildings, both public and private, eſpecially the electoral palace, which may compare with any in Europe, and the magnificence of its churches and convents, are ſuch as ſurpaſs any thing in Germany for the bigneſs. It is walled round, and fortified in the modern way; but is a town of no conſiderable trade, except what is occaſioned by their prince's reſidence among them; moſt of the mechanics being glaziers and ſilk-weavers.

Donawert is a great thorough-fare, both by land and water; but the entertainment of travellers ſeems to be the moſt beneficial employment of its inhabitants.

Newmark, once an imperial city, but now ſubject to the Duke of Bavaria, ſtands on the banks of the river Saltz; and its trade conſiſts chiefly in iron.

Ratiſbon, ſituated at the confluence of the Danube and the Regen, is the only free imperial city within the limits of the Elector's dominions; being governed by its own magiſtrates, and plentifully ſupplied with proviſions: wine is made in the neighbourhood not inferior to Rheniſh; their fields produce all manner of grain, nor do they want good paſture for their cattle. The advantage of their ſituation upon and near ſo many navigable rivers, creates a briſk trade; and the concourſe of people which the diet occaſions, by being held here, is a great addition to it.

Newburg, a pretty, neat city, the capital of a country of the ſame name, ſubject to its own prince the Duke of Newburg, ſtands on the ſouth-bank of the Danube, and the town has a good trade in wine.

Amberg is ſituated very conveniently for trade, lying in the centre between Ratiſbon, Ingolſtat, and Nuremberg. It is remarkable for its iron mines, and the munufactures thereof, which are ſent down the Nabe to Ratiſbon, and other cities.

Notwithſtanding Bavaria in general is a rich plentiful country, and lies exceeding well for trade, the Danube, and many other navigable rivers paſſing through it, the natives are generally poor; becauſe the Elector, who is an arbitrary prince, monopoliſes the ſale of ſalt, corn, tobacco, and beer; which, together with his other revenues, bring him in yearly about half a million ſterling, excluſive of his ſubſidies granted him by foreign powers for the maintenance of his troops in their pay.

The country ſubject to the archbiſhop of Saltſburg is accounted part of the circle of Bavaria; being bounded by the duchy of Bavaria on the north; by Styria, and the Upper Auſtria, towards the eaſt; by Carinthia, and part of Tyrol, on the ſouth; and by Tyrol towards the weſt. The chief towns whereof are,

1. Saltſburg, ſituated on the river Saltz, 60 miles eaſt of Munich, is eſteemed one of the fineſt cities of Germany; having a very good trade, eſpecially in ſalt, which the neighbouring pits produce.

Hallen is another town in this country, upon the banks of the river Saltz, about 8 miles ſouth of Saltſburg, where the ſalt pans continually employ great numbers of people.

The country of Saltſburg, of which the archbiſhop is ſovereign, extends 70 miles from eaſt to weſt, and 50 from north to ſouth: beſides the abundance of ſalt it produces, it has conſiderable mines of copper and iron, and ſome of ſilver. A little above the city of Saltſburg are the baths of Gaſtein, the waters whereof are very hot, and take ſtrong of ſeveral minerals, being ſaid to be a remedy for the ſtone, the cholic, and other malignant diſtempers, by bathing in them only, without drinking the water. There are alſo many excellent quarries, out of which are dug ſtones little inferior to jaſper. There are other towns in this country of pretty good note, as Lauffen, Titmoning, Radſtadt, and Muldorff; but not remarkable for trade.

Franconia.

The modern Franconia is bounded by Heſſe, and Thoringia, towards the north; by the palatinate of Bavaria on the eaſt, by Suabia on the ſouth, and by the palatinate of the Rhine towards the weſt. It extends about 130 miles from eaſt to weſt, and about 140 from north to ſouth; the principal rivers whereof are the Maine, the Sala, the Tauber, the Rednitz, the Altmutz, and the Pegnitz. It is prettily diverſified with hills and valleys, foreſts, and champain, being fruitful in corn and wine. It comprehends, 1. The biſhopric of Wurtzburg; the chief towns of which are Wurtzburg, Ochſenfurt, Konigſhoven, and Biſchofſheim. 2. The biſhopric of Bamburg, whoſe principal places are Bamburg, Cronach, Weiſman, and Forcheim. 3. The biſhopric of Aichſtat. 4. The diſtrict belonging to the maſter of the Teutonic order; the chief town whereof is Margentheim. 5. The marquiſates of Cullenbach and Obuſpach; the chief towns being Cullenbach, Weiſinſtat, Bertrut, and Kreyling. 6. The diſtricts of Coburg, Schwartzenburg, Caſſel, Hennerburg, Erpach, Wortheim, or Hohenloe. 7. The imperial or free cities of Francfort, Nuremburg, Rotemburg, Weiſſheim, Scheinfurt, and Weiſſemburg; but moſt of theſe places having no conſiderable trade, it is neceſſary only to give a deſcription of two of the free cities, namely, Francfort and Nuremburg.

Francfort upon the Maine, is ſituated upon both ſides of that river, in 7 deg. 30 min. of E. lon. and 50 deg. 10 min. of N. lat. 18 miles E. of Mentz, and 15 W. of Hanau. This city is famous for its commerce, and more particularly for that of its two fairs, which are deſerredly placed among the moſt conſiderable of all Germany. Foreigners trading to Francfort ſhould take care to arrive there with their goods the two or three firſt days of these two fairs; becauſe, as long as they continue, no duty is paid, all perſons indifferently being allowed to expoſe their merchandiſe to ſale; which is a privilege, at any other time, belonging ſolely to the citizens.

The principal commodities ſold at theſe fairs, are Rhenish and Franconia wines, potaſhes, wool, ſaffron, Italian ſilk, leaf tobacco, and large quantities of printed books in moſt languages.

There are alſo vaſt numbers of excellent horſes brought here from all parts of Germany, and ſold at theſe fairs.

The commodities brought there by ſtrangers, and chiefly by the Dutch, which ſell beſt, are all ſorts of gold, ſilver, and ſilk ſtuffs; draperies, and ſmall woollen ſtuffs of all kinds; gold, ſilver, ſilk and thread lace; ribbons, hats, gloves, pins, and needles; all kinds of jewellers work; hemp, linen and cotton cloths; painted cloths of all ſorts; all kinds of Chineſe and Indian merchandiſe; ſpice, medicinal drugs, and dying ſtuffs; tin, lead, and copper.

In the fair-time, the ell of Francfort is ſeldom uſed, unleſs agreed upon; foreigners being allowed to meaſure with the ells of their own country.

This city, with its diſtrict, is governed by its own magiſtrates; which conſiſt of a prætor, 12 burgomaſters, 14 aldermen, and 42 counſellors, in the choice of which every company of tradeſmen have their votes. They have alſo a ſenate, which is divided into three benches, on the firſt the aldermen are ſeated, on the ſecond the counſellors, and on the third the tradeſmen.

The magiſtrates, and moſt of the inhabitants, are Lutherans; there are alſo ſome Calviniſts and Papiſts: Francfort is remarkable for being generally the place where the Emperor is elected; and in the town-house where the electors aſſemble before they proceed to the choice of an Emperor, the original golden bull, or magna charta of the empire, is preſerved.

The Jews are alſo pretty numerous at Francfort,

have a ſynagogue allowed them: however, they cannot live here in that ſplendour and opulence as they do in England; being frequently put to the vileſt drudgeries, and are particularly employed to extinguiſh fires, when any happen in the city.

Nuremberg, or *Nurenberg*, is ſituated in 11 deg. of E. lon. and 49 deg. 30 min. of N. lat. near the confluence of the rivers Regnits and Pegnits, 50 miles N. W. of Ratiſbon, and 40 S. of Bamberg; being one of the greateſt places of trade in all Germany, and the moſt famous for mercerics and toys.

The ſeveral kinds of merchandiſe brought from Nuremberg are very numerous.

The chief of which are copper-plates, and all utenſils made of this metal, either for ornament or uſe.

Iron of different ſorts unmanufactured: among the manufactured iron, ſtrong money-cheſts; and all goods that ſerve either for buildings, as hinges, locks, bolts, *&c.* or arts and trades, as files, ſaws, ſciſſars, compaſſes, hammers, *&c.* or houſe-furniture, as tongs, fire ſhovels, pokers, *&c.*

All ſorts of turners work, made of ivory or wood, in ſuch taſte as ſcarce to be imitated by other nations.

Automatons, or moving machines; and an infinity of dolls and other curious toys.

Beſides all theſe common merchandiſes, Nuremberg alſo furniſhes ſome made of the moſt precious metals, particularly gold and ſilver filagree work.

The Dutch, eſpecially the Amſterdam merchants, carry on a great trade with Nuremberg; from whence they have that incredible number of haberdaſhery ware and toys, which they afterwards vend in all parts of the world, ſo very cheap, that it is ſcarce imaginable how they can be made and tranſported into Holland at ſo low a price.

The merchandiſes ſent by the Dutch there, are pepper, and all kinds of groceries; ginger, indigo, and dying ſtuffs; refined ſugar and molaſſes; elephants teeth, Ruſſia leather; Leyden camblets, and other ſlight woollen ſtuffs; cloths, ſerges, and flannels; fine Hollands, painted Indian cloths, muſlins, and cambrics.

Beſides the inconſiderable duty of exportation paid for the commodities brought from Nuremberg, all goods are exempted from duty during the time of the fair, which laſts three weeks; for which reaſon the greater part of the merchants wait for this time to import the goods that come from abroad; this exemption commencing on Eaſter-day.

This city has a very rich bank; which is much upon the ſame regulation with that of Amſterdam.

Nothing but the genius and induſtry of this people could procure them their flouriſhing trade; for it is a barren country, producing ſcarce any thing to traffic with, but what receives the greateſt part of the value from their art and induſtry.

The territories of this city are about 30 miles long, and 20 broad; in which they have a great many good towns and villages; the whole being governed by magiſtrates elected out of the nobility; and the burgher-maſter, or chief magiſtrate, is changed every month; but the legiſlative authority is in the council or diet, conſiſting of 400 of the principal burghers.

The eſtabliſhed religion is the Lutheran; though there are alſo Calviniſts and Papiſts in the city.

Upper Saxony.

In the circle of Upper Saxony are included the duchy of Saxony, the marquiſate of Miſnia and Voigtland, the marquiſate of Luſatia, the duchies of Sax-Merſburg, Sax-Naumburg, and Sax-Altemburg, the principality of Anhalt, and county of Barby, and the province of Thuringia; moſt of which provinces are ſubject to the Elector of Saxony. But, beſides theſe, there are included in the circle of Upper Saxony, the marquiſate and electorate of Brandenburg, the duchy of Magdeburg, the principality of Halberſtat, and the duchy of Pomerania, moſt of which are under the dominions of the Elector of Brandenburg, the preſent King of Pruſſia.

The chief rivers in Upper Saxony are, the Elbe, the Sala, the Elſter, the Unſtruck, the Spree, the Havel, and the Neiſſe.

The duchy of Saxony properly ſo called, which gives the Elector the title of Duke, is of no great extent, and is bounded by the principality of Anhalt on the north; by Luſatia, and part of Brandenburg, on the eaſt; by Miſnia on the ſouth; and by the county of Mansfield, and the landgravate of Thuringia, on the weſt. The air of the country is cold, but healthful; the ſoil yields wheat, and ſome wine: there are alſo mines of ſilver, and other metals; but they want fuel to refine them.

The chief towns of the duchy of Saxony are, 1. Wittenburg, ſituated on the river Elbe, 40 miles north of Leipſic; but the town has nothing conſiderable in it beſides the univerſity; 2. Hall, ſituated on the river Sala, on the ſide of a pleaſant hill, covered with vines; the ſalt-pits near it yielding a good revenue to the Elector of Brandenburg.

The ſecond diviſion of the circle of Upper Saxony is the marquiſate of Miſnia, bounded by the duchy of Saxony on the north, by Luſatia on the eaſt, by Bohemia on the ſouth, and by Thuringia on the weſt: extending about 100 miles from north to ſouth, and 80 from eaſt to weſt. The chief rivers are, the Elbe, the Muldaw, the Pleiſs, and the Black and White Elſter. On the banks of the Elbe, near Dreſden and Meiſſen, are large vineyards, which produce indifferent wine. The whole country is very well furniſhed with wood, and their foreſts afford plenty of game and veniſon.

The chief towns of Miſnia are, Dreſden, the uſual reſidence of the Elector of Saxony, a large populous city, ſituated on the Elbe, in 13 deg. 36 min. of E. lon. and 51 deg. of N. lat. 65 miles N. W. of Prague, and 85 S. of Berlin: it is a large, ſtrong, elegant, and populous city; but very inconſiderable with regard to trade, except its fine laces, and porcelain.

Leipſic is very famous for its commerce and fairs. It is ſituated in 12 deg. 40 min. of E. lon. and 51 deg. 20 min. of N. lat. on the river Pleiſs, 42 miles N. W. of Dreſden. The fairs are held every year, at Eaſter, Chriſtmas, and Michaelmas; when the ſtreets are crouded by foreign merchants.

The principal merchandiſes to be had here, are all ſorts of gold, ſilver, and ſilk ſtuffs; fine Engliſh, French, and Dutch cloths; great parcels of woollen ſtuffs of the ſame manufactures; gold, ſilver, and thread lace; jewellers trinkets, particularly from Paris; haberdaſhery wares of all kinds; painted Indian cottons, muſlins, and cambrics; great parcels of thread, and tinned iron.

Freiburg is ſituated 20 miles S. W. of Dreſden; and is remarkable for its ſilver mines, which bring in the elector annually 100,000 l. ſterling, clear of all charges; and ſince theſe mines were firſt opened, it is reported they have yielded above one hundred millions of ſilver ſterling. There is a mint at Freiburg, where rix-dollars are coined, and other money, which is moſt commonly ſterling, and looked upon to be the beſt coin in Germany.

Meiſſen was once the capital of Miſnia. Slawen is the capital of Voigtland, ſituated on the river Elſter, 60 miles S. W. of Dreſden. The other principal towns are Pirn, Mulberg, Chremnitz, Frawenſtein, Kenningſtein, Marienberg, Annaberg, Zucokaw, Sneburg, Werda, Weiſſenfels, Colditz, Leiſſneck, Lutzen, and Zeitz; none of which are remarkable for trade.

The third diviſion of Upper Saxony is the marquiſate of Luſatia, bounded on the north by Brandenburg, on the eaſt by Sileſia, on the ſouth by Bohemia, and on the weſt by the duchy of Saxony and Miſnia; extending about 90 miles in length from north to ſouth, and 60 from eaſt to weſt; the principal rivers being the Spree and the Neiſſe.

Luſatia is part of it a ſandy barren ſoil, and the remainder taken up with bogs and marſhes, there being ſcarce corn enough growing in the province to ſerve its inhabitants. Veniſon and fiſh, however, are extremely plentiful; nor is there any want of wood. The chief towns are, 1. Bautzen, ſituated on the river Spree; 2. Gorlitz, ſituated in a marſh on the river Neiſſe. The chief trade of the citizens lies in cloth, which they make and dye, and in beer, which they brew, and ſend abroad. The other towns are

Zittaw,

Zittaw, Leiba, Luben, Guben, Sorau, Colmes, Comitz, Friedland, Sperehenberg, and Zobelitz; but they have nothing remarkable.

The fourth diviſion of Upper Saxony, is the duchy of Sax-Merſburg, Sax-Naumburg, and Sax-Altemburg.

Sax-Merſburg, and Sax-Altemburg, have little in them worthy obſervation, eſpecially with regard to trade.

But the city of Naumburg, which is ſituated in 12 deg. of E. lon. and 51 deg. 15 min. of N. lat. at the confluence of the rivers Sala and Unſtruck, 60 miles W. of Miſſen, is famous for its market; the commerce carried on there being much upon the ſame footing with that of Leipſick, both for imports and exports; as alſo for its weights, meaſures, and monies. The fifth diviſion of Upper Saxony is, the principality of Anhalt, and the little county of Barby: the chief towns being Zerbet, Brenburg, and Deſſau, which are ſubject to the prince of Anhalt; but not at all remarkable for trade.

The ſixth diviſion of Upper Saxony is the landgravate of Thuringia, and the county of Mansfeldt. The chief rivers are the Sala, the Werra, the Anſtruck, the Jeva, and the Leina. The country yields plenty of corn, and ſome wine; and among the great variety of plants and herbs with which their fields abound, thoſe peculiar to this province are ſaffron, and woad, uſed by the dyers in their beſt blues. They have alſo ſome good ſalt-pits; but their mines of ſilver and copper are very indifferent.

The chief towns are Erford, or rather Jeraford, from the river whereon it ſtands; Weimar, Jena, Gotha, and Eiſenach.

Erford, or Erfurt, is ſituated in 11 deg. 6 min. of E. lon. and 51 deg. of N. lat. 20 miles E. of Sax-Gotha, and ſubject to the Elector of Mentz; being remarkable for its trade in thread and ſaffron.

Weimar, the capital of a duchy, ſituated between Erford and Jena, has a great trade in wine. Jena is famous only for its univerſity. The people of Gotha are chiefly employed in the cultivating and preparing woad for the dyers; and Eiſenach has a conſiderable trade in iron.

The county of Mansfeldt is rich in minerals, among which there is a black kind of ſlate, that being melted down yields both copper and ſilver. The chief towns are, Eyeleben, the principal trade whereof is in iron work. Mansfeldt, remarkable only for a caſtle which ſtands near it, on the top of a hill. The other towns are Wipra, Aruſtein, and Querfort, which are of no conſequence.

The Elector of Saxony is now King of Poland; and the revenues from his electoral dominions amount to about 500,000 l. a year; for he has a tenth of all the corn, fruit, and other produce of the earth in his dominions; beſides a general exciſe upon beer, and almoſt all other kinds of proviſions.

Brandenburg. In the northern countries in the circle of Upper Saxony are comprehended the marquiſate of *Brandenburg*, *Madgeburg*, *Halberſtat*, and dukedom of *Pomerania*.

Brandenburg is bounded by Pomerania and Mecklenburg on the north; by Poland on the eaſt; by the other part of Upper Saxony on the ſouth; and by Brunſwick and Lunenburg towards the weſt; extending 200 miles in length from eaſt to weſt, but of very unequal breadth, in ſome places 100, in others not 50 miles. The chief rivers are the Elbe, the Oder, the Havel, the Spree, and the Wart. The air of this country is cold, the ſoil ſandy and barren; yet they have corn for their uſe for the moſt part, and when they want are ſupplied on eaſy terms from Poland.

Brandenburg is uſually divided into three parts: the Alt-marck, the New-marck, and the Middle-marck.

The chief towns in the Alt-marck are Stendal, Soltwedal, Gardeleben, Angermund, Oſterburg, and others of leſs note.

Stendal is the capital of Alt-mark, ſituated in a pleaſant plain, on the river Ucht; the trade whereof conſiſts chiefly in beer, which they export to Lunenburg and other provinces of Brandenburg. Gardeleben is ſaid to have its name from the pleaſant gardens about it. The beer brewed here is in great eſteem throughout Germany, as well as their hops, which are bought up by the Danes, and other foreigners. Angermund, ſituated at the confluence of the Anger and Elbe, has a great advantage by the navigation of the latter, upon which they tranſport their corn and other merchandiſe, as far as Hamburg, and from thence to foreign countries.

New-marck lies between the river Wart and Pomerania, being about 100 miles in circumference. The only conſiderable town in this territory is Kuſtrin, ſituated on the river Oder, a neat built town of great ſtrength, and has a ſpacious market-place.

Middle-marck is ſituated in the very heart of Germany, extending in length about 100 miles, between the Elbe and Oder; the chief towns whereof are Berlin, Brandenburg, and Francfort upon Oder.

Berlin, is the capital of the King of Pruſſia's dominions in Germany, ſituated on the river Spree, in 14 deg. of E. lon. and 52 deg. 30 min. of N. lat. 90 miles N. of Dreſden, and 50 W. of Francfort. Its principal commerce is almoſt wholly carried on by the way of Hamburgh; from whence it receives the merchandiſe of France, England, Holland, and the other nations, which trade to Germany by ſea: but it has canals cut from the Spree to the Oder, and from thence to the Elbe: ſo that it has a communication both with the Baltic ſea and the German ocean.

The merchandiſes proper for Berlin are all kinds of gold, ſilver, and ſilk manufactures; ribbons of all ſorts, eſpecially thoſe of England and France; cloths, and woollen ſtuffs; ſpice; medicinal and dying drugs; muſlins and cambricks; printed cotton cloths; lace of gold, ſilver, ſilk, and thread.

The merchandiſes exported are ſeveral works of ſteel; looking-glaſſes, and ſeveral other curious works, the manufacture of which was introduced into the ſtates of the King of Pruſſia by ſome French refugees.

The city is divided into two parts by the river: the largeſt towards the north is properly Berlin: the other ſouth of the river is called Coln, where the electoral palace ſtands. The town is generally well built, the ſtreets wide, and the ſquares and public places ſpacious; the whole encompaſſed with a wall, and regular fortifications.

The town of Brandenburg is ſituated in the middle of a moraſs, on the river Hamel; but the inhabitants are in ſo wretched a condition at preſent, that were it not for a neighbouring lake, which affords them fiſh, they would find it difficult to ſubſiſt.

Francfort on the Oder, uſually ſo called to diſtinguiſh it from Francfort on the Maine, is a town divided into two parts by the river Oder, and joined together by a wooden bridge. The ſtreets are wide, the houſes well built, and they have a tolerable good trade, eſpecially at their annual fairs, in linen cloth and fells.

The other towns in this marquiſate are, Spandaw, Oranienberg, Rotenaw, Lebus, Havelberg, Newſtat, Wiſtock, Dalmin, Rupin, Premiſlaw, Potzdam, and Templin; the moſt of which are manufactures of linen cloth, ſome coarſe woollens, and toys: ſome of them have a good trade in corn, hops, and beer; beſides, at Potzdam, all ſorts of arms for the forces and arſenals are made, which were formerly manufactured at Liege.

The duchy of *Madgeburg* is bounded by Mecklenburg on the north; and Upper Saxony on the eaſt; by the principality of Halberſtat on the ſouth; and by Brunſwick on the weſt; extending 60 miles in length from eaſt to weſt, and about 30 in breadth from north to ſouth; the river Elbe running acroſs the territory. That part which lies to the eaſtward of the river conſiſts chiefly of foreſts; but to the weſtward they have plenty of grain, tho' a great ſcarcity of wood. Their chief city is Madgeburg, ſituated on the banks of the Elbe, 70 miles weſtward of Berlin. The next is Borch; but neither of them have any conſiderable trade.

The principality of *Halberſtat* is bounded by the duchy of Brunſwick and Magdeburg on the north; by the duchy of Saxony on the eaſt; by the principality of Anhalt on the ſouth; and by the biſhoprick of Hildeſhein towards the weſt; being 36 miles in length from E. to W. and 25 in breadth from N. to S. Halberſtat and Gruninge are its principal towns. The territory is generally fru

l in corn, and excels any of the neighbouring countries plenty of all ſorts of veniſon.

The ancient Pomerania was of much larger extent than e preſent: the modern Pomerania being only a narrow act of land, about 200 miles long, and 60 broad. It well watered by lakes and rivers; the chief of which e, the Oder, the Pen, the Rega, the Perſant, the Wiper, e Stolp, and the Barte.

The county is uſually divided into the eaſtern and weſtern: he chief town of weſtern Pomerania is Stetin, formerly ne of the Hans towns, and the capital of Pomerania, tuated upon the river Oder, in 14 deg. 50 min. of E. n. and 53 deg. 30 min. of N. lat. 66 miles N. of erlin.

The King of Pruſſia by a late treaty procured a ceſſion be made of this city by the Swede, with the territory ereto belonging, and now remains ſovereign of it; hich is of prodigious advantage to his country, as it rocures him a free communication with the Baltic, and this town is very conſiderable for trade.

The King of Pruſſia is alſo in poſſeſſion of the iſles of Vollin and Uſedom; both of which are ſituated in the altic, at the mouth of the river Oder; the former aving a town of the ſame name; and the paſſage be- ween both iſlands is called the Swin, which commands he navigation of the Oder.

The reſt of weſtern Pomerania is ſubject to Sweden; but aſtern Pomerania belongs to the Elector of Brandenburg: is divided into three diſtricts, called Pomerania proper, Caſubin, and Vendoſin; whoſe chief towns are, 1. Cam- nin, ſituated on the eaſt branch of the Oder, called Di- eno, 5 miles S. of the Baltic ſea, and 35 N. of Stetin. 2. Colberg, ſituated at the mouth of the river Perſant, ear the Baltic, about 20 miles N. E. of Cammin, re- arkable for the ſalt-pits in its neighbourhood, which ield the Elector a good revenue. The other towns in aſtern Pomerania are Treptow, Coſlin, Stargard, Dam, uttow, Bublits, Griffenberg, Bellgarden, Rugen, Stolp, nd Regeſnorld; none of which are conſiderable for trade: or is the country fruitful in corn, being covered with oods; but well ſtocked with game, and wild beaſts: they ave plenty of fiſh and fowl, and have a few mines of iron.

His Pruſſian Majeſty is now alſo in poſſeſſion of the pro- ince of *Sileſia*, which is bounded by Brandenburg on he north; by Poland on the eaſt; by the mountains alled Riſſenbergen, which ſeparate it from Moravia, to- ards the ſouth; and by Bohemia on the weſt; being pwards of 200 miles long, and 70 broad. The chief owns are Breſlaw, Croſſen, Glogaw, Lignitz, and agendorf.

Breſlaw, the capital of Sileſia, is ſituated upon the Oder, n 16 deg. 50 min. of E. lon. and 51 deg. 15 min. of N. lat. 120 miles N. E. of Prague, being famous for s commerce with Amſterdam, Hamburg, Berlin, and everal other towns of the north and Baltic ſea. The erchandiſes which arrive there are unloaded, and ſold nder three great covered halls, containing ſeveral ware- houſes for wholeſale, and ſeveral ſhops for retail; where he commerce of Sileſia lawns is carried on, which makes conſiderable branch of the European, and more eſpe- ially of the Dutch trade.

The other towns are ſtrong fortified places, but of no con- equence in trade. The country is very fruitful, and ell inhabited; the people are chiefly employed in the inen manufacture; and, during the late war, were obliged o receive the King of Pruſſia for their ſovereign, who ompelled the Queen of Hungary to give him the whole f this country, to part of which he had juſt hereditary retenſions.

There are ſeveral rich ſilver mines in Sileſia, which were ortgaged for 95,000 l. to ſome Engliſh merchants, by he Emperor Charles VI.; and when the King of Pruſſia ook poſſeſſion of the country, he agreed to pay off this ortgage; part of which he has ſince detained in his hands, n the pretence of obliging the Britiſh miniſtry to make ome of his ſubjects ſatisfaction whoſe ſhips were ſtopped, nd their trade moleſted, by Engliſh privateers during he late war.

His Pruſſian Majeſty has alſo taken poſſeſſion of the prin- cipality of *Eaſt Frieſland*, on the death of its laſt prince: which is a province of Germany, in the circle of Weſt- phalia; being the N. W. part of Germany, bordering on Groningen, a province of the United Netherlands, and remarkable for the port of Embden, which is an impe- rial city. He alſo enjoys the duchy of Cleve, with the counties of Marck and Ravenſburg; all which, together with his poſſeſſions in the province of Pruſſia in Poland, from whence he takes his royal title, render him a very formidable prince. His dominions are the largeſt of any of the German powers, except thoſe of the houſe of Auſtria: they bring in a revenue of about 2 millions ſter- ling yearly, and ſupport a ſtanding army of 85,000 men. Though they are not the moſt populous and fruitful, yet his preſent Majeſty, as well as his father, has given ſuch encouragement to foreign trade, ſet up many pro- fitable manufactures, and invited ſo many mechanics and artiſts from all parts to ſettle in the country, that his do- minions ſeem now to be the moſt flouriſhing of any in Germany. They already furniſh the large empire of Ruſſia with woollen cloth, which was formerly done by the Engliſh merchants; and with many other valuable commodities. We may expect to ſee them a conſider- able naval power in the Baltic, ſince they have ſo much enlarged their ſea-coaſts, and ſecured the navigation of the river Oder entirely to themſelves. Beſides, his Pruſ- ſian Majeſty has erected an Eaſt India company at Em- den; and is giving all poſſible encouragement on that ſide to trade. See *Eaſt* India company.

Lower Saxony.

Within the circle of Lower Saxony are comprehended the duchies of Mecklenburg, Lawenburg, Holſtein, Lu- nenburg, Brunſwic, Hanover, and Bremen, the princi- pality of Verden, and the biſhopric of Hildeſheim: it is bounded by the German ocean, Denmark, and the Baltic on the north; by Pomerania and the marquiſate of Brandenburg on the eaſt; by the territories of the landgrave of Heſſe on the ſouth; and by the circle of Weſtphalia towards the weſt; extending in length from E. to W. 200 miles; and about as far in breadth from N. to S. The chief rivers being the Elbe, the Weſer, the Alter, the Hamma, the Hemon, the Leme, the Ocker, and the Eldt.

1. The duchy of *Mecklenburg* is bounded by the Baltic, ſea on the north; by Pomerania on the eaſt; by Branden- burg on the ſouth; and by the duchies of Lunenburg and Sax-Lawenburg on the weſt; being ſaid to derive its name from the high Dutch word Mecklen, and burg, ſignifying a town of merchants and brokers.

Mecklenburg is chiefly divided into ſix parts, the moſt conſiderable trading towns in each being as follows: 1. Roſtock, an imperial city, and one of the Hans towns, but famous only for its univerſity; though it is ſituated on a bay of the ſea, near the mouth of the river Warna. 2. Warnemund, ſituated on the ſea, being the port-town to Roſtock. 3. Wiſmar, a hanſe town, formerly very conſiderable; it being here where all the men of war be- longing to this body were laid up.

2. The chief town of the duchy of *Lawenburg*, is called *Lawenburg*, a ſmall but populous town, with a good trade, being ſituated at the conflux of the Elbe and the Steignitz, about 40 miles S. E. of Hamburg, and 30 S. of Lubeck.

3. In the province of *Holſtein*, the principal cities are Ham- burg and Lubeck, which have been already deſcribed as belonging to the Hans towns.

4. The dukedom of *Lunenburg*, *in which Zell is comprehended*, is bounded by the river Elbe on the north; by Branden- burg and Madgeburg on the eaſt; by the dukedom of Brunſwick on the ſouth; and by Bremen and part of Weſtphalia on the weſt. The principal rivers are the Elbe, the Ilmenou, or Clive, and the Jetz. The chief towns are, 1. Lunenburg, ſituated on the river Ilmenow, in 10 deg. 20 min. of E. lon. and 53 deg. 35 min. of N. lat. 45 miles N. of Zell, and 30 S. E. of Hamburg; being tolerably well built, and about 2 miles in circumference: remarkable for making great quantities of ſalt, which is the principal employment of the inhabitants, and brings a good revenue to the ſovereign. 2. Zell, the uſual re- ſidence of the late Dukes of Lunenburg, is ſituated in a

ſandy plain at the conflux of the two little rivers Aller and Fuhſe, about 40 miles S. of Lunenburg, and 30 N. of Hanover. 3. Harburg, conveniently ſituated for trade on the Elbe, 30 miles W. of Lunenburg, and oppoſite to Hamburg. There are ſome other towns in this duchy; but they are ſo far from being remarkable for trade, that the ſoil is very barren, and the people eſteemed the greateſt churls in Germany: but as it is covered with woods and foreſts, abounding with wild hogs, deer, and other game, the German nobility frequently come here to hunt in the ſeaſon; and the country is now ſubject to the Elector of Hanover.

5. *Brunſwick, including the duchy of Hanover, or Calenburg, Grubenhagen, Blankenburg, and Reinſtien*, is bounded by Lunenburg on the north; by Madgeburg and Halderſtat on the eaſt; by Heſſe Caſſel on the ſouth; and by the river Weſer on the weſt. The principal rivers are the Weſer, the Leina, the Junerſte, and the Ocker. The chief towns of Brunſwick, are Brunſwick and Hanover.

The city of Brunſwick is ſituated in 10 deg. 30 min. of E. lon. and 52 deg. 30 min. of N. lat. on the river Ocker, 35 miles E. of Hanover, and 30 S. E. of Zell, being the reſidence of the Duke of Brunſwick-Wolfenbuttle, to whom it is ſubject. It was formerly an imperial city, and a rich and powerful hans-town: but after Duke Rodolph Auguſtus took poſſeſſion of it by right of conqueſt, moſt of the merchants and tradeſmen forſook it: ſo that it is now in a declining condition, their chief trade being in tanning leather, brewing mum, and making butter. Their mum is remarkable, being made of barley with a ſmall mixture of wheat, well hopped: but there are two ſorts; the one thin and weak, which is the ordinary drink of the inhabitants; and the other, called ſhip-mum, is imported into England, and other parts of Europe, being excellent liquor, and fit for keeping, after it has purged itſelf at ſea.

Hanover, the capital of the dukedom of Calenburg, is ſituated on the river Leina, in 9 deg. 45 min. of E. lon. and 52 deg. 32 min. of N. lat. 35 miles W. of Brunſwick. This town, being the reſidence of the electoral family, is very populous and well fortified. It was once a free imperial city, and one of the hans-towns, when it had a conſiderable trade: but now the only merchandiſe they export is a kind of muddy ſweet beer, which goes by the name of bruhane, and is bought by the inhabitants of the neighbouring villages. There is alſo the town of Helmſtadt; but it has no trade.

Grubenhagen lies on the S. W. of the dukedom of Brunſwick, and its capital town is Eimbeck, which has ſome trade in beer: but this country is moſt conſiderable for mines of ſilver, copper, and lead; beſides many other minerals, as grey vitriol, and inkſtone, out of which two the ordinary green vitriol is made. Gedien vitriol, which grows like icicles out of the rocks. Blue vitriol, commonly made out of the copper ore. White vitriol made of lead ore. Miſy, a mineral of the ſame colour and nature as the ordinary yellow brimſtone; and brimſtone made out of a peculiar ore, from whence drop the *flores ſulphuris*, which uſually coagulate like icicles. The chief of all the mine-towns belonging to the prince of Brunſwick is at Zellerfield, where the overſeer of the mines keeps his court, and pays his workmen: the other towns in this principality are all inhabited by miners; being Clonſthal, Attenan, Andeoaſburg, Oſterode, and ſome others. Theſe mines and towns lie upon the great mountain of Hartz, between Brunſwick, Goſlar, and Thuringia, belonging in common to the families of Hanover and Brunſwick Wolfenbuttle, but chiefly to the former: there being above a hundred capital mines, ſeveral of which have ſmaller ones belonging to them.

The little counties of *Blankenburg* and *Reinſtein* are uſually conſidered as one province: but they have no towns of trade. However, the imperial city of Goſlar, though independent of the dukes of Brunſwick, is generally included in the county of Blankenburg: it is ſituated on the river Goſe, in 10 deg. 30 min. of E. lon. and 52 deg. of N. lat. being conſiderable for its mines of ſilver, and lead: the inhabitants are chiefly miners, and employed in digging, cleaning, tempering, or vending their metals and manufactures of hard-ware: they are governed by their own magiſtrates, and enjoy many privileges.

6. The duchy of *Bremen*, and the principality of *Verden*, are bounded by the river Elbe towards the north; by the river Weſer on the ſouth-weſt, and by the German ocean on the weſt: the country is either a barren ſand, or a moraſs: though there are ſome fruitful meadows on the banks of the Weſer and the Elbe. It was anciently ſubject to the Archbiſhop of Bremen; but being conquered by Sweden, was confirmed to that crown by the treaty of Weſtphalia in 1648, when the archbiſhopric was converted into a dukedom. The Danes took this country from the Swedes in 1712, and afterwards mortgaged it to the Elector of Hanover, who, in 1715, as King of Great Britain, had 250,000 l. granted him by his parliament, to enable his Majeſty to purchaſe it, which he accordingly did, and thereby became maſter of the key which opens the Elbe and the Weſer, on which rivers a great trade is carried to many parts of Germany: the chief towns being Bremen, Verden, and Stade: but Bremen has been already particularly deſcribed as one of the hans-towns.

Verden, or Ferden, is ſituated in 9 deg. of E. lon. and 53 deg. 24 min. of N. lat. upon the river Aller, 26 miles S. E. of Bremen; but has no conſiderable trade.

Stade, formerly one of the hans-towns, is ſituated on the W. ſide of the Elbe, in 9 deg. of E. lon. and 50 deg. 38 min. of N. lat. 17 miles N. of Hamburg, having a fine at the conjunction of the two rivers Zwinga and Elbe, which form a good harbour, and will admit of larger ſhips than that of Hamburg; on which account it is reputed to ſtand more convenient for the German trade; and ſince Great Britain and Bremen are under one ſovereign, ſome projectors have propoſed the eſtabliſhing a trade between them, which would certainly be an advantage to his Britannic Majeſty's German dominions, if it could be effected, whatever it may be to Britain. But it might be difficult to turn the current of trade from Hamburg, and the Engliſh might give an advantage to their rivals in commerce by attempting it.

Hildeſheim is about 50 miles in length, ſurrounded by the territory of Brunſwick; but ſubject to its own biſhop, who is now elector of Cologne. Its principal town is of the ſame name, ſituated 30 miles S. E. of Brunſwick, and 17 S. E. of Hanover: being an imperial city, having a mixture of Lutherans and Papiſts for its inhabitants, who carry on a good trade in corn. There are alſo Peine, Marienburg, Papenburg, Daſſel, Bokenem, Woldenburg, Eltz, and ſome other towns; but of no reputation for trade. There alſo the towns of Buxtehude, ſituated on the river Eſſe, near the Elbe, 15 miles W. of Hamburg, and many from Stade, in one of the moſt pleaſant and fruitful countries of Germany, ſupplying Hamburg with great part of its proviſions. Rottenberg, a little city on the river Wien, 15 miles N. of Verden, a place of ſome trade and well inhabited. Rutzenbuttle, a ſtrong fortreſs at the mouth of the Elbe, belonging to the Hamburgers, and a few other places, of no conſideration with regard to trade.

The extent of the particular dominions belonging to the elector of Hanover, are as follows.

	miles long.	miles broad
The duchy of Lunenberg -	80	50
The duchy of Hanover, or Calenberg	40	12
The principality of Grubenhagen -	40	40
The duchy of Saxe-Lawenberg -	30	15
Bremen and Verden - -	60	40
The county of Hoya -	30	15
——— Diepholt - -	30	10

The eſtabliſhed religion is the Lutheran: the electoral revenues amount to about 400,000 l. a year; and the elector is capable of raiſing 30,000 men in all his territories: but the inhabitants, though well ſituated for trade, apply themſelves little to commerce.

Suabia.

The circle of Suabia is bounded by Franconia on the north; the duchy of Bavaria on the eaſt; the county of Tyrol, and the mountains of Switzerland on the ſouth; and by Alſace on the weſt; extending about 130 miles from E. to W. and 110 from north to ſouth; where the duchy of Wirtemburg, the marquiſate of Baden,

e imperial cities of Augſburg and Ulm are comprehended
the dutchy of *Wirtemburg* are 64 cities, 150 great
owns, and 640 villages; but none of any conſiderable
ade: though Stutgard is remarkable for its hot baths.
The marquiſate of *Baden* is a populous fruitful country,
bounding with corn, wine, veniſon, and wild fowl, of
hich Baden is the capital, ſituated in 7 deg. 30 min. of
. lon. and 47 deg. 35 min. of N. lat. famous only for its
ths, which are ſcalding hot; but there are no towns of
ade; though the country produces great quantities of
emp and flax.

ugſburg is a large imperial city, the capital of the circle
f Suabia, ſituated in 11 deg. of E. lon. and 48 deg.
0 min. of N. lat. on the rivers Lech and Wardour,
6 miles E. of Ulm, and 220 S. W. of Vienna. The
habitants are half proteſtants, and half papiſts, who are
overned by their own magiſtrates, and have an equal
ght in electing them.

his city is very mercantile, and particularly remarkable
r the curioſities manufactured by its goldſmiths and
wellers.

carries on a great trade with France, Italy, and the low
ountries. France ſends there ſeveral rich ſtuffs; as alſo
prodigious quantity of ſuch novelties whoſe modes are
f the Paris invention, and eagerly ſought after in the
ourts of German princes.

aly furniſhes Augſburg with ſeveral ſorts of ſilks; the
ow-countries and Holland ſupply it with cloths and
oollen ſtuffs, ſpices, and drugs for the dying of painted
ottons, muſlins, and cambrics.

hese merchandiſes arrive there in ſuch great abundance
hat ſcarce a day happens without the entrance of 40 or
0 large waggons into the cuſtom-houſe, which after-
ards unload their merchandiſe in the warehouſes built
hiefly in the principal ſtreet, at the end of which the
uſtom-houſe is placed.

he next moſt conſiderable town in Suabia is *Ulm*, an im-
erial city, ſituated on the Danube, where it unites with
he Iller, in 10 deg. of E. lon. and 48 deg. 24 min. of
. lat. The town is populous, and regularly fortified,
herein are abundance of exquiſite mechanics, eſpecially
clock-work and iron and ſteel manufactures. They
ave a briſk trade with Bavaria and Auſtria, from whence
ey receive corn, ſalt, and iron, by the Danube, export-
g linen-cloth, and cotton in return. They are go-
erned by their own magiſtrates, who are all Lutherans,
alſo are moſt of the inhabitants.

ibrach is another imperial city, 20 miles S. of Ulm,
emarkable for its hot bath.

emminghen is a large city, 15 miles S. E. of Bibrach,
hoſe principal trade is in linen, cotton, and paper.

eutkirk, a little neat imperial city, has a conſiderable
ood trade in linen cloth, corn, and flax, and the citizens
ave the privilege of digging the mines near the place.

empten, one of the moſt ancient cities of Germany, has
good trade in linen-cloth, and ſalt, which is brought
ither from Tyrol and Switzerland, and vended in Ger-
nany.

endaw is an imperial city, ſtanding partly on the conti-
ent, and partly on an iſland in the lake of Conſtance,
a pleaſant healthful ſituation; having, by the lake and
he Rhine, which runs thro' it, an opportunity of ex-
orting merchandiſe at very eaſy rates.

Wangen, a ſmall imperial city, has a conſiderable trade
flax and paper.

Conſtance, or Coſtnitz, is ſituated on the S. W. part of
he lake of the ſame name, in 9 deg. 12 min. of E. lon.
nd 47 deg. 37 min. of N. lat. It is well built, populous,
nd finely ſituated, having a briſk trade from the con-
eniency of water-carriage along the lake and the Rhine:
ut it is ſubject to the houſe of Auſtria; as alſo are ſe-
eral other places in the circle of Suabia.

Buchorn is a ſmall city, but has a good trade, by means
f the lake; veſſels continually paſſing and repaſſing with
erchandiſe between Suabia and Switzerland.

Uberlingen, a city near the lake of Conſtance, has at
reſent a very briſk trade, and is alſo famous for its mi-
eral waters, which cure the ſtone and other diſtempers.

Briſgow, ſubject alſo the houſe of Auſtria, lies near the Rhine; the chief town whereof is Friburg, ſituated at the end of the Black foreſt. It is eſteemed a ſtrong place, and very populous; the inhabitants are very expert in poliſhing precious ſtones found in Lorrain, and the adjacent countries, of which they make conſiderable advantage. There alſo ſeveral other inferior diviſions in Suabia; but they have no place of trade worthy of notice.

Upper Rhine.

The circle of the Upper Rhine is divided into three parts: the landgravate of Heſſe, and the Wetterau; the landgravate of Alſatia, and the duchy of Lorrain.

Heſſe is bounded by Brunſwick on the north; by Thuringia on the weſt; by the river Maine, and Franconia on the ſouth; and by the Palatinate of the Rhine on the weſt; being about 100 miles from E. to W. and near as far from N. to S. The air is cold but healthful, and in ſome parts of the country abounds with corn and wine; beſides, in their mountains are found mines of copper and lead, which yield conſiderable profit.

Heſſe is divided into Heſſe-proper, and Wetterau; in Heſſe proper the chief towns are, Caſſel, the capital of Heſſe, and ſeat of the Landgrave. It is ſituated on the river Fulda, an the citizens have a good trade, eſpecially of wood and woollen manufactures. Smalcald, ſituated on a river of the ſame name, is conſiderable for its iron mines, which employ vaſt numbers of ſmiths, and artificers, in the town; and the iron ware made here is vended all over the empire. In the county of Waldeck, and territories of the abbey of Fuld, which geographers make a part of Heſſe, there are no towns of any note for trade.

That part of Heſſe called *Wetterau*, yields both corn and wine, and by ſome is eſteemed one of the moſt fruitful countries in Germany; the counties of Hanau and Naſſau take up the greateſt part of it. The country of Hanau is about 15 miles in breadth, and 40 in length, extending along the river Maine.

The chief town is Hanau, ſituated in 8 deg. 45 min. of E. lon. and 52 deg. 32 min. of N. lat. 13 miles E. of Francfort. Its commerce conſiſts in great parcels of leaf tobacco, camblets, and corn. The Dutch chiefly trade there, the camblets and corn ſerving them to ſend to Spain, from whence they paſs into the Spaniſh Weſt Indies: but the tobacco of Hanau is ſent into ſeveral places.

Dillenburg has ſome trade in cattle, and its woollen manufactures. Siegen has a good iron mine in its neighbourhood: but the other towns belonging to the four families of Heſſe-Caſſel, Heſſe-Darmſtadt, Heſſe-Rhinfield, and Heſſe-Homberg, are no ways remarkable for trade. The landgrave of Heſſe Caſſel is the head of this illuſtrious houſe: his ſubjects are Calviniſts; his revenues are about 120,000 l. a year; and he has generally a large body of forces in foreign pay.

Alſatia, or *Alſace*, is bounded by the county palatine of the Rhine on the north; by the circle of Suabia, from which it is ſeparated by the Rhine, on the eaſt; by Switzerland on the ſouth; and by Lorrain on the weſt; its extent being about 100 miles from N. to S. and the breadth at a medium about 25; though in ſome places leſs; and in others it is more than 30. The ſoil is exceeding rich, producing plenty of corn and wine: the hills are covered with cheſnut-groves; affording great quantities of copper, lead, and other minerals: the paſtures are excellent; and the country well-watered by the Rhine.

It is divided into Upper and Lower Alſace. In Upper Alſace are the towns of Colmar, New Briſac, and ſeveral others; but none of them remarkable for trade. In Lower Alſace are Straſburg, and ſeveral other towns. Straſburg is ſituated in 7 deg. 35 min. of E lon. and 48 deg. 38 min. of N. lat. near the W. bank of the Rhine, 55 miles W. of Stutgart; being formerly an imperial city, with a flouriſhing trade: but it was treacherouſly ſurpriſed by the French in 1712, who are now maſters of all Alſace. See *France*.

Lorrain is bounded by the duchy of Luxemberg towards the north; by Alſace, the duchy of Deux-ponts, and the Palatinate on the eaſt; by Franche-Compte on the ſouth; and by Champagne on the weſt; extending upwards of 100 miles in length, and as many in breadth. It is di-

vided

vided into three parts; Lorrain-proper; the duchy of Bar; and French Lorrain and Bar, which conſiſts chiefly in the biſhoprics of Metz, Toul, and Verdun. It was governed by its own dukes till 1735, when it was given to King Staniſlaus for his life, and afterwards to be united to France: in conſideration of which the Duke of Lorrain has been conſtituted Grand Duke of Tuſcany. But as Lorrain is now divided from Germany, and as it is treated of under its own proper head, ſee *Lorrain*.

Lower Rhine.

The circle of the Lower Rhine comprehends the Palatinate of the Rhine, and the Archbiſhopricks of Mentz, Triers, and Cologne.

The Palatinate of the Rhine, including the biſhoprics of Spire and Worms; as alſo the duchy of Deux-ponts, or Zweiebruggen, is bounded by the archbiſhopric of Mentz and Triers on the north; by Franconia and Suabia on the eaſt; and by Alſace and Lorrain on the ſouth and weſt; being upwards of 100 miles long, and from 50 to 70 broad. The air, the ſoil, and noble rivers which water this country, all contribute to render it one of the richeſt and pleaſanteſt provinces of the empire, which have ſeveral times made it a prey to the French. The hills are covered with vines, which yield that noble liquor known in other parts of Europe by the name of Rheniſh wine. The vallies afford plenty of all manner of grain and fruits. The foreſts abound in deer and other game. And the Rhine and Neckar not only yield fiſh in abundance, but afford a very convenient water-carriage for merchandiſe.

The chief town in the palatinate is Heidelburg, ſituated in a fruitful plain on the Neckar, 40 miles S. of Frankfort. It is neither large nor populous; and is chiefly famous for a large wine-fat, generally called the Heidelburg-tun, containing 200 tuns Engliſh meaſure: but this is not the only town in Germany where there are wine-fats of an uncommon ſize, carved and gilded; which ſeem to be built more for ornament than uſe; and to ſhew this is one of the moſt profitable branches of their trade near the Rhine and the Danube. Manheim, ſituated in 7 deg. 20 min. of E. lon. and 49 deg. 30 min. of N. lat. at the confluence of the Rhine and Neckar, 14 miles N. W. of Heidelburg, is the uſual reſidence of the Elector Palatine. There are alſo the towns of Frankendal, Altſheim, and others: but none of them remarkable for any other trade than the produce of their vineyards.

The biſhopric of Worms lies on both ſides the Rhine; the chief town whereof is Worms, an imperial city, in which are large ſpaces of ground planted with vines, yielding two or three thouſand hogſheads of excellent wine annually.

The biſhopric of Spire lies alſo on both ſides the Rhine; the chief town being Spire, an imperial city, large and populous; about 12 miles S. W. of Heidelburg. There are alſo the towns of Philipſburg, Spierbach, and ſome others; but of no conſequence in trade.

The duchy of Deux-ponts, and the duchy of Pomeren, afford no materials for trade. But theſe two biſhoprics and duchies are not ſubject to the Elector.

The Archbiſhopric of Mentz, lies on the banks of the river Maine; being bounded by Weterau on the north; by Franconia on the eaſt; by the Palatinate on the ſouth; and by the electorate of Triers on the weſt; extending about 50 miles in length, and about 20 in breadth; though there are other territories belonging to this archbiſhopric in Heſſe, Thuringia, and other places. The archbiſhop of Mentz is the firſt ſpiritual Elector, to whom all foreign princes and ſtates addreſs themſelves, who have any propoſitions to make to the empire; to him the princes and ſtates apply for a redreſs of their grievances; and he is elected to the archbiſhoprick by 24 capitulary canons of the church of Mentz, of noble extraction.

The chief city belonging to the archbiſhopric of Mentz, is Mentz, or Mayence, ſituated in 8 deg. of E. lon. and 50 deg. of N. lat. at the confluence of the Rhine and Maine, 20 miles W. of Frankfort, and 25 N. of Worms. It is a large populous city, but meanly built, and weakly fortified. Proteſtants are permitted to live and trade there; though they are not allowed the public profeſſion of their religion: The inhabitants claim a right to the

invention of printing, and the art of making gun-powder. The beſt vineyards for Rheniſh wines are in the neighbourhood of Mentz, which occaſions it to have a flouriſhing trade in that commodity, particularly old hock, which is the beſt kind of Rheniſh wine, and grows at Hockheim, near Mentz.

Bingen is pleaſantly ſituated at the confluence of the Rhine and Nahe, 16 miles W. of Mentz, and is alſo remarkable for its wine.

In the Rhingaw, a narrow tract of land, extending about 20 miles in length, along the banks of the Rhine, are ſeveral fine towns, particularly Rodeſheim, which is famous for the growth of the beſt vines; though the whole country of the Rhingaw abounds in the choiceſt vines, ſeeming but one entire city, interſperſed with gardens and vineyards within its walls.

A conſiderable part of the electoral revenue ariſes from the toll on the Rhine and the Maine, and from the tax on wines; the whole revenue amounting to upwards of 100,000 l. a year.

The electorate of Triers, or *Treves*, is bounded by the diocese of Cologne and the duchy of Juliers on the north; by Mentz and Weterau on the eaſt; by Lorrain and the Palatinate on the ſouth; and by the Netherlands on the weſt; being 80 miles long, and from 20 to 50 broad. The archbiſhop is the ſecond elector of the empire; but has no other ſuffragans than the biſhops of Mentz, Toul, and Verdun, who are under the dominion of France. The face of the country, and the nature of the ſoil, are very different in one part from what they are in another: the ſouth and weſtern parts of the country being mountainous and barren, encumbered with woods and foreſts; having but few towns and people, or indeed of any thing except wild beaſts, deer, and other game, which uſually abound in ſuch deſert places: though near the Rhine and the Moſelle the country is very pleaſant, abounding with corn and wine, and crouded with people.

The capital of this electorate is Triers or Treves, ſituated on the Moſelle, in 6 deg. 10 min. of E. lon. and 49 deg. 55 min. of N. lat. 60 miles W. of Mentz: but the city is neither large nor populous; and, having been the ſeat of war of late years, its trade is not in a flouriſhing condition. Coblentz is very pleaſantly ſituated at the conflux of the Rhine and the Moſelle, 60 miles N. of Triers; being ſurrounded with vineyards; and the convenience of its ſituation has rendered it a town of good trade, particularly in corn, wine, wood, and iron; which are chiefly ſent to Cologne, and from thence into Holland.

At Boppart, 10 miles S. of Coblentz, all veſſels paſſing the Rhine pay a toll to the Elector, whoſe revenues amount to about 100,000 l. a year. Berncaſtle is pleaſantly ſituated on the Moſelle, having a good trade in wine. Beſides, there are Mein, Cochein, Saffich, Engers, Cell, St. Vendt, Limburg, and other towns; though of no conſequence in trade.

The electorate of Cologne lies on the weſtern ſide of the Rhine; being bounded by the duchy of Cleves on the north; by the duchy of Bergen on the eaſt; by the electorate of Triers on the ſouth; and by the duchy of Juliers and the Netherlands on the weſt; extending about 70 miles in length; though not above 7 or 8 in breadth. The elector is much the moſt powerful of all the ſpiritual electors, his revenue amounting to about 250,000 l. a year; for the country is very fruitful, abounding in corn, wine, paſture, and all neceſſaries of life.

The capital city is Cologne, ſituated on the river Rhine, in 6 deg. 40 min. of E. lon. and 50 deg. 50 min. of N. lat. 45 miles E. of Maeſtricht, 62 N. of Triers, and 400 N. W. of Vienna. It is one of the largeſt and moſt elegant cities of Germany, having a great trade, eſpecially in wines, and ſtill remains a free imperial city, under ſome limitations. The elector has two palaces in the city; but uſually reſides at Bon: for the government of the city of Cologne is lodged in the magiſtrates and burghers, conſiſting of ſix burgo-maſters, ſeven aldermen, and 150 common-council men, who continue for life, and two of the burgo-maſters are regents annually by turns: but the aldermen are appointed by the elector without whoſe concurrence no law can be made;

alſo claims the command of the militia, and the defence of the city; ſo that it appears to be a mixed government. The inhabitants are for the moſt part Roman catholics; but many of the principal merchants and tradeſmen are proteſtants, of whom the Lutherans have a church allowed them in the city; though the Calviniſts are obliged to go as far as Mulheim, two miles on the other ſide of the Rhine, to their public worſhip. This city was formerly ſo remarkable for its commerce, as to be reckoned one of the four capitals of the hans-towns; and it is now a place of good trade. The principal commodities from this city are conſiderable quantities of Rheniſh and Moſelle wines, iron cannons, bullets, and other ſorts of arms ſerving for the attack and the defence of towns: all kinds of iron works, carpenters timber, earthen ware, ſlates, and tiles. The imported commodities are ſpice, medicinal and dying drugs, ſugar; dry and ſalt fiſh, eſpecially herrings; oil of olives, all kinds of ſilk and woollen ſtuffs, ribbands; gold, ſilver, ſilk and thread lace; jewellers work, cottons, muſlins and cambricks, ſoap, dry fruits, cheeſe, butter, and other proviſions, porcelain, coffee, tea, and chocolate.

All the merchandiſes which paſs by Cologne in going up the Rhine, and which are deſigned for Frankfort and other towns of Germany, are to be unladen here, and put aboard other barges to continue their voyage; after having paid the duty of paſſage, which is likewiſe paid for the merchandiſes left in the boats that brought them.

Bonn, where the elector reſides, is ſituated on the Rhine, 10 miles S. of Cologne. The vineyards in its neighbourhood afford plenty of good Rheniſh wines, and the foreſts variety of game.

At Andernacht, 8 miles N. of Coblentz, the elector has a cuſtom houſe. Zous ſupplies the neighbouring countries with corn; and Rhinberg affords plenty of wine. There are alſo Lintz, Nuys, Meurs, Keyſerwaert, Kempen, and other towns; though of no conſideration in trade. But the elector of Cologne is alſo biſhop of Hildeſheim; which has been before deſcribed under the diviſion of Lower Saxony.

The proteſtant religion prevails in the Palatinate among the generality of the natives: but the elector is now a Roman catholic, and the Romiſh prieſts have ſuch power, that the proteſtants are ſcarcely tolerated; and the other countries of this circle are almoſt all of the popiſh faith.

Weſtphalia.

In the circle of Weſtphalia are comprehended the duchy of Weſtphalia; the biſhoprics of Liege, Munſter, Paderborn, and Oſnabrug; the duchies of Juliers, Cleves, and Berg; the principality of Minden; the counties of Marck, Ravenſburg, Lippe, Schawenburg, Lingen, Steinfort, Corbey-abbey, &c.

This circle is bounded by the German ocean on the north; by the circle of Lower Saxony on the eaſt; by Heſſe on the ſouth; and by the Netherlands towards the weſt; extending in length 200 miles from N. to S. and 200 broad in ſome places from E. to W. The principal rivers are the Weſer, the Ems, the Lippe, the Roer, the Aa, and the Hunt.

The *duchy of Weſtphalia* is bounded by the biſhopricks of Munſter and Paderborn on the north; by the landgrave of Heſſe on the eaſt; by Wetterau on the ſouth; and by the county of Mark, and duchy of Berg towards the weſt; being about 50 miles long, and about 40 broad. The country is generally mountainous and woody, except towards Lipſtadt, where the ſoil is tolerably fruitful; nor is there any want of corn or paſturage in the vallies among the hills; at leaſt there is enough to ſupply the inhabitants, who are not very numerous. Their rivers run from the mountains with an impetuous torrent: and though they have mines of ſilver, copper, and lead, in ſeveral places, they can make but little advantage of them, becauſe they are ſo liable to be flooded by the rivulets which fall from all ſides of the mountains.

The chief town of this duchy is Arnſburg, ſituated on the river Roer, about 50 miles N. E. of Cologne. There are alſo the towns of Werle, Geſeck, and Brilon; but none of them have any trade worthy of notice.

The *biſhopric of Leige*, or *Luyick*, is bounded by Flanders and Brabant towards the north and weſt; by the duchy of Limburg on the eaſt; by Luxemberg and part of France on the ſouth; being about 70 miles long, and from 25 to 50 broad. It is in general a pleaſant fruitful country; having plenty of good arable and paſture lands. They have alſo ſome mines of lead and iron, and quarries of marble: but what it is moſt particularly remarkable for, are the great quantities of vitriol and brimſtone which are made in this country.

The capital of the biſhopric is Liege, ſituated on the river Maes, in 5 deg. 36 min. of E. lon. and 50 deg. 40 min. of N. lat. 30 miles N. E. of Namur, 12 S. of Maeſtricht, and 50 E. of Bruſſels; being about 4 miles in circumference. It is a populous and wealthy city, two branches of the Maes, and other rivulets or canals running through ſeveral of the ſtreets, and forming little iſlands. There are about 100 churches of all ſorts, beſides monaſteries, with a very numerous clergy. The chapter of Liege conſiſts of ſixty major canons, who are moſt of them of noble extraction, and have the power of electing the biſhop, whoſe ſovereignty extends over the city and dioceſe, though the citizens would have it an imperial city, but they have ſuffered ſeverely for diſputing the biſhop's authority.

Their commerce conſiſts chiefly in all kinds of offenſive and defenſive arms, of which they have good manufactories: as alſo in iron, nails, and moſt kinds of hardware. They have likewiſe ſome manufactures of coarſe woollen cloths, called piliakins; of ſerges, ribbonds, white and coloured thread, and hair-buttons. Beſides, the coal and alum mines found in the neighbourhood of Liege, and in ſeveral other parts of its ſmall territories, make no ſmall object of its commerce; and great numbers of ſlates are alſo ſold there.

Wine, brandy; Engliſh, French, and Dutch woollen cloths; ſilk ſtuffs of Lyons, Tours, Italy, Amſterdam, and Leyden; cottons, muſlins, ſpices, and all ſorts of medicinal and dying drugs, are the principal merchandiſes ſent there by ſtrangers.

Tongres, or Tongren, is the next town of conſequence, being ſituated on the river Jecker, 10 miles N. W. of Liege; but it has no trade.

Huy, ſituated on the eaſt ſide of the Maes, 12 miles S. W. of Liege, has good iron mines in its neighbourhood, which employ moſt of its inhabitants.

Dinant, 35 miles S. W. of Liege, is a place of ſome trade; particularly in the manufactures of braſs and iron. Franchemont has lead mines in its neighbourhood.

The Spaw, or Spa, is a town about 17 miles S. E. of Liege, lying in a bottom ſurrounded with hills, celebrated for its mineral waters ever ſince the times of the Romans: for Pliny ſays, that they taſted of iron, and were purgative; that they cured tertian agues, and the ſtone; that when boiled they grew turbid, and at laſt of a reddiſh colour. At preſent there are four mineral fountains much in eſteem, in and near this place, called Geronſter, Saviniere, Tonnelet, and Pohunt; the latter of which is in the middle of the town, and ſupplies moſt of the waters ſent into foreign parts, being beautified with a fine ſtone building, with an inſcription, importing that theſe waters remove obſtructions, diſſolve hard ſwellings, dry up a ſuperfluity of moiſture, and ſtrengthen debilitated limbs. There are great quantities of theſe waters ſent to all countries in Europe: the ſeaſon for filling bottles with it being either in the heat of ſummer when it is very dry; or in the hardeſt froſts of winter, when the waters are briſker, ſtronger, and more ſparkling than at other times.

There are Buillon, Borchloen, Bilſen, Haſſelt, Mayeſick, Horn, Couvin, Verviers, and other towns; but none of them remarkable for trade.

The biſhop of Liege is one of the moſt conſiderable eccleſiaſtical princes of Germany, having within his dioceſe 52 baronies, 18 walled towns, and 400 villages full of people, with a large revenue; being able to maintain a body of 8000 men, without oppreſſing his ſubjects, who are generally Roman Catholics.

The Biſhopric of Munſter, lies on both ſides the river Ems; being bounded by the counties of Bentheim and Steinfurt on the north; by the biſhopric of Oſnabrug and Paderborn towards the eaſt; by the county of Marck on the ſouth; and by the duchy of Cleves and ſome part of

Zutphen towards the weſt; extending 100 miles in length, and from 20 to 60 in breadth. It is a barren country, producing little corn: but no part of Weſtphalia produces better bacon, or hams, which they export all over Europe, being ſo much admired that they bear double the price of any other. The biſhop of this dioceſe is a count of the empire, and abſolute ſovereign of the territories belonging to the dioceſe; being elected by the dean and chapter of the cathedral church.

The chief city is Munſter, ſituated in the moſt fruitful plain in the country, on the river Aa, in 7 deg. 10 min. of E. lon. and 52 deg. of N. lat. 70 miles N. of Cologne, and 35 S. W. of Oſnabrug. There are alſo Meppen, Haſlunen, Kloppenberg, Warenberg, Stromberg, Coeſfeldt, Ahuſen, Tillight, Rheyne, and ſome other towns of no conſequence in trade. The Roman Catholic is the eſtabliſhed religion: the biſhop's revenue is about 150,000l. a year, and he can maintain a conſiderable body of forces.

The Biſhopric of Paderborn is bounded by the county of Lippe towards the north; by the duchy of Brunſwick on the eaſt; by the county of Waldeck on the ſouth; and by the duchy of Weſtphalia on the weſt; being about 40 miles long, and 20 broad; containing 20 caſtles, 24 market-towns, 54 other pariſhes, and 16 monaſteries, ſubject to its own biſhop: but the territory is very barren, affording little beſides hogs-fleſh, deer, and other veniſon; though it has a variety of ſalt-mines. The principal town is Paderborn, ſituated in 8 deg. 25 min. of E. lon. and 51 deg. 45 min. of N. lat. 50 miles S. E. of Munſter; but neither this, or any of the other towns, are reſpectable for any kind of trade, except Warburg, which is conſiderable for the iron and lead mines in its neighbourhood, as alſo for its ſtrong and palatable beer.

The Biſhopric and principality of Oſnabrug has the county of Diepholt on the north; the counties of Minden and Ravenſberg on the eaſt, with Munſter, Steinfurt, and Bentheim, on the ſouth and weſt; being 40 miles long and 30 broad; eſteemed one of the moſt fruitful parts of Weſtphalia, and ſubject to its biſhop, who is a count of the empire. The principal town is Oſnabrug, ſituated on the river Oſe, in 7 deg. 40 min. of E. lon. and 52 deg. 31 min. of N. lat. 75 miles W. of Hanover. Its linens are in great eſteem, of which they ſell great quantities unbleached, particularly to the Dutch, who bleach them at Haerlem; and the inhabitants have alſo a conſiderable trade in hams and bacon.

There are alſo Ibourg, Mello, and ſome other towns, which have no trade. The inhabitants are both papiſts and proteſtants; ſo that the biſhopric is held alternately by a proteſtant and a papiſt; the proteſtant being always a prince of the houſe of Brunſwick.

The Duchies of Juliers, Cleves, and Berg, were formerly ſubject to the ſame ſovereign; but the two former are now enjoyed by the Elector Palatine, and the latter by the King of Pruſſia.

The duchy of Juliers is ſituated between the Maes and Rhine, being bounded by Guelderland on the north; by the duchy of Berg, and part of the electorate of Cologne on the eaſt; by Limberg on the ſouth; and the Netherlands on the weſt; extending 60 miles in length, and 30 in breadth. It is a plentiful country, abounding in corn and cattle, rich paſtures, and wood: but it is moſt remarkable for a fine breed of horſes, and woad for dyeing, which is gathered here in large quantities.

The chief town is Juliers, ſituated on the river Roer, in 6 deg. of E. lon. and 50 deg. 55 min. of N. lat. 20 miles W. of Cologne.

There are alſo Duren, Munſter-Eifel, Bedbur, Enſkirchen, and other towns, which are no ways remarkable for trade.

Aix la-Chapelle, or Aken, is alſo ſituated in this duchy, in 5 deg. 50 min. of E. lon. and 50 deg. 45 min. of N. lat. 18 miles N. E. of the city of Liege, and 30 W. of Cologne; being an imperial city, or ſovereign ſtate, governed by its own magiſtrates, whoſe territories contain 200 villages. It is large and populous; being much frequented by foreigners, as well as Germans, on account of its hot baths. There are ſeveral mines of lead, coal, vitriol, and lapis calaminaris, near this city. Popery is the eſtabliſhed religion; though proteſtants are permitted to reſide there, but not to celebrate divine worſhip. The greateſt part of the trade of Aix-la-Chapelle is carried on by the way of Liege, where it ſends moſt kinds of braziery goods, and ſtrong leather. The commodities received in exchange being copper, ſpice, drugs, and wool, particularly Spaniſh wool.

The Duchy of Cleves, or *Cleef*, lies on both ſides the Rhine; being bounded by part of the United Provinces towards the north; by Munſter on the eaſt; by Juliers on the ſouth; by Guelderland and Brabant on the weſt; extending upwards of 40 miles in length, and about 25 in breadth. The country is generally mountainous and woody; though it has plenty of corn and cattle, being watered by the Rhine, Roer, Lippe, and Nierſe.

The chief place is Cleve, ſituated near the W. ſhore of the Rhine, in 5 deg. 36 min. of E. lon. and 51 deg. 40 min. of N. lat. 10 miles S. W. of Nimeguen, and 60 N. W. of Cologne. There are alſo Embric, Gennep, Weſel, Rees, Roerort, Duiſberg, and ſome other towns; but none of them have any trade.

The Duchy of Berg, is bounded by the county of Marck on the north; by the duchy of Weſtphalia on the eaſt; by Cologne on the ſouth; and by the Rhine, which divides it from the duchy of Juliers, on the weſt; extending about 50 miles in length upon the banks of the Rhine, and about 20 in breadth: the country being chiefly rocky and mountainous, affording very little arable or paſture land, and conſequently poorly inhabited.

The principal town is Duſſeldorp, ſituated on the eaſt ſhore of the Rhine, in 6 deg. 20 min. of E. lon. and 51 deg. 15 min. of N. lat. 20 miles north of Cologne. Its chief trade conſiſts in corn, which the inhabitants get from the Low countries, and tranſport to Cologne and other parts.

Eſſen, 15 miles N. E. of Duſſeldorp, is remarkable for its excellent artificers in iron, and fire-arms. But Bentberg, Solingen, and other towns, are no ways conſiderable for trade.

The Principality of Minden alſo belongs to the King of Pruſſia; it lies between the county of Hoy on the north, and the county of Lippe on the ſouth; being 25 miles long and 20 broad; having great quantities of corn. The chief towns are Minden, and Peterſhagen; but they have no other trade than the exportation of corn.

The county of Marck lies between the rivers Lippe and Roer; being about 40 miles in length, and the ſame in breadth; ſubject alſo to the King of Pruſſia. Its chief town is Hamm, 25 miles S. of Munſter, which has plenty of corn and flax. Werden, 10 miles N. E. of Duſſeldorp, makes vaſt quantities of hams and bacon. But Unna, though formerly one of the hans-towns, Altena, and other towns, are no ways remarkable for trade.

The county of Ravenſberg is likewiſe ſubject to the King of Pruſſia, being bounded by the biſhopric of Oſnabrug on the north; by the county of Lippe on the eaſt and ſouth; and by Munſter on the weſt. It is a rocky mountainous country, having for its chief town Bilevelt, which, as well as the reſt of the towns, has little or no trade.

The county of Lippe is about 30 miles long, and 10 broad; being governed by its own count, whoſe chief towns are, Diethmold, 12 miles N. E. of Paderborn. Lippe, 20 miles W. of Paderborn, having a trade in timber and planks, for building barges and other veſſels on the Rhine. Lemgow, 15 miles N. of Paderborn, abounding in corn: and Uflen, conſiderable for its ſalt ſpring and manufacture of cloth. The counties of Pyrmont and Ritberg are alſo ſubject to the Count of Lippe: the chief town of the former being of the ſame name, ſituated 16 miles E. of Lemgow, and remarkable for its mineral waters, which are ſent to the moſt diſtant countries of Europe in great quanties: but the latter has no trade.

The county of Schawenberg, is part of it ſubject to the Count of Lippe, and the other to the landgrave of Heſſe: being 30 miles long and 16 broad. Its chief places are Schawenberg and Buckenberg. It has good paſture, and plenty of corn: it has alſo ſalt, timber, coal, allum, chalk, and veniſon; beſides, the free-ſtone in their quarries is ſo good, that great quantities of it are exported to Holland and Flanders.

The counties of Hoy and Diepholt are ſubject to the Elector of Han-

Hanover. *The counties of Delmonhurſt and Oldenberg*, are ſubject to the King of Denmark: but none of them, as well as ſome other little diſtricts of this circle, have any remarkable trade.

Eaſt Frieſland, or the county of Embden, or Emmerland, is bounded by the German ocean on the north; by Oldenburg on the eaſt; and by Groningen on the weſt, extending about 50 miles in length, and 30 in breadth, ſubject to the King of Pruſſia. The ſoil is generally marſhy, and the natives are remarkable for their ruſticity. The chief towns are Norden, pleaſantly ſituated on the ſea, 10 miles N. of Embden, formerly a good harbour, but not capable of receiving ſhips of burthen at preſent. Aurich, 10 miles N. E. of Embden, conſiderable for ſeven great fairs of cattle held here annually: but the other towns are of no importance.

Though in this diſtrict the city of Embden is ſituated near the mouth of the river Ems, on the Dollart bay, in 6 deg. 45 min. of E. lon. and 53 deg. 40 min. of N. lat. 25 m. E. of Groningen, and 60 W. of Bremen; being an imperial city, under the protection of the King of Pruſſia. The Engliſh had formerly a mart here for their woollen manufacture: but, ſince they removed it to Hamburg, Embden has been upon the decline: however, the King of Pruſſia has lately granted it ſeveral privileges, and ſeems aſſiduouſly bent to make it a conſiderable place of trade, having eſtabliſhed an Eaſt India company here, and given the merchants many ſigns of his royal favour.

Burgundy.

The circle of Burgundy, which makes the tenth circle of the empire, conſiſted of the 17 provinces of the Netherlands, and the Franche Compte; but they are now divided from, and independent of the empire. See *Netherlands* and *France*.

Upon the whole, there are in Germany upwards of 300 ſovereign princes and ſtates, moſt of them arbitrary in their reſpective territories; and they are able to raiſe and pay 500,000 men. The empire is pretty equally divided between papiſts and proteſtants: moſt of the proteſtants are Lutherans, as in Pomerania, Mecklenburg, Holſtein, Brandenburg, and Saxony: Auſtria and Bavaria are generally papiſts: in Heſſe and Franconia the people are Calviniſts; and in Suabia, Weſtphalia, and the Lower Rhine, there is a mixture of all theſe religions: but the Lutherans and Calviniſts ſeldom allow a toleration to one another, where they are in power; and the papiſts tolerate neither.

Though the goods and merchandiſes of Germany are permitted to be imported and conſumed in Great Britain; yet this is no diſadvantage, becauſe Great Britain, in return for the linens, linen-yarn, and other commodities of Germany, exports there great quantities of woollen cloth, tin, tobacco, ſugars, with other home products, and other plantation commodities, whereby the Britiſh nation, according to Doctor Davenant, gained a balance of 160,000 l. a year from Germany. See *Hans*-towns.

GEROUIN. A term given at Grand Cairo in Egypt, to the heavieſt quintal uſed for the weighing of merchandiſes of great bulk and weight: the quintal gerouin being about 117 Cairo rotols, 110 of which make about 98 lb. of London avoirdupois. See *Quintal*.

GHAN. A Muſcovite term for what is called a Caravanſera in the Eaſt.

GHENT, or *Gaunt*, a city of the Auſtrian Netherlands, and capital of the province of Flanders, ſituated 30 miles N. W. of Bruſſels, in 3 deg. 36 min. of E. lon. and 51 deg. of N. lat. See Auſtrian *Netherlands*.

GHERKINS. A foreign pickle, reſembling Engliſh cucumbers.

GHILAMS. Silk ſtuffs manufactured in China, and fit for the trade of Japan; being bought up and ſent there by the Dutch in great quantities, whereby they make conſiderable profits.

GIBRALTAR. A port-town of the province of Andaluſia, in Spain, ſituated in 6 deg. of W. lon. and 36 deg. of N. lat. on the ſtreight, between the ocean and the Mediterranean, to which it gives its name. It ſtands at the foot of Mount Calpe, one of Hercules's pillars, about 16 miles N. of Ceuta, in Africa, 40 miles S. W. of Cadiz, and 80 S. of Seville. It is built on a rock in a peninſula, and can only be approached on the land ſide, by a very narrow paſſage between the mountain and the ſea, acroſs which the Spaniards have drawn a line, and fortified it, to prevent the garriſon having any communication with the country. It was taken by the confederate fleet, commanded by Sir George Rook, in two days, in 1704. The ſtreight, to which this town gives name, is about 24 miles long, and 15 broad; a ſtrong current ſetting through it from the ocean to the Mediterranean, which requires a briſk gale to ſtem. The garriſon of Gibraltar is cooped up in very narrow limits, and the little ground they have produces things in ſuch ſcarcity, that they are obliged to have all their proviſions from Spain, England, and the coaſt of Barbary. The road is very unſafe either againſt enemies or ſtorms; and though it is made a free port, merchants have been invited to ſettle there to little purpoſe; becauſe it is ſtill under a military government: its garriſon conſiſting of four regiments of foot.

However, it is become conſiderable for its trade with Barbary; the Engliſh merchants at Gibraltar having great warehouſes of all kinds of goods of the growth of that part of Africa; whereby they furniſh the merchants of London on as good terms as they uſually had them in Barbary; and, by the convenience of ſhipping, can ſend them to England in ſmaller quantities than by loading veſſels wholly, as they were obliged to do when Gibraltar belonged to the Spaniards. They likewiſe have a conſiderable trade, by barcolongo's, with the empire of Morocco; ſo that the trade is ſeldom ſhut up; and Gibraltar is now the market for the wax, copper, almonds, drugs, and other products of Barbary.

The retention of Gibraltar in the hands of the Britiſh nation, has been always conſidered as a thorn in the ſide of Spain: but as a naval power; as a commercial nation, it is requiſite for Great Britain to retain maritime fortreſſes, for the protection of trade, wherever it extends: for this reaſon Calais and Dunkirk were formerly held ſo eſtimable to the Engliſh, while they were in poſſeſſion of thoſe places, which made them more abſolute maſters of the channel and ſtreight. During the wars of Queen Anne, the Engliſh became ſenſible that Gibraltar commanded the whole trade to the Levant, and would therefore be a conſiderable compenſation for the trouble and expences they ſuſtained in endeavouring to promote the Archduke Charles of Auſtria to the Spaniſh throne: accordingly, after Sir George Rook had conveyed that prince over to Portugal in the year 1704, this gallant admiral ſailed to Gibraltar; which he vigorouſly attacked by ſea, while a body of ſoldiers took poſſeſſion of the narrow iſthmus behind the town, whereby they cut off all communication between the garriſon and the Spaniards on the continent, which obliged the town to ſurrender. The court of Madrid was under the greateſt anxiety to recover Gibraltar: accordingly, the enſuing year, the French and Spaniards beſieged it by ſea and land; but the prince of Heſſe Darmſtadt, who commanded there, and Sir John Leake the Engliſh admiral, obliged Marſhal Teſſe and Admiral De Pointi, to raiſe the ſiege, after they had been upwards of five months expoſing themſelves to the cannon of the garriſon. The Archduke Charles received the homage of Gibraltar; and, in the year 1708, Sir John Leake reduced Sardinia to his obedience; which was followed by the reduction of Port-Mahon, with the whole iſland of Minorca. Theſe places were retained in the name of the archduke; but the death of his brother, the Emperor Joſeph, in April 1711, alarmed the Britiſh miniſtry, who ſeemed to have no other view in this war than the preſervation of the ballance of power: therefore, the court of London, apprehending that Charles would become too formidable, by poſſeſſing, at the ſame time, the Auſtrian ſucceſſion, and Spaniſh monarchy, with the imperial dignity, grew cool to the intereſt of the court of Vienna. This diſpoſition being laid hold of by Lewis XIV. who inſinuated to the new miniſtry in England, the neceſſity, as well as expediency, of putting an end to ſo long a war, upon terms agreeable to the firſt ſcheme of the grand alliance; it became productive of the peace concluded by the treaty of

of Utrecht in 1713, by which the court of Madrid ceded to Great Britain the town and caſtle of Gibraltar, with the iſland of Minorca, for ever; and alſo agreed that the Britiſh ſubjects, in trading to Spain and the Weſt Indies, ſhould have all advantages granted by Spain to any other nation: in return for which the court of London procured the confederates to acknowledge Philip V. as King of Spain and the Indies.

The poſſeſſion of Gibraltar and Minorca, in the hands of Great Britain, contributes to the common benefit of all the independent powers of Europe, during any ſcene of military contentions: but this was diſregarded by the courts of France and Spain, who were equally ſenſible what advantages it would convey to the Britiſh commerce, and what an obſtacle it would be to their ambitious hopes in reducing all Italy to the obedience of the Bourbonian line. The duke of Orleans, then regent of France, actually undertook to procure the reſtitution of Gibraltar from the Engliſh miniſtry, who were then devoted to his ſervice; but, in this the Spaniards were diſappointed by the conduct of cardinal Alberoni, their prime miniſter, who had concerted a ſcheme with Prince Cellamare, the Spaniſh ambaſſador at the French court, and ſome of the French nobility, to remove the Duke of Orleans from his regency; which deſign being diſcovered, by letters found on the Abbot Porto Carrero, Prince Cellamare was ſent home guarded, and the regent was ſo much diſguſted as to publiſh an immediate declaration of war againſt Spain. The French actually attacked Biſcay; but negociations were entered into at the Hague, under the mediation of the Dutch, the ſucceſs of which may be principally imputed to the diſgrace of Cardinal Alberoni in 1719, occaſioned by his prevailing on the King to baniſh his queen from the council, and afterwards from the kingdom, where his Majeſty ſoon perceived how neceſſary her preſence was; ſo that having recalled his royal conſort, and diſgraced the Cardinal, he was prevailed on, by his true friends, to accede, in February 1720, to the quadruple alliance, and thereby terminate a war which would ſpeedily have involved all Europe in its misfortunes: however, he was deſirous of adding ſome conditions to what had been agreed upon by the contracting parties; one of which was the reſtitution of Gibraltar; but this was left to be ſettled at a congreſs for a general peace, to be held immediately at Cambray. The Spaniſh monarch had great expectations of procuring this reſtitution through the intereſt of France, on account of the double marriage agreed on by the two crowns; the firſt between Lewis XV. and Maria infanta of Spain, then but three years old; and the ſecond between the prince of Aſturias, and Mademoiſelle de Montpenſier, daughter to the Duke of Orleans: the regent of France ſollicited the Britiſh miniſtry on this occaſion; the reſtitution alarmed the Britiſh nation; every honeſt Engliſhman proteſted againſt delivering up Gibraltar and Minorca, which had coſt ſo dear, and were of ſuch great importance to their trade in the Mediterranean; nor could theſe difficulties be adjuſted before the death of the regent, in December 1723, which produced an entire change in the French miniſtry. The Duke of Bourbon, who ſucceeded to the regency of France, did not look upon himſelf bound, by the engagement of his predeceſſor, that Gibraltar ſhould be reſtored; eſpecially as he found it was entirely contradictory to the ſentiments of the Britiſh parliament: but Spain inſiſted ſtrongly upon this promiſe, without which ſhe had never acceded to the quadruple alliance. The two courts were further embroiled, by the reſentment which the Spaniſh monarch took at the return of the Infanta from France, whence ſhe was ſent home by the regent, becauſe Lewis XV. was ſo infirm, and his ſpouſe ſo young, as to make it apprehended he would not live long enough to have any children by her; which ſo provoked the court of Spain, that her plenipotentiaries were recalled, and thereby an end was put to the ineffectual congreſs of Cambray.

During the late war, which continued nine years within ſixteen days, the Spaniards never attempted to beſiege Gibraltar, which they now looked upon as impregnable, and for the reduction of it they had but two ways, by treachery, or by ſtarving. From the firſt they were abſolutely precluded by the vigilance of the Britiſh parliament over the conduct of the miniſtry; and againſt the laſt there was an eaſy remedy, while the Britiſh fleet was ready to convey a ſufficient quantity of proviſions to the garriſon.

Soon after the conferences were opened at Aix-la-Chapelle, a report was revived of the reſtoration of Gibraltar to his moſt Catholic Majeſty, who, as an equivalent, was to deliver up Ceuta, a ſtrong fortreſs in the kingdom of Fez, on the ſouth-ſide of the ſtreights, and almoſt oppoſite to Gibraltar: but this report was contradicted by the third article of the definitive treaty of peace, concluded at Aix-la-Chapelle, on the 7th of October, 1748, wherein the treaty of Utrecht, among other treaties, is renewed and confirmed, without the leaſt derogation: ſo that, purſuant to the tenth article of the treaty of Utrecht, the full property of the town and caſtle of Gibraltar, with the port, fortifications, and forts, are veſted in the crown of Great Britain, to be enjoyed for ever, without exception, or impediment. Notwithſtanding the definitive treaty of peace, the articles of commerce between their Britannic and moſt Catholic Majeſties, and the claims of the Aſſiento company, were not finally adjuſted till the 24th of November 1750, when the treaty of Madrid was concluded: during which time, it was apprehended that Gibraltar was to be ſacrificed in exchange for Porto Rico, a large iſland in the Weſt Indies, conquered by the Earl of Cumberland in the reign of Queen Elizabeth, who abandoned it on account of the mortality among his men; though this ſuſpicion has ſince appeared to be without any manner of foundation; and that we may have no farther occaſion for entertaining ſuch apprehenſions, ought to be the ardent wiſh of every honeſt Engliſhman. For, in the year 1720, when a report was current that Gibraltar was to be reſtored, it occaſioned a general concern among the ſubjects of his Britannic Majeſty, who did not fail to expreſs their juſt ſenſe of the great importance of that place to the trade and ſecurity of England: they conſidered the ſtrength of it and Mort-Mahon, the eaſe of keeping them, the difficulty of regaining them, with their advantageous and almoſt neceſſary ſituation for commanding the trade of the Levant. In the year 1729, upon a ſimilar occaſion, every Engliſhman manifeſted a ſteady, warm, and unanimous ſpirit, for the preſervation of Gibraltar; nor were they even ſatisfied by a declaration that it would never be given up, but expected that the miniſtry would purge themſelves from the imputation of ever having entertained ſo criminal an intention.

What advantage would the poſſeſſion of either Ceuta or Oran be to the Britiſh crown? No more than Tangier was in 1683, when the charge in keeping up the fortifications, and maintaining a numerous garriſon againſt the attack of the Moors, induced King Charles II. to order the demolition of the works, and the garriſon to be withdrawn. Gibraltar and Mincorca coſt an immenſe quantity of Britiſh blood, and treaſure; they were won by the law of arms; they have been confirmed by the moſt ſolemn treaties: if the Spaniards ſhould ſtill ſeek for their reſtitution, that alone is a ſufficient reaſon for their retention; for if it ſhould unhappily fall into their hands, it muſt naturally become a neſt for the French and Spaniſh privateers, and they will never conſent to diſmantle it, like Dunkirk. Gibraltar is one of the brighteſt jewels in the Britiſh crown, and was it once exempted from a military government; was it to be placed under a judicial authority, it would appear with a more conſpicuous luſtre: the advantages reſulting from it to Great Britain would be innumerable; for might it not be the grand mart of commerce? A mart that by its happy ſituation might engroſs the general trade of Europe, and at laſt ſupplant the Dutch, by turning out a more commodious ſtorehouſe than all the United Provinces can amaſs together.

GIGLIO. An iſland on the coaſt of Tuſcany, in Italy, 15 miles weſt of Porto Heriole, being ſituated in 11 deg. 45 min. of E. lon. and 42 deg. 25 min. of N. lat. See *Italian* iſlands, after *Italy*.

GILD. See *Guild*.

GILDER. A perſon whoſe buſineſs is either gilding of wood or metals.

LDING, or *Guilding*. The art, or act, of ſpreading or covering a thing over with gold, either in leaf or liquid; which was an art not unknown among the antients, though it never arrived among them at the perfection to which the moderns have carried it.

The modern gilders make uſe of gold leaves of ſeveral thickneſſes; but there are ſome ſo fine, that a thouſand do not exceed 4 or 5 drachms in weight; the thickeſt of which are uſed for gilding on iron, and other metals, and the thinneſt on wood. Gilding of plate is performed with an amalgama of gold and quickſilver. But there are ſeveral methods of gilding now in uſe; as gilding on an oily ſize; gilding on a water-ſize; gilding by the fire, which is peculiar to metals; gilding of books, and other things.

ILEAD, balm of Gilead, or balſam of the Levant. See *Balſam*.

ILL. An Engliſh liquid meaſure, containing a quarter of a pint, uſed for meaſuring ſmall quantities of wine, or ſpirituous liquors.

ILL. Ground-ivy, a medicinal plant, which gives the denomination to a ſort of medicated ale or drink, called *gill*, or *gill-ale*, made by infuſing the dried leaves of the plant therein; when it is abſterſive and vulnerary, being preſcribed in diſorders of the lungs and breaſt; and alſo eſteemed in obſtructions of the viſcera.

ILLA, in chemiſtry and pharmacy, is an Arabic term for ſalt, peculiarly uſed in England for the emetic ſalt of vitriol; being prepared from that mineral, and uſed in tertians, and all fevers ariſing from a corruption of humours in the firſt paſſages.

ILOLO. An iſland of the Pacific ocean, ſituated in 125 deg. of E. lon. and 40 min. of N. lat. See *Celebes*.

IMP. A kind of lace, made either of ſilk or thread, uſed for trimming of women's gowns, and ſold for about 2 d. a yard.

IN. See *Geneva*.

INGER, *Gingiber*, or *Zinziber*. An aromatic root, of conſiderable uſe, both as a ſpice and a medicine; which formerly was chiefly brought from Calicut in the Eaſt Indies; though of late it has been cultivated with good ſucceſs in the Weſt Indies.

The beſt ſort is that which is new, dry, well filled, hard to break, of a ruddy brown colour without, reſinous within, and of a hot pungent taſte.

The root is candied when green, with ſugar and honey; being firſt ſteeped ſome time in water, to take away part of its acrimony, and diſpoſe it to let go the outer ſkin: a marmelade is alſo made of it, and dry cakes. The northern people make great uſe of this confection, as holding it ſovereign againſt the ſcurvy: and the Indians eat the root, when green, by way of ſallet, firſt chipping it ſmall, mixing it with herbs, and ſeaſoning it with oil and vinegar. See *Spice*.

As to its medicinal uſe, it is thought proper for fortifying the ſtomach, and quickening the appetite; it alſo helps digeſtion, and reſiſts putrefaction, and the malignity of humours.

There is a kind of wild ginger, which grows likewiſe in the Eaſt Indies; as alſo in the iſland of Madagaſcar, whoſe leaves and roots have ſome reſemblance to the real ginger; but the roots are of different kinds; their rounder part being called zerumbeth, and the longer zedoair, which is a very excellent cordial; but the zerumbeth is of no uſe in medicine.

INGIRAS. A ſilk ſtuff manufactured in the Eaſt Indies, whoſe length is 9 ells and a half, and breadth 2-3ds.

IN-SENG. An admirable plant, till now little known in Europe. See *Zin-Seng*.

IOVENAZZO. A little city and port of Naples, in the Terra de Barri, on the gulph of Venice, 12 miles weſt of Barri; being ſituated in 17 deg. 30 min. of E. lon. and 41 deg. 15 min. of N. lat.

IRACE. A city and port of Naples, in the further Calabria, ſituated 36 miles N. E. of Reggio, in 16 deg. 35 min. of E. lon. and 38 deg. 35 min. of N. lat.

IRASOL. A precious ſtone, of ſome reſemblance to the opal; and therefore called the falſe opal. The antients called it aſteria, and eſteemed it much; but its value is now diminiſhed, either becauſe the taſte of perſons is altered, or that the giraſol is not ſo rare. It is found in the ſame countries with the opal, and is perhaps extracted from the ſame mines. See *Opal*.

GIRDING *Girt*, in the ſea-language, is the cable ſtrained tight, to prevent the ſhip's going over it with her ſtern port, and ſo lie a-croſs the tide.

GIRDLER. An artificer, that makes bridles, girdles, and the like, for horſes: but, by the ſtatute of the 1ſt of Richard III. girdles, or harneſs wrought for girdles, are not to be imported by ſtrangers to be ſold, upon forfeiture, or the value.

GIRDLERS *company of London* was incorporated by letters-patent of the 27th of Henry VI. dated the 6th of Auguſt 1449, which were confirmed by Queen Elizabeth the 12th of October 1568; when the pinners and wire-drawers were incorporated with them, by the appellation of The maſter and wardens, or keepers, of the art or myſtery of the girdlers of London: the company conſiſting of a maſter, 3 wardens, 24 aſſiſtants, and 77 liverymen; whoſe fine of admittance is 10 l. having a handſome and convenient hall in Baſinghall-ſtreet, wherein they tranſact their affairs.

GIRIB, is a geometrical meaſure in Perſia, uſed only for meaſuring land; containing 1066 gueuſes, or Perſian ſquare ells; the gueuſe computed at 35 inches, or rather 2 feet, 10 inches, and 11 lines.

GIRTH. A broad girdle, which buckles under the horſe's belly, generally made of ſacking or very ſtrong linen.

GLAIR. See *Varniſh*.

GLARIS. One of the cantons of Switzerland. See *Switzerland*.

GLASGOW. A large city and port of Scotland, in the ſhire of Clydeſdale, ſituated on the river Clyde, 20 miles N. W. of Lanerk, and 40 miles weſt of Edinburgh; which has a conſiderable foreign trade, and is one of the moſt elegant towns in Scotland; ſituated in 4 deg. 8 min. of W. lon. and 55 deg. 50 min. of N. lat.

GLASS. A tranſparent, brittle, factitious body, produced of ſalt, and ſand or ſtone, by the action of fire; which makes it an artificial concrete.

The diſcovery of glaſs, according to Pliny, was by accident in Syria, at the mouth of the river Belus, by certain merchants driven thither by the fortune of the ſea; who were obliged to live there, and dreſs their victuals, by making a fire on the ground, where there happened to be a ſtore of the plant kali; which being burnt to aſhes, and the ſand or ſtones of the place accidentally mixed with it, a vitrification was undeſignedly made; from whence the hint was taken, and eaſily improved. But how old ſoever glaſs may be, the art of making and working it does not appear of ſuch great antiquity; the firſt place mentioned for the making thereof being Sidon in Syria, which, as obſerved by Pliny, was famous for glaſs and glaſs-houſes.

The firſt time we hear of glaſs among the Romans, was in the time of Tiberius; when, as Pliny relates, an artiſt had his houſe demoliſhed for making glaſs malleable, or rather flexible: though Petronius Arbiter, and ſome others, aſſure us, that the Emperor ordered the artiſt to be beheaded for his invention.

Venice, for many years, excelled all Europe in the fineneſs of its glaſſes; their great glaſs-works, which furniſhed all Europe with the fineſt and largeſt glaſſes, being at Muran, or Mouran, a village near the city. But, within this laſt century, the French and Engliſh have not only come up to, but even ſurpaſſed the Venetians.

The French made a conſiderable improvement in the art of glaſs, by the invention of a method to caſt very large plates, till then unknown, and ſcarce practiſed yet by any but themſelves and the Engliſh. For the court of France applied itſelf with ſuch laudable induſtry to cultivate and improve the glaſs-manufacture, that a company of glaſsmen was eſtabliſhed by letters patent; and it was provided by an arret, that not only the working in glaſs ſhould be no derogation from nobility, but even that none except nobles ſhould be allowed to undertake ſuch works.

The ſalt made uſe of in the compoſition of glaſs, is of the fixed kind, being ſuch as will not evaporate with the

moſt intenſe heat; and the ſand or ſtone muſt be ſuch as will not eaſily melt, which is what gives firmneſs and conſiſtence to the glaſs.

This ſalt is chiefly procured from a kind of aſhes, called polveraine, or rochetta, brought from the Levant; particularly from Alexandria and Tripoli; which are produced from a vegetable, frequent in the country, commonly called kali: though Banhin mentions ten ſpecies of this plant; whereof there are four uſed by the Alexandrians for the making of polveraine and ſoap; called kali geniculatum, kali ſecunda ſpecies, kali ægyptiacum, and kali ſpinoſum. The Britiſh coaſts afford the firſt and laſt, where they are called frog-graſs, and ſea-graſs; but they are of no uſe in making of glaſs; for, being laid on a hot iron, they fly off almoſt wholly in fumes, leaving no aſhes at all; whereas the kali brought from the Levant, applied on the ſame iron, is ſoon converted almoſt entirely into polveraine, or very ſaline aſhes, of a dark colour; which is properly prepared, and laid by to make frit: though, inſtead of the aſhes of the plant kali, thoſe of fern will alſo yield a ſalt, which makes excellent glaſs, nothing inferior to that of polveraine: beſides, the aſhes of the cods and ſtalks of beans, as alſo thoſe of coleworts, bramble-buſh, millet-ſtalk, ruſhes, and ſeveral other plants, may be uſed for the like purpoſe; but more eſpecially the kali of Languedoc in France, and the barilla of Spain.

For ſtone, the ſecond ingredient in glaſs, the beſt is that which will melt, is white, and tranſparent; being a ſort of marble, called tarſo, principally found in Italy: the next is puocoli, or cuogolo, a ſort of pebbles found at the bottoms of rivers: but nothing makes finer and clearer glaſs than flint; though the charge of preparing it deters the glaſs-men from uſing it. However, Antony Neri obſerves, that all white, tranſparent ſtones, which will not burn to lime, are fit to make glaſs; and that all ſtones which will ſtrike fire with ſteel, are capable of being employed in making of glaſs; but this latter rule Dr. Merret obſerves does not hold univerſally.

Where proper ſtone cannot be had, ſand is uſed; the beſt for the purpoſe being that which is white and ſmall; but for green glaſs, that which is harder and more gritty; though Engliſh glaſs-houſes are furniſhed with white ſand for their cryſtal glaſſes from Maidſtone; and with the coarſer, for green glaſs, from Woolwich.

Manganeſe, or ſiderea, is alſo reputed a third ingredient in glaſs; which is a kind of pſeudo loadſtone, dug up in Germany, Italy, and even in Mendip hills in Somerſetſhire: but the proportion hereof to the reſt is very inconſiderable; beſide, that it is not uſed in all glaſs.

There are two kinds of glaſs; being white, or cryſtal glaſs, and green glaſs; from which there are made three principal kinds of glaſſes, diſtinguiſhed by the form or manner of working them, as round glaſs, table or window-glaſs, and plate-glaſs or looking-glaſs.

Round glaſs is underſtood of thoſe veſſels, bottles, phials, and drinking-glaſſes, which are made of both cryſtal and green glaſs. Window-glaſs conſiſts of ſeveral ſorts of glaſs, made in different places, for the uſe of building; as, 1. Crown-glaſs, of which there are two kinds, diſtinguiſhed by the places where they are wrought; the former being Ratcliffe crown-glaſs, which is the beſt and cleareſt, and was firſt made in England, at the Bear-garden, on the bank-ſide, in Southwark, but ſince at Ratcliffe in Middleſex; of which there are 24 tables to the caſe, the tables being of a circular form, about 3 feet 6 inches in diameter: and the latter being Lambeth crown-glaſs, which is of a darker colour than the former, and more inclining to green. 2. French glaſs, alſo called Normandy glaſs, and formerly Lorrain glaſs, becauſe made in thoſe provinces; which at preſent is made wholly in the eſtabliſhed glaſs-works; five whereof are in the foreſt of Lyons, four in the county of Eu, and the laſt at Beaumont near Rouen; but this is of a thinner kind than the Engliſh crown-glaſs; and, when laid on a piece of white paper, appears of a dirtyiſh green colour; and there are 25 tables to the caſe. 3. German glaſs, which is both white and green; the former being of a whitiſh colour, but ſubject to thoſe ſmall, curved ſtreaks, obſerved in the Engliſh Newcaſtle glaſs, though free from the ſpots and blemiſhes thereof: the latter, beſide its colour, is liable to the ſame ſtreaks as the white; but both of them are ſtraighter, and leſs warped than the Newcaſtle. 4. Dutch glaſs, which is not much unlike Newcaſtle glaſs, either in colour or in price; being, like it, frequently much warped; and the tables are but ſmall. 5. Newcaſtle glaſs, which is that moſt uſed in England, being of an aſh colour, ſubject to ſpecks, ſtreaks, and other blemiſhes; beſide that it is frequently warped: of which Leybourn ſays, there are 45 tables to the caſe, each containing 5 ſuperficial feet; though others ſay there are but 35 tables, and 6 feet in each table; which is 15 feet leſs than the other.

There are alſo ſome manufactures of glaſs at Briſtol, at Stourbridge; as alſo ſome in Dublin.

The plate or looking glaſs is made of much the ſame materials as thoſe of other works of glaſs; that is, an alkali ſalt, and ſand: the ſalt, however, it is to be obſerved, ſhould not be that extracted from polveraine, or the aſhes of the Syrian kali; but the aſhes of the barilia, a plant of the genus of kalies, growing about Alicant in Spain; though it is very rare that the barillia can be had pure, becauſe the Spaniards, in burning the herb, make a practice of mixing another herb along with it, which abates its quality, or of adding ſand to it, to increaſe the weight; which is eaſily diſcovered, if the addition be only made after the boiling of the aſhes; but next to impoſſible, if made in the boiler: and it is from this alteration that thoſe threads, and other defects, in plate-glaſs ariſe. There are two different ways of manufacturing plate-glaſs; the one by blowing, and the other by caſting or running: but the looking-glaſſes which are blown, ſhould never exceed 45, or at moſt 50 inches, in length, and of a breadth proportionable; for thoſe exceeding theſe dimenſions, as are frequently found among the Venetian glaſſes, cannot have the thickneſs ſufficient to bear the grinding; and beſide, are ſubject to waves, which prevents them from reflecting objects with a proper regularity. The art of caſting, or running, large looking glaſs plates, was invented by the Sieur Abraham Thevart, who firſt propoſed it to the court of France, in the year 1688; which is performed much like the caſting of ſheet-lead among the plumbers: by means whereof the manufacturers are not only enabled to make glaſſes of more than double the dimenſions of any made by the Venetian way of blowing; but alſo to caſt all kinds of borders, mouldings, and other ornaments: though the manufactories are of ſo extraordinary a nature, that the French glaſs-houſe in the caſtle of St. Gobin, in the foreſt of Fere, in the Soiſſonois, appears more like a little city than a manufactory: for it is computed that a furnace before it is fit to run glaſs, coſts above 3 500l. that at leaſt ſix months are required for the building it anew, and three months for the refitting it; as alſo, that when a pot of matter burſts in the furnace, the loſs of matter at that time amounts to above 250 l.

GLASSES are diſtinguiſhed, with regard to their form and uſe, into two kinds; as drinking glaſſes, and optic glaſſes; the former being ſimple veſſels of common glaſs or cryſtal, uſually in form of an inverted cone; of which thoſe chiefly uſed in England are made of the aſhes of fern, cryſtal glaſſes being grown into diſeſteem: and the latter are thoſe made uſe of to ſtrengthen, improve, and preſerve the ſight; to which claſs belong

Convex glaſſes,	Teleſcope glaſſes,
Concave glaſſes,	Object glaſs,
Lenticular glaſſes,	Eye glaſs,
Meniſcus glaſſes,	Magnifying glaſſes,
Plain glaſſes,	Multiplying glaſs, and
Planoconcave glaſs,	Perſpective glaſs.
Planoconvex glaſs,	

The glaſs-trade is very conſiderable in France, whence great quantities are exported, not only to moſt countries of Europe, but alſo to China, India, and America. In the year 1746, a bill was brought into the Britiſh parliament for raiſing an additional duty upon glaſs, and ſubjecting that commodity to the laws of exciſe; which univer-

univerſally held, not only as unſalutary to that particular branch of trade, but prejudicial to the general intereſt of the whole community; whereupon a great number of men and women, occupiers of the glaſs-trade, attended the houſe of commons with printed caſes againſt the bill; containing, in ſubſtance, that it would occaſion ſome thouſands of artiſans, then employed in the following trades, as grinders, poliſhers, ſcallopers, file-beaters, ſilverers, frame-makers, carvers, gilders, and gold-beaters, to be out of employment: but, notwithſtanding ſuch remonſtrances, the bill paſſed into a law; whereby it was enacted, That there ſhould be paid upon all crown, plate, and flint glaſs, imported into Great Britain, an additional duty of 8 d. for every pound weight; and 2 d. *per* pound upon all green or other glaſs imported, and ſo in proportion for a greater or leſs quantity: alſo upon all quart bottles and flaſks, the additional duty of 2 s. *per* dozen; and upon bottles and flaſks containing more or leſs than a quart, 2 s. for every dozen quarts, be the quantity of bottles containing the ſame greater or leſſer; all which duties were to be paid by the reſpective importers, over and above all other cuſtoms and duties.

That there ſhould be paid the additional duty of 9 s. 4 d. for every hundred weight, upon all the materials, or metal, or other preparations whatſoever, by whatever name they then were or might be called, that ſhould thereafter be made uſe of in the making of crown, plate, flint, and white glaſs, and after that rate for a greater or leſſer quantity: as alſo the additional duty of 2 s. 4 d. for every hundred weight, upon all the materials in the making of common bottles, and all other green glaſs; which duties were to be paid by the makers of glaſs.

That if any crown, plate, flint, or other glaſs, or bottles or flaſks, imported, ſhould be put on ſhore out of any veſſel, before entry made at the cuſtom-houſe where the ſame ſhould be imported, and theſe additional duties paid or ſecured, or without a warrant for landing the ſame, firſt ſigned by the proper officer of the cuſtoms, the ſame, or the value thereof, ſhould be forfeited; and might be ſeized or recovered of the importer, or proprietor thereof.

That theſe additional duties on importation ſhould be levied and paid in the ſame manner as the former duties on imported manufactures of glaſs by an act of the 2d of William and Mary, were to be paid; and ſuch of the duties upon imported glaſs as ſhould ariſe in South Britain, ſhould be under the management of the commiſſioners of the cuſtoms in England; and ſuch of the duties as ſhould ariſe in Scotland, ſhould be under the management of the like officers in Scotland; all which ſhould be paid into the exchequer at Weſtminſter, diſtinctly from all other branches of the public revenues, for the purpoſes after mentioned; and the duties upon the materials to be made uſe of in the making of crown, plate, flint, and all white glaſs; as alſo of all common bottles, and other green glaſs; ſhould be under the ſame management, and paid and kept in the ſame manner.

By this act all the glaſs-makers were put under the laws of exciſe; and it was alſo enacted, That every maker of glaſs in London, or within the bills of mortality, ſhould within four weeks, and makers of glaſs in any other part of Great Britain, ſhould within ſix weeks after entry, pay off all the exciſe-duties due from them for glaſs, on forfeiture of double the ſum for every ſuch neglect and offence: but, upon exportation, a drawback is to be allowed of this additional duty.

It was likewiſe enacted, That no perſon ſhould import into Ireland, any crown, plate, flint, or white glaſs, or any common bottles, or other green glaſs, or glaſs of any kind or denomination whatſoever, other than the manufacture of Great Britain; and if any kind of glaſs whatſoever, other than the manufacture of Great Britain, ſhould be landed out of any veſſel in Ireland, it ſhould be forfeited, and deſtroyed within ten days after condemnation thereof; and the veſſel alſo with her tackle and furniture, in which the glaſs was imported, ſhould be forfeited; and the maſter of the veſſel, and every other perſon concerned in importing, or aſſiſting in landing the ſame, ſhould forfeit 10 s. for every pound weight thereof, and ſo in proportion for any greater or leſs quantity.

That the maſter of every ſhip which ſhould carry any crown, plate, flint, or white glaſs, or common bottles, or other green glaſs, or glaſs of any denomination whatſoever, to Ireland, ſhould take from the collector or comptroller of the port of Great Britain, where he ſhould lade ſuch glaſs, a duplicate of his contents in writing, under ſuch officers hand, of all the glaſs laden on board his veſſel, before he be permitted to ſail; which duplicate ſhould be given him without fee; and every maſter of ſuch veſſel ſhould deliver ſuch duplicate upon oath to the collector or other officer of the cuſtoms in ſuch port in Ireland where he ſhould arrive, and intends to unlade, before he be permitted to unlade the glaſs. And if any glaſs ſhould be unladen in any part of Ireland, before ſuch duplicate is produced to the officer as aforeſaid, it ſhould be forfeited, and deſtroyed within ten days after condemnation: the ſhip alſo, with her tackle, ſhould be forfeited; and the maſter of the veſſel, and every other perſon concerned in importing, or aſſiſting in landing the ſame, ſhould forfeit 10 s. for every pound weight thereof, and ſo in proportion for any greater or leſs quantity.

That if any perſon ſhould directly or indirectly export, tranſport, ſhip off, carry, or convey out of Ireland, or cauſe to be ſo done, or be aſſiſting towards the ſame, any glaſs of what denomination ſoever, or ſhould directly or indirectly load, or cauſe to be ſo done, any horſe, cart, or other carriage, or any veſſel within or belonging to Ireland, with any glaſs, with intent to export the ſame from Ireland, or any port thereof, or with intent that any perſon or perſons whatſoever ſhould ſo export or carry off the ſame out of Ireland, every offender, for every ſuch offence ſhould forfeit 10 s. for every pound weight ſo exported; and the glaſs ſhould be forfeited, and deſtroyed within ten days after condemnation; and the veſſel, or other bottom whatſoever carrying the ſame contrary to the meaning of this act, ſhould be forfeited, with her tackle and furniture.

That all the powers relating to exciſe ſhould be put in execution, for the managing the duties upon glaſs.

That the monies ariſing by this act on the duties upon glaſs, and alſo upon ſpirituous liquors, ſhould be entered ſeparate from all other, in a book to be kept in the auditor of exchequer's office; which ſhould be a yearly fund, charged with the annuities upon a loan of 3,000,000 l. till redemption thereof by parliament, 2,500,000 l. whereof ſhould be chargeable with 4 *per cent.* and made tranſferable in the books of the bank, to be kept in the office of the accomptant-general of that company for that purpoſe; and the remaining 500,000 l. ſhould be raiſed by lottery, for purchaſe of annuities at 4 *per cent.* to be placed to the ſame account, tranſferable in the ſame manner with the other annuities.

That all the money advanced towards the ſaid ſum of 3 000,000 l. ſhould be deemed one capital ſtock, on which the ſaid annuities ſhould be attending: but if there ſhould be any deficiency in theſe additional duties, to pay ſuch annuities, the deficiency ſhould be ſupplied out of the ſinking fund; and, if there ſhould be any ſurplus, it ſhould be reſerved for the diſpoſition of parliament. See *Exciſe*, and *Fund*.

This act has been very prejudicial to the glaſs-trade; but it is ſtill exiſting: the conſequence of which appears to be the decline of the Britiſh manufacture, and the conſumption of the French; for it is well known that great quantities of French looking-glaſſes are clandeſtinely imported into England.

GLASS *Frame-maker*, *Carver*, and *Gilder*, are particular people, who frame, carve, and gild looking-glaſſes.

GLASS-*grinder*, is a perſon who furniſhes the cabinet-maker, or upholder, with looking-glaſſes and ſconces: he buys the plate-glaſs from the glaſs-houſe rough; after which, it is his buſineſs to grind it even, and poliſh it, which is done by ſand and water.

GLASS *ſellers company, and looking-glaſs makers, of London*, were incorporated by letters-patent of the 16th of Charles II. dated the 25th of July 1664; by the name of The maſter, wardens, aſſiſtants, and commonalty of glaſs-ſellers of the city of London.

There

There are, beſides the commonalty, a maſter, 2 wardens, 24 aſſiſtants, and 44 liverymen, whoſe fine is 5 l. but having no hall, they treat of their public buſineſs where they conveniently can.

GLASS *wort.* See *Kali.*

GLAZIER. A workman, who makes and fits panes and plates of glaſs, to the ſaſhes and window-frames of houſes, pictures, and the like.

GLAZIERS *company of London*, was incorporated with that of glaſs-painters, by charter of the 13th of Charles I. dated the 6th of November 1637, by the appellation of The maſter, wardens, and commonalty of the art or myſtery of glaziers, and painters of glaſs, of the city of London; which is a fraternity conſiſting of a maſter, 2 wardens, 21 aſſiſtants, and 91 liverymen, whoſe fine is 3 l. but their hall being conſumed in the great general conflagration in 1666, and the ſite converted to another uſe, they meet elſewhere to treat of their affairs.

GLOBE, in geometry, a round or ſpherical body, more uſually called a *ſphere:* but the terraqueous globe is more peculiarly ſo denominated, in a geographical ſenſe; conſiſting of land and water; whereof 1-4th of the ſurface only is land; the land being divided into the two great eaſtern and weſtern continents, beſides iſlands; and the waters being divided into the three extenſive oceans, called the Atlantic, the Pacific, and the Indian ocean, beſides leſſer ſeas. See *Continent*, *Ocean*, and *Sea.*

GLOBE is more particularly uſed for an artificial ſphere of metal, plaiſter, paper, or other matter; on whoſe convex ſurface is drawn a map, or repreſentation, either of the earth or heavens, with the ſeveral circles conceived thereon; which are ſold by the mathematical inſtrument-makers: theſe globes being of two kinds, the celeſtial and terreſtrial; each of very conſiderable uſe; the one in aſtronomy, and the other in geography; to perform many of the operations thereof in an eaſy, ſenſible manner, ſo as to be conceived without any knowledge of the mathematical grounds of thoſe arts. The fundamental parts, common to both globes, are an axis, repreſenting that of the world; and a ſpherical ſhell, or cover, which makes the body of the globe, on whoſe external ſurface the repreſentation is drawn: but though globes are made of ſilver and braſs, thoſe commonly uſed are of plaiſter and paper.

The things common to both globes are either delineated on the ſurface, or added as appendages without it. Without the ſurface are, 1. The two poles, whereon the globe is turned, repreſenting thoſe of the world. 2. The brazen meridian, which is divided into degrees, and paſſes through the poles. 3. The wooden horizon, whoſe upper ſide repreſents the horizon, and is divided into ſeveral circles; the innermoſt whereof contains the twelve ſigns of the zodiac, ſubdivided into their degrees; the next, the Julian; and the third, the Gregorian kalendar; and, without ſide of all theſe, are drawn the points of the winds. 4. A braſs quadrant of altitude, divided into 90 degrees, to be faſtened on the meridian at the diſtance of 90 degrees from the horizon. 5. The hour-circles, divided into twice twelve hours, and fitted on the meridian, round the poles, which carry an index pointing to the hour; and a mariner's compaſs is ſometimes added to the bottom of the frame, and ſometimes a ſemicirle of poſition. On the ſurface are delineated, 1. The equinoctial line, divided into 360 degrees, commencing from the vernal interſection; 2. The ecliptic, divided into twelve ſigns, and theſe ſubdivided into degrees; 3. The zodiac; 4. The two tropics; and, 5. The polar circles. But for an explanation of theſe technical terms, reference muſt be had to their reſpective articles; and what elſe belongs to globes, either as to conſtruction, or deſcription, is different, as the globe is either celeſtial or terreſtrial.

The celeſtial globe is an artificial ſphere, on whoſe convex ſurface the fixed ſtars are laid down, at proportionable diſtances, together with the principal circles of the ſphere; the uſe of it being to exhibit the phænomena of the motions of the ſun and ſtars, in an eaſy and obvious manner; which, though ſomewhat inaccurate, is yet exact enough for the common uſes of life, and may ſave the trouble of trigonometrical calculation.

The terreſtrial globe is alſo an artificial ſphere, on whoſe ſurface are delineated the principal places of the earth, in their proper ſituations and diſtances, together with the circles imagined on the ſurface of the terreſtial ſphere. The circumference of this globe is divided into 360 parts or degrees, every degree containing 60 geographical miles; conſequently the globe is 21,600 geographical miles round; and the diameter, or thickneſs of it, near a third part of the circumference, or 7200 miles. The uſe of this globe is to exhibit the ſeveral affections and phænomena of the different places of the earth, depending on magnitude, or diſtance, in an eaſy, obvious manner, without the trouble of trigonometrical calculation.

GLOBULAR *Chart.* See Globular *Chart.*

GLOBULAR *ſailing.* See Great circle *Sailing.*

GLOSS is uſed, in matters of trade, for the luſtre of a ſilk, ſtuff, or the like. See *Luſtre.*

GLOVE. A habit, or covering, for the hand and wriſt, uſed both for warmth, decency, and as a ſhelter from the weather.

Gloves are diſtinguiſhed, with reſpect to commerce, into leathern gloves, ſilk gloves, thread gloves, cotton gloves, and worſted gloves.

There are alſo gloves of velvet, ſattin, taffety, &c. leather gloves are made of ſhammy, kid, lamb, doe, elk, and buff ſkins. There are likewiſe perfumed gloves, waſhed, glazed, waxed gloves; white, black, ſnuff, and other coloured gloves; ſingle, lined, topped, laced, fringed with gold, ſilver, ſilk, fur, and other things. It is a proverb, That for a glove to be good, and well made, three kingdoms muſt contribute to it; Spain to dreſs the leather, France to cut it, and England to ſew it. But of late the French ſeem to have appropriated the functions of the other two; the gloves of the French manufacture being now ſaid to have the advantage in point of dreſſing and ſewing, as much as of cutting.

The ſhops of London are chiefly ſupplied with gloves from the country; of which the beſt are from Scotland. The Iriſh excel in kid-ſkin; but the duty makes them come dear.

Great quantities of French, and other foreign made gloves, have of late been clandeſtinely brought into Great Britain, and ſold contrary to law, to the prejudice of his Majeſty's revenue, and to the exceeding great detriment of the glovers, and all others concerned in the manufacture of gloves in this kingdom; which it is apprehended has been inadvertently encouraged by perſons not knowing, or not conſidering the penalties they incur, by being any way acceſſary to ſuch illegal practices; though every perſon offering ſuch gloves to ſale, forfeits the ſame, with treble the value, and the gloves may be ſeized by the perſon to whom they are offered: every perſon buying ſuch gloves forfeits the ſame, with treble the value, and the gloves may be ſeized by the ſeller; and either buyer or ſeller may proſecute the other, and the firſt proſecutor be acquitted: every perſon harbouring or concealing ſuch gloves, forfeits the ſame, with treble the value: every perſon receiving or buying ſuch gloves, upon conviction before any juſtice of peace, on the oath of one witneſs, is liable to forfeit 20 l. one half to the poor of the pariſh, and the other half to the informer, or to ſuffer three months impriſonment. And whereas many ſuch gloves are ſold, under a pretence that they have been ſeized and condemned at the court of exchequer, and there legally ſold; it is neceſſary to inform the public, that all ſuch gloves as are really condemned and ſold in the court of exchequer, are ſtamped at the cuſtom-houſe before they are delivered, with an oval ſtamp between the letters G. R. in which is a crown, above theſe words in capital letters, CUSTOM-HOUSE, and below it, SEIZED, as a mark to diſtinguiſh them as having been condemned and ſold in the ſaid court; and conſequently ſuch gloves, which are not ſo ſtamped, cannot be legally bought or ſold. See *Manufacture.*

GLOVER. A perſon whoſe trade conſiſts in making gloves; but gloves are chiefly ſold by haberdaſhers and milliners in London.

GLOVERS *company of London*, was incorporated by letters patent, dated the 5th of September 1638, by the title of The maſter, wardens, and fellowſhip of the company of glo-

lovers of the city of London; who are governed by a naſter, 4 wardens, and 30 aſſiſtants, with a livery of 30 members; their fine upon their admiſſion is 5 l. 13 s. d. and they have a hall in Beech-lane, wherein they nanage their affairs.

UE, *Gluten.* A viſcid, tenacious matter, ſerving as a ement to bind or connect ſeveral things together. There re divers kinds of glues made uſe of in the different arts; s the common glue, glove-glue, and parchment-glue; he two laſt are more properly called *ſize*.

The common, or ſtrong glue, is a commodity uſed by umerous kinds of artificers; as joiners, cabinet-makers, afe-makers, hatters, bookbinders, and others; the conmption whereof is very conſiderable: but the beſt is hat made in England, in ſquare pieces, of a ruddy, rown colour; and Flanders glue is held the next after he Engliſh.

Glue is made of the ſkins of all kinds of beaſts; as oxen, ows, calves, ſheep, and others. The older the beaſt is, he better is the glue made of its hide. Indeed it is rare ney uſe whole ſkins for this purpoſe, thoſe being applied better uſe; but they make uſe of the ſhavings, parings, r ſcraps thereof; ſometimes they make it of the feet, news, and nerves, of beaſts.

hat made of whole ſkins is the beſt, and that of ſinews, c. the worſt: hence chiefly ariſes the difference of lues, and the advantage of the Engliſh and Flemiſh lues; for as Engliſh tanners generally make the glue emſelves, they are not ſparing of the parings of the ins, which they never ſell: whereas, in France, the ue-makers being a peculiar kind of manufacturers, and ving no parings but what they buy, make uſe chiefly ſinews, feet, &c.

he beſt glue is that which is oldeſt: the ſureſt teſt of odneſs, is to lay a piece to ſteep three or four days in ater; if it ſwell conſiderably without melting, and, hen taken out, reſume its antient dryneſs, it is excelnt.

GLUE, is a ſort of the glue made of a nervous and muaginous parts of a large fiſh, found chiefly in the Ruſan ſeas.

heſe parts being boiled, bear a near reſemblance to that ſcid matter found on the ſkins of cod-fiſh: when boiled the conſiſtence of a gelly, they ſpread it on a leaf of per, and form it into cakes; in which ſtate it is ſent to ngland.

iſh glue is of conſiderable uſe in medicine, and ſeveral her arts; where it is better known under the names of ng glaſs, and ichthyocolla. See *Ichthyocolla*.

YCYRRHIZA. See *Liquorice*.

OMON, in aſtronomy, denotes an inſtrument, or apratus, for meaſuring the meridian altitudes and declinaons of the ſun and ſtars.

hoſe converſant in obſervations prefer the gnomon, by me called the aſtronomical gnomon, to the ſmaller quaants; both as more accurate, eaſier made, and more ſily applied. See *Quadrant*.

ccordingly, both antients and moderns have made uſe gnomons for the making of their conſiderable obſervaons. Ulugh Beigh, King of Parthia, uſed a gnomon, the year 1437, which was 180 Roman feet high: that ected by Ignatius Dantes, in the church of St. Petrous at Bologna, in the year 1576, was 67 feet high; d M. Caſſini erected another 20 feet high in the ſame urch, in the year 1655.

A. A great city and ſea-port of the Hither India, in ia, ſituated in 73 deg. 20 min. of E. lon. and 15 deg. min. of N. lat. on the Malabar coaſt, in the kingdom Decan, or Viſiapour, the capital of the Portugueſe ſetments in India. See *India*.

AT. An animal ſo well known as to need no deſcripon.

he goats of Barbary, and the Indies, are eſteemed the oſt beautiful of thoſe called common goats; and the ce of the beautiful goats ſeen in Europe, particularly England and Holland, comes from thence.

ſides the fleſh, milk, and cheeſe, afforded by this ani-, there are alſo three pretty conſiderable articles in trade belonging to it, which are its ſkin, its tallow, and its hair.

The ſkin ſerves for Morocco leather, and ſometimes for parchment, by which the real chamoiſis is frequently counterfeited. Its tallow may be uſed for candles, as alſo by curriers for the dreſſing of their leather; and its hair for the manufacture of ſeveral ſtuffs, ſuch as camblets, pluſhes, and others; as alſo for making of perukes.

The greater part of goats-hair met with in Europe, is brought from the Levant. The Engliſh, Dutch, and French trade conſiderably in it; and the Flemmings, particularly thoſe of Bruſſels, employ great quantities of it for the making of camblets, which undoubtedly are the moſt beautiful in Europe.

The ſpun-goat hair of Angora is moſt in eſteem; though that of Beibazar is much more white, becauſe ſoaped on the ſpot, to give it that white luſtre which otherwiſe gives no augmentation to its quality.

There is not a merchandiſe more difficult to be known than ſpun goat-hair, either upon account of its different qualities or price; that of Angora being at leaſt of twelve ſorts, and that of Beibazar of ſeven or eight; which always augment in fineneſs and price, from the coarſeſt to the fineſt. See *Hair*.

GOBELINS. A celebrated manufactory, eſtabliſhed at Paris, in the Fauxburg St. Marcel, for the making of tapeſtry, and other furniture, for the uſe of the crown. See *Tapeſtry*.

The houſe where this manufacture is carried on, was built by two brothers, Giles and John Gobelins, both excellent dyers, and the firſt who brought to Paris the ſecret of dying that beautiful ſcarlet colour ſtill known by their name, as well as the little river Bievre, on whoſe banks they fixed their dye-houſe, and which is now known by no other name than that of the river of the Gobelins: though, before the year 1667, it was called *Gobelin's folly*, and then changed its name into that of Hotel Royal des Gobelins, in conſequence of an edict of Lewis XIV. Monſieur Colbert having re-eſtabliſhed, and with new magnificence enriched and completed the King's palaces, particularly the Louvre and Tuilleries, began to think of making furniture ſuitable to the grandeur of thoſe buildings. With this view he called together all the ableſt workmen in the ſeveral arts and manufactures throughout the kingdom; particularly painters, tapeſtry-makers, ſculptors, goldſmiths, and eboniſts, by ſplendid offers, penſions, and privileges: he alſo called others from foreign nations; and, to render the intended eſtabliſhment more firm and durable, brought the King to purchaſe the Gobelins for them to work in; and drew up a ſyſtem of laws, or policy, in ſeventeen articles.

By theſe it was provided, that the new manufactory ſhould be under the adminiſtration of the ſuperintendant of arts, and the King's buildings: that the ordinary maſters thereof ſhould take cogniſance of all actions, or proceſſes, brought againſt any of the perſons in the ſaid manufactory, their ſervants, and dependants; and that no other tapeſtry-work ſhould be imported from any other country.

The Gobelins has ever ſince remained the firſt manufactory of this kind in the world; the quantity of the fineſt and nobleſt works that have been produced by it, and the number of the beſt workmen bred up therein, being incredible: ſo that, in effect, the preſent flouriſhing condition of the arts and manufactures of France, is in a great meaſure owing thereto.

Tapeſtry-work in particular is their glory. During the ſuperintendance of M. Colbert, and his ſucceſſor M. de Louvois, the making of tapeſtry is ſaid to have been practiſed to a degree of perfection, ſcarce inferior to what was antiently done by the Engliſh and Flemiſh: the battles of Alexander, the four ſeaſons, the four elements, the King's palaces, and a ſeries of the principal actions of the life of Lewis XIV. from the time of his marriage to the firſt conqueſt of Franche Comte, done from the deſigns of M. le Brun, director of the manufactory of Gobelins, being maſter-pieces in their kind.

GOESMON, or *Gouemon*. A kind of ſea-herb, otherwiſe called varech. See *Varech*.

GOES. A port-town of the United Provinces, capital of the iſland of S. Beveland, in the province of Zealand, ſituated in 3 deg. 45 min. of E. lon. and 51 deg. 30 min. of N. lat. 10 miles E. of Middleburg, and 13 miles W. of Bergen-op-Zoom.

GOLD. A yellow metal; the heavieſt, pureſt, moſt ductile, and ſhining, and on thoſe accounts the moſt valuable of all metals. See *Metal*.

The chemiſts call gold *ſol*, the ſun, to denote its pre-eminence over other metals, which are called by the names of the planets: its ſymbol or character is ☉, which in their hieroglyphical way of writing denotes perfection, ſimplicity, and ſolidity.

The weight of gold is to that of water, as 19636 to 1000. A cubic inch of pure gold, weighs 12 oz. 2 dr. 52 gr. and the cubic inch of ſilver 6 oz. 5 dr. 28 gr. the pound weight, or 12 oz. Troy, of gold, being divided into 24 caracts.

The value of gold is to that of ſilver, as 14 to 1; but antiently it was only as 12 to 1. Indeed this proportion varies, as gold is more or leſs plentiful: for Suetonius relates, that Cæſar brought ſuch a quantity of gold to Rome, that the pound of gold was only worth ſeven pounds and a half of ſilver. Standard gold is worth 44 l. 10 s. ſterling the pound weight; ſtandard ſilver is worth 3 l. the pound, or 5 s. the ounce. See *Coin*, and *Money*.

The firſt characteriſtic, or property of gold, is, that it is the heavieſt of all bodies: ſo that whoever would make gold, muſt be able to add to the weight of other matters, and make them equiponderate with gold.

In every maſs of matter, therefore, heavier than mercury, there muſt of neceſſity be a ſhare of gold; there being no body in nature of intermediate gravity, that is, no body whoſe gravity is to that of gold, more than 14 to 19. See *Mercury*.

Its ſecond character is, that of all known bodies it is the moſt ductile and malleable; and of all bodies its parts have the greateſt degree of attraction, or cohere with the greateſt force. Gold-beaters and wire-drawers furniſh proofs of this property; for they reduce gold into leaves, or lamella, inconceivably thin, yet without leaving the leaſt aperture or chaſm viſible to the beſt microſcope, or even pervious to the light.

This tenacity, or coheſive force of gold, depends altogether on its being free from ſulphur; for mix but a ſingle grain of common ſulphur with one thouſand times the weight of gold, and the maſs ceaſes to be malleable. See *Sulphur*.

The third character of gold is its fixedneſs in the fire; in which it exceeds all other bodies. This property ſeems to reſult from the homogeneity and equality of its parts, which equally aid and ſupport each other, and have equal pores or interſtices through which the fiery corpuſcles find an eaſy paſſage. The Prince of Mirandola, Mr. Boyle, and other chemiſts, furniſh divers experiments to illuſtrate this wonderful fixity; for, after laying a quantity of gold two months in the intenſeſt heat imaginable, it is taken out without any diminution of weight.

Its fourth character is, not to be diſſoluble by any menſtruum in nature, except aqua regia and mercury. The baſis of aqua regia is ſea-ſalt, which is the only known ſalt that has any effect on gold; but this ſalt has its effect, in what form or manner ſoever applied, whether as a fluid or a ſolid, in ſubſtance or in ſpirit.

The fifth character is, that it readily and ſpontaneouſly, as by ſome magnetic virtue, attracts and abſorbs mercury. It may be added, that as ſoon as the mercury enters the gold, the metal becomes ſoft, like a paſte.

The ſixth character is, that it withſtands the violence both of lead and antimony; that is, being fuſed in the coppel along with either of thoſe matters, it does not diſſipate, and fly off with them in fume, but remains fixed and unchanged. All other metals, except gold, and ſilver melted with lead, periſh with it, and evaporate by fire; and in antimony, all other metals, except gold, even ſilver itſelf, undergo the ſame fate. Thus, if a maſs, conſiſting of gold, ſilver, ſtones, and copper, be fuſed together with antimony, the ſeveral matters become ſeparated, and all but the gold riſes to the ſurface in form of a ſcoria, and is blown off with bellows; but the gold remains behind, much purified, as having loſt all its heterogeneous parts along with the other metals: and hence antimony is uſed as the teſt of gold.

The ſeventh character is, that of all bodies it is the ſimpleſt, the primary elements being here excepted. By ſimple is meant, that whoſe minuteſt part has all the phyſical properties of the whole maſs. Thus, if a grain of gold be diſſolved in aqua regia, and a ſingle drop of the ſolution be taken, a quantity of gold may be ſeparated therefrom, which ſhall only be the millionth part of the grain, and yet have all the characters of gold; or, if a grain of gold is fuſed with a large maſs of ſilver, and mixed together, ſo that the gold becomes equally diffuſed through the whole maſs, there will be found in every particle of the maſs a particle of perfect gold. Accordingly, diſſolve any part of the mixture in aqua fortis, and a quantity of gold will precipitate to the bottom, bearing the ſame proportion to the grain, that the part diſſolved did to the whole maſs; on which principle depends the art of aſſaying. See *Aſſay*.

All the known parts of the earth afford this precious metal, though with a deal of difference in point of purity and abundance. Europe, ſo fertile in other reſpects, comes ſhort of all other quarters in gold. America furniſhes the moſt, particularly the mines of Peru and Chili. That of Aſia is eſteemed the fineſt, particularly that of Menaricabo in the Eaſt Indies: though the Spaniards affirm, that they get gold out of ſome of their Peruvian mines 23 caracts fine before it is purified; and the gold of Axima, on the coaſt of Africa, is found from 22 to 23 caracts.

Glauber, an eminent chemiſt, holds that there is no any ſand, or ſtone, but gold may be procured from lime-ſtone only excepted: the misfortune is, that the expence of ſeparating it much ſurmounts the profits.

Gold is chiefly found in mines: though there is ſome alſo found in the ſand, and mud of rivers and torrents, particularly in Guinea; which laſt is in form of a fine duſt, and called gold-duſt. Glauber ſays, that there is a third ſort of gold, ſcarce found any where but in the drains of the mountains of Chili; which is ſeparated from the earth by waſhing; whence the places where it is found, or ſeparated, are called lavaderos.

This earth is uſually reddiſh, and very fine; at about 20 feet deep, it is mixed with grains of large duſt; and from hence commences the ſtratum, or bed of gold. Between are banks of ſoft blueiſh ſtone, mixed with yellow threads, which yet are not gold, but only pyrites or marcaſite of gold. When the miners have diſcovered any of this earth, they endeavour to bring rivulets to it, which in thoſe mountains are very frequent; in order, by force thereof, to tear off the upper earth, and lay the ſtratum bare. This they forward by digging with ſpades, and, as ſoon as the golden earth is uncovered, they turn off the water; when they dig up the ſoil by force of arms, and, loading it on mules, carry it to the lavaderos, which are a ſort of baſons of water; where the earth undergoes divers repeated lotions, in different waters, the earthy and impure part is all ſeparated and carried off with the ſtream, and the gold left at bottom. This method of getting gold is immenſely gainful; the expence being but trifling, compared with thoſe accruing in the common way, by machines, fire, and quickſilver. The richeſt of theſe lavaderos, is that of De l'Eſtancia del Rey, 12 leagues from the Conception, a port of the South Sea. But Thuringia, and ſome other places about the Rhine, are the only places in Europe where gold is got in this manner.

The gold of mines is of two kinds; the one in pieces, or grains, of various forms and weights. Of this ſort, among the ſpecimens ſent by Columbus to Spain, to let them ſee the richneſs of his diſcovery, there were ſome of 18 oz. weight; and the relations of those days aſſure us, that in 1502 there were others found of 32 lb. weight.

The other kind of gold is dug up in ſtoney glebes,

s what they call the mineral, or ore of gold. Theſe lebes are of various colours, and uſually 150 or 160 athom deep. Along with the gold they uſually contain ome other mineral matter, as antimony, vitriol, ſulphur, opper, or ſilver, particularly the laſt; without ſome f which it is ſcarce ever found.

Manner of ſeparating gold. They firſt break the metal- ine ſtone with iron mallets, pretty ſmall; then carry it o the mills, where it is ground into a very fine powder, nd laſtly paſs it through ſeveral braſs-wire ſieves, one af- er another, the laſt as fine as any ſilk ſieve.

The powder, thus prepared, is laid in wooden troughs, with a proper quantity of mercury and water, and there eft to knead and ſaturate in the ſun and air for twice 24 hours. After this the water, with the recrementitious earth, is drove out of the tub by means of other hot waters poured thereon. This done, there remains nothing but maſs of mercury, with all the gold that was in the ore. The mercury is ſeparated from it by diſtillation in large alembics. The gold, in this ſtate, is called *virgin gold*; as well as that found in the ſand of the rivers, or that in grains in the mines, in regard none of them have paſſed the fire. After this, they uſually fuſe it in crucibles, and caſt it into plates or ingots.

Manner of refining gold. There are three principal man- ners of refining gold; the firſt with antimony, the ſecond with ſublimate, and the third with aqua fortis. See *Re- fining*.

Beſides theſe three, there are other methods of refining gold; particularly that called cupellation, which is per- formed with lead and aſhes; and that called cæmenta- tion, by means of a compoſition of brick-duſt, common ſalt, ſal ammoniac, ſal gemma, and urine.

The aſſaying of gold is performed with the touchſtone, but more ſecurely by fire. See *Aſſaying*.

By the ſtatute of the 15th of Charles II. it was enacted, That it ſhould be lawful to export out of any port of England or Wales, in which there is a cuſtomer or col- lector, or out of Berwick, all foreign coin, or bullion, of gold or ſilver, firſt making entry thereof in the cuſtom- houſe, without paying duty. See *Bullion*.

And, by the ſtatute of the 1ſt of William and Mary, it was alſo enacted, That all the gold and ſilver that ſhould be extracted by the art of melting and refining of metals, and otherwiſe improving of them and their ores, ſhould be employed for no other uſe but the increaſe of monies; and the place for the diſpoſal thereof ſhould be their Ma- jeſties mint within the Tower of London, where they were to receive the full value for their gold and ſilver ſo extracted. See *Coinage*.

When gold and ſilver aſſumed the character and form of money, both theſe metals had affixed to them a diſtinct and determinate value: and though, in former ages, the proportion between gold and ſilver was ſo ſettled, that every ounce of gold was nearly equivalent to 12 of ſilver; yet afterwards, when America was diſcovered, gold quickly came to be in ſo great eſteem, that the ounce was reckoned nearly equal in value to 15 ounces of ſilver. This, we muſt certainly be convinced, could be owing to nothing, but that the ſilver mines at that time yielded great quantities of ore. But as this regulation was founded merely on the greater or leſſer ſcarcity of one of theſe two metals, the preſent proportion of 1 ounce to 15, does not ſeem altogether ſo well adjuſted as might be wiſhed; becauſe, conſidering the preſent ſcarcity of ſilver, which is owing to the vaſt ſums of that coin carried to the Eaſt Indies, the prevailing cuſtom lately introduced, of work- ing ſuch great quantities of ſilver into plate, and to the failing of the mines, which yield it not now in ſuch plenty as they did at firſt, the price of gold ſeems to be raiſed too high; and it were to be wiſhed it might gradually be brought back to its juſt proportion.

And becauſe the equality between gold and ſilver being once exactly adjuſted, according to this proportion, all other inferior ſorts of money, reduced to the ſame ſtan- dard, would be ſubjected to the ſame rule: therefore, by bringing down the price of gold to its juſt compara- tive value, many inconveniencies would be avoided; for it is moſt evident, that it is not poſſible to neglect this proportion, but the certain and ſudden loſs of the one or other of the two ſpecies will be the conſequence; ſince it is plain, that either raiſed in the extrinſic value, the other will be converted into plate, or carried out of the king- dom.

Moreover, whether the diſproportion ſuppoſed to be in- troduced into the ſyſtem of money affect the gold or ſil- ver coin, in either caſe the kingdom will ſuffer alike: to avoid which theſe two metals ſhould be regulated in their proportion, according to that ſyſtem which ought to ſerve as a conſtant and univerſal rule to all, and is the general practice of the kingdoms of Europe; that is, to fix un- alterably the proportion between gold and ſilver, taking the meaſure thereof with reſpect to more or leſs from the moſt conſiderable parts of Europe; and indeed ſeveral kingdoms have already taken thoſe proper methods to pre- vent the ſcarcity of ſilver.

In Europe the principal gold mines are at Chremnitz, and ſome other places, in Hungary; the former of which has been worked 900 years, being ſeveral miles long, and 160 fathoms deep.

In Aſia, the chief places where gold is found in any quan- tities, are Achem, the capital city of Sumatra; which is uſed as a commodity, inſtead of money or coin; it being the chief return of goods carried thither for ſale: Pegu, from whence it is brought, and ſold to the merchants of Achem: Cochinchina, China, and Japan; but the Chi- neſe ſell it for ſilver: the Philippine iſlands, particularly near Manilla; and the iſland of Borneo, where they ſift it out of the ſands of the rivers, in ſearching for diamonds.

In Africa, the principal gold mines are along the coaſt of Guinea; which are very rich and numerous. See *Guinea*.

In America, the chief mines of gold are in the ſouth part of Peru, near the frontiers of Chili; where the gold- miners pay only 1-20th part to the King; though the ſilver-miners pay 1-5th, becauſe the adventure of the former is much more precarious than the latter. But the richeſt of theſe gold mines are in Brazil, and belong to the King of Portugal. See *Portugal*, and *Spain*.

All gold and ſilver is properly a commodity, particularly in Holland: for as all bills of exchange above ſuch a ſum are payable in bank, where the ſpecie is ſuppoſed to lie, to anſwer the whole demand; and there is money of a baſe alloy, with which all ſmall ſums are payable, and the neceſſaries for human life bought, as alſo moſt of the commodities bought and ſold; therefore people make it a trade to buy gold and ſilver, and keep it for a market; ſo that it has ſeldom any determinate price.

Upon the whole; the importation of gold and ſilver is no longer an advantage to Great Britain, unleſs ſhe can have an over-ballance in the general trade of the world to anſwer it; and, notwithſtanding all laws that can be made, if the Britiſh nation owes a ballance in its general trade, the gold and ſilver of the nation muſt go to pay the ballance: ſo that it ſignifies nothing to import it in foreign ſpecie, if ſhe muſt pay for it in her own coin to the man who will run the riſk of her laws; for, in Spain and Portugal, it is death by the law to ſhip off gold or ſilver; and yet they are daily exported, particularly to England, where, in three years time, there have been coined at the Tower of London 23,719 lb. 9 oz. of gold; the value of which in tale was 1,055,528 l. 17 s. 6 d. ex- cluſive of what gold was re-exported to China, and other countries.

Burniſhed GOLD, is that ſmoothened, or poliſhed with a ſteel inſtrument, called a burniſher, if it be wrought gold, or gilding on metal; or with a wolf's tooth, if it be gild- ing in water.

Gold Coin, or *Species of* GOLD. See *Coin*.

Cloth of GOLD. See *Cloth*.

Fine or *pure* GOLD, is that purged by fire of all its impuri- ties, and all alloy. The moderns frequently call it gold of 24 carats; but, in reality, there is no ſuch thing as gold ſo very pure; and there is always wanting at leaſt a quarter of a carat. Gold of 22 carats has one part of ſilver, and another of copper; that of 23 carats has half a part, that is, a 24th of each. See *Carat*, and *Alloy*.

Bouteroue maintains, that the electrum of the antients was gold of 19 carats, or four parts gold, and a fifth ſil-

GOESMON, or *Gouemon*. A kind of ſea-herb, otherwiſe called varech. See *Varech*.

GOES. A port-town of the United Provinces, capital of the iſland of S. Beveland, in the province of Zealand, ſituated in 3 deg. 45 min. of E. lon. and 51 deg. 30 min. of N. lat. 10 miles E. of Middleburg, and 13 miles W. of Bergen-op-Zoom.

GOLD. A yellow metal; the heavieſt, pureſt, moſt ductile, and ſhining; and on thoſe accounts the moſt valuable of all metals. See *Metal*.

The chemiſts call gold *ſol*, the ſun, to denote its pre-eminence over other metals, which are called by the names of the planets: its ſymbol or character is ☉, which in their hieroglyphical way of writing denotes perfection, ſimplicity, and ſolidity.

The weight of gold is to that of water, as 19636 to 1000. A cubic inch of pure gold, weighs 12 oz. 2 dr. 52 gr. and the cubic inch of ſilver 6 oz. 5 dr. 28 gr. the pound weight, or 12 oz. Troy, of gold, being divided into 24 caracts.

The value of gold is to that of ſilver, as 14 to 1; but antiently it was only as 12 to 1. Indeed this proportion varies, as gold is more or leſs plentiful: for Suetonius relates, that Cæſar brought ſuch a quantity of gold to Rome, that the pound of gold was only worth ſeven pounds and a half of ſilver. Standard gold is worth 44 l. 10 s. ſterling the pound weight; ſtandard ſilver is worth 3 l. the pound, or 5 s. the ounce. See *Coin*, and *Money*.

The firſt characteriſtic, or property of gold, is, that it is the heavieſt of all bodies: ſo that whoever would make gold, muſt be able to add to the weight of other matters, and make them equiponderate with gold.

In every maſs of matter, therefore, heavier than mercury, there muſt of neceſſity be a ſhare of gold; there being no body in nature of intermediate gravity, that is, no body whoſe gravity is to that of gold, more than 14 to 19. See *Mercury*.

Its ſecond character is, that of all known bodies it is the moſt ductile and malleable; and of all bodies its parts have the greateſt degree of attraction, or cohere with the greateſt force. Gold-beaters and wire-drawers furniſh proofs of this property; for they reduce gold into leaves, or lamella, inconceivably thin, yet without leaving the leaſt aperture or chaſm viſible to the beſt microſcope, or even pervious to the light.

This tenacity, or coheſive force of gold, depends altogether on its being free from ſulphur; for mix but a ſingle grain of common ſulphur with one thouſand times the weight of gold, and the maſs ceaſes to be malleable. See *Sulphur*.

The third character of gold is its fixedneſs in the fire; in which it exceeds all other bodies. This property ſeems to reſult from the homogeneity and equality of its parts, which equally aid and ſupport each other, and have equal pores or interſtices through which the fiery corpuſcles find an eaſy paſſage. The Prince of Mirandola, Mr. Boyle, and other chemiſts, furniſh divers experiments to illuſtrate this wonderful fixity; for, after laying a quantity of gold two months in the intenſeſt heat imaginable, it is taken out without any diminution of weight.

Its fourth character is, not to be diſſoluble by any menſtruum in nature, except aqua regia and mercury. The baſis of aqua regia is ſea-ſalt, which is the only known ſalt that has any effect on gold; but this ſalt has its effect, in what form or manner ſoever applied, whether as a fluid or a ſolid, in ſubſtance or in ſpirit.

The fifth character is, that it readily and ſpontaneouſly, as by ſome magnetic virtue, attracts and abſorbs mercury. It may be added, that as ſoon as the mercury enters the gold, the metal becomes ſoft, like a paſte.

The ſixth character is, that it withſtands the violence both of lead and antimony; that is, being fuſed in the coppel along with either of thoſe matters, it does not diſſipate, and fly off with them in fume, but remains fixed and unchanged. All other metals, except gold, and ſilver melted with lead, periſh with it, and evaporate by fire; and in antimony, all other metals, except gold, even ſilver itſelf, undergo the ſame fate. Thus, if a maſs, conſiſting of gold, ſilver, ſtones, and copper, be fuſed together with antimony, the ſeveral matters become ſeparated, and all but the gold riſes to the ſurface in form of a ſcoria, and is blown off with bellows; but the gold remains behind, much purified, as having loſt all its heterogeneous parts along with the other metals: and hence antimony is uſed as the teſt of gold.

The ſeventh character is, that of all bodies it is the ſimpleſt, the primary elements being here excepted. By ſimple is meant, that whoſe minuteſt part has all the phyſical properties of the whole maſs. Thus, if a grain of gold be diſſolved in aqua regia, and a ſingle drop of the ſolution be taken, a quantity of gold may be ſeparated therefrom, which ſhall only be the millionth part of the grain, and yet have all the characters of gold; or, if a grain of gold is fuſed with a large maſs of ſilver, and mixed together, ſo that the gold becomes equally diffuſed through the whole maſs, there will be found in every particle of the maſs a particle of perfect gold. Accordingly, diſſolve any part of the mixture in aqua fortis, and a quantity of gold will precipitate to the bottom, bearing the ſame proportion to the grain, that the part diſſolved did to the whole maſs; on which principle depends the art of aſſaying. See *Aſſay*.

All the known parts of the earth afford this precious metal, though with a deal of difference in point of purity and abundance. Europe, ſo fertile in other reſpects, comes ſhort of all other quarters in gold. America furniſhes the moſt, particularly the mines of Peru and Chili. That of Aſia is eſteemed the fineſt, particularly that of Menaricabo in the Eaſt Indies: though the Spaniards affirm, that they get gold out of ſome of their Peruvian mines 23 caracts fine before it is purified; and the gold of Axima, on the coaſt of Africa, is found from 22 to 23 caracts.

Glauber, an eminent chemiſt, holds that there is no any ſand, or ſtone, but gold may be procured from lime-ſtone only excepted: the misfortune is, that the expence of ſeparating it much ſurmounts the profits.

Gold is chiefly found in mines: though there is ſome alſo found in the ſand, and mud of rivers and torrents, particularly in Guinea; which laſt is in form of a fine duſt, and called gold-duſt. Glauber ſays, that there is a third ſort of gold, ſcarce found any where but in the drains of the mountains of Chili; which is ſeparated from the earth by waſhing; whence the places where it is found, or ſeparated, are called lavaderos.

This earth is uſually reddiſh, and very fine; at about 20 feet deep, it is mixed with grains of large duſt; and from hence commences the ſtratum, or bed of gold. Between are banks of ſoft blueiſh ſtone, mixed with yellow threads, which yet are not gold, but only pyrites or marcaſite of gold. When the miners have diſcovered any of this earth, they endeavour to bring rivulets to which in thoſe mountains are very frequent; in order, by force thereof, to tear off the upper earth, and lay the ſtratum bare. This they forward by digging with ſpades, and, as ſoon as the golden earth is uncovered, they turn off the water; when they dig up the ſoil by force of arms, and, loading it on mules, carry it to the lavaderos, or a ſort of baſons of water; where the earth undergoes divers repeated lotions, in different waters, the earthy and impure part is all ſeparated and carried off with the ſtream, and the gold left at bottom. This method of getting gold is immenſely gainful; the expence being but trifling, compared with thoſe accruing in the common way, by machines, fire, and quickſilver. The richeſt of theſe lavaderos, is that of De l'Eſtancia del Rey, 12 leagues from the Conception, a port of the South Sea. But Thuringia, and ſome other places about the Rhine, are the only places in Europe where gold is got in this manner.

The gold of mines is of two kinds; the one in pieces, or grains, of various forms and weights. Of this ſort, among the ſpecimens ſent by Columbus into Spain, to let them ſee the richneſs of his diſcovery, there were ſome of 18 oz. weight; and the relations of those days aſſure us, that in 1502 there were others found of 32 lb. weight.

The other kind of gold is dug up in ſtoney glebes,

s what they call the mineral, or ore of gold. Theſe glebes are of various colours, and uſually 150 or 160 fathom deep. Along with the gold they uſually contain ſome other mineral matter, as antimony, vitriol, ſulphur, copper, or ſilver, particularly the laſt; without ſome of which it is ſcarce ever found.

Manner of ſeparating gold. They firſt break the metalline ſtone with iron mallets, pretty ſmall; then carry it to the mills, where it is ground into a very fine powder, and laſtly paſs it through ſeveral braſs-wire ſieves, one after another, the laſt as fine as any ſilk ſieve.

The powder, thus prepared, is laid in wooden troughs, with a proper quantity of mercury and water, and there left to knead and ſaturate in the ſun and air for twice 24 hours. After this the water, with the recrementitious earth, is drove out of the tub by means of other hot waters poured thereon. This done, there remains nothing but a maſs of mercury, with all the gold that was in the ore. The mercury is ſeparated from it by diſtillation in large alembics. The gold, in this ſtate, is called *virgin gold*; as well as that found in the ſand of the rivers, or that in grains in the mines, in regard none of them have paſſed the fire. After this, they uſually fuſe it in crucibles, and caſt it into plates or ingots.

Manner of refining gold. There are three principal manners of refining gold; the firſt with antimony, the ſecond with ſublimate, and the third with aqua fortis. See *Refining*.

Beſides theſe three, there are other methods of refining gold; particularly that called cupellation, which is performed with lead and aſhes; and that called cæmentation, by means of a compoſition of brick-duſt, common ſalt, ſal ammoniac, ſal gemma, and urine.

The aſſaying of gold is performed with the touchſtone, but more ſecurely by fire. See *Aſſaying*.

By the ſtatute of the 15th of Charles II. it was enacted, That it ſhould be lawful to export out of any port of England or Wales, in which there is a cuſtomer or collector, or out of Berwick, all foreign coin, or bullion, of gold or ſilver, firſt making entry thereof in the cuſtom-houſe, without paying duty. See *Bullion*.

And, by the ſtatute of the 1ſt of William and Mary, it was alſo enacted, That all the gold and ſilver that ſhould be extracted by the art of melting and refining of metals, and otherwiſe improving of them and their ores, ſhould be employed for no other uſe but the increaſe of monies; and the place for the diſpoſal thereof ſhould be their Majeſties mint within the Tower of London, where they were to receive the full value for their gold and ſilver ſo extracted. See *Coinage*.

When gold and ſilver aſſumed the character and form of money, both theſe metals had affixed to them a diſtinct and determinate value: and though, in former ages, the proportion between gold and ſilver was ſo ſettled, that every ounce of gold was nearly equivalent to 12 of ſilver; yet afterwards, when America was diſcovered, gold quickly came to be in ſo great eſteem, that the ounce was reckoned nearly equal in value to 15 ounces of ſilver. This, we muſt certainly be convinced, could be owing to nothing, but that the ſilver mines at that time yielded great quantities of ore. But as this regulation was founded merely on the greater or leſſer ſcarcity of one of theſe two metals, the preſent proportion of 1 ounce to 15, does not ſeem altogether ſo well adjuſted as might be wiſhed; becauſe, conſidering the preſent ſcarcity of ſilver, which is owing to the vaſt ſums of that coin carried to the Eaſt Indies, the prevailing cuſtom lately introduced, of working ſuch great quantities of ſilver into plate, and to the failing of the mines, which yield it not now in ſuch plenty as they did at firſt, the price of gold ſeems to be raiſed too high; and it were to be wiſhed it might gradually be brought back to its juſt proportion.

And becauſe the equality between gold and ſilver being once exactly adjuſted, according to this proportion, all other inferior ſorts of money, reduced to the ſame ſtandard, would be ſubjected to the ſame rule: therefore, by bringing down the price of gold to its juſt comparative value, many inconveniencies would be avoided; for it is moſt evident, that it is not poſſible to neglect this proportion, but the certain and ſudden loſs of the one or other of the two ſpecies will be the conſequence; ſince it is plain, that either raiſed in the extrinſic value, the other will be converted into plate, or carried out of the kingdom.

Moreover, whether the diſproportion ſuppoſed to be introduced into the ſyſtem of money affect the gold or ſilver coin, in either caſe the kingdom will ſuffer alike: to avoid which theſe two metals ſhould be regulated in their proportion, according to that ſyſtem which ought to ſerve as a conſtant and univerſal rule to all, and is the general practice of the kingdoms of Europe; that is, to fix unalterably the proportion between gold and ſilver, taking the meaſure thereof with reſpect to more or leſs from the moſt conſiderable parts of Europe; and indeed ſeveral kingdoms have already taken thoſe proper methods to prevent the ſcarcity of ſilver.

In Europe the principal gold mines are at Chremnitz, and ſome other places, in Hungary; the former of which has been worked 900 years, being ſeveral miles long, and 160 fathoms deep.

In Aſia, the chief places where gold is found in any quantities, are Achem, the capital city of Sumatra; which is uſed as a commodity, inſtead of money or coin; it being the chief return of goods carried thither for ſale: Pegu, from whence it is brought, and ſold to the merchants of Achem: Cochinchina, China, and Japan; but the Chineſe ſell it for ſilver: the Philippine iſlands, particularly near Manilla; and the iſland of Borneo, where they ſift it out of the ſands of the rivers, in ſearching for diamonds.

In Africa, the principal gold mines are along the coaſt of Guinea; which are very rich and numerous. See *Guinea*.

In America, the chief mines of gold are in the ſouth part of Peru, near the frontiers of Chili; where the gold-miners pay only 1-20th part to the King; though the ſilver-miners pay 1-5th, becauſe the adventure of the former is much more precarious than the latter. But the richeſt of theſe gold mines are in Brazil, and belong to the King of Portugal. See *Portugal*, and *Spain*.

All gold and ſilver is properly a commodity, particularly in Holland: for as all bills of exchange above ſuch a ſum are payable in bank, where the ſpecie is ſuppoſed to lie, to anſwer the whole demand; and there is money of a baſe alloy, with which all ſmall ſums are payable, and the neceſſaries for human life bought, as alſo moſt of the commodities bought and ſold; therefore people make it a trade to buy gold and ſilver, and keep it for a market; ſo that it has ſeldom any determinate price.

Upon the whole; the importation of gold and ſilver is no longer an advantage to Great Britain, unleſs ſhe can have an over-ballance in the general trade of the world to anſwer it; and, notwithſtanding all laws that can be made, if the Britiſh nation owes a ballance in its general trade, the gold and ſilver of the nation muſt go to pay the ballance: ſo that it ſignifies nothing to import it in foreign ſpecie, if ſhe muſt pay for it in her own coin to the man who will run the riſk of her laws; for, in Spain and Portugal, it is death by the law to ſhip off gold or ſilver; and yet they are daily exported, particularly to England, where, in three years time, there have been coined at the Tower of London 23,719 lb. 9 oz. of gold; the value of which in tale was 1,055,528 l. 17 s. 6 d. excluſive of what gold was re-exported to China, and other countries.

Burniſhed GOLD, is that ſmoothened, or poliſhed with a ſteel inſtrument, called a burniſher, if it be wrought gold, or gilding on metal; or with a wolf's tooth, if it be gilding in water.

Gold Coin, or *Species of* GOLD. See *Coin*.

Cloth of GOLD. See *Cloth*.

Fine or *pure* GOLD, is that purged by fire of all its impurities, and all alloy. The moderns frequently call it gold of 24 carats; but, in reality, there is no ſuch thing as gold ſo very pure; and there is always wanting at leaſt a quarter of a carat. Gold of 22 carats has one part of ſilver, and another of copper; that of 23 carats has half a part, that is, a 24th of each. See *Carat*, and *Alloy*.

Bouteroue maintains, that the electrum of the antients was gold of 19 carats, or four parts gold, and a fifth ſil-

ver. From an ordinance of King John of France, it appears that the gold then ſtruck at Paris was of 19⅓ carats; and yet it is added, that it was the beſt and fineſt gold then known on earth. In England, at this time, the ſtandard of crown gold is 22 caracts.

GOLD *Lace*. See *Lace*.

Leaf GOLD, or *Beaten Gold*, is gold beaten with a hammer into exceeding thin leaves.

It is prodigious to ſee the fineneſs they will thus reduce a body of gold to; it being computed that an ounce may be beaten into 160 leaves, each three inches ſquare; in which ſtate it takes up more than 159,099 times its former ſpace.

This gold they beat on a block of marble, commonly black marble, about a foot ſquare, and uſually raiſed three feet high. They make uſe of three ſorts of hammers, formed like mallets, of poliſhed iron: the firſt, which weighs three or four pounds, ſerves to chaſe, or drive; the ſecond, of eleven or twelve pounds, to cloſe; and the third, which weighs fourteen or fifteen pounds, to ſtretch and finiſh.

They alſo make uſe of four moulds, of different ſizes; two of vellom, the ſmalleſt whereof conſiſts of 40 or 50 leaves, and the larger of 200; the other two, conſiſting each of 500 leaves, are made of bullocks guts, well ſcoured and prepared.

The leaves thus finiſhed, they take them out of the mould, and diſpoſe them in little paper-books, prepared with red bole, for the gold to ſtick to; each book ordinarily containing 25 gold leaves.

There are two ſizes of theſe books; 25 leaves of the ſmalleſt only weighs 5 or 6 grains, and the ſame number of the largeſt 9 or 10 grains.

It muſt be obſerved, that gold is beaten more or leſs, according to the kind or quality of the work it is intended for: that for the gold-wire drawers to gild their ingots with, is much thicker than that for gilding the frames of pictures. See *Gilding*.

Million of GOLD, is a phraſe uſed to ſignify a million of crowns. See *Crown*.

GOLD *Money*. See *Money*.

Moſaic GOLD, is gold applied in pannels on a proper ground, diſtributed into ſquares, lozenges, and other compartments; part whereof is ſhadowed to raiſe or heighten the reſt. See *Moſaic*.

Shell GOLD is that uſed by the illuminers, and to write gold letters. It is made of the parings of leaf gold, and even of the leaves themſelves, reduced into an impalpable powder, by grinding on a marble, with honey. After leaving it to infuſe for ſome time in aqua fortis, they put it in ſhells, where it ſticks: to uſe it, they dilute it with gum water, or ſoap-water.

Tun of GOLD, is a kind of money of accompt, uſed by the Dutch, and in ſome other countries, containing 100,000 florins. See *Florin*.

A hundred pounds ſterling of or in gold, is found to weigh 2 lb. 10 oz. the ſame ſum in ſilver weighs 26 lb. 4 oz. twenty-two pence, in copper farthings and halfpence, weigh 1 lb. avoirdupoiſe.

A tun of gold, at 4 l. the ounce, amounts to 96,000 l. a tun of ſilver, at 5 s. 2 d. to the ounce, to 6200 l. a pound weight of ſterling gold, is worth 48 l. an ounce is worth 4 l. the penny-weight 4 s. one grain 2 d. a pound weight of ſterling ſilver amounts to 3 l. 2 s. an ounce is worth 5 s. 2 d. the penny-weight 3 d. and ſomething more, one grain a halfpenny.

Virgin GOLD, is gold juſt as it is taken out of the mines, before it has undergone any action or preparation by fire. Such is the gold duſt, and that got by lotion in the lavaderos in Chili. It is added, that there are maſſes or lumps of pure gold found in the mines, particularly thoſe of Hungary. Accordingly, in the Emperor's collection, are ſtill preſerved ſeveral plates of gold ſaid to be thus found. Virgin gold is ſometimes very pale, and ſo ſoft that it may be moulded into any figure with the hand. It even takes an impreſſion from a ſeal, like the ſofteſt wax. To harden it, as alſo to heighten its colour, they mix emery with it.

GOLD *Wire* is a cylindrical ingot of ſilver, ſuperficially gilt, or covered with gold, at the fire, and afterwards drawn ſucceſſively through a great number of little round holes, of a wire-drawing iron, each leſs than the other, till it is ſometimes no bigger than a hair of the head.

It may be obſerved, that before the wire is reduced to this exceſſive fineneſs, it is drawn through above 140 different holes; and that each time they draw it, it is rubbed freſh over with new wax, both to facilitate its paſſage, and to prevent the ſilver's appearing through.

It is amazing to what degree of fineneſs the gold is here drawn; and yet it ſtill keeps firm together, and never ſhews the leaſt ſigns of the ſilver underneath it. See Gold *Wire*.

Gold wire flatted, is the former flatted between two rollers of poliſhed ſteel, to fit it to be ſpun on ſilk, or to be uſed as it is without ſpinning, in certain ſtuffs, lace, and embroideries.

GOLD, *in medicine and chemiſtry*. The chemiſts make ſeveral preparations of gold for medicinal uſes; as ſalts, mercuries, and tinctures of gold; but it is a point not yet well agreed on, whether gold has any real property whereby it may be of uſe in medicine.

Notwithſtanding the ſmall number of experiments wherein the medicinal efficacy of gold is founded, the alchymiſts will have it contain the radical balm of life, for the retrieving of health and youth, and the removal of all diſeaſes. Gold, according to them, contains a ſulphur friendly to nature, like that of the ſun, which animates the whole univerſe: and on this principle they have formed a thouſand airy projects for an univerſal remedy. See *Elixir*.

In effect, it is probable the Arabs and alchymiſts were only brought to attribute all theſe virtues to gold, from their perceiving certain qualities therein, which they ſuppoſed it muſt communicate to other bodies. Thus, gold being commonly ſaid to be incapable of being deſtroyed, it is hence concluded to be proper to preſerve animal matters, and defend them from putrefaction; which is juſt as reaſonable as ſome phyſicians preſcribing the blood of an aſs's ear as an appeaſing remedy, by reaſon the aſs is a very peaceable animal.

GOLD-BEATER, is a perſon who makes leaf gold, by purifying gold, and heating it when in thin plates, before he begins to hammer it, which is done between leaves made of gut, called *gold beaters leaf*.

GOLD-FINDER, is a perſon who purchaſes the ſweepings of goldſmiths ſhops, and refiners aſhes, or the rubbiſh wherein plate is ſuppoſed to have been melted. Theſe aſhes or duſt are waſhed with water from their impurities as much as poſſible; then put in a veſſel, into which quickſilver is poured, and, by conſtantly ſtirring it about, the mercury attracts whatever metal is in the duſt. When they think the quickſilver has done its office, it is taken out and waſhed, and then diſtilled from the other metals which remain at bottom: theſe are melted together in a lump, and carried to the refiner, who knows how to ſeparate them. There are but few maſters in this way, who take no apprentices, and uſe common labourers to do their work.

GOLDSMITH, or *Silverſmith*, is a perſon employed in making all manner of utenſils in thoſe rich metals, either for ornament or uſe. His work is either performed in the mould, or beat into figure by the hammer, or other engine. All works that have any ſort of ſculpture, or raiſed figures of any ſort, are caſt in moulds, and afterwards poliſhed and finiſhed. Plates or diſhes of ſilver are beat out from thin flat plates: but tankards, and other veſſels of that kind, are formed of thin plates ſoldered together; and their mouldings are beat, not caſt.

The goldſmiths of London employ ſeveral diſtinct workmen, almoſt as many as there are articles in their ſhops; for in this city there are hands that excel in every branch, and are conſtantly employed in their own way, which gives them an advantage over other nations, who employ the ſame hands in every branch of their trade. But the goldſmiths of London are generally bankers. See *Banker*.

Goldſmiths, and manufacturers in gold and ſilver. The goldſmiths of London were incorporated by King E

ward III. in the year 1327, by the name of The war-
dens and commonalty of the myſtery of goldſmiths of the
city of London; which was confirmed by Richard II.
in the year 1394; and King Edward IV. in the year
1462, not only confirmed the aforeſaid grants, but like-
wiſe conſtituted the ſociety a body politic and corporate,
to have perpetual ſucceſſion, and a common ſeal, for tran-
ſacting the company's buſineſs; and, by this grant, K. Ed-
ward inveſted the corporation with a privilege of inſpect-
ing, trying, and regulating all gold and ſilver wares, not
only in the city of London, but likewiſe in all other parts
of the kingdom; with a power to puniſh all offenders
concerned in working adulterated gold or ſilver, and a
privilege of making by-laws for their better government.
This company is governed by a prime, and three other
wardens, with 98 aſſiſtants, and a livery of 198 mem-
bers, whoſe fine on admiſſion is 20 l. They have a very
magnificent hall in Foſter-lane, to manage their affairs
in, with a very great eſtate; out of which, according to
the directions of the ſeveral benefactors, upwards of
1000 l. is annually paid to charitable uſes.

In the year 1405, a conteſt happened in the city of Lon-
don, between the companies of goldſmiths and cutlers,
concerning certain privileges challenged by the former,
of inſpecting all the gold and ſilver work made by the
latter; which, being ſtrenuouſly oppoſed by the cutlers,
occaſioned the goldſmiths to apply to parliament, to have
their right in that reſpect aſcertained: wherefore the mat-
ter in diſpute was referred by the King to the Mayor of
London; who having carefully examined into the affair,
made his report, that the cutlers had a right of working
in gold and ſilver; yet all ſuch things as were by them
made, were to be aſſayed by the goldſmiths, according
to their antient immunities.

In the year 1629, the appearance of goldmiths ſhops in
the ſouth row of Cheapſide was ſingularly beautiful, and
greatly ornamental to the Engliſh metropolis; for theſe
ſhops, in a continued courſe, extended from the old
change to Bucklerſbury, excluſive of four ſhops only of
other traders in all that ſpace, which occaſioned the privy
council to make the following order. "Foraſmuch as
his Majeſty hath received information of the unſeem-
lineſs and deformity appearing in Cheapſide, by reaſon
that divers men of mean trades have ſhops among the
goldſmiths, which diſorder it is his Majeſty's expreſs
pleaſure to have reformed; whereas, by occaſion that
Sir Heneage Finch, knight, and ſome aldermen, did
this day attend the board upon other buſineſs, and there
was the ſame time mention made alſo of the aforeſaid
deformity; it was thereupon thought fit, and accord-
ingly ordered, that the two Lord Chief Juſtices, with
ſuch other judges as they ſhould think meet to call unto
them, ſhould conſider what ſtatutes or laws there were
to inforce the goldſmiths to plant themſelves for the uſe
of their trade in Cheapſide and Lombard-ſtreet, and
the parts adjacent, and thereupon return certificate to
the board in writing, with all convenient expedition;
of which order the ſaid Lord Chief Juſtices were
thereby prayed and required to take notice, and to
perform the ſame accordingly."

However, this order has been ſo far neglected, that at
this time ſome of the principal goldſmiths of London are
notely ſcattered in ſeveral parts of the city; where they
ſeem to have incorporated the buſineſs of a banker with
the profeſſion of a goldſmith.

By the ſtatute of the 12th of William III. it was enacted,
that the cities of York, Exeter, Briſtol, Cheſter, and
Norwich, where the mints were then lately erected,
ſhould be appointed for the aſſaying and marking of
wrought plate. That in every one of thoſe cities, the gold-
ſmiths, ſilverſmiths, and plate-workers, who ſhould be free-
men of, and inhabiting within the ſaid cities, and having
ſerved an apprenticeſhip to the trade of a goldſmith, ſilver-
ſmith, and plate-worker, ſhould be incorporated a company
in each city, and ſhould be called the company of goldſmiths
in each city; which company ſhould be enabled annually to
chuſe two wardens, who ſhould continue one year; and
if any of the wardens ſhould die, or remove out of ſuch
company, the company ſhould within one month chuſe ano-
ther in his room. That no goldſmith, ſilverſmith, or
plate-worker, in the ſaid cities, ſhould make any manu-
facture of ſilver leſs in fineneſs than the ſtandard which
ſhould be appointed by law, nor ſhould put to ſale or ex-
change any plate of ſilver until ſuch plate ſhould be marked
with the worker's mark, to be expreſſed by the two firſt
letters of his ſurname, and alſo with the lion's head eraſed,
and the figure of Britannia, and with the arms of ſuch of
the cities aforeſaid wherein ſuch plate ſhould be aſſayed,
and alſo with a variable mark or letter in Roman character,
which ſhould be annually changed upon the election of
new wardens, to denote the year; upon pain that all ſuch
ſilver-plate, except ſuch things as, by reaſon of their ſmali-
neſs are not capable of receiving a touch, ſhould be for-
feited, or the value thereof; one moiety to the King, and
the other to ſuch as ſhould ſue for the ſame. That there
ſhould be an able man, experienced in aſſaying of gold
and ſilver, elected by the company of goldſmiths in each
of the ſaid cities, for whom it ſhould be lawful to detain
8 gr. from every pound troy of ſilver he ſhould aſſay,
4 gr. whereof ſhould be put into the box of diet, and the
other 4 gr. ſhould be allowed him towards his waſte and
ſpillings. That the boxes, wherein the diet of plate tried
by the aſſayer is put, ſhould be locked up with three locks,
and the keys ſhould be kept by the wardens and aſſayers;
which boxes ſhould be at the charge of each company
conveyed annually, if required by the Lord Chancellor, to
his Majeſty's royal mint at the Tower of London, and the
diet therein contained ſhould be tried as the pix of the
coin is tried; and if in any of the ſaid diets there ſhould
be found any deceit, ſuch company ſhould forfeit 50 l. to
be recovered as aforeſaid againſt ſuch company, or any
member thereof in his private capacity, to be diſpoſed of
as aforeſaid; and if any plate ſhould be touched, marked,
or allowed for good by the aſſayers, and in the ſame there
ſhould be found any deceit, ſuch aſſayer ſhould forfeit
double the value of the plate as aforeſaid.

That every perſon that ſhould be a goldſmith, ſilverſmith,
or plate-worker, and ſhould inhabit in any of the cities,
or in any other place where an aſſayer ſhould not be ap-
pointed, before he takes upon him to exerciſe any of the
ſaid trades, ſhould enter his name, mark, and place of
abode, with the wardens of ſuch company of that city
where an aſſayer is appointed; which ſhould be done by
the wardens without fee; and if any ſuch perſon ſhould
not enter his name, and mark, and place of abode, or
ſhould ſtrike any other mark, ſuch perſon ſhould forfeit
double the value of the plate ſo marked, to be recovered
and diſpoſed as aforeſaid.

That every goldſmith, ſilverſmith, and plate-worker, in-
habiting in any place where an aſſayer ſhould not be ap-
pointed, ſhould firſt fix his mark upon all his plate, ex-
cept ſuch things as, by reaſon of their ſmallneſs, are not
capable of receiving the touch, and ſhould then ſend the
ſame to ſome place where an aſſayer ſhould be appointed,
and the ſame ſhould be there aſſayed; and if it ſhould be
found to be of the fineneſs of ſtandard, it ſhould be
marked by the aſſayer, and he ſhould be paid by the
owners of ſuch plate a ſum not exceeding 6 d. for every
pound troy; and if any ſuch goldſmith ſhould work any
ſilver plate leſs in fineneſs than the ſtandard, or ſhould
put to ſale or exchange any ſilver plate, unleſs it be ſuch
things as, in reſpect of their ſmallneſs, are not capable of
receiving a touch, before ſuch plateſhould be aſſayed and
marked, every ſuch perſon ſhould forfeit the plate or the
value thereof as aforeſaid.

By the ſtatute of the 12th of George II. it was enacted,
That no goldſmith, or other perſon making or dealing in
gold or ſilver wares, in any part of England, ſhould make
any gold plate, or manufacture of gold, leſs in fineneſs than
22 carats of fine gold in every pound troy; nor any ſil-
ver plate, &c. leſs in fineneſs than 11 oz. 2 dwt. of fine
ſilver in every pound troy; nor ſell, exchange, expoſe to
ſale, or export any gold plate, &c. leſs in fineneſs than 22
carats, &c. nor any ſilver plate, &c. leſs in fineneſs than
11 oz. 2 dwt. &c. upon pain that every ſuch perſon ſhould
forfeit for every ſuch offence 10 l. and, for default of pay-
ment, the offender ſhould be commited by the court in
which judgment ſhould be given thereon, to the houſe of

correction, there to be kept to hard labour for any time not exceeding ſix months, or until payment be made of the ſaid forfeiture.

That nothing in this act ſhould extend to any jewellers works, of any gold or ſilver wherein any jewels or other ſtones were ſet, other than mourning-rings, nor to any jointed night ear-rings of gold, or ſprings of lockets.

That if any ſhopkeeper, or other perſon dealing in gold or ſilver wares, not being the maker, ſhould happen to export, ſell, or expoſe to ſale, any gold or ſilver wares worſe than the reſpective ſtandards, and ſhould diſcover the maker or perſon of whom he bought ſuch coarſe gold or ſilver wares; ſuch ſhopkeeper ſhould be exempted from any penalty for exporting, &c. ſuch coarſe gold or ſilver wares, and from any proſecution for the ſame.

That no goldſmith, &c. making or dealing in any gold or ſilver wares, ſhould ſell any gold or ſilver plate, until ſuch manufacture of gold or ſilver, being of the ſtandard aforeſaid, ſhould be marked with the mark of the maker, which ſhould be the firſt letters of his chriſtian and ſurname, and with theſe marks of the company of goldſmiths in London; the leopard's head, the lion paſſant, and a diſtinct variable mark or letter, to denote the year in which ſuch plate ſhould be made; or with the mark of the maker, and the marks appointed to be uſed by the aſſayers at York, Exeter, Briſtol, Cheſter, Norwich, or Newcaſtle upon Tyne, or plate of the ſame ſtandard, with the mark of the worker, which ſhould be the firſt letter of his chriſtian and ſurname as aforeſaid, and with theſe marks of the ſaid company; the lion's head eraſed, the figure of a woman, commonly called Britannia, and the ſaid mark or letter, to denote the year as aforeſaid; or with the mark of the worker, and the marks of one of the ſaid cities or towns; upon pain that every ſuch goldſmith, &c. ſhould forfeit the ſum of 10 l. and, for default of payment, ſhould be committed by the court in which judgment ſhould be given thereon, to the houſe of correction, to be kept to hard labour, not exceeding ſix months, or until payment of the ſaid forfeiture.

That this act ſhould not extend to oblige any of the following wares of gold or ſilver to be ſtamped by any of the companies of goldſmiths, that is to ſay, rings, collets for rings, or other jewels, chains, necklace-beads, lockets, hollow or raiſed buttons, ſleeve-buttons, thimbles, coral ſockets and bells, pipe-lighters, cranes for bottles, very ſmall book-claſps, any ſtock of garter, claſps jointed, very ſmall nutmeg-graters, rims of ſnuff-boxes, whereof tops or bottoms are made of ſtone, ſliding-pencils, toothpick-caſes, tweezer-caſes, pencil caſes, needle-caſes, any philligree-work, any ſorts of tippings or ſwages, or ſtone or ivory caſes, any mounts, ſcrews, or ſtoppers, to ſtone or glaſs bottles or phials; any ſmall or ſlight ornaments put to amber or other eggs or urns; any wrought ſeals with cornelian, or other ſtones ſet therein, or any gold or ſilver veſſel ſo richly carved or chaſed, or ſet with jewels or other ſtones, as not to admit of an aſſay to be taken of, or a mark ſtruck thereon, without damaging the ſame, or ſuch other things as, by reaſon of the ſmallneſs thereof, are not capable of receiving the marks before mentioned, and not weighing 10 dwt. of gold or ſilver each.

That if any goldſmith, &c. ſhould counterfeit any of the ſtamps of the ſaid company in London, or any of the ſtamps to be uſed in the places aforeſaid, or ſhould caſt any mark to reſemble any impreſſion to be made with a ſtamp by the ſaid company, or by the wardens or aſſayers at any of the places aforeſaid; or ſhould mark with any ſuch counterfeit ſtamp any wrought plate of gold or ſilver, or any wares of braſs, or other baſe metal, ſilvered or gilt over, and reſembling gold or ſilver; or ſhould remove from one piece of wrought plate to another, or to any veſſel of ſuch baſe metal as aforeſaid, any impreſſion made with any ſtamp of the ſaid company, or of the aſſayers at any of the places aforeſaid; or ſhould knowingly ſell or export any manufacture of gold or ſilver, with any ſuch counterfeit impreſſion thereon, or any impreſſion ſo removed as aforeſaid; every ſuch perſon ſhould forfeit 100 l. and, for default of payment, ſhould be committed to the houſe of correction, to be kept to hard labour for any time not exceeding two years, and until payment of the ſaid forfeiture.

That every manufacturer of gold or ſilver, who ſhould make any gold or ſilver plate, by this act required to be marked by the ſaid company of goldſmiths, or by the wardens or aſſayers, at the cities or places aforeſaid, ſhould ſend with every parcel of ſuch gold or ſilver, to the aſſay-office of the ſaid company, or to the ſaid wardens or aſſayers, a memorandum in writing, containing the day of the month and year, the Chriſtian and ſurname of the maker, and place of his abode, all the ſpecies in ſuch parcel of plate, and the number of each ſpecies, with the total weight of ſuch parcel; which memorandum ſhould be entered by ſome officer of the ſaid company, or by the ſaid wardens or aſſayers, in ſome of their books, and be afterwards filed; and the warden of the ſaid company, or ſuch warden or aſſayer who ſhould enter and file ſuch memorandums, ſhould monthly deliver on oath into the exciſe-office, all the memorandums by them received, or true copies thereof; and the commiſſioners of exciſe might monthly, or oftener, appoint any perſon to inſpect the books in the aſſay-offices, in order to check any account of plate chargeable with the duty; and, for every default of ſuch manufacturer of gold or ſilver, and for ſuch officer of the ſaid company, and of ſuch warden and aſſayer touching the premiſſes, he ſhould forfeit 5 l. and, for want of payment, ſhould be committed to the houſe of correction to be kept to hard labour for three months, or until payment of the ſaid forfeiture.

That no debenture ſhould be granted, nor any drawback allowed on exportation of plate or manufactures of ſilver out of the kingdom, in caſe the ſame was made ſeven years before entering the ſame for exportation.

That the ſaid wardens and commonalty, or ſuch perſon as the court of aſſiſtants ſhould appoint, might demand of every perſon bringing to the aſſay-office, belonging to the ſaid company, any parcel of wrought plate to be aſſayed and marked, ſuch prices as they ſhould think fit, ſo as the ſame did not exceed the ſeveral and reſpective prices following; for aſſaying and marking gold watch caſes or boxes, 10 d. a piece; for gold ſnuff-boxes, 15 d. a piece; for every other piece of wrought gold, weighing 3 oz. or under, 2 s. 6 d. for each piece of wrought gold weighing above 30 oz. to 50 oz. 3 s. 9 d. and ſo in proportion for greater parcels.

But if any piece of wrought plate ſhould be brought to be aſſayed, which, according to the rates above limited, ſhould not amount to 15 d. there ſhould be paid for aſſaying and marking ſuch piece of wrought gold a ſum not exceeding 15 d.

That the ſaid wardens and commonalty, &c. might demand of every perſon bringing to the ſaid aſſay-office, a piece of large ſilver, weighing 4 lb. weight troy or above, for aſſaying and marking every ſuch piece, a ſum not exceeding 5 d. and for every piece of ſuch plate weighing above 4 lb. troy, there ſhould be detained a diet not exceeding 10 gr. *per* pound troy; and that the ſaid wardens and commonalty, &c. might demand for aſſaying and marking the ſeveral ſmall wares of ſilver following; for every ſword-hilt 5 d. for every ſnuff box $3\frac{1}{2}$ d. for every watch-caſe or watch-box $2\frac{1}{2}$ d. for every knife or haft $1\frac{1}{4}$ d. for every pair of buckles $0\frac{1}{2}$ d. for every pair of tea-tongs $1\frac{1}{4}$ d. for every dozen of tea-ſpoons, or ſtainers, $3\frac{3}{4}$ d. for belt-buckles, belt-locks, runners, pendants, $2\frac{1}{2}$ d. a piece; for every orange-ſtrainer, or meg-grater, $1\frac{1}{4}$ d. for every dram-cup $0\frac{3}{4}$ d. for every zen of ſeals $3\frac{3}{4}$ d. for every pair of claſps $0\frac{3}{4}$ d. and every dozen of buttons $3\frac{3}{4}$ d.

But if any piece of ſilver ſhould be brought to the office to be aſſayed, which, according to the reſpective rates before limited, ſhould amount to the ſum of 5 d. there ſhould be paid for aſſaying and marking the ſame ſum not exceeding 5 d.

That if any perſon ſhould refuſe to pay ſuch prices as by this act required to be paid for the purpoſes aforeſaid, then any warden of the ſaid company might refuſe to ſtamp or mark all or any of the plate of ſuch perſon ſo refuſing, until ſuch prices ſhould be paid.

That the aſſayers at York, Exeter, Briſtol, Cheſter,

wich, and Newcaſtle upon Tyne, might demand the like rates for aſſaying and marking wrought plate of gold or ſilver, as the company of goldſmiths in London, and might refuſe to aſſay or mark plate for default of payment.

That in caſe the ſaid prices thereby allowed for the aſſaying and marking plate, ſhould raiſe more money than ſhould be ſufficient to defray the expences of the reſpective aſſay-offices, the overplus ſhould be applied in proſecuting offenders againſt the ſaid act; and if ſuch proſecutions ſhould not require the whole overplus, if any, the ſaid prices ſhould afterwards be leſſened in proportion by the ſaid reſpective companies of goldſmiths; and they ought to take ſo much leſs for aſſaying and marking wrought plate for the future, as would anſwer the purpoſes aforeſaid only, without bringing any profit to the ſaid companies.

That the aſſay-office of the companies of goldſmiths in London ſhould be kept open for taking in plate, from ſeven of the clock in the morning till nine the ſame morning, every working-day or hall-day; and the weigher ſhould take in the ſame, with the memorandums directed to be ſent therewith; and ſhould weigh and take an account thereof, before the ſame be aſſayed, and afterwards weigh the plate back, and deliver the ſame to the owner, or his order; and when the common aſſayers of the ſaid company, or their aſſiſtants, or any aſſayer at the cities and places above mentioned, ſhould diſcover any parcel of plate to be a coarſer allay than the ſaid reſpective ſtandards, and ſhould ſo report the ſame, after three aſſays made thereof; any warden of the company of goldſmiths in London, or any warden of the company at any of the cities or places aforeſaid, might break and deface the ſame, at any time after three days after the laſt aſſay made thereof, and not ſooner, unleſs the perſon who brought the ſame deſire it ſhould be broken, and delivered to him ſooner; and there ſhould nevertheleſs be paid for aſſaying of the ſame, ſuch rates as are before limited, as if ſuch plate ſhould have been really marked.

That all perſons who ſhould make any gold or ſilver plate in England, ſhould firſt enter their new marks, names, and places of abode, in the ſaid aſſay-office of the company of goldſmiths in London, or in the aſſay-office at the cities and places aforeſaid; which new marks ſhould be of a character different from their old marks; and their old marks ſhould be broken in the preſence of the aſſayer, on pain of forfeiting 10 l. and the further ſum of 10 l. for uſing any other mark; and, for default of payment, ſhould be committed by the court to the houſe of correction, for any time not exceeding ſix months, or until payment of the ſaid forfeitures. See *Plate*.

GOLD *and Silver Wire-drawer*, is a perſon who makes gold or ſilver wire, for ſpinning, for purle, making ſpangles, and other things, for the lace-man, who pays the drawers ſo much an ounce for their labour, and furniſhes them with the plate.

GOLD *and Silver Wire-drawers company of London*, was incorporated by letters-patent of the 21ſt of James I. the 14th of June 1623, by the ſtyle of The governor, aſſiſtants, and commonalty: but being reincorporated by charter of the 5th of William and Mary, the 16th of June 1693, the title was changed to that of The maſter, wardens, aſſiſtants, and commonalty of the art and myſtery of drawing and flatting of gold and ſilver wire, and making and ſpinning gold and ſilver thread and ſtuffs in the city of London; which fraternity conſiſts of a maſter, 2 wardens, and 18 aſſiſtants; but they have neither hall or livery.

By the ſtatute of the 10th of Queen Anne, all perſons who ſhould draw gold or ſilver into big wire were ſubjected to the laws of exciſe.

And it was enacted, That all perſons, by or for whom any wire ſhould be made, ſhould keep all the wire which ſhould not have been ſurveyed ſeparate from the wire which had been ſurveyed, for 24 hours after the making the ſame, unleſs ſuch wire ſhould be ſooner ſurveyed by the officer, on pain to forfeit 10 l.

That if any perſon, by or from whom ſuch big wire ſhould be made, ſhould fraudulently hide any wire chargeable by this act, or any bars of ſilver prepared for making the ſame, with intent to defraud her Majeſty, the offender ſhould forfeit 20 l.

That all gilt and ſilver wire, and all bars for making ſuch wire, which ſhould be found in any private workhouſe, and all private utenſils for barring or drawing of ſuch wire, of which no notice ſhould be given, ſhould be forfeited, and the ſame, or the value thereof, might be ſeized and recovered by any officer of the ſaid duties for her Majeſty's uſe.

That all gilt and ſilver wire, and all the materials and utenſils for the making of ſuch wire, in the cuſtody of any maker of wire, ſhould be liable to the debts and duties for gilt and ſilver wire owing by ſuch maker, and to all forfeitures incurred by ſuch perſon relating to the ſaid duties.

By the ſtatute of the 10th of Queen Anne, gold or ſilver thread, lace, fringe, or other work made thereof, imported, are to be forfeited, and 100 l. for every parcel. See *Lace*.

GOLD *Coaſt of Guinea*, is ſituated between 2 deg. of E. and 4 deg. of W. lon. and in 5 deg. of N. lat. See *Guinea*.

GOLDEN *Iſland*, an iſland ſituated in 79 deg. of W. lon. and 9 deg. of N. lat. at the mouth of the river or gulph of Darien, in the province of Terra Firma, in South America, where the Scots attempted to make a ſettlement in 1698; but finding it a barren ſpot of ground, they poſſeſſed themſelves of an iſthmus on the oppoſite ſhore, on the continent, in a good ſoil, and naturally ſo ſtrong, that the Spaniards could not have diſpoſſeſſed them, if the Engliſh had not contributed to their misfortune. See *Spaniſh* America.

GOLDEN *Rule*, in arithmetic, a rule or praxis of great uſe and extent in the art of numbers; whereby is found a fourth proportioned to three quantities given.

GOLETTA. A fortreſs and iſland in Africa, ſituated in 16 deg. of E. lon. and 36 deg. of N. lat. at the entrance of the bay of Tunis, and about 10 miles north of that city, taken by Charles V. when he attempted the ſiege of Tunis, and held by the Chriſtians ſeveral years after.

GOLTSCHUT. A kind of money, or rather ſmall golden ingot, brought from China; being looked upon there more as a merchandiſe than current ſpecie. The Dutch call it goltſchut: which, in their language, ſignifies a bar of gold, as having ſuch a figure; but other nations call them gold leaves.

As there are no gold or ſilver coins ſtruck throughout China and Tunquin, theſe two metals are cut into bits of ſeveral weights; thoſe of ſilver are called *tael*; and thoſe of gold, or goltſchuts, are uſed in large payments, when the taels and copper-money are not ſufficient.

There are two ſorts of them, ſome worth 100 l. ſterling, and others weighing only the half, valued in proportion.

When the Chineſe export them for the different parts of the Indies where they trade, the merchants with whom they treat, have them uſually cut in the middle; becauſe the Chineſe are ſuch cheats, that ſometimes above one third of copper or ſilver has been found in them.

The Japaneſe have alſo goltſchuts, but of ſilver only, of different weights, and conſequently of different value.

GOMBRON. The greateſt ſea-port town in Perſia, ſituated in 55 deg. of E. lon. and 27 deg. 30 min. of N. lat. in the province of Fars, or Fariſtan, on the ſtraight, at the entrance of the gulph of Perſia, oppoſite to the iſle of Ormus, on the ruin whereof this town roſe; and the Engliſh aſſiſting the Perſians in taking the iſle of Ormus from the Portugueſe, then one of the greateſt marts in the Eaſt, the government allowed the Engliſh ſome extraordinary privileges; as alſo half the cuſtoms of the port, and till very lately a great ſum in lieu of them. It ſtands about 30 miles N. E. of the Arabian coaſt, and about 300 miles S. E. of Schiras. Beſides the native Perſians, it is inhabited by Engliſh, Dutch, Portugueſe, Arabs, Jews, Armenians, Indians, Banians, and ſeveral other nations; of which the Armenians and Banians are much the greateſt traders. It is an unhealthful place, which occaſions moſt of the inhabitants to remove into the country during the hot ſeaſon, the winter being the time for traffic. The gains that are made by the Engliſh Eaſt India company, in carrying the merchandiſe of the Armenians,

nians, Moors, Banians, and others, from Gombron to Surat, is one great branch of the company's profit. They ſeldom ſend a ſhip from Gombron to Surat but ſhe is as deep loaden as ſhe can ſwim with their effects, beſides paſſengers, and a vaſt quantity of treaſure on board, ſometimes of the value of two or three hundred thouſand pounds: but this factory is ſubordinate to the government of Bombay. See *Perſia*.

GOMERA. One of the Canary iſlands, ſituated in 18 deg. of W. lon. and 28 deg. of N. lat. See *Canary* iſlands.

GOMORRA *Iſlands*. See *Comorra*.

GONDEZEL. A kind of ſpun cotton, of the middling ſort, and of no conſiderable vent.

GONDOLA. A little flat boat, very long and narrow; of which the middle ſized ones are upwards of 30 feet long, and 4 broad; always terminating at each end in a very ſharp point, which is raiſed perpendicularly the full height of a man.

The addreſs of the Venetian gondoliers, in paſſing their narrow canals, is very remarkable. There are uſually two to each gondola, and they row by puſhing before them. The fore-man reſts his oar on the left-ſide of the gondola; the hind-man is placed on the ſtern, that he may ſee the head over the tilt, or covering of the gondola, and reſts his oar, which is very long, on the right-ſide of the gondola.

GONDOZOLETTIS, is a term, at Aleppo, for the fineſt ſpun cotton.

GONE *out-a-head*. A ſea-term, ſpoken of one ſhip that out-ſails, or gets before the head of another under ſail.

GOOD HOPE *Cape*. See *Bon* Eſperance.

GOODS, in law, and particularly in the civil law, include all kinds of effects, riches, lands, and poſſeſſions; of which there are two kinds, moveable, and immoveable.

Goods, particularly underſtood in a mercantile ſenſe, include all ſaleable commodities, for importation, exportation, and home-conſumption; for the regulation of which the following laws have been enacted.

Goods inwards, by the ſtatute of the 13th and 14th Charles II. brought from beyond the ſeas, may not be taken up, or laid on land, out of any veſſel, lighter, or boat, being not in leak or wreck, except fiſh taken by Britiſh, beſtials, and ſalt, but at lawful hours, and only upon ſuch open places, keys, or wharfs, as ſhall be appointed by his Majeſty's commiſſion out of the court of exchequer, without ſpecial ſufferance and leave from the officers of the cuſtoms, upon forfeiture thereof, or the value, and 100 l. by the maſter: offenders not revealing their offence within one month, are to forfeit 100 l.

Imported into the port of London, may be unladen or landed at any of the lawful keys between the Tower of London and London-bridge, and between ſun-riſing and ſun-ſetting, from the 10th day of September to the 10th day of March; and between the hours of ſix of the clock in the morning and ſix in the evening, from the 10th day of March to the 10th day of September, giving notice to the proper officers; who, on refuſing to be preſent, are to forfeit for every default 5 l.

If imported into other ports, they are not to be taken up, diſcharged, and laid on land, out of any ſhip, lighter, &c. being not in a leak or wreck, except fiſh taken by Britiſh, and ſalt, but only in the day-light, that is, from the 1ſt of March to the 30th of September, between ſun-riſing and ſun-ſetting; and from the 30th of September to the 1ſt of March, between the hours of ſeven in the morning and four in the afternoon.

Wharfingers, or their ſervants, landing, or knowingly ſuffering to be landed, any goods or merchandiſes, prohibited, or uncuſtomed, without the preſence of a proper officer, or at unlawful hours, except in the port of Hull, are to forfeit 100 l.

By the 12th of Charles II. all goods of the growth, production, or manufacture of Muſcovy or Ruſſia, or of any of the dominions of the Emperor thereof, all maſts, timber, boards, ſalt, pitch, tar, roſin, hemp, flax, raiſins, figs, prunes, olive-oil, corn, or grain, ſugar, pot-aſhes, wine, vinegar, aqua vitæ or brandy, muſt be imported only in ſhips belonging to Great Britain or Ireland, and currants, and all goods of the growth, product, or manufacture of Turky in ſhips Britiſh built; except ſuch ſhips as are of the built of the country whereof the ſaid goods are the growth, production, or manufacture, or of ſuch ſort where the ſaid goods can only, or have moſt uſually been firſt ſhipped for tranſportation, on forfeiture of ſhip and goods.

If of the growth, production, or manufacture of Aſia, Africa, or America, they may be imported only in Britiſh ſhips legally manned, or in ſhips belonging to his Majeſty's plantations there, on forfeiture of ſhip and goods.

If of foreign growth, production, or manufacture, that is, of Aſia, Africa, and America only, and not of Europe, they may be ſhipped, and brought from no other country, but that of their growth, production, or manufacture, or from ſuch ports where thoſe goods can only, or have moſt uſually been firſt ſhipped for tranſportation, and in Britiſh ſhips, or plantation ſhipping legally navigated, on forfeiture of ſhip and goods.

But not to extend to goods of the Streights and Levant ſeas, and Eaſt India goods, which may be brought from the uſual places of lading in Britiſh ſhips duly manned, though thoſe places be not the very places of their growth, except raw ſilk and mohair yarn of the product of Aſia, unleſs from thoſe ports in the Levant ſeas, which are not within the Grand Signior's dominions.

Nor, by the 14th of George II. to goods of Perſia brought through Ruſſia by perſons free of the Ruſſia company.

Nor, by the 17th of Geo. II. to goods of the growth of the Spaniſh or Portugueſe plantations; which may be brought by any perſons from Spain, Portugal, or weſtern iſlands, commonly called Azores, or Madeira or Canary iſlands, reſpectively, in Britiſh ſhips.

Nor to bullion, nor to goods taken as prize by any ſhips belonging to Great Britain; nor to cochineal, nor indico; nor to ſpice by licence.

By the 3d of George I. goods inwards, of the product or manufacture of Jerſey, Guernſey, Alderney, and Sark, may, upon certificate from the governor, lieutenant, or deputy-governor, or commander in chief, and oath before the magiſtrates of Jerſey and Guernſey, that they are of the growth, &c. of the ſaid iſlands, be imported into Great Britain duty free, except ſuch exciſe or other duties as are due upon the like goods of the product of Great Britain.

But goods of the product of any foreign country imported into thoſe iſlands, or foreign goods in part or fully manufactured there, are, upon importation into Great Britain, liable to the ſame duties as if imported directly from the place of their product.

Bulk may be broken in any lawful port, and cuſtom paid for no more goods than are entered and landed.

By the 13th and 14th of Charles II. ſmall parcels of ſilk goods, or other goods found in cabbins, cheſts, trunks, or other ſmall package, or in any private place; and all other ſorts of goods for which the duties are not paid or ſecured within 20 days after the ſhip's entry, may be brought on ſhore by the officers of the cuſtoms, and ſecured in his Majeſty's ſtorehouſes till the duties be ſatisfied, unleſs the ſaid officers have a juſt cauſe to allow longer time.

The officers may ſtay and remain on board till all the goods are delivered and diſcharged out of the ſaid ſhips.

Goods inwards permitted to be taken up by bills at ſight or view, muſt be landed at the moſt convenient keys, and there, or in his Majeſty's ſtorehouſe of the port, be meaſured, weighed, and numbered by the officers; who are to perfect the entry, and return the ſame under their hands, the next day, to the collector, &c. upon forfeiture of 100 l.

By the 2d of George II. not reported, and found concealed on board any ſhip, without payment of duty, after clearing the ſhip by the proper officers, and diſcharging the tideſmen or watchmen from their attendance, are forfeited, and 100 l. by the maſter.

By the 1ſt of Elizabeth, no perſon, denizen, or ſtranger, may enter any goods inwards, or outwards, in the name of any other perſon than the very owner, being ſold, bargained, or contracted for, to or with any per-

efore entry, or before the arrival of the goods in parts eyond the ſeas, upon forfeiture thereof, or their value; d the offender to ſuffer impriſonment, and make fine ereof at the King's pleaſure.

y the 8th of George I. goods inwards, liable to duties, im- rted into any port, place, or creek, of this realm, by way merchandiſe, unſhipped, with intent to be laid on land efore the ſaid duties are duly paid, or lawfully tendered to e collector thereof, or his deputy, with the conſent d agreement of the comptroller and ſurveyor there, or ne of them at leaſt, or agreed for in the cuſtom-houſe, e forfeited.

y the 8th of Queen Anne, not only goods liable to du- s, unſhipped with intent to be laid on land before the d duties are paid or ſecured, or prohibited goods im- rted, are forfeited; but likewiſe the boats, hoys, veſ- s, horſes, and carriages, employed in removing them; d the perſons aſſiſting, or otherwiſe concerned in the ſhipping of the ſaid goods, or to whoſe hands they ſhall owingly come, forfeit treble the value of the goods.

y the 6th of George I. goods cuſtomable or prohibited, und by an officer in the cuſtody of any perſon being in a at, &c. on the water, or coming directly from the wa- -ſide, without the preſence of an officer, or found upon edible information in any houſe, &c. may be ſent to his ajeſty's warehouſe, till proof be made by oath, before uſtice of the peace, or other proper perſon, or other- ſe, to the ſatisfaction of the commiſſioners in London, of the principal officers in the out ports, in order to forthwith tranſmitted to the commiſſioners for their di- ctions, of the payment of the duty, or that they were ught in a lawful way of trade, or compounded for, or ndemned in the court of exchequer.

the 11th of George I. goods inwards, prohibited or n-goods liable to cuſtoms, exciſe, or inland duty, owingly harboured or concealed, are forfeited, with ble the value.

the 2d of Geo. II. goods clandeſtinely run or imported, owingly received or bought, before legally condemned: offenders, upon conviction, upon the oath or oaths one or more credible witneſs or witneſſes, before one more juſtice or juſtices of peace, are to forfeit 20 l. half to the poor of the pariſh, and the other half to informer, or to ſuffer three months impriſonment.

hibited goods, or goods liable to duties, fraudulently clandeſtinely imported, inſured to be delivered; inſurers, their aiders, abetters, and aſſiſtants, and perſons inſured or receiving the ſaid goods, are for ry offence to forfeit 500 l. each, beſides all other pe- ties.

the 11th of George I. prohibited, or goods actually , or pretended to have been run, offered to ſale, are eited, with treble the value, and the package; and be ſeized by the perſon to whom offered, or by any cer of the cuſtoms or exciſe: the goods to be ſecured he next warehouſe of the cuſtoms, exciſe, or inland- , that they are particularly ſubject to; if within the of mortality, within 24 hours, or in any other place, hours after ſeizure.

h goods bought, are forfeited, with treble the value, the package; and may be ſeized by the ſeller, or any cer of the cuſtoms or exciſe; and muſt be ſecured in like manner as ſuch goods offered to ſale.

the 5th of George I. goods ſalved out of any ſtranded s, except wrecked goods, or jetſham, flotſham, or n; after the charges of ſalvage, &c. are paid, are le to the ſame duties, and intitled to the ſame draw- s, as if regularly imported.

the 12th of George I. goods inwards brought into his jeſty's ſtorehouſes for ſecurity of the duties, and re- ning there ſix months unentered, are to be ſold by the miſſioners of the cuſtoms, by public auction, or inch andle; the produce whereof is firſt to be applied to the ment of the freight, primage, and charges of ware- e-room, next the duties, and the overplus to be paid he proprietor, or his order.

the 9th of George II. goods taken in at ſea by any or veſſel, or put out of any ſhip or veſſel within four ues from the coaſt, without payment of the duty, unleſs in caſe of neceſſity, or other lawful reaſon, notice whereof muſt be given to the chief officer of the port where they firſt arrive, are forfeited; and the maſter or perſon having charge of the veſſel into which they are taken, and alſo of the veſſel out of which they are taken, and all perſons concerned, are to forfeit treble the value; and the veſſels into which the goods are unſhipped and taken in, are alſo forfeited, unleſs exceeding the burthen of 100 tons.

Goods outwards, by the 13th and 14th of Charles II. may not be laden, or put off from any key or wharf, into any veſſel, lighter, or boat, except fiſh taken by Britiſh, ſea-coal, ſtone, and beſtial, in order to be exported, but at lawful hours, and at ſuch open places, keys, or wharfs, as ſhall be appointed by his Majeſty's commiſſion out of the court of exchequer, without ſpecial ſufferance and leave from the officers of the cuſtoms; upon forfeiture thereof, or the value, and 100 l. by the maſter.

The lawful hours for exportation, the ſame as for importation.

If liable to duties, and ſhipped or put into any boat or veſſel, with intent to be exported, before the ſaid duties are duly paid, or lawfully tendered or agreed for in the cuſtomhouſe, are forfeited: ſo they are if ſhipped without a warrant, or without the preſence of a proper officer of the cuſtoms.

By the 13th and 14th of Charles II. goods liable to duties, ſhipped ſecretly, and before payment thereof, eſcaping the diſcovery of the officers, and exported to parts beyond the ſeas; the owner to forfeit double the value of ſuch goods, according to the book of rates, except for coals.

Wharfingers, or their ſervants ſhipping off, or ſuffering to be water-born at or from their wharfs, &c. any goods or merchandiſes prohibited or uncuſtomed, without the preſence of a proper officer, or at unlawful hours, except the port of Hull; or goods paſſing by certificate, waſte-cocket, or otherwiſe, without the preſence of or notice given to one or more officers, are to forfeit 100 l.

Goods outwards taken in from the ſhore into any bark, hoy, lighter, &c. in order to be carried on board any ſhip outward bound, without a warrant, and the preſence of one or more officers, ſuch bark, &c. is forfeited.

By the 12th of Charles II. goods being the property of any merchant born denizen, taken by enemies or pyrates, or periſhed at ſea; upon due proof before the treaſury, or chief baron of the exchequer, and certificate thereof, to the collector of the port, goods of the like value in cuſtom may be ſhipped off duty free.

By the 7th of George I. foreign goods having paid all duties at importation, may, upon due proof thereof, be exported, after three years are elapſed, without payment of any ſubſidy outwards.

By the 2d of George II. goods prohibited to be worn, and foreign goods, ſhipped for exportation, and afterwards unſhipped or relanded, unleſs in diſtreſs, or in the preſence of an officer, are forfeited; and the maſter permitting the ſame, forfeits the value thereof; and the perſons to whoſe hands they ſhall come, knowing of the relanding, are to forfeit double the value, unleſs they make diſcovery to the officers of the cuſtoms within ſix days.

By the 12th of George I. goods whereon there is a drawback, bounty, or premium, or goods prohibited to be uſed here, or pepper, after entry, and before or after ſhipping, the officers of the cuſtoms may open, and ſtrictly examine any bale, truſs, cheſt, or other package, to ſee if they are right entered.

If found to be right entered, the ſame muſt be repacked at the officer's charge, which the commiſſioners of the cuſtoms are to allow, if they think it reaſonable.

But if found to be leſs in quantity or value than expreſſed in the exporter's endorſement upon his entry, or entered under a wrong denomination, whereby the King would have been defrauded, are forfeited, with the benefit of the drawback or bounty, and the value thereof.

By the 8th of George I. *goods coaſtwiſe inwards*, foreign goods imported into, and entered at any port of Great Britain, afterwards carried to any other port, muſt be accompanied with a certificate under the cuſtomer's ſeal,

mentioning the natural colour, length, and value, if they are meaſurable goods; or the natural weight, content, or value, if they are goods uſed to be weighed or valued; which certificate muſt be delivered to the cuſtomer, that he may examine whether the goods agree therewith.

If diſcharged or unpacked before the certificate be delivered, and without the preſence of an officer, ſuch goods, or their value, are forfeited.

By the 2d of George II. no goods coming into any one port of Great Britain from any other, may be unſhipped before the coaſt-cocket, tranſire, let-paſs, or certificate, be delivered to the cuſtomer, or collector and comptroller, and their warrant or ſufferance granted for the landing, upon forfeiture of the value of the goods by the maſter, knowing and conſenting thereto.

Foreign goods, taken in at ſea, or out of any ſhip or veſſel, by any coaſter, in order to be landed, or put on board any other veſſel, within the limits of a port, without payment of duty, are forfeited, with treble the value by the maſter of both veſſels, unleſs in caſe of neceſſity.

By the 9th of George I. foreign goods, taken on board any coaſting veſſel in parts beyond the ſeas, or out of any ſhip at ſea, or in any port of this kingdom, other than the port from whence certified, are forfeited, with double the value, and the maſter of ſuch veſſel is to forfeit the value of the goods.

By the 9th of George II. any officer, upon producing his warrant or deputation, may go on board any coaſting-veſſel, within the limits of any port, and rummage for prohibited and uncuſtomed goods, and remain on board during the veſſel's ſtay in the port.

Any perſon obſtructing or moleſting the officer in ſo doing, ſhall forfeit 100l.

By the 12th of Charles II. *goods coaſtwiſe outwards* may not be laden and carried from one port or creek of Great Britain, Ireland, Guernſey, or Jerſey, to any other port or creek of the ſame, in any ſhip or veſſel, whereof any ſtranger born, unleſs ſuch as be denizens or naturaliz'd, are owners, part owners, or maſters, and whereof at leaſt 3-4ths of the mariners are not Britiſh, upon forfeiture of the ſhip and goods.

By the 13th and 14th of Charles II. goods ſhipped or put on board any ſhip to be carried forth to the open ſea, from any one port, member, or creek, in Great Britain, to be landed at any other place of this realm, without a ſufferance firſt obtained from the officers of the cuſtoms, are forfeited.

And before the departure of the ſhip out of port, the maſter muſt take out a cocket, and become bound to his Majeſty with good ſecurity in the value of the goods, for the delivery thereof in ſome port within Great Britain, and to return a certificate within ſix months, under the hands and ſeals of the officers of the port of diſcharge, upon forfeiture of the bond and ſecurity.

By the 1ſt and 9th of Queen Anne, the ſubſtance of ſuch certificate muſt be indorſed on the back of the bonds, and ſigned to by the officers tranſmitting them into the exchequer, upon penalty of treble damages, and coſts of ſuit.

Or if a ſhip be laden with coals only, and the maſter pays the cuſtom or over-ſea duty in any port of Great Britain, the cuſtomer and comptroller of ſuch port are to grant a certificate thereof; which being produced to the officers of the loading port, will diſcharge the coaſt-bond, in like manner as if the coals had been landed in Great Britain. See *Cuſtoms*.

Prohibited GOODS, are ſuch as are prohibited by law.

Allotting of GOODS. See *Allotting*.

Conſignment of GOODS. See *Conſignment*.

Running of GOODS. See *Running*.

GORAO. A ſilk ſtuff manufactured in China, uſually of a crimſon colour.

GOREE. A ſmall iſland, ſituated in 17 deg. 40 min. of E. lon. and 15 deg. of N. lat. near Cape Verd in Africa, in the poſſeſſion of the French.

GORGONA. A ſmall iſland in the Pacific ocean, in 79 deg. of W. lon. and 3 deg. 30 min. of S. lat. 12 miles W. of the coaſt of Peru, in South America; being a high woody iſland, with a good harbour, and good water; where the buccaneers, and other adventurers, reſorted to wait for prizes, and for wood and water; the Spaniards not having thought fit to plant a colony here, though they come hither ſometimes, after the rains, to ſearch the rivulets for gold.

GORGONELLES. A kind of linen manufactured in Holland and Hamburg, of different qualities and breadths, and proper for the trade of the Canary iſlands.

GOSE. A name given in Ruſſia to the principal merchants who trade for the Czar, and who are properly his factors. Beſides the employments of the goſes in commerce, they have alſo ſome in public ceremonies; for when foreign ambaſſadors have an audience of the Czar, the goſes are obliged to aſſiſt in magnificent veſts, and caps of ſable, which are a mark of their profeſſion and dignity, commerce being a very honourable profeſſion among the Muſcovites.

GOSLAR. A city of Germany, in the circle of Lower Saxony, and duchy of Brunſwick, ſituated in 10 deg. 30 min. of E. lon. and 52 deg. of N. lat. 30 miles ſouth of Brunſwick, conſiderable for its ſilver and lead mines. See *Germany*.

GOTHLAND. The moſt ſouthern province of Sweden, being a peninſula, encompaſſed on three ſides by the Baltic ſea, or the channel at the entrance of it: the ſubdiviſions of it are Eaſt Gothland, and Weſt Gothland, Smaland, Halland, Bicking, and Schonen. See *Sweden*.

GOTHLAND. An iſland in the Baltic ſea, ſituated between the province of Gothland and Livonia, ſubject to Sweden.

GOTTENBURG. A port-town of Sweden, in the province of Weſt Gothland, ſituated in 11 deg. 30 min. E. lon. and 58 deg. of N. lat. on the coaſt of the Schagerack ſea, near the entrance of the Baltic, 200 miles S. W. of Stockholm, and 150 N. of Copenhagen; being a commodious harbour, and the beſt ſituated for a foreign trade, of any port of Sweden, lying without the Sound. See *Sweden*.

GOUD, or *Gaud*. See *Weld*.

GOUGE. An inſtrument uſed by divers artificers; being a ſort of round chiſſel, ſerving to cut holes, channels and grooves, in wood or ſtone.

GOULD, or *Gulden*. A ſilver coin ſtruck in Germany, but there are alſo Flemiſh goulds. See *Gulden*.

GOUTHIOU. A ſhrub which ſerves for dying black, growing in ſome parts of Spaniſh America, particularly Chili: it cannot be uſed alone, therefore muſt be mixed with maki and lanil; yet ſucceeds well when boiled with the root of pauke.

GRACE. Days of grace or reſpite are a certain number of days allowed for the payment of a bill of exchange, after the ſame becomes due. See *Day* of grace.

Act of GRACE, properly denotes an act of amneſty, oblivion; for the pardon of all offenders who are qualified, or come within the conditions of it.

The term is alſo ſometimes extended to an act for relief of inſolvent debtors in the ſeveral priſons, by ſetting at liberty who are qualified at liberty from their debts and confinement.

GRADATION, in chemiſtry, is a kind of proceſs belonging to metals, and conſiſts in gradually raiſing or exalting them to a higher degree of purity and goodneſs, as to encreaſe their weight, colour, and conſiſtence.

GRADO. An Italian iſland, ſituated in 13 deg. 40 min. of E. lon. and 46 deg. of N. lat. at the bottom of the gulph of Venice, 35 miles N. E. of Venice.

GRADUATION is uſed in mathematics, for the act of graduating, or dividing any thing into degrees. See *Degree*.

GRAIN, primarily denotes a fruit, or ſeed, growing in ſpica, or ear; in which ſenſe are comprehended all ſorts of corn, as wheat, rye, and barley, which are called *bread grain*; as alſo oats, beans, peaſe, and vetches, which are called *horſe grain*.

It has been computed, that the arable lands, ſown with wheat in England, annually produce thirty-four millions of buſhels of that grain; of which great quantities are exported in good years; and the reſt ſpent in the kingdom, where it is converted into excellent flour. England, according to Dr. Davenant, annually produces about the ſame quantity of barley; of which twenty-three millions of buſhels are converted firſt into malt, and after

into ale and beer; one million more of buſhels, made into malt, is converted into ſpirits and ſtrong waters; and ten millions, the reſidue of the ſaid thirty-four millions of buſhels of barley unaltered, is either made into bread, exported abroad, or uſed for ſeed at home: and, ſince Dr. Davenant wrote, great part of the light lands, which uſed to be ſown with rye, are ſown with barley, and, by late improvements, produce as good crops of that grain, as the richeſt lands in the kingdom; conſequently there are much greater quantities of barley annually ſown than when the Doctor made his calculations. Of rye the Engliſh have the leaſt ſown, at preſent, of any kind of grain; for the lands are generally too good for this grain, and the common people are uſually too dainty to eat the bread made of it. Of horſe grain, ſuch as peas, beans, vetches, and oats, there are as large quantities of land ſown annually, as there are with wheat, rye, and barley together; becauſe the very ſame land that is ſown one year with theſe kinds of grain, is ſown with horſe corn the next, and every third year the land lies fallow in the common fields; but in the incloſed grounds, where the huſbandman can improve his land as he pleaſes, he has uſually a crop every year. See *Corn*; as alſo *Wheat*, *Rye*, *Barley*, *Beans*, *Oats*, *Peas*, and *Vetches*.

Duties upon the exportation or importation of this claſs of eatables, ought to be proportioned and ſettled by rules very different from the plan propoſed for manufactures and materials imported and exported. In the article of proviſion, it is not proper for a nation to encourage an exportation uniformly, and at all times, as we ought to do in the caſe of manufactures; but only in years of plenty, and even then under certain reſtrictions, regulating the duties upon them, according as foreigners are under more or leſs neceſſity to have any of theſe things. To determine the duty upon ſuch imports, it is proper to conſider the degree of neceſſity a kingdom is under of being ſupplied with any ſort of theſe proviſions from abroad; always taking along with them, that even theſe rules and diſpoſitions, let them be ſettled with the utmoſt care and deliberation, cannot be permanent and unalterable. In certain articles they are ſo fluctuating, and liable to change, that accidents uſually happen which oblige a nation to vary them, and in ſuch extremes, that there are frequent emergencies which make it proper to advance, reduce, and take off the duties entirely; and as frequently juſtifiable motives to ſtop the exportation or importation by abſolute and rigorous prohibitions.

In order to ſhew that a variety and fluctuation is experienced in other countries, a Spaniſh author obſerves, that a very extraordinary meaſure is employed in England, and which at firſt ſight appears ſomewhat ſtrange; for they not only give leave to export grain in times of plenty, free of every tax, but a bounty is paid out of the treaſury upon every buſhel of wheat ſent abroad, at ſuch times as the price of it does not exceed a certain reaſonable ſum; that prince and his parliament apprehending, that this ſame liberty and encouraging bounty is the very thing that ſecures plenty to that kingdom for the enſuing years; and they ſupport their policy, both with arguments, that in all appearance are very well grounded, and with a repeated experience of having never felt a famine in that country for many years, ever ſince this law was firſt enacted, though it ſeem very ſtrange, and oppoſite to the conduct of other ſtates.

Notwithſtanding this example, and others, which he might produce, the ſame author ſays, that he will not preſume to decide it poſitively in this point, which he reckons one of the moſt weighty and delicate in civil policy, and in which the Spaniards are ſo much the more aſſured of a prudent deciſion, as it depends upon the mature deliberation and ſagacious judgment of the council of Caſtile; to whoſe penetration is referred the inquiry and direction of this intereſting affair, and in which it behoves them never to loſe ſight of a charge, which his Majeſty gave on this head, in his inſtructions to the intendants; which may be ſummed up in this, that whenever his Majeſty ſhall grant a licence to export grain, it is to be underſtood, that a previous inquiry be made, how much will be neceſſary for every one of the towns from whence the exportation is allowed, in order to leave them a ſufficiency for the conſumption of that year, and ſeed for the next ſeaſon.

That it might be ſeen of what great concern the intereſting affair of agriculture has been, both to the monarchs and the kingdom of Spain, the ſame author has recited the 83d article, under the 5th head of covenants, made between his Majeſty and the kingdom, July 18. 1650, at the time of granting a ſuſpenſion of the ſubſidy of the twenty-four millions, as follows.

" Having found by experience the many evils and inconveniences which reſult from the importation of foreign wheat, barley, and rye, into this kingdom, to the prejudice of its inhabitants, and of the proſperity and preſervation of this monarchy, on account of its being a detriment to health, and an occaſion to the plague; becauſe what they bring is in general very much damaged; and as by this means they have extracted, and do extract very large ſums of money in gold and ſilver, and there has been, and is an utter deſtruction of huſbandry in this kingdom, which is the main concern and ſupport of it; and the lands lie uncultivated, and the churches and convents loſe their tythes, and private perſons the rents they uſed to have in corn, and are liable to this misfortune, that in times of neceſſity, if foreign countries ſhall not think fit to ſupply us with wheat, this kingdom would be ruined; and, in order to prevent the aforeſaid, and many other inconveniences that are very evident, it is ſtipulated, that his Majeſty order, that no wheat, barley, or rye, come into theſe kingdoms by ſea from foreign countries, in order that huſbandry may be reſtored to its former ſtate, and in the years we have a middling harveſt there may be a ſurplus of wheat, that ſhall ſuffice to ſupply the wants we may ſuffer in years of ſcarcity, without being obliged to fetch it by ſea; ſince it is not reaſonable, that when there is wheat in this kingdom at a moderate price, we ſhould ſuffer it to be imported from abroad, to clog the ſale of that of the natives, deſtroy our own tillage, and enrich the enemies of this crown, that drain us of our money: and if at any time there ſhall be a want of wheat, barley, or rye, which cannot be ſupplied at a reaſonable price by any other province in this kingdom, that in ſuch caſe, and the province which ſhall labour under the ſaid difficulty ſhall apply for it, his Majeſty will be pleaſed to grant a licence, that for a limited time, and in ſuch places as there ſhall be a want of it, there may be imported the ſaid wheat, barley, and rye, by ſea, and in no other manner; excepting that nothing contained in this covenant be underſtood to extend to the kingdoms of Murcia, Galicia, the Aſturias, Biſcaya, Guipuzcoa, and Alaba: thus theſe kingdoms recovering by this means, the riches and wealth, which they formerly enjoyed, there will be a revival of their antient trade in all other ſorts of merchandiſe, and the revenues of the ports and cuſtomhouſes flouriſh as formerly."

However, the Spaniards have not yet been able to rear corn enough for themſelves, and are chiefly ſupplied from Great Britain. See *Corn*.

GRAIN is alſo applied to the fruits or ſeeds of divers plants, as a grain of muſtard-ſeed, millet, and pepper.

GRAIN is likewiſe extended to a minute body, or parcel of a body pulveriſed; in which ſenſe we ſay, a grain of ſand, a grain of ſalt, and a grain of gun-powder.

GRAIN alſo ſignifies a ſmall weight, uſed in eſtimating divers ſubſtances. See *Weight*.

The grain is the ſmalleſt of all the weights known in England, and taken from the weight of a grain of wheat, gathered out of the middle of the ear, and well dried; 24 grains make a pennyweight, and 20 pennyweights an ounce. The grain is troy weight, and uſed in the weighing of gold, ſilver, jewels, bread, and liquors.

The grain uſed by the apothecaries is the ſame with that of the goldſmiths; though they make a difference in the weights raiſed therefrom: thus, 20 grains with them make a ſcruple ℈, 3 ſcruples a drachm ʒ, 8 drachms an ounce ℥.

The

The caract uſed in eſtimating the fineſt of gold, as well as in weighing diamonds and precious ſtones, is alſo divided into 4 grains. See *Caract*.

GRAIN is alſo uſed for the figure or repreſentation of grains on ſtones, ſtuffs, and leathers. See *Morocco*, and *Shagreen*.

In ſome marbles the grain is very fine, in others coarſer. See *Marble*, and *Stone*.

Steel is known by its grain, which is much finer than that of iron. See *Steel*, and *Iron*.

GRAIN is alſo a money of accompt uſed at Meſſina and Palermo in Sicily, being 2-3ds of a penny ſterling.

GRAIN is alſo a coin at Malta, of which there are pieces of different value; among others, pieces of 15 grains, worth about $3\frac{1}{2}$d. ſterling; pieces of 10 grains, worth $2\frac{1}{2}$ d. ſterling; pieces of 5 grains, worth 1 d. ſterling, and pieces of 1 grain, worth a farthing.

GRAIN is likewiſe a copper coin of Tuſcany, worth 13-18ths of a penny.

Cochineal GRAIN. See *Cochineal*.

Scarlet GRAIN. See *Scarlet*.

GRAIN *of Paradiſe*, is that particular kind of cardamomum, denominated *maximum*, to diſtinguiſh it from the other two ſorts of the ſame medicinal ſeed. See *Cardamomum*.

GRAINARY. A place to lay or ſtore corn in, particularly for keeping. See *Corn*, and *Grain*.

Sir Henry Wotton adviſes to make it look towards the north as much as may be, that quarter being the moſt cool and temperate.

Mr. Worlidge obſerves, that the beſt grainaries are built of brick, with quarters of timber wrought in the inſide, whereto to nail the boards, with which the inſide of the grainary muſt be lined ſo cloſe to the bricks, that there be no room for vermin to ſhelter themſelves. There may be many ſtories one above another, and let them be near one to the other; for the ſhallower corn lies, the better. Some have had grainaries, the one above the other, and filled the upper with wheat, or other corn, having a ſmall hole in the floor, through which the corn deſcended into the lower one, like the ſand in an hour-glaſs; and when it was all come down into the lower grainaries, it was carried up again into the upper, and ſo kept continually in motion; which is a great preſervation to the corn. A large grainary, full of ſquare wooden pipes, may alſo kep corn from heating.

Public grainaries are common in ſeveral European cities on the continent; eſpecially at ſuch places where there is frequently a ſcarcity of corn: but the grainary at Dantzick is in the greateſt eſtimation; in imitation of which, a grainary was propoſed to be erected in Ireland; though the ſcheme has been ſince neglected.

The learned and reverend Dr. Stephen Hales, whoſe ſtudies are calculated for the good of mankind, has given an account of ſeveral methods to preſerve corn in grainaries by ventilation. But as many people may be at a loſs how to apply the different ſizes and forms of them to different quantities of corn, either in large grainaries, or leſſer parcels, he has communicated to the public a ſhort account of the cheapeſt and beſt methods that have hitherto been thought of, for preſerving corn ſweet, and free from heating, either in very large grainaries, or in ſmaller quantities, of only a few loads of corn; and, the better to explain theſe things, he has given a particular deſcription of theſe ventilators; which are of two kinds, the one called the larger double ventilator, and the other the leſſer ſingle ventilator.

This ingenious gentleman informs us, that falſe bottoms may be made to grainaries, by laying wooden bars on the floor, and nailing laths acroſs them, with a hair-cloth layed on them, as is done in malt and hop kilns. This may alſo be done in a cheaper manner, laying long poles at due diſtances on the floor, and covering them with hurdles. It may alſo be done by covering the floor of ſuch grainaries as are not very large, with faggot-ſticks unbound, laying firſt the larger ſticks ſingle, at proper diſtances acroſs the floor, then others acroſs them, with ſeveral ſuch layers acroſs and acroſs, laying the ſmalleſt bruſhwood uppermoſt; and leaving an air-channel next one of the walls in ſmall grainaries; but in large grainaries, the air-channel muſt paſs through the middle of the grainary, to be opened or ſhut, as occaſion requires.

The ſmall moveable ventilators will be ſufficient to keep corn from heating; but the larger double ones will be more extenſively uſeful to dry cold damp corn, or ſmutty corn that has been waſhed, alſo to ſweeten muſty corn.

But when grainaries are wanted purpoſely to lay up great ſtores of corn, in a comparatively much leſs quantity of building than is done in common grainaries, it may be done commodiouſly in the following manner. If grainaries ſtand on ſtone ſtaddles, or have their loweſt floor about three feet above the ground, then they may be joined together in one building, whereby three outer walls in eight will be ſaved.

Thus ſuppoſe four grainaries to be 40 feet long, and each 20 feet broad; the entrance into each of theſe grainaries may be at either end, or rather at both ends, with little inward porches, boarded up as high as the corn is to lay; but yet to have the front boards to run in grooves, ſo as eaſily to be put up or taken down, in proportion to the heighth of the corn, and for the greater convenience in filling and emptying the grainaries.

When cold, damp, or muſty corn, is at firſt laid in, it will be beſt not to lay it very thick, till it is well cured by ventilation, in a dry ſtate of the air: and in general, the more completely dry it is by ventilation or otherwiſe, ſo much the thicker it may be laid to any degree required.

But if the loweſt floor of four ſuch grainaries is on the ground, as the ſliding ſhutters in the air-trunk cannot then be come at, it will be requiſite to place the grainaries in a quadrangle, or like form, with the ventilators in the middle of the court, thence to convey air by trunks to the four granaries.

Now, theſe four granaries, being each 40 feet long, and 20 broad, will contain 3200 quarters of corn, at the rate of 10 cubic feet to each quarter, if it lay 10 feet deep: but if it lay 15 feet deep, then they will contain 4800 or 4000 quarters, allowing 800 quarters for the bulk, which the air-channels and the inner porches take up, at the end of each grainary.

Suppoſing wheat to lie 10 feet deep in one of theſe grainaries, then one half of that quantity will be equal to 4000 cubic feet; the ſeventh part of which, 571 cubic feet, will be equal to the quantity of air in the interſtices among the wheat; then ſuppoſing the ventilators with midriffs 8 feet long, and 4 feet wide, to blow out 26 cubic feet at each ſtroke, which, at the rate of 60 ſtrokes in a minute, will amount to 1560 cubic feet in a minute, which is more than double the quantity of air among the corn, that being no more than 571 cubic feet: this ſhews how very eaſy it is to prevent the heating of corn, by a little ventilation now and then: and it may be known whether, and in what proportion, air aſcends up through all parts of the corn, by turning a tub or caſk bottom upwards on the corn; and holding a lighted candle at the top or bung-hole, the motion of the flame will ſhew whether air paſs up through the corn.

A grainary thus filled up, will keep corn ſweet and dry, and conſequently free from weevels, with very little expence of ventilation, and that chiefly at the firſt laying the corn in. It will probably be beſt to ventilate when it firſt begins to ſweat a little; becauſe the moiſture being then afloat in the air among the corn, and alſo on the ſurface of the grains, it will be carried off with the leſs ventilation; and when it has been thus repeated a few times, the corn will effectually be freed from the greateſt part of the moiſture, which would endanger the ſpoiling of it, or the breeding of weevels: and when it, by this means, becomes completely dry, very little ventilation will afterwards be required, eſpecially if in this ſtate the windows and all inlets of air be kept cloſe ſhut in order to prevent the entrance of air in a damp ſtate. But, in a very dry ſtate of the air, it may be well to open them ſometimes, in the middle of the day, for a freſh air is better than a long confined dry air.

And in order to judge when the air is in a damp or dry ſtate, it may be well to have a whip-cord fixed in a p

per manner, by the lengthening and ſhortening of which the ſtate of the air may be pretty well known. Great care muſt be taken not to ventilate dry corn in a damp ſtate of the air; but in the caſe of corn that is ſo damp, that it will heat and ſpoil without ventilation, it muſt, if need, be ventilated in a damp ſtate of the air.

All kinds of corn, ſeeds, or whole oat-meal, may thus be kept ſweet by ventilation, and probably all coarſe ground oat-meal; for the air has been found to paſs upwards, through about 6 inches depth of fine ground oatmeal, and that in a ſmall degree when it was preſſed down; but it is uncertain whether it will go through a great depth of fine ground oat-meal, when it will be preſſed down by its great quantity; for oatmeal, ſomething finer than a hair-cloth muſt be uſed to lay it on. The air will not paſs through wheat-meal, but will through ground malt.

Small parcels, of a few loads of corn, may be eaſily kept ſweet in the following manner: by laying two rows of faggot ſticks acroſs and acroſs each other, leaving an air-channel about a foot wide, but 10, 15, or 20 feet in length, and covering the channel with a ſufficient quantity of faggot-ſticks laid acroſs over it; then laying a hair-cloth over all, on which corn may be heaped up as high as it can lie, taking care that all the faggots be covered therewith, both at the ſides and at each end.—A ſquare trunk of boards, about 5 inches wide within, and 3 or 4 feet long, muſt be put at one end of the heap of corn, through which air is to be blown by the moveable ventilators, the ſize of which muſt be proportioned to the quantity of corn intended to be thus ventilated. But in large grainaries, as ſuppoſe a malt-houſe, it may be well to have two, three, or more of theſe ſeparate heaps of corn, to be ventilated in their turns ſeparately. The faggots may be laid either in a long or round form, as ſhall beſt ſuit the ſhape or ſize of the grainary. The windows ſhould be open during this ventilation, to carry off the damp air as it riſes from the corn. Such heaps of corn, as alſo ſmall grainaries and bins full of corn, may be ventilated with a trunk full of paſſages for air on its ſides, covered with hair or ſacking; this trunk may have branches to it, according to the ſize or ſhape of the grainary. Theſe trunks may be made in ſeveral parts, to be taken off and put on at pleaſure, or with ſliding ſhutters to ſtop them at any deſired length.

GRAINING *Board*. A board uſed by the curriers to give the grain to their leather. See *Currier*.

GRAMONY. A term of trade uſed in ſome ports of the Levant, particularly at Smyrna, ſignifying, in the ſilk trade, a deduction of 2 s. 8 d. *per* bale, over and above all the tares eſtabliſhed by uſe.

GRANADA. The moſt ſouthern of the Caribbee iſlands, ſituated in 61 deg. 30 min. of W. lon. and 12 deg. 15 min. of N. lat. in the Atlantic ocean, 150 miles S. W. of Barbadoes.

GRANADILLOS. Some iſlands of the Caribbees, in the Atlantic ocean, ſituated in 61 deg. of W. lon. and between 12 and 13 deg. of N. lat. having the iſland of St. Vincent on the north, and Granada on the ſouth; ſo inconſiderable that no nation has thought them worth poſſeſſing.

GRANADO, or *Granada*, in the military art, a hollow ball or ſhell of iron, braſs, or even glaſs, or potter's earth, filled with gun powder, and fitted with a fuſe to give it fire. Of theſe there are two kinds, the one large the other ſmall: the firſt to be thrown at the enemy by a mortar, properly called bombs. The latter to be caſt with the hand, and thence denominated hand granados.

The common, or hand-granado, is a little hollow ball of iron, tin, wood, or paſteboard, filled with ſtrong powder, lighted with a fuzee, and thrown by hand into places where men ſtand thick; particularly into trenches and lodgments. Their compoſition is the ſame with that of bombs; and they are uſually about the bigneſs of an iron bullet, weighing about 3 pounds; they are commonly in thickneſs one eighth, ninth, or tenth of their diameter; their orifice about $\frac{2}{19}$ wide, as preſcribed by Caſimir.

Thuanus obſerves, that the firſt time granados were uſed, was at the ſiege of Wachlendonck, a town near Gueldres; and that the inventor was an inhabitant of Venlo, who, in making an experiment of the effect thereof, occaſioned two thirds of that city to be burnt; the fire being kindled by the fall of a granado.

GRANATE, popularly called *Garnet*, a gem, or precious ſtone, of a high red colour; thus called from the reſemblance it bears to that of the kernel of a pomegranate.

Granates are either oriental or occidental; the firſt are brought from divers parts of the Eaſt Indies; the ſecond from Spain, Bohemia, and Sileſia. Thoſe from the Eaſt are diſtinguiſhed by their colour into three kinds: the firſt of a deep browniſh red, like black clotted blood, of which there are ſome as big as a hen's egg; the ſecond are nearly of the colour of a hyacinth, with which it would be eaſy to confound them, but for their ſuperior redneſs: the laſt having a mixture of violet in their red, are called by the Italians *rubini della rocha*. See *Ruby*.

The occidental granates are of divers reds, according to the places they are found in. Thoſe of Spain imitate the colour of the kernel of a pomegranate; thoſe of Bohemia have a golden caſt with their red, and glitter like a live coal; thoſe of Sileſia are the darkeſt of all, and ſeldom thoroughly tranſparent. Thoſe of Bohemia are the moſt valued, and ſome prefer them to the oriental kind: they are found near Prague; not in any particular mines, but are picked up by the peaſants in the fields, from among the ſands and pebbles.

The powder of the granate is of uſe in medicine, and an ingredient in the cordial electuaries: the ancients held it excellent againſt heavineſs and melancholy.

GRANDE. A river of Brazil, in the province of Del Rey, in South America, which diſcharges itſelf into the Atlantic ocean, in 51 deg. of W. lon. and 32 deg. of S. lat.

GRANDE. The ſouth branch of the river Niger, in Africa, which diſcharges itſelf into the Atlantic ocean, in 15 deg. of W. lon. and 11 deg. of N. lat.

GRANITE, or *Granite*, a ſort of marble, extremely hard, rough, and incapable of taking a thorough poliſh; thus called from being ſprinkled over with a great number of little ſtains, reſembling grains of ſand. See *Marble*.

There are three ſorts of granite; that of Egypt, that of Italy, and that of Dauphiny: the firſt has browniſh or greeniſh ſpots, on a dirty white ground, found in very large pieces, and chiefly uſed by the Egyptians, in their obeliſks, and pyramids, on the tombs of their great men, where there are columns of this ſtone above 40 feet high. They have alſo a ſort of green granite, which is a ſpecies of ſerpentine, ſpotted with green and white ſpots.

The granite of Dauphiny, whereof a quarry has been found, is only a very hard ſort of flint.

GRANTAN. An Indian meaſure, particularly uſed in the iſland of Java for meaſuring pepper; being 3 $\frac{1}{2}$ lb. avoirdupois. See *Baruth*.

GRANVILLE. A port-town of France, in the province of Normandy, ſituated in 1 deg. 35 min. of W. lon. and 48 deg. 50 min. of N. lat. on the Engliſh channel, 50 miles S. W. of Caen; from whence the noble family of Carteret take the title of Earl.

GRANULATION, in chemiſtry, an operation performed on metals, whereby they are reduced into ſmall grains or globules.

GRAPES. The fruit of the vine. See *Wine*.

GRAPNEL-*anchor*, an anchor for a ſmall ſhip, boat, or galley, without ſtocks, and having four hooks, or holdfaſts.

GRAPNELS. Large iron hooks, to be thrown into an enemy's ſhip, to take hold, and keep her cloſe, to board.

GRATIAS. A term in the Spaniſh cuſtoms, ſignifying a favour; being allowances made by the King of Spain on goods imported from Great Britain, in conſideration of the ſeveral alterations of the Spaniſh coin, which had raiſed the duties.

GRATIAS *à Dios*. A cape, or promontory in the province of Honduras, in Mexico, ſituated in 84 deg. of W. lon. and 14 deg. 30 min. of N. lat. to which Columbus gave this name, on finding the winds favourable.

GRATIOLA. A medicinal plant, of conſiderable virtues, called in Engliſh hedge-hyſſop, and God's-grace.

Its moſt noted effects are to evacuate hydropic waters, both upwards and downwards, taken either in infuſion, or decoction; to cleanſe wounds, and to kill worms. The bark of it taken in powder is ſaid to be little inferior in virtue to ipecacuanha for dyſenteries. It is of a very bitter taſte, whence probably its vermifugous power; and its root aſtringent, whence its uſe in the dyſentry.

GRATIOSA. One of the iſlands of the Azores, ſituated in 29 deg. of W. lon. and 39 deg. of N. lat. See *Azores*.

GRAVEL. A coarſer ſand, conſiſting of little pebbles and flints, chiefly uſed in laying yards, courts, and walks in gardens.

GRAVELIN. A port-town of the French Netherlands, ſituated in 2 deg. of E. lon. and 50 deg. 56 min. of N. lat. near the mouth of the river Aa, and the Engliſh channel, 12 miles S. W. of Dunkirk, and 8 miles Eaſt of Calais. See *France*.

GRAVER. A ſteel inſtrument, ſerving to engrave on metals. See *Engraving*.

GRAVESEND. A port town of Kent, ſituated on the ſouth ſhore of the river Thames, oppoſite to Tilbury fort, and 20 miles E. of London, where ſhips are cleared before they are put to ſea.

GRAVING. The art of cutting lines, figures, and other deſigns on metals, more properly called engraving.

GREASE. See *Tallow*.

GREECE. See *Turky*.

GREEN. One of the original colours of the rays of light. Artificial greens are rarely ſimple colours, but produced by the mixture of yellow and blue. See *Blue* and *Yellow*.

Two powders, the one blue, and the other yellow, well mixed, appear perfectly green; tho' when viewed with a microſcope, a chequer of blue and yellow is obſerved. The dyers make divers ſhades, or caſts of green; as light-green, yellow-green, graſs-green, laurel-green, ſea-green, dark-green, parrot-green, and celadon-green. All the greens are firſt dyed in blue, then taken down with woad, and verdegreaſe, and then greened with the weed; there being no one ingredient that will give green alone. See *Dying*.

Mountain green, or Hungary green, is a ſort of greeniſh powder, found in little grains like ſand, among the mountains of Kernauſent in Hungary, and thoſe of Moldavia: tho' ſome hold that this mountain green is factitious, and the ſame with what the ancients call *floſcæris*, prepared by caſting water, or rather wine, on copper, red hot from the furnace, and catching the fumes thereof on copper-plates laid over for the purpoſe, or by diſſolving copper-plates in wine, as in making verdegreaſe. The painters uſe this colour for a graſs-green, which is ſometimes counterfeited by grinding verdegreaſe with ceruſe.

GREEN-*hide*, is that not yet tanned, or dreſſed, but juſt taken off from the carcaſe. See *Hide*.

GREEN-*Iſlands*. See Cape-*Verd* Iſlands.

GREENLAND. See *Denmark*.

GREENLAND *Company, and Fiſhery*. See Whale-*Fiſhery*.

GREEN-*Cod*. See Cod *Fiſhery*.

GREENWICH. A pleaſant town in the county of Kent, ſituated on the ſouth-ſide of the river Thames, five miles eaſt of London, eminent for its royal and magnificent hoſpital, erected for decayed ſeamen who have ſerved their country. A good part of which was built in the reign of King Charles II. at the expence of 36000 l. It was much promoted by K. William; and finiſhed under Queen Anne and King George the firſt and ſecond. The number of penſioners contained in this hoſpital is three hundred; to each hundred of which are allowed ſix nurſes, being the widows of ſeamen. The victualing is according to the allowance of Chelſea-hoſpital, being four men to a meſs; each meſs to contain four pounds of fleſh, and a gallon of beer: it is adminiſtred by a governor, captain, lieutenant, chaplain, ſteward, and phyſician.

By the ſtatute of the 7th and 8th of William III. it was enacted, That every ſeaman, waterman, or ſeafareing-man, diſabled by age, wounds or accidents, ſhould, upon certificate thereof from the captain, maſter, ſurgeon, and purſer, or ſo many of them as were in the ſhip, unto the governors of the hoſpital of Greenwich, be admitted into the hoſpital, and ſhould have provided unto him during life, convenient lodging meat, drink, cloathing, and other neceſſaries; and the widows of ſuch ſeamen, watermen, &c. who ſhould be ſlain or drowned in the ſervice, and the children of ſuch not of ability to provide comfortably for themſelves, ſhould be received into the ſaid hoſpital, and provided for; and the ſaid children ſhould be educated till they were fit to be put out, or of ability to maintain themſelves, ſo far forth as the hoſpital ſhould be capable to receive ſuch diſabled ſeamen, and ſuch widows and children, and as the revenues thereof would extend.

That every ſeaman who ſhould ſerve in any of his Majeſty's ſhips, or in any ſhip belonging to any ſubjects of his Majeſty's dominions, ſhould allow out of the wages for ſuch ſervice 6 d. a month for ſupport of the ſaid hoſpital, for the purpoſes aforeſaid, which monthly allowance ſhould be collected, as ſhould be appointed by the commiſſioners for executing the office of Lord High Admiral. By the ſtatute of the 8th and 9th of William III. it was enacted, That for the better collecting of the duties of 6 d. *per* month, granted by the 7th of William III. it ſhould be lawful for the commiſſioners, or their deputies, by warrant to cauſe all maſters of ſhips, not in his Majeſty's ſervice, to appear before them, and ſuch maſters upon their oaths to examine as to the number, wages and times of ſervice, of every perſon belonging to ſuch ſhips: and if ſuch maſters ſhould refuſe to appear, or ſhould obſtinately refuſe to give a diſcovery of the matters aforeſaid, upon their oaths, ſuch offenders ſhould forfeit 10 l. to the uſes mentioned in the ſaid act.

That when any vacancies ſhould happen in Greenwich hoſpital, the commiſſioners executing the office of Lord High Admiral ſhould have power to nominate any diſabled ſeamen, their wives and children, and the widows and children of ſeamen ſlain, or drowned in ſea ſervice, to be provided for in the hoſpital.

By the ſtatute of the 10th of Queen Anne it was enacted, That to the intent that the 6 d. a month might be effectually collected, every perſon that ſhould ſerve her Majeſty, or any other, in any of her Majeſty's ſhips, or in any ſhips belonging to Great Britain or Ireland, or the dominions thereunto belonging, and every maſter workman in his own ſhip, whether employed upon the high ſeas, coaſts, or in any port, bay or creek, other than ſuch apprentices under the age of eighteen years, as are exempted from payment of 6 d. a month; and perſons employed in any boat upon the coaſts, in taking of fiſh which are brought freſh on ſhore into Great Britain or Ireland; and perſons employed in boats that trade from place to place within any river, or in open bays upon the coaſts, ſhould pay the ſaid 6 d. a month for ſupport of Greenwich hoſpital.

That the maſter of every ſhip, not in her Majeſty's ſervice, was required to deduct out of the wages accruing to ſuch ſeamen 6 d. a month, and pay the ſame to ſuch officers as ſhould be appointed by the commiſſioners executing the office of Lord High Admiral.

That it ſhould be lawful for the commiſſioners executing the office of Lord High Admiral to appoint receivers of the ſaid duty, and to authoriſe ſuch receivers to demand of the collectors, or other officers of cuſtoms for the outports, and of the ports of Ireland, and ſuch other as they ſhould think fit, to examine every ſuch maſter or owner, as to the number and times of ſervice of all perſons belonging to ſuch ſhips, who are chargeable with the ſaid 6 d. a month; and if ſuch maſters or owners ſhould refuſe, when ſummoned, not having a reaſonable excuſe to appear, or ſhould neglect to pay the monies due to the hoſpital within fourteen days after they ſhould be called inwards, ſuch offenders ſhould forfeit 20 l.

That no private contracts made by any ſeamen ſhould obſtruct or delay the payment of the duties appropriated to the ſaid hoſpital.

That nothing in this act ſhould oblige the payment of the 6 d. a month by any maſters or ſervants of the hoy veſſels belonging to the port of London, and employed within the north foreland, in bringing corn, fiſh, or proviſions for London.

That the commiſſioners of the admiralty ſhould con

as qualified for an admiſſion into the ſaid hoſpital, any ſeaman who ſhould offer himſelf to be admitted, and ſhould produce a certificate of his having been wounded or hurt in defending any ſhip belonging to the ſubjects of her Majeſty againſt enemies, or in taking any ſhip from the enemy, and thereby diſabled for ſea-ſervice.

By the ſtatute of the 8th of King George II. after reciting that there was payable out of the eſtate of the late Earl of Derwentwater in Northumberland the ſums therein mentioned, it was enacted, That the rents and profits of the premiſſes, ſubject to the ſaid incumbrances, ſhould be applied towards the finiſhing the building of the hoſpital at Greenwich, and for the better maintenance of the ſeamen.

That in caſe any ſeaman on board any merchant-ſhip, belonging to the ſubjects of his Majeſty, ſhould be maimed in fight againſt any enemy, ſuch ſeaman ſhould be admitted into the royal hoſpital of Greenwich, as any other ſeaman wounded in the ſervice of his Majeſty.

By the ſtatute of the 18th of King George II. after reciting the foregoing acts, it was further enacted, that if the commiſſioners for collecting the duty of the ſaid 6 d. a month, ſhould find it difficult to be collected from privateers who neither clear inwards or outwards; for remedy thereof, every officer or ſeaman, or other perſon whatſoever, that ſhould be employed in any privateer, or private ſhip of war, having a letter of marque, belonging to any of the ſubjects of Great Britain or Ireland, or dominions thereunto belonging; or in Jerſey, Guerney, Alderney, Sark, and Man, or in his Majeſty colonies, iſlands, and dominions in America, ſhould pay 6 d. *per* month, or proportionably for any leſſer time during the time they ſhould be employed in any ſuch ſhip or veſſel, for the better ſupport of Greenwich hoſpital, and augmenting the revenue thereof, for the purpoſes in there cited acts mentioned.

That the commander of every privateer, or letter of marque-ſhip, or veſſel, before he ſailed from any ports of the dominions aforeſaid, ſhould deliver to the collector of the cuſtoms of the port he ſailed from, a liſt in writing, ſign'd by him, of the names, ages, and deſcriptions of every ſeaman, or other perſon, belonging to ſuch ſhip or veſſel; and on the arrival, or return thereof into any of the ports aforeſaid, the commander of ſuch veſſel ſhould deliver to the collector of the port he arrives at, an authentic copy on oath, of the liſt he delivered in to the collector of the port whence he ſailed, and a particular account, whether all, or any of the men, which ſailed with him are returned; and if any are wanting, he ſhould give an account of what was become of them; and if any ſuch commander ſhould obſtinately refuſe, or neglect to deliver ſuch liſts and accounts, he ſhould forfeit 50 l. one moiety whereof ſhould be for the uſe of the hoſpital, and the other moiety to the perſon who ſhould ſue for the ſame.

By the ſtatute of the 20th of King George II. after reciting the former ſtatute, and that as ſome doubt might ariſe, whether the ſhares of prizes, belonging to men running from their ſhips, after condemnation of ſuch prizes ſhould be forfeited; by the ſaid clauſe in the ſaid recited act, it was enacted, That no perſon who ſhould belong to any ſhip of war, or merchant-ſhip in his Majeſty's pay and ſervice, and who ſhould withdraw from the veſſel by which any prize ſhould be taken, or otherwiſe, from his Majeſty's ſervice, before or after notification given by the agents of the day of payment of the ſhares to the captors, ſhould have any benefit of the ſaid ſhares, or bounty-money, but the ſame ſhould go and be paid to the uſe of Greenwich Hoſpital.

That if any perſon ſhould run away from any ſuch ſhip, after notification given as aforeſaid, he ſhould forfeit ſo much of the prize and bounty-money, as ſhould at the time of his running away, remain in the agents hands. See *Mariner*.

GREGORIAN *Calendar*, is that which ſhews the new and full moon, with the time of Eaſter, and the moveable feaſts depending thereon, by means of epacts diſpoſed through the ſeveral months of the Gregorian year.

The Gregorian calendar therefore differs from the Julian, both in the form of the year, and in that it uſes epacts, inſtead of golden numbers.

This reformation of the kalendar was made in 1582, by order of Pope Gregory XIII. and with the advice of Aloyſius Lilius, and other mathematicians: at the ſame time ten days were cut off from that year, and caſt away, to bring the equinoxes to their ancient ſeat, the 25th of March; and to keep them conſtantly there, the ſame Pope introduced a new form of year.

GREGORIAN *year*, is the Julian year corrected, or modelled, in ſuch manner, as that the three ſecular years, which in the Julian account are biſſextile, are here common years, and only every fourth ſecular year a biſſextile year.

The Gregorian year, tho' it comes nearer to nature and truth, than the Julian, is not ſtrictly juſt, as it gets an hour and twenty minutes in four hundred years, and conſequently in ſeven thouſand two hundred a whole day.

The Gregorian year is now uſed in moſt countries of Europe, moſt of the United Provinces excepted, where the Julian year ſtill obtains. See *Julian* year.

From this difference ariſes the diſtinction of old, or Julian, and new, or Gregorian ſtyle. See *Style*.

The old ſtyle is eleven days behind the new; ſo that the ſame day which in the Gregorian account is the 11th day of any month, is in the Julian the 1ſt only.

GREMIL, or *Pearl herb*, a plant growing in uncultivated places, and cultivated in gardens for its ſeed. It is uſed in medicine as a lithontriptic, and diuretic; its doſe being a drachm, or two, reduced into fine powder.

GRENOBLE. A city of France, capital of the province of Dauphine, ſituated in 5 deg. 28 min. of E. lon. and 45 deg. 12 min. of N. lat. on the river Iſere, 45 miles S. E. of Lyons, 36 miles S. W. of Chamberry, and 100 miles W. of Turin. See *France*.

GRENOCK. A port-town of Scotland, in the county of Renfrew, near the mouth of the river Clyde.

GRIEVNA. A ſilver coin of Ruſſia, worth 5 $\frac{2}{3}$ d. ſterling.

GRILLES, is a term at Genoa, for an aſſociation of merchants, for the Negro trade.

GRILLUS. See Salt of *Vitriol*.

GRIMELIN. A ſmall ſilver coin, of a low ſtandard, ſtruck and current at Tripoli in Barbary, being worth about 2 pence ſterling.

GRIMSBY. A borough, and port-town of Lincolnſhire, ſituated at the mouth of the Humber, 30 miles N. W. of Lincoln.

GRIPE *of a ſhip*, is the compaſs or ſharpneſs of her ſtern under water, chiefly towards the bottom. The deſign of ſhaping her ſo, is to make her gripe the more, and to keep a good wind; for which purpoſe they ſometimes put a falſe ſtem upon the true one.

GRIPE, is alſo a ſea-phraſe for a ſhip's being apt to run her head or noſe too much into the wind; in which caſe they ſay ſhe gripes, of which there are two cauſes: 1ſt, overloading her a-head, the weight of which preſſes her head ſo down, that it is not apt to fall off from the wind: 2d, the ſtaying, or ſetting her maſts too much aft; which will always be a fault in a ſmall ſhip that draws much water, and will cauſe her to be continually running into the wind; tho' in floaty ſhips, if the maſts be not ſtayed aſar aft, they will never keep a good wind.

GRISONS. Allies of Switzerland. See *Switzerland*.

GRIST, denotes corn ground, or ready for grinding; but ſometimes it means profit or advantage; as ſuch or ſuch a thing brings griſt, that is, profit or advantage to the mill.

GROAT. An Engliſh money of accompt, equal to four pence. Other nations, as the Dutch, Polanders, Saxons, Bohemians, and French, have alſo groats, called groots, groches, and gros. See *Money*, and *Coin*.

In the Saxon times, the Engliſh had no ſilver money bigger than a penny; nor, indeed, after the conqueſt, till Edward III. who, about the year 1351, coined groſſes, that is, groats, or great pieces, which went for four pence apiece; and ſo the currency ſtood till the reign of Henry VIII. who, in 1504, firſt coined ſhillings. See *Shilling*.

GROCER, anciently meant an engroſſer, or monopoliſer, as appears by the ſtatute of the 37th of Edward II. but it now implies a perſon whoſe trade conſiſts in grocery, or the buying of ſugars, ſpices, raiſins, figs, currants, prunes, and other dry goods; and, becauſe that trade has frequent occaſion for changing of money for ſmall par-

cels of goods, the braſs or copper money, ſuch as halfpence and farthings, ſometimes go by this denomination.

GROCERS *company of London*, anciently denominated pepperers, having changed their name to that of grocers, were, under that denomination, incorporated by letters-patent of Edward III. in 1345, by the name of The wardens and commonalty of the myſtery of the grocers of the city of London, which was confirmed by Henry VI. in 1429: and both theſe grants were confirmed by a new charter of Charles I. in 1640, with an additional power of ſearching and inſpecting the goods and weights of all grocers, within the city and ſuburbs of London, and three miles round the ſame. They had anciently the management of the King's beam in the city of London, with the right of appointing a maſter weigher, and four porters to attend it.

This company conſiſts of a prime, and three other wardens, fifty-two aſſiſtants, and one hundred and twenty-ſeven liverymen, whoſe fine upon admiſſion is 20 l. They have a ſpacious hall in Grocers-alley, wherein they treat of their affairs, with a great eſtate, out of which is yearly paid to the poor about 700 l.

GROCHE. See *Groſs*.

GROCHE, is a term ſometimes given by the Turks to the rial, or Spaniſh piece of eight, current at Conſtantinople for 80 aſpers of good allay or 3 s. ſterling; but if of baſe, 120 are given for the rial. See *Aſper*.

The pieces of eight riſe in their value at Conſtantinople, and Cairo, by exchanging them for temins, aſpers, and other monies of baſe allay current in Turky, according as they are ſought for by Armenian, Perſian, and Arabian merchants, who carry them into their countries preferably to other coins.

GROCHE, or *Cara Grouch*, is alſo a Turkiſh coin worth 4 s. 6 d. ſterling.

GROENLAND. See *Denmark*.

GROGRAM. A ſort of ſtuff, or ſilk, being in reality no more than a taffety, coarſer and thicker than ordinary. See *Taffety*.

GROS. A ſmall copper, or braſs coin, current in Franche-Compte, before that province was united with the crown of France, under the reign of Lewis XIV. and now received in Lorrain, and in ſome other neighbouring ſtates; being worth ſomewhat leſs than $\frac{1}{2}$ d. ſterling.

Livre de GROS, is a money of accompt uſed in Holland, Flanders, and Brabant; being worth more or leſs according to the places where it is uſed, or according as exchange riſes and falls.

GROSS, or *Groot*, is alſo a copper coin uſed in Poland, Germany, and Italy. The Poliſh groſs is equal to $\frac{1}{10}$ of an Engliſh penny. The groſs of Dantzic is equal to $\frac{3}{5}$ of a penny ſterling. The groſs of Hamburgh is equal to $\frac{9}{16}$ of a penny ſterling. The groſs of Saxony is of two kinds; the good and the marien; the former worth 1 $\frac{3}{4}$ d. ſterling, and the latter worth 1 $\frac{1}{6}$ d. ſterling. The kayſer groſs of Frankfort is worth 1 $\frac{1}{4}$ d. ſterling. The groſs of Vienna is worth 1 $\frac{19}{30}$ d. ſterling: and the groſs of Venice is worth 1 $\frac{19}{181}$ d. ſterling.

GROSS *weight*, is the weight of merchandiſes, and goods, with their duſt, and droſs; alſo of the bag, caſk, or cheſt, wherein they are contained; out of which groſs-weight allowance is to be made for tare and tret. See *Tare* and *Tret*.

GROSS *average*. See *Average*.

GROSS *in tale*, the quantity of twelve dozen. See *Tale*.

GROTESQUE *work*. A wild, whimſical figure, or deſign of a painter, or engraver; having ſomething ridiculous, extravagant, or even monſtrous in it.

GROUND, in agriculture, is a piece of land, ſoil, or portion of earth, fit, or unfit, to be cultivated: but all ſorts of ground may be reduced to marſhy, chalky, gravelly, and ſtony.

GROUND *in painting*, is the ſurface upon which the figures, and other objects, are raiſed, or repreſented. In like ſenſe is alſo ſaid the *ground* of a piece of tapeſtry, of an embroidery, of a medal, coin, and ſuch like.

GROUND *tackle*. A ſea term, denoting a ſhip's anchor, cables, and whatſoever is neceſſary to make her ride at anchor in a proper ground.

GROUND-*timbers*, in ſhip-buildings, are thoſe which lie on the keel, and are faſtened to it with bolts thro' the keelſon.

GROUNDS, the dregs or lees of liquors, eſpecially thoſe made from malt; alſo the name of powder made of ſtarch. See *Starch*.

GROUNDING *of a ſhip*, is the bringing her on ground to be trimmed, made clean, or to have ſome leak ſtopped in her.

GRUBENHAGEN. A town and caſtle of Germany, in the circle of Lower Saxony, and duchy of Brunſwick, ſituated in 9 deg. 36 min. of E. lon. and 51 deg. 45 min. of N. lat. 60 m. S. W. of Brunſwick, and 45 S. of Hanover. There are mines of ſilver, copper, iron, and lead, in the adjacent mountains, which are covered with the woody remains of the Hercynian foreſt: the people of this and the neighbouring country being all miners.

GUADALAVIAR. A river of Spain, which riſes in the province of Arragon, and runs S. E. through the province of Valencia, falling into the Mediterranean, a little below the city of Valencia.

GUADALUPE. One of the largeſt of the Caribbee iſlands, ſituated in 61 deg. of W. lon. and 16 deg. 30 min. of N. lat. in the Atlantic ocean, 80 miles N. of Martinico. See *French* America, under *France*.

GUADIANA. A river of Spain, which riſes in the middle of New Caſtile, and running S. W. by Calatrava, and Cividad Real, paſſes on to the city of Merida, in Eſtremadura; then entering Portugal near Elvas, runs S. through the provinces of Alentejo, and Algarva, diſcharging itſelf into the Atlantic ocean at Aymonte.

GUADILBARBAR. A river of Africa, which riſes in the mountains of Atlas, and runs from S. to N. through the kingdom of Tunis, falling into the Mediterranean near Bona.

GUADILQUIVIR. A river of Spain, which riſes in the mountains of Segura, in New-Caſtile; runs S. W. the whole length of Andaluſia; and, paſſing by Cordoua and Seville, falls into the Atlantic ocean at St. Lucar, a little N. of the bay of Cadiz.

GUAIAC, or *Guiacum*. A medicinal wood brought from the Indies, much uſed in venereal diſorders; called alſo *lignum vitæ*, and by the Spaniards *ligno ſanto*.

Guaiac grows both in the Eaſt and Weſt Indies; that of the latter is brought in large pieces, ſome of them weighing four or five hundred pounds; by which it is diſtinguiſhed from the former. The guaiac tree is the height of the common walnut-tree, and is diſtinguiſhed into two kinds, male and female; only differing as their leaves are more or leſs round; being all equally green, the flowers blue, and of a ſtarry form; having a little orange-coloured fruit, about the ſize of a ſmall nut, at the tip thereof.

The wood guaiac is extremely hard and heavy, on which account it is uſed as ebony in moſaic work, and alſo for making of button-moulds: but its principal uſe is in medicine, being found to warm, dry, rarify, attenuate, attract, and promote ſweats and urine: the uſual way of applying it being in decoction.

The beſt is that in large pieces, of a duſky colour, full gummy, heavy, and of an agreeable ſmell, and a brisk pungent taſte; the bark ſticking cloſe to the wood.

The bark of guaiac is held of as much virtue as the wood itſelf; but the rind is of no efficacy: ſo that to make a ſudorific decoction, or ptiſan of the wood, all the white part ſhould be firſt poured off; which, in reality, is the rind; and it is only neceſſary to chip or raſp the hard ſolid part, which is black, heavy, and reſinous; but, the chirurgeons frequently ſubſtitute box-wood inſtead of guaiac, and, they ſay, with equal ſucceſs.

The reſin drawn from guaiac is held much more effectual in venereal caſes, than either the wood or bark. It is brought to Europe in large pieces, not much unlike the common reſin; but very different in reſpect of ſmell: for, being caſt upon the coals, it yields a very agreeable balſamic fume.

GUAM. The chief of the Ladrone or Marian iſlands, in the Pacific ocean, ſituated in 140 deg. of E. lon. and 14 deg. of N. lat. where the Spaniards, and other nations, uſually touch for proviſions, in their voyages from America to Aſia. See *Marian* Iſlands.

UANCO, or *Guanaco*. An animal of the number of thoſe who furniſh the occidental bezoar, otherwiſe bezoar of Peru. See *Bezoar*.

UANIN. A kind of metal, compoſed of gold, ſilver, and copper, in which, when of 32 parts, there are 18 of gold, 6 of ſilver, and 8 of copper. There were formerly mines of Guanin in the iſland of St. Domingo; but, ſince the natural inhabitants of the iſland were exterminated by the Spaniards, the knowledge thereof has been intirely loſt.

UANIHANI, or *St. Salvador*, now called *Catt* iſland, one of the Bahama iſlands, in the Atlantic ocean, in North America, ſituated in 76 deg. of W. lon. and 24 deg. of N. lat. 200 miles E. of the iſland of Providence. This was the firſt land Columbus diſcovered in North America, in 1492; when he called it St. Salvador, his crew giving themſelves over for loſt in a boundleſs ocean, till they ſaw this land. See *Britiſh* America.

UARD, in its general ſenſe, implies defence, cuſtody, or conſervation of any thing; the act of what paſſes to prevent ſurpriſe, or the care and precaution taken to hinder any thing being done contrary to the deſire and intention of another. Thus Spain has at various times purpoſely fitted out men of war called,

UARDA-COSTAS, both in Europe and America: in the former particularly to guard the coaſts of Andaluſia from Cape St. Vincent to the ſtreights of Gibraltar, which the corſairs of Sallé, Algiers, and others from Barbary, more frequently infeſt, and dare to inſult. Such a proviſion may not only contribute very much to reſtrain them from invading, and committing all ſorts of hoſtilities, and depredations aſhore, making priſoners, and dragging into captivity many of the inhabitants of both ſexes; but would alſo ſerve to convoy, and protect the Spaniſh veſſels, that either carry on, or ought to carry on the traffic of their own fruits, and commodities, at leaſt upon their own ſeas, without being expoſed to be hurried away captive, and ſuffer all the wretchedneſs that uſually attends ſuch a misfortune, and with this additional mortification, that the Spaniards are obliged to remit thoſe large ſums of money, which they ſend from time to time, to Africa for their redemption, and which enable thoſe Barbarians to encreaſe their power at ſea, and do them ſtill greater injuries.

In America, the Spaniards conſtantly employ a great number of theſe armed veſſels, to prevent the ſhips of other nations from enjoying a traffic with the American Spaniards: as alſo to ſearch foreign veſſels, in ſuch latitudes, for what they eſteem contraband goods; ſuch as pieces of eight, logwood, and indigo: and likewiſe to hinder the Engliſh from carrying on the logwood trade in the bays of Honduras and Campeachy: which occaſioned the late war between Great Britain and Spain; and which, very probably, may bring on another.

UARDA FEU *Cape*, the moſt eaſterly promontory in Africa, ſituated in 50 deg. of E. lon. and 11 deg. of N. lat. on the coaſt of Anian, near the entrance of the Red ſea.

UARMAY. A port-town of Peru, in South America, ſituated in 78 deg. of W. lon. and 10 deg. of S. lat. 120 miles N. W. of Lima.

UATIMALA. A city of Mexico, in North America, ſituated in 97 deg. of W. lon. and 14 deg. 30 min. of N. lat. capital of the province of Guatimala.

UENGA. A great river of the Hither India in Aſia, which riſes in the mountains of Balagate, and running N. E. falls into the W. branch of the river Ganges, in Bengal.

UERNSEY. See *Britiſh* Iſlands.

UEROU. A river of Morocco, in Africa, near which is the city of Sallee.

UEST. A long meaſure, uſed in ſome of the Mogul's territories, being about 2 Engliſh ells.

UEZE. A long meaſure uſed by the Perſians for ſtuffs, cloths, and ſuch like merchandiſes; of which there are two kinds; the royal, called monkelſer; and the ſhort ſimply gueze, being only $\frac{2}{3}$ of the other; the former containing 2 feet 10 inches, and the latter 11 lines.

UIACUM. A phyſical wood. See *Guaiac*.

GUIAQUIL. A city and port-town of Peru, in South America, ſituated on the Pacific ocean, in 80 deg. of W. lon. and 30 deg. of S. lat. 140 miles N. E. of Payta, ſubject to Spain.

GUIARA. A port-town on the Caracoa coaſt, in Terra Firma, in South America, ſituated in 66 deg. of W. lon. and 10 deg. of N. lat. 200 miles E. of Maracaibo, ſubject to Spain.

GUILD, or *Gild*, ſignifies a fraternity or company; the original of which is thus related. It being a law among the Saxons, that every freeman of fourteen years old, ſhould find ſureties to keep the peace, or be committed; certain neighbours entered into an aſſociation, and became bound for each other, either to produce him who committed an offence, or to make ſatisfaction to the injured party. That they might better do this, they raiſed a ſum of money among themſelves, which they put into a common ſtock; and when one of their pledges had committed an offence, and was fled, then the other nine made ſatisfaction out of this ſtock, by payment of money according to the offence. Becauſe this aſſociation conſiſted of ten families, it was called a decennary, and from hence came the Engliſh fraternities or companies. As to the direct time when theſe guilds had their origin in England, there is nothing of certainty to be found; ſince they were in uſe long before any formal licence was granted to them for ſuch meetings. Edward III. in the 14th year of his reign, granted licence to the men of Coventry, to erect a merchant's guild and fraternity, of brethren and ſiſters, with a maſter and warden; and that they might found chantries, beſtow alms, do other works of piety, and conſtitute ordinances touching the ſame. So Henry IV. in his reign granted a licence to found a guild of the Holy croſs, at Stratford upon Avon.

GUILD, in the royal boroughs of Scotland, is ſtill uſed for a company of merchants, who are freemen of the borough. Every royal borough has a dean of guild, who is the next magiſtrate below the bailiff: he judges of controverſies among men concerning trade; diſputes between inhabitants touching buildings, lights, water-courſes, and nuiſances; calls courts, at which his brethren of the guild are bound to attend; manages the common ſtock of the guild, and amerces and collects fines.

GUILD, according to Cambden, alſo ſignifies a tribute or tax.

GUILD-*rents*, payable to the crown by any guild, or fraternity, or ſuch rents as formerly belonged to religious guilds, and came to the crown at the general diſſolution, were ordered for ſale by the ſtatute of the 22d of Charles II.

GUILDHALDA TEUTONICORUM, was uſed for the fraternity of Eaſterling merchants in London; called alſo the Stillyard.

GUILD-*hall*. The great court of judicature for the city of London; in which are kept the mayor's court; the court of huſtings; the court of conſcience; court of common-council, and the chamberlain's court.

GUILD-*merchant*, was a certain privilege, or liberty, granted to merchants; whereby they were enabled, among other things, to hold certain pleas of land within their own precincts. Thus, King John granted *gildam mercatorium* to the burgeſſes of Nottingham.

GUILDER, is a ſilver coin, and money of accompt, of Holland, Flanders, and ſome places of Germany. The Dutch guilder, gulden, or florin, is worth 1 s. 9 d. ſterling. The guilder of Flanders is worth 1 s. $7\frac{1}{2}$ d. ſterling. That of Cologn 2 s. 4 d. ſterling. That of Hanover 2 s. $4\frac{1}{4}$ d. and that of Saxony 2 s. $3\frac{1}{7}$ d. ſterling. See *Guilder*.

GUILDINE, or *Guildive*. A ſpirit extracted from Brazil ſugar; making a part of the Portugueſe trade from Rio Janeiro, with the Spaniards of Buenos-Ayres. The French repute it extremely prejudicial to health, and therefore have forbid its importation under very ſevere penalties.

GUINEA, together with *Nigritia*, or *Negroeland*, are two large countries on the weſtern and ſouthern parts of Africa; extending from Cape Barbes, which ſeparates Nigritia from Zaara, to Cape Negro, which ſeparates

Guinea from Caffraria; theſe countries containing the principal places traded to by the ſeveral European African companies and others.

Nigritia, part of which is called the *Gum* coaſt, lies between 18 deg. of W. lon. and 15 deg. of E. lon. and between 10 and 20 deg. of N. lat. the great river Niger running through it from eaſt to weſt. It is bounded by Zaara, or the Deſart, on the north; by unknown countries on the eaſt; by Guinea on the ſouth; and the Atlantic ocean on the weſt; there being ſeveral European ſettlements on the branches of the river Niger, eſpecially near the mouths. It is about 3000 miles in extent: but, ſhould it be admitted, that ſome Europeans have gone up the river Niger, and diſcovered the country for 300 miles to the eaſtward of Cape Verd, as they pretend; it is certain, that all the remainder of the 3000 miles to the eaſtward of that, is perfectly unknown to the European nations, unleſs what they have gath red from the report of the natives, who are but poorly qualified to give a deſcription of their country: neither is the language of ſeveral of the negroe nations, who come down to the mouths of the river Niger to trade with the Europeans, underſtood by them, or even by the natives on the coaſt: for there are ſuppoſed to be forty nations of different people comprehended in this tract aſſigned to Negroeland.

The river Niger empties itſelf into the Atlantic ocean by ſeveral mouths; of which the three largeſt are the Rio Grande, or great river, the Gambia, and the Senegal: and as the mouth of the river Grande lies in 11 deg. of N. lat. and the Senegal in 16, it is conſequently upwards of 300 miles between the two moſt diſtant mouths of this river: and all the country between, except the riſing grounds, are annually overflowed as the Delta in Egypt is by the Nile; though the Senegal is ſaid by ſome writers to be a diſtinct river from the Niger. The Portugueze ſtill retain their ſettlements of Catheco, and Biſſeo, on the river Grande: the Engliſh had two ſettlements in the Gambia, one on Charles iſland, and another on James iſland. The French have two ſettlements, one on the ſouth, and the other on the north of Cape Verd; and another to the northward of them, on the river of St. John: the Dutch alſo have ſome ſettlements, all which formerly belonged to the Portugueze.

The chief negroe town is Tombut, and the adjacent country would be extremely fruitful if well cultivated; however it yields great plenty of rice and mil et, palm-trees, cocoa-nuts, and other fruits, herbs, and roots, with fleſh, fiſh, and fowl. The European nations ſettled on this coaſt, deal with the natives chiefly for gums, gold-duſt, ivory, wax, leather, oſtrich feathers, muſk, rice, cotton, and ſlaves.

The river Gambia is navigable for ſloops 200 leagues, the tides reaching ſo far from the mouth of it. The ſides of the river are generally flat and woody for about a quarter of a mile in land, in ſome places not ſo much; and within that are open pleaſant grounds, which the negroes uſe for their rice, and in the dry ſeaſon it ſerves the cattle for paſture. Inland it is chiefly very woody; but near the towns there is always a large ſpace of cleared ground for corn: the ſoil being moſtly ſandy, with ſome clay, and a great deal of rocky ground. Near the ſea, and the lower part of the river, no hills are to be ſeen; but high up the river are ſome lofty mountains, from whoſe tops are pleaſant proſpects: the hills are of iron ſtone; and though they are ſometimes little elſe but a continued hard rock, they are full of trees.

In every kingdom there are ſeveral lords of ſoils, commonly called Kings of the towns where they dwell, whoſe privilege it is to have all the ciboa-trees; ſo that no perſon can cut any leaves, or draw any wine from them, without their permiſſion: the men who have the liberty of drawing wine, give two days produce in a week to the lord of the ſoil, as an acknowledgment; and white men are obliged to make a ſmall preſent to them, before they can have liberty to cut ciboa leaves, or graſs, to cover a houſe.

James iſland, one of the principal ſettlements formerly belonging to the Engliſh African company, lies ten leagues up the river Gambia, almoſt in the middle of it, being 3 miles from the neareſt ſhore. At low water, the iſland is about three quarters of a mile in circumference, upon which there was a ſquare fort of ſtone, regularly built, with four baſtions, upon each whereof were ſeven cannons mounted, which commanded the river all round. Under the walls of the fort, facing the ſea, were two round batteries, on each of which were four large cannon mounted, and between thoſe were nine ſmall guns mounted for ſalutes. In the fort were ſome very good apartments for the governor, chief merchants, factors, writers, and enſign; and under ſome of theſe apartments were very good ſtorehouſes. One officer, one ſerjeant, 2 corporals, a gunner and his mate, with 30 ſoldiers, were by eſtabliſhment the garriſon of this fort, beſides white and black ſervants. Beſides the fort, there were ſeveral factories up the river, ſettled for the conveniency of trade, which were all under the direction of the governor and chief merchants of the fort, to whom the factors remitted all their trade. For this purpoſe the company had three or four ſloops of about 30 tons each, and about the ſame number of long-boats: ſome of them were conſtantly employed in fetching proviſions and water from the main for the uſe of the garriſon; the reſt being employed in carrying goods up to the factories, and bringing from them ſlaves, elephants teeth, wax, and other things, down to James fort, from whence moſt of them, except ſlaves, were ſent to the company in England.

On the north-ſide of the Gambia, the firſt kingdom is that of Barrach, which extends 20 leagues along the river; and in this country the Engliſh African company had two factories; one at Gilliſleet over againſt James fort; and the other at Colar, upon a river of the ſame name, which diſcharges itſelf into the Gambia, eight leagues above James iſland. The next kingdom is Cadibus, which extends 20 leagues. Further eaſt, on the north-ſide of the river, is the kingdom of Sangally, which extends 14 leagues; and in this kingdom the Engliſh company had their chief factory of Joar, being about ten miles diſtant from the river. Next to Sangally lies the kingdom of Barſally, extending about 15 leagues along the river, to which moſt of the other kingdoms are tributary. Beyond Barſally lies the kingdom of Yany, which extends 80 leagues further up the river. And the laſt kingdom on the north-ſide of the river, which Europeans frequent, is that of Woolly, extending 7 leagues beyond Yany: in which kingdom the Engliſh company had a factory of Fatatenda, about 500 miles from the mouth of the Gambia, which at this place is as wide as the Thames at London-bridge; ſo that ſloops of 30 tons can come up with their cargoes, and the tides riſe three or four feet.

On the ſouth-ſide of the river Gambia, the firſt kingdom is Cumbo, which commences at Cape St. Mary, and extends eleven leagues to the eaſtward of it, affording plenty of cattle, goats, and fowl; where the Engliſh company had a ſmall factory, which purchaſed proviſions for the garriſon at James Fort. The next kingdom on the ſouth-ſide is Fonia, extending ſeven leagues, in which the Engliſh company had two factors employed in buying up elephants teeth and bees wax. The next country to Fonia is Caen, extending 23 leagues along the river, in which is a town called Tancrowal, where the Engliſh company had a factory: but Tancrowal is divided into two parts; one belonging to the Portugueſe, and the other to the Mundingoes; the former having ſeveral canoes, which they ſend up the river to trade once or twice a year, by which means they have made this town a place of great reſort, and the richeſt in the whole river. Next to Caen lies the country of Jaloffs, famous for huſbandmen and laborious people, by which means it abounds with corn and rice: this kingdom extends about 12 leagues; and in it is Elephant's iſland, being four or five miles long, full of trees and monkeys. The next kingdom is Yamina, which abounds in fiſh and fowls: it extends about 14 leagues, and in it are two iſlands; the one large and pleaſant; the other almoſt in the middle of the Gambia, called Sea-horſe iſland, abounding in ſea-horſes, from whence it takes its name. The next country is Eropina, a petty king-

extending about 14 leagues. After which begins Jenarrow, governed by an Emperor: here the Engliſh company had a ſettlement near a large town called Benoe, which is inhabited by people of the Mundingo race, but ſtrict followers of Mahomet: this country runs about 32 leagues along the river, and then begins Tomany, which is a large and populous country, extending about 26 leagues along the river, and the Engliſh company had a factory at a ſmall town called Yamyamacunda, which made a conſiderable trade, in dry goods, when it was well ſupplied. Above Tomany begins Cantore, in which is a town called Colar, about 500 miles from Cape St. Mary's; and beyond this town the country is little known to white people.

The ſea-horſe, the crocodile, and other animals for which the Nile is famous, abound in the river Gambia; which alſo overflows its banks every year as the Nile does, but ſome months later.

Theſe countries on the banks of the river Gambia, are inhabited by ſeveral races of people; as the Mundingoes, Jaloffs, Pholeys, Floops, and Portugueſe; but the moſt numerous are called Mundingoes, as is likewiſe the country where they inhabit; and the natives are generally of a black colour.

The chief trade of theſe countries conſiſts in gold, ſlaves, elephants teeth, and bees-wax. The gold is of a very good quality, and finer than ſterling gold: it is brought from the inland countries in ſmall bars, big in the middle, and turned round into rings, worth from 10 to 40 s. each. The black merchants who bring the gold alſo bring ſlaves and elephants teeth: about 2000 ſlaves being brought from the inland countries, and near 1000 bought along the river every year.

The French company of Senegal, incorporated with that of the Weſt in 1718, and ſince the year 1719 making part of the grand India company, has two principal eſtabliſhments on this coaſt, one in the iſland of Goree, and the other in the iſland of St. Lewis, at the mouth of the river Senegal: the latter having alſo ſubordinate to it the wood iſland, and the Engliſh iſland.

The iſland of Goree is about 30 leagues from Senegal, one league from the terra firma of Cape Verd, and four leagues from the Cape.

The Dutch firſt poſſeſſed it, and built the forts St. Francis and St. Michael: the French ſeized upon it in 1678, and the Engliſh in 1692, but were obliged the year following to give it up to the French, in whoſe hands it has continued ever ſince.

The principal commerce of the French company is with the ſubjects of the King of Hamel, or Houmel, and at Rio-freſco, Portudat, Seringua, Jovat, and the river Breſalin.

About three leagues from this river there is a ſalt marſh, where the Portugueſe, with the negroes of Gambia, and the coaſt, load ſalt for trading with it up the river, where it proves to be a very good commodity.

All that the French company purchaſe in theſe places, comprehending even Senegal, may amount one year with another to 6000 ox hides, 40 or 50 hundred weight of gum arabic, called otherwiſe gum ſenega; 150, or 160 hundred weight of yellow-wax; 7 or 800 lb. of elephants teeth; 200 cotton carpets; 25 or 30 lb. of gold, and 1500 negroes of both ſexes, beſides oſtriches and egrets feathers, ambergreaſe, indigo, civet, and ſeveral coarſe cotton cloths ſtriped with blue and white, which are ſold again on the gold coaſt.

Somewhat higher up the coaſt are the kingdoms of the Jaloffs and Ceraticks; to the latter of which the cuſtoms are paid for the liberty of navigation and commerce in the river Senegal; which may amount for each ſhip to about 80 l. ſterling reduced into merchandiſe proper for this trade.

The Engliſh and Dutch trade conſiderably with the Jaloffs at Camino, Jameſil, and Geroep: where the months of March and April, November and December, are beſt for this trade.

The merchandiſes proper for Gambia, particularly for the Jaloffs, wherewith the Dutch uſually load their ſhips, are bars of iron, whereof 28 or 30 weigh 10 hundred weight; brandy, beer, copper baſons of different weights, copper-plates of about a pound weight; coarſe, narrow, and blue ſerges; red, yellow, and blue cloths of four threads; glaſs work of different ſorts; red, yellow, and white ratines; rock coral, broad ſwords, braſs trumpets, red caps, rock-cryſtal, ſailors knives, coarſe ſhirts for men, fine ſhirts laced on the neck and wriſts, Haarlem habits, Sileſia lawns, fine linen, fine cotton cloths, fine and common paper, white and blue earthen pots, Leyden blankets, Iriſh mantles, Morocco ſhoes, hats, coarſe white thread, glaſs bottles with tin ſtoppers, and all ſorts of needles.

The cargoes of French ſhips for Senegal are compoſed partly of the ſame merchandiſe; as alſo of black cotton cloths, and Rouen calendered linnen: kettles from 4 and 5 lb. to 8 and 10 lb. ſome ſilver trinkets of little conſequence; middling ſtraw-coloured amber, tin, ſmall looking-glaſſes, dreſſed ſkins from 8 to 10 lb. the dozen, ſome ſmall ſpecie, coarſe and red coral, taffeties, cloves in ſmall quantity, Sambucca wood, and Florence iris, but theſe two laſt, with ſome ells of ſcarlet-cloth, are only by way of preſent for the Negro Kings. To theſe may be added fuſees, muſkets, piſtols, gun-powder, balls, ſhot, and flints: but the beſt kind of merchandiſe are the Maldive ſhells, called in the Eaſt Indies coris, and on the coaſts of Africa bouges.

The moſt proper times for the negro trade up the Gambia, are the months of May and June, 7 or 800 captives being then brought there from Guinea, and other parts.

The Engliſh, French, and Portugueſe, eſtabliſhed upon the Gambia, return in the month of July from the traffic they carried on up the river, and bring with them commonly to the amount of 200 negroes: but in December, January, and February, the petty Kings, on the lower part of the river, alſo ſell ſome few captives.

GUINEA is divided into the Upper and Lower Guinea; extending together about 2500 miles along the ſea coaſt.

Upper Guinea, is ſituated between 15 deg. of E. lon. and 15 deg. of W. lon. and between 4 and 10 deg. of N. lat. bounded by Nigritia, or Negroeland, on the north; by unknown lands on the eaſt; by Lower Guinea and the Atlantic ocean on the ſouth; and by the ſame ocean on the weſt; comprehending, 1. The Grain coaſt, from its producing chiefly Guinea pepper: 2d, The ivory coaſt, from the plenty of elephants teeth found there: 3d, The gold coaſt, from its furniſhing moſt gold: 4th, The ſlave coaſt, from their meeting with the greateſt number of ſlaves there; though every one of theſe diviſions produce ſome of theſe articles. The Engliſh, French, Portugueſe, and Dutch, have forts and factories on this coaſt: but there are abundance of little princes and ſtates in the inland country, who are uſually at war, and ſell their priſoners to the Europeans for ſlaves; others make it their buſineſs to traffic to diſtant countries to purchaſe ſlaves, or ſteal them, and bring them down to the coaſt to make money of them; for ſome of the negroes will ſell even their neareſt relations, if they have an opportunity.

1. The *Grain* coaſt, ſo called from the paradiſe grain, or Guinea pepper, is watered by three great rivers; the Rio de Seſtro, the Rio de St. Paul, and the river de Sierra Leon. The chief towns are Sherbro, Baffoe, Sanguin, Buga, and Tomba.

The Engliſh are in poſſeſſion of an iſland in the river of Sierra Leon, which was firſt called Bence's iſland, but now George's Iſland. It is the property of ſome private merchants of London, who have a factory there, conſiſting of about ten Engliſhmen, and ſome black ſervants, who purchaſe a great many ſlaves from the neighbouring negroes, and carry on a conſiderable trade up the river for rice, ivory, civet, and ambergreaſe. There are about thirty private traders ſettled on the Sierra Leon, who keep gromettas, or negroe ſervants, which they hire by the month, to carry European goods up the river, and exchange them for ſlaves and teeth: but the country about the river is entirely covered with wood.

The commerce carried on up the Rio de Seſtro, is principally in Guinea-pepper, ivory, wax, rice, millet, peaſe, beans, ſeveral ſorts of fruit, and palm-wine: but the chief

chief place of trade is at Sherbro, from whence is brought cam-wood for dying.

2. The *Ivory*, or *Tooth* coaſt, which takes its name from the elephants teeth found here, is watered by the Rio de Suerio, and the Rio de Eſcravos; the moſt remarkable towns being Jaque, Cape Lakoo, Drumryn, Cape Palmas, Seſtre, Sino, and Bottowa.

The principal commerce of this coaſt is ivory, becauſe elephants are very numerous here, and are ſuppoſed to ſhed their teeth every three years: however, there are ſeveral ſtriped cotton ſtuffs brought from this coaſt, which are profitable commodities on the gold coaſt, where the negroes uſe them for covering their nakedneſs. In exchange for theſe commodities, the Europeans give the negroes iron rings, and little copper bells; for which they alſo receive ſeveral kinds of refreſhments, and very cheap; ſuch as oxen, kids, and hogs; as likewiſe rice, peas, beans, citrons, oranges, cocoa-nuts, and ſugar-canes.

Ivory is purchaſed in teeth, or ſchrevelios. The teeth are large, weighing from 30 lb. to a hundred weight: they are worth double the ſchrevelios in the country; ſelling for 10 or 12 l. when the other are not worth 5 l. a hundred. The ſchrevelios are ſmall, from 15 lb. to 4 lb. weight, among which are ſold to the windward, the teeth of the hippopotamus, or ſea-horſe, catched in the river Nunes and Gambia; being about 16 inches long, a white ivory, but ſo brittle as not to be eaſily worked.

The rule upon the coaſt is, that when four will weigh a hundred weight, they ſhall be all accounted teeth, and paid for as ſuch, though one or two of them ſhould be very ſmall: for the more teeth increaſe in their weight, the ivory is better, and makes amends for the ſmallneſs of the other. At Gambia the points of them are often found broken, from the elephants grubbing againſt rocky ground: at other times they are ſeen flawed, or they are light in proportion to their bigneſs, which are circumſtances that abate their value.

The elephants move and change their paſture in very large herds; 1000 or 1500 together have been ſeen upon the banks of the Gambia, who are bold, forage leſs than horſes, and look out better: they march in a line, and are ſecure from the attacks of the natives, who muſt come very near, as their ſkin is impenetrable by fire-arms; beſides, ivory was the trade of Guinea before the uſe of muſkets; and the weighty teeth come to ſale in leſs numbers than the ſchrevelios; therefore, it appears that the larger ſize are teeth of elephants which have died naturally, and which being grown to their utmoſt perfection and ſolidity, withſtand a very conſiderable elapſe of time, without mouldering or decay: the ſchrevelios being probably ſuch as were ſhed when young, or as bucks ſhed their horns, which the natives by practice know where to look for. See *Elephant*.

3. The *Gold* coaſt, ſo named from the abundance of gold that is found here, is watered by ſeveral rivers, of which the principal is Rio Cobre, or Ancober, by ſome called the gold river, which falls into the ſea, near the Dutch fort of St. Anthony, a little to the weſtward of Cape Three points.

The chief towns, which give names to ſo many petty kingdoms or ſtates dependant on them, are Aquamboe, Agonna, Acron, Fantyn, Sabo, Fetu, Commani, or Commenda, Jabi, Adorn, Ante, and Axim.

On this coaſt are ſeveral European forts and ſettlements. The moſt eaſterly, called Chriſtianburgh, belongs to the Danes. The ſecond, called Crevecœur, ſtands a little to the weſtward of the former, and belongs to the Dutch; and, further weſtward, Accra, which belongs to the Engliſh. In Agonna ſtands fort Simpas, once belonging to the Engliſh. In Acron, fort Patience to the Dutch. In Fantyn, Anamaboa to the Engliſh; and Amſterdam to the Dutch. In Sabo, fort Naſſau to the Dutch. In Fetu, Conradeſburgh to the Dutch; and Cape Coaſt Caſtle, or Cabo Corſo, to the Engliſh. In Commani, Vredenburgh, and Las Minas, or d'Elmina to the Dutch. In Ante, fort Infuma to the Engliſh: Batenſteirn, Orange, and St. Sebaſtian, to the Dutch. In Axim, the forts of Axim, and St. Anthony to the Dutch: fort Frederickſburg, and Dorothea, once to the Pruſſians. There are

alſo ſeveral other ſmall forts and factories belonging to the Engliſh and Dutch on this coaſt: but the ſtrongeſt forts are thoſe of Cape Coaſt, and Las Minas.

This coaſt is more frequented by Europeans than any other part of Africa. The gold of Axim is the beſt, being 22 or 23 carats fine; the others are leſs fine, and that of Fetu is the coarſeſt of all.

The negroes find it either in the ſand of brooks and torrents, or in mines: the former being what is commonly called gold duſt, which is more or leſs abundant according as it rains more or leſs in the mountains where theſe torrents and rivulets have their ſources.

The gold from the mines is found very plentifully in the mountains of Jaffou, 30 leagues from Accra.

The mine and earth gold is not purified when brought by the negroes to the Europeans; therefore it requires an underſtanding in the goodneſs of the mineral to avoid being deceived.

Thoſe who come to trade aboard the ſhips are uſually officers, or captains of villages, who are all merchants; and, as they are from different places, they have alſo different manners of bargaining; thoſe eſtabliſhed on the coaſts bargain for themſelves; and thoſe of the inland parts, who are neither acquainted with the language nor manner of treating with Europeans, make uſe of brokers, for a certain fee agreed upon among themſelves. Theſe brokers are commonly conſiderable merchants of the coaſt, who never neglect ſuch ſmall profits; and who generally buy up all the merchandiſe of the ſhips, and ſell them again at 6 *per cent.* profit, in the inland country.

When the negroes are upon any bargain with Europeans, they always aſk before concluding it, what *dachee* will be given them; that is, the preſent, beſide the merchandiſe agreed upon for exchange.

This cuſtom was introduced by the Dutch to alienate the negroes from the Portugueſe whom they greatly eſteemed; but what was firſt voluntary became afterwards neceſſary, and nothing could be concluded with a negroe unleſs he knew firſt what *dachee* he ſhould be complimented with.

The negroes have no notion of mercantile credit, therefore every thing is paid for in gold; for which purpoſe they have little ſcales and weights of their own making, or ſuch as are brought them from Europe, if the quantity to be given is ſomewhat conſiderable; if not, they take it up with their fingers, and augment, or diminiſh it as they think proper.

The European merchants, or factors, never go up into the country to purchaſe gold: but the trading negroes come down to the forts and factories, or bring it on board the European ſhips. They have learnt to mix copper, and other ingredients of leſs value, both with the rock gold and gold duſt. Some pieces they caſt ſo artfully, that quite round, of the thickneſs of a ſhilling, the piece ſhall be pure gold, and perhaps filled up with copper or iron: but the common falſe mountain gold is a mixture of ſilver, copper, and a proportion of gold very high coloured, which makes the cheat not eaſily diſcernible for, being obliged to receive an infinite number of little pieces in a pound, it is almoſt impoſſible to try every one by the touch, and the metal looking ſo well, is ſcarce ſuſpected. They alſo tinge powder of coral ſo artfully, that it is impoſſible to diſtinguiſh it any other way than by the weight: of this alſo they make a powder reſembling gold duſt; but chiefly of the filings of copper, to which they give a good tincture; though all this falſe metal in a month or two loſes its luſtre. The way the factors take to diſtinguiſh true gold from falſe, if it is in large pieces, is to cut it through, which eaſily diſcovers what it is: if the pieces are ſmall mountain gold, they lay them upon a ſtone, and beat them with a hammer: but, as this is not practicable with gold duſt, they put the duſt into a copper baſon, winnowing and blowing it, by which the falſe gold flies away, leaving the pure gold behind. Maſters of ſhips commonly hire a native at ſo much a month for the trade; ſome of them have a quicker ſight at knowing it, and are readier by practice at ſeparating the droſſy falſe gold from the true.

The value of gold brought from the Guinea coaſt, year with another, by all the European nations

de thither, is ſuppoſed to amount to the value of
,000 l. ſterling and upwards; of which the Engliſh
y import one third, the Dutch another, and the
ench, Portugueſe, Danes, and Pruſſians, another third:
ough of late the French have come in for a much
ater ſhare.

ſides the commerce which the negroes of the gold coaſt,
thoſe who come from the inland parts, have with the
ropean nations eſtabliſhed among them, and the ſhips
ich arrive there yearly, they drive on a very conſider-
e trade among themſelves, either by daily markets in
ir towns, or by fairs held in ſome places once or twice
year; which fairs are never held on the ſame day in
o villages of the ſame kingdom, in order that the con-
urſe of people might be the greater, and that the mer-
ants might not prejudice one another.

t theſe fairs the Negroes expoſe to ſale all the fineſt and
ſt kind of merchandiſe they have purchaſed from Eu-
peans, and none but Negroes come to traffic there;
ough, if the markets are near the European forts, the
hite people reſort there for providing neceſſaries.

The *Slave* coaſt extends from the Daniſh fort of Chriſti-
burg, near the river Volta on the weſt; to the river
amarone on the eaſt; containing the kingdoms of
ahomy, Whidah, Ardra, and Benin; where the Eng-
h, French, Portugueſe, and Dutch, have ſeveral facto-
es: there are alſo the Negro towns of Lampo, Great
d Little Popo, Whidah, Great and Little Ardra,
rebo, Averri, and Benin; the latter of which is re-
ted to contain 100,000 inhabitants: but the King of
ahomy, having conquered Whidah, is the moſt potent
ince of the country.

The ſlave trade is carried on in much the ſame manner as
e gold trade. The Negroe factors and merchants come
wn to the coaſt with their ſlaves, agree with Europeans
r the price of them, and the price of the goods they are
take in exchange; ſo that a ſhip is ſoon diſpatched, if
ey act fairly: but if a merchant delivers any part of his
ods before he has his ſlaves, they will make him wait a
eat while for them, and ſometimes not bring them at
ll, unleſs the European factor find ſome way to make re-
riſals: and yet it is found neceſſary to truſt theſe people;
r, as they trade with other nations beyond them, and
ave not always effects to purchaſe ſlaves, they have ſome-
mes no way of getting them, unleſs they can be credited
r goods to go to market with, and exchange for ſlaves
the inland country.

rivate trading ſhips bring two or three boats with them
pon the Guinea coaſt for diſpatch; and while the mates
o away in them, with a proper parcel of goods and in-
ructions, into the rivers and bye-places, the ſhip is
aking good her trade at others near hand: but from the
ricks and panyars, or running away with the Negroes,
hich the European traders have ſometimes practiſed; and
om the cutting off the ſhips by the Negroes, in return;
oth ſides are jealous of each other in many places. The
uropeans commonly trade on board the ſhip, keeping their
ailors in cloſe quarters abaft, becauſe they are few, while
he ſlaves are viewing and contracting for at the fore-part:
t night alſo keeping a good watch, to prevent the Negroes
rom ſtealing with their canoes athwart the hauſe, to cut
he cable, with an intention of ſtranding and plundering
he ſhip. The Negroes are again as often diffident of
oming near the Europeans, and will play for hours to-
gether in the canoes about the ſhip, before they dare ven-
ure aboard. In the windward part, they have a ſuper-
itious cuſtom of dropping with their finger a drop of
ea-water into their eye, which they are pleaſed to get
eturned, as it paſſes for an engagement of peace and ſe-
curity: but, after all this ceremony, they will ſometimes
return to ſhore; and if hardy enough to come on board,
hey appear all the time ſo ſhy and frightened, that from
he leaſt appearance of a panyar, they will jump over-
oard. Downwards to Biſſam, Aſinee, Jaquelahou, Cape
le Hou, Jaque a Jaques, Cape Apollonia, and Three
Points, or where the Negroes have poſſibly gained a
knowledge of the European factories, there is a better un-
derſtanding and ſecurity: theſe being places that ſell off a
great number of ſlaves, managed, however, entirely on board
the ſhips, who anchor before the town, hoiſt their enſign, and fire a gun; or, when the natives ſeem timorous, do it by their boats coaſting along the beach, and pay at ſome of them a ſmall duty to the chief cabiceers, or principal traders. Where there are factories, as at Gambia, Sierra Leon, the Gold coaſt, Whidah, Calabar, Cabenda, and Angola, the Europeans are more at large; the Negroes being ſold there in open market on ſhore; and in ſome places, when the natives perceive a ſhip on their coaſt, they make a ſmoke on the ſea-ſhore, as a ſignal for the ſhip to come to an anchor, that they may come and trade with the people on board.

In ſome places, the firſt buſineſs, after a ſhip arrives upon the coaſt to trade for ſlaves, is to pay the duties, and make a preſent to the King, or governor of that part of the country, for leave to trade: then the King's ſlaves are to be taken off, at almoſt what price he pleaſes to ſet upon them, before the merchant is permitted to deal with his ſubjects. When the price is agreed on, the European ſurgeon views all the ſlaves naked, men, women, and children: the grown men, ſuppoſed to be above 35 years of age, are generally excepted to; as are all thoſe who have any lameneſs, or other defects, thoſe whoſe ſight fails them, and ſuch as have the venereal diſeaſe, or any other diſtemper that is not eaſily cured, even the loſs of a tooth being ſometimes made an objection. The infirm Negroes being ſet aſide, the reſt are branded with a hot iron by the merchant, to diſtinguiſh them; after which they are locked up in ſome priſon, till they can be ſent on board; for the Europeans have no forts or factories in many places where they meet with the greateſt number of ſlaves. The price of an able-bodied man is from 3 to 5 l. the women a fifth part leſs, and the children in proportion to their reſpective ages: this price being reckoned by ſo many bars; as ſo many knives make a bar, or there is ſuch a quantity of cloth to a bar; from ſixty to eighty of which is the price of a good ſlave. When the Negroes are ſent on ſhip-board, their former maſters ſtrip them of every rag, ſo that the merchant receives them all perfectly naked, in which manner they generally remain till they are brought to America.

If this part of Africa was not ſo exceeding populous, this contiuual exportation of its inhabitants muſt ſoon diſpeople the country; for it is computed there are about 200,000 yearly exported to America.

The ſucceſs of a voyage depends firſt, on the well ſorting, and well timing of a cargo. Secondly, in a knowledge of the places of trade, what, and how much, may be exported every where. Thirdly, in dramming well with Engliſh ſpirits, and conforming to the humours of the Negroes. Fourthly, in timely furniſhing proper goods for the ſlaves. Fifthly, in diſpatch. And, laſtly, the good order and management of ſlaves when on board.

As to the timing of a cargo; this depends at ſeveral places much upon chance, from the fanciful and various humours of the Negroes, who make great demands one voyage for a commodity, that perhaps they reject the next; and is in part to be remedied, either by making the things they want to paſs off ſome others with them, for which they have not ſo much inclination: or by ſuch a continual traffic and correſpondence on the coaſt, as may furniſh the owner from time to time with quick intelligence, to be done only by great merchants, who can keep a number of ſhips employed, that, like a thread, unites them in a knowledge of their demands, and a readier ſupply for them, as well as diſpatch for the intereſt of the merchant, by putting the purchaſes of two or three ſhips into one.

As to the ſorting, this may be obſerved in general, that the windward and leeward parts of the coaſt are as oppoſite in their demands as their diſtance is great. Iron bars, which are not aſked for to the leeward, are a ſubſtantial part of the windward cargoes, beſides cryſtals, oranges, coral, and braſs-mounted cutlaſſes: braſs pans are proper for Rio Seſthos to Apollonia: Coris, or bouges, at Whidah: copper and iron bars at Calabar: but arms, gunpowder, tallow, old ſheets, cottons of all denominations, and Britiſh ſpirits are every where ſought after; ſealing-wax and pipes are alſo neceſſary in ſmall quantities, as they

ſerve for dachees, or preſents, and are a ready purchaſe for fiſh, a goat, kid, or fowl.

As to the wholeſome victualing, and managing ſlaves aboard; the common, cheapeſt, and moſt commodious diet is with vegetables, hoarſe-beans, rice, Indian corn, and farine or flour: the former are brought from Europe: rice is got to windward about Seſthos: Indian corn at Montford, Anamaboa, and ſome other places on the coaſt; as alſo, with farine, at the iſles of St. Thomas and Prince's; maſters governing themſelves in purchaſing according to the courſe they deſign to ſteer. This food is accounted more ſalutary to ſlaves, as being nearer to their accuſtomed way of feeding. One or other is boiled on board at conſtant times of the day into dab a-dab, ſometimes with meat in it; an overſeer, with a cat of nine tails, ſtanding over the ſlaves, to force it upon thoſe who are ſullen and refuſe. It is a rule always obſerved to keep the men ſlaves a part from the women and children, as alſo to hand-cuff the men; though ſome ſhips triple ſuch as are ſturdy with chains round their necks: it is alſo neceſſary to keep the ſailors ſober, and on a barricaded quarter-deck: but, abating their fetters, the ſlaves ſhould be all treated with gentleneſs and civility. When ſhips have their complement of Negroes, and are out at ſea, it is commonly imagined the ignorance of the ſlaves in regard of navigation will always be a ſafeguard; yet, as many of them think they are only bought to be fattened and eat; and more, that death will ſend them into their own country, there have been ſeveral inſtances of their riſing and killing a ſhip's company diſtant from land, though not ſo frequently as on the coaſt; therefore a maſter's care and diligence ſhould never be over till the delivery of them: however, many ſhips allow greater liberties in their paſſage, as conducive to the health of the ſlaves, whom they call up in different parties by turns, and ſuffer them to go at large on the ſhip's-deck, from ſun-riſe to ſun-ſet, giving ſuch as like it, pipes and tobacco, and cleaning and airing their dormitories every day.

Beſides ſlaves, this country ſupplies the Europeans with honey, wax, leather, cotton, pepper, jaſper-ſtones, leopard ſkins, and ſome ivory: for which the Europeans give in exchange gold and ſilver ſtuffs, ſcarlet-cloths, crimſon velvets, ear-pendants of red glaſs, looking-glaſſes with gilt frames, coris, fine coral, earthen pots for drinking; all ſorts of fine cotton and linen cloths; lemons, confected fruits, bracelets of braſs, lavendar, and bars of iron: but no Europeans, except the Dutch, are permitted to trade in Benin, where they are treated with great civility and fidelity.

The French are ambitious of increaſing their ſettlements on the coaſt of Guinea; but the Engliſh companies have relinquiſhed ſome of their factories, and in 1749 they had only ſeven; being Cape Coaſt Caſtle, Commenda, Succondee, Dick's Cove, Tantumquerry, Winnebah, and Accra.

LOWER GUINEA, or *Congo*, contains the kingdoms of Congo, Angola, or Loango.

Congo. The Portugueſe who diſcovered this country in 1484, and eſtabliſhed themſelves there in 1491, introduced Chriſtianity, among ſeveral of the natives, and are the only Europeans who trade there; other nations only putting in at the coaſts for refreſhments, which they have in exchange for ſmall looking-glaſſes, and toys.

The principal eſtabliſhment of the Portugueſe in the kingdom of Congo is at Laonda, the reſidence of the Viceroy, which is a beautiful, ſafe, and commodious port; from whence all the Portugueſe veſſels depart, whether thoſe which come from Europe, or go there; or thoſe deſtined for Brazil.

The ſlave trade is the moſt important which the Portugueſe carry on in Congo; and it is ſurpriſing how many they ſend yearly to their American colonies.

What makes this trade ſo conſiderable, and lucrative, is the eaſy paſſage from Loanda to Brazil, which is uſually made in a month or 35 days, and makes mortality leſs frequent with them, than among the Negroes tranſported by other nations, who have a longer voyage to make.

But of the five provinces of Congo, which are Banza, called St. Salvador; Bamba, Sondy, Pemba, and Sogno,

ſcarce any but St. Salvador, and Sondy, furniſh [illegible] ſlaves, at leaſt for being tranſported; the Negroes of [illegible] three other provinces never inuring themſelves properly [illegible] work, and dying when they change their air and climate.

It is difficult to ſay how many ſlaves belong to the Portugueſe at Loanda, Colombo, St. Salvador, and in all [illegible] places of this part of Africa, where they have ſettlements.

The middling people having 50, 100, and 200; ſeveral of the richeſt have 3000; and one religious ſociety at Loanda, has the property of 12000 ſlaves of different [illegible] tions, as ſmiths, joiners, turners, ſtone-cutters, and other workmen: however, none of theſe ſlaves are ſent to Brazil, but ſuch only as are taken in war, or ſold by the King, and the great men of the country.

Beſides Negroes, the Portugueſe have alſo from Congo elephants teeth, wax, honey, and civet.

The merchandiſe they bring there are gold, and ſilver ſtuffs, velvets, Engliſh cloths, gold lace, black ratteens, ſmall Engliſh carpets, copper baſons, blue earthen pitchers, hats, rings, coral, fire arms, and coris, which ſerve for ſmall money; beſides brandy and wine.

There are mines of copper and iron, in the kingdom of Congo, which are of ſome uſe in trade; but as to the ſilver mines ſaid to be in the province of Bamba, it ſeems that they have not been worked, or that their profits are not any way conſiderable.

Angola, of all the countries on the coaſt of Africa, furniſhes Europeans with the moſt Negroes, though not above 300 leagues in extent of coaſt; but the kingdom is extremely enlarged up the country, being ſcarce leſs than 900 leagues in length, and as many in breadth.

Tho' the Portugueſe are extremely powerful in the interior part of the kingdom of Angola, and tho' the greater part of the Negroes of the provinces they have ſubjected are vaſſals of the crown of Portugal, to which they yearly pay a tribute of ſlaves; yet the Negroe trade on the coaſts has always remained free to the other nations of Europe; the Engliſh, French, and Dutch, ſending there yearly a great number of ſhips, which take away ſeveral thouſands of ſlaves, and tranſport them either to their own, or the Spaniſh American colonies.

The Portugueſe however are thoſe who treat for the moſt, and it is aſtoniſhing that they have not already depopulated the country, as ſcarce a year paſſes without their ſending to Brazil to the amount of 15000.

The merchandiſe given in exchange for them are cloths, ſtriped feather beds, ſilk ſtuffs, linens, velvets, gold, and ſilver lace, black and broad ſerges, Turkiſh carpets, white and coloured thread, ſilk for ſewing, Canary wine, brandy, oil of olives, ſailors knives, ſpice, refined ſugar, large hooks, pins, needles, and toys.

The Portugueſe have alſo a ſettlement at Benguella, a ſmall kingdom depending on that of Angola, where they keep on foot ſomething of a trade; but this place is unwholſome, and rather remarkable for being the abode of criminals, whom the tribunal of Liſbon baniſhes there than for that of free profeſſors of trade.

Loango. The Negroe trade carried on in Loango, Malimba and Cabindo, by the Engliſh, French, and Dutch, is very conſiderable, as well for the number of ſlaves, for their goodneſs and ſtrength; the Europeans prefer them to all others; and the inhabitants of the American colonies purchaſing them always at a dearer rate; as they are the fitteſt for undergoing the labour and fatigues of the culture, and preparing of ſugar, tobacco, and indigo. Negroes are purchaſed cheaper in Angola and Loango than in Upper Guinea. Young blacks at full growth, and in their prime, are bought for about 3 l. a head, and boys and women in proportion; thoſe bought for 3 l. being worth 20 l. or 25 l. in America.

A Dutch cargo for the coaſt of Guinea.

This cargo contains not only the quantity, and quality of the merchandiſe fit for the Negroe trade on the coaſt of Guinea; but explains alſo what ſhips are beſt for the purpoſe, the requiſite number of ſailors, their wages, and neceſſary victuals both for Europeans and Negroes.

The fitteſt ſhips for theſe coaſts are thoſe of 200 tons manned with 50 or 60 ſailors.

The victuals for this number of ſailors for thirteen [illegible]

fourteen months, are 60 ſacks of oatmeal; 60 of grey peas; 60 of white peas; 50 barrels of beef; 15 barrels, or 10 ſchipponds of bacon; the ſchippond weighing 300 lb. 6 barrels of butter; 4 puncheons, or 2 pipes of oil; 250 cheeſes; 8000 lb. of biſcuit; 300 loaves of bread, each of half a pound; 8000 lb. of dry fiſh; 60 barrels of beer; 300 pipes of brandy; 200 pounds of candles, half wax; half a tierce of train oil for lamps.

Victuals for 600 *Negroes.*

14 laſts, or 152 ſacks of oatmeal; 8 laſts of beans; 4 pipes of brandy, beſides what is neceſſary for the ſailors; 1 butt of Spaniſh wine; 1 or 2 pipes of prunes for purging them; 300 lb. of tamarins for the ſame purpoſe; 2 ciſterns, containing 16 tierces of water each, for boiling their beans and oatmeal.

Merchandiſes for Loango, and Malimbo.

Scarlet cloth, with broad liſt; blue cloth; yellow cloth, a few pieces only; bleached Sileſia lawns; anabaſſes in pieces, and half pieces; black flowered ſtuffs; large and ſmall baſons; bells; fuſees and gun-powder; and a great quantity of brandy.

The expence of this cargo, either for Guinea, or Loango, not including the purchaſe of the ſhip, may amount to about 3000 l. ſterling.

The goods which the Europeans carry to this part of Africa, and barter for ſlaves, gold, and other commodities, are chiefly theſe: calicoes, cottons, linen and woollen ſtuffs, ſerges, perpetuana's; wrought iron, pewter, and braſs; ſuch as ſwords, knives, hatchets, nails, hammers, pewter-diſhes, plates, pots, and cups, braſs pots, kettles, and other houſhold utenſils; fire-arms, powder, ſhot; braſs and glaſs toys, beads, bugles, and coris; with brandy, ſpirits, wine, and tobacco. The Negroes are extremely fond of braſs ware; and wrought pewter, iron, and lead, are good articles. There are likewiſe great quantities of fire-arms, gun-powder, ball, cloathing, liquors, and furniture, ſent yearly from Europe, for the uſe of the European forts and factories. So that, upon the whole, Europeans may export to Africa about the value of 200 000 l. in goods; and may bring from thence annually to the value of 3 000,000 l. in gold, ſlaves, ivory, pepper, gums, aud drugs.

Guinea is agreeably diverſified with mountains and vallies, woods and open fields. The hills are adorned with trees of an extraordinary height; the vallies between them being rich and extenſive, proper for the cultivation of all manner of corn and fruits, with villages every where agreeably interſperſed, and the country is exceeding populous. But the moſt pleaſant and fruitful part of the country is that about Whidah, which is repreſented as a perfect paradiſe, if it was not for the unhealthfulneſs of the place with regard to European conſtitutions. However, it may be ſuppoſed, that, on ſo extenſive a coaſt, there is a great deal of deſert ground. Much of this is found upon the gold-coaſt; and other parts of it are ſo overflowed in the rainy ſeaſon, that the ſoil will produce ſcarce any thing but rice; all other corn, and moſt of the plants, being deſtroyed by the annual floods: but then Whidah, and other places, make amends for this by their abundant fertility.

Their rivers running but a ſhort courſe from north to ſouth, and being made chiefly by the rains, are not any of them navigable for ſhips, from the river of Sierra de Leon in the eaſt, to the river of Benin or Formoſa in the weſt; though they abound, as well as their ſeas, with variety of good fiſh.

Travellers uſually make but two ſeaſons in this country, winter and ſummer; from April to September incluſive is their winter, or rainy ſeaſon; and from October to March incluſive is their ſummer, and their hotteſt, as well as faireſt weather. But their wet ſeaſon does not always begin juſt at the ſame time; nor is it the ſame at all places on this coaſt. At ſome times, and in ſome places, it begins a month or two ſooner than in others, being ſometimes of a longer, and at others of a ſhorter duration: though, between the vernal and autumnal equinoxes, they have generally exceſſive rains, attended with violent ſtorms of wind, as well as thunder and lightening. Beſides, as the winds at this time blow from the ſouthward, and there is not one ſecure harbour on the coaſt, if any ſhipping happens to be there in theſe ſtorms, they are infallibly run on ſhore, unleſs they can ſtand out to ſea, or get into the mouth of the river Sierra de Leon, when they find them coming on; to which may be added, there always ſits ſuch a ſurf or ſwelling on this coaſt, that it is very difficult going on ſhore at any time, even during the fair ſeaſon, eſpecially at Whidah.

The moſt violent ſtorms, or travadoes, are in July and Auguſt, coming from the ſouthward. It is alſo obſerved, that, during the hot ſeaſon, the winds are periodical on this coaſt, blowing from midnight till one or two in the afternoon, from the land; and then ſhifting to the ſouthward, blow from the ſea; which rages ſo violently on this ſhore ſome months in the year, that it looks like fire, which makes the ſailors call it *the burnings*, when it is almoſt impoſſible to go on ſhore.

Few Europeans viſit theſe ſhores without a dangerous fit of illneſs ſoon after their arrival, and many of them are carried off by it; which is occaſioned from the noxious vapours in the wet ſeaſon, or from the ſituation of the European factories near the ſea, and the mouths of rivers, where the ouze and ſalt marſhes are very unhealthful.

The Negroes are generally of a good ſtature, robuſt, able-bodied men, their complexion a ſhining jet black, their noſes flat, their lips thick; large rolling eyes, of which great part of the white appears; exceeding even white ſets of teeth; with black hair, ſhort and curled, appearing more like wool than hair, which diſtinguiſhes them from the black inhabitants of Aſia.

The habit of a Negroe is a paan, or cloth, round the waiſt, about two feet broad; but thoſe of the better ſort have another cloth of a good length wrapped about them, and thrown over their ſhoulders; yet ſo as their arms, legs, and a good part of their bodies, appear naked, both of the men and women. Their ornaments conſiſt of a multitude of rings or bracelets, of gold, ivory, or copper, according to their circumſtances, worn on their arms and legs, with necklaces and girdles of coral; all of which they have from the Europeans; beſides thin plates of gold, copper, tinſel, beads, and coral, for dreſſing the women's hair.

As there are a great many petty ſovereigns in Guinea, who are frequently at war with each other, the ſlaves are generally ſuch as are taken in theſe wars, not only men, but women and children; for when they invade a country with any ſucceſs, they carry all the inhabitants into captivity. There are alſo a great many others, who are made ſlaves for debt, or ſome miſdemeanor; and not only the debtor, or criminal, loſes his liberty, but frequently his whole family, and all that are related to him. Beſides, ſome people ſell even their wives and children when they have offended them; while others leſſen their families, under an apprehenſion they ſhall not be able to maintain them; and if a famine, or great ſcarcity, happens, they will ſell themſelves to one another for bread. In times of full peace, nothing is more common than for the Negroes of one nation to ſteal thoſe of another, and ſell them to the Europeans: there have been alſo inſtances of children ſelling their parents when they have been weary of them, and wanted to enjoy what they had. Theſe are the various ways by which the unhappy Negroes are frequently reduced from flouriſhing circumſtances to a ſtate of ſlavery, and brought down to the coaſt to be ſold to the Europeans: ſo that, all things conſidered, this trade is not ſo inhuman as ſome have repreſented; becauſe, if the Europeans did not buy the captives, they would remain ſlaves to their captors, who are the worſt of maſters.

As to the traffic of the Negroes among themſelves, it conſiſts either in carrying corn, and other produce of the reſpective maritime countries, from one place to another along the coaſt, in their large canoes, as there happens to be a demand for it; or in bartering goods with one another on ſhore: thoſe near the coaſt exchange the merchandiſe they get of the Europeans, with thoſe of the more diſtant countries, for gold, ſlaves, and ivory, which foreigners take off their hands, furniſhing them with new ſupplies of European goods, and with theſe they go to market in the inland countries again.

Every

Every tribe or family make their own tools: they are all ſmiths, carpenters, and maſons, building their houſes or huts with wood and clay, thatching them with reeds or palmeto leaves: they alſo make their own arms, ſuch as darts, lances, arrows, and broad ſwords; but their fire-arms, powder, and ball, are ſupplied by the Europeans: they alſo make their inſtruments of huſbandry, and ſeveral houſhold-utenſils. Their watermen and fiſhermen are but one tribe; and are ſo numerous upon the coaſt, that 800 or 1000 of them go out a fiſhing together in canoes made out of one tree, the largeſt being 30 feet long, and 6 broad; which the Europeans hire to carry their merchandiſe to and from their ſhips, and along the coaſt from one factory to another.

They have bulls and cows, but no oxen, in Guinea, the Negroes applying themſelves very little to grazing; though the fleſh of theſe animals is very dry and hard in moſt places. They have alſo ſheep cloathed with hair inſtead of wool, goats, hogs, and deer. Their horſes are exceeding ſmall, and uſed ſometimes for the ſaddle, as well as aſſes; but they neither uſe them, or any other cattle, for the draught of carriage, or to lay burdens on; for all their goods are carried on the backs of men, if it is 100 miles, unleſs they have the conveniency of water-carriage, which ſeldom happens, their rivers falling from ſteep rocks and mountains, and are navigable only a little way. They have lions, tygers, elephants, wild hogs, jackhalls, foxes, crocodiles, wild cats, and monkeys.

They have plenty of wild and tame fowl, particularly parrots; and they have many kinds of freſh and ſalt water fiſh.

They have alſo rice, millet, Indian corn, yams, potatoes, and ſugar-canes.

They abound in palm-trees, from which they extract wine and oil; the wine from the tree, and the oil from the nut. A tree will yield from 10 to 20 gallons of wine; of which an anchor, or 5 gallons, is uſually ſold on the coaſt for about 2 s. 6 d. ſterling. There are ſome ſweet and ſour orange-trees upon the coaſt; with great number of lemon-trees, the ſmall fruit of which are pickled, and ſent to Europe. The papay-tree grows here, affording a fruit as big as a large pear, of an oval figure, green within, and white without, which ſerves the natives for food. They have alſo ſome ginger, the piſan or bananas tree, pomegranates, tamarinds, the delicious ananas or pine-apple, and the fineſt melons.

Their garden-plants are good; and almoſt all manner of European roots, herbs, and garden-ſtuff, arrive there to great perfection: but the Malaguette, or Guinea pepper, is the plant for which the country is moſt remarkable; it grows on a ſhrub, in long, ſlender, red ſhells or pods, ſeparated into four or five diviſions or cells, and covered by a white film: beſides, they have alſo a bad ſtinking ſort of tobacco, uſed by the Negroes.

The Portugueſe were the firſt who diſcovered the S. W. ſhores of Africa, in the 15th century; and as the Pope was then thought to have a right to diſpoſe of all Pagan countries, they obtained a grant from his Holineſs in 1442, of all countries diſcovered to the S. and E. of Cape Bajadore, which lies on the weſt-ſide of Africa, in 27 deg. of N. lat. The Pope however afterwards, on the diſcovery of America by Columbus, publiſhed another bull in favour of the Spaniards, dated the 3d of May 1493; whereby he aſſigned and transferred to the King of Spain, and his ſucceſſors, all the countries diſcovered, and to be diſcovered 100 leagues to the W. and S. of the Azores, and Cape Verd iſlands; which the Portugueſe looked upon as an infringement of the former grant to them; and this bred a miſunderſtanding between thoſe two nations: however, they came to an agreement in the ſame year, that the line mentioned in the grant to Spain, to be drawn from N. to S. through the Azores, and the Cape Verd iſlands, ſhould be extended 270 leagues farther weſtward, and that all new diſcovered lands to the weſtward of that line ſhould belong to the Spaniards, thoſe to the eaſtward of it being to belong to the Portugueſe; accordingly, the latter built forts, and ſettled colonies on the eaſtern and weſtern coaſts of Africa, and in the Eaſt Indies, and remained in the quiet poſſeſſion of them, enjoying the ſole trade of Africa and the Eaſt Indies about 100 years without a competitor.

The reformation happening in the 16th century, the Engliſh, Dutch, and other Proteſtant nations, began to call in queſtion the Pope's power of diſpoſing of Pagan countries; and being ambitious of ſharing the gold of Africa with the Portugueſe, both the Engliſh and Dutch, in the ſame century, ſent ſeveral ſhips to the coaſt of Guinea; where, in imitation of the Portugueſe, they exchanged toys and trifles with the Negroes for gold, and made very advantageous returns. But the Portugueſe building forts upon the coaſt, and keeping the natives in a ſort of ſubjection, that they could not trade freely with any other nation, the Negroes invited the Engliſh to ſettle among them; and, for ſome ſmall conſideration, aſſigned them places to erect forts and factories upon, that they might be able to protect their own trade, as well as that of the natives. The Dutch alſo falling upon the Portugueſe ſettlements about the ſame time, deprived them of their capital fort of La Minas, and at length drove them from all their ſettlements on the gold coaſt. Whereupon the Portugueſe removed farther eaſtward, and gained a vaſt extent of country, in which they were not diſturbed by the Dutch, little or none of the ſame tempting metal being found there, though they meet with ſlaves in abundance.

The Dutch had no ſooner driven the Portugueſe from the gold coaſt, but they began to contrive how they might beat the Engliſh, and all other nations, out of that trade: accordingly, as they had by treaty agreed to join an Engliſh ſquadron to ſuppreſs the pirates upon the Barbary coaſt, De Ruyter, the Dutch Admiral, actually ſailed to the Straights with the Engliſh, under pretence of putting that project in execution; but then making an excuſe to the Engliſh Admiral, that he was ordered another way, he ſailed to the coaſt of Guinea; and there, with the aſſiſtance of the Negroes his countrymen had already ſpirited up againſt the Engliſh, made himſelf maſter of ſeveral Engliſh forts, and particularly of that now in the poſſeſſion of the Dutch, which goes by the name of Amſterdam fort.

The Dutch had the ſame views here as they had in the Eaſt Indies: they intended the ſubduing of the natives, and no doubt propoſed to have opened the gold mines, and become the ſole maſters of them, as the Spaniards are of the ſilver mines in Potoſi: but the court of England eſpouſing their company's intereſt, rendered the Dutch ſcheme abortive.

But the French are now very formidable on this part of Africa, where they are chiefly in poſſeſſion of the gold trade; and have ſo artfully crept into the Negroe trade, that they now purchaſe the beſt ſlaves on the coaſt, with which they not only ſupply their own colonies, but also furniſh the Spaniards with great numbers, whereby they have almoſt ſupplanted the Engliſh of Jamaica in this valuable trade: however, it is hoped the Engliſh will now retrieve their loſs, and recover this important branch of their commerce.

Reflexions on the African trade.

The African trade is very advantageous to Great Britain, as it ſupplies the Britiſh plantations with Negroes for their uſe and ſervice: beſides, conſidering the number of ſhips annually employed in it, the great export of the Britiſh manufactures to the African coaſts, and the value of the product of the Britiſh plantations annually ſent to Great Britain, the advantages reſulting from this trade are more apparent. The Negroes are the hands by which the Britiſh plantations are improved; it being by their labour ſuch great quantities of ſugar, tobacco, cotton, ginger, fuſtic, and indigo, are raiſed, which employ a great number of ſhips for tranſporting them to Great Britain; and the greater number of ſhips employed, the greater number of handicraft-trades at home, ſupported more of the Britiſh product and manufactures, and maintain more ſailors, who are maintained by a ſeparate employment: for if every one raiſed the proviſions he eat, made the manufacture he wore, traffic would ceaſe, whereas is a variety of employments men have ſet themſelves

whereby one is ſerviceable to another, adapted to their particular genius, without invading each others provinces. Therefore it may be ſaid, that the adviſing a former reign to monopolize this trade, and confine it to an excluſive company, was the ſame as to adviſe the people of Egypt, to raiſe high banks to keep the Nile from overflowing, leſt it ſhould fertilize their lands; or the King of Spain to ſhut up his mines, leſt he ſhould fill his kingdom too full of ſilver.

It is not to be doubted, whether the vending Britiſh manufactures, and encouraging navigation, on advantageous terms, are the true intereſt of Great Britain; and that all foreign commerce, as it advances either, is more or leſs profitable to the kingdom; but the confining this trade to an excluſive company could promote neither: and perhaps it was one great reaſon why we know ſo little of the great continent of Africa; becauſe the company finding ways enough to employ their ſtock among thoſe few ſettlements they had made on the ſea-coaſt, never endeavoured a farther inland diſcovery; whereas, when the trade was laid open, the buſy merchant, that induſtrious bee of the nation, would not leave any creek or river untraded to, from whence he might hope to make advantage.

When the company had an excluſive trade, they were obliged, by the ſtatute of the 9th and 10th of William III. to pay a duty of 10 *per cent.* on all goods exported to Africa, which was applied to maintain, ſupport, and defend all ſuch forts and caſtles as were erected for the preſervation, improvement, and well carrying on that trade. However, the excluſive privileges granted to the company were prejudicial to the community; for the African company, under an excluſive trade, in the time of peace, between the years 1680 and 1689, employed only 159 ſhips, being about 28 ſhips annually, and delivered into the plantations 46,396 Negroes, being 5155 a year: but the Negroes imported, after the trade was laid open by William III. into Jamaica, Barbadoes, and Antigua, only, amounted to 42,000 for three years of peace; which was near as many Negroes delivered to thoſe three iſlands only in three years under an open trade, as there were in nine years of peace by the company into all the plantations when excluſive. It appeared in the year 1708, in time of war, that there were employed in this trade above a hundred ſhips, capable of carrying 25,000 Negroes a year into the plantations, belonging to the ſeparate traders; which demonſtrated that the trade was above four times as much increaſed as when it was excluſive, though that was a time of peace; and that the export of the manufactures of coarſe perpets to that coaſt, had been increaſed from 4000 to 70,000 pieces a year.

It muſt certainly be prudent in any trade, manufacture, or buſineſs, to render the firſt materials as cheap as poſſible. Negroes are the firſt and moſt neceſſary materials for planting; from whence it follows, that all meaſures ſhould be taken that may produce ſuch a plenty of them, as may be an encouragement to the induſtrious planter.

Experience, the ſureſt guide we can follow in matters of trade, has demonſtrably taught us, that the African trade has not been carried on moſt to the national advantage by a company with a joint ſtock; but that when it became free and open, it greatly encreaſed, the plantations were better ſupplied with Negroes, and the advantages to the kingdom were infinitely greater.

It is undoubtedly true, that when the company had the whole trade almoſt to themſelves, they did not ſupply the plantations with ſuch a plenty of Negroes as was requiſite; and that, as they forced them to accept of ſuch a ſort as they thought fit to bring, ſo they put their own price upon the product of the plantations. But if it is alledged, that the African company, when excluſive, at any time ſold choice Negroes from 14 to 18 l. a head; it may be remembered, that as they ſet their own price on the product of the plantations, ſo ſugar did not ſell in any of them for half the price it has done for many years paſt, or ſince the trade to Africa was firſt laid open.

It is to trade and commerce we are indebted for what knowledge we have of foreign parts; and it is obſervable, that the more remote people dwell from the ſea, the leſs they are acquainted with affairs abroad. Africa is a large country, and doubtleſs the trade to it may be much enlarged to the advantage of Great Britain. Uſe and experience make us by degrees maſters of every thing; and though the firſt undertakers of a deſign may fall ſhort of anſwering their private ends, yet they often lay open beaten paths, wherein poſterity may tread with ſucceſs, tho' the others miſcarried. When all places are permitted freely to ſend ſhips, and to have the management of their own affairs, induſtry is encouraged, and people's heads are ſet at work how they may outdo each other, by getting firſt into a new place of trade. Beſides, the more traders, the more buyers at home, and ſellers abroad; by which means the Britiſh plantations on the large continent of America may be better furniſhed with Negroes; for want of which, the inhabitants there could never arrive to thoſe improvements they have done on the iſlands, the company having given them little or no ſupply; chooſing rather to ſend their Negroes to the latter, becauſe they were able to make them better payments; but the free traders afterwards did it, to the great advantage of thoſe plantations, and of the nation in general.

As for the three other principal commodities brought in returns from Africa, gold, wax, and teeth, they are alſo highly advantageous to Great Britain: the firſt advances the national wealth, and is allowed to be a good barter; and the ſecond ſerves for a foreign export, without any diſadvantage to the home product; and the third is not only manufactured at home, but afterwards carried to the markets abroad.

As neither Great Britain, nor any other European nations, are owners of any conſiderable ſpot of ſoil on the coaſt of Guinea; and ſuch as have forts and caſtles thereon dare not ſtir beyond the reach of their guns; beſides, as Great Britain is enabled by her manufactures and goods of all kinds, to trade the cheapeſt and moſt advantageouſly to Africa, and has a ſuperior ſtrength to any nation to protect its trade on that coaſt; there is no reaſon to dread the inſults of the French, nor to fear that they can beat the Britiſh ſubjects out of this trade, while it remains open and free, without being impeded by an excluſive company.

Since the act of parliament of the 23d of King George II. for extending and improving the trade to Africa, there are 135 merchants free of the new African company in London, 157 in Briſtol, and 101 in Liverpool, in all 393; which will occaſion an increaſe of this trade; for, in the year 1752, there were 88 ſhips ſent from Liverpool only, to the coaſt of Africa; whoſe commanders and owners names, what part of the coaſt each ſhip went to, and what number of ſlaves they bought, are as follows.

	Slaves.

See *Africa*, and *African* companies.

GUINEA. A gold coin, ſtruck and current in Engla
See *Coin*.
The value or rate of the guinea has varied: it was
ſtruck on the footing of 20 s. and, by the ſcarcity of g
was afterwards advanced to 21 s. 6 d. but is now

to 21 s. The pound troy of gold being cut into 44 parts and a half, each part makes a guinea; which took this denomination, becauſe the gold whereof the firſt were ſtruck was brought from that part of Africa called Guinea; for which reaſon it likewiſe bore the impreſſion of an elephant.

Guineas and half-guineas may be imported by any perſons, purſuant to an act of the 8th William III.

UINEA, is alſo the name of a white cotton cloth, brought from the Eaſt Indies, particularly from Pondicherry; the piece being 29 or 30 ells and a half long, and 7-8ths broad.

They are ſo called, becauſe proper for the Negroe trade on this part of Africa.

UINEA *Company*. See *African* company.

UINEA *Pepper*. See *Pepper*.

UINEATUF-*Longee*. A cotton and ſilk ſtuff, manufactured in the Eaſt Indies; the pieces of which are 6, 8, or 13 ells in length, and 5-6ths or 2-3ds in breadth.

UINGUANS. A blue and white cotton cloth, ſometimes mixed with the thread of the bark of trees; the pieces uſually contain 8 ells in length, and 3-4ths or 5-6ths in breadth; which come chiefly from Bengal; though there are alſo guinguans half bark and half ſilk.

UINGUET. A ſort of ſlight camblet, manufactured at Amiens in France; the breadth of which is half an ell.

ULDEN, or *Gould*, is a ſilver coin of ſeveral places in Germany. That of Saxony is worth 2 s. 4 d. ſterling, and that of Vienna is the ſame. There are alſo ſeveral others, more properly called guilders. See *Guilder*.

The gulden of St. Gall, in Switzerland, is worth 2 s. 3 d. ſterling; that of Lucern 2 s. 6 d. ſterling, and that of Zurich the ſame.

There are alſo in Holland, particularly at Amſterdam, two ſorts of guldens; the one is the guilder, and the other called gulden, worth about 2 s. 2 d. ſterling.

ULPH, or *Gulf*. An arm or part of the ocean, running up between the land; ſuch is the gulph of Venice, called alſo the Adriatic ſea; the gulph of Lyons; the gulph of Mexico, and of Florida.

A gulph is ſtrictly diſtinguiſhed from a ſea, becauſe the latter is larger: it is alſo diſtinguiſhed from a bay, or ſinus, being greater than the ſame. Some will have it eſſential to a gulph, to run into the land through a ſtreight or narrow paſſage. The ſea is always moſt dangerous near gulphs, by reaſon of the currents being penned up by the ſhores.

UM. A vegetable juice, exuding through the pores of certain plants, and there hardening into a tenacious tranſparent maſs.

Gum is properly one of the juices of the bark, drawn thence by the ſolar warmth, in form of a glutinous humour; and by the ſame cauſe is afterwards inſpiſſated, concocted, and rendered tenacious.

The chemical character of gums, whereby they are diſtinguiſhed from reſins, and other vegetable juices, is, that they are diſſoluble in water, and at the ſame time inflammable by fire: but it muſt be obſerved, that this character excludes a great part of thoſe commonly called gums.

In the general, gums are more viſcid, and leſs friable, and generally diſſoluble in any aqueous menſtruum; whereas reſins are more ſulphurous, and require a ſpirituous, or oily diſſolvent. Boerhaave conſiders a gum as a ſort of ſaponaceous fat; which, beſide its oily principle in common with a reſin, has ſome other ingredient that renders it miſcible with water. See *Reſin*.

Gums are different, according to the different trees and roots they ooze from. Some authors diſtinguiſh them into aqueous and reſinous gums; the firſt thoſe diſſoluble in water, wine, and the like fluids; the ſecond only thoſe diſſoluble in oil. To theſe two, ſome add a third anomalous kind, ſoluble with much difficulty in water or oil.

Among the claſs of gums are uſually ranked, gum anime, arabic, gutta, adraganth, ammoniac, aſſa fœtida, bdellium, balm, benzoin, camphor, copal, elemy, frankinſenſe, euphorbium, galbanum, lacca, manna, myrrh, olibanum, ſagapenum, ſanguis draconis, ſtarcocolla, ſtacte, ſtorax, tacamahacha, turpentine, and many others, ſee each under its proper article.

GUM-*Coaſt*. See *Guinea*.

GUM, among gardeners, is a diſeaſe incident to fruit-trees of the ſtone kind, as peaches, plums, apricots, and cherries.

GUN. A fire-arm, or weapon of defence; which forcibly diſcharges a ball, ſhot, or other offenſive matter, through a cylindrical barrel, by means of gun-powder.

Under this general name are included moſt ſpecies of fire-arms, which may be divided into great and ſmall. Great guns, called by the general name cannon, make what is alſo called ordnance, or artillery; under which come the ſeveral ſorts of cannon; as cannon-royal, demi-cannon, culverins, demi-culverins, ſakers, minions, and falcons. Small guns include muſkets, muſketoons, carabines, blunderbuſſes, and fowling-pieces.

Piſtols and mortars are almoſt the only kinds of regular weapons charged with gun-powder, that are excepted from the denomination of gun.

GUNFLEET. One of the channels by which ſhips enter the mouth of the river Thames.

GUNNEL, in a ſhip, is that piece of timber that reaches on either ſide, from the half deck to the fore-caſtle; alſo the lower part, where a piece of ordnance lies.

GUN-POWDER. A compoſition of ſaltpetre, ſulphur, and charcoal, mixed together, and uſually granulated; which eaſily takes fire, and rarifies, or expands, with great vehemence, by means of its elaſtic force.

To this powder is owing all the action and effect of guns and ordnance; ſo that the modern military art and fortification depend wholly thereon.

The invention of gun-powder is aſcribed by Polydore Virgil, to a chemiſt, who accidentally put ſome of this compoſition in a mortar, and covered it with a ſtone; whence the ingredients happened to take fire, and blew up the ſtone.

Thevet ſays, the perſon here ſpoke of, was a monk of Fribourg, named Conſtantine Anelzem: but Belloforet, and other authors, with more probability, hold it to be Bartholdus Schwartz; at leaſt it is affirmed he firſt taught the uſe of it to the Venetians, in the year 1380, during the war with the Genoeſe; and that it was firſt employed in a place, antienty called Foſſa Clodia, now Chioggia, againſt Laurence de Medicis; and all Italy made complaints againſt it, as a manifeſt contravention of fair warfare.

Du Gange adds, that there is mention made of gun-powder in the regiſters of the chambers of acounts in France, as early as the year 1338.

To ſay no more; it appears that Roger Bacon, an Engliſhman, knew of gun-powder 150 years before Schwartz was born. That excellent friar mentions the compoſition in expreſs terms, in his treatiſe *De nullitate magiæ*, publiſhed at Oxford in 1216. "You may raiſe thunder and "lightening at pleaſure, ſays he, by only taking ſulphur, "nitre, and char-coal, which ſingly have no effect; but "mixed together, and confined in a cloſe place, cauſe a "noiſe and exploſion greater than that of a clap of "thunder."

Preparation of gun-powder. There are divers compoſitions of gun-powder, with reſpect to the proportions of the three ingredients to be met with in pyrotechnical writers; but the proceſs is much the ſame in all.

However, gun-powder being a commodity of ſuch conſequence, both in reſpect of ſpeculation, of war, and of commerce, as the conſumption thereof is incredible, it deſerves a more particular detail. To make gun-powder duly, then, regard is to be had, that the ſaltpetre be pure, and in fine large chryſtals, or ſhootings; otherwiſe it is to be purified, by taking away its fixed or common ſalt, and earthy parts: thus, diſſolve 10 lb. of nitre in a ſufficient quantity of fair water; ſettle, filtrate, and evaporate it in a glazed veſſel, to the diminution of half, or till a pellicle appear on it; the veſſel may then be taken off from the fire, and ſet in a cellar: in 24 hours the chryſtals will ſhoot; which ſeparate from the liquor; and after the like manner may the liquor be chryſtalized ſeveral times, till all the ſalt be drawn forth: this done, put it into a kettle, and that on a furnace with a moderate fire; which gradually increaſe till it begins to ſmoke,

evaporate, loſe its humidity, and grow very white. It muſt be kept continually ſtirring with a ladle, for fear it ſhould return to its former figure, by which means its greaſineſs will be taken away: after that, ſo much water is to be poured into the kettle as will cover the nitre; and then it is diſſolved, and reduced to the conſiſtency of a thick liquor; which muſt be ſtirred with a ladle, without intermiſſion, till all the moiſture is again evaporated, and it is reduced to a dry and white meal.

The like regard is to be had to the ſulphur; chuſing that which is to be had in large lumps, clear, and perfectly yellow; not very hard, nor compact, but porous; nor yet too much ſhining; and if, when ſet on fire, it freely burns away all, leaving little or no reſident matter, it is a ſign of its goodneſs: ſo likewiſe, if it is preſſed between two iron plates, that are hot enough to make it run, and in the running appear yellow, and that which remains of a reddiſh colour, it may be concluded to be fit for the purpoſe. But, in caſe the ſame be foul and impure, it may be purified in this manner: melt the ſulphur in a large iron ladle or pot, over a gentle coal-fire, well kindled, but not flaming; then ſcum off all that riſes on the top, and ſwims upon the ſulphur; take it preſently after from the fire, and ſtrain it through a double linen cloth, letting it paſs at leiſure; by which means it will be pure, the groſs filthy matter remaining behind in the cloth.

For the charcoal, the third ingredient, ſuch ſhould be choſen as is large, clear, free from knots, well burned, and cleaving.

There are three kinds of powder, called cannon-powder, muſket-powder, and piſtol-powder: of each of theſe again there are two ſorts, a ſtronger and a weaker; all which differences ariſe only from the various proportions.

The proportions are thus: in the ſtronger cannon-powder, to every 100 lb. of ſaltpetre 25 lb. of ſulphur are generally allowed, with the ſame quantity of charcoal; and in the weaker cannon-powder, to every 100 lb. of ſaltpetre, 20 lb. of ſulphur, and 24 lb. of charcoal. As for the ſtronger muſket-powder, 100 lb. of ſaltpetre require 18 lb. of ſulphur, and 20 lb. of charcoal; and in the weaker, there goes to 100 lb. of ſaltpetre, 15 lb. of ſulphur, and 18 lb. of charcoal. In the ſtronger piſtol-powder, 100 lb. of ſaltpetre requires 12 lb. of ſulphur, and 15 lb. of charcoal; whereas the weaker has to 100 lb. of ſaltpetre, only 10 lb. of ſulphur, but 18 lb. of charcoal.

Other authors preſcribe other proportions. Semicnowitz, for mortars, directs 100 lb. of ſaltpetre, 25 lb. of ſulphur, and as many of charcoal: for great guns, 100 lb. of ſaltpetre, 15 lb. of ſulphur, and 18 lb. of charcoal. For muſkets and piſtols 100 lb. of ſaltpetre, 8 lb. of ſulphur, and 10 lb. of charcoal.

Miethius extols the proportion of 1 lb. of ſaltpetre to 3 oz. of charcoal, or two, or two and a quarter of ſulphur; than which, he affirms, no gun powder can poſſibly be ſtronger. He adds, that the uſual practice of making the gun-powder weaker for mortars than guns, as in the example above, is without any foundation, and renders the expence needleſsly much greater: for whereas to load a larger mortar 24 lb. of common powder is required, and conſequently to load it ten times 240 lb. he ſhews, by calculation, that the ſame effect would be had by 180 lb. of the ſtrong powder.

Gun-powder may alſo be made of ſeveral colours; but the black is the moſt ſerviceable of any.

Corn-powder is of ſo much greater force, than when in duſt, or meal, that it is concluded the larger grains are ſtronger than the ſmaller: for which reaſon, common powder is granulated larger than other powders; and therefore powder in loading ſhould not be beat home into the piece, ſo as to bruiſe the grains. There are three ways to prove the goodneſs of gun-powder: 1. By ſight; for if it be too black, it is too moiſt, or has too much charcoal in it: ſo alſo, if rubbed upon white paper, it blackens it more than good powder does; but if it be of a kind of azure colour, ſomewhat inclining to red, it is a ſign of good powder. 2. By touching; for if, in cruſhing it with the fingers ends, the grains break eaſily and turn into duſt, without feeling hard, it has too much coal in it; or if, in preſſing under the fingers upon a ſmooth hard board, ſome grains feel harder than the reſt, or, as it were, dent the fingers ends, the ſulphur is not well mixed with the nitre, and the powder is bad. 3. By burning, wherein little heaps of powder are laid upon white paper, three inches or more aſunder, and one of them fired; which, if it only fires away, and that ſuddenly, and almoſt imperceptibly, without firing the reſt, and make a ſmall thundering noiſe, and a white ſmoke riſes in the air almoſt like a circle, the powder is good; if it leaves black marks, it has too much coal, or is not well burnt: if it leaves a greaſineſs, the ſulphur, or nitre, are not well cleanſed. Again, if two or three corns be laid on paper an inch diſtant, and fire be put to one of them, and they all fire at once, leaving no ſign behind, but a white ſmoaky colour in the place, and the paper not touched, the powder is good; ſo alſo, if fired in a man's hand, and it burns not; but if black knots appear, which burn downwards in the place where the proof was made after firing, it is not ſtrong enough, but wants nitre.

To recover damaged powder, the merchants put part of the powder on ſail-cloth, to which they add an equal weight of what is really good; and with a ſhovel mingle it well together, dry it in the ſun, and barrel it up, keeping it in a dry and proper place.

Others again, if it be very bad, reſtore it by moiſtening it with vinegar, urine, or brandy; then they beat it fine, ſearce it, and to every pound of powder add an ounce, an ounce and half, or two ounces, according as it is decayed, of melted ſaltpetre; afterwards, theſe ingredients are to be moiſtened and mixed well; ſo that nothing can be diſcerned in the compoſition, which may be known by cutting the maſs, and then they granulate it as aforeſaid. In caſe the powder be in a manner quite ſpoiled, the only way is to extract the ſaltpetre with water, according to the uſual manner, by boiling, filtrating, evaporating, and chryſtalizing, and then with freſh ſulphur and charcoal, to make it up again.

Gun-powder is chiefly made in England and France, where there are mills erected for the purpoſe.

By the ſtatute of the 16th of Charles I. it was enacted, That it ſhould be lawful for all perſons, as well ſtrangers as natural-born ſubjects, to import gun-powder, paying ſuch cuſtoms as by authority of parliament ſhould be limited. That it ſhould be lawful for all his Majeſty's ſubjects of England, to make and ſell gun-powder at their pleaſure, and alſo to bring into the kingdom ſaltpetre, brimſtone, or other materials, for the making of gun-powder.

By the ſtatute of the 4th of George II. it was enacted, That there ſhould be paid to every perſon who ſhould export, by way of merchandiſe, any gun-powder of the manufacture of Great Britain, an allowance of 4s. 6d. for every barrel containing 100 lb. weight; which allowance ſhould be paid by the cuſtomer or collector with the privity of the comptroller of the port from whence the ſame ſhould be exported, or a debenture to be made forth by the cuſtomer or collector, according to the entry of ſuch gun-powder, without fee, and the ſhipping thereof verified by the ſearcher, and oath or affirmation made by the exporter on the entry or debenture before the cuſtomer or collector, or comptroller of the port, that the ſaid gun-powder was of Britiſh manufacture, and was exported or intended to be exported, by way of merchandiſe, and not for the uſe of the ſhip, and not relanded, or intended to be relanded, in Great Britain, the exporter giving ſecurity to the cuſtomer or collector in 5 l. for each barrel, that the gun-powder ſhipped, or intended to be ſhipped, ſhould not be relanded; and ſuch ſecurities ſhould be diſcharged in manner hereafter mentioned. For ſo much gun-powder as ſhould be entered for, or landed in Ireland, Guernſey and Jerſey, Alderney, Sark, or Man, or any of his Majeſty's plantations, the condition of the bond ſhould be to bring certificates in diſcharge thereof from each place reſpectively, importing that ſuch gun-powder was there landed, ſigned by the proper officers of his Majeſty's

toms; and for want of ſuch officers, by the governor of thoſe iſlands or plantations; and for ſuch gun-powder as ſhould be entered for any foreign port, to bring a certificate under the hand of any of his Majeſty's conſuls reſiding in ſuch port, or under the hands of two known Britiſh merchants at ſuch port, that ſuch gun-powder was there landed; or ſuch bonds ſhould be diſcharged, upon proof that the ſame was taken by enemies, or periſhed in the ſeas; the examination and proof thereof being left to the commiſſioners of the cuſtoms in England or Scotland.

That whereas gun-powder exported for Africa was ſold in ſmall parcels along the coaſt, therefore, in ſuch caſe, upon proof made upon oath, or ſolemn affirmation, of the maſter, mate, or other perſon having charge of the ſhip during the voyage, importing that ſuch gun-powder was ſold upon the coaſt of Africa, and alſo of the oath or ſolemn affirmation of the merchant exporter, if living, that, to the beſt of his knowledge and belief, the ſaid goods had been diſpoſed of at the places to be mentioned in the reſpective affidavits, or affirmations, and that they had not been relanded in Great Britain, the ſame ſhould be taken in lieu of the certificates aforeſaid.

That if any gun-powder ſhipped to be exported, for which allowance was made, ſhould be relanded in Great Britain, without the licence of one of the principal officers of ſuch port firſt had, or unleſs in caſe of diſtreſs to ſave the gun-powder from periſhing, which ſhould forthwith be made known to one of the ſaid officers, the ſaid gun-powder, over and above the penalty of the bond, and treble the value of ſuch gun-powder, ſhould be forfeited.

That in caſe any of the duties payable upon the importation of ſaltpetre or brimſtone ſhould, during the continuance of this act, be redeemed, ſo much of the allowance to be made on exportation of the gun-powder ſhould be abated, as ſhould bear a proportion to the duties ſo redeemed.

By the ſtatute of the 5th Geo. II. it was enacted, That no commander of any ſhip outward bound ſhould receive on board any gun-powder, either as merchandiſe, or ſtore for the voyage, except for his Majeſty's ſervice, before ſuch ſhip ſhould be over againſt Blackwall, upon pain of forfeiting for every 50 lb. weight of gun-powder 5 l. and in proportion for a leſſer quantity.

That the commander of every ſhip coming into the Thames, ſhould put on ſhore all powder, either before the arrival of ſuch ſhip at Blackwall, or within 24 hours after ſuch ſhip ſhould come to an anchor there, or at the place of her unloading, upon pain of forfeiting 5 l. for every 50 lb. weight of gun-powder found on board, and in the like proportion for a leſs quantity; and if any gun-powder ſhould be found on board ſuch ſhip above Blackwall, after the time limited for unloading the ſame, the commander of every ſuch ſhip ſhould, for every 50 lb. weight of gun-powder, forfeit 5 l. and in proportion for a leſſer quantity.

By the ſtatute of the 15th and 16th of George II. reciting, That whereas, by an act paſſed the 11th of George I. for making more effectual an act paſſed in the 5th year of the ſame reign, intitled, An act for the preventing the miſchiefs that may happen by keeping too great quantities of gun-powder in or near the cities of London and Weſtminſter, or the ſuburbs thereof; no perſon ſhould keep above 200 lb. of gun-powder at a time, within any place under one roof, or any yard within the cities of London and Weſtminſter, or within three miles of the Tower of London, or of St. James's palace, or within two miles of any public magazine, longer than 24 hours, on forfeiture of the gun-powder, or the value: but that dealers ſtill kept as large and dangerous quantities as uſual, and by ſeveral methods evade the act; and though the juſtices had power to ſeize ſuch dangerous quantities, they could not detain them, and the owners immediately demanded the ſame again, and maintained an action at law for the recovery thereof, though it was not detained an hour; whereby the good intentions of the act were defeated to the great danger of the public ſafety: to prevent which, it was then enacted, That no perſons, not being dealers in gun-powder, ſhould keep more than 50 lb. within the limits aforeſaid; or being dealers, not more than 200 lb. longer than 24 hours, though the places were diſpoſed under different roofs; or on the river Thames, except in ſhips, &c. paſſing or detained by tides, or bad weather; except alſo carts and other carriages, loading or unloading, or paſſing on the highway; on pain of forfeiting all ſuch gun-powder, and the value, with full coſts of ſuit to any perſon who would ſue for the ſame.

That perſons permitting others to keep gun-powder, in any places not belonging to the owners of ſuch gun-powder, ſhould forfeit for every offence one ſhilling for every pound of gun-powder ſo permitted to be kept contrary to the meaning of this act, to be recovered as aforeſaid.

By the ſtatute of the 22d of George II. reciting, That as great quantities of gun-powder were frequently lodged in warehouſes, or other edifices, within or near to cities and market-towns, to the apparent danger of the lives and fortunes of many thouſands of his Majeſty's ſubjects; for preventing the miſchiefs which might happen thereby, or from carrying too great quantities of gun-powder together from one place to another; it was enacted, That no perſon ſhould have or keep gun-powder for more than 24 hours at any one time, in greater quantity than 400 lb. in any houſe or other place in any city, or the ſuburbs thereof, or in any market-town, or within a hundred yards diſtance thereof, within England, or within two miles of any of the King's palaces, or houſes of reſidence, or within one mile of any of the King's magazines for keeping gun-powder; nor ſhould any perſon keep, for more than 24 hours, at any time a greater quantity than 3000 lb. weight thereof, in any houſe or other place within England, except herein after excepted.

That any two juſtices might iſſue a warrant for ſearching in the day-time, any houſe, ſhop, or other place, and breaking open the door thereof, if there ſhould be occaſion; and if, upon ſearch, more ſhould be found than allowed by this act, the ſame ſhould be ſeized, and forfeited to any perſon who ſhould inform and ſue for the ſame.

That no perſon ſhould convey at any one time, in any waggon or other carriage, within England, a greater quantity of gun-powder than 2500 lb. weight, or more than 5000 lb. weight in any open veſſel upon any river, within the diſtance of one mile from any city or market-town; and all ſuch gun powder ſhould be carried in covered carts and carriages; and the barrels in which the ſame was contained, ſhould be cloſe joined and hooped, and ſecured, that no part thereof be ſcattered in the paſſage, under penalty of being ſeized and forfeited to the informer.

That every perſon employed in any ſtorehouſe or warehouſe where gun-powder ſhould be kept, or in carrying gun-powder from one place to another, being convicted before any juſtice of wilfully committing any act, whereby ſuch gun-powder might be in danger of taking fire, ſhould forfeit 5 s. to the informer for every 100 lb. weight of gun-powder contained in ſuch ſtorehouſe, &c. or which he ſhould be employed in conveying from one place to another; and on non-payment thereof he ſhould be committed to the public goal, without bail or main prize, for any time not exceeding ſix months, as ſuch juſtice ſhould think fit.

That this act ſhould not extend to any of the King's ſtorehouſes or magazines, or to hinder the proving gun-powder for the King's officers, as is uſual for the ſervice, or to the carrying of gun-powder to or from any of the King's magazines, or with forces on their march, or to any mills already built, and uſed for the making of gun-powder, or to any ſtorehouſes or offices near to ſuch mills, or to the magazines erected at Barking Creek's mouth in the county of Eſſex, and Erith Level in the county of Kent, or to the magazines or warehouſes erected near Liverpool in the county of Lancaſter.

That the juſtices for each county, riding, or diviſion in England, ſhould, at their reſpective general quarter-ſeſſions, upon application made to them for that purpoſe, appoint proper and convenient plots of ground, at the diſtance of two

miles from any city or market-town, not exceeding two acres in any one place, with the uſe of convenient roads leading thereto, for erecting warehouſes for keeping gunpowder in any quantity, firſt agreeing with the proprietors of the ſaid grounds for the ſame; and if any ſuch proprietors ſhould refuſe or neglect to agree, or by reaſon of any impediment could not ſo agree, the ſaid juſtices, at their general quarter-ſeſſions, ſhould iſſue their warrant to the ſheriff of that county to impannel and return a jury at that time and place appointed, who ſhould upon oath enquire into the value of the ſaid ground, with the uſe of convenient roads leading thereto; and all ſuch verdicts and inquiſitions ſhould be kept with the records of the ſaid ſeſſions, and ſhould be concluſive to all parties; and the ſaid juſtices were impowered to ſend for perſons intereſted, and examine parties or witneſſes upon oath; and the ſum to be aſſeſſed as aforeſaid, not exceeding 30 years purchaſe, ſhould be paid to the proprietors of the ſaid ground, according to their reſpective intereſts therein, to be adjudged by the ſaid juſtices; and upon ſuch payment, or in caſe of refuſal to accept the ſame, then, upon leaving the ſame with the reſpective juſtices for the benefit of ſuch proprietors, the inheritance of the ſaid ground, and the uſe of the roads leading thereto, ſhould be veſted in the purchaſers and their aſſigns, for the purpoſes aforeſaid, and not otherwiſe; and the warehouſes which ſhould be erected thereon, ſhould be built in ſuch manner as would moſt effectually render them ſafe and ſecure.

That no penalty or forfeiture ſhould be incurred upon account of a greater quantity than 30 C. weight of gunpowder being kept within any warehouſe or magazine already built for that purpoſe, unleſs the juſtices at their quarter-ſeſſions ſhould, upon complaint thereof, by two or more of the inhabitants of, or near that place, adjudge the ſame to be dangerous, and until the expiration of ſix months next after ſuch adjudication; and provided the ſame was not ſituated in any city, or the ſuburbs thereof, or in any market-town, or within 100 yards diſtance thereof, or within two miles of any of the King's palaces or houſes of reſidence, or within one mile of any of the King's magazines for the keeping gun-powder.

The bounty on Britiſh gun-powder of 4 s. 6 d. for every barrel containing 100 lb. net weight, granted by the ſtatute of the 4th of George II. was, by the ſtatute of the 24th of George II. continued until the 24th of June 1757, and from thence to the end of the then next ſeſſion of parliament.

GUN-POWDER *Mill*. See *Mill*.

GUNSMITH, is a perſon who makes guns and piſtols; he works both in wood and iron; but the gun or piſtol barrel is made by the founder, from whom he buys them in parcels, makes locks for them, and mounts them.

GUNSMITHS *company of London* was incorporated by letters-patent of the 13th of Charles I. in 1638, by the name of The maſter, wardens, and ſociety of gun-makers of the city of London; who have a maſter, 2 wardens, and 18 aſſiſtants, but neither livery nor hall.

GUNTER's *Line*, called alſo *Line of lines*, and *Line of number*, is a graduated line, actually placed on ſcales, rules, and ſectors; being only the logarithms transferred upon a ruler from the tables, ſo as to anſwer much the ſame purpoſes inſtrumentally, as the logarithms themſelves do arithmetically; for what the logarithms do by addition and ſubſtraction, is done in this line by turning a pair of compaſſes this way and that.

GUNTER's *Quadrant*, is a quadrant made of wood, braſs, or the like; being a kind of ſtereographic projection on the plane of the equinoctial, the eye ſuppoſed in one of the poles: ſo that the tropic, ecliptic, and horizon, are arches of circles, but the hour-circles all curves, drawn by means of ſeveral altitudes of the ſun, for ſome particular latitude every day in the year; the uſe of this inſtrument being to find the hour of the day, the ſun's azimuth, and other common problems of the globe, as alſo to take the altitude of an object in degrees.

GUNTER's *Scale*, alſo called by navigators the *Gunter*, is a large, plain ſcale, with divers lines thereon, of great uſe in working queſtions in navigation. On one ſide of the ſcale, are the line of numbers; the line of artificial ſines, marked ſines; the line of artificial tangents, marked tangents; the line of artificial verſed ſines, the artificial ſines of the rhumbs, the artificial tangents of the rhumbs, the meridian line in Mercator's chart, and equal parts. To which, on the ſhorter ſcales of a foot long, are uſually added lines of latitudes, hours, and inclinations of meridians. On the backſide of the ſcale are the lines uſually found on a plain ſcale. The lines of artificial ſines, tangents, and numbers, are ſo fitted on this ſcale, that, by means of a pair of compaſſes, any problem, whether in right-lined or ſpherical trigonometry, may be ſolved very expeditiouſly with tolerable exactneſs; whence the inſtrument becomes extremely uſeful in all parts of mathematics where trigonometry is concerned, as navigation, dialling, and aſtronomy.

The ſame lines are alſo occaſionally laid down on rulers to ſlide by each other; hence called *ſliding gunters*, ſo as to be uſed without compaſſes.

GUPPAS. A weight uſed in ſome towns of the ſtraights of Malacca, particularly at Queda; 4 make the quantas, and 16 quantas the hali or nali, and 15 hali the bahar of 450 lb. avoirdupoiſe weight.

GUR. A white cotton cloth, brought from the East Indies; the length 14 ells, and breadth 7 or 8.

GURAES. Bengal painted callicoes of 36 cobres in length, and 2 in breadth, the cobre being 17½ inches; of which the Engliſh of Madras ſend great quantities to the Manillas.

Gum GUTTA. See *Gamboge*.

GYNÆCEUM, among the antients, the apartments of the women, or a ſeparate place in the inner part of the houſe where the women kept themſelves retired, employed in ſpinning, out of ſight of the men. Under the Roman Emperors there was a particular eſtabliſhment of gynæcea, being a kind of manufactories managed chiefly by women for the making of cloths, and furniture for the Emperor's houſhold. Mention is made of theſe gynæcea in the Theodoſian and Juſtinian code, and ſeveral other authors. In imitation whereof, divers of the modern manufactories, particularly thoſe of ſilk, where a number of women and maids are aſſociated and formed into a body, are called gynæcea.

GYPSUM. A fibrous, talky kind of ſtone, found in quarries; which being burnt and diluted, or wrought up with water, ſerves to make what is called parget, or plaiſter of Paris.

GYPSUM, or *Gypſe*, is alſo uſed for a coarſe ſort of talk, a ſhining tranſparent ſtone, chiefly found in the quarries of Montmartre near Paris, among the plaiſter-ſtone. The generality confound this with the former, on account of its conformity with the Latin gypſum; but happily enough, as the French gyp, or gypſe, is not for the making of plaiſter.

This ſtone being calcined in a kiln, beaten into meal and ſifted, then mixed up with gum, ſize-water, and colours, ſerves to counterfeit marble; which it does to a perfection, that both the eye and touch may be deceived

H.

HAG

HAAM. See *Awm.*

HABERDASHER. The name of a trader in various ſmall wares or goods; as ſilk, thread, tape, ribbands, needles, pins, and other articles; particularly buckram, wadding, hair-cloths, buttons, mohair, and binding, for taylors: but the name is alſo ſometimes uſed for a ſeller of hats.

HABERDASHERS *company of London*, antiently was indifferently called hurrers and milliners; the latter from the merchandiſes they chiefly dealt in, which came from the city of Milan in Italy. But they were incorporated, by letters-patent of the 26th of Henry VI. in 1407, by the ſtyle of The fraternity of St. Catharine the Virgin, of the haberdaſhers of the city of London; though at preſent they are denominated The maſter and 4 wardens of the fraternity of the art or myſtery of haberdaſhers in the city of London.

This corporation is governed by a maſter, 4 wardens, and 93 aſſiſtants, with a livery of 342 members, who, upon their admiſſion, pay each a fine of 25 l. They have a ſtately hall in Maiden-lane to diſpatch their affairs in; and they are poſſeſſed of a great eſtate; out of which, according to the generous benefactions of ſeveral donors, they annually pay to charitable uſes about 3500 l.

HABERDINE. An ordinary ſort of cod-fiſh, which is fit for ſalting, particularly in Scotland.

HACHA. A port-town of Terra Firma, in South America, ſituated in 72 deg. of W. lon. and 11 deg. 30 min. of N. lat. on the north ſea, at the mouth of the river Hacha, 240 miles eaſt of Carthagena. The galleons firſt touch here on their arrival in South America; of which expreſſes are immediately ſent to all their ſettlements, to prepare the treaſure to be carried to Europe.

HADDOCK. A ſort of fiſh, eaten freſh, or ſalted for long keeping, ſomething like a cod, but not ſo good in kind, nor ſo large in form.

HADERSLEBAN. A port-town of Sleſwick, or South Jutland, ſituated in 10 deg. of E. lon. and 55 deg. 15 min. of N. lat. near the ſea called the Little Belt, 32 miles S. E. of Rypen, ſubject to Denmark.

HÆMATITES, in natural hiſtory, the blood-ſtone; a kind of ruddy mineral, in form of a ſtone: thus called, either on account of its reſembling dry, curdled ſtone, or of the faculty it has of ſtanching blood.

Pliny reckons five kinds; the Ethiopic, the androdamas or black, the arabic, the elatites or miltites, and the ſchiſtos; beſides that commonly called the magnes hæmatites, from the property it has of attracting iron.

The five ſorts differ chiefly in point of hardneſs; the beſt, according to Dioſcorides, is that which is friable, hard, black, and ſmooth, without either gritty parts or veins.

That commonly uſed by the painters is factitious, being made of Armenian bole, and other drugs; but the native, or foſſil kind, comes from Egypt and Bohemia; which has ſeveral uſes in medicine, being held cooling and aſtringent; in which quality it is preſcribed in hæmorrhages, and given in ſubſtance, in form of fine powder; though the gilders alſo uſe it for burniſhers, to poliſh their gold.

HAERLEM. A large populous city of the United Provinces, in the province of Holland, ſituated in 4 deg. 20 min. of E. lon. and 52 deg. of N. lat. 4 miles eaſt of the ſea, and 12 weſt of Amſterdam, near the lake, which, from this town, is called Haerlem Meer. They have large manufactories of ſilk, velvet, and linen here, as alſo of thread and tapes. See *United* Provinces.

HAGUE, or *Graven Hague*; that is, *the Earl's Hague*; a place of the United Provinces, in the province of Holland, ſituated in 4 deg. of E. lon. and 52 deg. 10 min. of

HAI

N. lat. 2 miles E. of the ſea, 14 N. W. of Rotterdam, and 9 S. W. of Leyden; encompaſſed with fine meadows and groves, but no walls, and therefore eſteemed a village; though it enjoys all the privileges of a city, except that of ſending repreſentatives to the ſtates. See *United* Provinces.

HAFTER. A perſon whoſe trade is to make hafts, or handles, for all kinds of inſtruments, of ivory, horn, wood, gold, or ſilver.

HAIL, among ſailors, is to call a ſhip at a diſtance.

HAINAN, or *Aynan*. An iſland of China, ſituated between 107 and 110 deg. of E. lon. and between 18 and 20 deg. of N. lat. about 50 miles S. of the continent of China. See *Chineſe* iſlands.

HAINE. A river of the Auſtrian Netherlands, which runs through the province of Hainault from E. to W. paſſing by Mons and St. Ghilian, and falling into the Scheld at Conde.

HAIR. Thoſe ſmall fine threads that grow out of the ſkin of human creatures, and moſt four-footed animals; but it is frequently called ſhag and wool upon the latter.

Human hair makes a very conſiderable article in commerce, eſpecially ſince perukes have been in faſhion.

The hair of the growth of the northern countries, as alſo of England, Scotland, and Ireland, is valued much beyond that of the more ſouthern ones, as Italy, Spain, and the more ſouth parts of France.

The merits of good hair conſiſt in its being well fed, and neither too coarſe, nor too ſlender; the bigneſs rendering it leſs ſuſceptible of the artificial curl, and diſpoſing it rather to frizzle; and the ſmallneſs making its curl of too ſhort duration. Its length ſhould be of about 25 inches; for the more it falls ſhort of this, the leſs value it bears.

There is no certain value of hair; but it is ſold from 5 s. to 5 l. an ounce, according to its quality; the white being moſt coveted, then the grey, and ſo on, as it grows darker.

The ſcarceneſs of grey and white hair has put the dealers in that commodity upon a method of reducing other colours thereto; which is done by ſpreading the hair to bleach on the graſs, like linen, and afterwards waſhing it out in a lixivious water; which lye, with the force of the ſun and air, brings the hair to ſo perfect a whiteneſs, that the moſt experienced perſon may be deceived therein, there being ſcarce any way of detecting the artifice, but by boiling and drying it; whereby the hair is left of the colour of a dead walnut-tree leaf.

There is alſo a method of dying hair with biſmuth, which renders ſuch white hair as borders too much upon the yellow, of a bright ſilver colour; and boiling is alſo the proof of this, the biſmuth not being able to ſtand it.

Hair which does not curl or buckle naturally, is brought to it by art; by firſt boiling, and then baking it, in the following manner. After having picked and ſorted the hair, and diſpoſed it in parcels, according to the lengths; they roll them up, and tie them tight down, upon little cylindrical inſtruments, either of wood or earthen ware, a quarter of an inch thick, and hollowed a little in the middle; in which ſtate they are put in a pot over the fire, there to boil for about two hours. When taken out, they are let to dry, and when dry ſpread on a ſheet of brown paper, covered with another, and thus ſent to the baker; who making a cruſt, or coffin, around them of common paſte, ſets them in the oven, till the cruſt is about three fourths baked.

The end by which an hair grew to the head, is called the head of the hair; and the other, with which they begin to give the buckle, the point. Formerly the peruke-makers

miles from any city or market-town, not exceeding two acres in any one place, with the uſe of convenient roads leading thereto, for erecting warehouſes for keeping gunpowder in any quantity, firſt agreeing with the proprietors of the ſaid grounds for the ſame; and if any ſuch proprietors ſhould refuſe or neglect to agree, or by reaſon of any impediment could not ſo agree, the ſaid juſtices, at their general quarter-ſeſſions, ſhould iſſue their warrant to the ſheriff of that county to impannel and return a jury at that time and place appointed, who ſhould upon oath enquire into the value of the ſaid ground, with the uſe of convenient roads leading thereto; and all ſuch verdicts and inquiſitions ſhould be kept with the records of the ſaid ſeſſions, and ſhould be concluſive to all parties; and the ſaid juſtices were impowered to ſend for perſons intereſted, and examine parties or witneſſes upon oath; and the ſum to be aſſeſſed as aforeſaid, not exceeding 30 years purchaſe, ſhould be paid to the proprietors of the ſaid ground, according to their reſpective intereſts therein, to be adjudged by the ſaid juſtices; and upon ſuch payment, or in caſe of refuſal to accept the ſame, then, upon leaving the ſame with the reſpective juſtices for the benefit of ſuch proprietors, the inheritance of the ſaid ground, and the uſe of the roads leading thereto, ſhould be veſted in the purchaſers and their aſſigns, for the purpoſes aforeſaid, and not otherwiſe; and the warehouſes which ſhould be erected thereon, ſhould be built in ſuch manner as would moſt effectually render them ſafe and ſecure.

That no penalty or forfeiture ſhould be incurred upon account of a greater quantity than 30 C. weight of gunpowder being kept within any warehouſe or magazine already built for that purpoſe, unleſs the juſtices at their quarter-ſeſſions ſhould, upon complaint thereof, by two or more of the inhabitants of, or near that place, adjudge the ſame to be dangerous, and until the expiration of ſix months next after ſuch adjudication; and provided the ſame was not ſituated in any city, or the ſuburbs thereof, or in any market-town, or within 100 yards diſtance thereof, or within two miles of any of the King's palaces or houſes of reſidence, or within one mile of any of the King's magazines for the keeping gun-powder.

The bounty on Britiſh gun-powder of 4 s. 6 d. for every barrel containing 100 lb. net weight, granted by the ſtatute of the 4th of George II. was, by the ſtatute of the 24th of George II. continued until the 24th of June 1757, and from thence to the end of the then next ſeſſion of parliament.

GUN-POWDER *Mill*. See *Mill*.

GUNSMITH, is a perſon who makes guns and piſtols; he works both in wood and iron; but the gun or piſtol barrel is made by the founder, from whom he buys them in parcels, makes locks for them, and mounts them.

GUNSMITHS *company of London* was incorporated by letters-patent of the 13th of Charles I. in 1638, by the name of The maſter, wardens, and ſociety of gun-makers of the city of London; who have a maſter, 2 wardens, and 18 aſſiſtants, but neither livery nor hall.

GUNTER's *Line*, called alſo *Line of lines*, and *Line of number*, is a graduated line, actually placed on ſcales, rules, and ſectors; being only the logarithms transferred upon a ruler from the tables, ſo as to anſwer much the ſame purpoſes inſtrumentally, as the logarithms themſelves do arithmetically; for what the logarithms do by addition and ſubſtraction, is done in this line by turning a pair of compaſſes this way and that.

GUNTER's *Quadrant*, is a quadrant made of wood, braſs, or the like; being a kind of ſtereographic projection on the plane of the equinoctial, the eye ſuppoſed in one of the poles: ſo that the tropic, ecliptic, and horizon, are arches of circles, but the hour-circles all curves, drawn by means of ſeveral altitudes of the ſun, for ſome particular latitude every day in the year; the uſe of this inſtrument being to find the hour of the day, the ſun's azimuth, and other common problems of the globe, as alſo to take the altitude of an object in degrees.

GUNTER's *Scale*, alſo called by navigators the *Gunter*, is a large, plain ſcale, with divers lines thereon, of great uſe in working queſtions in navigation. On one ſide of the ſcale, are the line of numbers; the line of artificial ſines, marked ſines; the line of artificial tangents, marked tangents; the line of artificial verſed ſines, the artificial ſines of the rhumbs, the artificial tangents of the rhumbs, the meridian line in Mercator's chart, and equal parts. To which, on the ſhorter ſcales of a foot long, are uſually added lines of latitudes, hours, and inclinations of meridians. On the backſide of the ſcale are the lines uſually found on a plain ſcale. The lines of artificial ſines, tangents, and numbers, are ſo fitted on this ſcale, that, by means of a pair of compaſſes, any problem, whether in right-lined or ſpherical trigonometry, may be ſolved very expeditiouſly with tolerable exactneſs; whence the inſtrument becomes extremely uſeful in all parts of mathematics where trigonometry is concerned, as navigation, dialling, and aſtronomy.

The ſame lines are alſo occaſionally laid down on rulers to ſlide by each other; hence called *ſliding gunters*, ſo as to be uſed without compaſſes.

GUPPAS. A weight uſed in ſome towns of the ſtraights of Malacca, particularly at Queda; 4 make the quanta, and 16 quantas the hali or nali, and 15 hali the bahar of 450 lb. avoirdupoiſe weight.

GUR. A white cotton cloth, brought from the East Indies; the length 14 ells, and breadth 7 or 8.

GURAES. Bengal painted callicoes of 36 cobres in length and 2 in breadth, the cobre being 17½ inches; of which the Engliſh of Madras ſend great quantities to the Manillas.

Gum GUTTA. See *Gamboge*.

GYNÆCEUM, among the antients, the apartments of the women, or a ſeparate place in the inner part of the houſe where the women kept themſelves retired, employed in ſpinning, out of ſight of the men. Under the Roman Emperors there was a particular eſtabliſhment of gynæcea, being a kind of manufactories managed chiefly by women for the making of cloths, and furniture for the Emperor's houſhold. Mention is made of theſe gynæcea in the Theodoſian and Juſtinian code, and ſeveral other authors. In imitation whereof, divers of the modern manufactories, particularly thoſe of ſilk, where a number of women and maids are aſſociated and formed into a body, are called gynæcea.

GYPSUM. A fibrous, talky kind of ſtone, found in quarries; which being burnt and diluted, or wrought up with water, ſerves to make what is called parget, or plaiſter of Paris.

GYPSUM, or *Gypſe*, is alſo uſed for a coarſe ſort of talk, a ſhining tranſparent ſtone, chiefly found in the quarries of Montmartre near Paris, among the plaiſter-ſtone. The generality confound this with the former, on account of its conformity with the Latin gypſum; but unhappily enough, as the French gyp, or gypſe, is not for the making of plaiſter.

This ſtone being calcined in a kiln, beaten into meal and ſifted, then mixed up with gum, ſize-water, and colours, ſerves to counterfeit marble; which it does to a perfection, that both the eye and touch may be deceived

H.

HAG

HAAM. See *Awm.*

HABERDASHER. The name of a trader in various ſmall wares or goods; as ſilk, thread, tape, ribbands, needles, pins, and other articles; particularly buckram, wadding, hair-cloths, buttons, mohair, and binding, for taylors: but the name is alſo ſometimes uſed for a ſeller of hats.

HABERDASHERS *company of London*, antiently was indifferently called hurrers and milliners; the latter from the merchandiſes they chiefly dealt in, which came from the city of Milan in Italy. But they were incorporated, by letters-patent of the 26th of Henry VI. in 1407, by the ſtyle of The fraternity of St. Catharine the Virgin, of the haberdaſhers of the city of London; though at preſent they are denominated The maſter and 4 wardens of the fraternity of the art or myſtery of haberdaſhers in the city of London.

This corporation is governed by a maſter, 4 wardens, and 93 aſſiſtants, with a livery of 342 members, who, upon their admiſſion, pay each a fine of 25 l. They have a ſtately hall in Maiden-lane to diſpatch their affairs in; and they are poſſeſſed of a great eſtate; out of which, according to the generous benefactions of ſeveral donors, they annually pay to charitable uſes about 3500 l.

HABERDINE. An ordinary ſort of cod-fiſh, which is fit for ſalting, particularly in Scotland.

HACHA. A port-town of Terra Firma, in South America, ſituated in 72 deg. of W. lon. and 11 deg. 30 min. of N. lat. on the north ſea, at the mouth of the river Hacha, 240 miles eaſt of Carthagena. The galleons firſt touch here on their arrival in South America; of which expreſſes are immediately ſent to all their ſettlements, to prepare the treaſure to be carried to Europe.

HADDOCK. A ſort of fiſh, eaten freſh, or ſalted for long keeping, ſomething like a cod, but not ſo good in kind, nor ſo large in form.

HADERSLEBAN. A port-town of Sleſwick, or South Jutland, ſituated in 10 deg. of E. lon. and 55 deg. 15 min. of N. lat. near the ſea called the Little Belt, 32 miles S. E. of Rypen, ſubject to Denmark.

HÆMATITES, in natural hiſtory, the blood-ſtone; a kind of ruddy mineral, in form of a ſtone: thus called, either on account of its reſembling dry, curdled ſtone, or of the faculty it has of ſtanching blood.

Pliny reckons five kinds; the Ethiopic, the androdamas or black, the arabic, the elatites or miltites, and the ſchiſtos; beſides that commonly called the magnes hæmatites, from the property it has of attracting iron.

The five ſorts differ chiefly in point of hardneſs; the beſt, according to Dioſcorides, is that which is friable, hard, black, and ſmooth, without either gritty parts or veins.

That commonly uſed by the painters is factitious, being made of Armenian bole, and other drugs; but the native, or foſſil kind, comes from Egypt and Bohemia; which has ſeveral uſes in medicine, being held cooling and aſtringent; in which quality it is preſcribed in hæmorrhages, and given in ſubſtance, in form of fine powder; though the gilders alſo uſe it for burniſhers, to poliſh their gold.

HAERLEM. A large populous city of the United Provinces, in the province of Holland, ſituated in 4 deg. 20 min. of E. lon. and 52 deg. of N. lat. 4 miles eaſt of the ſea, and 12 weſt of Amſterdam, near the lake, which, from this town, is called Haerlem Meer. They have large manufactories of ſilk, velvet, and linen here, as alſo of thread and tapes. See *United* Provinces.

HAGUE, or *Graven Hague*; that is, *the Earl's Hague*; a place of the United Provinces, in the province of Holland, ſituated in 4 deg. of E. lon. and 52 deg. 10 min. of

HAI

N. lat. 2 miles E. of the ſea, 14 N. W. of Rotterdam, and 9 S. W. of Leyden; encompaſſed with fine meadows and groves, but no walls, and therefore eſteemed a village; though it enjoys all the privileges of a city, except that of ſending repreſentatives to the ſtates. See *United* Provinces.

HAFTER. A perſon whoſe trade is to make hafts, or handles, for all kinds of inſtruments, of ivory, horn, wood, gold, or ſilver.

HAIL, among ſailors, is to call a ſhip at a diſtance.

HAINAN, or *Aynan*. An iſland of China, ſituated between 107 and 110 deg. of E. lon. and between 18 and 20 deg. of N. lat. about 50 miles S. of the continent of China. See *Chineſe* iſlands.

HAINE. A river of the Auſtrian Netherlands, which runs through the province of Hainault from E. to W. paſſing by Mons and St. Ghilian, and falling into the Scheld at Conde.

HAIR. Thoſe ſmall fine threads that grow out of the ſkin of human creatures, and moſt four-footed animals; but it is frequently called ſhag and wool upon the latter. Human hair makes a very conſiderable article in commerce, eſpecially ſince perukes have been in faſhion.

The hair of the growth of the northern countries, as alſo of England, Scotland, and Ireland, is valued much beyond that of the more ſouthern ones, as Italy, Spain, and the more ſouth parts of France.

The merits of good hair conſiſt in its being well fed, and neither too coarſe, nor too ſlender; the bigneſs rendering it leſs ſuſceptible of the artificial curl, and diſpoſing it rather to frizzle; and the ſmallneſs making its curl of too ſhort duration. Its length ſhould be of about 25 inches; for the more it falls ſhort of this, the leſs value it bears.

There is no certain value of hair; but it is ſold from 5 s. to 5 l. an ounce, according to its quality; the white being moſt coveted, then the grey, and ſo on, as it grows darker.

The ſcarceneſs of grey and white hair has put the dealers in that commodity upon a method of reducing other colours thereto; which is done by ſpreading the hair to bleach on the graſs, like linen, and afterwards waſhing it out in a lixivious water; which lye, with the force of the ſun and air, brings the hair to ſo perfect a whiteneſs, that the moſt experienced perſon may be deceived therein, there being ſcarce any way of detecting the artifice, but by boiling and drying it; whereby the hair is left of the colour of a dead walnut-tree leaf.

There is alſo a method of dying hair with biſmuth, which renders ſuch white hair as borders too much upon the yellow, of a bright ſilver colour; and boiling is alſo the proof of this, the biſmuth not being able to ſtand it.

Hair which does not curl or buckle naturally, is brought to it by art; by firſt boiling, and then baking it, in the following manner. After having picked and ſorted the hair, and diſpoſed it in parcels, according to the lengths; they roll them up, and tie them tight down, upon little cylindrical inſtruments, either of wood or earthen ware, a quarter of an inch thick, and hollowed a little in the middle; in which ſtate they are put in a pot over the fire, there to boil for about two hours. When taken out, they are let to dry, and when dry ſpread on a ſheet of brown paper, covered with another, and thus ſent to the baker; who making a cruſt, or coffin, around them of common paſte, ſets them in the oven, till the cruſt is about three fourths baked.

The end by which an hair grew to the head, is called the head of the hair; and the other, with which they begin to give the buckle, the point. Formerly the peruke-makers

ruke-makers made no difference between the two ends, but curled and wove them by either indifferently, which made them unable to give a fine buckle; hair wove by the point never taking a right curl. Foreigners own themſelves obliged to the Engliſh for this diſcovery; which was firſt carried abroad by an Engliſh peruke-maker.

There are a great many frauds in the hair-trade, human hair being frequently adulterated with the hair of camels, goats, and horſes. Great quantities of hairs are imported into Great Britain from France and Spain, worth about 6 l. *per* pound, beſides the duty in France, which is 6 *per cent.* of the value. The duty on importation into Great Britain, is 4 s. *per* pound: but theſe dealers have uſually entered it from Dunkirk as a Flemiſh commodity; whereby it only pays 1 s. 6 d. *per* pound, beſides the new additional duty of 5 *per cent.* on dry goods; whereby the Britiſh government has loſt 18,000 l. at leaſt, from the year 1713 to 1750.

HAIR is alſo uſed in divers arts and manufactories; the hair of beavers, hares, and conies, being the principal matter whereof hats are made.

The hair of cattle ſpread on the ground, and left to putrify on corn-lands, like other animal ſubſtances, ſuch as horns, hoofs, blood, and garbage, proves a good manure; and it alſo makes an ingredient in the compoſition of plaiſter.

HAIR-*Merchant.* A perſon who furniſhes the peruke-makers with hair, ready picked, dreſſed, and curled, fit for weaving. He buys the hair of pedlars and others who go up and down the country of England to procure it; and there are ſome who import great quantities from abroad.

HAIRS-*Breadth*, is accounted the 48th part of an inch. See *Meaſure.*

HAIR-*Lace.* See *Lace.*

HALABAS. A city of the Hither India, in Aſia, capital of the province of Halabas, ſituated in 83 deg. of E. lon. and 26 deg. 35 min. of N. lat. at the conflux of the rivers Ganges and Jemma, 200 miles eaſt of Agra, ſubject to the Mogul.

HALE, in the ſea-language, ſignifies to pull; hence, to hale a ſhip, ſignifies to pull her on ſhore.

HALF-*Bloom.* A round maſs of metal, which comes out of the finery of an iron work.

HALF-*Penny.* An Engliſh copper coin, whoſe value is expreſſed by its name. See *Penny.*

HALF-*Seal*, is that uſed in chancery for the ſealing of commiſſions to delegates, upon any appeal in marine caſes, and ſuch like. See *Delegate.*

HALI, or *Nali.* A weight uſed at Queda, a conſiderable town of the ſtraight of Malacca in the Eaſt Indies; 15 of which make one bahar of 450 lb. avoirdupoiſe weight.

HALL, is a public building, erected for the adminiſtration of the policy and juſtice of a city or corporation; in which ſenſe it is called the town-hall, a company's hall, and the like: thus Guild-hall is a ſtately building in the city of London, and the great court of judicature for that city, where meetings of the citizens are held for the election of officers, and for ſolemn entertainments.

HALLAGE. A fee due for cloth brought for ſale to Blackwell-hall in London; but the word is alſo uſed for toll, paid to the lord of a fair, or market, for commodities ſold in the common hall of the place.

HALLEIN. A town of Germany, in the circle of Bavaria, and archbiſhopric of Saltzburg, ſituated in 13 deg. 6 min. of E. lon. and 47 deg. 36 min. of N. lat. on the river Saltza, 8 miles ſouth of Saltzburg, where there are great ſalt works.

HALLIARDS. The ſea-term for thoſe ropes by which all the ropes of a great ſhip are hoiſted up, except the croſs-jack, and the ſprit-ſail-yard, which are always ſlung.

HALMSTAT. A port-town of Gothland in Sweden, ſituated in 13 deg. 5 min. of E. lon. and 36 deg. 45 min. of N. lat. on the coaſt of the province of Halland, in the Categate ſea, 80 miles S. of Gottenberg.

HALSER. See *Hawſer.*

HALSTER. A corn meaſure uſed at Louvain, Ghent, and in ſome other parts of the Low Countries; 12 halſters make 1 muid, and 4 muids 7 halſters are about 10½ quarters of London meaſure.

HAM, in commerce, is uſed for a leg and thigh of pork, dried, ſeaſoned, and prepared to make it keep, and give it a briſk, agreeable flavour.

Weſtphalia hams, ſo much in vogue, are prepared by ſalting them with ſaltpetre, preſſing them in a preſs eight or ten days, keeping them in juniper-water, and drying them by the ſmoke of juniper-wood. However, Portugal, Flanders, and Hamburg, furniſh an abundance of hams cut after the manner of thoſe from Weſtphalia.

HAMANS. White, very fine, and cloſe cotton cloths, brought from the Eaſt Indies, particularly from Bengal, whoſe pieces are uſually 9 ells and a half in length, and one ell in breadth.

HAMBURG, called ſometimes *Ramburg*, a German term for a ſort of caſk for containing pickled ſalmon, weighing uſually from 300 to 350 lb. 6 hamburgs being computed to make 8 barrels, each containing 30 or 40 large ſalmons, and 80 or 100 ſmall ones.

HAMBURG. A great city, and port-town of Germany, upon the river Elbe, ſituated in 9 deg. 40 min. of E. lon. and 54 deg. of N. lat. in the circle of Lower Saxony, and duchy of Holſtein. See *Germany.*

HAMBURG *Company.* See *North* companies.

Bank of HAMBURG. See *Bank.*

HAMMER. A town of Norway. See *Denmark.*

HAMMER. An inſtrument of iron, with a handle of wood, uſed in moſt mechanic arts, to beat, ſtretch, and drive. Bodies capable of being ſtretched, or extended under the hammer, are ſaid to be malleable: but when this act is performed on iron heated for the purpoſe, the ſmiths call it forging.

HAMMERING, in coining; a piece of money, or a medal, is ſaid to be hammered, when ſtruck, and the impreſſion given with a hammer, and not with a mill. See *Coinage.*

HAMMOCK. A ſwinging bed uſed by ſailors, and throughout all parts of America; being found ſo commodious by ſuch Europeans as are eſtabliſhed there, that they prefer them to the ordinary beds of their reſpective countries.

The hammocks eſteemed moſt are thoſe that come from the Brazils; which, on a journey, are ſuſpended from the branches of trees; and their weight, not exceeding 4 or 2 pounds, makes their carriage eaſy to travellers; being moſtly of cotton, and manufactured with ſuch ingenuity and variety by the women of the country, that of 100 brought from the ſame place, ſcarce one has the ſame deſign and faſhion.

HAMPSTEAD *Water-office.* See *Water* work companies.

HAMPTON. A port-town of New Hampſhire, in North America, ſituated in 70 deg. of W. lon. and 42 deg. 35 min. of N. lat. 40 miles north of Boſton, ſubject to Great Britain.

HAN. A kind of caravanſera met with in ſome parts of the Levant, where travellers and merchants may retire with their equipage: the difference of the han and caravanſera conſiſting in ſize; the latter having many, and the former but few apartments.

HANCES, or *Hanſes*, in a ſhip, are falls, or deſcents of the fife rails, which are placed as baniſters in the poop and down to the gang-way.

HAND-BREADTH is ſometimes uſed for a meaſure of four inches.

HAND, or *Handful*, is alſo a meaſure of four inches, by the ſtandard, according to the ſtatute of the 33d of Hen. VIII. The hand, among jockeys, is four fingers breadth, by which the height of horſes is meaſured.

HANDICRAFT. Any trade that is wrought or performed by the hand.

HAND-*in-hand Fire-office.* See *Inſurance.*

HAND *Mill.* See *Mill.*

HANDSPECK, or *Spike.* A ſmall lever to move heavy bodies with; eſpecially to wind up the cable in ſhips, and to hoiſt the anchor.

HANGINGS. Linings for rooms, made of arras, tapeſtry, or the like. See *Tapeſtry.*

HANK. A ſkain of ſilk, thread, or worſted.

ANOVER. A city of Germany, in the circle of Lower Saxony, and duchy of Brunſwick, ſituated in 9 deg. 45 min. of E. lon. and 52 deg. 32 min. of N. lat. capital of the dominions belonging to his Britannic Majeſty in Germany. See *Germany*.

ANSE, or *Hans*. An antient name for a ſociety, or company of merchants.

ANSE *towns*. Certain free towns of Germany, and the north, united in a ſtrict league, for the better carrying on of commerce.

They were formerly reputed to be 72 in number, comprehending all the important towns for commerce, not only in Germany, where this aſſociation began, but alſo throughout the reſt of Europe; as, among others, Marſeilles, Calais, Bourdeaux, St. Malo, Rouen, and Bayonne, for France; Liſbon, Cadiz, Seville, and Barcelona, for Spain and Portugal; London, for England; Leghorn, Meſſina, and Naples, for Italy; laſtly, Amſterdam, Rotterdam, Antwerp, Dort, and Dunkirk, for that part of Lower Germany afterwards called the Netherlands.

It is not well known why the name of hanſe was given to this aſſociation. Some think it derived from an old French term ſignifying formerly ſociety or company; others from the German *a en-zée ſteden*, that is, towns on the ſea; and afterwards, by way of abbreviation, *hanſée*. The time of the aſſociation of the hanſe towns is as uncertain as the origin of their name; ſome fixing it in 1164, and others not till 1254.

The confederacy of ſo many cities depending on different ſovereigns, who had often different intereſts, and who were not always at peace with each other, ſubſiſted not long in its firſt extent; being reduced towards the end of the 16th century, to what was afterwards called the *Teutonic hanſe*, that is, the aſſociation of the Germanic cities, whereof Lubeck, Brunſwick, Cologn, and Dantzic, were, after the ſeparation of the others, the four principal cities. During the greateſt reputation of this hanſe or ſociety, it not only made treaties of alliance with ſeveral ſovereigns, as that of 1370 with the King of Denmark; but alſo frequently armed conſiderable fleets, and raiſed troops for ſeveral enterprizes, particularly for maintaining the privileges and liberty of its commerce; for in 1428 they made war againſt Eric King of Denmark, with a fleet of 250 ſhips, manned with 12,000 men.

The principal factories of theſe towns were thoſe of London; Bruges, which was afterwards transferred to Antwerp; Bergen in Norway, and Novogrod in Ruſſia; but the chief of all was Lubeck.

The factories of the hanſe towns eſtabliſhed in foreign countries, were directed by a principal merchant, who had under him a ſecretary; and this merchant was a kind of conſul, who paſſed judgment upon the differences among the merchants of the aſſociation, an appeal from whom was to be finally decided by the magiſtrates of the aſſociated cities.

This privilege, called liberty of court, and which took away from the juriſdiction of the judges of places the cognizance of the affairs of theſe ſtrangers, was what moſt contributed to break the confederacy; ſovereigns being unwilling to ſuffer in the principal towns of their ſtates an independency which might be attended with bad conſequences.

The remaining part of the hanſe towns preſerve this privilege ſtill among themſelves; but it is of no conſequence in the preſent ſituation of the Teutonic hanſe, which, under a grand name, enjoys ſcarce any of the privileges of the antient confederacy.

However, Hamburg, Lubeck, Bremen, and Dantzic, have maintained themſelves in the liberty of their commerce, and in ſeveral conſiderable privileges, which they not only obtained from the maritime powers, but were careful to get confirmed from time to time by new treaties; though now each town carries on a trade ſeparately for itſelf.

RAM. A name given by the inhabitants of Madagaſcar to the tree productive of the medicinal gum, called by druggiſts tacamacha. See *Tacamacha*.

RBOROUGH, or *Harburg*. A port-town of Germany, in the circle of Lower Saxony, ſituated in 9 deg. 30 min. of E. lon. and 53 deg. 57 min. of N. lat. on the ſouth-ſide of the river Elbe, oppoſite to Hamburg. See *Germany*.

HARBOROUGH *Company*. See *North* companies.

HARBOUR. A ſea-port, or ſtation, where ſhips may ride ſafe at anchor; the word being chiefly applied to thoſe cloſed, or ſecured with a boom or chain, and that are furniſhed with a mole. See *Port*.

HARDENING. The act of communicating a greater degree of hardneſs to a body than it had before: the hardening and tempering of iron and ſteel making a conſiderable article in the mechanical arts.

HARDERWICK. A town of the United Provinces, in the province of Guelderland, ſituated in 5 deg. 30 min. of E. lon. and 52 deg. 35 min. of N. lat. on the Zuider ſea, 23 miles N. W. of Zutphen.

HARDS, or *Hurds*, of flax, or hemp, denote the coarſer parts, ſeparated in the dreſſing of it, from the tear, or fine ſtuff. See *Flax*, and *Hemp*.

HARD-*ware*, is a general term of trade, comprehending an infinity of different kinds of merchandiſe, of wrought ſteel, iron, braſs, and copper; of which there are conſiderable manufactures at St. Stephen's in Forez, and Tiers in Auvergne in France; the biſhopric of Liege, Aix-la-Chapelle, Nuremberg, and in ſeveral other parts of Germany; as alſo at Saliſbury, Sheffield, Birmingham, Wolverhampton, Walſal, and other places in England. The Engliſh hard-ware is reputed the fineſt, niceſt, and beſt in Europe; which the French, who are riſing in this branch of manufacture, have prohibited to be imported into their dominions.

HARLINGEN. A port-town of the United Netherlands, in the province of Weſt Frieſland, ſituated in 5 deg. 20 min. of E. lon. and 53 deg. 15 min. of N. lat. on the German ſea, 14 miles W. of Lewarden.

HARNESS, is uſed for the furniture put on a horſe, to draw in a coach, waggon, cart, or other carriages; ſuch as collars, leathers, traces, and the like; as alſo for corſlets, curates, and morions, uſed as armour; which are prohibited to be imported into Great Britain.

HARP. A muſical inſtrument, of the ſtring kind, being of a triangular figure.

Jews-HARP. See *Jews*-harp.

HARPINEER, or *Harpooneer*. An engineer, or fiſherman, who manages and throws the harping-iron. See Whale-*Fiſhery*.

HARPING-*Iron*, or *Harpoon*. A ſort of dart or ſpear, faſtened to a line, wherewith fiſhermen catch whales, ſturgeons, and other large fiſh. This harping-iron is a large javelin of forged iron, five or ſix feet long, with a ſharp, cutting, triangular point, barbed like that of an arrow. At the upper end is engraven the harpineer's name, near a ring, to which the line is faſtened, which is let down as ſoon as the fiſh is ſtruck, to give him room to dive. See Whale-*Fiſhery*.

HARPINGS, in a ſhip, properly denotes her breadth at the bow: but the ends of the bends, which are faſtened into the ſtem, are ſometimes called harpings.

HARPSICHORD. A muſical inſtrument, of the ſtring kind, played after the manner of an organ.

HARQUEBUSS, in the ancient ſtatutes of England, called alſo *Arquebuſe*, *Haquebut*, or *Hagbut*, is a hand gun, or a fire-arm, of a proper length to be bore on the arm; being properly a fire-arm, of the ordinary length of a muſket, or fowling piece, cocked uſually with a wheel. Hawzelet preſcribes its legitimate length to be forty calibers; the weight of its ball one ounce ſeven eighths, and its charge of powder as much. There is alſo a larger kind, called *harquebuſs a croe*, much of the nature of blunderbuſſes, uſed in war, for the defence of places; being uſually reſted on ſomething when diſcharged.

The firſt time theſe inſtruments were ſeen, was in the imperial army of Bourbon, who drove Bonnevet out of the ſtate of Milan; which were ſo big and heavy as to require two men to carry them: but they are now little uſed, except in ſome caſtles, and by the French in ſome of their garriſons.

HARROW, in huſbandry, a drag made in a ſquare form, to break the clods of earth after ploughing, which con-

fiſts of ſeveral parts; 1ſt, the harrow bulls, which are the holes where the nails go in; 2d, the ſlots, which are the croſs pins; 3d, the harrow-tines, pins, or tuſhes, which are iron nails; 4th, the hook, being that which faſtens the horſe to them; 5th, the couples, when two harrows are tied together.

HARTLAND. A market-town of Devonſhire, ſituated in 4 deg. 45 min. of W. lon. and 51 deg. 9 min. of N. lat. near Briſtol channel; 25 miles W. of Barnſtaple; and gives name to a cape, called Hartland Point, at the entrance of Briſtol channel.

HARTS-HORN, or *Cornu Cervi*. See Harts-*Horn*.

HARWICH. A borough, and port-town of Eſſex, ſituated in 1 deg. 25 min. of E. lon. and 52 deg. 5 min. of N. lat. at the mouth of the river Maningtree, on the German ſea, 62 miles N. E. of London.

HASLEM. An iſland of Denmark, ſituated in 11 deg. 30 min. of E. lon. and 56 deg. 15 min. of N. lat. in the Categate ſea, at the entrance of the Baltic, north of the iſland of Zealand.

HAT. A covering for the head, wore by the men throughout the weſtern part of Europe; being chiefly made of hair and wool, worked, fulled, and faſhioned to the figure of the head; which are ſaid to be firſt ſeen about the year 1400, when they became of uſe for country wear and riding.

F. Daniel relates, that when Charles VII. of France made his public entry into Rouen in 1449, he had on a hat lined with red velvet, and ſurmounted with a plume, or tuft of feathers. He adds, that it is from this entry, at leaſt under this reign, that the uſe of hats and caps is to be dated, which thence forward began to take place of the chaperoons and hoods that had been worn before. In progreſs of time, from the laity, the clergy likewiſe took the habit; but it was looked on as a great abuſe, and ſeveral regulations were publiſhed, forbiding any prieſt, or religious perſon, to be abroad in a hat without cornets; and enjoining them to keep to the uſe of chaperoons, made of black cloth with decent cornets: if they were poor, they were at leaſt to have cornets faſtened to their hats, and this upon penalty of ſuſpenſion and excommunication. Indeed the uſe of hats is ſaid to have been of a longer ſtanding among the eccleſiaſtics of Britanny, by 200 years, and eſpecially among the canons: but theſe were no other than a kind of caps wore in colleges.

Hats make a very conſiderable article in commerce: the fineſt, and thoſe moſt valued, being made of the pure hair of an amphibious creature, called caſtor, or beaver, common in Canada, and other parts of North America; but they are alſo made of the hair, or wool, of ſeveral other animals; particularly the hare, coney, and camel; the proceſs of making being much the ſame in all. See *Caſtor*, *Camel*, and *Wool*.

Hats for women are made in various forms, and of various materials; ſuch as ſilk, ſtraw, ſhavings of wood, ivory, feathers, and horſe-hair.

By the ſtatute of the 8th of Elizabeth it was enacted, That no perſon ſhould make any hat of foreign ſtuff, unleſs ſuch perſon ſhould firſt have been apprentice, or covenant ſervant, to hat-making ſeven years; upon pain to forfeit all ſuch hats, and 5 l. for every month that he ſhould ſo continue. That no perſon ſhould make or ſell any cap, or other thing made of felt, but only hats; nor ſhould make or ſell any cap of woollen cloth not knit: and that no perſon ſhould dye black any cap with bark or ſwarf; but only with copperas and gall, or with woad and madder. See *Dying*.

By the 1ſt of James I. it was enacted, That no perſon ſhould ſet on work, in the art of hat or felt making, any perſon born out of his Majeſty's realms, upon pain to forfeit 5 l. for every month.

By the 5th of Geo. II. it was enacted, That no hats or felts ſhould be ſhipped in any of the Britiſh plantations; and no hats or felts ſhould be loaden upon any horſe or carriage to the intent to be exported out of the ſaid plantations. That all offenders againſt this act ſhould be ſubject to theſe penalties; the hats and felts to be forfeited, and the offenders to forfeit 500 l. and every maſter, mariner, porter, boatman, or other perſon, knowing ſuch offence, and aſſiſting therein, to forfeit 40 l. which forfeitures might be recovered in any court of record in Great Britain. That no perſon inhabiting in the plantations ſhould retain in the ſaid art of hat or felt making any Negro, upon pain to forfeit 5 l. for every month.

The manufacture of hats was formerly very conſiderable in France; but the Engliſh hats are now moſt in repute for the trade to Germany, Spain, Portugal, and Italy, where conſiderable quantities are exported.

HATTER, and HATTERS *Company of London*. See *Feltmaker*, and *Feltmakers* Company.

HATBAND-*maker*, is a perſon whoſe employment conſiſts in making bands, and buying linings for hats.

HATBAND-*makers company of London*, was incorporated by letters-patent of the 13th of Ch. I. dated the 12th of Dec. 1638, by the name of The maſter, wardens, aſſiſtants, and fellowſhip of the myſtery of hatband-makers of the city of London; which is a fraternity conſiſting of a maſter, two wardens, and twelve aſſiſtants; but without either hall or livery.

This company, during the wear of rich hatbands, was in a flouriſhing condition; but the ſame having been for many years in diſuſe, the trade is almoſt dwindled to nothing; inſomuch, that at preſent there are very few of the profeſſion.

HATCHES, in a ſhip, a ſort of trap-doors in the mid-ſhip or between the main-maſt and fore-maſt, through which goods of bulk are let down into the hold. Hence the

HATCHWAY, is that place where the hatches are.

HATCHES, are alſo flood-gates, ſet in a river, to ſtop the current of the water; this word being particularly uſed for certain dams, or mounds, made of rubbiſh, clay, or earth, to prevent the water that iſſues from the ſtream-works, and tin-waſhes in Cornwal, from running into the freſh rivers.

HATTOCK. A ſhock of corn, containing twelve ſheaves; but others make it only three ſheaves laid together.

HAVANA, or *Havannah*. A port-town, and capital of the iſland of Cuba, in America, ſituated in 84 deg. W. lon. and 23 deg. of N. lat. See *Spaniſh* America.

HAVEL. A river of Brandenburg, in Germany, which receives the river Spree, near Berlin; and, running by Brandenburg, turns N. and diſcharges itſelf into the Elb, a little below Havelburg.

HAVEN. A port, harbour, or proper place where ſhips may ride in ſecurity. See *Port*.

HAVERFORD-*weſt*. A port, and borough town of Pembrokeſhire, in South Wales, ſituated in 5 deg. of W. lon. and 51 deg. 50 min. of N. lat. 12 miles S. E. of St. David's.

HAVRE-DE-GRACE. A port-town of France, in the province of Normandy, ſituated in 10 min. of E. lon. and 49 deg. 30 min. of N. lat. on the Engliſh channel at the mouth of the river Seyne, 40 miles W. of Roan. See *France*.

HAUTBOY, or *Hoboy*. A ſort of muſical inſtrument of the wind kind, with a reed to blow or play upon it.

HAWKERS, anciently were fraudulent perſons, who went from place to place, buying and ſelling braſs, pewter, and other merchandiſe, which ought to be uttered in open market; but now they are perſons who utter wares by virtue of a licence from the commiſſioners appointed for that purpoſe by the government.

By the ſtatute of the 9th of William III. it was enacted, That there ſhould be paid to his Majeſty by every hawker, pedlar, petty-chapman, or other trading perſon, going from town to town, and to other mens houſes, or travelling either on foot or with horſes, or other carriage, carrying to ſell any goods, a duty of 4 l. for each horſe; and every perſon ſo travelling with a horſe, or other beaſt bearing or drawing burden, ſhould pay 4 l. for each horſe over and above.

That every perſon ſo travelling, upon receiving his licence, ſhould pay unto ſuch perſons as the commiſſioners of the treaſury ſhould appoint to be commiſſioners for licenſing hawkers, pedlars, and petty-chapmen, not exceeding three, or any perſon deputed by them, one moiety of the duty, and give ſecurity by bond, with one

be taken in his Majeſty's name, for the payment of e other moiety at the end of ſix months, unleſs the arty ſhould chuſe to pay down the other moiety; in hich caſe he ſhould be allowed 2 s. in the pound for rompt payment.

That if any ſuch perſon ſhould be found travelling without a licence, he ſhould forfeit 12 l. one moiety to the informer, and the other moiety to the poor of the pariſh; and if any perſon ſo trading, upon demand made by any uſtice, mayor, conſtable, or other officer of the peace, f any town corporate, or borough, where he ſhould ſo rade, ſhould refuſe to produce his licence, he ſhould forfeit 5 l. to the church-wardens of the pariſh for the uſe of he poor, and for non-payment ſhould ſuffer as a vagrant, nd be committed to the houſe of correction.

That the commiſſioners, or any two of them, might rant a licence to every hawker, and pedlar, for which icence there ſhould only be taken 1 s. unleſs ſuch perſon hould travel with horſe, or other beaſt, in which caſe here ſhould be paid 2 s. over and above the duties; and hat the commiſſioners ſhould keep a diſtinct accompt of he duties, and pay the money into his Majeſty's exchequer.

That if any perſon ſhould forge any licence, or travel with ſuch forged licence, ſuch perſon ſhould forfeit 50 l. nd ſhould be ſubject to ſuch other penalties as for forgery.

That this act ſhould not prohibit any perſon from ſelling acts of parliament, forms of prayer, proclamations, gazettes, licenſed almanacks, or other printed papers licenced; or any fiſh, fruits, or victuals; nor to hinder any maker of goods, within the kingdom, or their children, apprentices, agents, or ſervants, from carrying or ſelling the goods of their own making; nor any tinkers, coopers, glaziers, plumbers, harneſs-menders, or other perſons uſually trading in mending kettles, tubs, houſhold-goods, or harneſs, from going about and carrying materials for mending the ſame: and that nothing therein contained ſhould hinder any perſon from ſelling goods in any public mart, market, or fair.

Theſe duties were made perpetual, and part of the aggregate fund, by the 3d and 7th of Q. Anne, and the firſt of Geo. I.

By the ſtatute of the 3d of Queen Anne it was enacted, That every perſon, actually trading as a hawker, &c. who ſhould not upon demand have his licence ready, ſhould forfeit as if he had traded without a licence; and in caſe any perſon ſhould lend his licence, the perſon lending, and the perſon trading under colour of the ſame, ſhould each of them forfeit 40 l.

That perſons trading in the woollen or linen manufactures of this kingdom, and ſelling the ſame by wholeſale, ſhould not be deemed hawkers, pedlars, or petty chapmen, within any act; but ſuch perſons, and thoſe immediately employed under them, might carry abroad and ſell the ſaid manufactures.

By the 4th of Geo. I. makers and ſellers of Engliſh bone-lace, going from houſe to houſe, &c. are not adjudged hawkers.

AWKERS, are alſo thoſe perſons who go up and down London ſtreets, crying news-papers, and ſelling them by retail.

AWSER, or *Halſer*, belonging to a ſhip, is a rope conſiſting of three ſtrands; being a kind of little cable, ſerving for many uſes on board; ſuch as to faſten the main and fore ſhrouds, and to warp a ſhip over a bar.

AWSES, in a ſhip, are two round holes under her head, thro' which the cables paſs when ſhe lies at anchor.

urning in the HAWSE, is when the cable endures any extraordinary ſtreſs.

earing the HAWSE, is the untwiſting of two cables, which, being let out at different hawſes, are entangled or twiſted together.

old HAWSE, is when the holes are high above the water.

reſh the HAWSE, is a term among the ſailors when there is reaſon to ſuſpect the cable may be fretted in thoſe holes; at which time they veer out a little, to let another part endure the ſtreſs: and this they call, *to freſh the hawſe*: though freſhing the hawſe, is alſo uſed when new pieces are laid upon the cable.

Riding upon the HAWSE, is when a weighty ſubſtance lies a-croſs, or falls directly before the hawſe.

HAY. Graſs which is mowed down and dried in the ſun, on purpoſe for horſes provender in the winter time, in cities, ſtables, or other places, when and where green and growing graſs cannot be had.

By the ſtatute of the 2d of William and Mary it was enacted, That every truſs of old hay offered to be ſold in the cities of London and Weſtminſter, and within the bills of mortality, between the laſt of Auguſt and the 1ſt of June, ſhould contain 56 pounds; and that every truſs of hay offered to be ſold between the 1ſt of June, and the laſt of Auguſt, being new hay of that ſummer's growth, ſhould contain 60 pounds; and the perſons bringing either of the ſame, ſhould forfeit for every truſs of leſs weight 1 s. 6 d.

That no perſon ſhould ſuffer his waggon or cart to ſtand in the Haymarket, or Southwark, or other place within the bills of mortality, with hay or ſtraw to ſell, from Michaelmas to Ladyday, after two in the afternoon, and from Lady till Michaelmas after three in the afternoon, on pain of 5 s.

HAZON-MAINTHI. A name which the inhabitants of Madagaſcar give to all ſorts of ebony wood.

HEAD, in the mechanic arts, is applied to the parts of inanimate and artificial bodies; in which ſenſe ſome nails are ſaid to have heads, others hooks; and others, as brads, neither.

HEAD *of a ſhip*, or other veſſel, is the prow, or part that goes foremoſt.

HEAD-*land*, in huſbandry, is the upper part of a ground left for the turning the plough; or that part which is ſo ploughed a-croſs, at the ends of other lands.

HEAD-*ſea*, is when a great wave, or billow of the ſea, comes right a-head of the ſhip, as ſhe is in her courſe.

HEADS. A ſort of tanned hide. See *Hide*.

HEADS *of goods*, is a term among traders on the coaſt of Guinea, for ſpread-eagle dollars, cryſtal-beads, iron-bars, braſs-pans, and arrangoes; becauſe they are the deareſt. See *Bar*.

HEAVE, at ſea, ſignifies to throw away, or fling any thing overboard: though when a ſhip being at anchor riſes and falls by the force of the waves, ſhe is alſo ſaid to heave, and ſet. To heave at the capſtan, ſignifies to turn it about. To heave a flag a-board, is to hang it out: and to heave out the top-ſails, is to put them abroad.

HEBRIDES, or *Weſtern Iſlands*, lie on the W. of Scotland; of which Sky, Mull, Iſla, and Arran, are ſome of the largeſt. See *Britiſh* Iſlands.

HECK, among huſbandmen, a rack at which horſes are fed with hay: but it is alſo an engine to take fiſh in the river Ouſe: and a ſalmon-heck is a grate for catching that ſort of fiſh. See Salmon *Fiſhery*.

HEDAGIUM, antiently ſignified a toll, or cuſtom, paid at the hyth, or wharf, for landing merchandiſe, or other goods: from which toll, or cuſtomary duty, exemptions were ſometimes granted to particular perſons and ſocieties.

HEDERA. A kind of gum, or reſin, oozing from the ivy-tree; being firſt like glue, of a red colour, with a ſtrong, active, and diſagreeable ſmell: when dry it is friable, and of a tanned colour: it ſhould be choſen dry, tranſparent, and of a balſamic odour; but care muſt be taken that gum Aluchi is not ſubſtituted in its place. It is reputed good for the healing of wounds, and employed alſo as a depilatory: the beſt kind comes from the Indies; but it is alſo brought from Italy, and Languedoc in France

HEEL, in the ſea-language. If a ſhip leans on one ſide, whether a-ground or a-float, ſhe is ſaid to heel a-ſtarboard, or a port; or off-ward, or to the ſhore; that is, inclines more to one ſide than the other.

HEEL *of a maſt*, is that part of the foot thereof, which is pared away ſlanting, that the maſt may be ſtayed aft-ward on.

HEIDELBURG. A city of Germany, in the circle of the Lower Rhine, capital of the Palatinate, ſituated in 8 deg. 40 min. of E. lon. and 49 deg. 20 min. of N. lat. on the river Neckar, 43 miles S. of Frankfort, and 13 N. E. of Spire. See *Germany*.

HEILA. A port-town of Regal Pruſſia, in the kingdom of

of Poland, ſituated in 19 deg. of E. lon. and 54 deg. 30 min. of N. lat. on the point of a peninſula in the Baltic ſea, 12 miles N. of Dantzick, ſubject to Poland.

HELENA, St. commonly called *Saint Helena*, an iſland in the Atlantic ocean, ſituated 1200 miles W. of the coaſt of Africa, and 1800 E. of the coaſt of South America. It conſiſts of one ſteep high rock, and looks like a caſtle in the middle of the ſea; nor is there any poſſibility of landing but at one place, which is defended by a platform of 40 guns. It was taken from the Dutch in the reign of King Charles II. and is now ſubject to the Engliſh Eaſt India company.

The winds blowing always from the S. E. a moderate gale, it is an exceeding pleaſant voyage from the Cape of Good Hope to St. Helena, and performed in leſs than 3 weeks without handing a ſail, or giving the leaſt trouble to the ſeamen. But there is no ſailing to this iſland directly from the northward, the winds always blowing from the S. E. in theſe ſeas. When a ſhip therefore is ſent from England to St. Helena, it firſt ſails as far ſouthward as the Cape of Good Hope, and then returns to St. Helena: but it is doubted whether three ſhips ever made the iſland in going directly from Europe ſince it has been diſcovered.

There is no anchorage any where about the iſland, but at Chappel-valley bay; and as the wind always ſits from the S. E if a ſhip over ſhoots the iſland ever ſo little, ſhe cannot recover it again.

In this iſland the Engliſh Eaſt India company has a fort of three baſtions, and at the foot of the fort a little village of forty or fifty houſes.

In this village, which is only inhabited on the arrival of European ſhips, the inhabitants, who the reſt of the year are employed in the culture of their lands, keep a kind of fair, where the whole trade of the iſland is carried on, and where ſailors furniſh themſelves with the refreſhments of the iſland, and the iſlanders with ſuch European and Indian commodities as ſuit them moſt.

The produce of the iſland conſiſts in oranges, citrons, pomegranates, figs, peas, beans, and other fruits, as alſo garden ſtuff.

The inhabitants may be alſo treated with for white ſalt, which is excellent; bole, or red earth, much like *terra ſigillata*, and ſome red dying-ſtuffs.

The merchandiſes given them in exchange are ſome wines, thin ſtuffs of a low price; ſeveral ſorts of linens, ſome hard and haberdaſhery-ware, houſhold utenſils, and inſtruments for the culture of their lands.

HELISPHERICAL-*line*, in navigation, denotes the rhumb-line, becauſe, on the globe, it winds round the pole heliacally, or ſpirally, and ſtill comes nearer and nearer to it.

HELITROPIUM, otherwiſe *Ricionoides*, or the turnſol. See *Turnſol*.

HELIOTROPE, a precious ſtone of a green colour, ſtreaked with red veins, which Pliny ſays is thus called, becauſe, when caſt into a veſſel of water, the rays of the ſun falling thereon, ſeem to be of a blood colour; as alſo that, when out of the water, it bears ſome reſemblance to the figure of the ſun, and is proper to obſerve its eclipſes.

The heliotrope is alſo called oriental jaſper, on account of its ruddy ſpots. See *Jaſper*.

It is found in the Eaſt Indies; as alſo in Ethiopia, Germany, and Bohemia.

HELLEBORE. A medicinal plant, reputed among the ancients a ſpecific for the cure of folly, melancholy, and madneſs.

There are two ſorts of hellebore; the black, and white.

Black hellebore, called in Engliſh Chriſtmaſs-roſe, has a dark coloured root, furniſhed with abundance of little fibres; its ſtem green, its leaves dented, and its flowers of a carnation hue, not unlike the roſe.

White hellebore, called in Engliſh neeſewort, has a whitiſh root, beſet with fibres of the ſame colour, ſhooting out at a ſort of bulb, not unlike the head of an onion; its leaves being broad, at firſt green, and afterwards of a yellowiſh red. From the middle of the leaves riſes a ſtem, two or three feet high, which ſeparates about the middle into branches, each whereof bears a conſiderable number of little flowers like ſtars, diſpoſed in manner of a ſpica, or ear.

In each kind the roots only are uſed, which are to be choſen large, and fair; furniſhed with big filaments: thoſe of the white, tan-coloured without, and white within; and thoſe of the black, blackiſh without, and browniſh within; dry, clean, and of a ſharp diſagreeable taſte. They act as purgatives; but ſo very violently upwards and downwards, as frequently to cauſe convulſions; whence the uſe of them internally is now neglected, unleſs joined with other purgatives, and even alterants to correct them. They are ſtill retained with ſucceſs for the farcy in horſes, and for the ſcab in ſheep: but the chief uſe wherein the preſent practice acknowledges white hellebore, is in form of a ſternutory powder to clear and open the head.

HELLESPONT. The ancient name for the entrance of the ſtreight which divides Aſia from Europe, paſſing from the Archipelago to Conſtantinople: but it is now called the Dardanells, and is about 2 miles wide, being the place where Xerxes laid a floating bridge over, to march his army from Aſia to Europe. See *Dardanells*.

HELM, in navigation, a horizontal piece of timber, ſerving to move another fitted into it at right angles, called the rudder; the helm, or tiller of a ſhip, being a beam, or piece of timber, faſtned into the rudder, and ſo coming forward into the ſteerage, where the perſon that ſtands at the helm ſteers the ſhip.

A-lee the Helm, ſignifies to put the helm to the lee-ſide of the ſhip.

Bear up the Helm, is to let the ſhip go more large before the wind.

Port the Helm, is to put the helm on the left hand or ſide of the ſhip.

Right the Helm, or *Helm the midſhip*, is to keep it even with the middle of the ſhip.

Starboard the Helm, is to put it to the right ſide of the ſhip.

HELMONT. A town of the Netherlands, in the province of Dutch Brabant, ſituated in 5 deg. 40 min. of E. lon. and 51 deg. 30 min. of N. lat. on the river Aa, 18 miles W. of Venlo.

HELMONTIAN *Laudanum*. See *Laudanum*.

HELSINGPORT. A port-town of Sweden, in the province of Finland, and territory of Nyland, ſituated in 24 deg. 6 min. of E. lon. and 60 deg. 8 min. of N. lat. on the gulph of Finland, 80 miles E. of Abo, ſubject to Sweden.

HELVETIA, or *Helvetic*, ſomething that has a relation to the Switzers, or inhabitants of the Swiſs cantons, who were antiently called Helvetii.

The Helvetic body comprehends the republic of Switzerland, conſiſting of thirteen cantons, which make ſo many particular commonwealths: by whoſe laws and cuſtoms all differences between the ſeveral ſtates and republics are to be decided within themſelves, without the intervention of foreign power. See *Switzerland*.

HELVOETSLUYS. A port-town of the United Netherlands, ſituated in 4 deg. of E. lon. and 51 deg. 54 min. of N. lat. on the iſland of Voern, in the province of Holland, 5 miles S. of the Briel; one of the beſt harbours in Holland, and the ſtation for the Engliſh packet-boats. See *United Provinces*.

HEMINA, *Emine*, or *Eſmine*, is a great corn meaſure uſed in ſeveral parts of France, and in ſome ports of the coaſt of Barbary: however it is not an effective meaſure, as the buſhel, but a kind of meaſure of accompt, being one compoſed of ſeveral other certain meaſures; as, at Marſeilles the hemina of corn weighs 75 lb. weight of the place, or 60 lb. and ſomewhat more avoirdupoiſe weight; and in Barbary it is computed equal to 2 buſhels.

HEMLOCK. A narcotic plant, of ſome uſe in phyſic. The common hemlock is a poiſon, though not of a violent ſort: for there are inſtances of conſiderable quantities being taken without the leaſt diſorder.

HEMP. A plant of great uſe in the arts and manufactories furniſhing thread, cloth, and cordage: which bears a near analogy to flax, both in reſpect of form, culture, and uſe.

The plant is annual; that is, muſt be ſown afreſh every year: it riſes quick, into a tall, ſlender ſort of ſhrub, whoſe ſtem however is hollow, and big enough to be charred, and thus uſed in the compoſition of gun-powder. Its leaves ariſe by fives, or ſixes from the ſame pedicle, and are a little jagged; yielding a ſtrong ſmell, which affects the head.

The culture and management of hemp makes a conſiderable article in agriculture; there being divers operations required therein, as pulling, watering, beating, and ſwingling. The plant is ſown in May, in a warm, ſandy, rich ſoil; and is itſelf ſufficient to deſtroy weeds, on any ground. About Lammas it is fit for gathering; the marks of its maturity being its leaves turning yellow, and the ſtalks white. It is of two kinds, male, popularly called karl; and female, or fimble. The male alone produces ſeed to perpetuate the kind; the female is the lighteſt, and the firſt ripe. See *Flax*.

The Engliſh and Dutch, whoſe countries produce but little hemp in proportion to what they have an occaſion for with regard to their fleets, and merchant-ſhips, buy up great quantities of it yearly in Italy, and the northern countries; as in Riga, Coningſberg, Narva, Courland, and Muſcovy. The beſt is the Italian; and the next that of Ruſſia.

Moſt of all the provinces of France produce hemp in abundance, which makes a very conſiderable article in the French trade, by its great conſumption in the kingdom, either for thread, linens, or cordage; the French India company having not forgot among other things the culture and traffic of ſo neceſſary a plant.

Hemp is the foundation of ſeveral profitable manufactures; as ſail-cloth, ticking, ſacking, cordage, twine, and nets: therefore its culture ought to be encouraged, both in Great Britain and its northern colonies in America.

ENECHEN. An herb which grows in ſome parts of America, particularly in the iſthmus of Panama; being a kind of hemp of which the Indians make thread, cloths, and cords: but the leaves of this plant are more like thoſe of the European thiſtle, than of hemp.

ENRY-*Cape*. The ſouth cape of Virginia, in America, ſituated in 74 deg. 50 min. of W. lon. and 37 deg. of N. lat. at the entrance of the bay of Cheſepeak.

ERACLEA. A port-town of European Turky, in Romania, ſituated in 28 deg. of E. lon. and 41 deg. of N. lat. on the Propontis, 60 miles S. W. of Conſtantinople, once a great city, but now run to ruin.

ERB, is a denomination for thoſe plants whoſe ſtalks periſh every year, after the production of their bloſſoms, and after the ſeeds which are to preſerve their ſpecies are come to maturity.

Of theſe plants ſome are annual, and muſt be ſowed every year; others biſannual, which produce flowers and ſeeds only every two or three years; and others vivarous, whoſe root is preſerved all the winter, and in the ſpring ſhoots forth leaves, bloſſoms, and ſeeds.

Garden plants, or herbs, are thoſe cultivated in gardens, and fit for eating. Medicinal herbs, are thoſe of which phyſicians and apothecaries compoſe their remedies: and vulnerary herbs, are thoſe which taken interiorly, or applied topically, are good for the healing of wounds.

There are an affinity of herbs; ſome of which, as relative to trade, are deſcribed in this dictionary under their proper articles.

ERB, or *Herba*, in foreign manufactures, particularly in thoſe of the Eaſt and Weſt Indies, is underſtood of ſtuffs manufactured of herbs, reduced into flax, and afterwards ſpun: the principal of theſe ſtuffs being ſpun herbs, ſilk herbs, ſoft herbs, and herb taffeties.

HERBS, is a term in the Eaſt Indies for a kind of roſſy ſtuff, made of a thread taken from different ſorts of herbs, being uſually ſold at Surat; but Europeans only buy them out of curioſity, as they readily cut in the folds.

Some pretend that theſe cloths, which are uſually coloured, are not made of herbs; but of a ſilk produced by a kind of fly in the woods, and left upon the trees: though the firſt opinion is the moſt common.

HERB, is a term given by the Engliſh of Virginia to a kind of hemp which grows naturally, and without culture, in that part of North America; being ſpun like European flax, but the thread is more beautiful and gloſſy. The Indians make only cordage and nets of it; but the Europeans make linens and ſlight ſtuffs of it, which ſucceed admirably well.

There is another kind of this ſilk herb found in South America; eſpecially in the mountains of Popayan and Peru. The root of the plant is full of knots, and its leaves are like the blade of a ſword; of the thickneſs of the hand in the middle near the root, but thinner towards the edges, and upper part where they terminate in a point.

The Indians and Spaniards cut theſe leaves when at a certain growth; and, after drying them in the ſun, beat, and extract from them different ſorts of threads, coarſe or fine, employed in making hammocks, cordage, and a kind of half ſhifts, with which the Indian women cover themſelves from their waiſt. The threads of the fineſt ſort are uſually for ſilk ſtuffs, and ſtockings, as gloſſy as thoſe of Spain; the fineſt ſort being for lace, with which the Mulatoes and Negroes adorn themſelves on days of great ceremony: of all which merchandiſe there is a great trade in the principal towns of the South ſea, and farther up the country.

HERB *of Bengal*, has a ſtalk of a finger's thickneſs, on the extremity of which there grows a tufted button, ſpun into a very fine and gloſſy thread, with which carpets and bed-coverings are made, variegated with divers figures; beſides, of this herb alſo is made that kind of taffety called in Europe herb taffety.

Soft HERB, is an Eaſt India ſtuff, half herb and half cotton, whereof the pieces are 7 ells and a half in length, and $\frac{3}{4}$ or $\frac{5}{6}$ in breadth.

HERB-*taffety*, is an Indian taffety manufactured out of a ſilky matter extracted from ſeveral plants growing in Indoſtan, and ſome parts of China.

HERBA, however, is properly the bark of a tree, growing in many places of India and China, which being drawn out very fine, works like ſilk, and is mixed with ſilk or cotton, in the manufactures of calicoes.

HERCULES *Pillars*, are Mount Calpe in Spain, near Gibraltar, on the European ſide of the Streights; and Mount Avila on the African ſide of the ſtreights of Gibraltar.

HERMETIC, or *Hermetical Art*, is a name given to chemiſtry, on a ſuppoſition that Hermes Triſmegiſtus was the inventor thereof, or excelled therein.

HERMETICAL *Seal*. A manner of ſtopping or cloſing glaſs-veſſels, for chemical operations, ſo very accurately that nothing can exhale, or eſcape; not even the moſt ſubtile ſpirits. It is performed by heating the neck of the veſſel, in the flame of a lamp, till it is ready to melt; and then with a pair of pincers twiſting it cloſe together, which is called putting on Hermes's ſeal.

There are other ways of ſealing veſſels hermetically; as by ſtopping them with a plug, or ſtopple of glaſs, well luted into the neck of the veſſel: or by turning another *ovum philoſophicum* upon that wherein the matter is contained.

HERMODACTYLS, in medicine, a drug uſed as a gentle purgative: but naturaliſts are not agreed as to the origin of this drug. Some will have it the root; others the fruit of a plant: however, to reconcile them, there might probably be allowed two kinds of hermodactyls; the one a root, the other a fruit.

The fruit is about the ſize of a little cheſnut; in figure reſembling a heart, ruddy without, very white within; of a light fungous ſubſtance, without fibres, eaſily broke, and reduced into a ſubſtance like flour, of a ſweetiſh taſte, but ſomewhat viſcid. It is brought dried from Egypt and Syria: but authors differ as to the plant which bears it: in the common opinion it paſſes for a ſort of colchicum; others take it for a *tuberoſus iris*.

Hermodactyls promote perſpiration, but are chiefly uſed to purge pituitous humours of the brain and joints; being ſo efficacious in ſcouring the mucilaginous glands, and preſerving them from the lodgments of gritty matters, which occaſion the gout and arthritic pains, that they are denominated by ſome writers *anima articulorum*.

HERNGRUNT. A town of Upper Hungary, ſituated

in 19 deg. 20 min. of E. lon. and 48 deg. 47 min. of N. lat. 65 miles N. of Buda, near the Carpathian mountains; where is one of the richeſt copper-mines in Europe, with ſeveral ſorts of vitriol.

HERON. A large bird, bearing on its head a kind of tuft compoſed of very fine feathers; uſed chiefly for the ornaments of theatrical and maſquerade caps.

HERRING. There are ſeveral names given to herrings, according to the different manners wherein they are ordered; as, 1ſt, ſea-ſticks, being ſuch as are catched all the fiſhing ſeaſon, and are but once packed. A barrel of theſe hold ſix or eight hundred, eight barrels to the tun by law: a hundred of herrings is to be one hundred and twenty; a laſt ten thouſand; and they commonly reckon fourteen barrels to the laſt. There are others repacked on ſhore, called repacked herrings: ſeventen barrels of ſea-ſticks, making from twelve to fourteen of repacked ones.

The manner of repacking them is to take the herrings waſhed out in their own pickle, and lay them orderly in a freſh barrel. Theſe have no ſalt put to them, but cloſe packed, and headed up by a ſworn cooper with pickle, when the barrel is half full; the pickle being ſo ſtrong a brine that the herrings will ſwim in it.

2d, Summers are ſuch as the Dutch chaſers, or divers, catch from June to the 15th of July. Theſe are ſold away in ſea-ſticks, to be ſpent preſently in regard to their fatneſs; becauſe they will not endure repacking: they go one with another, full, and ſhotten; but the repacked herrings are ſorted, and the full ones put by themſelves.

3d, The ſhotten and ſick herrings by themſelves; the barrel whereof is to be marked diſtinctly.

4th, Crux herrings, which are ſuch as are caught after the 14th of September: theſe are cured with ſalt upon ſalt, and are carefully ſorted out, all full herrings, and uſed in the repacking.

5th, Corved herrings ſerve to make red herrings; being ſuch as are taken in the Yarmouth ſeas from the end of Auguſt to the middle of October; provided they can be carried aſhore within a week or leſs after their taking. Theſe are never gipped, but rowed in ſalt, for the better preſerving of them, till they can be brought on ſhore; and ſuch as are kept to make red herrings, are waſhed in great vats in freſh water, before they are hanged up in herring-hangs, or red-herring houſes.

As for the manner of ſalting herrings: the nets being haled on board, the fiſhes are taken out, and put into the warbacks, which ſtand on one ſide of the veſſels; where, when all the nets are thus unloaded, a perſon fills the gipper's baſkets. The gippers cut their throats, take out their guts, and fling out the full herrings into one baſket, and the ſhotten into another. One man takes the full baſket, when they are gipt, and carries them to the rower-back, wherein there is ſalt. One boy rows and ſtirs them about in the ſalt, another takes them thus rowed, and carries them in buckets to the packers. Four men pack the herrings into one barrel, and lay them one by one, ſtraight and even; and another man, when the barrel is full, takes it from the packer. It is let ſtand a day, or more, open to ſettle, that the ſalt may melt and diſſolve to pickle; after which they are filled up, and the barrel headed. The pickle muſt be ſtrong enough to ſuſtain a herring, otherwiſe the fiſh will decay.

Pickled HERRINGS. } See Herring-*Fiſhery*.
Red HERRINGS. }

HERRINGS are ſometimes preſcribed in medicine, by way of cataplaſms, to the feet, in fevers; as being ſuppoſed to draw the febrile matter downwards: though it is more probable this effect ſhould be owing to the ſalt uſed in the pickle.

HERRING-*buſs*. A veſſel uſed in the herring fiſhery. See *Buſs*.

HERRING *Cob*, is a young herring.

HERRING-*Fiſhery*. See *Fiſhery*.

HESSE-*Caſſel-Landgraviate*, including *Wetteravia*, is a territory of Germany, in the circle of the Upper Rhine.

HETEROGENEOUS, or *Heterogenial*, literally imports ſomething of a different nature, or that conſiſts of parts of different or diſſimilar kinds, in oppoſition to the homogeneous: thus, the refining of a metal is the purging it from all its heterogeneous parts. See *Refining*.

HETEROSCII, in geography, a term vulgarly applied to thoſe inhabitants of the earth, whoſe ſhadow at noon-tide is always projected the ſame way, either northward or ſouthward: in which ſenſe, the inhabitants of the temperate zones are called heteroſcii.

HETEROSCII, however, in ſtrictneſs, and according to the origin and reaſon of the word, is a term of relation, and denotes thoſe inhabitants, which, during the whole year, have their noon-tide ſhadows projected different ways from each other. Thus, we who inhabit the northern temperate zone, are heteroſcii with regard to thoſe who inhabit the ſouthern temperate zone, and thoſe are heteroſcii with reſpect to us.

From this definition it follows, that only the inhabitants of the two temperate zones are heteroſcii; nor is the word ordinarily applied to any other: though, in reality, there is always one part of the torrid zone, whoſe inhabitants are heteroſcii with regard to thoſe of the reſt, and with regard to thoſe of one of the temperate zones, except at the time of the ſolſtices; and, even at that time all of the torrid zone are heteroſcii with regard to thoſe of one of the temperate zones. But as this is variable, and the people of the torrid zone have their ſhadow now on this, and then on the other ſide; the cuſtom is to call them amphiſcii, and not heteroſcii. See *Amphiſcii*.

HEYRS, in huſbandry, young timber trees, uſually left for ſtandards, in felling of woods, or copſes. See *Timber*.

HIDE. The ſkin of a beaſt, particularly that of a bullock, or cow. See *Skin*, and *Tanning*.

There are hides of ſeveral denominations, according to their ſtate and quality.

Curried HIDE, is that which after tanning has paſſed through the curriers hands, and has thus received its laſt preparation, and is fitted for uſe.

Raw HIDE, or *Green Hide*, is that which has not undergone any preparation, being in the ſame condition as when taken off the carcaſe.

Salted HIDE, is a green hide, ſeaſoned with ſea-ſalt and alum, or ſalt-petre; to prevent its ſpoiling and corrupting, either by keeping it too long in cellars, or in tranſporting it too far in a hot ſeaſon.

There are alſo hides dried in the hair, ſent from America, particularly thoſe of buffaloes. See *Buff*.

Tanned HIDES, are hides either green, ſalted, or dried, further dreſſed, and prepared by the tanner, by paring off the hair, and ſteeping them in pits of lime and tan. See *Tanning*.

By acts paſſed in the 9th and 10th of Queen Anne, hides and ſkins imported, after payment of the duties, are to be marked, or ſtamped to denote the ſame.

Stamps are to be provided by the commiſſioners of the cuſtoms; and counterfeiting ſuch ſtamps, or knowingly ſelling any hides with ſuch counterfeited ſtamps, is made felony.

Such goods ſhipped off to be exported, and afterwards re-landed, are forfeited with treble their value.

By acts paſſed in the 13th, 14th, and 20th of Charles II. hides of ox, ſteer, bull, cow, or calf, untanned, or raw, may not be exported, upon penalty of 500 l. and diſability to deal in leather for the future; and ſuch exportation is likewiſe declared a common nuſance, except for the ſhips uſe only, and not exceeding ſix hides. To be exported from any iſland belonging to Great Britain, except Ireland, to any other place than Great Britain, the penalty is double the value.

The drawback on hides, as granted by the third of Geo. from the 1ſt of Auguſt 1718 for ever, is for every pound of avoirdupoiſe weight $\frac{2}{3}$ d. And all hides and calve-ſkins dreſſed or curried, are alſo to draw back 1 d. *per* pound weight, as they ſhall weigh at the cuſtom-houſe. Sheep-ſkins and lamb-ſkins, tanned, tawed or dreſſed, are to draw back.

By the 12th of Queen Anne, the hides and calves ſkins having paid duties at the time of tanning, and having been marked with a ſtamp to denote the ſame, two third parts of thoſe duties may, upon exportation to foreign parts, be repaid by the collector of the duty at that port; provided ſufficient ſecurity be firſt given to the collector of the cuſtoms, that they ſhall not be relanded in Great Britain: whereupon the ſaid collector is to gi-

a debenture, expreſſing the kinds, quantities, and weights exported.

And this drawback may be allowed, altho' the marks have not been ſeen by the officers of the cuſtoms; provided that oath be made before the collector of the cuſtoms, that the hides or ſkins contained in the reſpective bales or packs, were marked with the ſtamps denoting the payment of the duties, and how much the duties amounted to, together with the weight exported. But if relanded, they are forfeited, and treble the value.

Tanned hides are marked on each buttock, and tanned calve-ſkins above the tail: but never on the fleſh ſide.

Under the denomination of tanned hides are comprehended *ſole leather*; as

Butts, which are generally made from the largeſt ox, bull, ſteer, or cow-hide, and are tanned whole, except the pates and tails, which are cut off, and tanned ſeparately.

Backs, which are made from ſmall, as much as from large hides, and for conveniency in tanning, and afterwards for packing them for exportation, they are ſlit down the back in two parts, ſo that each two ſides of leather are accounted but one back. The pates and tails are cut off and tanned ſeparately.

Bends, which are cut off the beſt part of the hide, as the back, ribs, ſhoulders and buttocks, and then tanned: ſo that out of one hide there may be made ſix, eight, or ten bends.

Clout leather, which are a ſmall ſort of bends, the beſt part of a hide being cut into twenty or thirty pieces.

Crope ſoles, which are cut out of the back of a good upper leather hide after it is tanned.

Upper leather, as roundings, rands, wombs, dippings, and heads, which are the offal, being only the thin part, as the belly, flanks, and ſhanks of thoſe hides, the bends and clouting-leather were cut from; and are cut into ſeveral pieces and tanned.

HIERA PICRA, in pharmacy, a kind of electuary, firſt deſcribed by Galen, compoſed of aloes, cinnamon, aſarabacca, ſpicanardi, ſaffron, and maſtic, made up with honey, or ſyrop of violets and honey; being uſed to purge and cleanſe the ſtomach, remove obſtructions, promote the menſes and hæmorrhoides, and ſweeten the blood: tho' its chief uſe is in making the tinctura ſacra.

Beſides this ſimple hiera picra, there is a compound ſort, called diacolocynthidos pachii, by reaſon colocynthis is the baſe thereof, and that it was firſt uſed, with good ſucceſs, by Pachius of Antioch, in divers obſtinate diſeaſes. It is compoſed of colocynthis, opoponax, ariſtolochia rotunda, agaric, and other ingredients; being uſed in epilepſies, apoplexies, palſies, and lethargies; to excite the menſes, and promote the expulſion of the after-birth.

There is alſo a third ſort of hiera, called liberanus, but rarely uſed; and Dr. Quincy ſays it is one of the moſt ridiculous medicines ever contrived, though it paſſes for a cordial.

HIERES. A town of Provence, in France, ſituated in 6 deg. 5 min. of E. lon. and 43 deg. 5 min. of N. lat. on the Mediterranean, 8 miles E. of Toulon.

HIERES *Iſlands*, are ſituated near the coaſt of Provence, in France, oppoſite to the towns of Hieres and Toulon. See *French* Iſlands.

HIGH *ſea* or *Ocean*, is that far from land. See *Sea*, and *Ocean*.

HIGH *water*, is that ſtate of the tides when they ceaſe to flow. See *Tide*.

HIGLER. A perſon who buys up proviſions in the country, and carries them to peoples houſes, inſtead of bringing them to market.

HILDESHEIM. A city of Germany, capital of the biſhopric of Hildeſheim, ſituated in 18 deg. of E. lon. and 52 deg. 17 min. of N. lat. 30 miles S.W. of Brunſwic, and 17 S.E. of Hanover; an imperial city, or ſovereign ſtate, the inhabitants being a mixture of Lutherans and Papiſts.

HINGES, in building, thoſe neceſſary iron ligaments, by means whereof doors, lids, folds of tables, and the like, make their motions, whether of opening, ſhutting, or folding.

The ſpecies of hinges are many, as bed, box, butts, caſement, Lancaſhire, and ſmooth-filed, caſting, cheſt-black, coach, deſk, dovetails, eſſes, folding, garnets, dozen-ware long, weighty-long, lamb-heads, port, ſide Lancaſhire, ſide ſmooth-filed, ſide with riſing joints, ſide with ſquares, ſcrew, ſcuttle, ſtall, trunk of ſundry ſorts, joints; Lancaſhire, dozen-ware with hooks, dozen ware long, dozen ware ſhort, weighty long, and weighty ſhort.

HIN. The name for aſſa-fœtida in China, of which the Chineſe export much from Batavia.

HIPPO, now *Bona*. A port-town of Africa, ſituated in 7 deg. 40 min. of E. lon. and 36 deg. 30 min. of N. lat. on the coaſt of Algiers and province of Conſtantina, 90 miles N. E. of the city of Conſtantina.

HIPPOCRAS. A kind of medicated wine, being a drink, or beverage, compoſed of wine, with ſpices and other ingredients infuſed therein, much uſed among the French by way of dram after meals. There are various kinds of hippocras, according to the kind of wine, and the other additional ingredients made uſe of; as white-hippocras, red hippocras, claret hippocras, ſtrawberry hippocras, hippocras without wine, and cyder hippocras.

That directed in the college diſpenſatory, is to be made of cloves, ginger, cinnamon, and nutmegs, beat, and infuſed in canary, with ſugar; to the infuſion ſhould be put milk, a lemon, and ſome ſlips of roſemary, and the whole to be ſtrained through a flannel; which is recommended as a cordial, good in paralytic, and all nervous caſes.

HIPPOLAPATHUM, in natural hiſtory, a ſpecies of lapathum, called alſo monk's rhubarb. See *Rhubarb*.

HIPPOPOTAMUS, or *Sea-horſe*, an amphibious animal, not ſo much like a horſe as an ox; of which it has not altogether the reſemblance; having ſomething alſo of the bear and the hog. See *Sea-horſe*, and *Walrus*.

They are met with abundantly upon the banks of the Nile, and the Niger; but thoſe of the Niger are larger, and more dangerous than thoſe of the Nile. There are alſo many in ſome iſlands on the coaſt of Africa; but ſmaller, and even of different figures.

The Negroes of Guinea feed on their fleſh, which ſome Europeans make no difficulty alſo of eating, reputing the taſte pretty good, though ſomewhat ſavouring of ſlime and mud.

The teeth of the ſea-horſe are extremely white, and better than ivory for ſupplying the place of loſt teeth; both upon account of their hardneſs, and not ſo readily growing yellow: handles for knives, and turners work, are alſo made of them.

HIRCULUS. A kind of falſe nardus, found mixed with celtic nardus.

HISPANIOLA. An iſland of America, in the Atlantic ocean, ſituated between 67 and 74 deg. of W. lon. and between 18 and 20 deg. of N. lat. being about 420 miles long from E. to W. and 120 in breadth from N. to S. 50 miles E. of Cuba, 70 miles E. of Jamaica, 60 miles W. of Porto-Rico, and 300 miles N. of Terra Firma. See *French* and *Spaniſh* America, under *France* and *Spain*.

HISTIODROMIA, the art of ſailing, or of conducting veſſels on the ſea. See *Sailing*.

HITHE. One of the cinque ports in the county of Kent, ſituated in 1 deg. 7 min. of E. lon. and 51 deg. 6 min. of N. lat. on the Engliſh channel, 13 miles S. of Canterbury, and 6 miles W. of Dover.

HOED. A corn meaſure, being one of the diminutions of the laſt, and uſed in ſeveral towns of the United Provinces.

HOG's-*gum*. A kind of reſin, or ſovereign balſam for the healing of wounds, oozing from a tree which grows in the iſland of St. Domingo. It has been called hog's gum becauſe this animal made known its virtue and qualities, being accuſtomed, after the battles wild boars have with each other, to open the bark of the tree with his tuſks, and to rub himſelf afterwards againſt it, when the gum begins to ooſe.

HOGSHEAD. A meaſure, or veſſel of wine or oil, containing the fourth part of a tun, or 63 gallons. See *Meaſure*.

Two of theſe hogſheads make a pipe, or butt.

The diſtillers weigh their veſſels when full, and for a hogſhead allow four hundred weight, two quarters, and twenty-two pounds, caſk, and liquor.

HOGUE. A town and cape, ſituated in 2 deg. of W. lon. and 49 deg. 50 min. of N. lat. on the N. W. point of Normandy, in France.

HOHIO. A river of North America, which riſes in the Apalachian mountains, near the confines of Carolina, and Virginia, and running S. W. falls into the river Miſſiſſippi; being reckoned by ſome the principal ſtream, which forms the river Miſſiſſipi.

HOLANS. A kind of cambric manufactured in Flanders, and ſent in conſiderable parcels to Spain, whence it paſſes to the Spaniſh Weſt Indies.

HOLBECK. A town of Denmark. See *Denmark*.

HOLD, of a ſhip, the loweſt part of a ſhip, including all that part lying between the keelſon and the lower deck; containing the ſteward's room, the powder room, the bread room, and the boatſwain's room, divided from each other by bulk-heads.

The hold, in a merchant ſhip, is the ſtore room, or the place wherein the goods, at leaſt all the heavier, and more cumberſome, are ſtowed: the reſt being diſpoſed between the two decks, at leaſt in Dutch ſhips, which have their holds very ſhallow, and the ſpace between the decks high.

HOLER. A copper coin ſtruck and current in ſome ſtates of Germany; 12 of which are worth about a halfpenny ſterling.

The holer is ſo light and thin, that to give it a currency in payments, they mould it into the form of the head of a nail; and thus the name holer comes from *hol*, which ſignifies hollow, or concave.

HOLLAND, in the linen-drapery, a fine, white, even, cloſe kind of linen cloth, chiefly uſed for ſhirts and ſheets; being chiefly wrought in the provinces of Holland, Frieſland, and other parts of the United Provinces, whence the appellation: but the principal mart, or ſtaple of this cloth is at Haerlem, whence it is ſent from moſt other parts, as ſoon as wove, to be whitened the enſuing ſeaſon.

That manufactured in Frieſland is the moſt eſteemed, and called frize-holland; being the ſtrongeſt, and the beſt coloured, of any of that fineneſs; which is never calendered, nor thickened as the reſt; but exported juſt as it comes from the whitſter. It is diſtinguiſhed by its being yard, quarter and half wide; being half a quarter more than thoſe commonly called frize-hollands, which are not right.

Guilix HOLLAND is very white, and fine, and is chiefly uſed for ſhirts; being the ſtrongeſt of any for its fineneſs, except true frize, and is juſt yard wide.

Alcmaer HOLLAND is very ſtrong cloth, and wears exceeding well; being about yard, quarter and half wide.

HOLLEN. A town of Norway. See *Denmark*.

HOLLI. A kind of gum, or balſam, which the Indians of New Spain make uſe of as an ingredient in their chocolate, to which they attribute the virtue of fortifying the heart, and ſtopping a dyſentery.

The holli oozes by inciſion from a tree, in the language of the country, called holquahuylt, or chilly. The liquor when it begins to ooze is of a milky colour, afterwards it grows brown, and laſtly becomes intirely black.

The Spaniards of Mexico uſe holli in imitation of the antient inhabitants of the country; but the uſe of it is not eſtabliſhed in Old Spain, nor in any other country of Europe.

HOLM. A port and market town of Cumberland, ſituated on Solway frith, 200 miles W. of Carliſle.

HOLSOM. A ſhip is ſaid to be holſom at ſea, when ſhe will hull, try, and ride well, without rolling, or labouring.

HOLSTEIN. A duchy of Germany, in the circle of Lower Saxony.

HOLYHEAD. An iſland and cape of the county of Angleſey, ſituated in 4 deg. 45 min. of W. lon. and 53 deg. 26 min. of N. lat. in the Iriſh channel, where people uſually embark for Dublin in Ireland.

HOLY-ISLAND. An iſland in the German ſea, ſituated in 1 deg. 42 min. of W. lon. and 55 deg. 45 min. of N. lat. 6 miles S. of Berwick in Northumberland.

HOMOGENEOUS, or *Homogenial*, is applied to various ſubjects, to denote, that they conſiſt of ſimilar parts of the ſame nature and kind, in contradiſtinction to heterogeneous, where the parts are of different natures. See *Heterogeneous*.

Natural bodies, for the generality, are compoſed of homogeneous parts; as a diamond, a metal, and the like. Artificial bodies, on the contrary, are aſſemblages of heterogeneous parts, or parts of different qualities; as a building of ſtone and wood.

HONDURAS. A province of Mexico, in North America, which, including the country of the Muſkito Indians, is ſituated between 85 and 94 degrees of W. lon. and between 12 and 16 deg. of N. lat. bounded by the bay of Honduras and the North ſea on the north and eaſt; by the province of Nicaragua and Guatimala on the ſouth; and by Vera Paz on the weſt; which the Spaniards lay claim to; but the Engliſh have been long poſſeſſed of the logwood country, in the bay of Honduras, and cut large quantities there every year. The Muſkito Indians on the eaſtern part of this province are a people independent of the Spaniards, having entered into treaties with the Engliſh, and entertained them in their country, and ſerved them in ſeveral capacities; nor have the Spaniards any towns, or forts in the bay of Honduras, or the Muſkito country.

HONE. A general denomination for all ſuch kinds of ſtone as ſerve to ſharpen ſciſſars, razors, lancets, and knives. Thoſe of the Levant are of a yellowiſh colour, not unlike bees wax when firſt taken out of the hive; and are uſed moſt commonly for ſciſſars.

There are alſo ſome yellow hones in Oxfordſhire, being holly-wood that will be thus petrified in a ſhort time.

The Cork hone is of a milk white colour on the outſide, and of a flat colour within; its chief uſe being for razors.

The hone for lancets is green, being a kind of pebble.

The hone for whetting knives is a kind of brown freeſtone.

And, laſtly, the oil-hone is much like that of the Levant; being uſed for the ſharpening of chizzels and engraving-tools.

HONEY. A ſweet ſort of juice ſucked from vegetables by the bees, and repoſited in their combs; being properly one of the juices afforded by the flowers, and is found to exude from all ſorts thereof; even the bittereſt, as aloes and colocynth, not excepted. In all male flowers that have utricles at the bottom of the petala, is found a viſcid, ruddy, ſweet juice in good plenty. The bees viſit theſe flowers, and putting in their proboſcides, or trunks, ſuck out the honey-juice, and load their ſtomachs therewith; to be afterwards diſcharged and laid up in their combs: ſo that honey is a vegetable ſubſtance. In the belly of the bee is a ſmall tranſparent bladder, which is the proper receptacle of the honey; when the animal finds this full it returns, enters one of the cells, and diſcharges it there by that part of the head ſituated between the two jaws, which it extends wider than ordinary, moving its head about at the ſame time. If a drop happens to be ill placed, the bee ſucks it up again by its proboſcis, and diſcharges it anew: and when a cell is filled with honey, they ſtop it up with wax, for winter ſtore. See *Wax*.

Honey was antiently taken for a dew that fell, or deſcended on the flowers; but what proves this a miſtake is that the bees only gather it after the ſun is up, when there is no dew left; it muſt therefore be either a liquor prepared in the flower, and excreted by its proper veſſel, like manna; or rather, it appears to be the fine duſt, or *farina fœcundans* of the apices. For, according to the obſervations of M. du Vernay, the bees, when in ſearch of honey, fix upon no other parts but the ſtamina and apices, and not on ſuch as yield any other liquor.

There are two kinds of honey, white and yellow: the white, called virgin honey, trickles out ſpontaneouſly from the comb, by turning it up, or breaking it. The ſecond is ſqueezed from the combs in a preſs, after having firſt ſoftened them with a little water over the fire: and there is alſo an intermediate ſort, of a yellowiſh white colour, drawn, by expreſſion, without fire.

Honey left to ſtand two or three days, purges itſelf, throwing up a ſcum of wax, and other droſs, which is to be taken off.

Hone

Honey has conſiderable medicinal virtues, being reputed a good detergent and cleanſer, and in that quality uſed both internally and externally, for the viſcera, wounds, and ulcers: it is alſo the baſis of ſeveral compoſitions in pharmacy. Of honey, with the addition of roſes, violets, or mercurialis, is made mel roſatum, mercuriale, and helleboratum. There is likewiſe mel ſcilliticum, or a preparation of ſquills; mel paſſulatum violatum, made with raiſins boiled in water; and mel anthoſatum, made of roſemary flowers. The chemiſts alſo draw a water, a ſpirit, and an oil, from honey; and it is an ingredient in ſeveral drinks, as mum, and metheglin. See *Mum*, and *Metheglin*.

Honey is the production of moſt countries, yet more abundant in the iſland of Candia, and in the greater part of the iſlands of the Archipelago, than any where elſe. Hamburg honey is ſold at Amſterdam by the ton of 330 lb. tret; its price being from 40 to 45 s. ſterling *per* ton, with a deduction for prompt payment of 1 *per cent.*

Wild HONEY. S. Adaman, abbot of Hii, in his deſcription of holy places, obſerves, that in the place where John the Baptiſt lived in the deſart, there are locuſts which the poor people boil with oil, and a ſort of herbs with large long leaves, of a milk colour, and a taſte like that of honey: and that this is what in ſcripture is called wild honey.

HONEY-*comb*, in gunnery, is a flaw in the metal of a piece of ordnance, when it is ill caſt, and ſpongeous.

HONEY-*dew*, is a ſweet taſted dew, found early in the morning on the leaves of divers ſorts of plants. This honey-dew falling on the ears of ſtalks of wheat, beſmears them with a different colour from the natural; and being of a clammy ſubſtance, ſo binds up the young, tender, and cloſe ears of the wheat, by the heat of the ſun, that it prevents the growth, and compleating of the perfect grain therein: a ſhower of rain ſucceeding preſently after the fall thereof, or the wind blowing ſtiffly, are the only natural remedies againſt it.

HONFLEUR. A port-town of France, in the province of Normandy, ſituated in 15 min. of E. lon. and 49 deg. 24 min. of N. lat. on the ſouth-ſide of the river Seyne, near the Engliſh channel.

HONGRE. See *Hungar*.

HONOUR *of the city*, are the public offices, or employments thereof: thus, when a man has been conſtable, overſeer of the poor, and church-warden of his pariſh, common-council-man, alderman, and laſtly mayor, he is ſaid to have paſſed all the honours of the city.

HONOUR, is alſo a term uſed in the commerce of bills of exchange. To honour a bill of exchange is to accept and pay it, in conſideration of the drawer, tho' he has not as yet remitted effects. To honour a bill is alſo underſtood when a bill of exchange having been proteſted, any other perſon than him on whom it has been drawn, is willing to accept and pay it upon account of the drawer, or ſome endorſer.

HONORAT. An iſland on the coaſt of Provence, in France. See *French* Iſlands.

HOOK. A crooked inſtrument made of iron or braſs, whereon or wherewith to hang or faſten one thing to another; of which there are ſeveral ſorts uſed in building; as, 1ſt, armour hooks, which are generally of braſs, and are to lay up arms upon, as guns, muſkets, half-pikes, javelins, and the like; 2d, caſement hooks; 3d, chimney-hooks, which are made of both braſs and iron, and of different faſhions; their uſe is to ſet the tongs and fire ſhovel againſt; 4th, curtain-hooks; 5th, hooks for doors and gates; 6th, double line hooks, large and ſmall; 7th, ſingle-line hooks, large and ſmall; 8th, tenter-hooks, of various ſorts.

HOOK-*pins*, in architecture, are taper iron pins, only with a hook-head, to pin the frame of a roof or floor together.

HOOKER. See *Howker*.

HOOP. A flexible inſtrument made of wood or metal, ſo as to go round and incloſe a veſſel, to keep it tight, and prevent it from leaking.

HOORN. A port-town of the United Provinces in the province of Holland, ſituated on the Zuider ſea, 19 miles N. of Amſterdam.

HOP. A plant of the reptile kind, whoſe flower is a principal ingredient in beer, and other malt-liquors. See *Beer*.

The hop creeps like ſnake-weed, unleſs it finds pales, or ſhrubs to hang to; or unleſs they who cultivate it, plant poles for the purpoſe. Its ſtem is long, flexible, rough, and hairy: its leaf indented like that of the vine, and covered with a kind of prickly down, like that of the cucumber. Its flowers are of a greeniſh yellow, reſembling, both as to form and ſize, thoſe of the female elm, and grow in a kind of bunch, or cluſter: in this flower a blackiſh bitter grain is contained, which is the ſeed of the hop. In the ſpring time, while the bud is yet tender, the tops of the plant being cut off, and boiled, are eat like aſparagus, and found effectual to looſen the body: the heads and tendrils are good to purify the blood in the ſcorbutus, and moſt cutaneous diſeaſes: decoctions of the flowers, and ſyrups thereof, are of uſe againſt peſtilential fevers: juleps and apozems are alſo prepared with hops, for hypocondriacal and hyſterical affections, and to promote the menſes.

The propagation and culture of hops, is a point of ſome nicety, as well as advantage. It is certain there is nothing in all the rural employments, that, under prudent management, turns to more account; very large eſtates having been raiſed by this commodity in a few years paſt. Switzer tells us, he has known ground yield 30 l. *per annum per* acre, planted therewith: to ſay nothing of the number of poor that are employed therein, in the planting, ſoiling, digging, houghing, poling, tying, and picking.

Culture of HOPS *and* HOP-*gardens*. Hops are of ſeveral kinds: Mortimer reckons four; namely, the wild garlic-hop, which is not worth propagating; the long and ſquare garlic hop, which, tho' valuable, yet on account of the redneſs towards the ſtalk, does not bear the beſt price; the long white hop, which is the moſt beautiful and fertile; and the oval hop. Another author diſtinguiſhes the hops to be cultivated into the white and grey kinds; the latter being a large ſquare hop, more hardy, and bearing a plentifuller crop than the former, though it does not ripen ſo early.

For the ſoil of HOPS. There are ſcarce any but may ſerve, except ſtony, rocky, and ſtiff clay ground: the beſt, however, is that which is light, deep, and rich, which will be the better if ſand is mixed with it; a black garden mould is alſo excellent. If the ground be cold, ſtiff, and ſour, the beſt means of improvement is to burn-beat it. Mortimer adds, that in Kent, where they eſteem new land beſt for hops, they plant their hop-gardens with cherry-trees and apple-trees, at a good diſtance; that when the land is paſt the beſt for hops, which happens in about ten years, the cherry-trees may begin to bear; and thirty years after, when the cherry-trees are ſpent, the apples-trees may be in perfection.

For the planting of HOPS. The ground is firſt to be prepared, by tilling it in the beginning of winter, either with the plough or ſpade. In October, and ſometimes in March, they proceed to plant, marking out the places where they deſign each hillock, or little plantation. Some plant in ſquares, checquer-wiſe, which is the moſt convenient form, where they intend, in the courſe of the tillage, to plough with horſes between the hills; but the beſt form for the hop, as well as the moſt pleaſing to the eye, is the quincunx.

If the ground-plot be poor, or ſtiff, it is neceſſary ſome good mould, or elſe a compoſt of manure and earth, be laid in holes a foot ſquare, in the ſeveral places where the hills are to be. The diſtance of the hills in dry and hot ground, may be ſix feet; but in moiſt and rich ground, ſubject to bear large hops, eight or nine.

For planting, the largeſt ſets are to be choſen, eight or ten inches long, having each three or four joints, which are to be ſet in holes made for the purpoſe, one at each corner of a hole, and a fifth in the middle, raiſing the earth two or three inches about.

For the dreſſing of HOPS. If the hop-ground be old, and wore out of heart, they find it convenient to dig about them, towards the beginning of each winter, and take away a quantity of old earth, ſupplying its place with what is fatter and freſher. If the hops are in good heart, manuring and pruning is moſt adviſeable: in order to which, they pull down the hills, and undermine all about,

till they come near the principal roots. This done, taking off the earth from the roots, they find by the colour, which are new ſhoots, and which old ones, and cut off all the new ones: when the roots are thus dreſſed, the new mould, or manure, is to be applied.

For the poling. The time is when the hops begin to appear above ground; the number and dimenſions of the poles, to be adjuſted to the diſtance of the hills, the nature of the ſoil, and ſtrength of the hop. To prevent houſling, the poles are to be made to lean outwards, and particularly towards the ſouth, to receive more of the ſun's beams; it being matter of obſervation, that a leaning pole bears more hops than an upright one.

As to tying. When the hops are got two or three feet above ground, the next buſineſs is, to conduct and tie them to ſuch poles as are empty, and at proper diſtance from them. They are to be tied with withered ruſhes, or woollen yarn; but not ſo cloſe as to hinder their climbing up the poles: two or three ſtrings may ſuffice for a pole; and this operation muſt be attended to in April and May.

About midſummer, when they ceaſe to run in length, and begin to branch, ſuch of them as are not yet got up to the tops of the poles, ſhould have their heads nipped off, or elſe be diverted from the pole, that they may branch the better, which is more for the increaſe of the hop, than its extending in length.

Sometime in May, after rain, the hills are to be made up with a hoe, or ſpade, or by ploughing, which will be a means to deſtroy the weeds; and it is neceſſary, if the ſpring or ſummer prove dry, to water them twice or thrice in a ſeaſon.

Hops *blow* towards the latter end of July; and the forward ones are ripe by the cloſe of Auguſt: their ripeneſs is diſcovered by their fragrant ſcent, their changing of colour, being eaſily pulled, and by the browniſh colour of the ſeed.

Hops are to be *gathered* when they look a little browniſh, and that without delay: the moſt expeditious way is, to make a frame with four ſhort poles or ſticks, laid on four forks driven into the ground, of ſuch breadth as to contain either the hair cloth of the kiln, or a blanket tacked round it about the edges. On this device the poles, with the hops round them, may be laid, being either ſupported by forks, or the edges of the frame; at each ſide whereof the pickers may ſtand and pick the hops into it. When the blanket or hair-cloth is full, they untack it, carry it away, and place another, or the ſame emptied, in the ſame frame again; and this frame may be daily removed, with little trouble, to ſome new place in the garden near the work.

Hops muſt not be gathered while wet; but if the dew is on them, or a ſhower of rain has taken them, the pole may be ſhaken, and they will dry the ſooner. If they are over-ripe, they will be apt to ſhed their ſeed, wherein conſiſts their chief ſtrength; neither will they look ſo green, but ſomewhat brown, which much leſſens their value; though ſome let them ſtand as long as they can; becauſe they waſte leſs in the dropping: for four pounds of undried hops, though ripe, will make one of dry; whereas five pounds of thoſe ſcarcely ripe, yet in their prime, make but one; ſo that it is judged the proprietors get more in the thorough ripe hop, than they loſe in the colour.

As faſt as the hops are picked they muſt be *dried*; ſome, eſpecially the Flemings and Hollanders, make uſe of an ooſt, or kiln, for this purpoſe; others dry them on the ordinary malt-kiln in an hair-cloth; but the beſt way is to make a bed of flat ledges, about an inch thick, and two or three inches broad, ſawn, and laid one acroſs the the other, checquer-wiſe, the flat way; the diſtances about three inches; the ledges ſo entered are put into another, that the floor may be even and ſmooth: this bed may reſt on two or three joyſts ſet edge-ways, to ſupport it from ſinking; they then cover it with large double tin-plates, ſoldered together at each joint, and ſo order the ledges before they are laid, that the joints of the tin may always be over the middle of a ledge; and when the bed is wholly covered with tin, then ſet boards about the edges of the kiln, to keep up the hops, only letting the one ſide be to remove, that the hops may be ſhoved off as before. The hops may be turned on this tin bed or floor with great ſafety, and ſmall expence of fuel; beſides, that any manner of fuel will ſerve for this purpoſe, as well as charcoal, the ſmoke not paſſing through the hops: but it muſt not be forgot, to make conveyances for it, at the ſeveral corners and ſides of the kiln.

The *turning* of hops after the eaſieſt and moſt ſecure manner, is found to be not only a waſte and injury to the hop, but alſo an expence of fuel and time; yet it may be prevented, in caſe the upper bed, whereon the hops lie, have a cover, that may be let down, and raiſed at pleaſure; which cover may be tinned over, by nailing ſingle tin-plates to the face of it, that when the hops begin to dry, and are ready to be burnt, this cover may be let down within a foot and leſs of the hops, which will reflect the heat upon them, that the uppermoſt hop will be as ſoon dry as the lower, and every hop equally dried.

Bagging of Hops. After they have lain a month or more to cool and toughen, the method is to make a round or ſquare hole in an upper floor, big enough for a man with eaſe to go up and down, and turn and wind in it; a hoop is then tacked about the mouth of the bag faſt with packthread, that it may bear the weight of the hops when full, and of the man that treads them: that done, the bag is let down through the hole, and the hoop will reſt above, ſo as to keep the bag from ſliding wholly through; into this bag are caſt a few hops, and before they go in to tread, a handful of hops are tied at each lower corner with a piece of packthread, to make a ſort of taſſel, whereby the bag, when full, may be conveniently lifted or removed: a perſon then goes into the bag, and treads the hops on every ſide; another ſtill caſting in as faſt as it is required, till it be full: when it is well trodden and filled, the bag is let down by unripping the hoop, and the mouth of the bag is cloſed; the two upper corners being filled like the lower: this bag, if well picked and dried, will keep ſeveral years in a dry place; only care muſt be taken, that mice are not permitted to ſpoil or waſte the hops; not that they will eat them, but make their neſts therein.

The counties of Kent, Surry, and Worceſter, are the moſt remarkable of any in England, for the cultivation of hops; where the hop-planters commonly agree with hop-dreſſers to do all the huſbandry part, for 3 l. to 3 10 s. *per* acre; the charge of which is computed thus in ſome parts; 3 l. for the huſbandry, 4 l. for the wear of 3000 poles, 5 l. for picking and drying, 1 l. 10 s. for dung, 1 l. for rent, and 10 s. for tythe, in all 15 l. a year; and, in ſome places, they pay 4 or 5 l. a year for the rent of an acre of land. Poles are about ⅓ part of the yearly charge, picking and drying another third, and the reſt is laid in the managing of the ground, the acre of which ſometimes produces 40, 50, 60, 80, or 100 l. the hop-planters eſteeming it a moderate return if an acre produces only 30 l. in a ſeaſonable year; but the crops frequently fail, becauſe hops are very tender plants, and very apt to ſuffer by winds, blights, mildews, rains, droughts, and inſects.

Hops are under the laws of exciſe; and by ſeveral acts of parliament the following regulations are made relative to this commodity. If hops are imported, unclean, corrupt, or mixed with powder, duſt, droſs, ſand, or dung, they are forfeited. Britiſh hops exported to Ireland, are not to draw back the duty: nor are they to be imported into Ireland, except from Great Britain only, on forfeiture of the value, and the ſhip; ſuch importation being declared likewiſe a common nuſance.

If carried from Great Britain to Ireland, the maſter of the ſhip is to take with him a duplicate of his cocket, under the hands and ſeals of the collector and comptroller of the port, in order to be produced upon oath, to the officers of the cuſtoms in Ireland, before landing, upon forfeiture, and 10 s. *per* pound.

No foreign hops are to be landed in Great Britain, before the entry and payment of the duty, or without warrant from the proper officer: nor any foreign hops, except of Britiſh growth, are to be landed in Ireland, upon forfeiture thereof, together with the ſhip or veſſel

d every perſon concerned is to forfeit 5 s. for every ound weight; the hops being to be burnt within ten ys after condemnation.
ny perſon mixing with hops any dung or ingredient to ter the colour or ſcent, and being convicted thereof, pon oath before a juſtice of the peace, is to forfeit 5 l. r every hundred weight.
PE. A ſtation for ſhips in the mouth of the river Thames, below Graveſend.
E *Cape.* See *Bon Eſperance.*
PPER. A veſſel wherein ſeed-corn is carried at the ime of ſowing. The word is alſo uſed for that wooden rough in a mill, into which the corn is put to be ground.
R, or *Oort.* A Daniſh coin. See *Oort.*
RD, in geography, is uſed for a company or tribe of wandering people, who have no ſettled abode or habitation, but ſtrole about, dwelling in chariots, or under tents, to e ready to ſhift, as ſoon as herbage, fruits, and the preent province is eaten bare.
RD, is more popularly the name which the Tartars, who nhabit beyond the Wolga, in the kingdoms of Aſtracan nd Bulgaria, give to their villages; a hord conſiſting f fifty or ſixty tents ranged in a circle, having an open lace in the middle. The inhabitants of each hord ſually form a military company or troop; the eldeſt whereof is commonly the captain, and depends on the eneral, or prince of the whole nation.
ORDEATUM. A liquid medicine, made of barley, oiled till it burſt: but ſometimes other ingredients are dded, as the cold ſeeds, almonds, and the like.
ORN. A hard, callous ſubſtance, growing on the head of divers animals: but it is laid down as a rule by ſome naturaliſts, that no animals have horns, except thoſe that are cloven footed.
Horns make a conſiderable article in the arts and manufactures. Bullocks horns, ſoftened by the fire, ſerve to make lanthorns, combs, inkhorns, drinking-horns, ſnuff-boxes, tobacco-boxes, and the like.
By the ſtatute of the 4th of Edw. IV. and 1ſt and 7th of James I. Britiſh horns unwrought, are not to be tranſported or ſold to ſtrangers, upon forfeiture of double their value.
art's-HORN, or *Cornu cervi.* The ſcrapings or raſpings of the horn of a hart, or ſtag, which are medicinal; being uſed in aſtringent draughts, and ptiſans, with that intention: it yields by diſtillation a very penetrative volatile ſpirit, much in uſe, and commonly called drops, which is often adulterated.
ORN, is alſo a ſort of muſical inſtrument, of the wind kind; chiefly uſed in hunting, to animate and bring together the dogs, and the hunters: but what are now called French-horns, made of braſs, are chiefly in uſe.
ORN *Cape*, or *Cape Horn.* The moſt ſouthern promontory of Terra del Fuego, in South America, ſituated in 80 deg. of W. lon. and 57 deg. 30 min. of N. lat. round which all ſhipping paſſes of late, from the Atlantic to the Pacific ocean or South ſea; the way through the ſtreights of Magellan, being found more tedious, if not more hazardous.
ORNER. A perſon whoſe trade conſiſts in manufacturing or turning of horns, much in the ſame manner as the turner does wood.
ORNERS *company of London*, was incorporated by letters-patent of the 13th of Charles I. dated the 12th of January 1638, under the appellation of The maſter, wardens, aſſiſtants, and commonalty of the art and myſtery of horners of the city of London; who conſiſt of a maſter, two wardens, and nine aſſiſtants; but have neither livery nor hall.
In the reign of Edward IV. this company was reduced to great ſtraits by the almoſt general exportation of horns; therefore, upon their application to parliament in 1465, it was, in compaſſion to their grievances, enacted, That henceforth no other horns ſhould be exported, but ſuch as were refuſed by the horners of this city and kingdom, on the penalty of forfeiture; and for the more effectual execution of the ſaid law, the wardens of the company of horners of this city, were empowered to ſearch for all ſuch goods and merchandiſe, both wrought and unwrought, not only in the city, but within twenty-four miles of the ſame, and alſo in the fairs of Sturbridge and Ely, when all ſuch goods as were found bad and unmarketable were to be forfeited.
And the company, for the more effectual preventing monopolies, and the evil deſigns of ſiniſter men, have of late appointed ſeveral of their members to attend, not only the market of Leadenhall, but likewiſe thoſe of the neighbouring counties, for the buying of horns; whence the reſpective quantities bought by each, are ſent to their warehouſe in Wentworth-ſtreet, Spittlefields, where they are divided by lots among the ſeveral members; by which means all frauds and impoſitions are happily prevented, to the great eaſe and advantage of both widows and orphans, who receive their ſeveral ſhares in proportion to the reſt of the members of the company.

HORSE. A domeſtic quadruped, of great uſe in the affairs of agriculture, commerce, war, and ſporting.
The maſters in the art of horſemanſhip lay it down, that a horſe to be good, and well made, muſt have three parts like thoſe of a woman; the breaſt, which is to be broad; the hips round, and the mane long: three of a lion; namely, countenance, intrepidity, and fire: three of a bullock; the eye, noſtril, and joint: three of a ſheep; the noſe, gentleneſs, and patience: three of a mule; ſtrength, conſtancy, and foot: three of a deer; head, leg, and hair ſhort: three of a fox; ear, tail, and trot: three of a ſerpent; memory, ſight, and turning: three of a hair, or cat, running, walking, and ſuppleneſs.
Horſes are diſtinguiſhed into ſeveral kinds, and differently denominated, with regard to their ſtrain or country. As, the Neapolitan, known by his hawk noſe; the Spaniſh genet, by his ſmall limbs; the Barb, by his fine head, and deep hoof; the Dutch, by the roughneſs of his legs; and the Engliſh, by his ſtrong knitting together.
Horſes are alſo diſtinguiſhed with regard to the uſes or offices they are reſerved for; as, the ſumpter-horſe, coach-horſe, war-horſe, hunting-horſe, running-horſe, ſaddle-horſe, pack-horſe, and road-horſe.
Horſes are likewiſe diſtinguiſhed with regard to their colours; as, a bay, which admits of divers ſhades or caſts; as, black-bay, brown-bay, dapple-bay; all which have conſtantly black manes and tails. Dun, and mouſe-dun, having frequently a black liſt along the back, are denominated flea-backed. The flea-bitten is white, ſpotted with red. Grey, dapple-grey, ſilver-grey, ſad, or powdered grey, black-grey, ſandy-grey, and iron-grey. Griſſel, or rount, a light fleſh colour intermixed with white. Peach-colour, or bloſſom colour. Pye-bald, which conſiſts of two colours, one of them white. Tyger colour, much the ſame with the branded grey, only the ſpots ſmaller. Roan, a bay, black, or ſorrel, intermixed with white hairs. Rubican, black or ſorrel, with white hairs ſcattered about his body. Sorrel, common ſorrel, red and cow-coloured ſorrel, bright or light-coloured ſorrel, burnt ſorrel, all chiefly diſtinguiſhed by the colour of their manes. Starling colour, reſembling a browniſh or blackiſh grey, only more freckled or intermixed with white. Wolf-colour, deer-colour, black, and white.
The colours are generally conſidered as ſymbolical of the nature and qualities of the beaſts, and accordingly their value is much influenced thereby. The dapple grey is prized for beauty; the brown bay for ſervice; the black, with ſilver hair for courage; the roan for countenance; the ſorrel, black without white, and iron grey, are reputed hot and fiery; the bright grey, flea-bitten, and black with white ſpots, are ſanguine; the white, dun, and pye-bald, phlegmatic, and heavy; the mouſe-dun, red bay, and blue grey, are dull; the peach colour rarely prove obedient to the ſpur; the ſorrel ſeldom fail of being good, eſpecially if their legs, tails, and manes, are black; and the ſame may be ſaid of the flea-bitten, at leaſt thoſe ſo marked in the fore parts, or over the whole body, for when marked behind it is an ill ſign. Indeed, it is hard laying down any univerſal rule: the white, which promiſe the leaſt, prove good, when black about the eyes and noſtrils; and there are excellent iron greys, tho' they are not reputed a good colour.
There is a conſiderable trade in moſt parts of Europe in

in horſes; but the countries affording the beſt, and in the greateſt numbers, are England, Spain, Flanders, Holland, particularly Frieſland, a part of Germany, Switzerland, Denmark, and Italy, eſpecially the kingdom of Naples.

Sometimes Barbs, Turkiſh, and Arabian horſes, are imported into Europe; but the difficulty of embarking the one, and the long voyage of the others, beſides the great duties paid for all, and the extortions thoſe are ſubject to who undertake theſe tranſports, make the obſtacles almoſt inſurmountable.

Beſides the commerce of horſes in different countries, a horſe affords either ſeveral uſeful things for manufactures, or for the implements of ſeveral arts and trades.

The principal of theſe are, the hair, the hoof, and the hide. The hair is uſed for making buttons, and haircloths, as alſo to mix with human hair in perukes: the hoof in ſeveral horn works; and the hide moſtly for ſaddle leather.

An oil is extracted from the horſe's neck and belly, which is uſed chiefly by enamellers. The buccaneers of St. Domingo uſe no other for burning, and even drive on a pretty conſiderable trade with it, at Tortuga, and the Antilles iſlands, where it yields but little ſmoke; making a more lively blaze than any other oil. See *Oil*.

Sea HORSE. An amphibious animal found in ſeveral parts of the frozen ocean; particularly towards Greenland.

Some authors, and perhaps not without reaſon, give it the name of *morſe*, or ſea-ox, either upon account of its bigneſs, or its two large teeth ſhaped like horns; or its nearer reſemblance to an ox, than to a horſe.

When theſe animals are in great numbers upon the ice, where they uſually go to ſleep, and repoſe themſelves in the ſun-ſhine, the ſeamen awake them by great outcries; yet keeping their boats at ſome diſtance, for fear the animals, on running into the ſea, might leap into, and overturn them; though it is when the ſea-horſe precipitates himſelf into the ſea, that the harponeer takes his time to caſt at him his harping iron, the ſtroke being then ſurer, becauſe the ſkin is more tender.

The teeth of this animal are uſed for a kind of ivory; but they are not ſo much in eſteem as formerly; becauſe the ſhips which reſort the whale fiſhery, frequently brought ſuch a great quantity of them, that the price is much lowered. Their chief uſe is in turners, and inlaid work; they are alſo of ſome uſe in medicine; and rings are alſo made of them, reputed a kind of counter-poiſon, and an antidote againſt malignant diſorders.

In 1606, ſome Engliſh were ſent to make diſcoveries in the north, where they landed in 74 degrees, 55 minutes, and met with ſuch numbers of ſea-horſes, that they killed 800 in leſs than ſix hours, filled three barrels with teeth, and twenty-one ton of oil.

In 1608 the Engliſh killed 900 in ſeven hours, from which they procured 31 ton of oil, and two barrels of teeth: they alſo took alive a male and a female; and the male was brought into England.

In 1610, 800 were killed in two days; and one man killed 40 the firſt day with a lance.

The Hamburghers alſo, being once unſucceſsful in the whale fiſhery, went in queſt of theſe animals, and killed ſuch numbers of them, that they made a greater profit by this voyage, than if they had had ſucceſs in the whale-fiſhery.

There are ſome parts of the ſea-horſe good for eating; among others the tongue, heart, and liver, if boiled, when newly killed. See Whale *Fiſhery*, *Walrus*, and *Hippopotamus*.

HORSE, is alſo a term uſed in various arts and manufactories, for ſomething that helps to ſuſtain their work from the ground, for the more commodious working at it.

The horſe uſed by tanners and ſkinners, called alſo the leg, is a piece of wood cut hollow and roundiſh, four or five feet long, and placed aſlope, upon which they pare their ſkins to get off the dirt, hair, and fleſh.

HORSE, is likewiſe uſed in carpentery for a piece of wood jointed acroſs two other perpendicular ones, to ſuſtain the boards, and planks, which make bridges over ſmall rivers; and on divers other occaſions.

HORSE, is alſo a rope in a ſhip, made faſt to one of the foremoſt ſhrouds; having a dead-man's eye at its end, through which the pennant of the ſprit-ſail ſheets is reeved.

HORSE, is alſo a cant name lately introduced into the office of lotteries, for the chance, or benefit of a ticket; or number for one or more days; upon condition, if it be drawn a prize within the time covenanted for, of returning to the ſeller an undrawn ticket. To determine the value of a horſe, the amount of the prizes in the lottery ſhould be multiplied by the time the horſe is hired for; and from the product ſhould be ſubſtracted the amount of the number of prizes by the value of an undrawn ticket into the time of the horſe: the remainder being divided by the number of tickets into the whole time of drawing, the quotient is the value of the horſe.

HORSE-*ſhoe*. A cover or defence for the ſole of a horſe's foot. Of theſe are ſeveral ſorts; as, the planch ſhoe, or pancake, which is ſaid to make a good foot, and a bad leg, as cauſing the foot to grow beyond the meaſure of the leg. It is choſe for a weak heel, and will laſt longer than any other ſhoe; being borrowed from the moil, which has weak heels, and fruſhes to keep the feet from ſtones and gravel.

Shoes with calkins, which, though intended to ſecure the horſe from ſliding, yet are reputed by many to do him more harm than good; as he cannot tread even upon the ground, whereby many times he wrenches his foot, or ſtrains ſome ſinew, eſpecially upon ſtony ways, where ſtones will not ſuffer the calkins to enter. Double calkins are leſs hurtful, as he treads evener with them than on the ſingle calkins; though they muſt not be over long, or ſharp-pointed, but rather ſhort and flat.

Shoes with rings were firſt invented to make the horſe lift his feet up high; though ſuch ſhoes are more painful than helpful, beſide the unhandſomeneſs of the ſight. This defect is moſt incident to horſes that have not ſound hoofs, for tender feet fear to touch the ground that is hard: but what is intended for remedy, proves a prejudice to the horſe, by adding high calkins, or rings to his ſhoes; for by that means his heels are made weaker than before.

Shoes with ſwelling welts or borders round about them, are uſed in Germany, which being higher than the heads of the nails, ſave them from wearing. Theſe are the beſt ſort of laſting ſhoes, if made of well tempered ſtuff, as they wear equally in all parts, and the horſe treads evenly upon them.

Others, who uſe to paſs mountains, and places where ſmiths are not ſo eaſily met with, carry ſhoes about them, with vices, whereby they faſten them to the horſe's hoof, without the help of the hammer or nail: yet this is more for ſhow than ſervice; for tho' ſuch ſhoes may ſave a horſe's feet from ſtones, yet it ſo pinches his hoof that he goes with pain, and, perhaps, injures them more than the ſtones. On ſuch emergent occaſions, therefore, it is better to make uſe of the joint-ſhoe, which is made of two pieces, with a flat rivet nail joining them together in the toe, ſo that it may be taken both wide or narrow, to ſerve any foot.

Panton, or pontable ſhoe, opens the heels, and helps hoof-binding; to which may be added the half panton ſhoe.

Patten-ſhoe, is uſed for a horſe that is burnt in the hip, ſtifle, or ſhoulder, as it cauſes him to bear upon that leg the grief is on, and conſequently makes him uſe it the better.

HORSE-*meaſure*, is a rod of box, to ſlide out of a cane, with a ſquare at the end, being divided into hands and inches, to meaſure the height of horſes. See *Hand*, and *Meaſure*.

HORSHAM-*ſtone*, is a kind of thin broad ſlate, of a greenish colour, chiefly brought from the town of Horſham in Suſſex, formerly much uſed, eſpecially in Suſſex, to hear or cover churches, chancels, and great houſes.

HORTOLAN, or *Ortolan*. A ſmall bird, exceeding fat and of an exquiſite taſte, found in the ſouthern, and ſeveral other provinces of France.

The hortolans of the iſland of Cyprus are a very conſiderable object of the Venetian trade, upwards of a thouſand barrels of them being one year with another exported

orted for Venice, which are cured and caſked much like rovence anchovies; that is, with a pickle of vinegar and alt.

SE, from the Saxon, *hoſa*, a ſtocking. See *Stocking*.

enwich HOSPITAL. See *Greenwich* Hoſpital.

ſt's HOSPITAL, popularly called the *Blue-coat Hoſpital*, the city of London, was anciently a monaſtery of rey-friars, founded by Raihere the firſt prior thereof, in e time of Henry I. diſſolved by Henry VIII. and con-erted by Edward VI. into an hoſpital for poor children, ho are ſupplied with all neceſſaries, and conveniencies, oathed, dieted, and taught.

ere are two mathematical ſchools, the firſt founded by ing Charles II. but they are now united; where youths e taught ſeveral parts of practical mathematics, particu-rly navigation, to fit them for apprentices to maſters of ips.

T-*bed*. A piece of earth, or ſoil, plentifully enriched ith manure, and defended from cold winds, to forward e growth of plants, and force vegetation, when the aſon, or the climate of itſelf is not warm enough.

y means of hot-beds ſkillfully managed, gardeners can nearly imitate the temperature of other climates, that eds of plants brought from any country between the opics, may be made to flouriſh even under the poles.

he uſual way of making hot-beds in England, is of rſe-litter and graſs mixed together, and left on a heap eight or ten days to putrify; when it is removed into ed, and covered with glaſſes or frames. Others chuſe take horſe-dung a month or ſix weeks old, and make feed-bed of it, about four feet high, and cover it up th ſtraw a foot thick, which is to be removed in three four days, and its place ſupplied either with cows dung, the laſt years ridges.

Holland they make uſe of hot beds made of ſand, hich are not ſo apt to raiſe unwholſome damps as thoſe horſe dung. The Dutch alſo make hot beds of tanners k, which, when once rightly prepared, will maintain equable heat for ſix months.

eſe ingredients are to be made up into balls, moiſtened th a little urine, or in any other form at pleaſure, and poſed to the air till thoroughly dry; whence they may built into the moſt orderly fire imaginable, affording lowing, ſolemn, and conſtant heat for ſeven or eight urs without ſtirring. This mixture is frequently uſed ſome parts to ſlacken the impetuous devouring of the , and keep coals from conſuming too faſt.

-*ſhoots*, or *Hoviliſes*. A ſort of factitious or compound l, made of a third part of any coal, pit, ſea, or rcoal, mixed with two thirds of loam. See *Fuel*.

TTENTOTS *Country*, is ſituated between 15 and 35 . of E. lon. and between 23 and 25 deg. of S. lat. ng the moſt ſouthern promontory of Africa, compre-ding the Cape of Good Hope, and the reſt of the tch ſettlements there. See *Caffraria*.

TS, or *Hutts*, pounces and round balls of leather, ed, or tied on the ſharp end of fighting cocks ſpurs, keep them from hurting one another in ſparring or athing themſelves.

PPON, or *Hoppo*, is a term among the Chineſe for a ndarin commiſſioner of the cuſtoms, eſtabliſhed for receipt of the duties of importation and exportation.

R-*Glaſs*. A popular kind of chronometer, or clepſy-, ſerving to meaſure the flux of time, by the deſcent running of ſand, out of one glaſs veſſel into another. e beſt hour-glaſſes are thoſe which, inſtead of ſand, e egg-ſhells well dried in the oven, then beaten fine ſifted.

e hour glaſſes are much uſed at ſea for reckoning; but e are alſo a ſort of hour-glaſſes which depend on the of water or other liquid, more properly called clep-a.

SAGE. A fee which a carrier, or other perſon, pays aying up goods in a houſe.

SE. A building of divers forms and materials, con-d with various apartments, ſuited to the uſe and enience of the perſons who inhabit therein: but it rticularly applied, in partnerſhips of trade, to that e where the buſineſs is carried on.

HOUSE *of Call*. A houſe where journeymen taylors, ſhoe-makers, and all other artificers meet, and may be heard of by the reſpective maſters.

Town-HOUSE, or *Hall*, is a place where the officers and magiſtrates of a town, or city, hold their meetings, for the due adminiſtration of their polity. See *Gild*.

HOUSE-*wife's cloth*, is a middle ſort of linen cloth, between fine and coarſe, for family uſes.

HOUSING, or *Houſe*. A cover laid over the ſaddle of a horſe, in order to ſave it from the weather and dirt.

Boot-HOUSING, is a piece of ſtuff faſtened to the hinder part of the ſaddle, that covers a horſe's croupe; either for the ſake of ornament, to hide the horſe's leanneſs, or to ſave the cloaths of the rider from being daubed and ſoiled by the ſweat of the horſe.

Shoe-HOUSING. A piece of cloth bordered with a fringe, oftentimes put round the ſaddle, to cover the croupe, and hang down to the lower part of the belly, to ſave the ſtockings of thoſe that ride without boots.

HOUSSET. A kind of Perſian ſilk, brought from Aleppo.

HOWKER, or *Hooker*. A veſſel much uſed by the Dutch, built ſomething like a pink, but rigged and maſted like a hoy.

Howkers carry from 50 to 200 tons; and with a ſmall number of hands will go to the Eaſt Indies: they tack ſoon and ſhort, will ſail well, lie near the wind, and live almoſt in any ſea.

HOY. A ſmall veſſel, or bark, whoſe yards are not acroſs, nor the ſails ſquare, like thoſe of ſhips; but the ſails like a mizzen, ſo that ſhe can fall nearer to the wind than a veſſel with croſs ſails can do.

HOYSE, or *Hoiſe*, the ſea word for haling up any thing into the ſhip, or getting up a yard: thus they ſay hoiſe up the yard, and hoiſe the water in.

HUCKABACK. A particular ſort of linen, wove on purpoſe for table-cloths and napkins, with little eyes in it, and ſhot back, that the greaſe and dirt may eaſily waſh out.

HUCKSTER. One that ſells proviſions, or ſmall wares, by retail.

HUDSON's *Bay* lies in the north part of Canada, in North America, in 80 deg. of W. lon. and between 51 deg. and 63 min. of N. lat. where the Engliſh Hudſon's bay company have ſeveral forts and ſettlements; from whence they carry on a traffic with the natives for ſkins and furs to a very great value.

This bay is about 300 leagues wide from ſouth to north; or rather above 530 reckoning from the cod of James bay, in lat. 51, to that of Repulſe bay in lat. 67-10. The breadth is unequal; being in ſome places only about 30 leagues, and in others 130. That part of the bay on the weſt ſide, in lat. 57, is called Button's bay; and the eaſtern part, from lat. 55-15 to 51, and the moſt ſouthern part, is called James bay.

On the eaſtern main, or coaſt of Labrador, are ſeveral iſlands: the continent is very extenſive, and inhabited by Indians, who are rude and uncivilized: but the Engliſh have ſeveral forts and ſettlements on the Weſt Main, or New Wales; particularly one at the mouth of Churchil river, in about lat. 59, and lon. 95. W. from London; another at York fort, at the mouth of Nelſon's river; one at new Severn, one at Albany river, one at Hayes's iſland, and one at Rupert's river. See *Britiſh* and *Indian* America.

The Engliſh HUDSON's *bay company* was formed in 1681; its charter, dated the 2d of May, in the 32d year of the reign of Charles II. being granted in favour of Prince Rupert and his aſſociates.

Its privilege is excluſive for all the trade that can be carried on in Hudſon's bay, and in all the ſeas, ſtreights, bays, rivers, lakes, and paſſages, in whatever latitude they may be, with the property of all the iſlands and lands therein, not poſſeſſed by any other nation; which lands and territories were to be called the lands of Rupert. A governor, ſub-governor, deputy, and ſeven directors, were appointed for its adminiſtration; and a common ſeal was granted to the company.

The capital fund of the company was 10,500 l. ſterling, and ſhares were worth 500 l.; but the continual wars be-

 tween

tween France and Great Britain, till the peace of Utrecht, ſunk the value of the ſhares.

The ſole trade of the country is that of furs; ſuch as the ſkins of beavers, martens, foxes, bears, rein-deer, and buffaloes; from which vaſt profits ariſe; and, beſides, there is a pretty good trade of blubber, in the forts belonging to the Engliſh company. See *Beaver*.

The natives receive, in exchange for their furs, arms, proviſions, ſome groceries, and hard-ware.

The commodities for the ſupport of the colony conſiſt generally in all the neceſſaries of life; the country affording nothing either for the nouriſhment or cloathing of the inhabitants of this rich, but miſerable colony.

This company was occaſioned by two French gentlemen, who travelled into the country of the Eſkimaux, and diſcovered what a valuable trade might be carried on there: they repreſented the matter to the French government, who, contrary to their political ſyſtem, rejected it; whereupon they communicated their obſervations to the Engliſh, who ſettled the trade. The French ſoon perceived their error, grew jealous of the Engliſh, and at different times diſpoſſeſſed them of moſt of their forts, which were reſtored by the treaty of Utrecht; and from that time the Engliſh company has been in a very flouriſhing condition.

French Canada company, otherwiſe called *The company of Caſtor*. Before the eſtabliſhment of companies for the Weſt Indies, the inhabitants and colonies of New France, diſcretionarily diſpoſed of the ſkins they treated for with the Indians. The company of 1628, which alone was empowered to carry on this trade, being incapable of fulfilling its engagements; the Dutch, for a conſiderable time, engroſſed the whole Canada trade; taking away with them the beſt part of the caſtors, and ſelling them to the French at an exceſſive rate.

When the Weſt company was eſtabliſhed in 1664, it carried on this trade as long as it ſubſiſted; it being from them that the hatters and furriers of France had their caſtors much cheaper than from the Dutch.

After the revoking of the letters-patent granted this company, when Lewis XIV. had united to his crown the dominions of the Weſt company, the adjudication thereof was made over to private farmers; and, by an arret of council of the 11th May 1675, it was ordained, that the commerce and traffic of caſtor ſhould be confined to one only perſon; that is, the adjudicator of the ſaid demeſnes, at 3 s. 4 d. ſterling *per* lb. weight, without diſtinction of qualities and ſpecies.

By another arret, of the 16th of May 1677, caſtors were reduced to 3 qualities, and 3 different prices; the fat and half-fat to 4 s. 6 d. ſterl. *per* lb. the dry and new, to 3 s. 4 d. ſterling; and the dry and moulted to 2 s. 6 d. ſterling.

Laſtly, in 1695, upon the remonſtrance of Pointeau, farmer-general of the five large farms, to whom the demeſnes of the Weſt and Canada were made over, the following regulation was made of the price and ſpecies of caſtor, by an arret of council of the 30th of May of the ſame year; fat, and half fat caſtor, at 4 s. 2 d. *per* lb. avoirdupoiſe weight: fat ſummer caſtor, and moulted, at 2 s. 2 d. and dry winter and Muſcovy caſtor, at 2 s. 6 d. ſterling.

French Acadia Company. The French had a flouriſhing company in Nova Scotia, or Acadia, before the peace of Utrecht; for, in 1683, this company was formed for carrying on the commerce of all ſorts of furs, eſpecially thoſe of caſtor: but it was deſtroyed by the treaty of Utrecht, which gave Nova Scotia to the crown of Great Britain.

This is a very profitable trade to the Europeans, who, in 1742, gave only a pound of gun-powder for 4 beavers, a fathom of tobacco for 7, a pound of ſhot for 1, an ell of coarſe cloth for 15, a blanket for 12, two fiſh-hooks, or 3 flints, for 1; a gun for 25, a piſtol for 10, a common hat with white lace for 7, an ax for 4, a check ſhirt for 7, a bill-hook for 1, and a gallon of brandy for 4; all which is ſaid to bring 2000 *per cent.* profit.

Theſe furs are more eſteemed than thoſe ſold at New York, and brought from the Canadean lakes; for the former are worth 5 or 6 s. a pound, and the latter only 3 s. 6 d. A good Indian hunter will kill 600 beavers in a ſeaſon: but they ſometimes burn off the fur, and roaſt the beavers like pigs; beſides, they uſe the ſkins for bedding and coverings; ſo that one man ſeldom brings above a pack, containing 100 ſkins, to market: but the French have got a ſettlement for trade about 100 miles above the Britiſh factory, where they ſell their goods cheaper than the Engliſh, and get all the choice ſkins both of beavers and martens.

It has been ſaid, that the Engliſh company avoid making any diſcoveries to the northward of Churchill, or extending their trade that way, for fear they ſhould diſcover a paſſage to the weſtern ocean of America, and by that means tempt the other Engliſh merchants to lay open their trade. Indeed, it is ſtrongly preſumed that ſuch a paſſage may be diſcovered; the parliament have encouraged the attempt; and it has been tried, but hitherto with little ſucceſs. See *North*-weſt paſſage.

It has been complained, that the company have only 120 men in all their factories; that they employ only two or three ſhips in the trade; and that the commerce of furs in this part of the world may ſoon be engroſſed by the French who are daily attempting it: therefore, the opening of this trade, and the better ſettlement of the bay, has been wiſhed for by ſeveral perſons; eſpecially as there is a probability of ſucceeding in the diſcovery of a north-weſt paſſage, which would open a new road to the South Sea and the Eaſt-Indies, greatly change the face of commerce, and give to the poſſeſſors of the country about Hudſon's bay many advantages over other nations.

HUDSON's *Streights*, in N. America, lie between 65 and 75 deg. of W. lon. and between 60 and 64 deg. of N. lat. being the paſſage out of the Atlantic ocean into Hudſon's bay.

HUDSON's *River*, riſes near the lake Champlain, in Canada in North America; and, running ſouth, paſſes by the Engliſh fort of Albany; from whence it continues its courſe the whole length of New York, falling into the ſea near the weſt-end of Long iſland, a little below the city of New York.

HUEGLY. A town in the Eaſt Indies, ſituated on an iſland in the moſt weſterly branch of the river Ganges, in the province of Bengal, in 87 deg. of E. lon. and 22 deg. of N. lat. about 100 miles up the mouth of the river. It is a large populous town, inhabited by Indians and Portugueſe, where the Engliſh and other Europeans lately had factories; but the Engliſh are now removed lower down the river to Fort William, or Calkutta.

HULKS, are large veſſels, having their gun-decks from 113 to 150 feet long, and from 31 to 40 feet broad, capable of carrying from 400 to 1000 tons; their chief uſe being for ſetting maſts into ſhips.

HULL, or *Kingſton upon Hull*, a port-town in the East Riding of Yorkſhire, ſituated in 6 min. of W. lon. and 53 deg. 45 min. of N. lat. on the river Hull, near its mouth of the Humber, 32 miles S. E. of York; being a place of good trade; with a yard for building men of war, and other veſſels.

HULL *of a ſhip*, is her main body, without either maſts, yards, ſails, or rigging.

To HULL, or *lie at the Hull*, is underſtood of a ſhip, when either in a dead calm, or in a ſtorm, ſhe cannot carry her ſails, but they are taken in to preſerve them; ſo that nothing but her maſts, yards, and riggings are abroad, and her helm tied down to the lee ſide of the ſhip; in which ſtate ſhe will lie eaſily under the ſea, if ſhe be a good ſailor, and make her way one point before the wind.

To ſtrike a HULL, is to lie cloſely, or obſcurely, in a ſtorm; or to tarry for ſome conſort, bearing up with the helm laſhed a-lee.

HULLOCK. A ſmall part of a ſhip's ſail, which is cut and left open in a great ſtorm; commonly uſed in the mizzen ſail, to keep the ſhip's head to the ſea.

HUMBER. A river formed by the Trent, the Ouſe, the Derwent, and ſeveral other ſtreams; which divides Yorkſhire from Lincolnſhire, and falls into the German ſea at Holderneſs.

HUN

NDRED. The number of ten times ten, or the ſquare f ten; whereby is uſually expreſſed the quantity or proortion of the profits made in theway of commerce; as, hey aſk two and a half *per cent.* or in the hundred, for emitting money to ſuch a city: the legal intereſt of oney is 3 *per cent.* or three pounds in the hundred.

NDRED, is alſo uſed as a meaſure to expreſs a certain uantity, or number of things: a hundred of ſalt at Amſterdam being fourteen tons.

Deal boards are ſix ſcore to the hundred, called the long undred: pales and laths are five ſcore to the hundred if ive feet long, and ſix ſcore if three feet long.

NDRED *Weight*, Engliſh avoirdupoiſe, is 112 lb. the uarter is 28 lb. the pound 16 ounces, and the ounce 16 rachms; 20 hundred weight, or 2240 lb. being a ton. This is the common weight of England for all groſs goods; eing the ſame as the quintal of France; but the hundred eight is leſs in ſugar, and more in tin. See *Quintal*, nd *Weight*.

NGAR, or *Hongre*, a gold coin ſtruck in Hungary; nd alſo a money of accompt, worth about a crown erling.

NGARY. A kingdom ſubject to the houſe of Auſtria, bounded by the Carpathian mountains, which divide from Poland, on the north; by Tranſilvania, and Wallachia towards the eaſt; by the river Drave, which ſearates it from Sclavonia, on the ſouth; and by Styria, Auſtria, and Moravia towards the weſt.: extending from 5 deg. 30 min. to the 49th deg. of N. lat. and from the 6th to the 22d deg. of E. lon. being a continued plain f 300 miles and upwards from Preſburg to Belgrade.

This country, tho' at ſome diſtance from the ſea, is well watered by lakes and rivers; the moſt conſiderable of which are the lakes Balaton, or Platſee, and the new Fidelſee. The principal rivers are the Danube, the Tiſcus, the Drave, the Raab, the Gran, the Teyſſe, and the Waag.

Hungary is divided into the upper, or larger, which lies N. E. of the Danube; and the lower, or leſſer, on the S. W. ſide of the Danube. The chief towns in Upper Hungary are Preſburg the capital, New Hauſel, Chremnitz, Newſol, Hern Grunt, Eſperics, Caſchaw, Agria, Peſt, Segedin, Temeſwaer, Zolnock, Montgatz, Unghuar, and Tokay. In Lower Hungary the chief towns are Buda, Gran, and Komarra.

No ſoil can be more fruitful than that of Hungary, where it is free from woods and mountains. Their bread corn is good, and yet ſo plentiful that it is ſix times cheaper than in England. Their grapes are large and luſcious, and their wines, particularly thoſe of Tokay, admired beyond any in Europe. Nor have they leſs plenty of cattle, than of corn and wine, ſending incredible numbers of oxen every year into Germany, beſides deer, game, wild fowl, and the beſt freſh water fiſh, all in abundance. The country is alſo famous, eſpecially about Chremnitz, for its gold mine, which is 170 fathoms deep, and the vein runs 10 miles in length. There have been found in this mine pieces of pure virgin gold, ſome of which are to be ſeen among the Emperor's curioſities at Vienna. Near the town of Chremnitz is alſo a mine of vitriol 80 fathoms deep. The richeſt of the ſilver mines is called the Trinity, and a third called Winſchat. The ore is rich, and moſt of it contains ſome gold, which is ſeparated by melting the ſilver, and afterwards grinding and diſſolving it in aqua fortis, made of the vitriol which comes from Chremnitz, wherein the gold ſubſides. Theſe mines alſo afford cryſtals, amethyſts, and vitriol naturally cryſtallized. At Hern Grunt there are copper mines, ſo rich that they yield from 20 to 60 lb. of copper in 100 lb. of ore. There are alſo ſeveral kinds of vitriol found in theſe mines, as white, green, blue, and a tranſparent red; likewiſe a green earth called berg grun, uſed in painting. Here are alſo two ſprings of vitriolic water, which in fourteen days turn iron into copper. At Eſperics, near the frontiers of Poland, there are ſalt mines, in one of which the veins are ſo large that they dig out pieces of a thouſand pound of pure ſalt.

The Hungarians have ſcarce any other manufacture than that of copper, and other hard wares; conſequently their foreign trade is not very conſiderable; the exportation of their wines and cattle ſeeming to be the beſt branches of it. They might indeed promote a very profitable navigation by the Danube on the coaſts of the Black ſea; but, as the Turks are maſters of the mouth of that river, nothing of that kind can be attempted at preſent: ſhould the houſe of Auſtria extend its conqueſts a little farther, by making itſelf maſter of Wallachia, and Bulgaria, the ſituation of Hungary would not lie much amiſs for carrying on a trade between Aſia, and the German ocean; but what is the greateſt diſcouragement to trade, is, that Hungary is looked upon only as a province, and the imperial miniſtry, far from conſulting the good of the country, only wreck and impoveriſh the people to increaſe the Auſtrian revenue, and fill their own pockets, while they ſtop the mouths of the moſt popular Hungarian lords with penſions or places.

Adjacent to Hungary are the provinces of Tranſylvania, Sclavonia, and Croatia; all of which are ſubject to the houſe of Auſtria.

Tranſylvania, part of the ancient Dacia, is bounded by the Carpathian mountains, which divide it from Poland towards the north; by Moldavia towards the eaſt, from which it is ſeparated by a long ridge of hills; by Wallachia, and part of Hungary, on the ſouth; and by Hungary towards the weſt; extending from 45 deg. odd min. to 48 deg. of N. lat. and from the 22d to the 25th deg. of E. lon. being about 120 miles in length from N. to S. and about as many from E. to W.

The country is inhabited by four ſeveral ſorts of people; the firſt ſtyle themſelves Saxons, and are poſſeſſed of the province called Sieben Bourgen, or ſeven towns, containing near two thirds of the country; the ſecond are the Siculi, who inhabit the N. E. near the Carpathian mountains; the third, the Hungarians, who reſide towards the confines of Hungary, and Walachia; and the fourth, the Cingars or Gypſies, who pitch their tents all over the country.

The principal rivers of Tranſylvania are the Alt, the Maroſch, and the Samos: the ſoil is exceeding fruitful, the wheat eſteemed the beſt in Europe, and ſo plentiful, that the peaſants eat no other bread; the wine is in great plenty, and inferior only to that of Hungary. In their meadows and paſtures they feed vaſt herds of large oxen, which increaſe ſo upon them, that a fat ox may be purchaſed for the value of 20 ſhillings in the country, but driven to market into Auſtria will yield 12 or 15 l. They have alſo a good breed of horſes, very much eſteemed by foreigners. Their woods afford plenty of bees and honey, with which they make a ſort of mead, which is highly valued, mixing the honey with ſeveral other pleaſant ingredients. Their foreſts abound with all kinds of veniſon. They have ſome mines of gold, and other metals, in their mountains, but not ſo many as in Hungary. Theſe are either at Sculatti, or Rimli Dominurditz, in the laſt of which there have been found large lumps of virgin gold. Their beſt ſilver mines are near Offera, and Radna; where are alſo ſeveral copper mines, in which they ſometimes meet with a vein of pure gold. There is plenty of ſteel at Cyck; of iron at Thoroſch and Huniad; and they frequently meet with brimſtone and iſinglaſs in their copper mines. They have alſo ſuch quantities of rock ſalt, in the diſtrict of Maromarus, that they export it to other countries.

The only manufacture, beſides thoſe of copper, iron, and ſteel, is that of cloth, of which they export no great quantities. What they ſend abroad is chiefly fat cattle, wine, mead, rock ſalt, copper, and iron wares. A country ſo well ſtocked with all manner of proviſions, and neceſſaries, was it under the government of its own Prince, muſt make a tolerable figure in the world; but being a diſtant province belonging to the Auſtrian family, notwithſtanding all theſe extraordinary advantages, Tranſylvania is ſcarce ever mentioned as part of Europe, and leſs is known of it than of the remoteſt countries in the Eaſt or Weſt Indies.

Sclavonia, including Ratzia, is bounded by the rivers Drave, and Danube, which ſeparate it from Hungary, towards the north and eaſt; by the river Save, which divides it from

from Servia and Bosnia, on the south; and by Stiria on the west; being computed to be upwards of 200 miles in length, and between 50 and 60 miles in breadth. The chief towns are Posega, Walpo, Walcowar, Peterwaradin, Salankamen, Carlowitz, Sirmium, Zagrab, and Gradiska. Sclavonia is very proper for tillage, and would produce plenty of corn and wine if they could enjoy a settled peace, and their fields were well cultivated. The navigable rivers which pass through Sclavonia, render it also exceeding proper to carry on a trade between the empire and Turky; but it is a misfortune, that, notwithstanding these frontier countries are blessed with all the advantages nature can bestow upon them, great part of them are often a perfect desart, and only considerable for the strength of their towns, and the number of their garrisons, which are always pernicious to trade, and husbandry; for none will attempt to establish manufactures, or improve their lands, where the soldiers probably will reap the fruit of their labours.

Croatia, part of the ancient Illyricum, is bounded by the river Save, which separates it from Sclavonia, towards the north; by Bosnia towards the east; by Morlachia towards the south; and by Carniola on the west; being about 80 miles in length, and as much in breadth. The chief towns are Carlstat, Siseg, Castanovitz, Dubiez, and Whitz.

The country of Croatia is naturally fruitful, producing plenty of corn, wine, and oil, where it is cultivated; but, being a frontier against the Turks, it has not yielded much more than would supply the necessities of the inhabitants of late years.

HUNGARY-*water*. A distilled water, denominated from a Queen of Hungary, for whose use it was first prepared; which is one of the distilled waters of the shops, and is directed, in the college dispensatory, to be made of rosemary flowers infused some days in rectified spirits of wine, and then distilled: its virtues being much the same as those of the simple it is drawn from.

HURDS. See *Hards*.

HURDLES, in husbandry, are frames made either of slit timber, or of hazzle rods platted together, to serve for gates in enclosures, or to make sheep-folds.

HURON *Lake*, is situated in Canada, in North America, between 84 and 89 deg. of W. lon. and between 43 and 46 deg. of N. lat. the country contiguous to this lake being called the country of the Hurons, where the French pretend to have some settlements, and to have entered into an alliance with the Indians, who have found out a way from this lake to their settlements on the river Missisippi, which falls into the gulph of Mexico.

HURRICANE. A furious storm of wind, arising from a contrariety and opposition of several winds; which is frequent in the East and West Indies; making terrible ravages in the islands thereof; blowing down houses, rooting up trees, and even whole woods. They begin in the north, some say in the west, but turn round; and, in a little time, veer through all the points of the compass.

It is customary for the French and English inhabitants in the Caribbee islands, to send every year about June to the native Caribbees of St. Domingo, and St. Vincent, to know whether there will be any hurricane that year: and, about ten or twelve days before any hurricanes come, they constantly send them word. The prognostics those people go by, are given us by Captain Langford, who, in 1697, engaged one of them, by civilities, to reveal them to him.

It is one of their principles, that all hurricanes come either on the day of the full, change, or quarter of the moon; each of which is discovered by a number of phænomena the preceding quarters, as, a turbulent sky, universal calm, the stars appearing red, noises in hollows or cavities of the earth, strong smell of the sea, and a settled westerly wind. The same author assures us, he received this benefit from the information, that whereas hurricanes are so dreadful, that all ships are afraid to put out to sea while they last, and chuse rather to perish at anchor in the roads; yet, with good management, a vessel may lie out at sea in these, as safely as other storms, by taking care the ports be well barred and calked, the top-masts and tops taken down, the yards a-port lashed, and the doors and windows secured. With these precautions, that experienced navigator preserved his vessel in two great hurricanes, and taught others how to do the same, by putting out from port, where they would inevitably have perished. And from the above prognostics he foretold several hurricanes at land. He adds, that all hurricanes begin from the north, and turn to the westward, till arriving at the south-east their force is spent. The cause he suggests to be, the sun's leaving the zenith of those places, and going back towards the south; and the repelling, or bounding back of the wind, occasioned by the calming of the general trade wind.

HUSBAND *of a ship*, or *the ship's husband*, is a person chose by the owners, where several persons are concerned in a ship, to take an account of every merchant's goods, &c. and pay the wharfage, lighterage, porterage, &c. without troubling the merchants; and these husbands are to collect every merchant's proportion, when they do the owners freight.

HUSBANDRY. The knowledge and art of improving lands, particularly arable and meadow, which is properly the employment of a farmer. It is chiefly this that distinguishes the happiness of one nation from another; for corn is more precious than gold or silver; it commands both, and the farmer of Great Britain receives in exchange for his labour both the produce of the mines of Peru and Brazil. The art of husbandry is well understood in England; but it may be greatly improved, if the farmers were not entirely averse to any new scheme or invention, however manifestly calculated for their advancement; rather choosing to follow the methods used by their ancestors, than endeavour to put any modern design into execution. See *Agriculture*, and *Corn*.

HUSE. A fish, of which the white glue, called ising-glass, is made.

HUSTINGS. A court of common pleas, held before the Lord Mayor and Aldermen of London, in Guildhall; which is the principal and highest of all the courts in the city.

Other cities and towns had also courts of the same nature, as Winchester, Lincoln, York, and Shippey.

HUSUM. A port-town of Slesvic, or S. Jutland, situated in 8 deg. 30 min. of E. lon. and 54 deg. 40 min. of N. lat. on the German sea, 35 miles E. of Slesvic, subject to the Duke of Holstein-Gottorp.

HYACINTH, or *Jacinth*, in natural history, a precious stone, thus called from its resemblance of the purple flower called hyacinth, or the violet.

Though, it must be observed, this holds of the ancient rather than the modern hyacinth, which is usually of a deep reddish yellow, approaching a flame colour, or the deepest amber: the ancient seeming to be a different stone, of a purple colour tending to blue.

There are four sorts of hyacinths; those intermixed with a vermillion colour; those of a saffron colour; those of an amber colour; and, lastly, those of a white, intermixed with a slight red. Hyacinths, again, are distinguished into oriental and occidental: the oriental come from Calicut and Cambaya; being equal in hardness to the oriental amethyst: the occidental are sold in Bohemia and Portugal, which are a degree softer. This stone graves or cuts fine, and would be more used for seals, but that the graving frequently costs more than the stone: the ancients used it for amulets and talismans; and bore it about their necks, or set in rings, supposing it to have the virtue of securing them from the plague.

The hyacinth used in medicine, and whereof the confection of hyacinth is made, is a different stone, of which there are three several sorts: the first, about the bigness and figure of a grain of salt, and pretty soft; the second ruddy, and shaped like the point of a diamond, found in several parts of Italy, Silesia, and Bohemia; the third, is white, intermixed with some other colours, being found in the same places as the red.

In strictness, only the first kind should be used in the confection of hyacinth; but the druggists and apothecaries frequently substitute the other.

Confecti

fection of HYACINTH, is a thin cordial electuary, com-
oſed of divers ſorts of precious ſtones, particularly of
hat whoſe denomination it bears, with certain earths,
eeds, roots, coral, hartſhorn, and other ingredients, well
ixed, and ground together.

DRAGOGUES. A ſpecies of purgative medicines,
uppoſed to be peculiarly fitted to diſcharge ſerous or
atry humours. The principal of which, in the com-
non opinion, are the juices of elder, of the root of iris,
f ſoldonnella, mechoacan, and jalap: in the general,
ll ſudorific, aperitive, and diuretic medicines, are hy-
ragogues.

DRARGYRUM. A name given to mercury, or quick-
lver. See *Mercury*.

DROGRAPHICAL *maps*, more uſually called ſea-
harts, are projections of ſome part of the ſea, in plano;
or the uſe of navigation; in which are laid down all the
humbs, or points of the compaſs, the meridians, and
arallels, with the coaſts, capes, iſlands, rocks, ſhoals,
nd ſhallows, in their proper places and proportions. See
Chart.

DROGRAPHY. That part of geography which con-
ders the ſea, principally as it is navigable; teaching how
o deſcribe and meaſure the ſea; giving an account of the
ides, counter-tides, currents, ſoundings, bays, and gulphs;
s alſo its rocks, ſhelves, ſands, ſhallows, promontories,
arbours, and diſtances from port to port, with all that is
emarkable, either out at ſea, or upon the coaſt: but ſome
f the beſt authors uſe the term in a more extenſive ſenſe,
o as to denote the ſame with navigation.

n this ſenſe, hydrography includes the doctrine of ſailing,
he art of making ſea charts, with the uſe thereof; and
very thing neceſſary to be known, in order to the
afeſt and moſt expeditious performance of a voyage:
that it is the moſt perfect of all the mathematical
ciences; there being ſcarce any thing wanting to its per-
ection, but the diſcovery of the longitude. See *Longi-
ude*.

The Jeſuits Ricciolus, Fournier, and De Chales, are the
rincipal writers on the ſubject of hydrography.

n France they have profeſſors of hydrography eſtabliſhed
t all their ſea-ports, who are to inſtruct the youth in-
ended for the ſea, in all the parts of navigation, ſailing,
nd ſteering, with the ſeveral branches of mathematics
eceſſary thereto; as, arithmetic, the doctrine of the
phere, and trigonometry: they are royal profeſſors, and
each gratis; having ſalaries allowed them by the King;
nd are alſo charged with the examination of pilots.

DROMEL. A drink made of honey diluted with
ſufficient quantity of water, and fermented by a long
nd gentle heat: under which claſs are mead, and me-
heglin. Hydromel is either ſimple, called alſo aqueous,
here honey and water are the only ingredients, which
ay be prepared at any time; or compound, when other
rugs are added to improve and exalt the flavour and vir-
ue. It is particularly called vinous hydromel, when it
quals the ſtrength of wine; which it is brought to do,
ot only by the great quantity of honey uſed in it; but
lſo by its long coction and inſolation: this is only made
the heat of ſummer, and of rain water, the beſt ho-
ey boiled together, and ſcummed from time to time,
ll they become of conſiſtence to ſuſtain an egg. This
one, the liquor is expoſed to the ſun for forty days, to
ſpoſe it to ferment; then adding ſome Spaniſh wine,
nd keeping it two or three months, it acquires a flavour,
carce inferior to malmſey: it fuddles readily; and the
runken fit holds longer than that produced by wines,
y reaſon of its more viſcid conſiſtence: however, hy-
romel is the common drink of the Poles and Ruſſians.

DROSTATICAL *ballance*. A kind of ballance con-
rived for the eaſy and exact finding the ſpecific gravity of
odies, both liquid and ſolid; which is an inſtrument of
onſiderable uſe in eſtimating the degree of purity of
odies of all kinds; the quality and richneſs of metals, oars,
nd minerals; the proportions in any mixture, adultera-
on, or the like; of all which the ſpecific weight is the
nly adequate judge.

The hydroſtatical ballance is founded on this theorem of
rchimedes; That a body heavier than water, weighs leſs
in water than in air, by the weight of as much water as is equal to it in bulk: whence, if the weight of the body in water is ſubtracted from the weight in air, the difference gives the weight of as much water as is equal in magnitude to the ſolid propoſed: having therefore two bodies, the one firm, the other fluid, together with the weight of each apart; to find their proportion, the greater muſt be divided by the leſſer; and the quotient compared to one that is unity, will be the antecedent of the proportion deſired.

HYDROSTATICS. The doctrine of gravitation in fluids; or that part of mechanics, which conſiders the weight or gravity of fluid bodies, particularly water, and of ſolid bodies immerged therein. To which belong whatever relates to the gravities and æquilibria of liquors; with the art of weighing bodies in water, in order to eſtimate their ſpecific gravities.

HYGROMETER. A machine, or inſtrument, whereby to meaſure the degrees of dryneſs, or moiſture of the air; of which there are ſeveral kinds; for whatever body either ſwells or ſhrinks by dryneſs or moiſture, is capable of being formed into a hygrometer: ſuch are woods of moſt kinds, particularly aſh, deal, and poplar; ſuch alſo is catgut, and the beard of a wild cat.

HYGROSCOPE, is uſed in the ſame ſenſe with hygrometer.

HYKES. A ſort of blankets, in great uſe among the natives of Barbary; being wove by the women, who make no uſe of a ſhuttle therein, but conduct every thread of the woof with their fingers. One of theſe hykes is uſually ſix yards long, and five or ſix broad; ſerving the Kabyle as well as Arab, both male and female, for a compleat dreſs in the day, and for a bed and covering in the night. It is a looſe and troubleſome kind of garment, being frequently diſconcerted, and falling on the ground; ſo that the wearer is every moment to be tucking it up, and folding it anew round the body.

HYPOCHONDRIACAL *Medicines*, are remedies proper in the hypochondriacal diſeaſe: ſuch are all thoſe which tend to purify the blood, humours, and ſpirits; as chervil, baum, agrimony, and the other cephalic and cardiac herbs: ſuch alſo are thoſe which purge melancholy or atribilis, and thoſe which diſpel wind and vapours; and all medicines good for diſorders of the nerves, particularly vervain, both male and female: but, above all, frequent general anodyne purges.

HYPOCISTIS, in medicine, a juice uſed in the compoſition of theriaca; being the juice of a ſhoot or excreſcence of the ſame name, ſprouting out from the foot of a kind of ciſtus-tree, called ledon, or ladaniſera, common enough in the hot countries. See *Ladanum*.

The ſhoot grows about a foot high, and one, two, or three inches thick; ſomething bigger at top than at bottom, ſoft, ſucculent, of a yelloviſh colour, and ſurrounded from ſpace to ſpace with a ſort of rings or browniſh knots.

When gathered, it is pounded in a mortar, and the juice expreſſed; after which it is evaporated on the fire, till it comes to the conſiſtence of a hard blackiſh extract, like Spaniſh liquorice; and it is then made up into little maſſes for carriage. It is of a tart aſtringent taſte, and uſed to ſtop fluxes of the belly, vomitings, and hæmorrhages; though antiently much more than at preſent. It is alſo an ingredient in Venice treacle, and ſome unguents. It is ſometimes uſed as a ſubſtitute to acacia; and, Dr. Quincy ſays, is the more powerful of the two. See *Acacia*.

HYPOLAPATHUM. A kind of rhubarb, of two ſorts; one wild, and growing without culture; and the other cultivated in gardens. See *Rhubarb*.

HYPOSTATICAL *Principles*, among the chemiſts, and particularly paracelſiſts, are the three chemical elements, ſalt, ſulphur, and mercury; called alſo the *tria prima*.

HYPOTHECA, in the civil law, an obligation whereby the effects of a debtor are made over to his creditor, to ſecure his debt. As the hypotheca is an engagement procured on purpoſe for the ſecurity of the creditor, various means have been made uſe of to ſecure to him the benefit of the convention. The uſe of the pawn or pledge

is the moſt antient; which is almoſt the ſame thing with the hypotheca; all the difference conſiſting in this, that the pledge is put into the creditor's hand; whereas in a ſimple hypotheca the thing remained in the poſſeſſion of the debtor. It was found more eaſy and commodious to engage an eſtate by a civil covenant, than by an actual delivery: accordingly, the expedient was firſt practiſed among the Greeks; and from them the Romans borrowed both the name and the thing; only the Greeks, the better to prevent frauds, uſed to affix ſome viſible mark on the thing, that the public might know it was hypothecate, or mortgaged by the proprietor: but the Romans, looking upon ſuch advertiſements as injurious to the debtor, forbad the uſe of them.

The Roman lawyers diſtinguiſhed four kinds of hypothecas; the conventional, which was with the will and conſent of both parties; the legal, which was appointed by law, and for that reaſon called tacit; the prætor's pledge, when by the flight, or non-appearing of the debtor, the creditor was put in poſſeſſion of his effects; and the judiciary, when the creditor was put in poſſeſſion by virtue of a ſentence from the court.

The conventional hypotheca is ſubdivided into general and ſpecial. The hypotheca is general, when all the debtor's effects, both preſent and future, are engaged to the creditor. It is ſpecial, when limited to one or more particular things.

For the tacit hypotheca, the civilians reckon no leſs than 26 different ſpecies thereof.

Among the moderns, to hypothecate a ſhip, is to pawn or pledge the ſame for neceſſaries; and into whoſe hands ſoever the ſhip comes, it is liable; ſo if goods be hypothecated, it will be the ſame.

By the common law of England, a maſter of a ſhip could not impawn the ſhip or goods; for no property, either general or ſpecial, nor ſuch power, is given unto him, by the conſtituting of him maſter: but, by the civil law, in caſes of neceſſity, he may do it, rather than the voyage ſhould be loſt; and the reaſon of the civil law, which allows the pawning of a ſhip for neceſſaries upon the high ſeas, ſeems to be plain; becauſe there may be an invincible occaſion and neceſſity at ſea, but not at land. And the common law hath held the law of Oleron reaſonable, that if a ſhip be at ſea, and takes leak, or otherwiſe wants victuals, or other neceſſaries, whereby ſhe is in danger, or the voyage may be defeated; in ſuch caſe the maſter may impawn, for money, or other things to relieve ſuch extremities, by employing the money to that end; for he is the perſon truſted with the ſhip and voyage, and therefore may be reaſonably thought to have that power implicitly, ſo as not to ſee the whole voyage loſt.

But a maſter, for any debt of his own, cannot pawn or hypothecate the ſhip; the ſame being no ways liable but in caſes of neceſſity, for relief and compleating of the voyage: nor can he ſell or diſpoſe of the ſhip, without a ſpecial authority or licence from the owners; and when he does hypothecate the veſſel or furniture, he ought to have the conſent and advice of his mariners; but when the ſhip is well engaged, ſhe is for ever obliged, and the owners are concluded thereby till redemption: though ſuch obligation of the veſſel muſt be in foreign parts, or places where the calamity attending the ſhip is univerſal; and the maſter may not in every caſe of neceſſity impawn the veſſel or furniture.

By the laws of Oleron, if a veſſel in her voyage happens to be wrecked or caſt away, and the mariners, by their great pains and care, recover ſome of the ruins and lading, the maſter, in that caſe, may pledge the ſame; the produce of which he may diſtribute among his diſtreſſed mariners, in order to the carrying them home to their own country: but if the mariners no way contributed to the ſalvage, then their reward is ſunk and loſt with the veſſel. And if there is any conſiderable part of the lading preſerved, the maſter ought not to diſmiſs his men, till he has advice from the laders or freighters, and know their pleaſure; for otherwiſe he may be made liable for damage.

Where merchants freight out a ſhip at their own charges and ſet her to ſea, and it happens afterwards that the veſſel enters into ſome harbour, and is there wind-bound and the maſter delayed in his voyage till he wants neceſſaries, the maſter is not only to write home for ſupplies, but he may impawn his ſhip or lading at his pleaſure; or at leaſt ſuch goods as he can moſt convenieniently raiſe money on, rather than to loſe his whole voyage on the account; and if he cannot pawn the lading, he may ſell as much thereof as is neceſſary, to anſwer his occaſions; in all which caſes his act obliges. However, orders and inſtructions are carefully to be followed.

A ſhip being in great diſtreſs upon the ſea, and wanting a cable, the maſter contracted with a perſon for a cable which he delivered to him, &c. in an action for the money, it was held, that, by the maritime law, every contract of the maſter implies an hypothecation; but at common law it is not ſo, unleſs it be ſo expreſsly agreed. In the caſe of Coſter and Lewſly there was an expreſs hypothecation, and that was in a place where hypothecations are allowed, for it was at Rotterdam; and a maſter may hypothecate either ſhip or goods, becauſe he is intruſted with both, and repreſents the traders as well as owners of the ſhip.

In the caſe of Johnſon againſt Shippen, a ſhip in diſtreſs on the high ſea, in her voyage, put into Boſton in New England, and there the maſter took up neceſſaries, and by bill of ſale hypothecated the ſhip; and now there being a ſuit in the admiralty againſt the ſhip and owners to compel repayment, on a motion for a prohibition, the court of king's bench held, that the maſter could not by his contract make the owners perſonally liable; but the ſuit againſt the ſhip was good, otherwiſe there can be no remedy by law: and to hypothecate ſhips is abſolutely neceſſary for the preſervation of navigation; for the maſter can have no credit abroad, but upon giving ſecurity by hypothecation; though, if a ſhip in harbour in England is pawned or hypothecated, the party is not to ſue for it in the admiralty. See *Wreck*.

HYSSOP. A medicinal herb of a detergent cleaning quality and chiefly uſed in diſeaſes of the breaſt and lungs, being a ſtanding ingredient in pectoral apozems. There is also a ſyrup, and a ſimple diſtilled water from it, uſed in ſhops.

HYSTERICS, or *Hyſteric Medicines*, are remedies proper to remove hyſteric affections; particularly diſorders of the womb; of which there are ſeveral ſpecies: ſome evacuate or cleanſe the womb, by expelling any impurities lodged therein; others tend to ſtop immoderate fluxes thereof; and others ſtrengthen the tone of the womb.

HYTH, or *Hithe*. A port, wharf, or little haven, to embark or land wares at, ſuch as Queen-hyth.

I.

JAL

JAAR. A river which riſes near Tongres, in the biſhopric of Liege, runs N. E. and falls into the Maes at Maeſtricht, in the Netherlands.

JACATA. The capital of the iſland of Java. See *Sunda* iſlands.

JACHOS. A name given to one of the animals which produces the occidental bezoar.

JACINTH. A ſort of precious ſtone. See *Hyacinth.*

JACK, in a ſhip, is that flag which is hoiſted up at the ſprit-ſail-top-maſt head.

JACOBUS. A gold coin, worth 25 s. ſo called from King James I. of England, in whoſe reign it was ſtruck. There are uſually diſtinguiſhed two kinds of Jacobus, the old and the new; the former valued at 25 s. weighing 6 dwt. 10 gr. the latter, called alſo Jacobus, valued at 23 s. in weight 5 dwt. 20 gr.

JADE. A greeniſh ſtone, bordering on olive colour, much eſteemed for its hardneſs, which exceeds that of porphyry, agat, or jaſper, and only to be cut with diamond duſt. It is in great eſteem among the Turks and Poles, who adorn all their fine works with it, and eſpecially the handles of their ſabres.

This ſtone applied to the reins, is ſaid to be a preſervative from the nephritic colic. Mr. Bernier ſays, that the caravans of Tibet carry it to Cachemire, and that the Galibis prize it as highly as a diamond. The natives of South America value it on account of the virtues they attribute to it in the epilepſy, ſtone, and gravel; and, in a treatiſe on it printed at Paris, it is called the *divine ſtone.*

JAFFA, or *Joppa.* A port-town of Paleſtine, in Aſiatic Turky, ſituated in 36 deg. of E. lon. and 32 deg. 20 min. of N. lat. 30 miles N. W. of Jeruſalem.

JAFISMKE, is a term among the Muſcovites, for the rix-dollars of Germany, upon account of the figures of St. Joachim being impreſſed on theſe ſorts of ſpecie, which began to be ſtruck in 1519 in the city of Jochimſtal in Bohemia.

JAFNAPATAN. A port-town of the iſland of Ceylon, in the Eaſt Indies, ſituated in 70 deg. of E. lon. and 10 deg. of N. lat. at the north-end of the iſland, 100 miles north of Candy, ſubject to the Dutch. See *Ceylon.*

JAGO, St. A city of the iſland of Cuba, ſituated in 76 deg. 30 deg. of W. lon. and 20 deg. of N. lat. 100 miles north of Jamaica, in America. See *Spaniſh* America.

JAGO, St. The chief of the Cape Verd iſlands, in Africa, ſituated in 24 deg. of W. lon. and 15 deg. of N. lat. ſubject to Portugal. See Cape *Verd* iſlands.

JAGO, St. Capital of the province of Chili, in South America, ſituated in 77 deg. of W. lon. and 34 deg. of S. lat. 2 leagues weſt of the mountains of Andes, and 18 eaſt of the Pacific ocean. See *Spaniſh* America.

JAGO *de la Vega*, or *Spaniſh town.* The capital of the iſland of Jamaica, in America, ſituated in 76 deg. 30 min. of E. lon. and 18 deg. 20 min. of N. lat. at the S. E. part of the iſland, about 7 miles N. W. of Port Paſſage, and the bay of Port Royal; where the governor reſides, and the general aſſembly or parliament, and courts of juſtice, are held.

JALAP. A root of a plant not much unlike bryony, and therefore by ſome called bryonia peruviana; as being brought chiefly from Peru and New Spain; much uſed as a cathartic.

The mechoacan and the jalap are reckoned of the ſame ſpecies: therefore, as this is ſometimes called mechoacana nigra, that goes as often by the name of jalapium album.

As jalap does not appear to have been known to the antients, it has its place in medicine only ſince thoſe parts

JAN

of America which produce it have been traded to by the Europeans. That which breaks blackeſt, moſt brittle, ſound, and ſhining withinſide, is the beſt; by reaſon the reſinous parts, which give it thoſe properties, are ſuppoſed to contain its medicinal virtues.

Some take great pains to extract its reſin, which is to be done with any ſpirituous menſtruum, and afterwards want correctors for it. The moſt common is ſalt of tartar, or loaf-ſugar. But if correcting conſiſts in ſeparating its parts, as it certainly does, the drawing it from the root, and making it into a reſin, ſhould ſeem to be unneceſſary.

Jalap is ſold at Amſterdam for about 2 s. 8 d. ſterling the pound; the tare is purſuant to the weight, 2 *per cent.* deduction being allowed for good weight, and 1 *per cent.* for prompt payment.

JALE. A liquid meaſure in France, containing about 4 Paris pints, and anſwering to the Engliſh gallon. See *Gallon.*

JALOIS. A corn meaſure uſed at Guiſe in France, and in its neighbourhood. The jalois of wheat weighs 80 lb. avoirdupoiſe weight, of maſlin corn 76, of rye 76 alſo, and of oats 50; a jalois making 5 buſhels.

JAMAICA. An iſland of America, ſituated in the Atlantic ocean, or North-ſea, between 76 and 79 degrees of W. lon. and between 17 and 18 deg. odd min. of N. lat. near 5000 miles S. W. of England. See *Britiſh America.*

JAMAICA *Pepper*, or *All-ſpice.* See *Indian* wood.

JAMAICA *Wood*, or *Braziletto wood.* See *Indian* wood, and *Brazil* wood.

JAMAVAS. An Indian taffety, with gold or ſilk flowers; the piece being from 5 to 8 ells in length, and 5-8ths, 5-6ths, or 7-8ths in breadth.

JAMBA. A city of the Hither India, in Aſia, capital of the province of Jamba, ſituated in 82 deg. of E. lon. and 31 deg. of N. lat. 220 miles N. E. of Delli.

JAMBETT. The ſecond kind of fur, which the Turks have from the ſkin of the ſable; being much inferior to the ſable properly ſo called, which is that of the chine; but much better than that of the peck, called by them ſamoul-bachar: they have alſo a fourth kind, which is the belly; but not of any repute in Conſtantinople.

JAMBY. A town on the eaſt-ſide of the iſland of Sumatra, in the Eaſt Indies, ſituated in 101 deg. of E. lon. and 1 deg. 30 min. of S. lat. 160 miles north of Bencoolen; where the Dutch have a fort, and import from thence pepper, and the beſt ſort of canes. See *Sunda* iſlands.

JAMES-*Town*, was once the capital of Virginia, in America, and of James county, ſituated in 76 deg. 30 min. of W. lon. and 37 deg. 30 min. of N. lat. in a peninſula on the north-ſide of James or Pouhatan river, 40 miles weſt of the mouth of it; in which there are not above 80 houſes, and thoſe chiefly places of entertainment for ſeafaring men; the ſeats of the government and of the courts of juſtice, being removed to Williamſburg, about 7 miles north of it.

JAMES-*Town*, is alſo a Portugueſe ſettlement, on the river Cazuma, near Cape Verd, in Africa.

JAMIS. A kind of cotton cloth, brought from the Levant by the way of Aleppo.

JANISARKI. A term at Conſtantinople, for the covered bazar, where druggiſts and linen drapers have their ſhops.

JANNEQUIN, or *Genequin.* A ſpun cotton, of indifferent quality, brought from the Levant by the way of Smyrna; a thouſand quintals whereof are ſold there one year with another; which coſt from 1 l. 10 s. to 2 l. 14 s. ſterling the quintal if fine, and from 1 l. 16 s. to 2 l. 13 s. ſterling if coarſe.

JAPAN,

JAPAN, *Japon*, or the *Japoneſe iſlands*, are ſituated between 130 and 144 deg. of E. lon. and between 30 and 40 deg. of N. lat.

The largeſt of theſe iſlands is called *Japan*, and ſometimes called *Niphon*, which gives its name to the reſt; being about 600 miles long, and from 100 to 150 broad; the chief town whereof is Jeddo; but there are alſo the cities of Mecao, Oſacca, Sacai, and Surunga.

The next iſland is *Sacock*, or *Xino*, parted by a very narrow channel from Japan, lying ſouth of it, and is about 500 miles in circumference, the capital city being Bongo; but the city of Nangaſaqui is moſt remarkable for trade.

The third iſland in magnitude is *Tonſa*, divided from Japan and Sacock by narrow channels; it is near 400 miles in circumference, and the capital city is Tonſa.

Beſides theſe, there are a great number of leſſer iſlands about them, ſubject to Japan; ſome of which are inhabited, and others deſert. The whole are ſubject to one ſovereign or emperor; who has 50 or 60 vaſſal princes, or kings, as they are called, under his dominion; and his reſidence is at Jeddo, which is ſituated on a bay in the Pacific ocean on the eaſt-ſide of the iſland of Japan; whoſe revenues are ſaid to be greater than thoſe of any other monarch in the world.

The empire of Japan furniſhes every thing that is neceſſary for life, and ſeveral other merchandiſes which may ſerve for a greater trade than it has with ſtrangers; ſuch as gold, ſilver, copper, tin, lead, all in abundance; cotton, hemp, goat's hair, ſilk, all ſorts of varniſhed works and utenſils, porcelain, and a great quantity of medicinal drugs.

The Japoneſe have almoſt all ſorts of cattle and poultry found in Europe; but their horſes are very ſmall. Rice is the principal grain the country affords, which is managed in the ſame manner as in China, and always grows in water till ripe. They have alſo very good red wheat, but not in ſo great quantities as rice. Their huſbandmen are little better than ſlaves; as they plow and manure the ground for the great lords, but have no properties of their own.

The commerce of the Chineſe to Japan, is almoſt as antient as the two empires. It was formerly reciprocal; as many Japoneſe being ſeen at China, as Chineſe at Japan: but at preſent only the Chineſe continue it; the Emperor of China having prohibited the Japoneſe the entrance of his territories, on pain of death; and conniving at, rather than permitting, the trade of his ſubjects to Japan; ſo that the Chineſe who reſort Japan always make falſe declarations at the cuſtomhouſes, that their cargo is not intended for theſe iſlands.

The other Indian nations which trade to Japan, are the Siameſe and Cambodians; but ſince the Dutch made themſelves maſters of this trade, theſe two nations, and even the Chineſe, have greatly ſuffered in this branch of commerce.

The Japoneſe trade to Cochinchina, Siam, Camboya, and the Philippine iſlands; their principal return being in ſilk.

The Portugueſe were the firſt Europeans who had a knowledge of the Japoneſe iſlands, either, as ſome ſay, upon the relation of the Chineſe and Siameſe; or, as others report, that they had been drove there by a tempeſt in 1534, or in 1542, in a voyage to China.

The Portugueſe firſt eſtabliſhed themſelves at Surunga, where the Engliſh were alſo allowed to trade; but four or five years after they removed into the iſland of Diſnia, near Nangaſaqui, a poſt at preſent poſſeſſed by the Dutch.

The Portugueſe of Macao were thoſe who traded chiefly to Japan, which was ſo much the more eaſy, and advantageous to them, as they could import there moſt ſorts of Chineſe merchandiſe, which ſell very well at Japan; as alſo that their whole trade, upon account of their proximity, could be completed in leſs than four months, being ſcarce more than 20 days at ſea. This commerce was very beneficial, and amounted, one year with another, to upwards of 200,000 l. ſterling.

A jealouſy of commerce, rather than the real intereſt of ſtate, cauſed the expulſion of the Portugueſe from Japan,

in 1636; and with them the Chriſtian religion, which Francis Xavier a jeſuit had began to preach there in 1549. But the Dutch have reaped an advantage from this excluſion; being permitted to trade there, on declaring they were no Chriſtians.

The Dutch were invited in 1605 by the Japoneſe themſelves, which notwithſtanding they deferred till 1609; and it was in the month of July this year that the firſt ſhip of the Dutch company appeared at Firando, where they had afterwards leave to eſtabliſh themſelves; from whence the deputies went to Jeddo for the ratification of their treaty of commerce; the principal article of which was, that every year there ſhould come there at leaſt a ſhip from Batavia, with European and Indian merchandiſe.

Thevenot gives the following deſcription of the iſland of Diſnia in the Dutch poſſeſſion.

This iſland, he ſays, is not more than two miles in circumference, and no Dutchman can ſtir out of it, or come into the town of Nangaſaqui, to which it is joined with a bridge, without hazarding his being cut to pieces by the guards appointed to watch their motions; nor are the Dutch ſo much as ſuffered to have a lighted candle in their houſes in the night-time. If the centinels hear the leaſt noiſe, they blow a horn, and the governor immediately ſends a party to learn the reaſon of it, which does not return till the occaſion is diſcovered, and then the authors are ſeverely threatened, if not puniſhed. In this ſlaviſh condition the Dutch remain eight months in the year.

At the ſeaſon the Dutch fleet is expected, the governor of Nangaſaqui places centinels on the hills, to give notice of the approach of any ſhips. When they appear, a boat is ſent off to every ſhip with an officer; and as ſoon as the ſhips come to an anchor, an expreſs is immediately diſpatched to court, before whoſe return the Dutch cannot diſpoſe of any thing.

In the mean time a particular of every ſhip's cargo is taken, with the name, age, ſtature, and office of every man on board, which is tranſlated and printed in the Japoneſe language. When the expreſs is returned, the ſhip's crew are permitted to come on ſhore, and all are muſtered before a Japoneſe commiſſioner, when every perſon is called over aloud, and made to give an account of his age, quality, and office, to ſee if it agrees with the particular given in by the Dutch. After this examination they are ſent on board again, and the ſails of the ſhip, with the guns, arms, and ammunition, are brought on ſhore, and the hatches ſealed down by a Japoneſe officer; nor can they be opened, whatever the ſhip's crew want, without a permiſſion from the governor, who always ſends a perſon to ſee what is taken out, and ſeals them down again: nor dare the Dutch ſailors light a candle, or make any noiſe on board their ſhips, any more than on ſhore. The ſhips are allowed no communication with one another; nor is any officer or ſailor ſuffered to go on ſhore, except the perſon appointed to carry the company's preſent to the King at Jeddo. His Majeſty having accepted the preſent, and prepared another for the company, the Dutch officer is conveyed to Nangaſaqui under as a ſtrong guard as he came. This journey uſually takes up about three months and a half.

While the Dutch ſhips lie in the road, none of the Japoneſe are allowed to go on board them to trade with the ſailors; and thoſe that carry proviſions on board are not ſuffered to take any money from them till the permiſſion to trade comes from court, when they deliver in their accounts and are paid; and then the Japoneſe permit ſix perſons from every veſſel to come on ſhore, to buy and ſell for themſelves, and ſtay four days, either in Diſnia, or in the city, as they ſee fit. When theſe ſix men return on board, ſix others are allowed to go on ſhore and traffic in like manner, and ſo on.

As for the merchandiſes belonging to the company, the Dutch make an invoice of them, with their price; which being tranſlated into the Japoneſe language, is affixed to the gate of the town leading to the Dutch factory, and then for ſix weeks the Dutch are allowed to trade.

The Japoneſe are ſo jealous of the Dutch, that they will

not ſuffer the ſame preſident of their factory to reſide longer than a year, unleſs he is nominated a ſecond time, and has been two years out of employment: neither will they admit the ornaments of any figures in the ſtern, or ſtern of their ſhips; imagining it an affront offered to the idols, which are the objects of their religion.

It might appear ſtrange, that the Dutch, who are ſo haughty to the Indians, ſhould be ſo ſubmiſſive to the Japoneſe; but the profits of this trade are ſo great, that they readily bear theſe kinds of affronts; there being at leaſt 150 *per cent.* profit in the merchandiſe brought there, and much more in thoſe exported.

The European, Indian, and Chineſe merchandiſe proper for the Japan trade, are Dutch ſcarlet, and other lively coloured cloths, camblets of moſt ſorts, gold and ſilk brocades, damaſks, black and coloured armoiſins, gauzes, and other ſilk ſtuffs; with raw ſilk, wool, and ſpun cotton, embroidery-work, carpets, linen, ſilk night-gowns ready made, glaſs and earthern bottles; lead, tin, ſteel, Japan, calambour, eagle, and Brazil wood, brown and white ſugar, Cambodia walnuts, alum, red leather, wax, a metal called calin, caſſia, verdegreaſe, tea, camphor, muſk, paper, pepper, ſpice, particularly cinnamon; elephants teeth, hemp, red wool, medicinal drugs, borax, quickſilver, Chineſe porcelains, toys of all ſorts from the ſame country and Nuremberg, red coral; laſtly, the hides of ſtags, and other animals.

This laſt trade of green hides is one of the moſt important which the Dutch carry on to Japan, as they import there, one year with another, 200,000 hides of ſtags, and 100,000 of oxen and cows, which they have the greater part from Siam and the iſland of Formoſa.

Almoſt all theſe merchandiſes are paid for in ſilver; by which great profits are made when brought to China and Bengal.

From Japan are exported all ſorts of painted, lacquered, and varniſhed wood, wherein the Japoneſe are as excellent artiſts as the Chineſe; fans, coloured porcelains, drugs for dying, and medicine; gold, ſilver, copper, and ſteel, pearls, furs, goat-ſkins, and even ſilk.

The Dutch company ſend three or four ſhips every year to Japan, mounted from 30 to 50 guns, but indifferently equipped. Theſe ſhips depart from Batavia about the 10th June, touch at the iſland of Poltimon for refreſhments, arrive at Japan in the beginning of the month of Auguſt, and return in October or November, touching again about the 20th of December at the iſland of Poltimon, where the ſhips ſeparate; one taking all the gold and ſilver aboard, and going directly to Batavia; and the others, only laden with merchandiſe, continuing their route to Malacca, where they arrive towards the end of the year; from whence, after having refreſhed themſelves for eight days, they ſet ſail for Bengal and Surat.

All foreign merchandiſes are brought to Meaco; which, in extent, magnificence, and the multitude of inhabitants, is not much inferior to Jeddo, the imperial city; but it exceeds it in trade, by the concourſe of merchants, and the number of fairs held there every year.

It is to theſe fairs that the principal merchandiſes are brought, which the Dutch, Chineſe, and Indians, import to Japan; and where are alſo brought, from two or three hundred leagues diſtance, the commodities and manufactures of the country.

Foreigners have no ſhare in this interior commerce; being even prohibited to advance into the country beyond Nanguaſaqui, unleſs they are ambaſſadors from kings, deputies from the Dutch company, or ſuch perſons as are invited to court.

When the fairs are opened, the merchandiſes are rated by the inſpectors, who deliver them to the higheſt bidder; which, however, is not done by public auctions, as in Europe; but, in order to prevent the jealouſy and animoſities of the bidders for the ſame merchandiſe, each merchant depoſites a billet in the hands of a clerk, wherein is written the price he can take; and this clerk delivers it to him who has offered moſt, throwing all the other billets into the fire.

Frauds in trade are puniſhed by the Japoneſe with extreme ſeverity; the rigour of the law extending not only to him who is detected in a fraudulent action, but alſo to his whole family, ſometimes even to 20 of his neareſt neighbours, who are all condemned to die, if the caſe is conſiderable; or to a fine, if leſs important.

To hinder the fraud of retail-dealers, and thoſe who ſell by the ell, there are public ells, or ichins, fixed to the corners of ſtreets, where every perſon may meaſure what he has purchaſed.

Neither gold nor ſilver are reckoned in wholeſale dealings; the money being paid and accepted without ſeeing or touching it, if the payments exceed about 75 l. ſterling. In theſe payments they make uſe of bags, ſealed with the ſeal of the mint-maſter, each containing about 75 l. ſterling; on their receipt they only examine if the ſeal is entire; and if any thing upon the opening is found deficient, it is charged to the account of the officer whoſe ſeal it bears; but it ſeldom happens that theſe bags are opened, ſome of them paſſing unopened through upwards of 2000 hands.

Large ſums are paid in gold among the Japoneſe, and in ſilver to ſtrangers; ſo that hardly any other metal but the latter is to be met with at Nanguaſaqui and in the Dutch factory, the foreign exportation of gold being prohibited; though ſometimes, but with difficulty, a permiſſion is obtained for this purpoſe.

Beſides theſe bags of about 75 l. ſterling, the Japoneſe alſo uſe cheſts of gold and ſilver of different forms, according to the metal; thoſe of gold containing to the value of about 1500 l. ſterling, and thoſe of ſilver about 260 l. ſterling.

The Japoneſe merchants keep their books with as much regularity as the Italians, uſing ſuch arithmetical rules as are common in Europe. See *Jeſſo*.

JAPAN *Earth*, or *Terra Japonica*. A medicinal ſubſtance, of a dark purple colour; very auſtere upon the palate, ſeeming to melt, like bole, in the mouth, and leaving ſomewhat of a ſweetiſh taſte behind it; being eſteemed for ſtopping fluxes of all kinds; but to what genus of bodies it belongs, is not well agreed on. See *Cachou*.

JAPANNING. The art of varniſhing, and drawing figures on wood, after the ſame manner as the workmen in Japan.

The manner of japanning on wood, ordinarily practiſed by Europeans, is this. They take a pint of ſpirit of wine well dephlegmated, and four ounces of gum lacca, which laſt muſt be broke from the ſticks and rubbiſh; then bruiſing it roughly in a mortar, they put it to ſteep in ſpring-water, tied up in a bag of coarſe linen, together with a little Caſtile ſope, for the ſpace of twelve hours. This done, they rub out all the tincture, put to it a little alum, and reſerve it apart: then add as much maſtic and white amber, diſtilled in a mattraſs, with ſpirit of wine, by a two days digeſtion, frequently ſtirring it, that it does not ſtick to the glaſs; after which they ſtrain and preſs it out into another veſſel. When this is done, they take the wood to be japanned, and cover it with a layer of this varniſh, till it is ſufficiently drenched with it; then taking ſome of the colour the figures are to be of, they incorporate it with ſeven times as much of the varniſh, and apply it with a pencil, going over each part three ſeveral times, each a quarter of an hour after another; and, two hours after this, they poliſh it with a peſtile, or Dutch reeds.

As to the colours uſed in this art, it is ſaid, that for a fair red they take Spaniſh vermilion, with a fourth part of Venice laque; black they make of ivory calcined between two crucibles; for blue they uſe ultramarine, and only twice as much varniſh as colour. The reſt are applied as above directed, except the green, which is difficult to make fair and lively, and therefore ſeldom uſed.

Night JAPANNING, is performed by applying three or four layers with the colours firſt, then two of pure varniſh uncoloured, made according to the former proceſs. Before it is dry, they ſift ſome venturines, or gold wire reduced to powder, over it, and then cover it with as many layers of pure varniſh as render it like poliſhed glaſs; and laſtly, they rub it over with tripoli, oil of olive, or hatters felt. See *Varniſh*.

JAPARA. A port-town of the iſland of Java, in the Eaſt

Indies, ſituated in 110 deg. of E. lon. and 6 deg. of S. lat. 250 miles eaſt of Batavia; which was the capital of a conſiderable kingdom, till the Dutch made themſelves maſters of it: but it is now a Dutch colony, as are alſo the reſt of the towns on the north coaſt of Java. See *Sunda* iſlands.

JAR, is uſed for a ſort of meaſure, or fixed quantity of ſeveral things; being an earthen pot, or pitcher, with a big hollow. The jar of oil is from 18 to 26 gallons; and the jar of green ginger is about 100 lb. weight.

JARGONS. Small ſtones of the bigneſs of a pin's head, and of a bright red colour, which ſometimes are ſold for real hyacinths; being found in abundance at Puy in Auvergne, in France. See *Hyacinth*.

JASPER. A ſort of precious ſtone, chiefly opake, but ſometimes tranſparent in certain parts, not much different from the agate, excepting that it is more ſoft, and does not take ſo good a poliſh. See *Agate*.

In ſome of theſe nature has amuſed herſelf, in repreſenting rivers, trees, animals, and landſkips, as if they were painted. The florid jaſper, found in the Pyreneans, is uſually ſtained with various colours; though there are ſome which have but one colour, as red or green; but theſe are the leaſt valuable; the moſt beautiful ſort is that bordering upon the colour of lacca, or purple; the next to that, the carnation: but what is now moſt valued, is the green, ſpotted with red.

JASQUES. A port-town of Perſia, in the province of Kherman, ſituated in 58 deg. of E. lon. and 25 deg. of N. lat. on the gulph of Ormus, 160 miles S. E. of Gombron. See *Perſia*.

JAVA. One of the Sunda iſlands, in the Eaſt Indies, ſituated between 102 and 113 deg. of E. lon. and between 5 and 8 deg. of S. lat. See *Sunda* iſlands.

ICELAND. An iſland ſubject to Denmark, ſituated between 10 and 26 deg. of W. lon. and between 64 and 67 deg. of N. lat. See *Daniſh iſlands*, under *Denmark*.

ICHIN. The ell, or long meaſure, uſed in Japan, being the ſame throughout all the iſlands which compoſe this vaſt empire; where not only every merchant has ichins in his ſhop, whereby he meaſures and ſells his merchandiſe, but public ichins are fixed to almoſt every corner of the ſtreets, where the purchaſer may go and try his meaſure.

This kind of ell is about 6 feet in length; being divided into 6 parts, and each of theſe diviſions into 10 others; ſo that the entire ichin has 60 diviſions.

IDIS. A kind of glaſs pearl, very flat towards the extremities; being yellow, with four black ſtripes, and uſed by Europeans for the Guinea trade.

IDRIA. A town of Germany, in the circle of Auſtria, and duchy of Carniola, ſituated in 14 deg. of E. lon. and 46 deg. 25 min. of N. lat. 16 miles N. E. of Goritz, conſiderable for its mines of quickſilver.

JEAN *de Luz*. A port-town of France, in the province of Gaſcony, ſituated in 1 deg. 32 min. of W. lon. and 43 deg. 30 min. of N. lat. near the frontiers of Spain, 8 miles E. of Fonterabia, and 12 S. W. of Bayonne.

JEAT. See *Jet*.

JEDDO. The capital city of the iſlands of Japan, ſituated in 140 deg. of E. lon. and 36 deg. of N. lat. See *Japan*.

JEER *Capſtan*. See *Capſtan*.

JEKYL. A ſmall iſland in the mouth of the river Alatamaha in Georgia, a Britiſh colony in America, fortified by Lieutenant-General Oglethorpe.

JENDE. A great lake of Sweden, in the province of Finland, and territory of Tavaſtia.

JENISA. A great river of Ruſſia, running from S. to N. through the province of Siberia, parallel to the Oby, and falling into the frozen ocean E. of that river, in 72 deg. of E. lon. and 70 deg. of N. lat.

JERQUE, in the Britiſh cuſtoms, is when a ſhip is untouched, and the ſurveyor, or other officer, goes on board, to ſearch if there are any unentered goods concealed, which is called jerquing the ſhip.

JERQUER, is the ſurveyor, or officer, who ſearches or jerques the ſhip; whoſe buſineſs it is to check the books kept by the land-waiters and tideſmen; as alſo to compare them with the maſter's report of his cargo, to ſee whether it is juſt, and fit to intitle him to the allowance of portage. See *Cuſtoms*.

JERSEY. An iſland in the Engliſh channel, ſituated in 2 deg. 30 min. of W. lon. and 49 deg. 20 min. of N. lat. 15 miles W. of the coaſt of Normandy, in France, and 80 miles S. of Portland, in Dorſetſhire. See *Britiſh* iſlands.

JERUN-*Crochen*. A coin ſtruck in the ſtates of the Grand Signior, and current for half a ducat. See *Crochen*.

JESSO, called alſo *Jeco*, *Jedio*, and *Yeſſo*, is ſaid to make but one continent with ſome of the Japoneſe iſlands, lying in 140 deg. of E. lon. and 40 deg. of N. lat. though ſome navigators and geographers think it ſeparated by an arm of the ſea, which the Japoneſe themſelves affirm. It is conjectured to extend N. E. to the American continent.

Its inhabitants and commerce were unknown to Europeans till 1643; when the country was diſcovered by a Dutch ſhip called *Caſtricam*.

The country is very mountainous, and the inhabitants are moſtly wild and rude, both in perſon and manners; being entirely without religion, and almoſt all covered with long hairs, like bears, eſpecially the mountaineers; but ſome of them who inhabit towns are more civilized; and they are all equally governed by a prince, who acknowledges the Emperor of Japan for ſovereign, and who pays him every year a kind of tribute; which he preſents himſelf in perſon; being uſually ſome ſilver and fine feathers. See *Japan*.

They have a pretty good trade with the Japoneſe; which before the Dutch appeared among them, were the only people they had any knowledge of.

The merchandiſes they exchange with the Japoneſe are whale blubber, the oil of ſeveral fat fiſh, whales tongues ſmoked, furs, ſeveral ſorts of birds feathers, and hemp which they ſpin by faſtening it between their teeth, and twiſting it with the palm of their hands.

The Japoneſe merchants viſit the inhabitants of Jeſſo once every year; bringing them rice, ſugar, Japonese ſilk robes, others of a blue ſtuff called kangan, tobacco, tobacco-pipes, and tobacco-boxes, ſmall cups, varniſhed pots, and diſhes, knives, hatchets, ſilver ear pendants, copper-rings for their ears, and ſeveral other trinkets.

This people, notwithſtanding they are ſo much uncivilized, are very ſubtile and intelligent, eſpecially in commerce, wherein they ſhew themſelves very faithful and honeſt. In general they greatly eſteem iron; and particularly thoſe who live in the 40th degree, prefer it in their trade with ſtrangers to any other commodity.

JESUITS *Bark*. See *Quinquina*.

JET, called alſo *Black Amber*. A light, ſmooth, pitchy fiſſile ſtone, extremely black, formed of a bituminous juice in the earth, in the manner of coal.

Jet works like amber, and has moſt of its qualities. It abounds in Dauphiny in France; but the beſt in the world is ſaid to be produced in Yorkſhire; which readily catches fire, flaſhes, and yields a bituminous ſmell.

There is alſo a factitious jet, made of glaſs, in imitation of the mineral jet; being drawn out in long hollow threads, which are cut and faſhioned at pleaſure. It is much uſed in embroideries, as alſo in the trimming of mourning, and may be made of any colour, though uſually black and white, and of late denominated beads. See *Beads*, and *Bugles*.

JETSON, or *Jetſom*, is where a ſhip is in danger of ſinking, and the goods are thrown into the ſea, for lightening her; but notwithſtanding the ſhip periſhes. See *Flotſon* and *Wreck*.

JEWEL, is a term in general for ſuch valuable ornaments as are made of gold, ſilver, and precious ſtones, to ſerve for dreſs or curioſity; being ſold by goldſmiths or jewellers; but it is more particularly applied to precious ſtones and pearls. See *Precious ſtones*.

JEWELLER, is a perſon who deals in precious ſtones, or ſhould be a judge of their beauties, common blemiſhes, and their intrinſic value. He muſt not only know real ſtones, but fictitious gems, and the manner of preparing them; his buſineſs being to ſet them in rings, necklaces, pendants, ear-rings, buckles of all ſorts, watches, picture-

e-pictures, and all toys as are adorned with precious nes. He ought to be an elegant deſigner, and have a ick invention for new patterns, not only to range the nes in ſuch manner as to give luſtre to one another, t to create trade; for a new faſhion takes as much th the ladies in jewels as any thing elſe.

EL-*Office*, or *Jewel houſe*. An office in London, hich takes care of faſhioning and weighing the King's te, and delivering it out by warrants from the Lord amberlain. When his Majeſty makes any preſent of te, they have the charge of providing it, with ſome her things leſs material.

he principal officers are, the maſter of the jewel-office, hoſe ſalary is 450 l. *per annum*; a yeoman, a groom, d a clerk, all in the King's gift.

here are alſo in this office, in the gift of the Lord hamberlain, the poet-laureat, at 100 l. *per annum* ſary; the King's hiſtoriographer, at 200 l. *per annum*; e hiſtory-painter, and principal painter, at 200 l. *per nnum*; the painter in enamel, and the ſurveyor and eeper of the pictures, at 200 l. *per annum* each.

he goldſmith and jewellers are employed by the maſter, d are uſually in his gift.

WS. A proper name for a people who formerly inhaited Paleſtine, and are now diſperſed over the whole orld; being thoſe people that were formerly called Hebrews or Iſraelites; who took this name at their return om the captivity of Babylon, and have retained it ever ince; it coming from Judah, which was the only tribe hat made any conſiderable figure at that time among hem.

The Jews have the reputation of being much ſkilled in rade; yet their probity and fidelity therein is as greatly uſpected: however, it is certain the nations prejudiced moſt againſt them, not only admit their living among hem, but ſome of them even ſeem pleaſed in learning rom the Jews the ſecrets of trade, and dividing with hem the profits.

The Jews are ſo diſſeminated through all the trading parts of the world, that they are become the inſtruments by which the moſt diſtant nations converſe with one another, and by which mankind are knit together in a general correſpondence. They are like the pegs and nails in a great building; which, though they are but of little value in themſelves, are abſolutely neceſſary to keep the whole frame together.

Theſe people may be conſidered in three views: 1ſt, With regard to their number; 2dly, Their diſperſion; and, 3dly, Their adherence to their religion: and afterwards it may be neceſſary to ſhew, firſt, by natural reaſons; and ſecondly, what providential reaſons, may be aſſigned for theſe three remarkable particulars.

The Jews are looked upon by many to be as numerous at preſent as they were formerly in the land of Canaan. Th s is wonderful, conſidering the dreadful ſlaughter made of them under ſome of the Roman Emperors, which hiſtorians deſcribe by the death of many hundred thouſands in a war, and the innumerable maſſacres and perſecutions they have undergone in Turky, as well as in all Chriſtian nations of the world. The rabbins, to expreſs the havock which has been ſometimes made of them, tell us, after their uſual manner of hyperbole, that there were ſuch torrents of holy blood ſhed, as carried rocks of 100 yards circumference above three miles into the ſea.

Their diſperſion is the ſecond remarkable particular in this people. They ſwarm over all the eaſt, and are ſettled in the remoteſt parts of China; they are ſpread through moſt of the nations of Europe and Africa, and many families of them are eſtabliſhed in the Weſt Indies; not to mention whole nations bordering on Preſter-John's country, and ſome diſcovered in the inner parts of America, if we may give any credit to their own writers.

Their firm adherence to their religion is no leſs remarkable than their numbers and diſperſion, eſpecially conſidering it as perſecuted or contemned over the face of the whole earth. This is likewiſe the more remarkable, if we conſider the frequent apoſtaſies of theſe people, when they lived under their kings in the land of promiſe, and within ſight of their temple.

If, in the next place, we examine what may be the natural reaſons for theſe three particulars which we find in the Jews, and which are not to be found in any other religion or people; in the firſt place, their numbers can be attributed to nothing but their conſtant employment, their abſtinence, their exemption from wars, and, above all, their frequent marriages; for they look upon celibacy as an accurſed ſtate, and are generally married before twenty, as hoping the Meſſiah may deſcend from them.

The diſperſion of the Jews into all the nations of the earth, is the ſecond particular of that people, though not ſo hard to be accounted for. They were always in rebellions and tumults while they had the temple and holy city in view; for which reaſon they have often been driven out of their own habitations in the land of promiſe. They have as often been baniſhed out of moſt other places where they have ſettled; which muſt very much diſperſe and ſcatter a people, and oblige them to ſeek a livelihood where they can find it. Beſides, the whole people is now a race of ſuch merchants as are wanderers by profeſſion, and, at the ſame time, are in moſt, if not in all, places incapable of either lands or offices, that might engage them to make any part of the world their home.

This diſperſion would probably have loſt their religion, had it not been ſecured by the ſtrength of its conſtitution; for they are to live all in a body, and generally within the ſame incloſure; to marry among themſelves, and to eat no meats that are not killed, or prepared their own way. This ſhuts them out from all table-converſation, and the moſt agreeable intercourſes of life; and by conſequence excludes them from the moſt probable means of converſion.

If, in the laſt place, we conſider what providential reaſon may be aſſigned for theſe three particulars, we ſhall find that their numbers, diſperſion, and adherence to their religion, have furniſhed every age, and every nation in the world, with the ſtrongeſt arguments for the Chriſtian faith; not only as theſe very particulars are foretold of them, but as they themſelves are the depoſitaries of theſe, and of all the other propheſies, which tend to their own confuſion. Their number furniſhes us with a ſufficient cloud of witneſſes, that atteſt the truth of the old Bible. Their diſperſion ſpreads theſe witneſſes through all parts of the world. The adherence to their religion makes their teſtimony unqueſtionable: Had the whole body of Jews been converted to Chriſtianity, we ſhould certainly have thought all the prophecies of the Old Teſtament, that relate to the coming and hiſtory of our bleſſed Saviour, forged by Chriſtians, and have looked upon them with the propheſies of the ſibyls, made many years after the events they pretended to foretel.

The two principal eſtabliſhments which the Jews have in the ſtates of Chriſtian princes, are at Amſterdam and Leghorn.

At Amſterdam they are divided into two different tribes; the one of Portugueſe Jews, about 5000 in number; and the other of German Jews, who are not leſs than 1200. Both are rich, and interfere in all kinds of commerce, particularly in that of the bank; but the Portugueſe Jews are in greater credit, both for exchange and mercantile affairs, at home and abroad.

Among other trades, the Portugueſe Jews of Amſterdam have almoſt all that of Barbary in their hands; there being ſcarce any of them but what have a ſhare in the three or four Dutch ſhips which go there every year; all this commerce being carried on between them and the Jews of that coaſt, particularly thoſe of Sallee, Saffia, and St. Croix, whoſe principal attention is to purchaſe the prizes of the corſairs taken from Chriſtians, to ſell them afterwards to the Jews of Amſterdam, and perhaps ſometimes to the merchants whoſe property theſe goods originally were, by diſguiſing them in an artful manner, either mixing others with them, or packing them up otherwiſe, and with different marks.

The Jews of Leghorn are greatly favoured by the Grand Duke; having not only a ſuperb ſynagogue for the exerciſes of their religion; but Duke Ferdinand, who was

the author of their eſtabliſhment, alſo granted them a peculiar civil and criminal juriſdiction, by which they have in themſelves the power of creating magiſtrates, and from whom there is no appeal but to the Grand Duke himſelf.

The Jews of Leghorn are computed to amount to upwards of 10,000; and they have ſo great a ſhare in its commerce, that their Sabbath is ſomewhat reſpected; no perſon appearing upon change of a Saturday, or tranſacting any buſineſs.

If the trade of the merchants of Leghorn to the Levant is computed at 100,000 crowns yearly, there are 98,000 for the Jews, and 2000 only to be divided between the French, Italians, Dutch, Engliſh, and Armenians, eſtabliſhed there.

In England, formerly the Jews, and all their goods, belonged to the chief lord where they lived; and he had ſuch abſolute property in them, that he might ſell them; for they had not liberty to remove to another lord, without leave. Mat. Paris tell us, that Henry III. ſold the Jews to Earl Richard, his brother, for a term of years, that *quos Rex excoriaverat, comes eviſceraret.*

They were diſtinguiſhed from the Chriſtians both living and dying; for they had proper judges and courts wherein their cauſes were tried, and they wore a badge on their breaſt over their cloaths in ſhape of a table, and were fined if they ſtirred abroad without ſuch badges: they were never buried in the country, but brought up to London, and interred without the walls.

It is to be obſerved, that the Jews have been expelled Spain, Portugal, and Ruſſia: they were alſo expelled England by King Edward I. and were not permitted to return till the uſurpation of Cromwell; and they were likewiſe baniſhed in France in 1182 and 1321; though they were afterwards permitted to return.

They have alſo lately attempted to be naturalized in Great Britain; but their attempt was fruſtrated. See *Naturalization.*

JEWS *Harp*, or *Trump*. A mock ſort of muſical inſtrument, made of braſs or iron, for children to play with; of which great quantities are made at Birmingham,

JEWS *Incenſe*. See *Frankincenſe.*

IF. One of the French iſlands to the ſouth of Marſeilles, on the coaſt of Provence. See *French* iſlands.

ILLENOIS *Lake* lies between 88 and 93 deg. of W. lon. and between 41 and 46 deg. of N. lat. ſituated in Canada in North America, having a communication with the Huron lake on the N. E. by a narrow channel; the country contiguous to this lake being called the country of the Illenois, now in alliance with the French.

ILMEN. A lake in the province of Great Novogrod, in Ruſſia, in 34 deg. of E. lon. and 58 deg. of N. lat. which has a communication with the lake Ladoga, by the river Woleoff.

IMAGERY. All ſorts of works that repreſent the ſhapes of men, or other creatures, whether in tapeſtry, painting, or embroidery.

IMBARGO. See *Embargo.*

IMMA. A kind of bole, or red earth, uſed in Perſia by dyers and painters; the beſt kind being found in the mountain of Chiampa, near Bander Congo.

IMMUNITY. A privilege, or exemption, from ſome office, duty, or impoſition; but the word is more particularly underſtood of the liberties granted to cities and communities. See *Franchiſe.*

IMPASTATION. The mixture of ſeveral materials of different colours, and conſiſtencies, baked or bound together with ſome cement, and hardened either by the air or fire; it being ſometimes a ſort of maſon's work, made of ſtucco, or ſtone ground ſmall, and wrought up again in manner of a paſte.

IMPERATORUM, or *Imperatorii*. A medicinal root, ſuppoſed to have the virtues of angelica; being of two ſorts, the one found in mountains, and the other in gardens. The former is preferable to the latter, eſpecially that of the Auvergne mountains in France; which ſhould be choſen with full roots, new, hard to break, of a brown exterior colour, green within, and of a briſk ſmell, and aromatic taſte.

IMPERIAL. A city and port-town of Chili, in S. America, ſituated in 80 deg. of W. lon. and 39 deg. S. lat. at the confluence of two rivers, 9 miles e... the Pacific ocean, and 70 miles north of Baldiviz.

IMPERIAL. A gold coin, formerly ſtruck in Fl... weighing 4 dwt. 4 gr. and of the fineneſs of 23 ... 3-4ths.

IMPERIAL *Serge*, or *Serge Imperial*, is a term among ... French for a kind of ſerge, 3-4ths of an ell broad, ... meaſure, and manufactured particularly in the L... Languedoc: they are alſo called ſempiternals and ... tuanas; which are chiefly deſigned for Italy and Spain.

IMPLEMENTS, is a term uſed for all things neceſſ... for a trade, or houſhold-furniture.

IMPORTATION. The bringing home goods from ... yond ſeas.

It has been obſerved, that commercial ſtates, on the ... portation of goods from other countries, lay very ... duties to diſcourage their coming in, and dream not ... that falſe maxim of reducing them, becauſe they are ... be paid by their own ſubjects; and, on the other ha... the duties on the exportation of their own goods are ... low, often none at all, notwithſtanding they are to ... paid by foreigners, in order to facilitate the export... of them; having always this point in view, that as ... as the commodities exported exceed thoſe imported, ... much more money will come into the kingdom, ... be detained there; and, from the contrary circumſta... ces, the miſery, depopulation, and ruin of the ſtate ... neceſſarily proceed.

It is ſuppoſed that the goods imported into Great B... tain, one year with another, amount to about five m... lions ſterling; but great quantities of theſe are re-... ported, which may reduce the home conſumption ... four millions.

It is the great intereſt of Great Britain to advance ... manufactures; but this cannot be more effectually d... than by freeing them from the cuſtoms of importa... and exportation, as alſo from exciſes. By diſcharging ... cuſtoms payable on manufactures at their exportation, ... would encourage the merchants to ſend them abro... and, by leſſening the duties on the importation ... many of them, it would enable the manufacturers to ... ford them cheaper at home. But it is ſtrange, that ... nation whoſe intereſt it is to outdo all others, by u... derſelling them in foreign markets, ſhould load eith... with taxes.

A judicious author, ſpeaking of logwood, ſays it pa... 5 l. *per* ton cuſtom when imported into Great Brita... and drew back 3 l. 15 s. when ſhipped out again; ... which means the dyers in Holland uſed it ſo muc... cheaper than thoſe of Great Britain: therefore, if ... was imported cuſtom free, and paid 1 l. 5 s. *per* ton ... its exportation, the Dutch dyers would uſe it ſo muc... dearer than thoſe of Great Britain.

It is proper for a country to diſcourage the importati... of commodities already manufactured, ſuch as wroug... ſilks, callicoes, brandy, glaſs, and other commoditie... unleſs purchaſed by its own manufactures or product; b... cauſe they ſhould encourage the materials whereof th... are made, to be wrought up at home; by which mea... more ſhips would be freighted, and more ſailors employe... beſides the great advantage to the nation in the balance ... its trade, which muſt be returned in bullion, as thoſe co... leſs abroad than the other; which will enable a count... to afford a greater conſumption of foreign commodities ... pleaſe the palate, ſuch as wine and fruit, which ... ſhips, and are fit ſubjects for trade, when they are pu... chaſed by home product and manufactures; for the pro... of the trade will enable the nation to bear the expenc... See *Exportation*, *Goods*, and *Ballance* of trade.

IMPOSITION. A tax, or duty, laid upon goods, pe... ſons, or lands, by the legiſlative power, or people of ... nation. See *Duty.*

IMPOST, in law, properly denotes the tribute, or ta... appointed by a ſovereign, to be paid for ſuch merch... diſe, as is brought into any haven in his dominions fro... foreign nations: which is diſtinguiſhed from cuſtom; b... cauſe the latter more properly ſignifies the duties paid ...

he King for goods ſhipped off or exported; but they are oth frequently confounded together. See *Cuſtom*, and *Duty*.

PRESS. To mark, ſtamp, or print, the ſhapes, repreentation, or ſubſtance of one thing upon another.

PRESSION, is frequently uſed in ſpeaking of the edition f a book, or of the number of times it has been printed. mpreſſion, however, differs from edition; the former, roperly ſpeaking, takes in no more than what belongs o the printing, letter, paper, margin, and page, diſances of words, lines, and the diſpoſition of every thing hat may have a good or bad effect on the eye: the latr, beſides all this, takes in the care of the editor, who eviſed the copy, corrected or augmented it; adding otes, tables, and other like things, which he judged ight contribute towards making the book more uſeful nd correct.

AMELLING, or *Enamelling*. See *Enamelling*.

CARNATION, in chemiſtry, the refining of gold, by eans of ſilver and aqua fortis; which is the ſame with hat is otherwiſe called departing. See *Depart*.

CENSE. An aromatic, odoriferous reſin, otherwiſe alled frankincenſe. See *Frankincenſe*.

CH. An Engliſh meaſure, the twelfth part of a foot, ontaining the ſpace of three barley corns in length. See *Meaſure*, and *Foot*.

H *of Candle*. A manner of ſelling goods among merhants; notice being uſually given upon the exchange in riting, and elſewhere, when the ſale is to begin; againſt hich time the goods are divided into ſeveral parcels called ots, and papers printed of the quantity of each, with he conditions of ſale; as, that none ſhould bid leſs than certain ſum more than another has bid before. During he time of bidding, a ſmall piece, of about an inch, of ax-candle, is burning; and the laſt bidder, when the andle goes out, has the lot or parcel expoſed to ſale. See *uction*.

CHASING. See *Enchaſing*.

CLE. A ſort of tape uſed by women to tie their coats nd aprons. See *Tape*.

DEMNITY. An act by which one promiſes to guantee, or ſave harmleſs, ſome other perſon from any loſs r damage that might accrue to him on any particular ccount.

DEX, is a term among traders and book-keepers, for a ook conſiſting of a certain number of leaves; which is ept in an alphabetical order, and uſed for finding readily, n the ledger, the folio of the debit and credit of the erſons with whom there is an accompt opened; though he index is alſo called the alphabet, table, or repertory.

DIA, or the *Eaſt Indies*. A great tract of Aſia, conaining all thoſe countries extending from Perſia on the weſt, to China on the eaſt; being India Proper, or India n this ſide the Ganges, and India beyond the Ganges; he former comprehending the empire of Indoſtan, or he Mogul's country; and the latter including the kingoms of Aracan, Pegu, Malacca, Siam, Cambodia, Cochinchina, and Tonquin; as alſo the ſtates of Acham nd Boutan.

This vaſt region of Aſia is called the Eaſt Indies, becauſe t is advanced ſo towards the eaſt; which diſtinguiſhes it rom a part of America, whoſe ſituation to the weſt has ccaſioned it to be called the Weſt Indies, on a preumption that they extended, and even joined to the Eaſt ndies, though diſtant from them in reality half the circumference of the globe.

. *India Proper*, or *Indoſtan*, is ſituated between 66 and 2 deg. of E. lon. and between 7 and 40 deg. of N. lat. eing bounded by Uſbec Tartary, and Thibet, on the orth; by another part of Thibet, the kingdoms of Aſem, Ava, and Pegu, on the eaſt; the bay of Bengal, and the ndian ocean, on the ſouth; and by the ſame ocean, nd Perſia, on the weſt; being about 2000 miles in ength from north to ſouth, and 1500 miles in breadth rom eaſt to weſt where broadeſt, though the ſouthern art of the peninſula is not 300 miles broad; and all the ountries within theſe limits are ſubject or tributary to the Great Mogul. It is ſuppoſed to be called Indoſtan, from he river Indus, on its weſtern frontiers. It is alſo called

Mogulſtan, from the imperial family now upon the throne, who derive their pedigree from Tamerlane, a Mogul, or Mogul Tartar: but it was the Emperor Aurengzebe, who made a conqueſt of Golconda, Viſiapour, and all the ſouthern kingdoms of India, about the year 1685. However, there are ſome Rajas, or Indian ſovereigns, on the coaſt of Malabar, and ſome others in the very heart of India, independent princes, inhabiting the mountainous and inacceſſible parts of the country: but Kouli Kan took the preſent Mogul priſoner, obtained an immenſe booty, and obliged him to yield up the weſtern provinces to Perſia, before he granted him his liberty.

The northern part of India is temperate, and the winds variable, as in other countries without the tropics; but towards the ſouth the country is ſubject to exceſſive heats; and the winds are periodical, returning to certain points at ſtated times, as in moſt countries within the tropics.

The monſoons, out at ſea, blow ſix months one way, and ſix another, namely, from April to October, or thereabout, they blow from the S. W. and from October to April from the N. E. not exactly from thoſe points, but varying ſometimes a point or two on either ſide. At the breaking up of either of theſe monſoons, a little before they ſhift, there are uſually prodigious ſtorms of wind. The ſhifting of the monſoons, and conſequently this ſtormy weather, does not come exactly at the ſame time every year, but ſometimes a fortnight or three weeks ſooner, and at others a fortnight or three weeks later than the uſual time; which frequently occaſions the loſs of ſhipping; for the merchants, for the ſake of a trifling gain, will remain upon the coaſt, in hopes that the ſtorm will keep off a little longer, till the winds grow too ſtrong for them, and they find it impoſſible to bear up againſt it. There are very few harbours on the coaſt of India; and therefore commanders who have any foreſight, get as far from the coaſts as they can at the time theſe ſtorms are expected.

But beſides the winds called monſoons, there are land and ſea breezes, which ſhift once in twelve hours, when the monſoons are not violent, for then the breezes give place to the hurricane. Theſe land and ſea breezes are of great uſe to the ſhipping, to carry them one way or the other along the coaſt; and the people on ſhore are very ſenſible of the effects of them too, for the land winds are hot, and the ſea breezes cool and refreſhing; and without the latter the ſouthern part of India would be intolerable in the heat of ſummer. But, as Providence is pleaſed to order it, the land winds blow but from midnight till noon, nor do they begin to be very troubleſome till nine in the morning.

Rains begin to fall in June, and their uſual continuance is about four months, from the latter end of June to the end of October. All the reſt of the year is exempt from ſtorms and hurricanes, and there are only ſuch moderate breezes as the heat of the climate requires. Thus it may be ſaid, that nine parts in ten of the continent of India are as healthful as any part of the world, and as agreeable to European conſtitutions after their illneſs is over, which they generally contract the firſt month they arrive there; this diſorder proceeding as much from the alteration of their diet, and a different regimen, as from any other cauſe.

The principal rivers of India are, the Ganges, the Indus, Jemma, Guenga, Chriſtena, Tapte, Paddar, Chaoul, and Negapatan. Beſides theſe, there are almoſt innumerable rivers, or rather torrents after the rains. Many of them at that time equal the Thames, and yet generally dry up before the rains fall again. As for the currents near theſe coaſts, they ſit and change as the monſoon does. It is very difficult going on ſhore in India, for the ſurf of the ſea runs ſo high, and breaks ſo far from the land, particularly at Fort St. George, on the Coromandel coaſt, that no European boat ever attempts the ſhore; but the natives come off in their muſſoola's, a boat almoſt as deep as a man is high, the planks whereof are not much more than half an inch thick, and ſewed together with cocoa-nut cordage. Theſe, if they ſtrike, as they muſt three times at leaſt before they get on ſhore, yield, and are as pliant almoſt as paſteboard; beſides, being exceeding light when on ground, the ſurf gently

the author of their eſtabliſhment, alſo granted them a peculiar civil and criminal juriſdiction, by which they have in themſelves the power of creating magiſtrates, and from whom there is no appeal but to the Grand Duke himſelf.

The Jews of Leghorn are computed to amount to upwards of 10,000; and they have ſo great a ſhare in its commerce, that their Sabbath is ſomewhat reſpected; no perſon appearing upon change of a Saturday, or tranſacting any buſineſs.

If the trade of the merchants of Leghorn to the Levant is computed at 100,000 crowns yearly, there are 98,000 for the Jews, and 2000 only to be divided between the French, Italians, Dutch, Engliſh, and Armenians, eſtabliſhed there.

In England, formerly the Jews, and all their goods, belonged to the chief lord where they lived; and he had ſuch abſolute property in them, that he might ſell them; for they had not liberty to remove to another lord, without leave. Mat. Paris tell us, that Henry III. ſold the Jews to Earl Richard, his brother, for a term of years, that *quos Rex excoriaverat, comes eviſceraret.*

They were diſtinguiſhed from the Chriſtians both living and dying; for they had proper judges and courts wherein their cauſes were tried, and they wore a badge on their breaſt over their cloaths in ſhape of a table, and were fined if they ſtirred abroad without ſuch badges: they were never buried in the country, but brought up to London, and interred without the walls.

It is to be obſerved, that the Jews have been expelled Spain, Portugal, and Ruſſia: they were alſo expelled England by King Edward I. and were not permitted to return till the uſurpation of Cromwell; and they were likewiſe baniſhed in France in 1182 and 1321; though they were afterwards permitted to return.

They have alſo lately attempted to be naturalized in Great Britain; but their attempt was fruſtrated. See *Naturalization.*

JEWS *Harp*, or *Trump*. A mock ſort of muſical inſtrument, made of braſs or iron, for children to play with; of which great quantities are made at Birmingham,

JEWS *Incenſe*. See *Frankincenſe.*

IF. One of the French iſlands to the ſouth of Marſeilles, on the coaſt of Provence. See *French* iſlands.

ILLENOIS *Lake* lies between 88 and 93 deg. of W. lon. and between 41 and 46 deg. of N. lat. ſituated in Canada in North America, having a communication with the Huron lake on the N. E. by a narrow channel; the country contiguous to this lake being called the country of the Illenois, now in alliance with the French.

ILMEN. A lake in the province of Great Novogrod, in Ruſſia, in 34 deg. of E. lon. and 58 deg. of N. lat. which has a communication with the lake Ladoga, by the river Wolcoſſ.

IMAGERY. All ſorts of works that repreſent the ſhapes of men, or other creatures, whether in tapeſtry, painting, or embroidery.

IMBARGO. See *Embargo.*

IMMA. A kind of bole, or red earth, uſed in Perſia by dyers and painters; the beſt kind being found in the mountain of Chiampa, near Bander Congo.

IMMUNITY. A privilege, or exemption, from ſome office, duty, or impoſition; but the word is more particularly underſtood of the liberties granted to cities and communities. See *Franchiſe.*

IMPASTATION. The mixture of ſeveral materials of different colours, and conſiſtencies, baked or bound together with ſome cement, and hardened either by the air or fire; it being ſometimes a ſort of maſon's work, made of ſtucco, or ſtone ground ſmall, and wrought up again in manner of a paſte.

IMPERATORUM, or *Imperatorii*. A medicinal root, ſuppoſed to have the virtues of angelica; being of two ſorts, the one found in mountains, and the other in gardens. The former is preferable to the latter, eſpecially that of the Auvergne mountains in France; which ſhould be choſen with full roots, new, hard to break, of a brown exterior colour, green within, and of a briſk ſmell, and aromatic taſte.

IMPERIAL. A city and port-town of Chili, in South America, ſituated in 80 deg. of W. lon. and 39 deg. S. lat. at the confluence of two rivers, 9 miles eaſt the Pacific ocean, and 70 miles north of Baldivia.

IMPERIAL. A gold coin, formerly ſtruck in Flanders, weighing 4 dwt. 4 gr. and of the fineneſs of 23 carats 3-4ths.

IMPERIAL *Serge*, or *Serge Imperial*, is a term among French for a kind of ſerge, 3-4ths of an ell broad, measure, and manufactured particularly in the Languedoc: they are alſo called ſempiternals and tuanas; which are chiefly deſigned for Italy and Spain.

IMPLEMENTS, is a term uſed for all things neceſſary for a trade, or houſhold-furniture.

IMPORTATION. The bringing home goods from beyond ſeas.

It has been obſerved, that commercial ſtates, on the importation of goods from other countries, lay very high duties to diſcourage their coming in, and dream not of that falſe maxim of reducing them, becauſe they are to be paid by their own ſubjects; and, on the other hand, the duties on the exportation of their own goods are very low, often none at all, notwithſtanding they are to be paid by foreigners, in order to facilitate the exportation of them; having always this point in view, that as much as the commodities exported exceed thoſe imported, ſo much more money will come into the kingdom, to be detained there; and, from the contrary circumſtances, the miſery, depopulation, and ruin of the ſtate will neceſſarily proceed.

It is ſuppoſed that the goods imported into Great Britain, one year with another, amount to about five millions ſterling; but great quantities of theſe are reported, which may reduce the home conſumption to four millions.

It is the great intereſt of Great Britain to advance her manufactures; but this cannot be more effectually done than by freeing them from the cuſtoms of importation and exportation, as alſo from exciſes. By diſcharging the cuſtoms payable on manufactures at their exportation, it would encourage the merchants to ſend them abroad; and, by leſſening the duties on the importation of many of them, it would enable the manufacturers to afford them cheaper at home. But it is ſtrange, that the nation whoſe intereſt it is to outdo all others, by underſelling them in foreign markets, ſhould load them with taxes.

A judicious author, ſpeaking of logwood, ſays it paid 5 l. *per* ton cuſtom when imported into Great Britain, and drew back 3 l. 15 s. when ſhipped out again; which means the dyers in Holland uſed it ſo much cheaper than thoſe of Great Britain: therefore, if it was imported cuſtom free, and paid 1 l. 5 s. *per* ton on its exportation, the Dutch dyers would uſe it ſo much dearer than thoſe of Great Britain.

It is proper for a country to diſcourage the importation of commodities already manufactured, ſuch as wrought ſilks, callicoes, brandy, glaſs, and other commodities unleſs purchaſed by its own manufactures or product; becauſe they ſhould encourage the materials whereof they are made, to be wrought up at home; by which means more ſhips would be freighted, and more ſailors employed, beſides the great advantage to the nation in the balance of its trade, which muſt be returned in bullion, as thoſe are leſs abroad than the other; which will enable a country to afford a greater conſumption of foreign commodities that pleaſe the palate, ſuch as wine and fruit, which employ ſhips, and are fit ſubjects for trade, when they are purchaſed by home product and manufactures; for the profit of the trade will enable the nation to bear the expence. See *Exportation*, *Goods*, and *Ballance* of trade.

IMPOSITION. A tax, or duty, laid upon goods, perſons, or lands, by the legiſlative power, or people of a nation. See *Duty.*

IMPOST, in law, properly denotes the tribute, or cuſtom appointed by a ſovereign, to be paid for ſuch merchandiſe, as is brought into any haven in his dominions from foreign nations: which is diſtinguiſhed from cuſtom becauſe the latter more properly ſignifies the duties paid

the King for goods ſhipped off or exported; but they are both frequently confounded together. See *Cuſtom*, and *Duty*.

MPRESS. To mark, ſtamp, or print, the ſhapes, repreſentation, or ſubſtance of one thing upon another.

MPRESSION, is frequently uſed in ſpeaking of the edition of a book, or of the number of times it has been printed. Impreſſion, however, differs from edition; the former, properly ſpeaking, takes in no more than what belongs to the printing, letter, paper, margin, and page, diſtances of words, lines, and the diſpoſition of every thing that may have a good or bad effect on the eye: the latter, beſides all this, takes in the care of the editor, who reviſed the copy, corrected or augmented it; adding notes, tables, and other like things, which he judged might contribute towards making the book more uſeful and correct.

NAMELLING, or *Enamelling*. See *Enamelling*.

NCARNATION, in chemiſtry, the refining of gold, by means of ſilver and aqua fortis; which is what is otherwiſe called departing. See *Depart*.

NCENSE. An aromatic, odoriferous reſin, otherwiſe called frankincenſe. See *Frankincenſe*.

NCH. An Engliſh meaſure, the twelfth part of a foot, containing the ſpace of three barley corns in length. See *Meaſure*, and *Foot*.

NCH *of Candle*. A manner of ſelling goods among merchants; notice being uſually given upon the exchange in writing, and elſewhere, when the ſale is to begin; againſt which time the goods are divided into ſeveral parcels called lots, and papers printed of the quantity of each, with the conditions of ſale; as, that none ſhould bid leſs than a certain ſum more than another has bid before. During the time of bidding, a ſmall piece, of about an inch, of wax-candle, is burning; and the laſt bidder, when the candle goes out, has the lot or parcel expoſed to ſale. See *Auction*.

NCHASING. See *Enchaſing*.

NCLE. A ſort of tape uſed by women to tie their coats and aprons. See *Tape*.

NDEMNITY. An act by which one promiſes to guarantee, or ſave harmleſs, ſome other perſon from any loſs or damage that might accrue to him on any particular account.

NDEX, is a term among traders and book-keepers, for a book conſiſting of a certain number of leaves; which is kept in an alphabetical order, and uſed for finding readily, to the ledger, the folio of the debit and credit of the perſons with whom there is an accompt opened; though the index is alſo called the alphabet, table, or repertory.

NDIA, or the *Eaſt Indies*. A great tract of Aſia, containing all thoſe countries extending from Perſia on the weſt, to China on the eaſt; being India Proper, or India on this ſide the Ganges, and India beyond the Ganges; the former comprehending the empire of Indoſtan, or the Mogul's country; and the latter including the kingdoms of Aracan, Pegu, Malacca, Siam, Cambodia, Cochinchina, and Tonquin; as alſo the ſtates of Acham and Boutan.

This vaſt region of Aſia is called the Eaſt Indies, becauſe it is advanced ſo towards the eaſt; which diſtinguiſhes it from a part of America, whoſe ſituation to the weſt has occaſioned it to be called the Weſt Indies, on a preſumption that they extended, and even joined to the Eaſt Indies, though diſtant from them in reality half the circumference of the globe.

India Proper, or *Indoſtan*, is ſituated between 66 and 93 deg. of E. lon. and between 7 and 40 deg. of N. lat. being bounded by Uſbec Tartary, and Thibet, on the north; by another part of Thibet, the kingdoms of Aſem, Ava, and Pegu, on the eaſt; the bay of Bengal, and the Indian ocean, on the ſouth; and by the ſame ocean, and Perſia, on the weſt; being about 2000 miles in length from north to ſouth, and 1500 miles in breadth from eaſt to weſt where broadeſt, though the ſouthern part of the peninſula is not 300 miles broad; and all the countries within theſe limits are ſubject or tributary to the great Mogul. It is ſuppoſed to be called Indoſtan, from the river Indus, on its weſtern frontiers. It is alſo called Mogulſtan, from the imperial family now upon the throne, who derive their pedigree from Tamerlane, a Mogul, or Mogul Tartar: but it was the Emperor Aurengzebe, who made a conqueſt of Golconda, Viſiapour, and all the ſouthern kingdoms of India, about the year 1685. However, there are ſome Rajas, or Indian ſovereigns, on the coaſt of Malabar, and ſome others in the very heart of India, independent princes, inhabiting the mountainous and inacceſſible parts of the country: but Kouli Kan took the preſent Mogul priſoner, obtained an immenſe booty, and obliged him to yield up the weſtern provinces to Perſia, before he granted him his liberty.

The northern part of India is temperate, and the winds variable, as in other countries without the tropics; but towards the ſouth the country is ſubject to exceſſive heats; and the winds are periodical, returning to certain points at ſtated times, as in moſt countries within the tropics.

The monſoons, out at ſea, blow ſix months one way, and ſix another, namely, from April to October, or thereabout, they blow from the S. W. and from October to April from the N. E. not exactly from thoſe points, but varying ſometimes a point or two on either ſide. At the breaking up of either of theſe monſoons, a little before they ſhift, there are uſually prodigious ſtorms of wind. The ſhifting of the monſoons, and conſequently this ſtormy weather, does not come exactly at the ſame time every year, but ſometimes a fortnight or three weeks ſooner, and at others a fortnight or three weeks later than the uſual time; which frequently occaſions the loſs of ſhipping; for the merchants, for the ſake of a trifling gain, will remain upon the coaſt, in hopes that the ſtorm will keep off a little longer, till the winds grow too ſtrong for them, and they find it impoſſible to bear up againſt it. There are very few harbours on the coaſt of India; and therefore commanders who have any foreſight, get as far from the coaſts as they can at the time theſe ſtorms are expected.

But beſides the winds called monſoons, there are land and ſea breezes, which ſhift once in twelve hours, when the monſoons are not violent, for then the breezes give place to the hurricane. Theſe land and ſea breezes are of great uſe to the ſhipping, to carry them one way or the other along the coaſt; and the people on ſhore are very ſenſible of the effects of them too, for the land winds are hot, and the ſea breezes cool and refreſhing; and without the latter the ſouthern part of India would be intolerable in the heat of ſummer. But, as Providence is pleaſed to order it, the land winds blow but from midnight till noon, nor do they begin to be very troubleſome till nine in the morning.

Rains begin to fall in June, and their uſual continuance is about four months, from the latter end of June to the end of October. All the reſt of the year is exempt from ſtorms and hurricanes, and there are only ſuch moderate breezes as the heat of the climate requires. Thus it may be ſaid, that nine parts in ten of the continent of India are as healthful as any part of the world, and as agreeable to European conſtitutions after their illneſs is over, which they generally contract the firſt month they arrive there; this diſorder proceeding as much from the alteration of their diet, and a different regimen, as from any other cauſe.

The principal rivers of India are, the Ganges, the Indus, Jemma, Guenga, Chriſtena, Tapte, Paddar, Chaoul, and Negapatan. Beſides theſe, there are almoſt innumerable rivers, or rather torrents after the rains. Many of them at that time equal the Thames, and yet generally dry up before the rains fall again. As for the currents near theſe coaſts, they ſit and change as the monſoon does. It is very difficult going on ſhore in India, for the ſurf of the ſea runs ſo high, and breaks ſo far from the land, particularly at Fort St. George, on the Coromandel coaſt, that no European boat ever attempts the ſhore; but the natives come off in their muſſoola's, a boat almoſt as deep as a man is high, the planks whereof are not much more than half an inch thick, and ſewed together with cocoa-nut cordage. Theſe, if they ſtrike, as they muſt three times at leaſt before they get on ſhore, yield, and are as pliant almoſt as paſteboard; beſides, being exceeding light when on ground, the ſurf gently

heaves them forward, and when they ſtrike again, another ſurf ſucceeds the former, till at length they are gently heaved aſhore upon the beach.

The Mogul's dominions produce all the neceſſaries, and many luxuries of life. The blacks inhabit the ſouthern part of India; the complexion of thoſe in the northern provinces is either white, or an olive; theſe are the governing part of the nation, and of the Mahometan religion; the reſt being Pagans.

The Mogul's annual revenue is computed to amount to between 40 and 50 millions ſterling, if the viceroys were honeſt and faithful, ariſing by the produce of the ſoil, of which he is proprietor as well as ſovereign, every one being obliged to pay ſuch a rent as is required by his commiſſaries; by duties and cuſtoms on merchandiſe and labour, every thing being taxed among the working people; and great ſums frequently extorted from the principal merchants of the country; by forfeitures and eſcheats, being heir to all his great officers; by preſents, which are extracted from all his governors; and laſtly, by the produce of the diamond mines of Golconda. His country is exceeding populous; and the people are very good manufacturers, particularly of ſilk, and fine cotton cloths: there are alſo many merchants all over the country, who ſupply Europeans with Indian goods; and their Banians are very remarkable for their knowledge in trade.

The Europeans had very little trade to the Eaſt Indies before the year 1498, when the Portugueſe diſcovered the way thither by ſea, round the Cape of Good Hope: after which the Engliſh, Dutch, French, Swedes, and Danes, eſtabliſhed factories on the coaſts and iſlands of India; where they have carried on a conſiderable trade, and are now in poſſeſſion of many ſettlements in different parts of the country.

Commerce of Indoſtan, or the empire of the Great Mogul.

The commerce which Europeans carry on to the Mogul's territories, conſiſts principally in gold and ſilver coin, or bullion, which they bring there in great abundance, and which never returns; being converted at Agra into goldſmiths work, or being drawn and ſpun for their manufactures of gold and ſilver cloths and brocades. Great quantities of woollen cloths, tin, and other goods, are alſo brought there by the Europeans; who likewiſe ſupply India with ſpice, leather, elephants, and ſome other things which the Dutch bring from Japan, China, the Moluccas, and Ceylon.

But Europeans import from India the manufactures or produce of the country; ſuch as chints, calicoes, muſlins, ſilk, pepper, diamonds, and ſaltpetre.

India is divided into ſeveral provinces; but the principal trading places are upon the coaſts, which are diſtinguiſhed by different names; as the coaſt of Guzarat, the Indian coaſt, the coaſt of Malabar, the Pearl coaſt, the coaſt of Coromandel, and Bengal or the Bay.

The coaſt of Guzarat.

The kingdom of Guzarat, or Cambaia, is almoſt wholly maritime, forming a peninſula, advancing between the gulphs of the Indus and Cambaia, being upwards of 120 leagues along the coaſt.

It is in this extent that Cambaia and Surat are ſituated, the former in 72 deg of E. lon. and the latter in 72 deg. 20 min. They are two of the moſt famous towns, particularly the latter, of India, both for the trade carried on there by the European nations, and for that carried on by the merchants of the country with Java and Sumatra, in the Indian ocean; Aden, Mocha, and Mecca, upon the Red ſea; and Bander Abaſſi, or Gombron, in the Perſian gulph; where, though very indifferent mariners, and with ſhips very unfafely built, they ſend yearly very great cargoes of the merchandiſe of their country, or ſuch as they purchaſe from ſtrangers.

Theſe merchandiſes are cotton cloths, carpets, tapeſtry, rock-cryſtal, precious ſtones; woods for dying, perfumes, and other uſes; indigo, camphor, tobacco, ſulphur, galanga, ſpikenard, ultramarine, aſſa fœtida, borax, ſcammony, benjoin, pepper, cummin, ginger, mirobalans, ſilk ſtuffs of their own manufactures, wheat, ſalt, oil, and butter.

Their returns from Aden are gold and ſilver ſpecie, coral, ambergreaſe, meiſſeit a drug for dying, and the beſt opium of the eaſt.

From Perſia they bring brocades, ſilks, velvets, camblets, pearls, dry fruits, and particularly roſe-water, which they love extremely, and which they tranſport into ſeveral parts of the Indies.

The Portugueſe, for a conſiderable time, engroſſed all the commerce of the kingdom of Guzarat; of which they made themſelves maſters by their forts at Daman, Diu, and Goa; but their power is no longer dreaded: ſo that the trade is now open to all the European and Eaſtern nations, who ſend yearly their ſhips to Surat, where the principal commerce of Guzarat is tranſacted; though a conſiderable trade is alſo carried on at Cambaia, Boritſchia, Boodera, and Sirches.

Amadabat is the capital city of Guzarat, little inferior to Agra, being ſituated in 72 deg. of E. lon. and 23 deg. 40 min. of N. lat. upon a ſmall river, which empties itſelf into the Indus. It is 140 miles N. of Surat, and 40 N. E. of Cambaia; having a very flouriſhing commerce, ſending yearly great caravans to Agra, and tranſporting to Surat, Cambaia, and Boritſchia, its manufactures, and ſeveral other commodities, either the productions of the country, or the returns of its caravans.

About 25 large villages, and upwards of 3000 ſmall ones are computed to be in the diſtrict of Amadabat; where almoſt all the inhabitants are employed in manufacturing of all ſorts of ſilk and cotton ſtuffs, brocades, cloths of gold and ſilver, but not ſo beautiful as thoſe of Perſia, damaſks, ſattins, taffeties, and velvets of all colours; alſo carpets, whoſe ground work is either of gold, ſilver, ſilk, or wool.

The beſt part of theſe manufactures are deſtined for Surat; the Banians, who have almoſt the whole trade of that city in their hands, and who act there as brokers to European merchants, having their factors on the ſpot, who buy up theſe commodities as ſoon as manufactured.

The productions of the country are indigo, cultivated and prepared in abundance in the diſtrict of this capital, particularly at Sirches, a ſmall town, but in great reputation for the perfect culture, and good preparation of this drug; ſugar-candy, powder ſugar, all ſorts of confects, cummin, honey, lacca, opium, borax, dry and confected ginger, mirabolans, ſaltpetre, ſal armoniac, ambergreaſe, muſk, and diamonds; but the three laſt are brought there from abroad, and ſold again to foreign merchants.

All the merchandiſes brought from Amadabat, and all thoſe which enter there by the returns of the caravans, pay no cuſtomhouſe duty, except a kind of preſent to the officer, which does not exceed 6 d. ſterling for a camel load.

Gun-powder, lead, and ſaltpetre, are the only contraband goods prohibited there for exportation; but a permiſſion for taking them away may be eaſily obtained.

The meidan, or market-place, of Amadabat, is one of the largeſt and moſt agreeable in all the Indies, being bordered on both ſides with two rows of palm-trees and tamarins, intermixed with orange and citron-trees, under which the merchants keep their ſhops, and ſell their goods.

The Banians, who are generally bankers, trade great in money; there being no towns any way conſiderable in the Mogul's territories, and the other part of the Indies, but what they can make remittances to; which is very commodious for merchants, upon account of the danger in travelling through all parts of Indoſtan, unleſs in a caravan; as alſo upon account of the Malabar pirates, commonly called Angria's men, who ſcour all the Indian ſeas, like the corſairs of Barbary in the Mediterranean.

The Engliſh and Dutch uſually take caravans from Surat for Amadabat, and afterwards thoſe of Amadabat for Agra, when they have any buſineſs in that capital. They have alſo factors at Amadabat, where they dye their cloths, and refine their ſaltpetre. It is likewiſe from this city that all the blue cloths come which are ſent into Perſia, Arabia, Abyſſinia, the Red ſea, the coaſt of Melinda, Moſambique, Madagaſcar, Java, Sumatra, Macaſſar, and the Moluccas.

Barbiſol

Boritſchia, or *Brotchia*. A large town of the kingdom of Guzarat, ſituated 36 miles to the north of Surat, upon a river which empties itſelf into the ſea by two mouths, 24 miles below the town.

Cotton cloths are manufactured there, as alſo in 80 villages of its diſtrict; being reckoned among the fineſt and moſt beautiful kinds made in the Indies.

The factories which the Engliſh and Dutch have there are very antient, and the firſt eſtabliſhed by theſe two nations on this coaſt. The greater part of the inhabitants are Banians, and conſequently almoſt all merchants.

Dijentagar, is almoſt in the midſt of the kingdom of Guzarat, and has a manufactory of cotton cloths.

Pettan, is famous for its manufactures of ſilks, cottons, tulbands, allegias, and ſome other ſtuffs; it being from thence that the Banians bring the greater part of thoſe which are purchaſed by the Europeans.

Cambaia, or *Cambay*. The commerce of this city is very conſiderable; being not inferior to any, except Surat, over which it had the ſuperiority before the decay of Goa, and the ruin of the Portugueſe.

It is ſituated at the mouth of the river Carari, in 23 deg. 30 min. of N. lat. at the bottom of the gulph to which it gives its name, 48 miles from Boritſchia.

The Engliſh and Dutch have factories there, upon account of its proximity to Surat, where their principal trade lies.

The natives of the country, particularly the Banians, who almoſt all devote themſelves to trade, are more ſubtle and ſkilful there than in any other part of the eaſt; but alſo greater cheats, eſpecially in precious ſtones, of which they have a very perfect knowledge.

The commerce of the Banians of Cambaia is uſually to Diu, Goa, Cochin, Achem, Batavia, Bantam, the coaſt of Coromandel, that of Bengal, Perſia, and the Red ſea, where they ſend their own ſhips; but the greater part with Dutch pilots, which they hire at a dear rate from the company, thoſe of the country being little experienced in maritime affairs.

Though the exportation of their merchandiſe to all theſe places is a conſiderable object of their trade, it is nothing in compariſon to that carried on with ſtrangers, who arrive every year at Cambaia; there being ſcarce a nation in the Indies, whoſe merchants and ſhips are not ſeen there; as alſo from Moſambique, Melinda, Arabia, and the Perſian gulph; beſides Europeans, who ſend there ſeveral ſhips more uſually laden with rials, rixdollars, ducats, and ſequins, than merchandiſe; gold and ſilver being, as has been already obſerved, the beſt cargo for this coaſt, except ſpice, which the inhabitants of Cambaia, as well as the reſt of the kingdom of Guzarat, cannot well do without.

The principal merchandiſes brought from Cambaia, are very fine cotton cloths, and perfectly well manufactured, which are not leſs eſteemed than thoſe of the coaſt of Coromandel and Bengal, canvas for ſails and ſacks, ſeveral ſorts of ſilk ſtuffs, ſcarfs for covering the head and face of women, carpets, gold cloths, bed-coverings of ſilk or cotton, ſeveral houſhold utenſils, indigo, ſaltpetre, borax, cummin, ginger, rhubarb, mirabolans, ſeveral other excellent drugs, ſugar, oil, and butter; without reckoning ſeveral ſorts of precious ſtones, either found in Guzarat, or brought from other parts; wherein the Banians, who keep their ſhops in one of the three great bazars of Cambaia, drive on a very opulent trade; and wherein Europeans may alſo make conſiderable profits, if they are judges, and upon their guard againſt the artful contrivances of Indian jewellers.

At Cambaia are alſo made ſeveral excellent works of agate, not inferior in any reſpect to thoſe of Europe, either in the beauty of the ſtone, or the perfection of the work.

The beſt part of the merchandiſes, of which Europeans make the greateſt purchaſe, are not ſuch as they make their returns with into Europe; but they carry them to different parts of the Indies, and exchange them for others, ſuch as all ſorts of corn and fruits; of which the Dutch, among others, buy up yearly great quantities, and in which they gain conſiderably, by bringing them to the places where they are wanted.

Surat, is ſituated on the river Tapte, 10 miles E. of the Indian ſea, 160 miles N. of Bombay, and as many S. of the city of Cambaia; being about three miles in circumference, but very populous, and vaſtly rich. The Engliſh, Dutch, and French, have their factories here, and trade very largely; but the Moors, Armenians, Banians, Arabs, and Jews, are much greater merchants. The Engliſh preſident lives in the ſtate of a prince, being uſually governor of Bombay, and of all the Engliſh ſettlements upon the weſt coaſt of India; having almoſt as much reſpect paid him as the Indian governor of Surat. He has his coaches, palanquins, and led horſes, richly equipped; and, when he goes abroad, has his guards, with a numerous retinue; the Europeans finding it neceſſary for their officers and ſervants to make a grand appearance among the eaſtern people.

Souali, ſeven or eight leagues from the mouth of the Tapte, is properly the port of Surat; the river not being navigable up to the town for ſhips of burden; which obliges merchants to unload at this place, and to ſend their merchandiſe to Surat, either in barges up the river, or by land in waggons drawn by oxen.

The Portugueſe took and ruined Surat in 1520; but as it was already famous enough for its trade, it became more conſiderable by its ruin; all the Indian nations, who were accuſtomed to trade there, having united to re eſtabliſh it; but it was not till near a century after that it became a general ſtaple for European and Eaſtern merchandiſe; being enriched by a kind of compenſation for the damage done to it by the Portugueſe, when the Dutch appearing in the Indian ocean, had deprived them of almoſt all their places, and entirely ruined their trade.

Since that time the Mogul has had ſuch a jealous and watchful eye over the preſervation of this important place, whoſe cuſtomhouſes bring into him ſome millions of rupees annually, that he ſuffers no foreign ſhips to continue in the river.

The Engliſh eſtabliſhed a factory there in 1609, the Dutch in 1616, and the French in 1665.

The principal commerce of the Europeans at Surat paſſes thro' the hands of the Banians, who are almoſt all exceeding rich; and what makes them preferred to Mahometan merchants in matters of brokerage is, that all the workmen with whom they correſpond, are idolaters, who would not treat with the ſame confidence with brokers not of their own ſect.

The European companies have uſually a principal broker, who has ſeveral others under him; it being this broker, who, with the chiefs of the factories, and their council, decide all matters, both with regard to the ſale and purchaſe of merchandiſe.

It is of the laſt importance, that this firſt broker is an honeſt and expert merchant; all the ſucceſs of this commerce depending on theſe two qualities.

The merchandiſes purchaſed at Surat by the intervention of theſe brokers, are of ſeveral ſorts, and are ſold in different places.

Thoſe proper to be ſent into Europe are ſpun and wool cotton; plain, white, and dyed cotton cloths; ſeveral ſilk ſtuffs plain or ſtriped of gold or ſilver; woollen or ſilk carpets, others of ſilk worked with gold or ſilver; cotton cloths, painted or printed; raw ſilks, indigo of three ſorts, aloes, Sapan wood, coffee, Maldivee ſhells for the Guinea trade, incenſe, ſaltpetre, borax, lacca, wax, myrrh, terrame-rita, red bole, muſk, bezoar, and ſometimes grey amber, pearls, diamonds, and ſome other leſs precious ſtones.

For Bander-Abaſſi, and Boſſora in the Perſian gulph, white, coarſe, and fine cottons, with a few dyed blue and black.

The merchandiſes of Surat for the commerce of Mocha, and the coaſts of the Red ſea and Arabia Felix, are coarſe white, blue, and black cotton cloths.

For Sumatra, Java, and Macaſſar, blue and black cottons, but much more of the fine than of the coarſe ſort.

For the Philippines, all ſorts of coarſe and fine white and dyed cottons; beſides carpets and ſilk ſtuffs.

Laſtly, opium for the coaſts of Malabar, and for the other parts of the Indies, whence pepper is brought; no commodity being better than opium for the exchange of this ſpice.

Two ſhips depart every year from Surat, for the conveniency of the Mahometans, who go upon a pilgrimage to Mecca; but uſually they are as much laden with merchandiſe upon account of the Mogul, as upon that of the pilgrims; and their returns are ſo rich, that they make a part of the European trade for the merchandiſe of Arabia Felix.

The Turks of Aden and Mocha ſend likewiſe every year a ſhip to Surat, whoſe cargo belongs to the Grand Signior.

The duties of importation and exportation paid by European merchants at Surat, are pretty moderate, amounting to only 2 *per cent.* though the natives of the country pay $3\frac{1}{2}$ *per cent.*

It has been obſerved, in ſpeaking of the commerce of Amadabat, that the Banians there tranſact a great deal of buſineſs by bills of exchange, and remittances to ſeveral parts of the eaſt; and here it will not be amiſs to add the exchange in the Mogul's territories; where, as in Europe, it is higher or lower, according to certain circumſtances.

The exchange from Lahor to Surat is from 7 to $7\frac{1}{2}$ *per cent.*

From Agra, from 4 to 5.

From Amadabat, from 1 to $1\frac{1}{4}$.

From Bengal, Patna, Caſſumbaſar, and Huegly, from 8 to 9.

From Golconda, and the neighbouring places, from 5 to 6.

And from Goa, 4 *per cent.*

Agra, the capital of the Mogul's empire, is ſituated in 79 deg. of E. lon. and 26 deg. 20 min. of N. lat. upon the river Jemma, which falls into the Ganges. It is a large, beautiful, and populous city, where the Mogul frequently reſides; being 20 miles in circumference, and 300 N. E. of Surat.

The number of its meidans, where are held public markets for all ſorts of commodities; of its covered bazars, where the merchants and artiſans have their ſhops and quarters; and of its caravanſeras, which are upwards of 80, are ſufficient to ſhew its vaſt extent and commerce, which is promoted as well by ſtrangers as the inhabitants.

This commerce is kept on footing there by ſeveral caravans, which depart from Amadabat, Surat, and other parts, uſually conſiſting of 4 or 500 camels, which the Engliſh, Dutch, French, Moors, Turks, Arabs, Perſians, and other nations trading to Surat, uſe for tranſporting their merchandiſe into this capital, and for bringing ſeveral others proper for their trade.

Beſides the indigo of Agra, which is the beſt in the world, ſeveral ſilk ſtuffs and cottons are brought from thence.

It is there alſo that all the merchandiſes of Boutan and Tartary are brought; and many merchants come hither from the interior parts of Indoſtan.

The expence of the merchandiſe brought from Agra to Surat is from 15 to 20 *per cent.* including the remittances of bills of exchange at 5 *per cent.* package, carriages, and the duties of the roads, purſuant to their different qualities.

It ſhould be alſo obſerved in general, that confiſcation does not take place in the Mogul's territories for the fraudulent entrance, or going out of merchandiſe; but, upon diſcovery, a double duty is paid.

Daman, *Baciaim*, *Diu*, and *Chaoul*, are alſo four maritime places of the kingdom of Guzarat, but all belonging to the Portugueſe. They had alſo Bombay, between Daman and Chaoul; but they ceded it to the Engliſh in 1662, in favour of the marriage between Catharine Infanta of Portugal, and Charles II. King of England.

Daman is ſituated in 72 deg. 20 min. of E. lon. and 20 deg. of N. lat. upon the gulph of Cambaia, between Surat and Baciaim, from which it is equally diſtant, having the latter about 75 miles to the ſouth, and the former about the ſame diſtance to the north, being about 120 miles from Diu, and 240 from Goa.

The ſituation of this town, and the goodneſs of its fort, with a pretty conſiderable commerce, make it at preſent eſteemed by the Portugueſe more than any other place remaining to them in the Indies; yet the trade of Baciaim is not much inferior to it; but that of both places with Diu is much decayed, ſince the Engliſh, Dutch, and other European nations, raiſed the reputation of Surat.

The Banians are thoſe who farm the cuſtomhouſes of Daman, and of the greater part of the other towns remaining to the Portugueſe; the duties of entry being paid at Daman upon the footing of 10 *per cent.*

Diu, is a little iſland, with a town of the ſame name, lying in 69 deg. of E. lon. and 21 deg. 15 min. of N. lat. 200 miles W. of Surat. It has the reputation of being impregnable; having always been the ſtrongeſt place of the Portugueſe in the Eaſt Indies. It was here that they formerly kept their armadas: the Mooriſh ſhips were alſo viſited here, and took paſſports for the aſſurance of their commerce; ſo that there was not a town from whence the King of Portugal had a greater revenue in cuſtomhouſe duties and paſſports.

Tavernier, in his obſervation on the Indian trade, thinks this town the moſt proper of any for the principal eſtabliſhment of a commercial company, both for the ſafety of its port, and the goodneſs of its waters, which are infinitely better than thoſe of Soualy and Surat, as likewiſe on account of the extraordinary quantity of all ſorts of refreſhments; or laſtly, by its proximity to Surat, where a perſon may go in four or five days by land, by croſſing the gulph, or at moſt in ſeven, by making the entire paſſage.

Chaoul, or *Chaul*. The Portugueſe, on their firſt arrival, and in the beginning of their conqueſts, took this town from the King of Decan.

Its commerce, which is very conſiderable, but much leſs than formerly, is particularly famous for ſilk and ſilk manufactures, with which it furniſhes Goa, and a great part of the Indies.

Several Chineſe ſhips come there with their merchandiſe; and, in exchange, take ſpice, which they have pretty cheap. Their other manufactures are all ſorts of vaniſh, and divers lacquered works of all colours, bordering much upon the perfection of thoſe of China.

A great number of horſes, oxen, and cows, with all ſorts of fruits and productions of the earth, except raiſins, walnuts, and cheſnuts, are alſo found there.

The Indian coaſt, and coaſt of Malabar, extends from the frontiers of Guzarat to Cape Comorin; being about 500 miles on the coaſt.

The Portugueſe, for a conſiderable time, were maſters of all this coaſt; by which they began their diſcoveries and conqueſts in the Eaſt Indies, Calicut being the firſt town where they put in, and Canonor the place where they erected their firſt fort: but they were diſpoſſeſſed of all their ſettlements on this coaſt by the Dutch, except Goa and a few other places of no conſequence.

Decan is the firſt kingdom of this coaſt after that of Guzarat, and was for a conſiderable time a province of the Mogul's empire; but now it is only tributary.

Its maritime towns are Geytapour, Rajapour, Carapatan, Dabul, and Sifardan; whoſe commerce conſiſts in ſilk ſtuffs and cotton cloths; which are ſent to Surat by ſea or by land as far as the coaſt of Coromandel.

Rajapour, or *Dunder Rajapour*, is a town ſituated about miles from Goa, being in the lands of Sevagy, the famous rebel, who ſo long kept all the forces of the Mogul and the King of Viſapour, in employment. The Engliſh had formerly a factor here, but were expelled by the Indians. The French company eſtabliſhed itſelf there in 1669, where it has a handſome factory, and an agreeable garden. Its commerce conſiſts in ſaltpetre, cotton cloths, and pepper.

Bombay, or rather *Boonbay fort and iſland*, lie about miles to the northward of Rajapour, in 72 deg. 28 min. of E. lon. and 18 deg. 30 min. of N. lat. being 130 miles S. of Surat, and 206 N. of Goa. The Portugueſe who poſſeſſed themſelves of it, ſoon after their coming to India, gave it the name of Boonbay, from the goodneſs of the harbour, being capable, it is ſaid, of containing 1000 veſſels. The King of Portugal, in the year 1663, transferred the property of it to King Charles II. on his marriage with the Princeſs Catherine, the Infanta of Por-

gal, as part of her fortune; and his Majeſty made a preſent of it ſome time after to the Engliſh Eaſt India company.
The iſland of Bombay is about ſeven miles in length; but the houſes are low and mean, except ſome few belonging to the Engliſh and Portugueſe. The fort is ſtrong, and regularly fortified, having 120 pieces of cannon mounted, and ſtands at ſome diſtance from the town. There are three or four other little towns upon the iſland, where the Portugueſe have their churches.
The iſland is but barren, and produces not half grain enough to ſubſiſt the inhabitants; but they are ſupplied very reaſonably from the neighbouring countries. What they abound in moſt, are their groves of cocoa-nut trees. Their gardens alſo produce mangoes, jacks, and other Indian fruits; and they make pretty large quantities of ſalt, with very little trouble, from the ſea-water; which being let into little pits, the ſun extracts the moiſture, and the ſalt is left behind.
The inhabitants are a mixture of ſeveral nations, Engliſh, Portugueſe, and Indians, amounting to 50 or 60,000. The preſident of Surat is uſually governor of the place, who has a deputy here, and courts of juſtice after the model of England; and the governor, when in the iſland, appears in greater ſtate than the governor of Fort St. George, being attended by the troops of Moors and Bandarins, with their ſtandards.
Both the Dutch and the Mogul in their turns have endeavoured to make themſelves maſters of Bombay, but ineffectually. So lately as 1688, the Mogul General landed 25,000 men upon the iſland, and attacked the fort; but not being able to carry it, came to a treaty with the governor, and retired.
The iſland of *Canarin*, which ſome call *Salſette*, lies a little to the north of Bombay, ſeparated from it only by a channel of half a mile wide, and fordable at low water. This iſland is 20 miles in length, 17 in breadth, and about 70 in circumference. It belongs to the Portugueſe, and is parcelled out among ſuch gentlemen as have deſerved well of the crown.
The chief town is Bandora, where the Jeſuits particularly have a noble college, fortified by ſeveral batteries of guns. The land near the ſea is low, and cut into ſeveral canals, producing rice, ſugar-canes, and Indian fruits in abundance; but the middle of the iſland is mountainous.
Malagate, is a part of the kingdom of Decan; being productive of ſilk, cotton, excellent lacca, areca, rice, and betel, which afford a conſiderable trade with Europeans. The diamonds of the mine, called by the Portugueſe *Rocca Vieja*, are much eſteemed, eſpecially thoſe denominated *Boyſſez*, becauſe naturally cut. There are alſo amethyſts, chryſolites, and the ſtones called by lapidaries hæmatites.
Decan, which ſome make a particular kingdom, and others place in the number of the provinces of Decan, is famous for the town of Goa; beſides Baticula, Viſapour, Siliapour, Paranda, and Wingurta or Verſara.
Goa, the capital of this province, has a conſiderable trade; which is chiefly in the hands of Jews, conſiſting of rice; of which there are four ſorts, the firſt and beſt called *gracatili*, the ſecond *jambucal*, the third *canacar*, and the fourth *pacharil*; but there is a great difference between every kind.
The other commodities are powder ſugar, and confected mirabolans of all ſorts; the rice and ſugar being bought up by the ſhips of Ormus; and the mirabolans are ſent to Perſia and Arabia.
A great deal of copper is ſold there; part of which is coined, and part employed in manufacture.
Goa is the capital of the Portugueſe poſſeſſions in the Eaſt Indies; being ſituated in 73 deg. 20 min. of E. lon. and 15 deg. 20 min. of N. lat.
It ſtands on an iſland of the river Mandoua, about 8 miles from the mouth of it; and, by the ſtrength of its ſituation, and the fortifications the Portugueſe have added to it, has been able to defend itſelf, both againſt the Dutch and the natives, who have beſieged it ſeveral times. The iſland it ſtands upon is 24 miles in circumference; and the hills, which ſurround it at a little diſtance, on the neighbouring continent, render it very hot and unhealthful. The town is about two miles in length, and half a one in

breadth; being not only fortified with walls and ramparts, but the whole iſland is ſurrounded by a wall, baſtions, and other modern works, which ſecure their fields and gardens from the incurſions of enemies: and indeed the Portugueſe have fortified the banks of the river from the very mouth of it, with redoubts and batteries of guns, which makes the attacking of it more difficult than any other town in India. Nor is the country between the town and the ſea more ſecure than it is pleaſant; being full of country ſeats and villages, well planted with all ſuch fruits as are found between the tropics. The viceroy, who reſides in this city, commands all the ſettlements the Portugueſe are maſters of from the Cape of Good Hope to China, which are very numerous; the clergy in the Portugueſe towns and ſettlements in Aſia, and the weſt coaſt of Africa, being ſubject to the archbiſhop of Goa. The buildings of this city are of ſtone, and very magnificent. They have abundance of convents and nunneries here; and it is ſurpriſing to ſee what numbers of monks, and other Popiſh eccleſiaſtics there are in this city, and on the coaſt of Malabar and Golconda. But they make few proſelytes among the Indian Pagans; and as for the Mahometans, who have the government in their hands, it is as much as the life of a miſſionary is worth to attempt to make a convert of any of them. Their labours are chiefly beſtowed on the ſlaves and dependents of the European factories and ſettlements on theſe coaſts; for the Proteſtants, having few or no miſſionaries in India, permit the Popiſh prieſts to make as many converts to Chriſtianity as they can in their own way.
The commerce of the Portugueſe in the Indies is almoſt reduced to that of this town; which is very inconſiderable, there being hardly any Portugueſe rich enough to make a cargo of 2500 l. ſterling; ſo that throughout the Eaſt Indies their whole trade does not amount to 50,000 l. ſterling a year.
It is commonly thought, that what tends to ruin the Portugueſe trade in the Eaſt Indies, is, that each governor has partly the trade of the town where he commands, in his own hands: ſo that merchants, enjoying no liberty, dare not undertake any thing conſiderable.
There is however at Goa a junto, or tribunal, eſtabliſhed for judging of the affairs of a new company, which by great ſums has obtained the excluſive privilege of the Moſambique and Macao trade, and of the other places in the Eaſt Indies belonging to the crown of Portugal: but though this company is greatly protected, its trade is of no conſequence, and ſerves to ruin the whole commerce of Goa: from which place alone the Portugueſe are allowed to freight for Bengal and China.

The coaſt of Malabar.

This coaſt extends from Goa to Cape Comorin; being about 400 miles long, and 100 broad. It is divided into ſeveral ſmall ſtates, but tributary to the Mogul; which have all particular diſtinguiſhing names.
The air of the Malabar coaſt in general is very good, and the ſoil is as fertile as moſt parts of Aſia; black and white rice, which make a part of its commerce, and perhaps the moſt conſiderable, having two crops in the year. Beſides an abundance of excellent fruits, it affords alſo in great plenty cardamomum, cinnamon, betel, and eſpecially pepper.
Mirzeou is the firſt place in the province of Canara, near the frontiers of the kingdom of Viſapour, and 54 miles to the ſouth of Goa. The Portugueſe had one of their moſt antient forts at this place; but the inhabitants took it in 1662.
The French company eſtabliſhed a factory there in 1669, but abandoned it the ſame year for Rajapour; and now all the pepper of theſe parts is ſold to the Dutch, who have a factory at Barſaloor.
Mangalor, 150 miles N. of Calicut, and *Barcelor*, or *Baſſelor*, 130 miles S. of Goa, are two of the moſt important places of Canara, both for trade, and the goodneſs of their roads for ſhipping. The Portugueſe had forts in both places; but were expelled by the Canarins, whilſt engaged in their long wars with the Dutch: however, the peace between the two nations having given the viceroy of Goa the opportunity of revenging himſelf

on the Indians, by inroads which ruined the whole coaſt, the viceroy of Canara was willing to give up the forts; which the Portugueſe refuſed, becauſe they were not in a condition to keep them, contenting themſelves with the eſtabliſhment of two factories, for receiving the half of the duties of all imported and exported commodities. Pepper, with black and white rice, are the principal commodities of theſe two towns; rice being ſo plentiful at Mangalor, that the inhabitants ſend away 50 or 60 ſhips loaded with it every year.

Onor is a part of Biſnagar; where the Portugueſe have a factory, and trade for almoſt all the pepper of the country; which has the reputation of producing the beſt in the Eaſt Indies. They may buy up yearly to the amount of 8000 quintals, which they are obliged to pay for ſix months before the harveſt, otherwiſe they can get none. Great quantities of rice are alſo ſent from thence to ſeveral parts of India.

Before the Portugueſe were eſtabliſhed on this coaſt, commerce flouriſhed at Onor more than at any other place; but, after the taking of Goa by Albuquerque, it all paſſed to that city. However the viceroys of Onor have always been friends of the Portugueſe, and could never be prevailed on to depart from their alliance.

Canonor, or *Cananar*, is a large province of Malabar: it is not ſo extenſive as Calicut, but is ſuperior to it in commerce, and the multitude of inhabitants.

Its principal maritime places are Baliepatan, Framapatan, and Canonor the capital, from whence it is named. The Portugueſe, for a long time, kept the firſt fort they had in India in this country, but loſt it in 1662; and ſince, the Dutch, who took it, remained in ſome reſpects the maſters of the commerce of this part of Malabar, which has not leſs than 25 leagues along the coaſt.

The town of Canonor is ſituated in 75 deg. of E. lon. and 10 deg. of N. lat. The commodities it affords are ſugar, pepper, ginger, cardamomum, caſſia, honey, ambergreaſe, found at Cape Comorin; ſome precious ſtones, as granates, ſaphires, hyacinths, rubies, topazes, and particularly the Cananor ſtone, of ſome uſe in medicine.

It is ſaid, that there comes to Canonor upwards of 200 ſhips every year; and though the commerce of the above mentioned merchandiſe is very conſiderable, it is certain that the rice produced abundantly in this province is the beſt upon the coaſt, and makes the greater part of the cargo of theſe ſhips.

A league to the ſouth of Cananor is the village of *Caola*, where very beautiful cottons are manufactured; and a little farther off is *Tremepatan*, remarkable for its bazar, merchants, and cotton cloths; the laſt of which retain the name of their reſpective villages.

Baliepatan, is remarkable for its pepper trade. It is properly a village, but large, and inhabited by rich Mahometan merchants. The Engliſh have a conſiderable factory here; it being at this place that the two ſhips which the Engliſh company ſends yearly to the coaſt of Malabar for the pepper trade, have the greateſt part of their cargo.

The Engliſh factory is more than a league from the ſea; being built upon an eminence on the banks of the river, into which ſhips of burden cannot enter.

The French had alſo an eſtabliſhment here; but as it was ill ſituated, and too far from the ſea, it was tranſferred to Tellicherry.

Tellicherry, or *Tilcery*, is ſituated in 75 deg. of E. lon. and 12 deg. of N. lat. 30 miles N. of Calicut. The Engliſh and French have each a factory there. The trade is much upon the ſame footing with that of the neighbouring towns; particularly pepper is ſold there pretty cheap, and ſent in conſiderable quantities from the kingdom of Cananor to Perſia, Baſſora, Mocha, and Muſcat; but the ſmalleſt kind is the beſt for all theſe places.

Calicut is one of the provinces of Malabar; where the Engliſh Dutch, French, and Danes, have all conſiderable factories.

The town of Calicut is ſituated in 75 deg. of E. lon. and 11 deg. 20 min. of N. lat. 300 miles S. of Goa, and 320 S. W. of Fort St. George; being formerly the greateſt place of trade in India; but Goa, and afterwards Surat, deprived it of this advantage; beſides that, the coaſt is very bad, and too frequent inundations have much contributed to hinder its foreign commerce, which however is pretty conſiderable.

The Dutch eſtabliſhed themſelves there in 1604, the Engliſh ſoon after, and the French not till 60 years after them.

Though Calicut is the capital of the province; yet the King quitted it, to keep his court more up the country, which has greatly diminiſhed his commerce. The bazar, however, is one of the moſt beautiful of any on the coaſt of Malabar; containing four or five handſome ſtreets, and is always ſtocked with merchandiſe; the principal of which are pepper, very beautiful cottons, natural ſaltpetre, which wants but very little purification, and is found abundantly throughout the kingdom, particularly near Sirinpatan; ſantal wood, and excellent rice. The ſand on the ſea-ſhore of the Calicut coaſt, particularly at the mouths of rivers, is mixed with very fine grains of gold, by the gathering of which ſeveral poor people acquire a livelihood. The largeſt grains are worth about 7 d. ſterling, but moſt commonly they are worth only 2 d. or 3 d.

Tanjour, or *Tanor*, is the principal place of the commerce of a very ſmall kingdom, to which it has given its name; where the prince, though his territories are ſcarce 30 ſquare miles, is an abſolute ſovereign.

This town is ſituated in 79 deg. of E. lon. and 11 deg. 30 min. of N. lat. 60 miles S. W. of Trincumbar, and 45 S. of Calicut. It has but one road for ſhips, and no river; the inhabitants of its bazar are rich Mahometans, and the natives in general are enemies of the Dutch, but friends to the Portugueſe; and the French were very well received there in 1672.

Cranganor is a ſmall province between Tanjour and Cochin, where the Portugueſe had a conſiderable fort; but the Dutch took it from them in 1662.

Cochin is a town 100 miles S. of Calicut, which the Dutch took from the Portugueſe in 1667.

Porcat comes after, and next *Calicoulan*, and *Coulan*, the laſt province of Malabar.

The Engliſh and Dutch have factories in the capitals, and beſt places of theſe provinces; the Dutch, who are not much more loved there, but more dreaded, than the Portugueſe, having forts at Coulan and Cochin, to aſſure themſelves of the pepper-trade, which is conſiderable there, and which their ſhips take in as they paſs by, continuing their voyage towards Surat, Perſia, and the Red ſea, where they ſell the beſt part of it, in exchange for ſeveral rich merchandiſes, which all theſe places furniſh, and with which they afterwards return to Batavia.

The commerce of theſe provinces is not much different from that of the reſt of Malabar; though there are natural productions proper to ſome, and not found in the others, which make the trade in ſome reſpects different.

In general, they afford pepper, cardamomum, lacca, ginger, tamarins, ambergreaſe, black and white rice, kerſeri, and catiang a kind of ſmall peas, ſantal wood, ſaltpetre, and ſeveral cotton cloths, but neither ſo fine, ſo white, nor ſo well painted as thoſe of Surat, Coromandel, and Bengal.

In Coulan there is alſo a pretty conſiderable pearl-fiſhery belonging to the King. Thoſe who fiſh for theſe pearls work all the week for themſelves, except on Friday, when they work for the maſter of the bark: towards the end of the fiſhery, the laſt eighth is for the King's farmer, beſides a duty paid him for all the ſmall pearls.

The Pearl, or Fiſhery coaſt.

This coaſt extends from Cape Comorin to Negapatan, having before it the iſlands of Manar and Ceylon; and it is in the ſtreight which ſeparates theſe iſlands from the continent that the pearl fiſhery is carried on. The interior part of the country is dry and barren; none of the legumes, and admirable fruits, which are found in other parts, being gathered there, except a little rice, which is ſcarce ſufficient for the ſuſtenance of the inhabitants; ſo that it was only for the pearl-fiſhery that the Dutch envied the Portugueſe.

Tuticorin, is the capital of this coaſt, but leſs remarkable for

extent and beauty, than for its pearl-fiſhery, and its inhabitants being the beſt fiſhers: thoſe of Calipatan are alſo in ſome repute; and it is from theſe two towns that the greateſt number of barks depart.

Tuticorin is ſituated 60 miles N. E. of Cape Comorin: but the Portugueſe, who made themſelves maſters of the fiſhery almoſt in the beginning of their eſtabliſhment in the Eaſt Indies, erected no fortification for the defence of this place. The Dutch, who took it in 1658, and who have ſince poſſeſſed it, in imitation of the Portugueſe, declare themſelves protectors only of the fiſhery; aſſiſting the natives with frigates, in order to give no umbrage to a people who are exceſſively jealous of their liberties. When the time of the fiſhery approaches, which is in April, or in the beginning of May, the *Naick*, or the ſovereign of the country, publiſhes the day and place of its opening, which is always done in concert with the Dutch company's officers, that they may ſend their ſhips there.

When the day is arrived, thouſands of men, women, and children, are ſeen to come from all parts, eſpecially ſome hundreds of divers in barks, all the reſt remaining on the ſhore in tents, during the 15 days the fiſhery continues, which reſembles much an encamped army, ſometimes 50 or 60,000 men being there together.

Before the fiſhery begins, the company's duties are regulated; and the company on its ſide engages to defend the fiſhers, in caſe of any attack, and to repair their veſſels, if any damage happens to them.

The duties of the naick are the firſt day's product of the fiſhery; every day's fiſhery being brought to land, and put under ſand till the heat of the ſun has putrified the oyſters, and looſened the pearls; which, when clean, are paſſed ſucceſſively through ſeveral ſieves; afterwards their place of ſale is ſpecified, which depends on the naick; and then a kind of fair is held from the month of June to the end of September.

The ſmalleſt are ſold by the weight for pearl ſeed, and the largeſt by auction to the higheſt bidder; ſome of them being ſold from 18 l. to 24 l. ſterling, and ſometimes more.

The coaſt of Coromandel.

This coaſt begins at Negapatan, where the fiſhery ends; extending to the river Ragund, and the town of Maſulipatan, in 16 deg. of N. latitude; ſome, however, give it more extent, and continue it as far as Bengal.

The commerce of the European nations upon this coaſt is very conſiderable, where they have great eſtabliſhments, forts, and factories; the ports and roads of the coaſt being the beſt of all the Eaſt Indies, and greatly reſorted by their ſhipping, when, during the winter, they are obliged to quit the coaſts of Guzarat and Malabar, where they cannot be in ſafety.

The principal European factories upon the Coromandel coaſt, are Pondicherry, belonging to the French, and the reſidence of their director-general in the Eaſt Indies; Negapatan, Niſipatan, otherwiſe Portapouli, Tegepatan, Saderaſpatan, Maliſpatman, Datſkeron, Bimlipatnam, Jaguervantze, Conjumelle, and Pelicate, belonging to the Dutch, who began in 1605 to trade on the coaſt of Coromandel, and who took Negapatan from the Portugueſe in 1651, as alſo Tegapatan. They have alſo a conſiderable factory at Golconda, the capital of the kingdom of this name, which contains a part of this coaſt; Maſſapatan, or Madras, belonging to the Engliſh; and Trincumbar to the Danes.

St. Thomas, which the French took in 1672 from the king of Golconda, and loſt the year after, may be reckoned the Portugueſe factory on this coaſt; but it is without a fort.

Beſides theſe factories, ſupported by forts, the Engliſh, Dutch, and French, have alſo forts at Maſulipatan, for the cotton trade, and in ſome other places of leſs conſequence.

Trincumbar, or *Tranquebar*, ſtands about 15 miles to the northward of Negapatan. This place is in the poſſeſſion of the Danes, who have a regular fort, built with ſtone, and ſurrounded with a deep moat. The town alſo, which is about two miles in circumference, is ſurrounded with a noble wall faced with ſtone, having large baſtions at proper diſtances mounted with cannon. The houſes which the Danes and other Europeans inhabit are of brick or ſtone, built all upon a floor, but commodious enough. The ſtreets are wide and ſtraight; being paved on the ſides with brick; but the houſes of the Indians are very mean, having clay-walls, and thatched roofs, as in moſt others towns of India. The garriſon is not anſwerable to ſo large an extent of ground, conſiſting only of about 150 Europeans, and ſome Indians, who are only fit to oppoſe ſoldiers like themſelves.

Porta Nova lies between 20 and 30 miles to the northward of Trincumbar, where the Dutch have a factory.

Fort St. David's, or *Tegapatan*, is about 15 miles to the northward of Porta Nova, in the latitude of 11 deg. 40 min. This place was purchaſed by the Engliſh Eaſt India company about 70 years ago. It has been ſince regularly fortified, and, next to Fort St. George, is a place of the greateſt conſequence to the Engliſh of any upon this coaſt; for here they have a very great trade for callicoes and muſlins.

Saderaſpatan is ſituated 40 miles S. of Fort St. George, where the Dutch have a factory.

Twenty miles northward of Saderaſpatan ſtands *Coblon*, the only ſettlement the Oſtend Eaſt India company had in India. From Coblon to *St. Thomas*, or *Meliapour*, is 10 miles; and this was once the moſt conſiderable place on the coaſt of Coromandel; but when the Portugueſe ſettled here, it was in ruins, and almoſt abandoned by the inhabitants.

Pondicherry, or *Pontcherry*, is ſituated in the territories of the Prince of Gingy, in 80 deg. of E. lon. and 12 deg. 27 min. of N. lat. 60 miles S. of St. George. It belongs to the French, who have a numerous garriſon here.

Out of the fort there is a conſiderable village of Negroes, in the midſt of which is the bazar; the warehouſes are large, being partly in the fort, and partly in the village.

The merchandiſes with which they are uſually filled, and which are deſtined for Europe, or for the commerce of the Indies, Perſia, and the Red ſea, are chiefly brought from Bengal, Surat, and the coaſt of Malabar.

At Pondicherry, however, and in its neighbourhood, are manufactured ſeveral white cotton cloths; thoſe which are painted are brought from Maſulipatan, being the moſt beautiful of this kind throughout India, and the moſt eſteemed in Europe.

From Coromandel alſo, by Pondicherry, are brought ſeveral ſilk ſtuffs, ſteel, cotton handkerchiefs, others of ſilk, diamonds, and other precious ſtones, from the mines of Golconda; ſpun and wool cotton, indigo, Maſulipatan and Niſapatan ſerges, an extraordinary quantity of rice, and other refreſhments.

The commerce of Coromandel is one of the moſt important of the Dutch in the Eaſt Indies, as may be judged by the great number of factories they have on this coaſt, and even in the capital of Golconda; but the extortions of the rajas, in the 17th century, obliged them to take up arms in their own defence; and, by the taking of Maſulipatan, they obliged the King of Golconda, not only to confirm for them their antient capitulations, but alſo to add more advantageous prerogatives, which are at preſent ſubſiſting.

1. That no merchant with whom the commiſſioners of the factories treat, ſhall be diſturbed in his perſon or goods, even upon the King's account, till the company firſt takes cogniſance of the matter.

2. That the weavers, painters, and other workmen employed by the company, ſhould not be obliged to lay aſide their work, even for the ſervice of the King, till ſuch time as they have fulfilled what they contracted.

3. That the company ſhall make uſe of ſuch brokers as they think proper, without being obliged to take thoſe of the King, or the rajas.

They have alſo another privilege, enjoyed by other Europeans as well as them, which is not to pay the duty of chappa-dellalla, that is, the ſtamp-cloth duty, which for the inhabitants of the country is 12 *per cent.*

The duties of entry are three and a half, and four *per cent.*

The merchandiſes which the Dutch import to Coromandel,

del, are ſpice, whoſe profits are very conſiderable, ſilver, and Japan copper, gold, Malacca tin, mercury, lead, vermillion, camphor, elephants teeth, ſandal, ſciapa, woollen cloths, and European ſtuffs, which they give in exchange for the articles above mentioned in Pondicherry.

The principal eſtabliſhment belonging to the Engliſh upon the coaſt of Coromandel, is *Madras*, or *Fort St. George:* as it is generally called from the Engliſh fort there, which ſtands about four miles to the northward of St. Thomas, in 13 deg. ſome odd min. of N. lat. and 81 deg. of E. lon. being near 4800 miles to the eaſtward of London.

The fort ſtands pretty near the middle of the white town, where the Europeans inhabit. There is an oblong ſquare, about a quarter of a mile in length, but not half ſo much in breadth. To the northward of the fort are three ſtraight handſome ſtreets, and as many to the ſouth; the houſes in the whole white town being computed at 120. There is a little ſuburb to the ſouthward, inhabited only by the black watermen and fiſhermen; and beyond this is an outguard of blacks, who ſerve to give intelligence to the fort; but there is no other fortification on this ſide. To the northward, adjoining to the white town, ſtands a much larger, called the black town, where the Portugueſe, Indians, Armenians, and a great variety of other people inhabit. This is built in the form of a ſquare, and is better than a mile and a half in circumference. It has alſo a river on the weſt, and the ſea on the eaſt; and to the northward a canal is cut from the river to the ſea, which ſerves for a moat on that ſide; at leaſt this was the ſtate of the place before it was taken by the French in 1746. Beſides the town of Madras, the Engliſh Eaſt India company have ſeveral of the neighbouring villages under their government, which yield them a conſiderable annual revenue, the whole having been purchaſed of the King of Golconda, when ſovereign of this coaſt. The company have alſo a houſe and garden at St. Thomas's mount, a hill ſeven or eight miles to the weſtward of Fort St. George. The governor is not only ſo of Fort St. George, but of all the ſettlements on the coaſt of Coromandel, and the weſt coaſt of Sumatra; for the perſon who preſides at Marlborough fort, or Bencoolen, is but deputy-governor there: the governor is alſo captain of the firſt company of ſoldiers, as the ſecond in council is of the next; and thoſe who bore the name of captain had but lieutenants commiſſions, and pay very lately. Beſides the lieutenant, there are two enſigns to each company.

As to the governor's ſalary, it is no more than 300 l. *per annum*. The great advantages they make is by their perquiſites, or by trading for themſelves. The other ſix of the council have ſalaries alſo from 100 l. to 40 l. *per annum*, according to their ſeniority; but they are uſually great merchants, and depend more on their trade than the company's allowance. There are alſo two ſenior merchants, who have 40 l. *per annum* each, and two junior merchants 30 l. *per annum*, five factors 15 l. and ten writers 5 l. *per annnm*. Theſe dine at the company's table, and have lodgings provided for them; but it is to be believed that no people in the world work ſo hard as the company's writers do for 5 l. *per annum*. The company allow the two chaplains of the fort 100 l. *per annum*, the ſurgeon or doctor of the fort has about 40 l. the judge-advocate 100 l. and the attorney-general no more than 23 l. The company have alſo two eſſay-maſters in their mint, whoſe ſalaries are 120 l. *per annum* each: as for other inferior officers, they are ſcarce worth mentioning.

The number of ſhips which arrive there every year directly from England upon the company's account, is uſually four or five, and ſometimes ſix.

The kingdom of Siam, that of Pegu, the Manilles, and China, are the places which the Engliſh ſhips of Madras moſt commonly frequent for their Indian commerce.

All the merchandiſes entering Madras, if not upon the account of the company, pay the duties of entry 5 *per cent.* of their value; and the commerce is there ſo conſiderable, that the annual product of this duty amounts often to upwards of 30,000 l. ſterling.

The merchandiſes ſent from Madras to the Manilles, are moſt kinds of cotton cloths, taffeties of Bengal of different colours, chints, and raw ſilk of Bengal of the firſt ſort. Their price is for the moſt part in a fluctuating condition, and much purſuant to the quantity of money brought to the Manilles from the South ſea in the Acapulco ſhips. Beſides theſe Indian merchandiſes, the Engliſh of Madras ſend alſo conſiderable quantities of thoſe of Europe, among others, camblets, cloths, ſerges, hats, worſted ſtockings, chryſtals, Flanders lace, and perpetuanas. When the cargo is made in Europe for the Manilles by the way of Madras, piaſters ſhould be added for purchaſing at Madras ſuch cottons and taffeties as are proper for the Manilles; beſides ſome tons of good wine, and ſome barrels of brandy, both in bottles, which ſell equally well among the Spaniards of the Manilles, and the Engliſh of Madras.

The merchandiſes brought from the Manilles to Madras are piaſters, ſulphur, and leaf-tobacco. Sometimes the Engliſh touch at China in their return, with the merchandiſe they get from the Spaniards, and exchange it for gold, in which they have a profit of 25 l. *per cent.*

Pelicat, or *Pullicat*, lies at the mouth of a river of the ſame name, about 23 miles from Madras. This place the Dutch have been in poſſeſſion of 100 years and upwards; being one of the firſt ſettlements they had on the continent of India. About a day's ſail of Pelicat lies *Caleſore*, where the Engliſh have a ſmall factory. This place is in the latitude of 16 deg. ſome odd min. N. and about 30 miles S. W. of Maſulipatan, the firſt conſiderable port in the kingdom of Golconda.

Golconda is the moſt conſiderable of all the kingdoms in that part of the Eaſt Indies, both for extent and trade. Beſides the antient dominion of the Kings of Golconda, it has been increaſed by a part of Biſnagar and Orixa, the one bordering upon Bengal, and the other upon the Mogul's territories, ſeparated by mountains from Malabar. Two principal things make this kingdom famous, the port of Maſulipatan, and the diamond-mines. See *Diamond*.

The greater part of Golconda is ſo fertile, that uſually every year there are two crops of rice, and ſometimes three; which make it one of its principal commodities. Cotton cloths, among others the painted callicoes of Maſulipatan, are not an indifferent object of trade for it; and it is inconceivable what quantities are yearly vended throughout Aſia, and even too much in Europe, where ſeveral ſovereigns, among others the Kings of Great Britain and France, have wiſely prohibited the uſe and conſumption in their territories.

The indigo of Golconda is not much inferior to that of Lahor, but not ſo good as that of Agra. The Dutch export uſually great quantities of it for Chiul and Dabul. Chryſtal, granates, topazes, agates, amethyſts, bezoar, betel, barley, as alſo ſteel, iron, and ſeveral kinds of refreſhments for ſuch ſhips as come to trade there, are likewiſe a part of its commerce.

Theſe refreſhments are ſo cheap, that a fowl coſts but a penny, and a ſheep 12 d. ſterling.

The commerce of Golconda, and the ports dependent thereon, is ſo advantageous to the Dutch, that, one year with another, they export from it to the value of 140,000 l. ſterling in merchandiſe; a part of which paſſes into Europe, and the other is diſtributed in India.

Maſulipatan is the principal port of the kingdom of Golconda, upon the coaſt of Coromandel, ſituated in 16 deg. 30 min. of N. lat. Its road for ſhipping, which is the ſafeſt in all India, brings merchants there from all nations; it being from thence that the greater part of the ſhips depart which go to Pegu, Siam, Aracan, Bengal, Cochinchina, the Red ſea, Madagaſcar, and the Manilles.

Though the ſame merchandiſes are brought from Maſulipatan, as from other parts of the kingdom; yet it is for the beauty of its painted callicoes, that it is ſo famous in Europe.

There are two ſorts, as at Surat, and in the reſt of the Indies, the one painted with the pencil, and the other only printed; but the painted ſort are by far ſuperior to the others.

The plant which ſerves to paint them, eſpecially red,

called chay, and is found only in the kingdom of Golconda, where it is in the ſame eſteem as cochineel is in Europe.

The advantage of cloths, either painted or printed here, is to become the more beautiful the more they are waſhed; the vivacity of the colours augmenting by the water, and even out-laſting the ſtuff.

At Maſulipatan are alſo found, ſalt, ſerges, ſome ſlight ſtuffs, and rice in greater abundance than in any other part of the coaſt.

The coaſt of Bengal.

Thoſe who bound the Coromandel coaſt by Maſulipatan, call the *Orixa coaſt* that which continues as far as Bengal; and even ſome comprehend therein the town of Pipley, though belonging to Bengal.

The ports of the kingdom of Orixa are all ſo bad, that Europeans trade there but little, or rather not at all; ſo that it will not be improper to paſs over to the kingdom of Bengal, one of the richeſt of the Eaſt Indies.

The kingdom of Bengal is the moſt eaſterly province of the Mogul's dominions; it lies upon the mouth of the Ganges, and is bounded by the provinces of Patna and Jeſuat on the north; the kingdom of Aracan on the eaſt; the bay of Bengal, and the province of Orixa, on the ſouth; by the provinces of Narvar and Malva on the weſt; extending near 400 miles in length, and 300 in breadth. Its foreign and domeſtic trade are very conſiderable; as may appear from the great number of Perſians, Abyſſinians, Arabs, Chineſe, Guzarats, Malabarians, Turks, Moors, Jews, Georgians, Armenians, and merchants from all parts of Aſia, who reſort there.

All the Chriſtian nations eſtabliſhed in the Eaſt Indies, alſo ſend their ſhipping there; and it is with the merchandiſes of Bengal that they partly make their returns to Europe, beſides what they export for their India trade.

The principal merchandiſes at Bengal are ſilks, pepper, rice, ſaltpetre, wood for dying, terra merita, lacca, yellow and white wax, indigo, but very bad, camphor, aloes, and gum gutta.

The towns of the greateſt commerce, and where the Engliſh, Dutch, and French have their beſt eſtabliſhments, are Fort William, Kaſſumbazar, Huegly, Pipley, and Baliſore; to which may be added Patna, the capital of a ſmall kingdom ſubject to the viceroy of Bengal.

Juxadavat is the capital of the Indian government, which is a large and populous city. *Dacca* is a place of ſome trade, ſituated on a branch of the Ganges, 125 miles N. E. of Huegly. It is upwards of 400 miles from Fort William to the city of *Patna*, which lies in 85 deg. of E. lon. and 26 deg. of N. lat. extending ſeven miles along the banks of the Ganges, and is a place of great trade for opium and ſaltpetre; but the Engliſh company lately withdrew their factory from this city. And it ſhould be obſerved, that there are many towns on both ſides the Ganges from Fort William to Patna.

Fort William, or the town of *Calcutta*, is the principal ſettlement belonging to the Engliſh company in Bengal; where there is a governor and ſix counſel, with other officers as at Madras and Bombay; to whom all the Engliſh factories here are ſubordinate. The fort is ſituated on the weſtern branch of the Ganges, in 87 deg. of E. lon. and 22 deg. 45 min. of N. lat. 130 miles N. E. of Baliſore, and 40 S. of Huegly. It is ſtrong, and well fortified; having a garriſon of European and Indian ſoldiers. The town is large, fair, and populous; being inhabited by many private Engliſh merchants, and ſeveral rich Indian traders, who ſupply the company with the commodities of the country.

The Engliſh are alſo eſtabliſhed at Huegly, Pipley, Dacca, and Baliſore; the French at Huegly and Pipley; and the Dutch at Huegly, Pipley, Baliſore, Kaſſumbazar, and Patna.

Baliſore is ſituated in 85 deg. 15 min. of E. lon. and 21 deg. 30 min. of N. lat. on the N. W. part of the bay of Bengal, 180 miles S. W. of Huegly, and 340 N. E. of Maſulipatan; where the Engliſh ſhips bound to Bengal uſually take up pilots.

Huegly, or *Ongli*, is ſituated on an iſland in the moſt eaſterly branch of the Ganges, about 100 miles up the mouth of the river; being a large town, chiefly inhabited by Indians and Portugueſe. It is the place of rendezvous for all nations who trade to Bengal; its warehouſes and ſhops being always filled with the richeſt merchandiſe of the Eaſt Indies; but each Indian ſect has its quarter in the bazars, mixing not together ſo much for the liberty of trade, as through a motive of religion, which hinders theſe ſuperſtitious people from contracting a familiarity with each other.

The Dutch factory at Huegly is large and magnificent, having both the air of a fortreſs and a palace. The director-general lives in a princely manner; and, next to Batavia, it is the place where the Dutch company appears with moſt power and magnificence.

Kaſſumbazar, or *Caſſumbazar*, is ſituated on the weſt branch of the Ganges, 70 miles north of Huegly; being a place from whence the Dutch have the greateſt quantity of ſilk, which they ſend down the Ganges to Huegly, and from thence partly to Japan, and partly to Europe; it being for this trade that they keep there a conſiderable factory, which however furniſhes them with ſeveral plain and ſtriped taffeties, and the moſt beautiful cotton cloths of Bengal.

One year with another, 22,000 bales of ſilk are gathered at Kaſſumbazar, each bale weighing 100 lb. whereof the Dutch company has only leave to purchaſe 6 or 7000 bales, the reſt being divided between the Tartars and the ſubjects of the Mogul, or remaining in the country for its manufactures.

At *Chapour*, in the diſtrict of Patna, the greateſt purchaſes of ſaltpetre are made, and it is alſo beſt refined there; it being from thence that the greateſt quantities which come from Bengal are brought; and it is entirely for this trade that the Dutch keep their factors there. The Engliſh had alſo a factory there; but it has been of late relinquiſhed.

It is neceſſary to obſerve, with regard to the merchandiſe brought from Patna and Kaſſumbazar, that they muſt be ready to deſcend to Huegly about the end of the rainy ſeaſon; the canals drying up two months after, and of conſequence the land-carriages increaſing the expence.

The merchandiſes proper for Bengal are Japan ſilver, copper, Malacca tin, vermillion, mercury, lead, tables, cabinets, and other varniſhed moveables, Japan or Chineſe porcelain, looking-glaſſes, cloths, and all ſorts of European merchandiſe, pepper, ſpice, areca, elephants teeth, Ceylon elephants, birds of paradiſe, and Ternate parrots, called louris.

The merchandiſes, either of the produce of the country, or brought from the neighbouring kingdoms, beſides thoſe above mentioned, with which Europeans uſually compoſe the cargo of their return, are ſpun and wool cotton, coffee, Maldive ſhells, muſk, ambergreaſe, ſalt, rice, common ſugar, and ſugar candy; wherewith the Dutch load ſhips every year, partly upon their own account, and partly by freight for the Indian merchants; their principal deſtination being for Perſia.

From Bengal are alſo brought borax, corn, gums, medicinal roots, embroidered coverings for beds, tapeſtry, and ſtuffs, ſent to China, Japan, Cambodia, Tunquin, and ſeveral other parts of the Eaſt Indies, as alſo to Europe; fruits, butter, honey, confects of ſeveral ſorts, diamonds, whereof there is an antient mine in the kingdom; and ſeveral other precious ſtones: as alſo ſlaves, either thoſe of the country, the poor often ſelling their children for a ſubſiſtence; or thoſe of Arracan, a neighbouring kingdom, whoſe inhabitants are more occupied in piracies than commerce, and whoſe principal trade conſiſts in ſelling their unhappy neighbours of both ſexes, whom they have reduced to ſlavery.

Though all theſe particulars make an opulent object of commerce for all the nations which trade to Bengal, it muſt be notwithſtanding confeſſed, that its manufactures, particularly moſt kinds of cotton cloths, are the merchandiſes which the ſhipping of the European companies bring from it in the greateſt quantity, and in which the Indians alſo drive a conſiderable trade.

The natives who trade moſt in Bengal, and through whoſe hands all the affairs of Europeans paſs, are the

Banians; who are all either merchants, brokers, bankers, or book-keepers. Several among them trade alſo by ſea, and have ſhips, which they either let out to be freighted, or on which they load their own merchandiſe.
It ſhould be obſerved, that the Dutch ſhips which go from Batavia to Bengal, or to Arracan, depart towards the end of the month of Auguſt, or ſome time in the month of September, to meet with the trade winds, as they clear the ſtreights of the Sunda, without which this navigation is difficult and dangerous.

The coaſt of Arracan, Ava, and Pegu.

Theſe kingdoms, which follow that of Bengal, and of which the coaſts of the latter join thoſe of Malacca, are more known in the Eaſt Indies by the pyratical courſes of the one, and by the great wars of the other with the King of Siam for the famous white elephant, than for their commerce with Europeans.
The Engliſh and Dutch, however, keep up ſome correſpondence with Arracan, upon account of the refreſhments their ſhips are obliged ſometimes to take there; yet without having any factories, tho' the King often invited theſe two nations to eſtabliſh themſelves in his territories.
The capital of the kingdom of Arracan is a town of the ſame name, ſituated on the N. E. part of the bay of Bengal, in 93 deg. of E. lon. and 20 deg. 30 min. of N. lat.
The kingdom of Ava is ſituated between the countries of Arracan on the north, and Pegu on the ſouth; but of no conſequence in trade.
The kingdom of Pegu is bounded by Ava on the north; by the mountains which ſeparate it from Laos on the eaſt; by Siam, and the bay of Bengal, on the ſouth; and by another part of the bay on the weſt. This country, like others between the tropics, is flooded when the ſun is vertical. It abounds in rice and wheat; it has figs, oranges, lemons, citrons, pomegranates, bananoes, goyvas, durions, mangoes, tamarins, pine-apples, cocoa-nuts, and other tropical fruits: they have alſo pepper and ſugar-canes: there are great numbers of elephants in the country, which alſo furniſhes ſkins and furs, ſome rubies, ſaphires, and other precious ſtones. The King is arbitrary, and his ſubjects are of a copper colour.
The capital city is Pegu, ſituated on a river of the ſame name, in 97 deg. of E. lon. and 17 deg. 30 min. of N. lat. 300 miles N. W. of Siam.
The Dutch ſend ſhips yearly to Pegu from their factories on the Coromandel coaſt, and from Bengal, laden with cotton cloths of the latter place; as alſo thoſe of Maſulipatan, and Meliapour, better known by the name of St. Thomas.
The inhabitants of Pegu prefer the cloths of Meliapour to all others, which they uſe for cloathing themſelves, without having any occaſion for a taylor, each piece making a complete habit, by twiſting them ſeveral times and ways about the body. The women cut them in four, and cover themſelves to the knees.
Pepper, cinnamon, nutmeg, ſantal wood, and paradiſe wood, are alſo brought there; in exchange for which are had ginger, gold, ſilver, precious ſtones, and pearls: the two latter are contraband commodities, and require the King's permiſſion to be either bought or ſold: rice is alſo in great plenty there, and the Dutch bring it to Malacca.
Bargains are concluded among the inhabitants of Pegu without ſpeaking one word: the purchaſer and vender give each other their hands covered with a handkerchief; and by the different motions of their fingers make known the price they offer, or will have for their merchandiſe.
Payments are uſually made in three months time, in gold, purſuant to its fineneſs; unleſs the trader is willing to be paid in ganzas, a mixed money of copper and tin, which each perſon has a liberty of trading with, by paying the King's duties.
There are ſome profits in this money by ſtaying ſome time in Pegu; gold, ſilver, precious ſtones, pearls, and other merchandiſe, being paid for in ganzas.

The coaſt of Malacca.

This coaſt is bounded by Siam on the north; by the bay of Siam and the Indian ocean on the eaſt; and the ſtreights of Malacca, which ſeparate it from the iſland of Sumatra, on the ſouth-weſt, being 600 miles long, and 200 broad; but in many places much leſs.
The town of *Malacca* is ſituated in 100 deg. of E. lon. and 2 deg. 30 min. of N. lat. Alphonſus Albuquerque took it from the King of Thor in 1511. The Dutch attacked it unſucceſsfully about 100 years after: but at laſt they expelled the Portugueſe in 1641, after a ſiege of ſix months, and have ever ſince remained maſters of it. Its port is one of the fineſt and ſafeſt of all the Eaſt Indies; for it may be entered at all times of the year, which is an advantage wherein other places are deficient.
As long as the town remained in the hands of the Portugueſe, it was one of the ſtaples for the Indian merchandiſe, and the magazine of the Eaſt, for all the Indian nations frequenting the ſea.
It yet ſupports its reputation, and its trade is pretty conſiderable, particularly in Surat, Coromandel, and Bengal cottons; which are ſold at Malacca, Andra, Giery, and on the rivers of Siaca and Pera. Several other merchandiſes are alſo met with there, part of which paſſes by land to Siam and Pegu.
The payment for theſe cottons, and the other merchandiſe which the Dutch bring there, is in gold and tin; whereby their profits are great in the other parts of India where they ſend them.
The number of Dutch families ſettled there are 2 or 300, and the other merchants are Maleſe, Moors, or Chineſe, which laſt interfere only in the retail of ſome ſmall commodities, as tea, ſugar-candy, and confects: but the others have always their ſhops well ſtocked with all the merchandiſe imported by the Dutch ſhipping.
It was not ſo much for the Malacca trade that the Dutch deprived the Portugueſe of this town, as for its admirable ſituation for China and Japan; beſides, that it commands all the ſtreight on which it is ſituated.
It is at Malacca that all the Dutch company's ſhips are to arrive, which come from China and Japan: it is there alſo that the diſtribution is made of all the rich merchandiſe of theſe places, partly for Batavia, and from thence to Europe; and partly for all the factories they have in the Eaſt Indies, at Bengal, upon the Coromandel coaſt, at Surat, in Perſia, and the Red ſea.
Ligor, and *Tenaſſerin*, are two ſmall kingdoms of the peninſula of Malacca, which depend on the King of Siam: but the Dutch have factories in them, and drive on a pretty good trade in tin and pepper.

The coaſt of Siam.

This coaſt extends from the 10th to the 25th deg. of N. lat. being near 1000 miles in length from N. to S. and from 1 to 200 broad.
The kingdom of Siam, even ſince Tunquin and Cochinchina were ſeparated from it, is one of the moſt powerful kingdoms of the Eaſt Indies.
Its boundaries are at preſent Cambodia to the eaſt; Laos to the north; Ava and Pegu to the weſt; and the gulph of Siam, to which it gives its name, to the ſouth.
Its capital is Seia-Juthaia, called variouſly by ſome Europeans Judha, Judia, Judea, and Odia; the Portugueſe call it Siam, and it is ſituated upon the Menam, a large river which empties itſelf into the gulph of Siam, four days journey from Seia-Juthaia. This river, like the Nile, overflowing the whole country in regular ſeaſons, makes it very fertile in all the neceſſaries of life, particularly in rice, whereof ſtrangers yearly take away ſeveral ſhip loads, which they ſell elſewhere with great profit. Large ſhips cannot aſcend the Menam, and therefore wait for their loading at the lower part of the river; middling veſſels advance as far as Bencock, five or ſix leagues higher; but none except barks and jonks can go as far as the capital.
There is ſcarce a part of Aſia but ſends merchants to Juthaia, and the Europeans who have factories there are the Engliſh, Dutch, and Portugueſe: the French had alſo a pretty conſiderable eſtabliſhment in 1686 at Bencock; but, by the revolutions of 1688, were obliged to quit it, and ſince that time their trade there is very conſiderable.
None but European merchants, the Chineſe, and Moors who are Mahometans, are privileged to have houſes

the towns; the Indians having them out of the walls, but all ſeparately; their quarters called camps being places where they both carry on their trade, and perform their religious exerciſes.

The Dutch are in moſt credit, and conſequently have the beſt trade. The factory they built there in 1634 is one of the moſt beautiful they have in the Eaſt; and their director-general holds one of the firſt ranks among thoſe which the company has in the Eaſt Indies.

Traffic is one of the principal profeſſions of the Siameſe; the King of Siam himſelf being one of the greateſt traders of his ſtate either abroad or at home.

His exterior commerce is principally to China, where he ſends yearly five or ſix large ſhips; to Japan two or three; to Tonquin, and Cochinchina, as many more; laſtly, he ſends ſome to all the coaſts of the Indies, eſpecially to Surat, and even to Perſia, where there are always ſome of his ſhips, though commanded chiefly by Chriſtians; the Siameſe being little experienced in the arts of navigation.

His interior commerce by his factors conſiſts not only in the precious merchandiſes imported by his ſhips, with which his warehouſes are always well ſtocked, and which he ſells at whatever price he pleaſes; but alſo in the different productions of his territories, whether he receives them as a tribute from his people, or has them cultivated in his demeſnes; ſo that in betel, and arrack only, both green and dry, plants growing in ſeveral parts of Siam, and much uſed by the Indians, who chew them continually, the King's factors drive on a conſiderable trade, whereby the cuſtom-houſe of Bencock, and the farming of the neighbouring gardens, are ſaid to amount yearly to upwards of 180,000 l. ſterling in revenues for the King.

The kingdom of Siam has ſeveral tin, lead, ſilver, and even gold mines; but the latter produces little, and the metal is of a very low ſtandard.

The tin-mines of Lagor are the moſt conſiderable; and this metal makes one of the beſt parts of the Dutch trade to Siam; the company having treated with the King for an excluſive privilege of its purchaſe.

It is with this tin that the Dutch ballaſt their ſhips, when they return into Europe; yet reſerving great quantities thereof for ſeveral parts of the Indies, where they exchange it for other merchandiſe with a very conſiderable profit.

The other merchandiſes exported from Siam, are timber for the building of ſhips, whereof the Dutch ſend great quantities to Batavia; ſtags, buffaloes, oxen, and tyger's hides, and ſkins; lacca, lead, ſapan wood, calembac, honey, wax, ſugar, betel, areca, pepper, rice, ſalt, varniſh, ſeveral odoriferous kinds of wood, tea from China and Japan, amber-greaſe, manufactures of the country, elephants teeth, ſalt-petre, gum-gutta, canes, cotton, ivory, eagle-wood, muſk, benjoin, and ſilk; but the three latter are brought there from Lahor, when this kingdom is not at war with Siam.

At Siam are alſo found precious ſtones, but Europeans seldom trade for them, their greateſt profit being in the other merchandiſe.

The foreign merchandiſe for the commerce of Siam, are ſilk ſtuffs, ſpice, all ſorts of Chineſe and Japan curioſities, divers European goods, gold and ſilver in bars; Surat, Coromandel, and Bengal cottons, whoſe profits would be immenſe, if the Indian manufacturers of theſe cloths did not bring them there themſelves, and take away all the advantage of the trade, by ſelling them cheaper than Europeans, who have them only at ſecond-hand.

To Siam are alſo imported red coral, yellow amber, quickſilver, ſandal, and woollen cloths. Pepper was formerly here a good commodity, but ſince its plantation in the kingdom, the Siameſe even furniſh ſtrangers with it.

As to the commerce of the Siameſe among themſelves, it abounds ſo with indolence, or rather probity, that in their bazars and markets, the vender neither reckons the money he receives, nor the purchaſer the commodity delivered to him.

The time for opening the bazars is from five o' clock in the evening to eight or nine.

The coaſt of Cambodia, or Camboya.

The kingdom of Cambodia is tributary to that of Siam, extending from the 9th to the 15th deg. of N. lat. The capital of Cambodia, to which Europeans give the ſame name as to the kingdom, called by the natives Ravecca, is ſituated 60 leagues from the mouth of the river Mecon, which empties itſelf into the gulph of Siam; and which, like the Nile and the Menam, overflows the country every year.

The Portugueſe for a conſiderable time had all its trade in their hands; but now it is open to all thoſe who are willing to trade to it.

The Dutch ſend there from Malacca, Bengal cotton cloths, and ſpun cotton.

The merchandiſe which may be exported from this kingdom are benjoin, lacca, wax, copper baſons, Chineſe fire-ſhovels; rice ſent to Quinam, where it is ſold to great advantage; and the hides of ſtags, oxen, buffaloes, and other animals; which, as well as at Siam, are ſome of the beſt and eaſieſt merchandiſe for ſale, upon account of the Dutch and Chineſe trade therein to Japan: but the Chineſe trade moſt to Cambodia.

The coaſt of Cochin-china.

This kingdom is ſituated between thoſe of Cambodia and Tonquin, upon a gulph of the ſame name: about 200 years ago it was a province to the latter, being upwards of 400 miles long, and 150 broad. The King is an abſolute monarch, and his ſubjects are pagans. The country abounds in elephants and rice: its principal trade with foreigners is that to China, and Japan, carried on by the Chineſe eſtabliſhed in Cochinchina, or thoſe of Canton: but the Dutch ſend there alſo ſome merchandiſe. The exports of the produce of the kingdom are gold, either from mines, or gathered in the ſand of ſome rivers; calambac wood found only in Cochinchina, and ſold for its weight in gold, even in the country, and of which there are three ſorts; that retaining the name of calambac, the moſt precious; aquila and calambouc ~~not~~ ſo good, but ſerving equally for medicine and perfumes; beſides pepper, ſent to China: ſilk gathered there in ſuch quantities that even the cordage of their gallies, and fiſhermens nets are made of it; very broad taffeties; ſugar, wax, areca, and betel; ſeveral ſhip-loads of rice: laſtly, birds neſts, the delight of all the Indians, which they uſe as a ſpice in what they eat, but it is more dear and precious than all others.

Silver is brought there from Japan; as alſo porcelain varniſhed works, and lacca; ebony and ivory from Chiampa: pearls from Anian; but the ſale of them and diamonds to ſtrangers is prohibited: in all other reſpects there is a free trade; and the Dutch, who ſend their ſhips there, trade in all theſe commodities, which they afterwards diſtribute in the reſt of Aſia.

Painted callicoes, ſpice, woollen cloths, ſeveral kinds of European merchandiſe, coral, yellow amber, vermillion, quickſilver, and pepper, are fit for this kingdom.

The coaſt of Tonquin, or Tunquin.

Tonquin was for a conſiderable time a province of China, when Cochinchina and Chiampa made a part of this province; but at preſent theſe two kingdoms are ſeparated from it; and Tonquin, much more ſtraitened than formerly, is bounded on two ſides by three provinces of China, which are Canton to the eaſt, and Invan and Quanſi to the north: on the weſt it touches the kingdom of Brama, and on the ſouth Cochinchina, and the gulph of the ſame name, lying between 101 and 108 deg. of E. lon. and 17 and 26 deg. of N. lat. being about 500 miles long, and 400 broad.

The chief town is Keccio, or Cachao: the monarchy is abſolute, and the religion paganiſm, as well as in Siam. It is not long ſince that the Tonquineſe renounced the Chineſe politicks, of cautiouſly trading with any foreign nation; ſo that now they not only permit other nations to come and trade with them, but alſo they ſend ſhips of their own to Siam, Batavia, and ſeveral other parts of the Eaſt Indies.

The beſt merchandiſe which can be brought by Europeans to Tonquin is gold or ſilver, particularly piaſters; tho' they want neither of theſe metals, having a ſufficiency

of

of the former from China, and of the latter from Japan. The other merchandiſes imported to Tonquin, are ſpice, pepper, quick-ſilver, vermillion, woollen cloths, and yellow amber.

The ſilk of Tonquin is produced in ſuch great abundance, that the poor and the rich equally cloath themſelves with ſeveral ſlight ſilk ſtuffs manufactured in the country, which are as cheap as thoſe made of hemp and flax in other countries.

The Dutch export much of this ſilk for Japan, which is more convenient than to bring there the ſilk of Perſia and Bengal, as they did before their trade was eſtabliſhed at Tonquin.

Muſk, tortoiſe ſhell, and pickled tortoiſe fleſh, aloes-wood; ſugar, in ſmall loaves of a pound, and half pound; porcelains, lacca, rice, and birds neſts, are alſo articles for the Tonquineſe trade.

They have oranges and citrons; but the latter are ſo acid, that they cannot ſell them to ſtrangers among the refreſhments they furniſh them abundantly with; however, they uſe this fruit themſelves, inſtead of aqua-fortis, for cleaning the copper, braſs, and iron they deſign to gild; as alſo for the dying of their ſilks, and the lixiviums of their cottons, which the juice of theſe citrons render of a gloſſy white colour.

The Tonquineſe are free, honeſt, and faithful in trade; differing much from the Chineſe, who pride themſelves in deceiving foreign merchants, and who uſe a thouſand artifices in the purchaſe or ſale of their merchandiſe. See *China*.

Beſides theſe countries, there are alſo the kingdoms of Aſem or Acham, and Boutan.

Aſem, is a kingdom of India, and one of the beſt countries of Aſia; the capital town of which is Chamdara. It is bounded by Boutan on the north; by China, on the eaſt; and by Patna on the weſt. In this country are found mines of gold, ſilver, lead, and iron. Silk is alſo gathered there in abundance, but coarſe; and the ſtuffs made thereof, tho' very gloſſy, cut, and are of little ſervice.

The lacca of Aſem is the beſt of all Aſia; but the gold is a contraband merchandiſe for exportation, tho' no money is coined of it, being always in ingots, which the people uſe in the interior commerce of the kingdom.

The ſilver money is of the ſize and weight of the rupees, and of an octogonal figure.

At Aſem two ſorts of ſalt are made, one with the greeniſh matter found upon ſtill waters; and the other with the leaves of the plant called Adam's fig.

It is alſo with the aſhes of this fig tree that the lixiviums for bleaching ſilks are made, which give them a beautiful luſtre; but as there is not enough for the bleaching of all their manufactures, ſuch ſilks as have been bleached by them are diſtinguiſhed from others, and are therefore dearer.

Another object of trade which is very conſiderable there, conſiſts in bracelets and tortoiſe-ſhell collars, or ſea ſhells, of the form of a hen's egg, which they wear on their legs and arms, and of which they conſume great quantities at the funerals of their parents; but the great men wear bracelets of coral or amber.

Boutan, is a kingdom of the Eaſt Indies bordering upon the Mogul's territories, very little known but by a caravan of merchants which departs yearly towards the end of December from Patna.

This caravan arrives in eight days at Gorroche-pour, the laſt town belonging to the Mogul, where the merchants take in proviſions for the reſt of their journey. From thence to the foot of the Naugrocel mountains, there are eight or nine days very troubleſome journey, and over the mountains eight or ten days, where it is that the inhabitants of the country, eſpecially the women, preſent themſelves to the travellers for carrying them, their merchandiſe and proviſions, to the bottom of the deſcent. The proviſions and merchandiſe are ſet on the backs of he-goats, who carry each about 150 lb. and the men are ſeated on a kind of ſaddle, which theſe poor people gird on their backs, three women ſucceſſively helping each other to carry one man.

On clearing the mountains there are oxen, camels, horſes,

and even ſedans for thoſe who fancy them, with which they go to Boutan, where a very conſiderable commerce of muſk is carried on, and where alſo is found the moſt excellent rhubarb, with abundance of martins, which afford very beautiful furs.

There is little gold found throughout this kingdom; but it is thought that there are mines of ſilver; and that it is of the metal of the country that the King of Boutan has his money ſtruck, which is of the weight and value of rupees, and of an octogonal form, with characters neither Indian nor Chineſe.

Their ſole manufactures are coarſe cloths, either all of hemp or cotton, with which they cloath themſelves in ſummer; and ſome ill woven cloths, not better than felts, which ſerve them in winter.

Remarks.

At the time of granting the charter for incorporating the Engliſh Eaſt India company in 1599, the Portugueſe, and the Hollanders, were in poſſeſſion of ſeveral large territories along the coaſt of India, as alſo in ſeveral other places of Aſia, proper for the proſecution of this trade: the former, indeed, had no company; but the latter had formed ſeveral companies ſo early as the year 1596, which were all incorporated together in 1602. The French eſtabliſhed a Chineſe company in 1660; and their preſent India company, which has ingulphed ſo many others, was firſt eſtabliſhed in 1664. But it was a conſiderable time before the Danes embarked in this trade; who were ſoon followed by the Oſtend company; as alſo by a company belonging to Sweden; and, ſo late as the year 1753, by the company of Embden, which may probably meet with ſucceſs under the patronage of his Pruſſian Majeſty, though the Oſtend company found ſo little protection from the emperor.

The united company of merchants of England trading to the Eaſt Indies, are in poſſeſſion of fort St. George, and fort St. David, two principal eſtabliſhments on the coaſt of Coromandel; fort William, in the bay of Bengal; together with the iſland of Bombay, on the weſt coaſt of the hither Peninſula of India; as alſo of St. Helena, an iſland in the Atlantic ocean: beſides which they have a trade, or factories, in Arabia, Perſia, China, Siam, Sumatra, and other iſlands of the Indian Archipelago: where, in purſuance of their charter, and of ſeveral acts of parliament, no Britiſh ſubjects are to repair to ſuch places of Aſia, Africa, and America, beyond the cape of Bona Eſperanſa to the ſtreights of Magellan, where any merchandiſe may be had.

The Portugueſe at firſt, in a manner, monopolized the whole trade to the Eaſt Indies: but the Dutch companies having united themſelves, fitted out ſtrong fleets which, being an overmatch for the Portugueſe, fell upon their ſhips wherever they met them; and took one place after another, till they hardly left the Portugueſe a ſafe or factory in India. The Dutch afterwards reduced ſeveral of the Indian iſlands to a ſtate of ſlavery: they meaſely, cruelly, and treacherouſly, expelled the Engliſh from Amboina: and though no people complained more of oppreſſion in Europe, which they even made a pretence for rebellion, caſting off their allegiance to their lawful ſovereign; yet, in a very ſhort time, they became the greateſt tyrants and oppreſſors that were ever known in the eaſt, or perhaps in any part of the univerſe, except the Spaniards in America: by which means, they have uſurped the dominions of ſeveral lawful princes, and eſtabliſhed themſelves at Batavia, in ſo formidable a manner, as to become the abſolute lords of the Indian ſeas; where they intimidated even the Mogul, plundered the Engliſh ſhips in time of peace, and very tyrannically aſſumed the property of all the ſpice iſlands to themſelves. Some of theſe ſpice iſlands actually belonged to the crown of England, particularly the Banda iſlands, by ſurrender of the Oran Cayas, or ſtates of Pooloroon and Lantor; at which time, if the Britiſh nation had exerted itſelf in behalf of her trade and empire at ſea, the Dutch had never been in a capacity of inſulting her coaſts. The ſpices are the baſis of the Dutch trade; being of more value to them than the mines of Potoſi to the Spaniards; for, in fact, they not only bring into their country Spa-

ſilver without the trouble of working the mines, but every other valuable merchandiſe the world can afford. It is generally ſaid, indeed, that it was the intereſt of the Engliſh to aggrandiſe the Dutch, in order to depreſs ſome popiſh powers, and defend herſelf: but had Great Britain obtained poſſeſſion of thoſe treaſures which the ſpices of India accumulate, ſhe would have been in no neceſſity of the Netherlands for a barrier: becauſe, power is an inſeparable attendant on riches; and if that little ſpot of ground, or rather mud, the ſeven provinces, are rendered ſo conſiderable by theſe advantages, what a glorious figure might Great Britain have made, if ſhe had been miſtreſs of the ſame opulent branch of commerce! But this invaluable loſs is to be attributed to the timidity, or avarice of ſome people about King James I. However, Cromwel inſiſted upon a reparation, trivial as it was; and, in the reign of Charles II. had not the nation been apprehenſive of the increaſing power of France, the Dutch had probably been compelled to reſtore the Banda iſlands, which they had ſo rapaciouſly, and ſo contradictory to all fiducial engagements, diſmembered from the crown of England.

The danger that threatens the ſettlements, belonging to the Engliſh Eaſt India company, from the power and proximity of thoſe belonging to the crown of France, is very great. Madraſs, or fort St. George, with the adjacent country, was purchaſed by the Engliſh Eaſt India company, of the King of Golconda; but the Mogul, afterwards making a conqueſt of the country, looked upon himſelf intitled to this, as well as the reſt of the towns in that kingdom: however, it became the ſeat of the Britiſh preſidency in the Aſiatic Indies; where four, five, or ſix ſhips, were generally ſent every year from England by the company, who alſo kept ſeveral trading veſſels in the country: the principal commodities purchaſed of the natives, for the uſe of the company, being callicoes, chints, muſlins, and ſometimes diamonds; which was an extenſive and advantageous commerce, enjoyed by the company, almoſt in an uninterrupted courſe, for upwards of 100 years.

The proximity of Madraſs to Pondicherry, being only twenty leagues diſtance, occaſioned it to ſuffer in ſome branches of its trade, ſince the peace of Utrecht; from which time, the French ſeemed to be more intent upon extending their commerce to, and in the Eaſt Indies, where they were become powerful competitors againſt the Britiſh company: but, notwithſtanding this claſhing of intereſt, Madraſs acquired ſome new advantages: the troubles in Perſia induced many Armenians to leave their country, and ſettle in India, where ſeveral of the moſt conſiderable fixed their reſidence and families in the preſidency of Madraſs: the irruption of the Morattaes in Carnatica, in the year 1740, was another event that brought ſeveral eminent and wealthy merchants to Madraſs; inſomuch, that the ſettlement was become the admiration of all the Aſiatic people, and the envy of all the European neighbours; for it had, a great number of years, brought in a clear annual revenue of 70,000 pagodas, or, reckoning each pagoda at 7 s. 8 d. 26,833 l. 6 s. 8 d. ſterling, by the duties on the trade of the Aſiatic inhabitants, and their conſumption; which was a ſum far exceeding the whole charges of the place, civil and military, according to the eſtabliſhment in peace: the neat gain, one year with another, on the head of profit and loſs in the Madraſs books, ariſing from the revenue, ſilver coinage, with the ſale of woollen and other European goods, amounted to near 90,000 pagodas, or 34,500 l. ſterling annually, after all charges, civil and military, of the coaſt were paid: beſides, the factory generally inveſted a million of pagodas, or 383,333 l. 6 s. 8 d. ſterling, in the commodities of the country, and uſually ſent 6000 bales of callicoes yearly to Europe; which brought a very great accumulation of treaſure to the proprietors of India ſtock.

There is no occaſion to repreſent in what an indefenſible condition this preſidency of the Eaſt India company was in the year 1746, when it was taken by commodore De la Bourdonnais; though ſuch had been the condition of it for eight years before: it is not neceſſary to enter into an examination why the neutrality offered by the French company, at the beginning of the war was rejected by the Engliſh company: nor why commodore Barnet was ſent to India with a ſquadron that ſeemed calculated only for a cruizing ſcheme; while the ſafety of the ſettlements, upon which depended the hopes of ſecuring the trade, appeared to be entirely unthought of, or, if thought for entirely neglected by the Engliſh company; though the French had ſet them a ſeaſonable example to the contrary at Pondicherry: nor is there room here to enter into an enquiry how the Britiſh preſidency fell into the hands of the French commodore: though it is proper to make a few obſervations on the loſs of the ſettlement.

Commodore de la Bourdonnais, at the reduction of Madraſs, obtained a booty of ſilver, woollen goods, velvets, copper, iron, lead, and ſtores for uſe and ſale, to the value of 73,000 l. in plate, furniture, mint neceſſaries, and other ſmall articles, 12,000 l. 1600 bales of callicoes, 7000 bags of ſalt-petre, and 800 landies of redwood, valued at 72,800 l. prime coſt; in all, 157,800 l. they alſo took the Princeſs Mary, with the Mermaid and Advice ſnows, employed in the ſervice of the company: to which might be added a much more conſiderable ſum, from the deprivation of ſo important a branch of commerce, and the loſs of revenues; beſides the expence of the public buildings, which coſt upwards of 60,000 l. and which the French intended to demoliſh, if they had not received freſh inſtructions, in conſequence of the Engliſh having taken Cape Breton; which cauſed the French to alter their meaſures, with the view of exchanging the one for the other.

What elſe could be expected, but the reduction of this valuable ſettlement, at a time when the garriſon, ill provided as it was in other reſpects, conſiſted only of 300 Europeans, of which there were no more than 200 effective men to be depended upon; beſides 80 ſailors; as alſo 200 Topaſſes, a black degenerate race of the Portugueſe, and of little uſe? What elſe but the reduction of ſuch a place muſt have been the conſequence, when attacked by a French officer of experience, at the head of 3200 Europeans, with 500 Coffries, as alſo a conſiderable number of Cephoys and Peons, the natives of the coaſt of Coromandel; aſſiſted with a ſquadron of ſhips, of ſuch ſuperiority as to intimidate commodore Peyton to diſappear with the Engliſh ſquadron, leaving the principal ſettlement belonging to the Engliſh Eaſt India company to fall an eaſy conqueſt to the French?

Since this reduction of fort St. George, the French have had their deſired opportunity of eſtabliſhing their intereſt among the natives of that part of the Coromandel coaſt: their trade has received a great augmentation: and their ſettlements are continued in the ſame defenſible ſituation, as Pondicherry was too fatally proved to be, by admiral Boſcawen, in 1748; though at the head of 3,690 ſoldiers, with 2000 Indians, 120 Dutch, and 148 artillery people; aſſiſted by a fleet of 9 ſhips of the line, 2 frigates, a ſloop, and 2 tenders, having 4580 ſailors aboard; the particulars of which diſcomfiture is perhaps to be attributed more to the neglect of the miniſtry, than that of the company.

It is certain, that during the laſt war, the French were too formidable for the Engliſh in the Eaſt Indies; where the ſafety of fort St. David was, at firſt, owing more to a diſperſion of the French ſquadron by a ſtorm, in which they loſt 1200 men; than to that poſture of defence it appeared to be in ſome time afterwards, when the French unſucceſsfully attacked it, with the hopes of the total extirpation of every Engliſh ſettlement on the coaſt of Coromandel. The French navy is continually increaſing, and not in ſuch an inperceptible manner as their policy formerly induced them to; but in the fair open face of day, without the dread of a ſecond Cromwel to threaten the burning of them upon their own ſtocks: their intereſt is every where extended with their power, and their commerce conſequently with both, eſpecially in India, where Madraſs has but an inconſiderable number of the 250,000 Aſiatic inhabitants left in its territory. If this is the caſe, the Britiſh government, as well as the Britiſh company, cannot be too diligent in retrieving their cha-

racter, and reſtoring their trade in India: the French are already too powerful along the coaſts of Africa: they are now invading the Britiſh ſettlements on the continent of America, aſſiſted by the ſtrength of the French coloniſts of Canada and Louiſiana, which are ſaid to amount to 200,000 men, who bid fair to procure the ſubverſion of the Britiſh fur trade with the Indians: this conſideration ſhould put the Engliſh upon their guard in every part of the world, and eſpecially in India, where they have had the mortification to find themſelves in the greateſt ſtate of debility; which, if properly executed, and carefully continued, may yet bid defiance both to the ſtrength and artifices of ſo potent an enemy, and ſo inſidious a rival.

Many objections have been made to the India trade; but more to the carrying on of that trade by excluſive companies. The trade is ſaid to be very prejudicial, as it is now driven; becauſe it exports European bullion, ſpends little of the product or manufactures of Europe, and brings in commodities perfectly manufactured, which hinder the conſumption of European goods, and diſcourage the wearing ſuch as are purchaſed with them: the chief profit thereof ariſing from underſelling the labour of the European poor, particularly the Engliſh; becauſe it is bought there cheaper, than, by reaſon of the value of the lands in England, and the price of proviſions, they are able to work here.

Upon theſe conſiderations, the Britiſh parliament made a law, in the 10th and 11th years of William III. to prohibit the wearing of wrought ſilks, bengals, ſtuffs mixed with ſilk or herba, of the manufacture of Perſia, China and India, and all calicoes painted, dyed, printed, or ſtained there. The reaſon of which was, the great detriment the nation received, as the trade was then managed, by exhauſting the treaſure thereof, and taking away the labour of the people, whereby many of the manufacturers were become exceſſively burthenſome and chargeable to their reſpective pariſhes, and others compelled to ſeek for employment in foreign parts.

The making this law gave a new life to the Britiſh manufactures, and would have given more if the true intent of the parliament had been anſwered: but it was not; for it neither kept the Britiſh treaſure at home, nor prevented thoſe commodities from being worn in Great Britain, as it was deſigned it ſhould, which made it much doubted whether any thing leſs than a total prohibition of their importation would do it: for though they were directed to be exported again, there is great reaſon to believe they are privately brought back both from Ireland, the Britiſh plantations, and other places to which they are ſent, to the loſs of the royal revenue, the prejudice of the Engliſh painters and ſtainers, beſides the injury to the Britiſh manufactures; otherwiſe, how came ſuch great quantities to be worn and uſed here, when the ſtock in hand has been ſo long ſince ſpent?

It has, however, been alledged, that by the exportation of thoſe manufactures again, more bullion in ſpecie is brought into England, than is carried out for the buying them in India: but this was never yet made out; though it would be much to the ſatisfaction of the people, who daily ſee that bullion carried away, and alſo for the honour of the company, that it was done.

But if the advocates for the company mean that the exportation of thoſe manufactures is a help to Great Britain in the balance of its trade, which muſt otherwiſe be paid in bullion; it may be anſwered, that the product and manufactures of Great Britain always have, and are ſtill ſufficient to ſupport the balance of its trade. As for white calicoes and muſlins, they have beat out the wearing of lawns, cambrics, and other thin German and Sileſia lawns; which has been the occaſion of turning many of thoſe looms to the woollen manufactures there, that were formerly employed in the weaving them; and has abated the exportation of great quantities of cloth; beſides the hinderance callicoes give to the conſumption of Iriſh and Scotch linens; the latter of which, in particular, being thin and ſoft, are as proper for dying, printing, and ſtaining, as they are, and may be made as white.

Therefore, it appears, that the Eaſt Indies is a bottomleſs pit for Engliſh bullion, which can never circulate to

England again: whereas, if it was ſent to any part of Europe, there might be ſome hopes, by the balance of trade, to return it; and when this bullion fails, that trade muſt ceaſe of courſe; which it may ſoon do, if the company carry out yearly as much as other trades bring in.

It has been objected, that the excluſive trade granted to the company is prejudicial to the nation; becauſe they do not carry on the Indian commerce in its full extent, which would be done by private traders, who would ſearch every port from the Perſian gulph to Japan for profit, which the company neglect. Beſides, there are other commodities which the company may trade in; and the tract of land within their charter is large enough to afford an advantageous commerce there, the profit whereof might be returned to Great Britain, in things no way injurious to its manufactures; ſuch as raw ſilk, indigo, pepper, ſalt-petre, ſpices, drugs, china-wares, coffee, tea, and many other things, if they were induſtrious to make diſcoveries, as private merchants would do if the trade lay open.

It may be remembered, that for many years before and after the revolution, there was great clamour and complaint againſt the old Eaſt India company for their oppreſſion, as well as monopoly, of a trade of ſuch extent, which includes ſo great a part of the globe, and ſo perfectly known by the Britiſh nation; and the parliament, when they borrowed 2,000,000 l. on the trade to the Eaſt Indies, did not think it the intereſt of England to ſettle that trade in an excluſive company, but in a regulated general ſociety, giving that trade to thoſe perſons who ſhould ſo advance that ſum for the ſervice of the public, to every perſon ſeverally by name, in proportion to his ſubſcription, however it may be now ordered, and carried on by the preſent company.

Dr. Davenant, who was a great advocate for carrying on the Eaſt India trade by an excluſive company, ſays, "That as to this trade in general, if all Europe by common conſent would agree to have no farther dealings to thoſe parts this ſide of the world by ſuch a reſolution would certainly ſave a great and continual expence of treaſure." He computes the gold and ſilver brought into Europe for about 200 years, to be 800 millions ſterling; and afterwards accounting for this immenſe ſum, concludes, that 150 millions of it has been carried away and ſunk in the Eaſt Indies; whereupon he expreſſes himſelf thus: "from whence I have reaſon to conclude, that the European nations had been richer by a full third than they are, if that trade had never been diſcovered and undertaken."

Sir Joſiah Child, a director of, and great advocate for the Eaſt India company, ſays, that in his time 25 or 30 of the moſt warlike ſhips, with 60 to 100 men each, were conſtantly employed in that trade by the Engliſh company: but for ſome years paſt, Mr. Wood ſays, he could not learn there were more than from 10 to 15. He ſays, it is probable this will be attributed to the duties and impoſitions on all goods imported, and the prohibition of Eaſt Indian and Perſian ſilks and ſtuffs: but he tells us that he is free to declare, that the company being the only perſons who can trade to the Indies, and the act of navigation preventing any Eaſt India goods being brought from France or Holland into Great Britain, they underſtand their own intereſt too well to carry on ſo large an extenſive a traffic as would be beneficial to the nation and not equally advantageous to themſelves.

All trades are carried on by ſelect companies with great prejudice to the nation than otherwiſe, as they exportleſs of its manufactures, and ſet their own price upon what they import at the expence of the people of Great Britain. Beſides, it appears, that the Engliſh companies have been more particularly injurious to the nation, in ſending over workmen of all kinds to India, for the improvement of the Indian manufactures, and thereby bringing the Europeans to the greater liking of them, for the enlarging of the company's gain, by the demand of theſe goods, inſtead of thoſe of the proper manufacture of Great Britain. The Indians knew little of dying goods, or ordering them ſo as to be fit for European markets, until the Engliſh company ſent Engliſhmen to teach them; wherein it muſt be granted that the

pany only conſidered their private advantage, though to the irretrievable loſs of the nation.

If this trade was laid open, it is apprehended, that a great number of ſhips, and thoſe the ſtrongeſt and moſt warlike, would be employed in this trade; which, by this means, would be more extenſive and enlarged in places already traded to, and to others hitherto unfrequented: conſequently more Britiſh ſubjects would find employment both at home and abroad: more Britiſh woollen and other manufactures would be exported; and Britons would have theſe goods much cheaper from thence for their own conſumption; and alſo thoſe which they reexport, whereby their traffic with them in foreign markets would be very much enlarged, and the conſumers of thoſe goods take them from Great Britain, which they now do from other nations. By this means likewiſe a very great coaſt-trade might be carried on, and Britiſh coarſe and fine cloths, and other manufactures, in all probability, be ſold in greater quantities than hitherto: and a very great profit would ariſe to the kingdom by the freight that Britiſh ſhips would be able to make, in carrying goods and paſſengers from one country to another; there having been inſtances of ſeparate trading ſhips, ſent out with very ſmall cargoes, which by trading from port to port in the Indies, and the freight they have made, have brought home cargoes of goods amounting to 10, 12, and 15 times the value of their outſet: upon which account many perſons ſeem deſirous of having the trade to India opened, that every Britiſh ſubject may enjoy the freedom of trade and navigation. See *Eaſt* India companies.

INDIAN *America*, conſiſts of all thoſe nations who are independent of the European governments. There are great numbers in Spaniſh America, who never paid any allegiance to the crown of Spain; and ſome in the Braſils who never paid any ſubjection to the crown of Portugal. The Romiſh miſſionaries have made a great body of theſe people ſubordinate to themſelves: the Araucans, and ſome other nations in Peru, are a free and numerous people: the Moſkitos, on the bay of Honduras, never acknowledged the Spaniſh government; but have long owned themſelves ſubjects to the Engliſh, who carry on a great trade there for logwood, which the Spaniards conſtantly endeavour to interrupt and deſtroy. But the Indians on the northern continent of America are the moſt powerful and intereſting to Europeans: they are divided in the Britiſh and French intereſt: their trade is chiefly in furs and ſkins: but the Engliſh have been dilatory in gaining theſe Indians to their intereſt; while the French have been induſtrious in obtaining their friendſhip. Indeed, the trade with theſe Indian nations ſeems to be the great rivalſhip between the Engliſh and French in this part of the world: but it is evident, from the report made to the lords commiſſioners of trade and plantations, by the honourable William Keith, Eſq; governor of the province of Penſylvania, that the Engliſh have neglected their intereſt; the report being as follows.

"In obedience to your lordſhips commands, ſignify'd to me, by your letter dated at Whitehall the 19th of March 1717-18, which I received the 20th of October following, I have made what enquiry I could, relating to the progreſs which the French nation have made, in finding out, and ſecuring a paſſage from their ſettlement on St. Lawrence river, or Canada, to that on Mechaſippi: and as I have my information chiefly from the Indian traders, I ſhall not pretend to vouch any thing from my own knowledge, but ſimply lay the whole before your lordſhips, in the plaineſt manner that it could be collected from their verbal relations.

"But, firſt, I would entreat your lordſhips will pleaſe to obſerve, that from an article in the treaty of Ryſwick, between the Britiſh and French crowns, by which, all lands on any rivers in America, the mouths or outlets whereof were then in poſſeſſion of either nation, are confined to that nation, as high as the firſt ſources of thoſe rivers; the French, by virtue of the Sieur de la Salle's

expedition and diſcoveries, now claim all the lands to the north and weſtward of the Britiſh colonies, from Canada along the lakes, unto the mouth of the river Mechaſippi. But as it is hard to imagine that ſuch a conceſſion was ever intended by the aforeſaid article; becauſe it is not only inconſiſtent with the antient grant from the crown to the proprietors of Carolina, but alſo with the ſecurity of all his Majeſty's colonies on this continent of America; I only ſubmit it to your lordſhips view, and ſhall proceed to the narrative as follows.

He then proceeds to give an account of the French intercourſe in North America, much in the ſame manner as is repreſented under the article of French America: after which he proceeds thus.

Having, above, given your lordſhips the moſt full and perfect account, that I could poſſibly diſcover, of the ſeveral routes which the French take from St. Lawrence to Mechaſippi; I ſhall, in the next place, proceed to lay before you, the ſtate of the ſeveral Indian nations, with reſpect both to the Engliſh and French, according to the beſt information I could get from the ſame perſons.

It has ever been the policy of the French in thoſe parts, in time of war, as well as peace, to uſe their utmoſt endeavours by all manner of means, to bring over any ſort, or all kinds of Indians into their intereſt: but as it is in vain to perſuade an Indian to think otherwiſe, than that thoſe are his beſt friends, who can help him to the beſt bargain, the Iroqueſe, or five nations, have hitherto been preſerved by the Dutch and Engliſh at New York, chiefly on account of finding better markets there, than with the French. Nevertheleſs, by the artifices of their Jeſuit miſſionaries, they daily continue to debauch them from the Engliſh intereſt; inſomuch that, of the whole number of Iroqueſe now remaining, which does not exceed 2000 fighting men, the French have drawn over 700 to inhabit among them; 400 ſeated at the fall of St. Louis, on the ſouth ſide of St. Lawrence, and 300 on the north ſide.

The reſt of them are planted chiefly along the lake Ontario, at ſome diſtance from it. I am told, there are no Indians in the French intereſt on this ſide of St. Lawrence, nearer than the Miamis, or Twoittois, as the Iroqueſe call them: they are in number about 2000, ſettled chiefly on the fore-mentioned river Miamis, flowing into the lake Erie, and on or near the branches of the river Onabache.

The gaining of this one nation would be of great importance to the Engliſh intereſt; and, as I am informed, it might be eaſily done at this time, if any offer was made of trading with them, and of building a fort upon lake Erie, where the French as yet have no ſettlements; tho', probably, they will ſoon go about to have one, upon the account of thoſe people, as well as to render their paſſage thro' that lake more eaſy and ſafe.

The Ilionis are about 3000 men, on or near the river of that name. The Miſſilimakinaes or Ontawaes were formerly 3000, but now are ſcarce 500. The Nokes 100. The Felleſavoins 200. The Sakes 200. The Puans 600. All theſe joined the French againſt the Iroqueſe in the laſt war; and all of them, except the Miamis, are ſeated about, or near the lake Ilionis, which is now commonly called by them Mechegan, and on the river that runs into it, and on the lake Puans, and the river Ilinois.

There are alſo diverſe other nations between Mechegan and Mechaſippi, as the Renards or Foxes, Maſſekotins, Kikapous; but theſe being farther off, did not join the French againſt the Iroqueſe.

Upon Mechaſippi, and the branches of it, there are many great nations, eſpecially to the weſt, as the Miſſouris, Ozages, Acanſias, who are different from thoſe of Acanſa on the eaſt, with many more, not leſs, as is affirmed, than 60000 men; with all whom, it is ſaid, the French have peace, and ſome alliance.

On the other hand, all the Engliſh, to the northward of Carolina, have not 1500 men in their intereſt, except the Iroqueſe. In New England and Connecticut, they were very few. In New York, only the river Indians, beſides the Iroqueſe. In Jerſey and Penſilvania, their

own,

own, or home Indians, called Delawares, are exceedingly decreaſed; and, being in ſubjection to the Iroqueſe, take their rules from them. In Maryland and Virginia, there are few, excepting thoſe towards the S. W. whom colonel Spotſwood, with great induſtry, has lately gained by treaties and hoſtages. Thoſe of Carolina, and the nations lately in friendſhip with them, have been very numerous: but the Iroqueſe, whether prompted by the French, or by what other motive is unknown, have, of late years, made great inroads upon them, and cannot as yet, by any endeavours of the Engliſh, be diverted from it. But of thoſe nations to the ſouthward, and of their ſtrength and intereſt, the beſt accounts will naturally come from Virginia and Carolina.

I come now, in obedience to the laſt part of your lordſhips commands, on this ſubject, humbly to offer my ſentiments of the methods which may be taken, in order to prevent the inconveniencies, unto which his Majeſty's plantations, on the continent of America, and the trade of Great Britain, may be ſubjected by ſuch a communication between the French ſettlements.

Tho' it may be juſtly ſaid, that we exceed the French in the improved value of our ſettlements, upon this continent; yet, from the above account it is plain, that we come far ſhort of the induſtry which they uſe in cultivating a neceſſary correſpondence and friendſhip with the natives, without which our farther progreſs to the weſtward will ſoon be circumſcribed; and we ſhall be under daily apprehenſions of loſing what we already poſſeſs. But ſince this friendſhip is, by experience, no otherwiſe to be acquired than by trade, it will neceſſarily follow that this trade ought to be encouraged and extended, with the utmoſt care and diligence. And that this may be done to the public advantage, as well as to that of particulars, it will be proper to conſider the nature of this trade, with reſpect to Great Britain, to the colonies where it muſt be carried on, and to the French who are our rivals in it.

The trade itſelf conſiſts in the exchange of a very few ſimple commodities; they take from us the woollen manufactures of Britain, gun-powder, ſhot, fire-arms, and trinkets; for which, we receive in barter, furs and ſkins: and this being almoſt a total exchange of Britiſh produce or manufacture, thro' the hands, and by the navigation and labour of Britiſh ſubjects in thoſe colonies, ſuppoſe it only for an equal quantity, in value of goods, which are either wanted at home, or may be juſtly placed to Great Britain's credit, upon the ballance of a trade with foreign countries, it will unavoidably follow, that Britain muſt gain in proportion to the magnitude or extent of the trade in general; and therefore we may conclude, that it ought not only to be encouraged, but eſtabliſhed upon an equal foot, throughout all theſe colonies, as they are inhabited by Britiſh ſubjects, carrying on a Britiſh intereſt, without any diſtinction made, or regard had to their particular ſettlements or ſocieties, as ſeparate governments.

With reſpect to the colonies, this trade will enrich particulars in proportion to the quantity they deal in, and the profit it brings, which of late years, has been ſo conſiderable, that it has tempted the trading intereſt of ſome colonies, to purſue that gain, with an unreaſonable deſire of cruſhing their neighbours: but this practice is by all means to be diſcouraged from Great Britain, as highly deſtructive to the public intereſt, both with reſpect to trade, and the advancement, as well as ſecurity of the Britiſh dominon on this continent.

Laſtly, if this trade could be carried on with a public ſpirit, and juſt regard to a national intereſt, as appears to be abſolutely neceſſary, for maintaining what we have already got, the French, who cannot furniſh theſe commodities, compared with us, either in quantity or value, could have no hopes of diverting the Indians from trading with us, and conſequently depending firmly upon us. We ſhould not, then, have the traders of New York jealous of, and uneaſy at the profits gained by the traders of Virginia; nor theſe again of the improvements which may poſſibly be made in Carolina: but every colony would find a ſolid and certain advantage, by an union among them, according to their ſituation, power, and ability to

advance their trading ſettlements, weſtward, upon the lakes and adjacent rivers; where thoſe vaſt nations of Indians would ſoon perceive, by our united intereſt, power, and traffic, that we were far preferable to our rivals the French, and every way much fitter to be choſen for their friends and allies. And in order to carry on this great deſign, I humbly conceive it will be proper, that a complete body of inſtructions be carefully compoſed, to be ſent to all the governors on this continent; where, amongſt other things, it may be directed,

1. That, in order to prevent the Indians being impoſed upon, and abuſed by looſe and over covetous perſons, trading promiſcuouſly amongſt them, which was the chief unhappy cauſe of the late deſtructive war in South Carolina; the governor ſhall uſe his utmoſt endeavours, with the advice of the council and aſſembly, to put the Indian trade, carried on by the inhabitants, under ſuch wholeſome and juſt regulations, as that the traders may not have it in their power to cheat and impoſe upon the Indians in any ſort, without being made accountable for it under high penalties. Provided always, that no reſtriction ſhall be made to prohibit or interrupt any of his Majeſty's ſubjects, in other of his colonies, from trading as freely with any foreign Indians, as the inhabitants of that colony can or may do themſelves. And in caſe they ſhall diſcover any abuſe to have been committed upon any Indian whatſoever, by any perſon or perſons, inhabitants in, or belonging unto any other of his Majeſty's colonies, complaint ſhall be forthwith made to the governor of that colony, whereunto the offender belongs, and he ſhall cauſe reſtitution to be made, and juſtice to be done, according to the nature of the offence.

2. That all poſſible encouragement be given towards carrying on a fair trade with the Indian nations, ſo that it may be extended as far weſtward upon the lakes and rivers behind the great mountains, as the ſituation and ability of the colony will permit: and when any proper place ſhall be diſcovered for the building of a fort, and ſettling a garriſon, in order to protect the trade, a report thereof ſhall be made to your lordſhips, with the circumſtances and reaſons for ſo doing.

3. That the governor ſhall, with all his induſtry and might, endeavour to make treaties and alliances of ſtrict friendſhip with as many Indian nations as he poſſibly can, always taking ſpecial care to ſtipulate and ſecure peace, not only between them and the colonies under his direction, but alſo between them and all the Engliſh colonies, and likewiſe with all the Indians under any league of friendſhip with any of the ſaid colonies. And that this may be the more effectually done, his Majeſty may pleaſe to direct and order, in a more eſpecial manner, by public proclamation, or otherwiſe, as ſhall ſeem meet, that all perſons travelling from the ſettlements of any of his Majeſty's colonies, into the woods, in order to diſcover and trade with any Indian nation, or nations whatſoever; if ſuch perſon ſhall happen accidentally to meet or encounter with any of his Majeſty's ſubjects, travelling from any other colonies or ſettlements upon the ſame deſign of trade or diſcovery, then, and in that caſe, ſuch perſons ſhall be obliged, and are ſtrictly commanded, under the higheſt pain of his royal diſpleaſure, to treat one another with civil humanity and kindly aſſiſtance, without giving or the other, upon either part, the leaſt interruption or hindrance in their ſaid reſpective deſigns of friendly intercourſe and traffic with the Indians; but, on the contrary, by their open and free behaviour, as well as diſcourſe, to convince the Indians, as much as in them lies, that all the Engliſh ſubjects upon this continent, howſoever diſtinguiſhed into governments, yet are but one people, under one King, who has commanded them, his ſubjects, to take all opportunities to ſhew his love and affection to all the Indian nations; and that whichſoever of them will make any league of friendſhip, with any one of the governments in theſe parts, are thereby entitled to his Majeſty's protection, and to the friendſhip, as well as aſſiſtance of all other governments, and of the Indian nations in alliance with any of them.

4. That, if any Indian nation, in league of friendſhip with any of his Majeſty's colonies, ſhall, in breach

thereof, preſume to make war upon, plunder, or in any other ſort moleſt any other Indian nation, who at the ſame time ſhall be in friendſhip with, and under the protection of any other of his Majeſty's colonies; then that colony, unto which ſuch offenſive Indians are bound by treaty, ſhall uſe their utmoſt endeavours, by threatnings as well as promiſes, to oblige the ſaid Indians to make reaſonable ſatisfaction for their breach of faith, to the contentment of the party aggrieved: and in caſe of meeting with any difficulty in bringing ſuch Indians to reaſon, the governor ſhall repreſent the ſame to his Majeſty forthwith, in order to receive farther direction therein.

5. To the end that all the governors of his Majeſty's plantations on the continent, be each of them, for their better direction, particularly acquainted with the ſtate of every other government relating to the Indians, let every one be order'd, upon his making any alliance or treaty with any Indian nation whatſoever, immediately to communicate the nature, import, and date of ſuch treaty unto all his fellow-governors upon the continent.

Such a correſpondence and harmony being once eſtabliſh'd, the trade might be eaſily ſecur'd and protected, by erecting four ſmall forts: the firſt upon lake Erie, near to the above-named Indians the Miamis: the ſecond on the lake Ontario, near to the Iroqueſe: the third on the head or higheſt fountain of Powtowmack river, which divides the colonies of Virginia and Maryland: and the fourth towards the head of Suſquehannah river, which runs thro' Penſilvania into the bay of Cheſeapeak.

The two firſt of theſe forts would not only ſecure all the Indians on this ſide Carolina to Canada, which are ſettled to the eaſtward of the lakes; but alſo open a trade with the above-mentioned great and numerous nations to the weſtward, whoſe communication by water would render the traffic eaſy. And becauſe the diſtance between the Engliſh ſettlements in theſe colonies, and the lakes, is too great, without the refreſhment as well as ſecurity of a middle ſtage or reſting-place, the other two forts would effectually anſwer that end to all the traders belonging to any of the colonies northward of Carolina.

I humbly conceive, that each fort will require a company, or garriſon of 50 men in the King's pay to be under the direction and command of the governors, his Majeſty's commanders in chief, in the reſpective colonies: that upon lake Erie, to be under Virginia; that upon lake Ontario under New York; that upon Potowmack under Maryland; and that upon Suſquehannah under Penſilvania.

To conclude, I cannot foreſee any thing which would interrupt the execution of this ſcheme, but the emulation in trade, that is kept up among the Engliſh colonies. For which reaſon, it ſeems neceſſary, that ſome method be projected, whereby each colony ſhall be obliged to bear its proportionable ſhare of the expence which the crown of Great Britain will be at, in building forts weſtward among the Indians, and ſubſiſting garriſons. For, if this was done at the public charge, equally for the protection of all, none would have any pretence to be diſtinguiſhed particularly in their claim to this trade. And if Great Britain does not imitate the French, in making their correſpondence with the Indians a national concern, whereby the government and maintenance of all forts and garriſons ſhall remain in the hands of the crown, the ſucceſs is very much to be doubted, from the variety of interruptions, which we may continually expect to meet with among ourſelves, as well as from the French, who have but one intereſt principally in view, and ſteadily purſue it with great application.

But, from the little knowledge and experience which I have of the Engliſh American colonies, I do not expect that this project, however juſt in itſelf, will generally pleaſe; wherefore I ſhall not preſume to inſiſt farther, or to put any other value upon it, than that I have, according to my duty, without prejudice or partiality, faithfully endeavoured to obey your lordſhips commands: And it is with great ſubmiſſion, that I beg leave to ſubſcribe myſelf,

Right Honourable,

Your Lordſhips moſt humble

And moſt obedient Servant.

W. KEITH.

Leſt it ſhould at any time be repreſented to your lordſhips, that, in imitation of the French, a ſociety may be incorporated, and a company erected for carrying on the trade upon this continent, with the Indians; I muſt beg leave to obſerve, that ſuch a privilege or immunity would certainly become a very heavy burden upon, and a great diſcouragement to the planting, as well as trading intereſt of every one, and of all theſe colonies, who, from the taſte they have of Engliſh liberty, are naturally averſe to all monopolies, and will hardly ever be reſtrained by the maxims or examples of a French government. Beſides, any reſtriction upon the inhabitants of theſe colonies, would altogether deſtroy the intent and deſign of the above ſcheme, which is founded upon reaſoning after this manner.

That under a good regulation of government, the relative advantages which ſubſiſt between any ſtate and its colonies abroad, are reciprocal. For,

As the ſtate has unqueſtionably a right, and moſt certainly ought to regulate the trade of its colonies for publick advantage; ſo the colonies have at leaſt an equal, if not a preferable claim to the ſubſiſtence and ſmaller profits which ariſe from that trade, to thoſe who muſt be employ'd in carrying it on.

That, where any public intereſt will be moſt effectually carried on, by the united ſtrength of many adjacent colonies, ſuch an union ought carefully to be eſtabliſhed with equality among them; and every thing tending to weaken or obſtruct this union, is to be conſidered as prejudicial to the public.

That the Indian nations upon this continent are not to be gain'd otherwiſe than by trade; and this trade cannot be managed to any purpoſe, without the mutual aſſiſtance and concurrence of all the Engliſh colonies. But, from the different conſtitutions, and particular intereſts of thoſe colonies, ſuch a regulation is not to be obtained without the authority of Great Britain."

The enormous ſtrides which the French have lately taken, ſeem to certify this report; and might have been more plainly foreſeen ſo long as the year 1751, when the Engliſh were told of the preparations which the French were making to engroſs all the trade of the Indians to themſelves: for in that year we were informed, that God in his Providence, ſeemed to be opening the door for the introducing the light of the goſpel among the ſix Mohawk nations wider than ever before. And if the Engliſh did not fail of doing their part, there was a proſpect of great things being done. It was evident the French were then exerting themſelves in an extraordinary manner, to draw all theſe nations over to them, and engage them in their intereſt. The King of France made extraordinary proviſions for them, that very large and liberal preſents may be made them in Canada. And they were indefatigable in their endeavours, in the labours of their emiſſaries, and all the ways they could deviſe. They were building forts in all the parts of America to the weſt of the Engliſh, in the carrying places between the lakes and rivers, and in all the moſt important places, where they might have the greateſt advantage to bring the Indians into dependence, and to draw their trade. Colonel Johnſon, and Major Lydius, who probably were beſt acquainted with the ſtate of theſe Indians, of all the ſubjects of the Britiſh crown, ſaid in the time of the treaty of Albany, That "it was a gone caſe; and that it was a thing beyond all doubt or diſpute, that unleſs ſomething extraordinary was ſpeedily done, and what was never like to be done, theſe nations were loſt to the Britiſh intereſt." By ſome accounts, abundantly confirm'd, about one half of the Onoontauguas actually left their old habitations, and went to live in Canada, the French having provided lands for them: and many others of the far nations were reſorting to ſettle there: An eminent Mohawk told an Engliſh trader, that the Quinquabs, the Onoontauguas, and the Chonuntoowaunces or Senecas, were generally in the French intereſt. He ſaid they indeed come to Albany and treat with the Engliſh as friends; but then go directly to the governor of Canada, and tell him all that has paſſed: they ſpeak, ſays he, ſmooth words, plea-

ſant words to the Engliſh; but their hearts are with the French. He ſaid concerning the Senecas, who are vaſtly the biggeſt of the ſix nations, that the governor of Canada was always there, meaning by his emiſſaries. Four Indians, who were related either in blood or marriage to ſome of the Engliſh, told them that the Indians that uſed formerly to be on their ſide, were continually in great multitudes flocking to Canada to dwell there. They ſaid that all the nations about the lakes that uſed to be friends to the Engliſh, had lately left them and had entered into alliance with the French.

Thus abundant and indefatigable are that nation, who underſtand their own intereſt ſo well, in their endeavours to gain all the Indian nations in North America, to eſtabliſh them in their intereſt, and to alienate them from the Engliſh. A trader was credibly informed while at Albany, that the Indians gave that as one reaſon why they left the Engliſh, and joined themſelves to the French, that they could not live with the Engliſh, they gave them ſo much rum, which they found by experience waſted them exceedingly.

The French have long threatened to drive the Engliſh colonies into the ſea: the Engliſh coloniſts on the northern continent of America are about one million of people, which number is equal to one half of Ireland or Scotland, and they ought for many reaſons to be ſtrongly protected. See *Britiſh* and *French* America, under Great *Britain* and *France*.

INDIA *Proper*, is ſituated between 66 and 92 deg. of E. lon. and between 7 and 40 deg. of N. lat.

INDIAN, or *Eaſtern Ocean*. See *Eaſtern* and *Ocean*.

INDIA *houſe of Spain*, is a court at Seville, under the direction of ſeveral commiſſioners, for the management of the Spaniſh Weſt India trade, and the navigation of that kingdom. See *Spain*.

INDIAN *wood*, called alſo *Jamaica* and *Campeche wood*, is taken out of the heart of a large tree growing plentifully in the iſland of Jamaica, and on the coaſt of Campeche, uſed in dying; its decoction being very red. See *Logwood*.

It has been obſerved, that putting ſome of this decoction into two bottles, and mixing a little powder of alum with the one, it will become of a very beautiful red, which will hold; the other in a day's time becoming yellow, though both bottles were ſtopped from the air alike; and if a little of the ſame decoction is expoſed to the air, it will become black as ink in the ſame ſpace of time.

The leaves of this tree ſometimes ſupply the place of ſpice, giving a very high ſeaſoned taſte to the meats and ſauces they are mixed with; having the ſcent of laurel, but much ſweeter. They are alſo uſed in medicine, either by way of fomentation for the cure of the palſy, and other diſorders proceeding from colds; or by bathing to fortify the nerves, and expel any ſwelling in the legs after malignant fevers.

The fruit of the ſame tree, called Jamaica pepper, or allſpice, is a real ſpice, being ſo aromatic as to ſupply the place of cloves, nutmeg and cinnamon, as it retains ſomething of the three together.

INDICUS *Coculus*, or *Coculus Indiæ*. See *Cuculi*.

INDICUS *Coſtus*. See *Coſtus* Indicus.

INDIES, *Eaſt and Weſt*. See *India*.

INDIGO, or *Indico*. A dying drug of a deep blue colour, brought from the Eaſt and Weſt Indies; being drawn from the leaves and ſtalks of a plant, called *anile* or *anele*, Indian weed, geſtum Indicum, blue weed, and indigo.

There are ſeveral kinds of indigo; the beſt is that called Serquiſſe, from the name of a village 24 leagues from Surat, where it is prepared; the beſt being in flat pieces of a moderate thickneſs, pretty hard, clean, light enough to ſwim in the water, inflammable, of a fine deep blue or purple colour, marked a little on the inſide with ſilver ſtreaks, and appearing reddiſh when rubbed on the nail. Indigo is uſed among painters, who grind and mix it with white, to make a blue colour; for without that mixture it would paint blackiſh: they mix it with yellow, to make a green colour. It is alſo uſed in dying, and by the laundreſſes, to give a bluiſh caſt to their linen.

Indigo is cultivated in ſeveral parts of the continent of America, and in the Antilles iſlands; but the beſt ſort is that brought from Guatimala, St. Domingo, and Jamaica. In the Mogul's territories, there are alſo conſiderable plantations of it in the neighbourhood of Biana, Indoua, and Coſſa, near Agra. There are alſo ſome in the kingdom of Golconda; and the Dutch bring it from Brampour, and Bengal, but it is the worſt ſort of indigo prepared in the Eaſt Indies.

When the indigo is too weighty for its bulk, ſome fraud may be well ſuppoſed to have been uſed; as firſt, when the plant is too much pounded in the mortar; ſecondly, when aſhes, earth, ſand, or ſlate are mixed with it: the firſt fraud is diſcovered by the colour which is blackiſh, and by the weight which augments conſiderably; the ſecond, by diſſolving a ſmall portion in water, which if pure, diſſolves entirely; but otherwiſe the foreign matter ſinks to the bottom of the glaſs.

Six ſorts of indigo are ſold at Amſterdam; that of Serquiſſe, Guatimala, Jamaica, Java, St. Domingo, and indigo Lauro: the former is worth about 2 s. 6 d. ſterling *per* lb. and that of Guatimala about 4 s. 6 d. *per* lb.

By the ſtatute of the 21ſt of George II. reciting, That as the making of indigo in the Britiſh plantations in America would be advantageous to the Britiſh nation, great quantities being uſed in dying Britiſh manufactures, which were then furniſhed from foreign parts, the ſupply whereof was at all times uncertain, and the price frequently exorbitant: and as the culture of it was found to ſucceed ſo well in the provinces of South and North Carolina, there were reaſons to hope, by a proper encouragement, that the ſame might be encreaſed, and improved to ſuch a degree, as not only to anſwer all Britiſh demands, but alſo to furniſh conſiderable quantities to foreign markets: it was therefore enacted, That all perſons who ſhould furniſh conſiderable quantities to foreign markets, or ſhould legally import into Great Britain, directly from any of the Britiſh colonies in America, any good or merchantable indigo, free from any falſe mixtures, and fit for dyers uſe, being the product of the colony from whence the ſame was imported, ſhould be entitled to 6 d. for every pound thereof, to be paid out of the cuſtoms, upon demand, by the collector of the port, where the ſame ſhould be imported. That if any perſon ſhould make entry of foreign made indigo, under the name of Britiſh plantation made, or ſhould mix any foreign indigo, or other falſe mixture with that made in the Britiſh plantations, in order to claim the premium, he ſhould forfeit all ſuch indigo; and double the value thereof ſhould be forfeited by the perſon making ſuch mixture.

That no certificate ſhould be granted for the ſaid præmium upon indigo, that was not good and merchantable, and free from any falſe meaſure.

That if any Britiſh plantation-made indigo ſhould be exported from Great Britain, the exporter, before the entry thereof, ſhould pay to the collector, or chief officer of the cuſtoms of the port the whole of the premium, over and above any duty ſuch indigo is ſubject to at exportation by any former act.

That if any perſon ſhould be found fraudulently to export ſuch indigo, without paying the ſaid premium as aforeſaid, he ſhould forfeit the indigo, and double the value thereof.

That this act ſhould be in force for ſeven years, to commence from the 25th of March 1749, and from thence to the end of the next ſeſſion of parliament.

INDRAPORE. A Dutch ſettlement on the weſt coaſt of Sumatra, in the Eaſt Indies, ſituated in 99 deg. of E. lon. and 20 deg. 20 min. of N. lat. 160 miles N. W. of Bencoolen.

INDULT, or *Indulto*, is a duty which the King of Spain receives from the merchandiſes of private perſons which are brought from America, on board the flota, or galleons: the word ſignifies ſafe paſſage, and the duty is about 2 $\frac{1}{2}$ *per cent*.

INDUS. A river of Aſia, riſing in the mountains which ſeparate Tartary from India, and running from the N. to the S. W. paſſes through the provinces of Cafimere, Attock

Attock, Multan, Bukor, and Tatta, diſcharging itſelf by ſeveral channels into the Indian ocean, a little below the city of Tatta. It is a noble deep and navigable river for veſſels of conſiderable bulk; but the mouth of it is ſo choaked up with ſand that ſhips cannot enter it. The Sha Nadir made this river the boundary between India and Perſia.

GERAM. A Britiſh factory in India, ſubordinate to the government of fort St. George. See *India*.

GOT. A maſs, or lump of gold, or ſilver, from the mines, melted down and caſt in a ſort of mould, but neither coined nor wrought.

GROSSER. See *Foreſtalling*.

K. A liquor uſed for writing on paper or parchment; being commonly a compoſition of vitriol, galls, gum arabic, and water; but printing ink is made of nut oil, linſeed oil, turpentine, and lamp-black.

Indian or Chineſe ink, is an admirable compoſition, in vain attempted to be imitated in Europe. It is not fluid like common writing ink, but ſolid like mineral colours, though much lighter. The Chineſe make it of all figures; but the moſt uſual is rectangular, about a quarter of an inch thick: ſome of the ſticks are gilt, with the figures of dragons, birds, and flowers; in order to which they have little wooden moulds, ſo curiouſly wrought that Europeans can hardly equal them in metals.

The Chineſe make it with ſmoke-black of different kinds; but the beſt is ſaid to be made of the ſmoke of fat pork, burnt at a lamp: they mix a kind of oil with it, to make it more ſmooth; adding other odorous ingredients to take away the rankneſs of the ſmell; and after they have mixed it into a paſte of a proper conſiſtence, they put it into a mould to figure it.

LAND, implies any thing ſituated in the main land, or heart of a country, far from the ſea-coaſts.

Hence, inland bills in traffic, are ſuch bills as are payable in the ſame land wherein they are drawn. See *Bill*, and *Exchange*.

LAND *Duties*. See *Duty*.

LAND *Goods*, or *Goods Inwards*. See *Goods*.

N. A public houſe of entertainment for travellers.

-holder. A perſon who keeps an inn.

-holders company of London, was incorporated by letters-patent of the 6th of Henry VIII. dated the 21ſt of December 1515, by the title of The maſter, wardens, and company of the art or myſtery of innholders of the city of London; conſiſting of a maſter, 4 wardens, 20 aſſiſtants, and 139 liverymen; who have a beautiful and convenient hall in Elbow-lane, wherein they tranſact their buſineſs, and their fine is 10 l. on admiſſion.

LAYING. See *Vencering*, and *Marquetry*.

INKEITHING. A port-town of Scotland, in the county of Fife, ſituated in 3 deg. 15 min. of W. lon. and 56 deg. 5 min. of N. lat. on the north ſhore of the frith of Forth, 10 miles N. W. of Edinburgh.

KINGS. Lands recovered from the ſea by draining and banking.

LAMO. A ſort of cotton brought from Egypt, by the way of Cairo.

OLVENT. A term applied to ſuch perſons as are incapable of paying their debts: thus, a perſon dying, and not leaving effects ſufficient to pay his debts, is ſaid to die inſolvent. See *Bankrupt*.

SURANCE, or *Aſſurance*, is a ſecurity given in conſideration of a ſum of money paid in hand, to make good ſhips, merchandiſe, and houſes, to the value of that for which the premium is received, in caſe of loſs by ſtorms, pirates, fires, or the like.

It is obſerved in hiſtory, that Claudius Cæſar, the Roman emperor, was the firſt that brought in this cuſtom of inſurance, whereby the danger and adventure of voyages is divided, repaired, and borne by many perſons conſenting, and agreed upon between them, what part every man ſhall be contented to inſure, make good and pay, if any fire or caſualty ſhall happen to the ſhip and goods adventured; to the end that merchants might enlarge their traffic and commerce, and not adventure all in one bottom to their ruin, but that the ſame might be anſwered

by many, and thereby the misfortune made the eaſier: and this cuſtom coming to the knowledge of the inhabitants of Oleron, was recorded by them, and ſet down for a law, and practice to be obſerved thro' all the ſea-coaſt towns of France; having been before uſed in England.

An office of inſurance was erected by the ſtatute of the 43d of Q. Elizabeth, and a court for deciding differences ariſing upon policies of inſurance in London: but any man, at this day, may make a private policy of inſurance, which ſhall be as good and effectual in law, to all intents and purpoſes, as one made and entered in that office; and when this court held cognizance, ſuch a policy might, as well as now, be ſued at the common law. Tho' it has been held, that by the making of an office policy, theſe advantages may enſue; if the policy of inſurance be loſt, and the ſame be entered with the regiſter of the office, the entry is ſufficient to make the parties anſwerable; but a private policy loſt is like a deed burnt, and unleſs there be ſtrong evidence of it, as a copy or the like, it will be of little value, ſo that there will remain nothing but an equitable relief in chancery.

There is no fixed or certain price for inſurances, which riſe and fall according to the ſtate of the nation in peace or war, the ſituation of the place, ſeaſon of the year, and other various occurrences: in former times, the rates of inſurance on a good ſhip, from London to Amſterdam was but three *per cent.* to Denmark four, and Sweden five; to Gibraltar and Malaga ſix and ſeven; to Ruſſia nine; to Venice ten; the Weſt Indies twelve; and to any port or place in the Eaſt Indies, China, Perſia, or beyond the Cape of Good Hope, was ſixteen *per cent.* but in the war, during the reign of King William, the premium of inſurance on a good ſhip for the like voyage, was above twenty *per cent.* and ſo of other voyages in proportion.

As goods and merchandiſe are commonly inſured, ſo likewiſe are the ſhip's tackle and furniture; though, in regard there ſeldom happens a voyage but ſomewhat is miſſing or loſt, a great premium is generally given in theſe caſes. And when a ſhip at ſea hath been long miſſing, and no advice can be had where ſhe is, the premium, eſpecially in time of war, will be very high, ſometimes thirty or forty *per cent.* But then theſe words are inſerted in the inſurance, loſt or not loſt; and in ſuch caſe, tho' it happens that at the time the ſubſcription is made, the ſhip is caſt away, yet the inſurers muſt anſwer: but if the party who cauſed the inſurance to be made, actually ſaw the ſhip wrecked, or had certain intelligence of it, ſuch ſubſcription will not be obligatory, for the ſame ſhall be accounted a meer fraud. So likewiſe if the aſſured, having a rotten veſſel, ſhall inſure upon the ſame more than ſhe is worth, and afterwards give order that going out of the port the ſhip ſhould be ſunk or wrecked, this will be adjudged fraudulent, and not oblige the inſurers to anſwer.

By the ſtatute of the 12th of Queen Anne, and the 4th of Geo. I. it is felony wilfully to caſt away or deſtroy a ſhip, to defraud the owners.

It is ſaid that very few inſure the whole ſhip, but ſubſcriptions are uſually for ſums certain, as 100 l. 500 l. or 1000 l. at the rate or premium current, which, when the adventure is borne, the inſurers receive; but if a loſs happen the premium is deducted, together with the uſual abatement, and then the inſured receive about eighty *per cent.* in common caſes. In the caſe of an inſurance loſt or not loſt, in the year 1583, there was a rich ſhip called the St. Peter, coming from the Eaſt Indies for Liſbon, miſſing a long time, and inſurance was made upon her at Antwerp and other places, at thirty *per cent.* Within three years after, there arrived at Liſbon a ſmaller ſhip, very richly laden, which was made of the other ſhip that was caſt on ſhore in a certain iſland abroad; and thereupon diverſe controverſies aroſe between the owners of the goods, and aſſurers, as alſo the maſter and mariners: at laſt it was adjudged by the ſea laws, that the maſter and mariners ſhould have one third part, and the aſſurers ſhould come in for ſo much *pro rata* as they had aſſured, all charges deducted, and the ſhip to be the owners of the former ſhip; with the like conſiderations as aforeſaid.

If a man inſures goods to the value of 5000 l. and he hath but 2000 l. remitted; now he having inſured a real adventure, by the law-marine all the inſurers muſt anſwer *pro rata*, if a loſs happens: but this is more by the cuſtom of merchants than by law; and ſome perſons are of opinion, that the firſt ſubſcribers who underwrit ſo much as the real adventure amounted to, are only to be made liable; and the reſt remitting their premiums, 10 s. *per cent.* being deducted out of the ſame for their ſubſcriptions, are to be diſcharged.

In caſe a merchant ſhall inſure a ſhip generally, and in the policy it is expreſſed of ſuch a burthen, the ſhip happens then to be loaden, and afterwards miſcarries; the inſurers ſhall not anſwer for the goods, but for the ſhip only, that is named. But where goods are inſured, it matters not in the policy of aſſurance, whether the particular wares and goods are named; but commonly mention is made of the principal wares, and all other commodities laden or to be laden by the inſured, for his account, or any other. Yet when an inſurance is upon any particular goods and merchandiſe, it muſt be declared particularly by the mark of the goods belonging to ſuch a merchant; and if there be more of the ſame mark, the number is added; and where the number is alike, the weight may diſtinguiſh the ſame; ſo as to be rightly anſwered, if any loſs happen.

If a ſhip be inſured from the port of London to any place abroad, and before the ſhip breaks ground, ſhe happens to take fire, and is burnt, the aſſurers in ſuch caſe are not obliged to anſwer; for the adventure did not begin till the veſſel was gone from the firſt port: if in the policy of inſurance the words *at and from the port of* London had been inſerted, there the inſurers would have been anſwerable for ſuch a misfortune. And if on ſuch an inſurance, the ſhip had broke ground, and afterwards been driven by ſtorm back to the port of London, and there had took fire, the inſurers muſt have anſwered; becauſe the very breaking of ground was a commencement of the voyage: and the port of London extends from the North Foreland in the Iſle of Thanet to London-bridge.

Where any merchant inſures merchandiſe from London to St. Lucar, until it be laid on ſhore at Sevil; this adventure is as well in the ſmall ſhips, lighters, or boats, in which it is carried up to the city of Sevil till the unlading thereof there, as the ſame was in the ſhip whereby the ſaid merchandiſe was tranſported from the port of London to St. Lucar; and any damage, either totally or in part, is to be anſwered by the aſſurers accordingly. If goods are inſured in a certain ſhip bound to any foreign parts, and in the voyage it happens ſhe becomes leaky, or receives other damage, and the ſupercargo on board and maſter agree to freight another veſſel for the ſafe delivery of the goods; and then after her relading the ſecond veſſel miſcarries, the aſſurers are diſcharged, without a ſpecial clauſe to make them liable: but if there be theſe words, The goods laden to be tranſported and delivered at ſuch a place, by the ſaid ſhip, or by any other ſhip or veſſel until they be ſafely landed, then the inſurers muſt anſwer the misfortune happening.

If a merchant freights a ſhip with wool, which occaſions a forfeiture of ſhip and lading, being contrary to law; or if he lades contraband goods knowingly, and afterwards inſures the ſame, if they are ſeized by the King's officers, the inſurers are not compellable to bear the loſs: tho' where any goods inſured, are not contraband at the time of the lading and inſurance, but become ſuch by ſome poſterior act or declaration, if they are then ſeized, the inſurers are anſwerable. And if goods be lawfully inſured, and afterwards the veſſel is diſabled, by reaſon of which, with the conſent of the merchant, they are put into another ſhip, which after arrival, proves an enemy's ſhip, and by reaſon thereof is ſubject to ſeizure; in this caſe the inſurers ſhall anſwer, for that is ſuch an accident as is within the intention of the policy of inſurance, where the policy mentions againſt dangers of the ſea, enemies, or otherwiſe, as policies generally do: but perſons inſuring, or undertaking to deliver prohibited goods, are to forfeit 500 l. by the 4th and 5th of William and Mary.

A merchant inſures his goods to a port abroad, and ther
to be landed; the factor after arrival of the ſhip, ſells th
cargo aboard, without ever unlading the ſhip; and th
buyer of the goods contracts for the freight of them fo
ſome other port, but before the ſhip breaks ground, th
is by ſome accident deſtroyed; in this caſe the aſſured a
buyer are left without remedy: for the property of th
merchandiſe being changed, and freight contracted
novo, the ſame amounts to as much if the goods had be
landed. By the laws of Antwerp, the adventure is to b
borne by the inſurers fifteen days after the ſhip's arrival
port.

In an action brought upon a policy of inſurance of goo
from London to Naples, warranted to depart with co
voy; it appeared that the ſhip departed with convoy, b
was ſeparated by ſtreſs of weather, and putting into To
bay, was there detained by contrary winds; afterwar
the maſter of the ſhip, expecting to meet the men
war that were convoy, ſailed out of the harbour, b
could not find them by reaſon of the badneſs of the we
ther, and the ſhip was taken by the enemy. It w
here argued, that no more was intended than a departu
with convoy at the firſt ſetting out of the river, whi
being provided by the inſurers, they had fulfill'd th
warranty; but on the other ſide it was inſiſted, that
the words of the policy the ſhip ought to go all the w
with convoy, and not only out of the mouth of the ri
where there is no danger; for that could never be
meaning of the parties, and that ſhe ſhould be left at
where is danger: but it was adjudged in this caſe, that
depart with convoy, means only that the ſhip ſhall le
the port, and ſail with the convoy, without any w
default in the maſter; and the maſter having done all t
could be done, notwithſtanding which the ſhip is tak
therefore the inſurers are anſwerable. It would be oth
wiſe, if by the maſter's default the ſhip had been ſepara
and taken; then the inſurers would not have been li

In order to the receiving and recovering of money inſur
upon policies of inſurance; when the perſons inſ
have received advice of the loſs of the ſhip or goods, t
are to make application to the inſurers, and produce t
vouchers, witneſſes, or evidences concerning the ſaid l
declaring the manner and place, the cauſe, with all
cumſtances thereof, and all ſuch proof as by letters
other means they can attain unto; with which, if
inſurers are ſatisfied, they will pay the money without
ſcruple, deducting the premium, nor can they make
objection to it, unleſs they have ſome reaſonable gro
to found it upon, as contrary intelligence, or the l
In which caſe, the parties who have inſured the ſa
muſt wait a convenient time, according to the diſta
of the place where the ſhip is affirm'd to be loſt,
more certain advice can be obtained by the inſurers a
it; or if nothing can be heard of the ſhip in any rea
able time, then the inſurers are obliged forthwith to
the money: but if, after that, it ſhould happen that
ſhip ſhould arrive ſafe, the inſurers in ſuch caſe
have the money returned them. And when it happ
that ſome part only of the goods are loſt, as in the ca
ejections in a ſtorm, or other ſuch accidents; then
inſurers make an average of it, and each man pay
much *per cent.* in proportion to the ſum for which he
ſcribed.

Where goods are redeemed from a pirate, all the inſ
muſt pay contribution, becauſe the redemption is m
for the ſafety of all; ſo it is where goods are wet, or
ceive damage by any other accident: and by the ma
laws, if it be abſolutely neceſſary to lighten a ſhip,
her eaſy entrance into harbour, or a channel, two
of the loſs ſhall fall upon the goods, and the third
upon the ſhip; except the ſhip is of greater value
the lading, and the charge of the goods be not the
of her inability to enter, but ſome bad quality proc
ing from the ſhip it ſelf; or it is otherwiſe provided,
the goods ſhall be fully delivered at the port appo
for them.

Aſſurances may be made on mens heads, as well as
and goods; as if a man is going for the Streights, o
any port in the Mediterranean ſea, and is in dange

being taken by the Moors or Turkiſh pirates, and ſo made a ſlave, whereby a ranſom muſt be paid for his redemption, he may advance a premium accordingly upon a policy of aſſurance; and if he is taken, the inſurers muſt anſwer the ranſom ſecured.

Some particular obſervations in making inſurances.

1. The party who cauſes the aſſurance to be made, ought to be a perſon well known for his honeſt and fair dealing. 2. The maſter of the ſhip and mariners ſhould likewiſe be honeſt, and of experience, to avoid the danger of barratry, or embezzling the goods, and other accidents. 3. The inſurer muſt take notice of the goodneſs of the ſhip, and of her ſailing, eſpecially making her voyage alone; and whether ſhe be old or new built, and the price of the aſſurance to be accordingly. 4 To know by the map or ſea-charts the place or country, and how far diſtant where the ſhip is to ſail, and the dangers of known rocks and ſands. 5. To have regard to what wind muſt ſerve, and the right ſeaſon of the year, which makes a difference in the price of aſſurances; an eaſt or north eaſt wind driving from the land for Spain, is the leaſt dangerous, and leſs money is paid than where a ſhip comes by contrary winds from thence to land: in the winter, two in the hundred is given more than in ſummer; except it be by calms in places of danger, as in the Streights infeſted with Turkiſh pirates; the like for ſhips bound for ſeveral ports, more ſubject to caſualties. 6. To conſider the places of hoſtility abroad, where the ſhip muſt unlade or touch, the hazard of general or particular embargoes on ſhips, and the likelihood that they may be detained by foreign princes and ſtates. 7. The inſurer is to take care not to inſure for unlawful places of trade, or queſtionable between princes; and in ſuch caſe he may demand as much, or near it, as is paid upon adventures loſt or not loſt. 8. To know upon what kind of goods or merchandiſe he aſſures; whether on wine, oil, ſalt, raiſins, or ſuch like periſhable wares; or upon other ſtaple commodities, as cloths, lead, tin, and the like, which are not ſubject ordinarily to averages as the other. 9. The ordnance and munition the ſhip is provided with, are to be inſpected and known, ſo as not to inſure upon the bottom of a ſhip, but with good advice. 10. If the aſſurer aſſures upon any particular goods marked, he ſhould know whether they are laden in the bottom of the ſhip, where there is danger of wetting and ſpoiling; or above on the deck, where there is danger from pirates, or of caſting overboard; about the middle is the beſt. 11. To be adviſed not to inſure beyond the limitation of his knowledge, by the means of others, as from Liſbon to Braſil, in ſuch voyages, whereof he cannot have timely notice. 12. And laſtly, to be provident in the contributions and averages, to anſwer for no more than is his due to pay, wherein it is neceſſary to have an inſpection of the bills of lading, and other papers.

The knowledge of theſe ſeveral particulars is not only of great uſe to all inſurers of ſhips, but alſo to the merchants aſſured, in their prudent and ſafe freighting and adventuring their goods and merchandiſes to ſea.

Though inſurance was intended for the encouragement and ſecurity of trade, it has been frequently turned into a wager, to the great prejudice of commerce, by dagging, or inſuring intereſt or no intereſt. This has given occaſions to ſome perſons to inſure their ſhips only to have them deſtroyed, and to make an advantage of their inſurances; which gave riſe to an act of parliament paſſed in the 19th year of George II. for regulating the inſurance on ſhips belonging to Great Britain, and on merchandiſes or effects laden therein; whereby theſe hazardous inſurances were prohibited: and it was declared, that it ſhould not be lawful to make re-aſſurance, unleſs the aſſurer ſhould be inſolvent, become a bankrupt, or die; in either of which caſes ſuch aſſurer, his executors, adminiſtrators, or aſſigns, might make re-aſſurance to the amount of the ſum before inſured; provided it be expreſſed in the policy to be a re-aſſurance. See *Bottomry*.

Inſurance offices in the city of London.

INSURANCE *offices on ſhips.* Theſe two ſocieties, purſuant to an act of parliament of the 6th of George I. dated the 22d of June 1720, were ſeparately incorporated by letters-patent; the one by the name of "The "Royal Exchange aſſurance, for inſuring of goods, mer-"chandiſe, and ſhips at ſea, and for lending money on "bottomry;" and the other by the name of "The Lon-"don aſſurance company:" by which names they were to have perpetual ſucceſſion, with a power to ſue and implead, be ſued and impleaded, anſwer and be anſwered, in courts of record, or elſewhere, touching or concerning the tranſactions of the corporations; to have each of them a common ſeal; and to purchaſe lands, houſes, or the like, in mortmain, to the amount of 1000 l. *per annum* each; and to grant, alien, or demiſe the ſame at pleaſure.

In conſideration of the premiſes, each corporation was to advance to the King the ſum of 300,000 l. without intereſt, for the term of 31 years. Towards raiſing this ſum, and paying all juſt demands that ſhould be made upon their reſpective policies, each company was impowered to raiſe a certain ſum, to be called the ſtock of the corporation; and in caſe the government ſhould think fit to repay the aforeſaid ſum of 300,000 l. within or before the expiration of the term above mentioned, that then the corporation ſhould ceaſe, and become void in all reſpects, as if the ſame had never ſubſiſted.

By a ſecond charter, they are impowered, not only to inſure houſes, goods, ſhips, and the like, from fire, but likewiſe to inſure lives.

The INSURANCE *offices on lives*, is in Serjeant's inn, Fleet-ſtreet; and was incorporated by letters patent of the 4th of Queen Anne, dated the 25th of March 1706, by the name of "The amicable ſociety for a perpetual aſſurance-"office." The number of members, not to exceed 2000, are impowered to purchaſe lands, tenements, and the like, to the amount of 2000 l. *per annum*, the ſame to alien at pleaſure, to ſue, and to be ſued, and to have a common ſeal alterable at diſcretion.

Each member of this ſociety originally paid, during the life of the perſon inſured upon, the ſum of 6 l. 4 s. *per annum*; out of which, for the firſt year of the incorporation, was divided 1-6th part of the ſeveral payments or contributions, among the nominees of the members that died in the ſaid year; which dividend increaſed proportionably till the year 1710, when they divided 10,000 l. among the nominees, which is to be yearly continued, with an addition of ſo much as the general court ſhall deem proper: but in caſe the number of members ſhall not amount to 2000, then the annual dividends to be made in proportion to the yearly payments of 6 l. 4 s. for each of the reſpective members.

And for the more effectual ſupport of this ſociety, it is, by a ſupplemental charter, dated the 16th of January 1729, ordained, that all and every of the members, or their nominees, that ſhall be in arrears to the corporation for a year and a quarter, and who, upon proper notice thereof given in the London Gazette, ſhall omit payment thereof for three months after, every ſuch member ſo offending ſhall be excluded the ſociety, and deprived of all benefits ariſing thereby, as if he, ſhe, or they had never belonged to the ſame.

The ſum, as already mentioned, appointed by their charter to be paid by the members of the ſociety, is 6 l. 4 s. *per annum* each, and the ſum to be divided among the yearly claimants 5 l. The ſurplus of 1 l. 4 s. is improved for the benefit of the corporation for granting annuities upon lives to their own members; by which, and other good management, the ſociety have a ſtock of above 30,000 l. whereby they are not only enabled to defray all the expences of the ſociety, but likewiſe to reduce the annual payments of the members from 6 l. 4 s. to 5 l. each; and beſide this, the company divide above 700 l. *per annum*, or ſo much thereof as is required, when the dividend, by a great mortality, does not amount to 100 l. for each claim, to pay each claimant 100 l. whereby all reſtrictions are effectually prevented, and the corporation kept in a flouriſhing condition; which, by the good footing it is on at preſent, it is not to be

doubted but it will improve to the great advantage of the members.

The INSURANCE *offices againſt fire.* The ſeveral inſurance offices againſt loſſes by fire have been very ſeaſonably and providentially eſtabliſhed: the firſt whereof, called the *Friendly ſociety*, was erected in 1684, for inſuring houſes; which is done on brick-buildings at the rate of 9 s. 4 d. *per cent.* for ſeven years, and double that ſum on thoſe of wood: but, beſides this certain charge, the inſured are obliged to contribute to the payment of all loſſes that may happen; in order to which they make a depoſit of 6 s. 8 d. *per cent.* and ſo much thereof as remains undivided at the expiration of the ſeveral inſurances is returned to the reſpective proprietors. For ſecuring the payment of all loſſes by fire, a conſiderable ſecurity in land is ſettled by truſtees; and, for extinguiſhing fires, the ſociety continually keep in their ſervice 22 firemen, who wear the company's badge, and are annually cloathed.

The hand-in-hand fire-office was erected in the year 1696, by about 100 perſons; who, mutually agreeing to inſure one another's houſes, from loſs by fire, by an amicable contribution, entered into a deed of ſettlement for that purpoſe; which being ſigned by every perſon deſirous of becoming a member, he or ſhe is thereby admitted into the joint contributionſhip, and becomes an equal ſharer in profit and loſs, in proportion to his, her, or their reſpective inſurance; which deed of ſettlement was inrolled in chancery, the 24th of January 1698. This office being calculated for the mutual eaſe and advantage of all the contributors, they inſure houſes and chambers at the following eaſy rates. The depoſite money on ſtone or brick houſes is 10 s. *per cent.* and double on thoſe of timber; with a premium of 2 s. *per cent.* on brick or ſtone, and double on timber buildings, for any ſum not exceeding 1500 l. and for any ſum from 1500 l. to 2000 l. 4 s. *per cent.* on brick and ſtone, and double on timber for any term of years not exceeding ſeven. But a ſum exceeding 2000 l. is not to be inſured on any building, without the approbation of a general court: and for the more effectual preventing the office from being impoſed upon, they inſure only 3-4ths of the value of each houſe. This company, for the extinguiſhing of fires, keep in their ſervice 30 firemen, who are annually cloathed, and have each a badge.

The ſun-fire office was projected by John Povey, about the year 1706, for inſuring merchandiſe and houſhold-goods, as well as houſes, from fire, which till then was never done; but the ſociety was not erected till 1710. This ſociety not confining themſelves, like other offices, to inſure houſes, goods, wares, and merchandiſes, within the bill of mortality only, have, for the advantage of the inhabitants of Great Britain in general, extended their inſurance to all parts of the iſland. The ſociety has a fund of 48,000 l. for the ſafety of the inſured; who pay for ſums from 300 l. to 1000 l. the annual premium of 2 s. *per cent.* for common inſurances, 3 s. *per cent.* for hazardous inſurances, and 5 s. *per cent.* for doubly hazardous inſurances: but from 1000 l. to 2000 l. the firſt inſurance is 6 d. *per cent.* more, the ſecond 1 s. more, and the third 1 s. 8 d.: and from 2000 l. to 3000 l. the firſt inſurance is 1 s. *per cent.* more, the ſecond 2 s. *per cent.* and the third 1 s. 6 d. Under the article of common inſurances, are to be underſtood all bricks or ſtone buildings, not inhabited by the hazardous trades, nor ſtored with hazardous goods: under that of hazardous inſurances are to be underſtood timber and plaiſter buildings, and goods and merchandiſe therein called hazardous: and under the head of doubly hazardous are to be underſtood all thatched timber, or plaiſter buildings, wherein hazardous goods or trades are depoſited, or carried on. The hazardous trades are apothecaries, chemiſts, bread and biſcuit bakers, ſhip and tallow-chandlers, ſtable-keepers, innholders, and malt-houſes; and the hazardous goods are, hemp, flax, tallow, pitch, tar, turpentine, hay, ſtraw, fodder of all kinds, and corn unthreſhed. To this office belong 30 firemen, and 20 porters, to aſſiſt the inſured in caſe of fire.

The union fire-office was erected in 1714, for inſuring of goods and merchandiſe; being upon the ſame foot, in all reſpects, as that of the hand-in-hand fire-office; except that, inſtead of houſes, they only inſure goods and merchandiſe, for certain premiums and depoſits for ſeven years; being 2 s. *per cent.* and 10 s. depoſit, for any ſum from 100 l. to 1000 l. for common inſurances on brick houſes; 3 s. *per cent.* and 15 s. depoſit, for common inſurances on timber houſes; 4 s. *per cent.* and 20 s. depoſit, for hazardous inſurances on brick houſes; 6 s. *per cent.* and 30 s. depoſit, for hazardous inſurances on timber houſes; 6 s. *per cent.* and 30 s. depoſit, for double hazardous inſurances on brick houſes; and 9 s. *per cent.* and 45 s. depoſit, for double hazardous inſurances on timber houſes; but from 1000 l. to 2000 l. and from 2000 l. to 3000 l. higher premiums are to be paid, though the depoſits are the ſame. And to this office belong 24 porters.

Weſtminſter fire office was erected in 1717, being exactly ſimilar to the Hand-in hand ſociety; and this company keep 18 firemen.

The eſtabliſhments of theſe ſeveral offices of inſurance from fire have been extremely beneficial to ſociety: no thing was ever ſo well calculated for the encouragement of trade; nor was there ever any ſcheme ſo well adapted for the ſecurity of private property. Theſe ſocieties ſeem to have ſprung from the ſource of humanity; they are the happieſt bands of amity; they are the promoters of induſtry, and the ſupporters of diſtreſs: in effect they ſeem to be a concatenated chain of mutual friendſhip, aſſiſtance, and protection, againſt one of the most terrible accidents of life, againſt one of the greateſt enemies of trade, and againſt the moſt ravaging ſpoiler of property. To the erection of theſe companies, the preſent grandeur and augmentation of the buildings of London and Weſtminſter in particular, and of all other cities and towns in general throughout England, are to be principally attributed; for the number of houſes inſured in the Hand-in-hand fire-office only, in 1735 amounted to 45,873, and the ſum inſured therein to 11,612,000 l.

INTAGLIOS. Precious ſtones, having the heads of great men, inſcriptions, and the like, engraven on them; ſuch as are frequently ſet in rings and ſeals.

INTENDANT. One who has the conduct, inſpection and management of any thing.

This is a title frequent among the French: they have intendants of the marine, who are officers in the ſea-ports, whoſe buſineſs is to take care the ordinances and regulations relating to ſea-affairs be obſerved: intendants of the finances, who have the direction of the revenues: intendants of provinces, who are appointed by the King to take care of the adminiſtration of juſtice, policy, and finances in the provinces: as alſo intendants of buildings and houſes.

INTEREST. A ſum of money, reckoned for the loan or forbearance of ſome other ſum, lent for, or due at a certain time, according to ſome certain rate. In reſpect whereof, the ſum lent or forborn is called the principal, becauſe it is the ſum that procreates the intereſt, or from which the intereſt is reckoned.

Simple INTEREST, is that counted from the principal only.

Compound INTEREST, is that counted, both from the principal and the ſimple intereſt forborn; called alſo intereſt upon intereſt; which ariſes from the principal and its intereſt put together, as that intereſt becomes due.

Lunary INTEREST, is a term in the port towns of the Levant, for the uſurary intereſt which the Jews exact from ſuch Chriſtians as have occaſion for their money, either upon the account of trade, or paying the extortions of the Turkiſh officers in theſe port-towns. They are called lunary, becauſe paid at ſo much *per cent.* every moon; and the Turkiſh months not being ſolar like those of the Chriſtians, augments the intereſt by upwards of 1-3d *per cent.*

According to the various uſes of money, the lending of intereſt is ſaid to be the moſt unnatural, becauſe removed from the deſign of its firſt inſtitution, which was to pledge in buying; but, notwithſtanding, it is certainly no leſs advantageous both to lenders and borrowers: nor is it accounted by any but enthuſiaſtical heads, a leſs

rantable uſe than any other that is made of money; lending and borrowing money upon intereſt being a thing practiſed, under moſt, if not all the governments in the trading part of the world.

The two material things to be conſidered in borrowing and lending at intereſt, not to mention ſecurities, are, firſt, the rate of intereſt; ſecondly, the time of payment.

The rate of intereſt is the ſum given for the uſe of 100 l. for one year; and this is in ſome places more, in others leſs, which is generally proportioned to the plenty or ſcarcity of money and trade, or dearneſs or ſcarceneſs of things.

Thus, in Italy and Holland, the rate is 3 l. *per cent.* in Sweden 6, France 7, Spain and Barbadoes 10 l. Ireland but 6 l. and Turkey 20 *per cent.* From which different rates the ingenious Sir Joſias Child makes many curious remarks, in his diſcourſe concerning trade; to which the reader is referred, who is curious in this affair, or inquiſitive after the policy of theſe matters, and would be inſtructed in them; being a treatiſe deſigned for practice.

By an act paſſed in the 4th year of the reign of Queen Anne, intereſt bonds for cuſtoms, additional duties, or the like, not paid according to the conditions thereof, are to be chargeable with intereſt at 6 l. *per cent. per annum*, from the time due till the actual payment, unleſs the treaſury ſhould judge it reaſonable to be remited.

By an act paſſed in the 12th of Queen Anne, it was enacted, That intereſt taken upon any contract for loan of money, or any commodities, ſhould not be above the rate of 5 l. *per cent. per annum*; all bonds, &c. for more than the ſaid intereſt, to be void; and the perſon taking ſuch intereſt, to forfeit treble the value of the money ſo lent; but not to prejudice parliamentary ſecurities, which are now reduced to 3 *per cent.* See *Funds*, *Loan*, and *National Debt.*

It was thereby alſo enacted, That no ſcrivener, ſolicitor, or broker, ſhould take above 5 s. *per cent.* premium, or above 12 d. over and above the ſtamp-duty, for making or renewing a bond, under the penalty of forfeiting 20 l. with coſt of ſuit, and half a year's impriſonment; the half to the King, the other to the proſecutor.

INTERLOPER, is ſaid of thoſe merchant-ſhips which ſtrive to carry on an indirect and clandeſtine commerce with contraband merchandiſe; or bring lawful merchandiſe into ſuch places as are not free for ſtrangers to trade in; but they are alſo called adventurers or buccaneers.

INTERLOPERS alſo ſignify, among ſuch Europeans as have companies of commerce, the private ſhips of theſe nations which ſtrive to trade in the extent of the conceſſion of their companies, without having obtained a licence from the parties concerned, or the directors.

None but the Engliſh had interloping ſhips of this laſt kind; but the former are very common in France, England, and Holland, particularly for the trade along the coaſts of Terra firma in Spaniſh America, and the South ſea.

The commerce of interloping ſhips is always very lucrative; the merchandiſe with which they are laden being uſually ſold at a very dear rate, and thoſe they have from the country they trade to, being generally cheap; beſides, they pay no duties, which is a very conſiderable matter: but the danger is great, being not only attended with the confiſcation of ſhips and cargoes, or the impriſonment of the ſailors, when ſurpriſed by the guarda coſtas; but alſo very often with the loſs of life, in conſequence of the ſtrict charge from the crown of Spain for admitting no foreigners to trade in the Spaniſh Weſt Indies.

INTERSOIL, in huſbandry, the laying one kind of ſoil or earth upon another.

INTRINSIC. A term applied to the inner, real, and genuine values and properties of any thing; in oppoſition to their extrinſic, apparent, or popular values.

INVENTORY, in law, a catalogue, or repertory, orderly made of all the goods and chattels of a perſon dead: but, in trade, it is a liſt, or particular valuation of goods by way of appraiſement.

INVERNESS. A port-town of Scotland, capital of the county of Inverneſs, ſituated in 4 deg. of W. lon. and 57 deg. 36 min. of N. lat. at the mouth of the river Neſs, on Murray frith, 106 miles north of Edinburgh.

INVOYCE, or *Invoice.* A liſt or account of commodities, with their value, cuſtoms, proviſion, and charges, ſent by a merchant to his factor, or correſpondent in another country.

The invoice is made out in the money of the country where the merchandiſes are purchaſed, or from what country they are ſent; being intended for the government of the ſeller, that he may ſo diſpoſe of ſuch commodities as to leave a reaſonable profit, ſuitable to the time that principals, for whoſe account they are, may be out of their money. However, it is cuſtomary for an additional charge to be made upon invoices, to procure a larger profit upon their ſales.

Book of INVOICES. See *Book*-keeping.

JOANNA. One of the iſlands of Comorra, ſituated in 45 deg. of E. lon. and 12 deg. of S. lat. between the N. W. part of Madagaſcar and Zanguebar in Africa; where the Eaſt India ſhips bound for Bombay in India frequently touch, and take in water and freſh proviſions; it being a plentiful country, and the people very ready to ſupply them.

JOBBER. A perſon who undertakes jobbs, or ſmall pieces of work; but in ſome ſtatutes it is uſed for a perſon who buys and ſells cattle.

JOHN'S, St. or *St. John's*, one of the Phillipine iſlands, in the Eaſt Indies, lying in 126 deg. of E. lon. and 7 deg. of S. lat. eaſt of Mindanao, from which it is ſeparated by a narow ſtraight. See *Philippine* iſlands.

JOHN'S, St. An iſland in the bay of St. Lawrence, in North America, ſituated in 65 deg. of W. lon. and 47 deg. of N. lat. having Nova Scotia on the S. and W. and Cape Breton on the E. See *French* America.

JOINER. An artificer in joinery, or moſt curious part of wood-work; as in cabinets, wainſcotting, and the like. The French call it *menuiſerie*, from *minutaria*, ſmall work; whereby it is diſtinguiſhed from carpentry, which is the larger and leſs curious work. See *Carpenter.*

JOINERS *company of London*, was incorporated by letters-patent of the 13th of Queen Elizabeth, dated the 18th of April 1569, by the name of The maſter, wardens, and commonalty of the faculty of joiners and cielers of London.

They are governed by a maſter, 2 wardens, and 24 aſſiſtants, with a livery of 323 members; who have a handſome hall in Friers-lane, Thames-ſtreet; and their fine of admiſſion is 8 l.

IONIAN *ſea.* A part of the Mediterranean.

JORDAN. A river of Aſiatic Turky, in the province of Judea, or Paleſtine, riſing in Mount Libanus, and runs S. quite through the country, a courſe of about 150 miles, forming two lakes; the firſt, which is almoſt dry in ſummer, called the ſea of Gallilee, the lake of Tiberias, and ſometimes the lake of Genezareth, being about 12 miles long, and 8 broad; the other called the Dead, or Salt ſea, where Sodom and Gomorrah ſtood, is about 70 miles long, and 16 broad: but the ordinary channel of the river Jordan is not above 20 yards broad at preſent, and diſcharges itſelf into the lake called the Dead ſea.

JOSEPH. A kind of cotton, of indifferent quality, brought from the Levant.

JOSSELASSAR. One of the ſorts of ſpun cottons brought from Smyrna.

JOURNAL, in merchant-accompts. See *Book*-keeping.

JOURNAL, in ſea-affairs, is a regiſter kept by the pilot, wherein notice is taken of every thing that happens to the ſhip from day to day, and from hour to hour, with regard to the winds, the rhumbs, the rake, and ſoundings, in order to enable him to adjuſt the reckoning, and determine the place where the ſhip is.

JOURNEYMAN, antiently ſignified a perſon who wrought with another by the day; though now, by the ſtatute, it extends to thoſe likewiſe who covenant with another in their occupation or trade by the year, without expecting any other profit than being paid a certain ſum for their wages.

By the ſtatute of the 22d of George II. after reciting an act made in the 1ſt of Anne, the preamble runs thus: That

That many perſons employed in the making of hats and felts, and in preparing and working up the manufacture of fur, hemp, flax, mohair, and ſilk, and alſo the manufactures made up of wool, fur, hemp, flax, mohair, cotton, or ſilk, or ſome of them mixed with one another, were of late guilty of divers frauds and abuſes, by purloining and embezzling the materials with which they had been entruſted. It was therefore enacted, That if any perſon hired, or employed to make up any felt or hat; or to prepare or make up any woollen, linen, fuſtian, cotton, iron, leather, fur, hemp, flax, mohair, or ſilk manufactures; or any manufactures made up of wool, fur, flax, cotton, mohair, or ſilk; or of any of the ſaid materials, mixed with one another; ſhould purloin, embezzle, or otherwiſe unlawfully diſpoſe of any of the materials with which he ſhould be entruſted, whether the ſame were or were not firſt wrought up; or ſhould reel falſe or ſhort yarn, and be convicted by the oath, or affirmation of a quaker, by the owner, or other credible witneſs, or by ſelf confeſſion, before any juſtice for the county or place, where the offence ſhould be committed, or the party reſide, the juſtice ſhould commit him to the houſe of correction, or other public priſon of the place, to be kept to hard labour for 14 days, and to be once publicly whipped; and, in caſe of a further conviction, upon a ſecond or other ſubſequent offence of the ſame kind, the juſtice ſhould commit him in like manner, for any time not exceeding three months, nor leſs than one month, to be kept to hard labour, and alſo to be publicly whipped twice, or oftener.

That if any perſon ſhould be convicted as aforeſaid, of buying, receiving, or taking by way of gift, pledge, ſale, or exchange, or in any other manner, from any other perſon whom he knows to be hired or employed to make or prepare any of the ſaid manufactures, any thrums, or ends of yarn, or any other materials of wool, furs, hemp, flax, cotton, iron, or any other leather, mohair, or ſilk, whether the ſame was or was not firſt wrought up, the conſent of the employer not being firſt had; or of buying or receiving, in any manner whatſoever, from any other perſons any of the ſaid materials, whether the ſame were or were not firſt wrought up, knowing them to be purloined or embezzled, he ſhould forfeit 20 l. for the firſt offence; and, on non-payment thereof immediately, the juſtice ſhould commit him to the houſe of correction, or other public priſon, as aforeſaid, to be kept to hard labour for 14 days, unleſs the forfeiture was ſooner paid; and if the ſame was not paid within two days before the expiration of the ſaid term, he ſhould be publicly whipped, once or oftener: and, in caſe of further conviction, upon a ſecond or other ſubſequent offence of the ſame kind, he ſhould forfeit 40 l. and, on non-payment thereof immediately, he ſhould be committed and kept to hard labour, for any time not exceeding three months, nor leſs than one month, unleſs the forfeiture was ſooner paid; and if the ſame ſhould not be paid within ſeven days before the expiration of the term of commitment, he ſhould be publicly whipped twice or oftener, as the juſtice ſhould order, and the ſaid forfeitures, after ſatisfaction was made thereof to the party injured, with coſts of proſecution, ſhould be equally diſtributed among the poor of the pariſh where the offender ſhould reſide.

That if any perſon ſhould be hired or employed to prepare or work up any of the manufactures before mentioned for any one maſter, and ſhould neglect or refuſe the performance thereof, by permitting himſelf to be frequently retained by any other perſon, before he ſhould have completed the work he was firſt hired to perform, and which was firſt delivered to him, being convicted thereof, he ſhould be ſent to the houſe of correction, and there kept to hard labour for any time not exceeding one month.

By the ſtatute of the 12th of George I. to prevent unlawful combinations of workmen employed in the woollen manufactures, and for the better payment of their wages, it was enacted, That all contracts or agreements, and all by-laws that are or ſhould be made, or entered into by any wool-comber, or weaver, or journeyman wool-comber, or journeyman weaver, in any place within the kingdom, for regulating the ſaid trade, or ſetting the prices of goods, or for advancing their wages, or for leſſening their uſual hours of work, was declared to be illegal, and void to all intents and purpoſes.

That if any perſon retained or employed as a woolcomber, weaver, or ſervant, in the ſaid art, ſhou'd depart from his ſervice before the end of the time for which he was hired, or ſhould quit or return his work before finiſhing the ſame according to agreement, unleſs upon ſome cauſe to be allowed by two juſtices, he ſhould be committed to the houſe of correction, to be kept to hard labour for any time not exceeding three months; and if any of the ſaid perſons ſhould be convicted of wilfully damnifying or deſtroying, without the conſent of the owner, any of the goods or work committed to his charge, or wherewith he or they ſhould be entruſted, he ſhould pay double the value thereof to the owner, to be levied by diſtreſs and ſale of his goods and chattels by warrant from two juſtices; and for want of ſufficient diſtreſs, ſhould be committed to the houſe of correction, to be kept to hard labour for any time not exceeding three months, or until ſatisfaction be made.

That every clothier, ſerge-maker, or woollen or worſted ſtuff-maker, or perſons concerned in making the ſaid manufactures, ſhould pay to all perſons employed by them in the woollen manufacture, the full wages, or other price agreed on, in lawful money of the kingdom, and not in goods, or by way of truck, or in any other manner than in money, nor ſhould make any deduction from ſuch wages, or price, on account of any goods ſold or delivered previous to ſuch an agreement by any perſon whatſoever; and, for the more eaſy recovery of ſuch wages or price, any two or more juſtices within their reſpective juriſdictions, upon complaint made, ſhould ſummon the offender, and for non-payment thereof in money, or ſufficient ſatisfaction given to the party grieved, they ſhould iſſue their warrant for levying the ſame by diſtreſs and ſale of the offender's goods and chattels, tendering the overplus to the owner; and for want of ſufficient diſtreſs, ſhould commit the party to the common goal, without bail or mainprize, for ſix months, or until ſuch ſatisfaction be made.

That if any perſons concerned in the woollen manufacture ſhould pay any perſons employed by them the wages, or price agreed on either in goods, or by way of truck, or in any other manner than in money, they ſhould forfeit 10 l. to the informer. And reciting, that whereas it was neceſſary, that the ſaid proviſions and regulations in the ſaid laſt in part recited act, ſhould be extended to journeymen dyers, journeymen hat-preſſers, and all other perſons employed in the woollen manufactures of the kingdom; and alſo to journeymen, ſervants, workmen and labourers, employed in the making of felts or hats, and in the manufactures of ſilk, cotton, mohair, fur, hemp, flax, linen, fuſtian, iron, and leather, or any manufactures made up of wool, fur, hemp, flax, cotton, mohair, or ſilk, or any of the ſaid materials mixed one with another; it was therefore enacted, That the ſaid ſeveral before recited clauſes in the ſaid act of the 12th of George I. and all the proviſions, pains, and penalties therein, ſhould extend to all perſons employed in or about any of the woollen manufactures of the kingdom; or the making of felts or hats, or in any of the manufactures of ſilk, mohair, fur, hemp, flax, linen, cotton, fuſtian, or leather, or in any manufactures made up of wool, fur, hemp, flax, cotton, mohair, or ſilk, or of any of the ſaid materials mixed one with another, in as full and ample manner as the ſame are declared to extend to the reſpective perſons therein named.

IPECACUANHA. A little wrinkled root, about the thickneſs of a moderate quill, brought from ſeveral parts of the Weſt Indies; of which there are four kinds, the brown, the black, the grey, and the white.

The grey is moſt eſteemed in phyſic; though the brown is moſt uſed, as being eaſieſt had: this latter is much twiſted, difficult to break, of a ſharp bitter taſte, and grows plentifully about Carthagena. The root of the grey ipecacuanha is longer than any of the other ſorts,

more violent in its operation. It comes from Peru by the way of Porto Bello, where the Spaniards call it bexugillo. The white ipecacuanha grows in Brazil and Martinico, which differs from the others, not only in colour, but alſo in figure, being leſs twiſted or rugged, and more reſembling the root of white dittany.

The ipecacuanha is purgative and aſtringent; it is alſo a gentle vomitive, and is found one of the beſt and ſureſt remedies hitherto diſcovered for a dyſentery. There are divers falſe ſpecies of ipecacuanha, or roots; which, on account of their external appearance, bear the denomination of ipecacuanha, and are ſometimes ſold for it. Dr. Douglas mentions two; the one white, reſembling the true white, only larger in ſize, ſtraighter, and ſofter to touch: the other brown, of a deeper colour than the true brown, and ſometimes mixed with red; whence it has alſo been called red ipecacuanha; both of which are produced in Maryland and Virginia, where they are uſed as vomitives by the lower ſort. But Sir Hans Sloane has diſcovered, that the latter is no other than the root of poiſonous apocynum, deſcribed by him in his natural hiſtory of Jamaica.

SWICH. A borough and port-town of Suffolk, ſituated in 1 deg. 16 min. of E. lon. and 52 deg. 12 min. of N. lat. on the river Orwel, 24 miles S. E. of Bury.

ELAND is an iſland of the Atlantic ocean, ſituated between 5 and 10 deg. of W. lon. and between 51 and 56 deg. of N. lat. It is ſeparated from part of England and Scotland by St. George's, or the Iriſh channel, on the eaſt; has the Scotch weſtern iſlands on the north and north-eaſt; the mouth of St. George's channel on the ſouth; and the Atlantic ocean on the weſt. It is divided into four large provinces, as Ulſter on the north, Leinſter on the eaſt, Munſter on the ſouth, and Connaught on the weſt; which are ſubdivided into 32 counties, and every county into baronies; being 250 miles long, and 150 broad; diſtant from Holy-head in North Wales 50 miles, and from Galloway in Scotland 15 miles.

It may be ſaid of the country in general, that it has as good paſture as any in Europe, and abundance of corn. Their cattle indeed are generally ſmall; but thoſe brought from England thrive exceedingly well. Here are a great many iron mines, quarries of ſtone, marble, ſlate, coal, and ſea-coal; but their principal fuel is turf, except in the towns near the ſea-coaſt, which are ſupplied with coal from England and Scotland.

Their chief commodities for exportation are linen cloth, cattle, hides, tallow, ſalt beef and pork, butter, cheeſe, honey, wax, ſalt, hemp, timber, pipe-ſtaves, woollen cloth, as coarſe rugs, ſhag mantles, freezes, ratteens, and camblets, with a variety of fiſh, and ſome lead.

Their importations from Great Britain are lead, pewter, ſea coal, hops, fine woollen cloth and hats, rich ſilks, ribbons, gold and ſilver lace, cutlery wares, tobacco, ſugar, and moſt of the plantation goods; as alſo muſlins, calicoes, China ware, tea, coffee, and other Eaſt India goods.

The inhabitants of Ireland are about two millions; but three parts in ſeven are Papiſts, whoſe religion is tolerated. The government is in the Lord Lieutenant, or Lord Deputies, and privy council: they have alſo a parliament; but their laws muſt be approved by the King of Great Britain in council, before they can be enacted; and an act of parliament in Great Britain will repeal or annul any of their laws. There is uſually a body of 12,000 men kept in pay on the Iriſh eſtabliſhment; but there is ſcarce any of the natives of that country among them, eſpecially in the infantry. But in this fruitful country the common people find ſuch difficulty to procure a livelihood, that many thouſands of them have transported themſelves of late years to the American plantations; and many of them enter as ſoldiers into the French ſervice, which has been often very prejudicial to Great Britain.

The province of Ulſter contains the counties of Donegal, Tyrconnel, Londonderry, Antrim, Tyrone, Fermanagh, Armagh, Down, Monaghan, and Cavan. The province of Leinſter contains the counties of Louth, Meath, Eaſtmeath, Weſtmeath, Dublin, Kildare, King's county, Queen's county, Wicklow, Catherlough, or Carlow, Wexford, and Kilkenny. The province of Munſter contains the counties of Waterford, Tipperary, Cork, Limerick, Kerry, and Clare. And the province of Connaught contains the counties of Galway, Roſcommon, Mayo, Sligo, and Antrim.

Dublin is the capital of the kingdom, lying in the province of Leinſter, in 6 deg. 25 min. of W. lon. and 53 deg. 16 min. of N. lat. at the mouth of the river Liffy, near the Iriſh channel, 60 miles weſt of Holyhead in Wales, and 270 miles N. W. of London. It is a large and populous city, pleaſantly ſituated, in view of the ſea on one ſide, and a fine country on the other. It contains between 2 and 300,000 inhabitants; has a noble cuſtom-houſe, a grand college or univerſity, the linen-hall for carrying on the linen-trade, but no exchange as in London or Briſtol; the merchants aſſembling in the Tholſel or Guildhall of the city for carrying on their commercial affairs, which of late years have been in a very increaſing condition; whereby the city is greatly increaſed, both in buildings, people, and manufactures.

The government of this city is in a lord mayor, 2 ſheriffs, 24 aldermen, and 112 common council men. The lord mayor and ſheriffs are elected by the aldermen alone; who fill up likewiſe all vacancies in their board by elections among themſelves, excluſively of the commons and citizens. The commons of the city are thoſe who have ſerved the office of ſheriff, and 96 perſons elected by the aldermen, from a double return made to them from the 25 ſubordinate corporations of the city.

The lord mayor and aldermen have the election of treaſurer in themſelves alone; thoſe of recorder and other officers, in the city; and the diſpoſal and management of the city-revenues in them, conjunctly with the ſheriffs and commons, who are all of them in reality elected by the aldermen.

The juſtices of the peace are the lord mayor, recorder, and ſuch of the aldermen who have ſerved the office of lord mayor, or who after their election have been excuſed that office; of the former there are now eight, and of the latter no leſs than ſeven.

The firſt charter to this city was granted to people who were free, and who knew the value of liberty—to the citizens of Briſtol, who were encouraged to ſettle here by the grant of a free and popular government, in which every freeman had a ſhare; in which a perfect equality was preſerved; in which there was no raſh pre-eminence or power, but what was owing to the appointment of the citizens, who were the electors of all their magiſtrates, and who, without any common council, made by-laws, and tranſacted every other buſineſs of government.

The freemen of Dublin, in number about 3000, who are not of the common council, are allowed no voice or controul in the general aſſemblies of the city, no votes in the election of their magiſtrates, no abſolute choice of their repreſentatives in common council, no one right or privilege diſtinct from thoſe of the inhabitants of the city, who are not admitted in franchiſes.

The lord mayor, and ſeveral companies of tradeſmen, every three years, make a very magnificent appearance, all richly habited on horſeback, which is vulgarly called the fringes: but it is properly the franchiſes, the liberties of the city being at this time ſurveyed; when a man rides into the water at low water mark, and throws an arrow as far as he is able into the ſea; ſo far being within the juriſdiction of the city; and the lord mayor may cauſe any ſhip to be arreſted within that diſtance.

Cork is the capital of the province of Munſter; ſituated on the river Lee, 126 miles S. W. of Dublin, and 50 miles S. of Limerick; being the next principal port in the kingdom to Dublin; lying in 8 deg. 25 min. of W. lon. and 51 deg. 40 min. of N. lat. It is large and populous; much frequented by foreign ſhipping, where they are victualled with ſalt beef, pork, and biſcuit.

Waterford is alſo a city and port in the province of Munſter, ſituated on the river Sure, 8 miles N. of the ſea, and 25 miles S. of Kilkenny, in 7 deg. of W. lon. and 52 deg. 12 min. of N. lat.

Wexford is a large ſea-port of Leinſter, ſituated on a bay of the Iriſh channel, at the mouth of the river Slaney, 65 miles S. of Dublin, in 6 deg. 25 min. of W. lon. and 52 deg. 15 min. of N. lat.

Limerick is a large city, and the capital of Munſter, ſituated on the river Shannon, in 8 deg. 30 min. of W. lon. and 52 deg. 35 min. of N. lat. 52 miles N. of Cork, and 100 S. W. of Dublin.

Kinſale is an excellent harbour, and a town of good trade; lying in the county of Cork, on the river Bandon, 14 miles S. of the city of Cork.

Dundalk is a port-town, in the county of Lowth, and province of Leinſter; ſituated on a bay of the Iriſh ſea, to which it gives its name, 18 miles N. of Drogheda, in 6 deg. 40 min. of E. lon. and 54 deg. 5 min. of N. lat.

Drogheda is alſo a port-town in the county of Lowth, ſituated on the river Boyne, 5 miles N. W. of the Iriſh channel, and 23 N. of Dublin.

Colerain is a place of great trade in linen, being in the county of Londonderry, and province of Ulſter; ſituated on the river Ban, in 7 deg. of W. lon. and 55 deg. 10 min. of N. lat. 5 miles S. of the ſea, and 25 miles N. E. of Londonderry.

Londonderry is the capital of Ulſter, ſituated in 7 deg. 40 min. of W. lon. and 54 deg. 52 min. of N. lat. on the river Mourn, near its mouth, 5 miles S. of the lake of Loughfoyle, 104 miles N. W. of Dublin, and 50 miles W. of *Carrickfergus*, which lies on a bay of the Iriſh channel of the ſame name, 14 miles E. of Antrim, and 85 N. of Dublin.

Carlingford is a port-town, remarkable for its fine oyſters; ſituated on a bay of the ſame name, in the county of Lowth, 22 miles N. of Drogheda: and the principal town of Connaught is *Galway*.

Theſe are the moſt conſiderable ſea-ports; but there are many others, as well as ſome inland places of trade; as, in Ulſter, there are the towns of Donnegal, Balyſhannon, Raphore, Antrim, Carrickfergus, Belfaſt, Liſburne, Clogher, Dungannon, Altmore, Inniſkilling, Armagh, Downpatrick, Newry, Drummore, Garret-Evelyn, Monaghan, Cavan, and Kilmore. In Leinſter are the towns of Atherdee, Longford, Laneſborough, Granard, Ardagh, Navan, Athboy, Trim, Dulek, Athlone, Mullingar, Ratoagh, Newcaſtle, Bray, Kildare, Naas, Athy, Philip's-town or Kingſton, Maryborough, Oſſory, Wicklow, Carlow, Laughlin, Tulla, Enneſcorthy, Roſs, Kilkenny, and Gowran. In Munſter are Tipperary, Caſhel, Clonmel, Carrick, Thurles, Tuam, Cloyne, Bandon, Mallow, Bantry, Roſs, Baltimore, Clear Cape, Kilmallock, Aſkeaton, Charleville, Kerry, Aghadeo, Tralley, Ardfort, Clare, and Killaloe. And in Connaught are Aghrim, Clonfert, Athenree, Loughrea, Roſcommon, Elphin, Abbybeyle, Caſtlebar, Sligo, Killony, Belclare, Ballaghy, Letrim, and Carrickdrumras.

The country is well watered by the Shannon, Boyne, Liffy, Lee, Blackwater, Sure, Barrow, Slaney, Mourne, Ban, Newrywater, and ſome other rivers.

The chief lakes are Lough-hearn, in Fermanagh, 30 miles long, and 10 broad: Lough-neagh, lying between Antrim and Tyrone, 20 miles long, and 10 broad: and Lough-foyle, near Londonderry, which has a communication with the ſea: beſides, the natives have much improved their inland navigation, by cutting navigable canals; nor is there any country that abounds more in ſpacious bays and commodious harbours.

It has been obſerved by ſome, that Ireland is treated by the Engliſh as a conquered country, in nothing more than in matters of trade; and that they are in a manner compelled to ſuppreſs and prohibit the exportation of the Iriſh manufactures, to prevent the ruin of their own.

It is certain, that the Iriſh have not only wool and fullers earth in as great perfection as the Engliſh, but have abundantly the advantage of them in the manufacturing it. Their ſituation alſo for an extended trade is more advantageous than that of any other nation in Europe, their harbours being many and commodious. Their inhabitants likewiſe are numerous and hardy, inured to want and labour, eaſy to feed, and able upon poor fare to run through a great deal of work. All the neceſſaries of life in that country are at lower prices than they are in any other on this ſide the globe; the people are incumbered with very few taxes, and their labour is cheaper than that of any of their neighbours. Theſe circumſtances conſidered, may perhaps in ſome meaſure juſtify the Engliſh for preventing the Iriſh from running into the Britiſh manufactures: but, to make them ſome compenſation, they are admitted, not only to bring their wool to England, but alſo to manufacture it in part, that is, to ſpin it; and very great quantities of their yarn are ſpun and imported into Great Britain in a year; an act of parliament being lately paſſed to open the port of Great Yarmouth for the importation of wool and woollen yarn from Ireland, the motive to which is ſignified in the preamble, to be of great utility and advantage to the woollen manufacturers in England, by rendering the conveyance of theſe materials to the ſeveral towns and places where the ſaid manufactures are carried on, more cheap, eaſy and expeditious.

The Iriſh, on the other hand, who think the reſtrictions in regard to the woollen manufacture a hardſhip upon them, have long clandeſtinely exported their wrought wool to France; which perhaps has proved more prejudicial to England, than if they had been permitted to manufacture it at home. But, conſidering theſe reſtraints, it is no wonder the trade of Ireland is contracted, compared to what it would have been otherwiſe. The common trade of Ireland, therefore, excepting the article of linens, is to be conſidered as almoſt confined to the proviſions which are the produce of their lands; of which, they have extraordinary plenty, ſo have they a very great and profitable trade for them. They trade conſiderably to Flanders and the Low Countries, eſpecially for butter; of which the Flemings buy vaſt quantities, as well as tallow and leather; inſomuch that the Iriſh ſend many ſhips at a time to Oſtend laden wholly with butter. They have a conſiderable trade with France alſo for their barrelled beef, with which the French victual their men of war, and ſuch of their merchant-ſhips alſo that are bound for long voyages, beſides the returns they make from thence for their wool.

As for their herrings, of which they catch great quantities on the coaſt from Belfaſt to Londonderry, they chuſe to ſend them to Spain and Portugal. With regard to their linen manufacture, which is ſo exceedingly increaſed of late years, they, as well as the Scotch, ſend vaſt quantities to the Britiſh colonies, and import it into England duty free.

The Iriſh alſo build very good ſhips; and many English merchants chuſe to build there, their oak being very good and plentiful.

They have all their coals, except a few in Kilkenny, which is far within land, from England; alſo all their copper, block-tin, and lead, from Lancaſhire, Cornwall, Devonſhire, and Yorkſhire.

They import their hops, and the greateſt part of their Weſt India commodities, with all the bulk of their mercery, grocery, and haberdaſhery wares, alſo from England.

From hence it appears, that the Engliſh are conſiderable gainers even in theſe few branches of trade: but when they demonſtrate that the politeneſs, the gaiety, and power of the Britiſh court, allure all thoſe that are ſtudious, either of improvement, pleaſure, or preferment, and drain from thence the penny rents of moſt of the eſtates of that kingdom; and when it is conſidered that every increaſe of their wealth, will greatly enlarge the inlet of their money, and increaſe the Engliſh drafts upon them, it muſt be acknowledged, that theſe circumſtances, together with the reſtriction on the exportation of their wool, and the other advantages which England already has of them in trade, will cauſe all or moſt part of their acquiſitions, on the general balance, to center in England.

To evince this truth, they annually ſend to England

preſent,	*L.* 10
For coals	9
For corn	
For broad cloths, Eaſt India goods, and mercery wares, hops, toys, and ſuch like	25

England has much of their wool raw and unmanufactured; which, as appeared by the regiſter thereof at the cuſtom-houſe for the year ending 1723, amounted to, yarn included, 271,291 ſtone; which becauſe of the monopoly, the Engliſh buy in Ireland at 6 s. *per* ſtone, in all 81,382 l. firſt coſt. This, by the art and labour of Engliſhmen, is converted into cloths, kerſies, ſtuffs, and other manufactures; and, by a reaſonable conjecture, is a means of ſaving, or gaining annually, over and above the firſt coſt - 750,000

By the expence of Iriſh outliers in England 600,000

So that the Engliſh are gainers or ſavers by this trade with Ireland *per annum* - 1,780,000

Now, if the gain of England, on the general ballance of her trade with all the world, is no more than 2,000,000 l. yearly, according to the ingenious Dr. Davenant, and others; how would the Engliſh have been able to ſupport themſelves with matter for ſuch an exceſs of luxury and profuſion, as has been lately known, and at the ſame time have maintained ſuch long and expenſive wars, had not the wealth they received annually from Ireland fed them with money?

Since then every addition to the wealth of the inhabitants of Ireland, will, as is urged by her advocates, enlarge the remittances of their money to England; ſince every acquiſition which they make by trade is at laſt to center among the Engliſh; and ſince it is evident, without employing them, it is impoſſible for the Engliſh to recover the trade they have loſt, what ſhould hinder them from making a proper uſe of the Iriſh, from ſetting them up as inſtruments to increaſe the Britiſh wealth, and to prevent the riſe of any others, to whom the trade of the univerſe might prove a fatal acceſſion of power, much to be dreaded by the reſt of Europe?

But how far the Iriſh manage their own trade at preſent, is to be ſeen in the following

Abſtract of the exportations and importations of Ireland for the year ending the 25th of March 1725, *eſtimated at a medium of the ſelling price for that year.*

By and from	Exports. *L.*	Imports. *L.*
South Britain, Wales, Guernſey, and Jerſey -	476,652	441,799
North Britain, and the Iſle of Man - -	21,250	31,003
Denmark, Norway, Sweden, and Hamburg -	4,249	74,300
Holland and Flanders -	52,618	70,048
France - -	214,422	141,650
Spain and the Canaries, Portugal, Genoa, and Leghorn	149,984	60,959
Plantations -	96,825	
Total *L.*	1,053,782	819,761

Having thus conciſely run through the chief branches of trade in Ireland, and ſet forth the greivances complained of by the Iriſh, it may be proper to mention a propoſal which has been made for incorporating Great Britain and Ireland together; to make one kingdom in all reſpects, as to parliament, trade, and taxes.

This propoſal of incorporation has long been the wiſh of many perſons of both kingdoms: and it is ſaid, that inexpreſſibly great would be the benefit on both ſides. The Iriſh would ſhare in the advantage of the Britiſh trade, and the Engliſh in theirs. By permitting them to get rich at the expence of the French, they would be enabled to eaſe the Engliſh of the worſt and heavieſt of their taxes; whereas at preſent the French, by the unaccountable infatuation of the Engliſh, get rich at their expence. By this mutual benefit, neither kingdom would be looked upon as foreign to the other; but the goods of both would be imported duty free, or perhaps be conſidered only as coming coaſtwiſe. The hoſtile prohibition againſt wearing or uſing the produce of either kingdom, would be repealed; and all that unnatural war between the commerce of the two nations would be at an end; which would be attended with theſe further happy conſequences, that many of the neceſſaries of life would be imported cheaper into England, than they now can be purchaſed; which would be a great advantage to the merchant and manufacturer: and many more of the luxuries, ornaments, and delicacies of life, would be exported from England into Ireland: for moſt certain it is, that, in proportion as Ireland grew rich, the natives would take the richeſt of their cloaths, furniture, plate, jewels, equipage, aud the like, from England. The inducements, likewiſe, of being near the parliament, the court, and the public funds, would bring many more Iriſh families to reſide and ſpend their fortunes in England than at preſent. In ſhort, whatever wealth Ireland would draw from other countries, by its produce, manufactures, and happy ſituation, would all center in England.

By ſeveral ſtatutes, hemp or flax, and all the productions thereof, as thread, yarn, and linen, of the growth and manufacture of Ireland, may be imported by Britiſh or Iriſh directly into Great Britain, free of all duties, upon certificate of the officers of the port where ſhipped, expreſſing the marks, number, tale, or weight of the ſpecies in each bale or parcel mentioned in the bill of lading, with the name and place of abode of the exporter from Ireland, and of the perſon who ſhall have ſworn the goods are the manufacture of Ireland, and where and to whom in England conſigned; and oath of the maſter, that the goods are the ſame mentioned in ſuch certificate.

But, by the 5th of George I. wrought ſilks, ſtuffs, &c. muſlins and callicoes of the manufacture of Eaſt India, China, or Perſia, may not be imported into Ireland, but from Great Britain; upon forfeiture thereof, or the value, with the ſhip, and furniture.

By the 6th of George II. no ſugars, paneles, ſyrups, or molaſſes, of the product of any of the plantations in America, nor any rum or ſpirits of America, except of the growth and manufacture of his Majeſty's colonies there, may be imported into Ireland, unleſs ſhipped in Great Britain in ſhips legally navigated, upon forfeiture thereof, or the value, together with the ſhip and all her furniture.

Any perſon aſſiſting in the unlawful landing, or receiving any of the aforeſaid goods ſo landed, are to forfeit treble their value; and for obſtructing officers 50 l. and to ſuffer three months impriſonment.

Maſters of ſhips, being his Majeſty's ſubjects, receiving any of the aforeſaid goods on board, in order to land the ſame, contrary to the true intent of this act, are to forfeit 100 l.

It is certainly neceſſary for Great Britain to maintain a friendly correſpondence with Ireland; and nothing is more likely to anſwer this end, than the encouraging the linen manufacture there, which it is highly the intereſt of the Britiſh people to promote, and of the Iriſh people to ſet upon; being for the moſt part of another nature than what is made either in North or South Britain; for, beſides the employment it will give to the poor, large tracts of land will be taken up for raiſing hemp and flax, both which thrive well in many parts of that kingdom. On the other hand, the low labour of Ireland being employed on that manufacture, it will no way prejudice that of Great Britain, but make the Iriſh better able to trade with the Engliſh, for ſuch things wherewith they are ſupplied by the latter; it being undoubtedly the intereſt of Great Britain, that all thoſe nations ſhe trades with ſhould grow rich, by any methods that do not make her poor; and more eſpecially Ireland, whoſe profits are generally ſpent in England.

After the fear that the value of the Britiſh lands would be leſſened by the improvement of Ireland, had produced a deſtructive prohibition of Iriſh cattle; the people of that country being neceſſitated to find out ſome other employment for their lands, turned their thoughts to the breeding of ſheep, and raiſing a growth of wool. No ſooner was this effected, but a prohibition enſued on the part of Great Britain, to export the manufactures made of that wool. This prohibition on the Iriſh tended greatly to

ruin the woollen trade of Britain, and raiſe that of France; for unleſs the Iriſh are ſuffered to export woollen goods, they muſt ſell their raw wool to the beſt bidder, and that is France; one pack of Iriſh wool working up two packs or more of French wool; which is double the damage to Great Britain, that the opening the exports from Ireland would be. France, by leſſening her taxes in time of peace, enabling thereby her people to work cheap, could afford to give large prices for Iriſh wool, and become the chief market for it; having thereby raiſed for exportation an immenſe cheap ſaleable manufacture, which their own wool was not capable of doing. As this increaſed, that of Great Britain declined: and though the caſe is ſo at preſent; yet ſtill this fear, or rather infatuation, about the value of the lands in Great Britain, makes the Britiſh government perſiſt in a prohibition, that not only hurts the Iriſh, and ruins the Britiſh ſubjects, but enriches the French: for, as the caſe now ſtands, either Ireland or France muſt have the woollen manufacture; Britain, by reaſon of its heavy taxes, and monopolies, that make labour dear, being inferior to both. The Iriſh export clandeſtinely ſome camblets to Liſbon, and underſel the French; therefore the Iriſh can recover the woollen trade out of their hands. And ſhall Great Britain compliment the French with a trade that ſhe denies her own ſubjects? Nay, moſt of what Ireland gets centers at laſt in England; and ſhall the Engliſh refuſe ſuch a ſum which the Iriſh would ſnatch from their enemies, and preſent to Great Britain?

IRIS. A very common plant, well known in England, France, Italy, Portugal, and other countries; having its name from the colour of its flower, which imitates in ſome reſpect the iris, or rainbow; but that of Florence is in moſt eſtimation.

The root of this plant is uſed by perfumers for making the powder of iris; by dyers, for giving their cloths and ſtuffs a good ſmell; by confectioners, for confects; by bleachers, for making their lixiviums odoriferous; by phyſicians, who preſcribe it in ſome remedies; by ſurgeons and apothecaries, who apply it as an ingredient in ſome unguents; and laſtly, by perſons for making their breath ſweet and agreeable; but, beſides the various uſes of the root, a green colour is extracted from its blue flowers, which ſerves for painting in miniature.

IRON. A hard, fuſible, and malleable metal; of great uſe in the affairs of life; conſiſting of an earth, ſalt, and ſulphur, but all impure, ill mixed, and digeſted, which renders it extremely liable to ruſt. It is the hardeſt, drieſt, and moſt difficult to melt of all metals; but it is ſoftened by heating it often in the fire, hammering it, and letting it cool of itſelf; and it is hardened by extinguiſhing it in water. See *Hardening*.

It may be rendered white, by cooling it in ſal armoniac and quicklime; but the ſtrongeſt temper of iron is ſaid to be that which it takes in the juice of ſtrained worms. See *Tempering*.

Iron has a great conformity with copper; and the two are not eaſily ſeparated, when ſoldered together; whence ariſes that uncommon friendſhip, which poets feign between Mars and Venus. See *Copper*, and *Vitriol*.

It has likewiſe ſo great a conformity with the loadſtone, that Rohault ſays it is itſelf an imperfect one; as alſo, that if it be a long time expoſed in a certain ſituation, it becomes a real loadſtone, and mentions the iron in the ſteeple of Notre Dame at Chartres as an inſtance. See *Magnet*.

There are ſeveral kinds of iron, which have properties very different from one another; as, Engliſh iron, which is coarſe, hard, and brittle, fit for fire bars, and ſuch uſes: Swediſh iron, which is a fine tough ſort, will beſt endure the hammer, is ſofteſt to file, and in all reſpects the beſt to work upon: Spaniſh iron, which would be as good as the Swediſh, were it not ſubject to red-ſear; that is, to crack betwixt hot and cold: German iron, commonly called in England Dort ſquare, becauſe brought thither from Dort, and is wrought into bars of three quarters of an inch ſquare; being a coarſe iron, and only fit for ordinary uſes.

There is another ſort uſed for making of wire, which is the ſofteſt and tougheſt of all, and not peculiar to any country; but indifferently made where-ever iron is found, though of the worſt ſort; for it is the firſt iron that runs from the mine ſtone, when it is melting, and is reſerved purely for the making of wire. See *Wire*.

Generally ſpeaking, the beſt iron is that which is ſofteſt and tougheſt, and, when it breaks, is of an even greyiſh colour, without any of thoſe glittering ſpecks, or any flaws or diviſions like thoſe ſeen in broken antimony.

There are a great number of iron works in moſt parts of England; but thoſe in the foreſt of Dean, in Glouceſterſhire, are in the moſt repute; where the ore is found in abundance, differing much in colour, weight, and goodneſs.

The beſt, called bruſh ore, is of a bluiſh colour, very ponderous, and full of little ſhining ſpecks, like grains of ſilver; affording the greateſt quantity of iron; but being melted alone, produces a metal very ſhort and brittle, and therefore not fit for common uſe. For the remedying whereof, the workmen make uſe of another ſort of material, termed cynder, which is nothing but the refuſe of the ore, after the metal has been extracted; and which being mingled with the other, in a due quantity, gives it that excellent temper or toughneſs, which cauſes this iron to be preferred to any brought from foreign parts.

When the furnaces are once at work, they keep them conſtantly employed for many months together, never ſuffering the fire to ſlacken night or day, but ſtill ſupplying the waſting of the fuel, and other materials, with freſh poured in at the top: charcoal is uſed altogether in this work, as ſea-coal will ſcarcely do.

From theſe furnaces the workmen bring their ſows and pigs of iron, as they call them, to their forges, where it is wrought into bars.

A very conſiderable trade in iron is carried on at Amſterdam, particularly of Swediſh, Spaniſh, and Liege iron.

The 100 lb. of Swediſh iron in large or ordinary bars, is uſually ſold for about 12 s. ſterling.

The 100 lb. of Spaniſh iron, for about 12 s. 3 d. ſterling.

The 100 lb. of Liege in rods, for about 11 s. 6 d. ſterling. See *Sweden*.

By the ſtatutes of the 28th Edward III. and 5th and 6th Will. III. iron made in Great Britain, except of Britiſh ore, or brought into Great Britain and there ſold, is not to be exported, upon forfeiture of double the value to the King.

By an act paſſed in the 12th year of Charles II. armour, bandeliers, bridle-bits, halbert-heads, and ſharps, holſters, muſkets, carbines, fowling-pieces, piſtols, pike-heads, ſword or rapier blades, ſaddles, ſnaffles, and ſtirrups, may be exported by any perſons.

By the ſtatute of the 23d of George II. reciting, That as the importation of bar iron from his Majeſty's colonies into the port of London, and the importation of pig iron from the ſaid colonies into any part of Great Britain, and the manufacture of ſuch bar and pig iron in Great Britain would be a great advantage, not only to the ſaid colonies; but alſo to the kingdom, by furniſhing the manufacturers of iron with a ſupply of that uſeful and neceſſary commodity, and by means thereof large ſums of money then annually paid for iron to foreigners would be ſaved to the kingdom, and a greater quantity of the woollen and other manufactures would be exported to America in exchange for iron: it was therefore enacted, That the duties then payable on pig iron, made in and imported from his Majeſty's colonies in America, into any port of Great Britain, ſhould ceaſe; and that no duty ſhould be payable upon bar iron made in and imported from the ſaid colonies into the port of London.

That no ſuch bar iron ſo imported into the port of London ſhould afterwards be exported, or be carried coaſtwiſe, to be landed at any other place in Great Britain, except for the uſe of his Majeſty's dock-yards, upon pain that the ſame, and the veſſel, ſhould be liable to ſeizure and ſeizure, as prohibited and uncuſtomed goods clandeſtinely exported or imported, or the veſſel in which the ſame ſhould be exported or imported,

then liable to by law; and alſo upon pain that the exporter, and maſter and mariners of the veſſel, ſhould be ſubject to the like penalties and puniſhments as the maſter or mariners of the veſſels laden with prohibited and uncuſtomed goods, or goods clandeſtinely exported or imported, were then liable by law; and that no officer of the cuſtoms ſhould grant any coquet, for exporting or carrying coaſtwiſe any ſuch bar iron ſo exported, except for the uſe of his Majeſty's dock-yards, upon pain of forfeiting 200 l.

That no ſuch bar or pig iron ſhould be imported duty free as aforeſaid, unleſs the ſame ſhould be ſtamped with ſome mark denoting the colony or the place where the ſame were made, and unleſs the importer ſhould produce ſuch certificate to the chief officer of the cuſtoms at the port where the ſame ſhould be imported, and unleſs oath be made by the maſter of the veſſel, before ſuch officer, which he is to adminiſter without fee, that the ſaid iron is the ſame mentioned in the certificate.

That no mill or other engine for ſetting or rolling of iron, or any plateing forge to work with a filt-hammer, or any furnace for making ſteel, ſhould be erected or continued, in any of his Majeſty's colonies in America, upon pain that every perſon offending therein ſhould, for every ſuch mill, forge, or furnace, forfeit 100 l.

ON is alſo the name of an Arabian meaſure for ſilks, being 3 4ths of an Engliſh yard.

the refining of IRON, ſee *Refining*.

the converſion of IRON *into ſteel*, ſee *Steel*.

arping IRON, ſee *Harping*.

ON *moulds*. Yellow lumps of earth, or ſtone, found in chalk-pits, about the Chiltern-hills in Oxfordſhire; being in reality a kind of indigeſted iron ore.

ON *ſick*, is applied to a ſhip or boat, when her bolts, nails, or ſpikes, are ſo eaten with ruſt, that they make hollows in the plants, whereby the ſhip leaks.

ONMONGER. A perſon who deals in various ſorts of iron wares, as alſo in moſt ſorts of braſs work, for houſhold furniture, and other uſes.

ONMONGERS *company of London*, was incorporated by letters-patent of the 3d of Edward IV. in 1464, by the appellation of The maſter and keepers, or wardens and commonalty, of the art or myſtery of ironmongers in London; conſiſting of a maſter, two wardens, and the whole livery are aſſiſtants, which contains 84, whoſe fine is 15 l. They have an elegant hall in Fenchurch-ſtreet, where they tranſact their buſineſs, with a great eſtate; out of which, according to the directions of ſeveral donors, is annually paid to charitable uſes, about 800 l.

Beſides this great charity, Mr. Thomas Betton, a Turky merchant, by will, in the year 1724, deviſed to the company in truſt about 26,000 l. one moiety of the profits thereof to be perpetually employed in the redemption of Britiſh captives from Mooriſh ſlavery; and the other half to be equally diſtributed between the poor of the company, and the ſeveral charity-ſchools, within the city and liberties thereof.

QUOIS, or the five Indian nations in North America, who are in alliance with the Engliſh. Their country is bounded by Canada on the north, by the Engliſh plantations of New York and Penſilvania on the eaſt and ſouth, and by the lake Ontario or Frontenac on the weſt; where they have long ſerved as a barrier to the northern Britiſh colonies againſt the French, and their Indians of Canada: but it is ſaid the French have lately prevailed on the Mohawks, one of the five nations, to revert their ancient allies the Engliſh. See *Indian* America.

S. A great river, which runs from ſouth to north through Ruſſia, falls into the river Oby, and makes part of the boundary between Aſia and Europe.

N. A port-town of Scotland, in the bailiery of Cunningham, ſituated in 4 deg. 40 min. of W. lon. and 55 deg. 15 min. of N. lat. at the mouth of the river Irvine, on the frith of Clyde, 15 miles E. of the iſle of Arran, and 63 miles weſt of Edinburgh.

LLE. A colour partaking of white and yellow, or rather a well ſcoured yellow; of which there are different kinds, as the pale, clear, golden, and dark iſabelle.

ISING *Glaſs*. See *Ichthyocolla*.

ISLAND, or *Iſle*. A tract of dry land, encompaſſed with water, either with the ſea, a river, or lake: in which ſenſe iſland ſtands contradiſtinguiſhed from continent, or terra firma. See *Continent*.

Some conclude from Gen. x. 5. and from Eccl. xxiii. that iſlands are as ancient as the world; and that there were ſome at the beginning. Whatever becomes of the proof, it is by no means probable, that the large iſlands, far remote from the continent, are new; or that they either aroſe out of the ſea, or were torn from the main land. Nor is it leſs certain, that there have been new iſlands formed, by the caſting up of vaſt heaps of clay, mud, and ſand; as that, for inſtance, of Tſongming, in the province of Nanquin in China; or by the violence of the ſea, which has torn off large provinces from the continent, as the ancients imagined Sicily, and even Great Britain, to have been formed. It is alſo certain, that ſome have emerged above the waves, as Santorini formerly, in the Levant, and three other iſles near it lately; the laſt in 1707, which roſe from the bottom of the ſea after an earthquake, that was ſuppoſed to have looſened it from its hold.

Several naturaliſts are of opinion, that iſlands were formed at the deluge; others think they have been rent and ſeparated from the continent by violent ſtorms, inundations, and earthquakes. Theſe laſt have obſerved, that the Eaſt Indies, which abound in iſlands more than any other part of the world, are likewiſe more annoyed with earthquakes, tempeſts, lightening, and volcanos, than any other part. Varenius thinks moſt of theſe opinions true, in ſome inſtances, and believes that there have been iſlands produced each of theſe ways. St. Helena, Aſcention, and other ſteep rocky iſlands, he ſuppoſes to have become ſo, by the ſea's overflowing their neighbouring champaigns. By the heaping up large quantities of ſand, and other terreſtrial matters, he thinks the iſlands of Zealand, Japan, and others, were formed. Sumatra and Ceylon, and moſt of the Eaſt Indian iſlands, he rather thinks were rent off from the main land; and concludes, that the iſlands of the Archipelago were formed in the ſame way, imagining it probable that Deucalion's flood might contribute towards it.

ISLE *de Dieu*. An iſland in the bay of Biſcay, on the coaſt of France, ſituated in 2 deg. 5 min. of W. lon. and 40 deg. 45 min. of N. lat. 14 miles W. of the coaſt of Poitou.

ISLE *of France*, is an iſland in the Indian ocean, ſituated in 56 deg. of E. lon. and 20 deg. of S. lat. 400 miles E. of Madagaſcar, and about 60 miles from the iſle of Bourbon; formerly ſubject to the Portugueſe, who called it Il ha do cerno: it was afterwards in poſſeſſion of the Dutch, who called it Mauritius; but it is now ſubject to the French, who gave it the name of the Iſle of France. See *Madagaſcar*.

The Portugueſe never had an eſtabliſhment in this iſland. The Dutch had only a ſmall fort for the ſafety of thoſe they ſent to cut wood; but the French have eſtabliſhed a ſtaple there for the conveniency of their India company.

This iſland is about 45 miles in circumference; the ſoil is very good and fertile, producing equally Indian and European fruits. Its air is alſo very wholſome, and fit for refreſhing fatigued ſeamen; but the principal utility, for which it was made choice of by the French company, conſiſts in its two ports.

ISOLA. A port-town of Italy, in the Hither Calabria, ſituated on the Mediterranean, in 18 deg. of E. lon. and 39 deg. of N. lat. 15 miles S. of St. Severino.

ISPAHAN, or *Iſpahan*. The capital city of Perſia, ſituated in 50 deg. of E. lon. and 32 deg. 30 min. of N. lat. See *Perſia*.

ISSEL. A river of the united Netherlands, which, riſing in Weſtphalia, runs north by Doeſburg, and afterwards by Zutphen and Deventer, dividing Gelderland from the provinces of Overyſſel and Zutphen; and diſcharging itſelf into the Zuider ſea, near Campen.

ISTHMUS. A narrow neck of land, which ſeparates two ſeas, and joins a peninſula to ſome other country; as the

isthmus of Suez, which joins Africa to Asia; and the isthmus of Darien, which joins North and South America.

ITALY, according to common observation, resembles a boot, or leg with part of the thigh; and extends in length from the N. W. to the S. E. that is, from the foot of Mount St. Bernard, a mountain of the Alps, to the city of Oranto, 600 miles in a direct line. The breadth is very unequal; for measuring the boot-top under the Alps, it is at least 400 miles, in the calf of the leg about 120, and towards the instep about 80 in breadth; extending from 38 deg. 20 min. to 47 deg. of N. lat. and from the 7th to the 19th deg. of E. lon. It is bounded by the Alps, which separate it from France, Switzerland, and Germany, towards the north and north-west; by the gulph of Venice, or the Adriatic sea, and the country of Trent, towards the east; by the Ionian sea, and streight of Messina, towards the south; and the Tuscan sea, towards the west.

The seas which encompass Italy on three sides, are the Adriatic, the Ionian, and the Tuscan. There are also abundance of fine lakes, as Major, Lugano, Como, Isco, and Garda in the duchy of Milan; Trasimene, Perugia, Vulsin, and Bracciano in Tuscany; and Fucin Fundi, Castello-Gandolpho, and Calano in the Campania of Rome. Besides, there are a multitude of lesser streams; which having their source in the Appenines, fall either into the Tuscan or Adriatic seas; the principal rivers being the Tiber, Po, Arno, Mincio, Adda, Adige, and Volturno.

Italy may be considered under three grand divisions. Upper Italy, containing the principality of Piedmont; to which may be added Savoy, though on this side the Alps; the duchy of Montferat, the territories of Genoa, duchies of Milan, Parma, Modena, Mantua, and the territories of Venice. Middle Italy, containing the dominions of the Pope, and the Great Duke of Tuscany; in which may be comprehended the territories of Lucca. The Lower, or Southern part of Italy, consisting of the kingdom of Naples.

1. *The countries subject to the King of Sardinia.*

Savoy is bounded by the lake, and territories of Geneva, towards the north; by Piedmont, from which it is separated by the Alps towards the east and south; and by Dauphine, and Lionois in France, towards the west. Its provinces are seven; the duchy of Savoy properly so called, the county of Geneva, the duchy of Chablais, the barony of Fossigny, the county of Taraintaise, the county of Maurienne, and the duchy of Aouste; the capital city being Chamberry, situated in 5 deg. 45 min. of E. lon. and 45 deg. 40 min. of N. lat. 90 miles north-west of Turin, and 45 south of Geneva.

The common people of this country are exceeding poor; which does not proceed so much from the barrenness of the country, being more fruitful in many parts than Switzerland; but from the despotic power of the prince and great lords, whose vassals the peasants are, being not allowed a subsistence out of the lands they manure. So great is the scarcity of corn in several villages, that travellers relate, it is a rarity to meet with a piece of bread, and that they have been forced to content themselves with a glass of wine, and a few chesnuts, the usual food of the natives, at their inns upon the great road. Their poverty therefore obliges many of the natives to go abroad; so that Savoyard chimney sweepers, pedlars, and raree-showmen, are seen in every part of Europe. The country however produces wine, and some corn, apples, pears, and other fruits. They have also large herds of black cattle, goats, hogs, venison, and wild fowl in the woods and mountains; as also plenty of fish in their lakes and rivers. There are also large woods of fir-trees, which afford masts, pitch, and tar for shipping; they have some oak timber; besides marble, stone quarries, and coal-pits; likewise in several places mineral waters, and hot baths; of which those at Aix are most resorted to. They have also several salt pits, and fountains, which furnish them with good white salt. In Fossigny there are allum mines, and the valley of Aouste affords a good sand for making crystal glasses.

The principality of *Piedmont* extends 100 miles in length from north to south, and about 70 miles in breadth from east to west; being generally computed to be 300 miles and upwards in circumference. It may be divided into eight parts or provinces; as Piedmont Proper, the marquisate of Saluzzo, the county of Asti, the lordship of Verceil, the principality of Masserano, the marquisate of Ivrea, and the vallies of the Vaudois; the capital city being Turin, situated in 7 deg. 16 min. of E. lon. and 44 deg. 55 min. of N. lat. at the confluence of the rivers Po and Doria, 100 miles S. W. of Milan, 150 S. E. of Lyons, and 100 miles N. W. of Genoa; it is of a square figure, three miles in circumference, much admired for its buildings, and the residence of his Sardinian Majesty.

This country lies between the Alps on one side, and the Appenine hills on the other; but is not incumbered with barren rocks and mountains, as its neighbours of Savoy and the state of Genoa are. On the contrary, there is not a more desirable climate, a pleasanter, or more fruitful province in Italy, abounding in corn, wine, fruits, rice, cattle, and fowls of all kinds, excellent cheese, silk, flax, hemp, and minerals; but the crop is sometimes destroyed by storms of hail, which are called the plague of Piedmont, when almost ready for the sickle. In plentiful years they export great quantities of corn and rice, as well as cattle, silk, linen cloth, wrought iron, and paper, insomuch that no country of its dimensions yields so great a revenue to its prince; what they want most is a large breed of horses, with which they are supplied from Germany.

The dominions of the King of Sardinia lying southward of Piedmont are the counties of Nice, Tende, Broglio or Bueil, with the principalities of Oneglia and Barcelonetta.

The county of *Nice* is bounded by the marquisate of Saluzzo on the north; by the county of Tende, and the territories of Genoa, on the east; by the Mediterranean on the south; and the county of Broglio or Bueil, and Provence, on the west. The country produces plenty of oil and wine, though but little corn, being very mountainous.

The city of Nice stands on the Mediterranean, in a pleasant plain, at the foot of the Alps, 10 miles to the N. of Antibes, and 60 to the S. of Pignerol; being defended by a strong castle, situated on a rock, which commands both the town and the harbour.

Villa Franca is situated on the same shore, about 5 miles to the E. of Nice. It seems to have a better harbour, and is defended by two forts.

The county of *Tende* is bounded by Piedmont on the north, by the territories of Genoa on the east, and by the county of Nice on the south and west; the chief town whereof is Tende, situated at the foot of the Apennine, about 30 miles to the north of Villa Franca, and hath a castle for its defence.

The county of *Broglio*, sometimes reckoned part of the county of Nice, is bounded by the valley of Barcelonet on the north, by the county of Nice towards the east, and by Provence in France on the south and west; the chief town whereof is Broglio, situated on the frontiers of Provence, about 30 miles to the north of Nice.

The principality of *Oneglia* lies on the Mediterranean, encompassed on three sides by the territories of Genoa, being about 25 miles in length, and 8 in breadth; the chief town Oneglia, situated on the sea, about 70 miles S. E. of Turin. It is a populous trading place, and the country about it abounds in oil and fruits.

The King of Sardinia's dominions which lie to the eastward of Piedmont are the duchy of Montferat, the Alexandrin, the Vigevano, and the Lomelin in the Milanese.

The duchy of *Montferat* is bounded by the lordships of Verceil on the north, by the Alexandrin on the east, by the territories of Genoa on the south, and by the county of Asti on the west; the chief towns whereof are Casal, Ponteora, Lucedia, Acqui, Nice de la Paille, Trino, and Alba.

The *Alexandrin* lies between the territories of Genoa and Milan on the south and east, and Montferat on the

north-weſt; the chief towns whereof are Alexandria and Boſco.

The *Vigevano* lies between Novara on the north, Milan on the eaſt, and Lomelin on the ſouth; the chief towns whereof are Vigevano and Mortara.

The *Lomelin* lies to the ſouth of Vigevano; the chief towns whereof are Valencia, Lumello, and Freſcarolo.

The valleys of *Seſſia* lie between the river of the ſame name, and the lake Major.

The duchy of Montferat, the Alexandrin, the Vigevano, and Lomelin, are pleaſant fruitful countries, watered by the river Po, yielding corn, wine, and oil; and as they are contiguous to Piedmont, are a very valuable addition to the King of Sardinia's dominions.

The ordinary revenues of this prince are uſually computed at 500,000 l. ſterling *per annum*; but this ſeems to be no more than an uncertain gueſs, as he does not too much oppreſs his ſubjects, by laying on them duties greater than they can bear, and thereby diſcourage them from cultivating and improving their lands to the beſt advantage, which would in the end redound to his own loſs. See *Sardinia*, under *Italian* iſlands.

2. *The republic of Genoa.*

Genoa extends along the Mediterranean from the river Var to the Magra, 150 miles in length, but not above 20 in breadth, and in ſome places ſcarce 10. It is bounded on the land-ſide by the Alps, and Apennine hills, which ſeparate the Genoeſe from the county of Nice, Piedmont, Montferat, the Milaneſe, and Parma, on the weſt, north, and north-eaſt. It is bounded by the duchy of Florence towards the eaſt, and by the Mediterranean on the ſouth.

The country lying thus open to the ſouth ſun, and the rocks and mountains covering it from the north winds, the air is much warmer than in the neighbouring country of Piedmont, and in ſummer it is exceſſive hot. The tops of the mountains are perfectly bare, having neither wood nor herbage upon them; but the bottom, and ſouth-ſide of the mountains, are well planted with vines, olives, mulberries, and other fruit-trees, and in ſome places with palm-trees; the laſt of which are ſeldom found in other parts of Italy; but the ſoil yields ſcarce any corn, nor have they great plenty of fiſh in their ſeas; or rather, as ſome relate, theſe ſeas are ſo tempeſtuous that the fiſh are not eaſily taken here.

The chief city is Genoa, ſituated in 9 deg. 30 min. of E. lon. and in 44 deg. 30 min. of N. lat. part of it on a level ſtrand near the ſea, but riſes gradually to the top of the hill, like the ſeats of a theatre, and affording a fine proſpect from the ſea. The circumference of the city is 6 miles, containing 30 pariſh-churches, 20 colleges, and as many convents and religious houſes. The harbour is large and deep, but expoſed to the ſouth-weſt wind; only there is a mole for the ſecurity of their galleys and ſmall veſſels.

The other principal towns are Gavi, Cogereto, Varagio, Noli, Albenga, St. Lorenzo, Taggia, St. Remo, Ventimiglia, Oneglia, Final, Sarzana, Lerce, Spezza, Porto Venere, Monteroſſo, Seſtri, Lavagne, Rapallo, Porto Fino, Rugneto, Torriglia, Vergagny, and Chivari.

Cogereto, is a little port-town 15 miles ſouth weſt of Genoa, and not worth mentioning, but that it is ſaid to be the place of the birth of the famous Columbus, who diſcovered America.

Varna, at the bottom of a bay about 30 miles ſouth-weſt of Genoa, is one of the largeſt towns in the Genoeſe territories, to which the King of Sardinia ſometimes ſets up a claim. Noli is ſituated on the ſame coaſt, with a canal defended by a caſtle, and two forts, and may be reckoned a tolerable harbour on a coaſt where none are good. Albenga is on the ſame coaſt, formerly eſteemed a conſiderable city, and a pretty good harbour. St. Remo is pleaſantly ſituated 15 miles to the weſt of Oneglia. Ventimiglia is a port-town, ſituated at the mouth of the river Rota; and Monaco is the capital of a little principality, belonging to the family of Grimaldi, defended by a caſtle, and has a harbour.

The towns ſituated to the eaſt of Genoa are Rapallo, on a bay of the ſame name, 16 miles S. E. of Genoa, famous for the excellent oil produced in the country about it: Lavagne, 25 miles S. E. of Genoa: Borgheto, the capital of a marquiſate: Sarzana, the eaſt boundary of the ſtate of Genoa, a large populous town of good trade: and Porto Venere, 7 miles to the ſouth of Sarzana, upon the gulph of Spezza, eſteemed a good harbour, and defended by a fort.

The Genoeſe are reputed to be ſagacious, and dextrous in buſineſs; all their nobility and gentry applying themſelves to trade, and are better acquainted with the myſteries of over-reaching and cozening thoſe they deal with, than the gentry of other countries, who are ſeldom obſerved to be guilty of ſuch practices.

The legiſlative authority in the republic of Genoa, is lodged in the great council or ſenate. The adminiſtration of the government is committed to the Doge or Duke, with the councils called the ſigniory, college, an aſſembly ſtyled the council, and an aſſembly compoſed of the ſigniory, and college united in one.

As to their naval ſtrength, it is dwindled to nothing. Their fleet, which formerly obtained ſo many glorious victories over the Venetians, Turks, Spaniards, and ſettled ſo many colonies in Aſia, is now reduced to ſix galleys; and when they would have made an addition to them of four more, the French King ordered them to deſiſt, at their peril.

The ordinary revenue is computed to amount to 200000 l. ſterling *per annum*; but, upon an extraordinary occaſion, the great men muſt ſubmit to be taxed in proportion to their wealth.

There is a bank at Genoa, whoſe fund is part of the public duties, which are appropriated to pay off the debts of the republic; from whence it is natural to think the projectors of the Engliſh ſinking-fund took the hint.

The Genoeſe country being but a barren ſpot, they uſually have two or three years proviſions of corn, wine, oil, and other neceſſaries in their magazines, which the magiſtrates ſell out at reaſonable prices in ſcarce years, to the people.

The republic of Genoa for a long time diſputed with that of Venice the empire of the Mediterranean, and the commerce of the Levant; but ſince the famous victory of Chiozza, whereby the Doge Andrew Contarini ruined the naval force of the Genoeſe, they ceaſed being rivals of the Venetians, after they had been ſo near 300 years. It is however certain, that it is only in the commerce of the Levant, that they come ſhort of the Venetians; having the advantage over them throughout the reſt of Europe, eſpecially in Spain; and becauſe otherwiſe it is by Genoa, that foreigners trade to all parts of Lombardy.

The different kinds of ſilk the Genoeſe bring from Meſſina, and other ports of Sicily, with the beautiful and rich ſtuffs manufactured at Genoa, conſtitute its greateſt trade; the Genoeſe having ſeveral veſſels arrive yearly in their port; who make part of their cargo conſiſt in their manufactures, which are plain velvets, black and coloured; others with large flowers, whoſe ground-work is of gold, ſilver, and ſilk; damaſks of all colours in great eſteem, ſatins, carpets, cloths of gold, ſilver, and ſilk; their other commodities are olives, oil, all ſorts of confects, Genoa points, ſtockings, gloves, patterns for ſilk breeches and waiſtcoats, ribbons, gold and lace, paper, ſoap, rice, figs, almonds, anchovies, white marble, lemons, perfumes, Italian cream of tartar, Parmeſan cheeſe, red coral, coffee, cottons, and all the drugs for medicine and dying which are brought from the Levant.

The commerce of the Genoeſe to Smyrna is now but inconſiderable, where notwithſtanding they always keep a conſul.

In the flouriſhing times of this republic it was miſtreſs of ſeveral iſlands in the Archipelago, and poſſeſſed ſeveral towns on the coaſt of Greece, and the Black ſea. Pera, one of the ſuburbs of Conſtantinople, was even under its juriſdiction, which facilitated its commerce to the Levant; but the declining of its ſtrength, and the loſs of ſo many ſtates, cauſed the ruin of its commerce in thoſe of

the Grand Signior, where but few of its ſhipping now appear under the French flag.

When foreign ſhips arrive in the port of Genoa, the merchandiſes they are laden with are depoſited in a large magazine, called *Porto Franco*, or free port; becauſe the merchandiſes which enter there to be ſold, or to go out, without having been ſo, pay no duty of importation or exportation; merchants paying theſe duties only to the cuſtomhouſe of the republic, in proportion to the vent they make of their goods, and being allowed to reimbark them in default of ſale, without the obligation of diſcharging any impoſt. See *Corſica*, under *Italian* iſlands.

3. *The duchies of Milan and Mantua, ſubject to the houſe of Auſtria.*

The duchy of *Milan* is bounded by Switzerland on the north; by the territories of Venice, and the duchies of Mantua and Parma, towards the eaſt; by the Apennine mountains, on the ſouth; by the King of Sardinia's dominions, on the weſt; being about 80 miles in length from north to ſouth, 60 in breadth from eaſt to weſt, and 300 in circumference.

It is well watered with lakes and rivers; the whole country being one fruitful plain, abounding with corn, wine, and delicious fruits, intermixed with great numbers of fine towns and villages.

Milan, the chief city of the Milaneſe Proper, and firſt diviſion, is ſtyled the Great; and that very juſtly, if its dimenſions, multitude of inhabitants, magnificence of churches and palaces, manufactures, and commerce, be conſidered. It ſtands upon the little river Olana, in 9 deg. 30 min. of E. lon. and 45 deg. 25 min. of N. lat. 250 miles N. W. of Rome, and 100 N. E. of Turin; having the advantage of two navigable canals, by which it has a communication with the rivers Adda and Teſin. It is ſuppoſed to contain 300,000 ſouls; among whom are great numbers of nobility and gentry, as well as merchants.

Milan affords gold thread; flowered velvets, whoſe ground-work is of gold, ſilver, or ſilk; ſeveral beautiful ſilk ſtuffs, and prepared ſilk; of which great quantities are conſumed in the manufactures of France; beſides ſteel, iron ware, and fine cryſtal works.

The civil government of Milan is lodged in the ſenate, conſiſting of prelates, doctors of law, and gentlemen of the country, who are however ſubject to the controul of the Auſtrian vicar-general.

The ſecond ſubdiviſion of the Milaneſe, is the *Paveſe*; which lies to the ſouth of Milaneſe Proper; the ſoil whereof affords ſuch plenty of corn, wine, and the moſt delicious fruits, that it is called the garden of the Milaneſe.

The 3d ſubdiviſion of Milan is the *Lodeſan*; abounding in rich paſture, and large herds of cattle, and is famous for its cheeſe: the chief towns whereof are Lodi, and Lodi Vechio.

The *Cremoneſe* is a ſmall province to the eaſtward of the Lodeſan; from which it is ſeparated by the river Adda, and abounds in corn, wine, flax, and fruits. The chief towns are Cremona, Caſal Maggiore, and Soncino.

Comaſco, the 5th ſubdiviſion of the Milaneſe, lies north of Milaneſe Proper; the chief towns are Como, Lecco, Bellamo, and Fort de Fuentes.

The 6th is *Anghiera*, ſituated on each ſide of the ſouth part of the lake Maggiore; the chief towns are Anghiera, Arona, Orta, Palanza, Canobio, Ugona, and Domo d'Oſcella.

The little province of the *Novareſe* is bounded by the diſtrict of Anghiera on the north, by the Milaneſe Proper on the eaſt, and by the King of Sardinia's territories on the ſouth and weſt; the chief town being Novara.

The *Tortoneſe* lies to the eaſt of the Alexandrin; and the chief town is Tortona.

The diſtrict of *Bobbio* lies between the Paveſe on the north, and the Apennine hills, which ſeparate it from the territories of Genoa, on the ſouth; the chief town being Bobbio.

The conſtant revenues of the duchy of Milan are computed at 300,000 l. ſterling *per annum*.

The duchy of Mantua is bounded by the Breſcian and Veroneſe, part of the territories of Venice, on the north; by another part of the Venetian dominions, and the Ferrareſe, on the eaſt; by the duchies of Modena and Mirandola on the ſouth; and by the Cremoneſe, in the duchy of Milan, towards the weſt; being divided into the duchy of Mantua Proper, that of Guaſtalla, the county of Novellara, the duchy of Sabionetta, the principalities of Bozolo, Caſtiglione de la Stivere, and Solferino. The whole is about 50 miles in length; but of very unequal breadth, in ſome places upwards of 30 miles, and in others not 7. The chief towns are Mantua, Borgoforte, Governolo, Oſtiglia, Gonzaga, Goïto, Luzara, Viadana, Guaſtalla, Novellara, Sabionetta, Bozolo, Caſtiglione de la Stivere, and Solferino.

The city of Mantua ſtands in the middle of a morass formed by the river Mincio, about 80 miles to the eaſt of Milan, and as many ſouth-weſt of Venice, the ſituation rendering it very unhealthful in the hot ſeaſon. It joins the continent by a cauſe-way 300 paces long on the ſide of Cremona, and by two other 5 or 600 paces long towards the north, with forts and drawbridges for the defence. It is between 4 and 5 miles in circumference, and ſuppoſed to contain 50,000 inhabitants. The town is a place of good trade; their ſilk manufacture particularly has a great reputation all over Europe; and it is from this city thoſe glorious Italian ſilks, called mantuas, take their name, which the Engliſh find more difficulty to imitate than any other.

The country of Mantua abounds in corn, fruits, flax, ſilk, and excellent paſture; but has little good wine.

4. *The duchy of Modena.*

Under the name of the *Modeneſe* are comprehended the duchies of Modena, Mirandola, Reggio, the marquiſate of Scandiano, and the principalities of Corregio and Carpi. It is bounded by the Mantuan towards the north, by the Bologneſe towards the eaſt, by the Appenine hills towards the ſouth, and by the Parmeſan on the weſt: extending about 60 miles in length from N. to S. and 50 in breadth from E. to W. the chief towns Modena, Boſtia, Finale de Modena, Frigano, Carfagnano, Mirandola, Concordia, Reggio, Rubiera, Berſello, Scandiano, Corregio, Carpi, Saſſuolo, and St. Martin de Eſte; all ſubject to the Duke of Modena, who is now alſo governor of Milan, under the Empreſs-Queen of Hungary.

The city of Modena is the capital, ſituated in 11 deg. 20 min. of E. lon. and 44 deg. 45 min. of N. lat. 40 miles S. of Mantua, and 20 N. W. of Bologna, in a pleaſant fruitful country, but not well built, or very populous. It has a trade in ſilk manufactures, velvets, and ſtuffs.

Reggio is the capital of a duchy, and ſtands about 12 miles N. E. of Modena; being a populous trading town better built than Modena, and ſubject to the ſame prince, whoſe revenues are computed to amount to 100,000 *per annum*.

5. *The duchies of Parma and Placentia.*

The duchy of *Parma*, including the *Plaiſantin*, is bounded by the Cremoneſe, and Lodeſan, on the north; by the duchy of Reggio, towards the eaſt; by the territories of Genoa, and Modena, on the ſouth; and by the Paveſan, and the Bobbion, on the weſt; extending 70 miles in length, and 30 in breadth. The chief towns are Parma, Caſtel Guelpho, Fornovo, Corneglio, Piacenza, Nibiano, Borgo St. Domino, Florenzolo, Colorno, Maggiore, Buſſeto, Borgo de Val de Taro, Bardi, Compano, now ſubject to the infant Don Philip, brother to the Kings of Spain, and of the Two Sicilies.

The duchies of Parma and Placentia are allowed to be bleſſed with a fine air, and fruitful ſoil. They abound alſo in cattle of all kinds; and the wool of their ſheep not inferior to any in Italy. Their cheeſe is excellent, and they have plenty of the beſt oil, wine, rice, corn, and fruits; truffles, a delicious root without ſtems, like plants, are found alſo here; and they have ſome mines of copper and ſilver; but the revenue is not ſufficient to maintain its prince.

The city of Parma is ſituated on a river of the ſame name, in 11 deg. of E. lon. and 44 deg. 45 min. of

lat. 45 miles N. W. of Bologna, 60 N. E. of Genoa, and 65 S. E. of Milan; it is three miles in circumference, and eſteemed a ſtrong town.

The city of Placentia, or Piacenza, is 30 miles N. W. of Parma, about half a mile ſouth of the river Po, in a fruitful plain, well watered with rivulets, being 3 miles in extent.

6. *The grand duchy of Tuſcany.*

The duchy of *Tuſcany*, or *Florence*, is bounded by the Pope's territories on the north, eaſt, and ſouth-eaſt; by the Tuſcan ſea on the ſouth-weſt; by the territories of Genoa and Modena on the north-weſt; extending 100 miles in length, and about as many in breadth, being pretty near ſquare. It is uſually divided into three parts, the Piſan, the Florentin, and the Sienneſe.

The *Piſan* is bounded by the Florentin, and the republic of Lucca, on the north and eaſt; by the Sienneſe on the ſouth-eaſt, and the Tuſcan ſea on the ſouth-weſt; the chief towns being Piſa, Leghorn, and Volterra.

The city of Piſa is 4 miles ſouth of the ſea, 10 north of Leghorn, and 40 weſt of Florence. It is the largeſt town in Tuſcany next to Florence; being divided almoſt into two equal parts by the river Arno, whereof the ſides lined with a ſloping wall form a mighty commodious quay, where ſhips of burden formerly unloaded their merchandiſe; but the mouth of the river being now choaked up, it is only navigable for ſmaller veſſels. This town formerly maintained powerful fleets, and diſputed the ſovereignty with the Genoeſe and Venetians. It made a conqueſt alſo of the iſlands of Sardinia and the Baleares, reduced the city of Carthage, and was of great ſervice againſt the infidels in the holy land; but being ſubdued by the Florentines, and the ſeat of the government removed, the town became deſerted, the buildings decayed; nor does it ſeem to be in the power of the Great Duke to reſtore it to its former happy ſtate; though this has been attempted by ſometimes making it the reſidence of the court, and granting extraordinary privileges to the citizens.

Leghorn, or *Livorno*, is ſituated in 11 deg. of E. lon. and 33 deg. 30 min. of N. lat. in a low ground on the Tuſcan ſea, 40 miles weſt of Florence, and 150 north-weſt of Rome; being one of the beſt harbours in Italy, and ſurrounded with a wall, and other fortifications, for its defence.

All merchandiſe ſent up the country, of which there are great quantities, are clogged with impoſitions as ſoon as they leave Leghorn. All the wines, oils, and ſilks, muſt make their way through a variety of duties before they reach the port: and though this muſt enhance the price of them to the foreign merchant, yet the labouring oar falls altogether on the natives; for the port is free, which has made it rich and populous; foreign merchants reſorting there from all nations, particularly the Engliſh and Dutch, as alſo the French and Spaniards, with ſome Armenians, Jews, and Turks.

The Engliſh and Dutch are thoſe who trade there moſt; Leghorn being properly the ſtaple of all the merchandiſe they bring from the Levant and the Weſt.

Moſt of the trade paſſes through the hands of Jews and Armenians, who are generally brokers and factors there for all nations; their brokerage-fees being half *per cent.* for ſales and purchaſes; they have half *per* 1000 for exchanges, and a fourth *per cent.* for inſurances of money.

The duchy of *Florence* is bounded by the Bolognois, and Romania, towards the north; the duchy of Urbin, and Romagna, towards the eaſt; by the Sienneſe on the ſouth; by the Piſan, and the republic of Lucca, towards the weſt. The chief towns are Florence, Fieſoli, Pratolino, San Martino, Scarperia, Fiorenzola, Pietra Mala, Piſtoia, Prato, Poggio imperiale, Empoli, St. Miniato al Tedeſca, Barbarino, Colle, Pougibond, Monte Pulciano, Marciano, Cortona, Arezzo, Burgo St. Sepulchro, Val Ombroſa, and Anciſa.

The city of *Florence* lies in a fruitful valley on the river Arno, in 43 deg. 40 min. of N. lat. 36 miles to the eaſt of Piſa, about as many to the north of Sienna, and 120 north of Rome, in a moſt deſirable ſituation, encompaſſed with beautiful hills on three ſides, full of villages, country-ſeats, gardens, groves, and woods of olives riſing gradually till they join the higheſt mountains of the Apennines; and towards the weſt lies that rich valley watered by the river Arno, which extends as far as Piſa, abounding in corn, wine, oil, and all manner of delicious fruits. The town is of a round form, about 6 miles in circumference, encompaſſed with walks, and other fortifications, and defended by three citadels.

The nobility and gentry think it not beneath them to apply themſelves to trade, and the laſt great Great Duke himſelf was ſaid to be one of the moſt conſiderable merchants in Europe; nay, the gentry ſell their own wines by retail out of doors, though not in their houſes, and even hang out a broken flaſk for a ſign at their court-yards.

Fiorenzola is a large town, ſituated in a valley, about 30 miles to the north of Florence, conſiderable on account of its trade.

The *Sienneſe* is bounded by Florence Proper towards the north, by the territories of the Pope on the ſouth and eaſt, and by the Tuſcan ſea on the ſouth-weſt; being about 60 miles in length, and as many in breadth. The chief towns are Sienna, Maſſa, Caſtiglione, Buriano, Groſſetto, Monte Alcino, Pienza, Sanquirico, Savona, Radicoſani, and Chiuſi.

The city of *Sienna* ſtands in a healthful air, 36 miles to the ſouth of Florence, pleaſantly ſituated on an eminence in an exceeding fruitful country; being about 4 miles in circumference.

Beſides the rich manufactures of gold, ſilver, and ſilk, as brocades, ſatins, damaſks, velvets, and fine woollen ſtuffs, ſuch as light ratines of all colours, and black drap ſerges made in the manufactures of Piſa, Florence, Lucca, and other towns of Tuſcany, or the neighbouring ſtates; there are alſo to be met with there ſilks of all ſorts, olives, and other commodities produced in the country, except oils which are brought from Gallipoli and Apulia, the exportation of thoſe of the country being prohibited; to which may be added ſpun and wool cotton, coffee which comes there by the way of Alexandria, alum, Roman aniſe, fine lacca, white, black, and red marble, red coral, ſoap, and Florence wines.

The French carry on two ſorts of trade at Leghorn; the one conſiſts in the merchandiſe they either import or export, the other in the freighting of French ſhips upon the account of other nations. The latter is of little conſequence upon account of the expences of being under the French flag; which amount to near 9 *per cent.* when thoſe of other nations amount hardly to 2 *per cent.*

As to their commerce in merchandiſe, the moſt conſiderable was formerly that of their cloths; but it is now much fallen by means of the Engliſh ſelling theirs at a cheaper rate.

The annual revenues of the Great Duke are computed to amount to 500,000 l. *per annum.*

The reſt of Tuſcany belonging to other princes and ſtates, are the territories poſſeſſed by the republic of Lucca, the State delli Preſidii, formerly poſſeſſed by the Spaniards, the principality of Piombino, the domain of the houſe of Cibo, and laſtly the marquiſite de Fos di Novo.

The city of *Lucca* is ſituated in the middle of a fruitful plain, about 15 miles over, near the river Secchia, 10 miles to the north of Piſa, and 12 to the eaſt of the Tuſcan ſea; being of an oblong form, 3 miles in circumference, and encompaſſed by a wall, defended by 11 baſtions, and other fortifications.

Viareggio is a little port, about 10 or 12 miles to the weſt of the city of Lucca; Orbitello is ſituated on the Tuſcan ſhore; Port Hercole is a large town and harbour on the Tuſcan ſea; and Piombino is a ſtrong fortreſs and harbour once ſubject to the Spaniard.

7. *The republic of Venice.*

The Venetian dominions in Italy are bounded by the country of the Griſons, Trent, and Tyrol, towards the north; by Carniola, and the gulph of Venice, on the eaſt; by Mantua, and Ferrara, on the ſouth; and by the duchy of Milan, on the weſt; being about 180 miles

in length from eaſt to weſt, and 100 in breadth towards the eaſt-end, but ſcarce half ſo broad on the weſt part, and of a very irregular figure.

Theſe Venetian territories are uſually divided into thirteen provinces, the Dogado, the Padouano, the Poleſino de Rovigo, the Veroneſe, the Breſcian, the Bergamaſco, the Cremaſco, the Vicentin, the Treviſana, the Feltrino, the Belluneſe, the Cadorino, and the port of Friuli.

Venice, the capital city of this ſtate, is ſituated in 13 deg. of E. lon. and 45 deg. 40 min. of N. lat. in the Lagunes, 5 miles from the continent. Theſe Lagunes are ſuppoſed to have been originally marſhy grounds, which the ſea encroached upon, leaving here and there ſome little iſlands, on which the fiſhermen of Padua built their huts in the fifth century; when the Goths and Vandals over-running Italy, ſeveral conſiderable families of Padua, Aquileia, and other neighbouring cities, obſerving the advantageous ſituation of theſe iſlands, that they could neither be approached by ſea or land by an enemy, retired hither with their effects, and laid the foundation of this great city. The water of theſe Lagunes is ſo very ſhallow, that it will not admit of veſſels but in certain channels marked out with ſtakes, and which the government are at great charges in keeping clear by mills, and other engines: on the ſide towards the Adriatic there is a long bank of earth, called the Lido, extending 40 or 50 miles in length, which breaks the fury of the ſea, and makes theſe waters calmer in blowing weather than they would otherwiſe be: nor are there more than two or three paſſages by which the city can be approached that way; and theſe ſo difficult, that if the buoys and other ſea-marks were removed, their pilots would find a difficulty in entering them. The number of the inhabitants, according to ſome, is 130,000; and, according to others, 300,000; of which the firſt ſeems neareſt the truth.

The iſland of Muran is ſituated about 2 miles N. E. of Venice, and is one of the largeſt and pleaſanteſt iſlands in the Lagunes; the chief town is of the ſame name. Here was the famous manufacture of Venice glaſs, which brought in a conſiderable profit to the republic before other nations learned the art; but they are now equalled, if not excelled, by the Engliſh, French, and Dutch, who uſed to take it off their hands.

Malamocco is an iſland two miles from Venice, conſiderable for its harbour, and for lying upon one of the narrow channels which leads from the Adriatic to Venice. Chiozza is ſituated on a little iſland on the coaſt of the Dogado. Torcello is a ſmall city on an iſland of the ſame name; ſo are Caorle and Grado.

The *Paduan*, on account of its fertility, and delightful ſituation, has obtained the name of the garden of Italy, and the terreſtrial paradiſe. The chief towns are Padua, Abano, Arqua, Montfelice, Eſte, Anguilura, Campo St. Pietro, and Citadella.

The city of Padua ſtands in a pleaſant plain, watered by the rivers Brent and Bachilio, about 22 miles to the weſt of Venice; the form almoſt circular. The manufacture of cloth here brought in a great revenue to the ſtate formerly, and is not inconſiderable at this time: but the Engliſh finding means to furniſh the quality of Venice with better cloth clandeſtinely, few of the nobility wear any thing elſe, notwithſtanding the magiſtrate of the pomps is obliged by his office to ſee that no body wears the cloth of a foreign country.

The *Poleſino de Rovigo* is a country fruitful in corn and paſture, well watered by the rivers Po, Adige, and Adigeſto; the chief towns are Rovigo and Adria. The *Veroneſe* abounds in excellent fiſh, corn, wine, oil, ſilk, wool, cattle, and ſome quarries of marble; the chief towns are Verona, Peſchiera, and Garda. The *Breſcian* has plenty of corn, wine, and oil; but is moſt remarkable for its iron mines and works, its plantations of flax, and linen manufacture; the chief city is Breſcia, which is a populous trading town. The *Bergamaſco* and *Cremaſco* are not much remarkable, except Bergamo, the capital of the former, a populous town, and place of good trade; the merchants of Germany, Switzerland, and Italy, reſorting to its annual fair.

The Vicentin is equally fruitful and pleaſant; the capital Vicenſa being a populous trading city. The other provinces are not conſiderable for their trade, or commodities, except the Belluneſe, which has a ſufficient quantity of corn and wine for its uſe; but is moſt remarkable for timber and iron mines, of great advantage to the republic.

Iſtria, frequently deſcribed among the Italian provinces, is a peninſula bounded by Carniola on the north; and encompaſſed by the Adriatic on the eaſt, ſouth, and weſt; being about 60 miles in length, and 50 in breadth: a woody, mountainous country, and chiefly valuable to the Venetians on account of its ſtone and timber. The chief towns are Cape d'Iſtria; ſituated on a ſmall iſland in the gulph of Trieſte, Pirano, Cita Nova, Parenzo, and Pola, with good harbours; Oſero, and St. Veit en Flaum.

Morlachia is bounded by Croatia and Boſnia towards the north; by Dalmatia on the eaſt; by the gulph of Venice towards the ſouth; and by Iſtria towards the weſt; being about 80 miles in length, and 25 in breadth. The towns on the coaſt ſubject to the Venetians are Zeny and Novigrad, whereof the former has a caſtle and harbour.

The Venetian Dalmatia is divided into the continent and iſlands. The chief towns on the continent are Zara, ſurrounded by the ſea, but joined to the continent by a bridge: Nona, Scardone, Sebenico, St. Nicholas, Salona, Trau; Spalato, a populous town, with one of the beſt harbours on the coaſt; Cliſſa, Ciclut, Riſano, Cattaro, Novo, Cataro, and Budua.

The Venetian iſlands on the coaſt of Morlachia and Dalmatia are Cherſo, Oſera, Veglia, Pago, with a tolerable good harbour, Arbe, Groſſa, La Coronata, La Liſſa, Lezina, and Corzola.

The Venetian iſlands upon the coaſt of Epirus and Morea are Corfu, a populous iſland producing oil, honey, wax, oranges, lemons, and a great variety of other fruits: the chief cities Corfu, and Caſſiope, have good harbours. The iſlands of St. Maura and Cephalonia, of which the latter produces wine, oil, ſilk, wool, honey, and wax, wherewith the natives carry on a tolerable trade. As for the iſland of Zante moſt conſiderable for the little grapes called currants, or corinths, from their being firſt cultivated about the city of Corinth. England, France, and the reſt of the countries of Europe, are ſupplied with this kind of fruit from hence, and conſequently the iſland hath a very great trade.

The revenues of the republic are computed to amount to 1,200,000 pounds ſterling *per annum*. It is pretended the Venetians can equip out 30 men of war, 100 gallies, and 10 galeaſſes. The ſovereign power is lodged in the nobility, about 1500 of which conſtitute their great council; the Doge having little ſhare in the government. A noble Venetian is always generaliſſimo at ſea; having the command of the iſlands, ports, and maritime places ſubject to them; and there is conſtantly a provenditor-general of the ſea, who commands when there is no generaliſſimo. He is changed every two years, and is attended by two noble Venetians, without whoſe concurrence he can undertake no enterprize. There is alſo a general of the gulph, who commands the gallies, clears the ſea of pyrates, and takes care that the cuſtoms are duly paid.

The Italians, particularly the Venetians and Genoeſe, had for a conſiderable time in their hands all the commerce of the ſouth of Europe, while the hans-towns enjoyed that of the north.

The Venetians, eſpecially as long as the route to the Indies was thought impracticable by the ocean, remained alone the maſters of the ſpice, drugs, and other precious merchandiſe which came from thence, and which they imported from ſeveral ports, and cities of Egypt and Syria, where they had been brought from the Red ſea, and Canges, either in caravans, or by embarking them on the Nile. The Portugueſe having happily doubled the cape of Good Hope towards the end of the 15th century, introduced this rich commerce to Liſbon; of which, a few years after, they were deprived by the Dutch, who at preſent furniſh Venice, and the other nations of Europe. Tho' this moſt important part of the Venetian trade has been taken away from them, yet what they are poſſeſſed

of at preſent is one of the moſt conſiderable of Europe; and, next to that of Genoa, the richeſt of Italy:

Their merchant ſhips reſort to Marſeilles for the trade of France; Alicant for that of Spain; Ancona upon the Adriatic ſea for the papal territories; Naples, Legborn, and Genoa for the other ſide of Italy: but the greateſt they carry on by ſea is the commerce of Smyrna, Conſtantinople, and the other ſtates of the Grand Seignior, ſituated on the Mediterranean.

The ambaſſador which the republic keeps at Conſtantinople, is called *Baile*, which in the Lombard language ſignifies *Judge-conſul*, whereof in reality he diſcharges all the functions; and tho' he has great political intereſts to manage with the Porte for his maſters, thoſe of trade are not the leſs recommended to him; it being properly as firſt conſul of the Venetians that he raiſes great duties upon all the merchants ſhips which carry the flag of S. Mark.

'Tis thought that theſe duties, all expences deducted, amount to 100,000 crowns, during the three years of his reſidence. Under him are two other principal conſuls, who reſide one at Aleppo, which is the center of all the Aſiatic commerce carried on in the Mediterranean, and the other at Alexandria in Egypt.

Two noble Venetians of inconſiderable fortunes are uſually pitched upon for filling theſe two conſulſhips, which they enjoy during life; the republic being willing to grant them time for re-eſtabliſhing their fortunes in theſe very lucrative employments, which engage them in no expences.

In the other port-towns the conſuls are only private citizens; and the places of their reſidence are Cyprus, Tripoli in Syria, Smyrna, Chio, Roſetto; and in Italy, Ancona, and Genoa.

'Tis ſurpriſing what a quantity of gold cloths, and ſilk-ſtuffs of the Venetian manufacture are ſold in all the ports of the Levant; and it is ſuppoſed, if the Venetians are believed, that the Turks conſume alone more than all Europe together.

There is at Conſtantinople a great vent of their cloths, which in reality are leſs fine and beautiful than the Engliſh, Dutch, and French; tho' perhaps for this very reaſon more eſteemed by the Turks.

The Armenians eſtabliſhed at Venice, and thoſe who arrive there yearly, contribute greatly to drive on a great trade; it being uſually on Dutch ſhips which return from the Levant that they load their merchandiſe; and the freight they pay, is not one of the leaſt profits of the Dutch in the Mediterranean.

The merchandiſes which foreigners export from Venice are velvets of all colours, whoſe ground-work is either ſatin, or gold and ſilver; rich brocades; gold, ſilver, and ſilk tabbies; looking-glaſſes; thread-lace, called Venice points; glaſſes, or other cryſtal veſſels, either for drinking or ornamental ſake; rice, currants, tartar, cream of tartar, ſilk, gloves, ſnuff-boxes, coral, olives, oil of olives; all Levantine drugs, fine lacca, orpiment, aniſe, coriander ſeed, ſulphur, turpentine, ſoap, and very fine veel.

Moſt kinds of merchandiſe are imported to Venice; except copper, iron, and eſpecially cloths which are contraband merchandiſe.

The commerce that Venice has moſt at heart is that of Conſtantinople, and that of Germany: to keep them on a ſolid footing, the Republic has granted great privileges both to the Turkiſh and German merchants eſtabliſhed in its capital, and has aſſigned them vaſt buildings, as well to ſerve them for lodgments, as to be the ſtaple of their merchandiſe: that of the Turks is called Il Palazzo de Turchi, and that of the Germans Il Fondego de Tudeſchi. If any diſpute happens among the Turks, and the ſubjects of the republic, wherein the former think themſelves injured, they call loudly for ſatisfaction, and obtain it ſo readily, that it ſeems that the Venetians dare not refuſe it them.

As to the commerce of the Germans, it is carried on in Germania, partly by ſea and partly by land.

8. *The Eccleſiaſtical State.*

The Pope's dominions are bounded by the territories of Venice towards the north; by the Adriatic ſea on the

north-eaſt; by Naples on the ſouth-eaſt; by the Tuſcan ſea on the ſouth-weſt; and by Tuſcany on the north-weſt, which it encompaſſes on three ſides, and is of a very irregular figure; extending in length from north to ſouth, about 240 miles, and in its greateſt breadth from eaſt to weſt 140, tho' in ſome places it is ſcarce 20 miles broad. They are uſually divided into ſeven provinces; the Campania of Rome; the patrimony of St. Peter, comprehending the duchy of Caſtro, the territory of Orvieto, and the county of Ronciglione: the province of Sabina; Ombria, or the duchy of Spoleto, in which are included the territories of Perugia, and the Contado di Citta de Caſtello; the marquiſate of Ancona; the duchy of Urbino; and Romania, comprehending Romania proper, the Bologneſe, and the dutchy of Ferrara.

Rome is ſituated in 13 deg. of E. lon. and 41 deg. 45 min. of N. lat. 140 miles N. W. of Naples, and 140 S. of Florence, ſtanding on the river Tiber, about 16 miles N. E. of the Tuſcan ſea; being about 12 miles in extent, but does not contain above 120,000 inhabitants.

Civita Vecchia, in the province of the patrimony of St. Peter, is ſituated on the Tuſcan ſea, about 30 miles N. W. of Rome, being the port of that city, and one of the beſt harbours on the coaſt; the Pope, in order to draw the trade that way, having made it a free port. It is defended by a caſtle, and other works, and is the ſtation of the Pope's gallies.

The province of *Umbria* produces wine, oil, fruits, and plenty of corn: and Foligno and Terni, two of its towns, drive on a pretty good trade, the former in cloth, ſilk, gold and ſilver lace; the latter in oil of olives, with which the country abounds, making, is is ſaid, 300 charges of oil every day for 6 months in the year, every charge weighing 600 lb.

It is obſervable at Ancona that the tide riſes not above a foot, tho' it riſes above four feet at Venice; and at the bottom of the gulph, and in that part of the gulph of Venice which lies next the Mediterranean, there is no tide at all to be diſcerned.

Sinigaglia, in the duchy of Urbino, is a harbonr of no great conſequence, but is remarkable for its fair held in Auguſt, and reſorted to by moſt of the merchants of Italy.

Peſaro, in the ſame duchy, is one of the largeſt and beſt peopled towns of the Pope's dominions, and has a very good trade.

In the little republic of St. *Marino*, which has continued 12, or 1300 years, there is a ſuburb to the town where the inhabitants have a good weekly market, and four annual fairs, in which great herds of live cattle are bought and ſold: the principal fair being on the feaſt of St. Bartholemew.

The *Romania Proper*, in theſe dominions, is a province diverſified with hills, woods, arable, meadow, and paſture; abounding in corn, wine, oil, figs, and other fruits; but the ſalt-pits are its principal riches.

Bologna, in the province of the ſame name, is ſituated upon ſeveral little rivulets, and a navigable canal, by which it has a communication with Ferrara, and is remarkable for its hams and ſauſages, wherein moſt towns in Europe endeavour to imitate them: it has alſo manufactures of ſilk, linen, and crapes; with a trade in dry fruits, allum, and waſh-balls.

The *Ferrareſe* produces corn, flax, and hemp, except that part of it next the ſea, which is a perfect bog, and very unhealthful.

Tho' the Pope has a very extenſive coaſt, both on the gulph of Venice and the Tuſcan ſea, his ſubjects have few ſea-ports, or any merchant-ſhips, or any foreign traffic: but he engroſſes all the corn in the country, the farmers being obliged to ſell it to his agents at the price he ſets upon it.

9. *The kingdom of Naples.*

The kingdom of Naples is the ſouth-eaſt part of Italy, bounded by the Adriatic on the north-eaſt; by the Ionian ſea on the ſouth-eaſt; by the Tuſcan ſea on the ſouth-weſt; and by the Pope's dominions on the north-weſt; extending 240 miles in length from the north-weſt to the ſouth-eaſt, 160 in breadth in the broadeſt place, and 80

in the narroweſt. It is uſually divided into four large portions: Terra de Lavoro, Abruzzo, Apuglia, and Calabria.

Naples, the capital city, is ſituated in 15 deg. of E. lon. and 41 deg. of N. lat. 140 miles S. E. of Rome; being 7 miles within the walls, as many without, and containing 300,000 inhabitants. It lies on the declivity of a hill, and one of the fineſt bays that ever the ſea formed. The bay is of a circular figure, about 30 miles in diameter, three parts of it ſheltered with a noble circuit of woods and mountains; the iſland Caprea ſtanding as a vaſt mole, which ſeems to have been planted there on purpoſe to break the violence of the waves that run into the bay, and ſtretches itſelf in a line almoſt parallel to Naples.

Its principal commodities are raw and prepared ſilk, diverſe ſorts of ſilk ſtuffs, ſtockings and waiſtcoats of ſilk, or ſilk mixed with gold and ſilver, Apulia oil, laurrel oil, and berries, raw ſulphur, Calabria manna, roſemary flowers, aniſe, and coriander ſeed, dry raiſins, currants, figs, and olives, cream of tartar, ſoap, dry orange and citron-peels, eſſences, quinteſſences, and perfumes of all ſorts.

The next towns of note in the ſame diviſion are Salerno and Amalti, ſituated at the bottom of a bay in the Tuſcan ſea, with a pretty good harbour.

The county of Moliſa in the *Abruzzo* is fruitful in corn and wine, and produces great quantities of ſilk. The Capitanata in Apuglia abounds in corn and paſturage; Manfredonia has a tolerable harbour; Terra di Barri produces corn, wine, ſaffron, and fruits; Terra di Otranto, in the ſame diſtrict, has olives, figs, and other fruits. *Calabria*, eſpecially in the Baſilicate, produces corn, wine, oil, ſaffron, cotton, wax, and the moſt delicious fruits; and in other parts, as in the Calabria Ulterior, is remarkable for fine horſes.

The revenues of the crown amount to about a million ſterling yearly, ariſing from a compoſition of the nobility and gentry for certain ſums, in lieu of their perſonal ſervices, from a duty on houſes, and almoſt a general exciſe. The clergy poſſeſs one third of the kingdom; the crown, the nobility and gentry the reſt; the peaſants being only the vaſſals. Though they abound in ſilk, that manufacture is not great, as they ſend moſt of it abroad unwrought: beſides, all the merchandiſe of this rich ſoil is carried abroad in foreign ſhipping; becauſe they have few ſhips of their own, or merchants; the proprietors of the lands ſelling the produce of their reſpective eſtates to foreigners.

Italian Iſlands.

The iſlands which lie S. W. of Italy in the Tuſcan ſea, are Sicily, with the Lipari iſlands, thoſe of Lavanza, Maritima, and Favagnana. The iſlands of Caprea, Iſchia, Procita, Ponza, and others on the coaſt of Naples. The iſlands of Elba, Capraia, Gorgona, and others on the coaſt of Tuſcany; the iſland of Sardinia, and the iſland of Corſica.

Sicily is of a triangular figure, ſituated between 12 and 16 deg. of E. lon. and 37 and 39 deg. of N. lat. being about 170 miles in length from E. to W. and 100 in breadth from N. to S. in the broadeſt part, being ſubject to Naples. It is uſually divided into three parts, the valley of Demona, the valley of Mazara, and the valley of Noto. There is not a country in Europe whoſe hills and plains are more fruitful, which occaſioned it being ſtyled the granary of Rome.

Meſſina, the principal town of the firſt diviſion, is ſituated on the ſea-coaſt at the N. E. part of the iſland, in 38 deg. 30 min. of N. lat. and 15 deg. 40 min. of E. lon. The town is of a great length, making a grand appearance towards the ſea, and has a large ſecure harbour.

The ſilk manufacturers live in the ſuburbs, where there is a ſquare of upwards of 1000 paces in breadth, in which they all work in the reſpective branches of their trade.

The Genoeſe, Florentins, and Luccoiſe, are in ſome reſpects the maſters of the Meſſina ſilk trade, which is the principal, and almoſt the only object that brings ſtrangers there.

Linens of all kinds, and common table cloths, are the chief merchandiſe which are brought there, and the only kind that ſell beſt: however, they are only payable at a certain time; the Italians having made it a kind of law for ſelling every thing for ready money, and paying at two, three, and ſix months, ſometimes more, for the goods which are brought them.

The payments of ſilks, and other merchandiſe, is uſually in Spaniſh rials brought from Spain, or had in Genoa and Leghorn.

But if traders are not inclined to bring ſpecie, they may take letters of credit for Meſſina, and Palermo, from whence a draught is eaſy for the fair of Novi in the Milaneſe, with little diſadvantage. Remittances may be alſo had from Lyons to Novi, with ſome benefit; but this regards only ſuch French merchants as trade for this ſilk.

It ſhould be obſerved, that tho' France has the greateſt part of its ſilk from Italy, and that there are manufactures in all the above-mentioned cities as beautiful gold, ſilver and ſilk ſtuffs as in France; yet the Italians prefer the French manufactures ſo much to their own, that the princes, and nobility of Italy, would not imagine themſelves well ſupplied if their ſtuffs did not come to them from Paris, Lyons, or Tours.

Melazzo, Patti, and Cifalu, are port-towns in the ſame diſtrict, having ſecure harbours, and a very good trade.

Palermo, the chief city of the ſecond diviſion, is ſituated on the N. W. part of the iſland, about 150 miles to the E. of Meſſina, in a moſt fruitful country; having the advantage of a good harbour, and a briſk trade in ſilk ſtuffs, raw ſulphur, cream of tartar, white ſpunges, and a great quantity of corn chiefly ſent to Portugal.

Mazaro and Trapano, in the ſame diviſion, are port-towns, and have a good trade.

In the third diviſion is *Syracuſa*, ſituated at the eaſt end of the iſland, lying well for trade, and has ſo excellent a harbour that people have been induced to reſort thither again, after it was deſtroyed by an earthquake in 169[illegible]

As to the produce of the iſland of Sicily, it is the ſame with that of Naples; only there is every thing here in much greater abundance, particularly corn, wine, oil, fruits, and ſilk, in which they have a good trade; though they loſe great part of the profit of this rich product, by ſuffering it to be exported in foreign bottoms, and not improving their commerce abroad.

The iſlands of Lipari which belong to Sicily, are Lipari, Hiera, Rotto, Strombolo, Panaria, Didima, Felicur, and Alicur; but have nothing in them meriting a particular deſcription. The ſame may be ſaid of the iſlands of Lavanzo, Maritima, and Favagnana.

Caprea, or *Capri*, is an iſland ſituated at the entrance of the gulph of Naples; the weſt end of it, for about two miles, is a continued rock, vaſtly high, and innacceſſible by ſea, in which part however is the largeſt town in the iſland, called Ano-Caprea, covered in ſeveral places with a very fruitful ſoil. The iſlands of Iſchia, Procila, and Ponza, merit no particular deſcription.

The principal iſlands on the coaſt of Tuſcany are Giglio, Elba, Pianoſa, Formicle, Monte-Chriſto, Capraia, Maloria, and Gorgona. None of them have any town remarkable for trade, except Porto Longone in the Elba, which is a ſmall town near the eaſt-end of the iſland, with a good harbour, and defended by a fort on a rock.

Sardinia is an iſland of an oblong form, ſtretching from north to ſouth in the Tuſcan ſea, bounded by the ſtreights which divides it from Corſica towards the north; by the Tuſcan ſea, which ſeparates it from Italy towards the eaſt; and by the ſame ſea on the ſouth and weſt; lying about 40 leagues N. W. of Sicily, between 8 and 10 deg. of E. lon. and 39 and 41 deg. of N. lat. being 140 miles in length, and 60 in breadth, ſubject to the King of Sardinia and Duke of Savoy. The ſoil is fruitful where it is manured, producing corn, wine, and oil in abundance, but is not cultivated as it ought to be, the natives ſeeming to have little inclination to huſbandry. They have great plenty of cattle; wild beaſts, and game, and are far from having any want of corn, tho' great part of their lands are uncultivated, that ſome years it is ſaid they export 8 or 900,000 buſhels, of which the greateſt part is carried to Spain.

Cagliari, the capital, is ſituated on the declivity of a hill near a bay of the ſea, in 9 deg. 12 min. of E. lon.

39 deg. of N. lat. 180 miles N. W. of Palermo, and 6 miles S. W. of Rome. It is a large handſome popu- ous place, with a tolerable harbour, and pretty briſk trade. Villa D'Igleſia ſtands on a bay of the ſea at the S. W. corner of the iſland; and Caſtell Aragoneſe, in the N. W. part has a pretty good harbour.

There are very few towns more of any conſequence upon the iſland, which is thinly peopled; the natives being an unpoliſhed generation, and regardleſs of improving either their ſoil or traffic.

The iſland of *Corſica* lies alſo in the Tuſcan ſea, a little to the north of Sardinia, 90 miles to the ſouth of the coaſt of Genoa, and 80 to the weſt of the coaſt of Tuſcany, in between 8 and 10 deg. of E. lon. and 41 and 43 deg. of N. lat. extending about 30 leagues in length from north to ſouth, and about 13 in breadth from eaſt to weſt, about the middle; but being near an oval figure, is much nar- rower at each end. It lies 100 miles ſouth of Genoa, and is ſubject to that republic, being ſurrounded almoſt with rocks and mountains, which makes it of difficult acceſs, and the inland part is pretty mountainous, tho' there are ſome plains which produce plenty of corn, as the hills do wine, oil, and fruits: however, the ſoil is not ſo fruitful as that of Sardinia, nor the air ſo unhealthful; it is pretty well watered with ſprings and rivers, and has plenty of cattle and ſheep; a little ſprightly breed of horſes, with ſome iron-mines, others of allum, and ſome ſalt pits. The natives are rough in their manners, not at all con- verſant in trade, and were ſo much addicted to piracy, and pilfering formerly, that it is ſaid the name of Corſair, which ſignifies a rover, or pyrate, was hence derived.

The towns of any note on the iſland are, Baſtia the ca- pital, ſituated on a bay of the ſea, in 9 deg. 40 min. of E. lon. and 42 deg. 20 min. of N. lat. 120 miles S. of Genoa, having a pretty good harbour: Calvi, ſituated on a bay of the ſame name; Ajazzo, ſituated alſo on a bay of the ſame name, with a good harbour; Bonifacio, on the ſouth point of the iſland, with a good harbour, and a tolerable trade, being eſteemed the beſt town in the iſland; and Porto-Vecchio, near the ſea, on the ſouth- eaſt part of the iſland, with a tolerable harbour.

The Corſicans have been long in arms againſt their go- vernors the Genoeſe, whom they charge with tyranny; while the Genoeſe charge them with being a ſeditious factious people.

REMARKS.

The trade which brings in foreign materials to be manu- factured at home, eſpecially when the materials are pro- cured in exchange for native commodities, is certainly beneficial. The trade may be called good which ex- changes commodities for commodities, manufactures for manufactures: beſides, an importation of commodities bought partly for money, and partly for goods, may be of a national advantage; eſpecially if the greateſt part of the commodities thus imported, are again exported: and every country which takes off the finiſhed manufactures of Great Britain, returning unwrought materials to be manufactured there, contributes ſo far to the employment and ſubſiſtence of the Britiſh people as the whole coſt of manufacturing thoſe materials.

So that it may appear, that the trade of Great Britain to Italy, though it runs away with a good deal of Britiſh money, is yet ſomewhat advantageous to the Britiſh na- tion, which ſends to Italy ſerges, bays, perpets, ſays, ſerſies, Spaniſh cloth, long cloths, ſtuffs, flannels, lead, tin, ſugar, and fiſh: its returns being in thrown and raw ſilk, wrought ſilks, red wool, paper, oil, ſoap, wine, and currants.

Both Venice and Genoa have made ſome attempts on a woollen manufacture; being furniſhed with wool from Alicant, and thoſe eaſtern parts of Spain: but they have not ſucceeded; while wrought ſilks and glaſs are not ſo much imported from thence as formerly, ſince thoſe ma- nufactures have been eſtabliſhed in Great Britain. But the price of exchange with Venice and Genoa, which was formerly in favour of Great Britain, has lately been againſt it, and particularly in the year 1740.

SAN FERNANDO. See *Fernando*.

JAICUS *Lapis*. A grey, ſoft, brittle ſtone, in form of an acorn, having lines drawn regularly on its ſurface, as if they were turned.

It is of ſome uſe in phyſic, being ſuppoſed to be endued with a lithonthripic power, and therefore applied to diſ- ſolve the ſtone in the bladder.

IVES, *St.* A borough and port-town of Cornwal, ſituated in 6 deg. of W. lon. and 50 deg. 18 min. of N. lat. on the Iriſh channel, 60 miles S. W. of Launceſton.

JUGDEA. A Britiſh factory in India, ſubordinate to the goverment of Fort William.

IVICA *Iſland*, is ſituated in the Mediterranean, 50 miles E. of Valencia in Spain, and as many S. of Majorca. See *Spaniſh* Iſlands.

JUICE, is applied to the vapours and humidities incloſed in the earth: thus cryſtal is ſaid to be formed of a lapidific juice; and metals are generated of vapours and juices condenſed in the earth.

JUJUBS. The fruit of a tree of the ſame name, grow ing very commonly in Italy and Provence; being about the ſize of a plum, oval, red without, yellow within, of a ſweet, very commonly vinous taſte: they are pectoral and aperitive, ſoften the acrimony of the humours, and promote a diſcharge by ſputation; having in general much the ſame virtues with figs, and are uſed with much the ſame intentions. See *Fig*.

Pliny tells us, that Sextus Papinius brought the firſt jujubs from Syria, and truffles from Africa, towards the end of Auguſtus's reign.

JULE. A coin ſtruck and current in the Eccleſiaſtic ſtate, and in ſome other parts of Italy.

The jule of Rome is of the value of 6 d. ſterling, the jule of Venice 5 ¾ d.; and the jule of Leghorn 5 ⅞ d.

JULEP, in pharmacy, an eaſy, agreeable, extemporaneous potion, preſcribed to ſick perſons; uſually compoſed of diſtilled waters, or light decoctions, frequently ſweetened with ſugar, or proper ſyrups.

JULIAN, *St.* A harbour on the coaſt of Patagonia, in South America, ſituated in 74 deg. of W. lon. and 48 deg. 15 min. of S. lat. where ſhips uſually touch that are bound to the South Seas.

JULIAN *Year*. See *Stile*.

JULIERS. A duchy in the circle of Weſtphalia, in Ger- many. See *Germany*.

JULPHA, was once the capital of Armenia, but now in ruins, the inhabitants being tranſplanted to Iſpahan, with- in a mile of which they have a town called New Julpha, by ſome looked upon as a ſuburb to Iſpahan, where they are encouraged and aſſiſted by the Perſians to carry on a foreign trade with all the countries of Aſia, and are the moſt conſiderable merchants in the world. They are alſo permitted to profeſs the Chriſtian religion, having ſeveral churches in New Julpha; and they come neareſt to the Greek church of any denomination of Chriſtians.

JUNCUS *Odoratus*. A kind of plant, or reed, of an aro- matic ſmell, growing in Arabia felix, at the foot of Mount Libanus.

Botaniſts and druggiſts give it ſeveral names, eſpecially the flower which is pretty ſcarce, and enters the compo- ſition of theriaca, wherein it is much better than the reed uſually employed in its place, upon account of the dear- neſs of the flower, which ſhould be choſen of a bright colour, and as new as poſſible. But the reed ſhould be of a flaxen colour, and bordering upon the taſte of the flower.

JUNK. Any part, or parcel of old cable, hawſers, or the like, which are uſed to hang for fenders by the ſides of a ſhip; or elſe it is untwiſted, and made into plates for cables, rope-yarn, or ſinnet; and if rotten it is made into oakham.

JUNK, is alſo a Chineſe veſſel, uſed in the coaſting trade of that country.

JUNIPER *Berries*. The fruit of the ſhrub juniper, much uſed in medicine; as they are certainly carminative; but their moſt remarkable properties are in ſcouring the viſ- cera, and particularly the reins and urinary paſſages.

The wood of this ſhrub is alſo of conſiderable uſe in phy- ſic; it ſtrengthens the ſtomach, expels wind, clears the lungs, provokes the menſes, and removes obſtructions of the viſcera: it is further ſaid to be ſudorific, cephalic, and

hyſteric; and from it they draw a ſpirit called gin, a tincture, an elixir, extract, and a ratifia. See *Geneva*.

It is ſaid it will laſt a hundred years without corrupting; the chemiſts add, that a coal of juniper, covered with aſhes of the ſame kind, will keep on fire an entire year.

JUNIPER-*gum*, is the ſame as artificial camphor. See *Camphor*.

JUNTA, called alſo *Junto* and *Junćto*. A council or company of ſeveral perſons meeting for the diſpatch of any buſineſs: the term being particularly uſed in the Spaniſh and Portugueſe affairs.

In Portugal they have three conſiderable juntas; the junta of commerce, that of the three eſtates, and that of tobacco. The firſt was eſtabliſhed by King John IV. being a council of marine. The ſame King aſſembled the ſtates of his kingdom to create the tribunal of the junta of the three eſtates; and King Peter II. created the junta of tobacco in 1675, which conſiſts of a preſident and ſix counſellors.

IVORY. The tooth, or tuſk, of an elephant, growing on each ſide of his trunk, ſomewhat in form of a horn, which is much eſteemed for its colour, its poliſh, and the fineneſs of its grain when wrought.

Great quantities of ivory are brought from ſeveral parts of the Eaſt Indies: but the ivory of the iſle of Ceylon, and that of Achem, have this peculiarity, that they never become yellow.

Ivory is alſo abundantly got in all parts of the African coaſt; but eſpecially at Rio Freſca, the rivers of Gambia, Senegal, and the ivory coaſt. See *Guinea*.

Beſides the great conſumption of ivory for ſeveral works and ornaments, it is alſo of ſome uſe in medicine, being raſped into a kind of powder for aſtringent ptizans. A ſpirit and volatile ſalt are likewiſe extracted from it, reputed good in maladies of the heart and brain; laſtly, by burning and calcining it, it is ſuppoſed to have the ſame virtues with coral.

But there is alſo a kind of ivory got from the teeth of ſome other animals beſides the elephant.

Black IVORY, or *Ivory black*, is the native ivory burnt, and taken out in leaves or ſhivers when become black: it is ground with water, and made up in little cakes or troches, uſed by the painters.

Muſcovite IVORY, is a ſort of ivory dug out of the earth in ſome parts of Muſcovite Tartary; particularly along the banks of the rivers Lena and Tenicia. Theſe teeth are uſually white, and ſometimes black: their weight is from 200 to 300 lb. they are uſed for the making of combs and other works, like elephants teeth; but the greateſt trade is in Muſcovy, few of them being ſent abroad.

JURATS, magiſtrates, in the manner of aldermen, for the government of ſeveral corporations: as the mayor and jurats of Maidſtone, Rye, and Winchelſea: the Jerſey has a bailiff and twelve jurats, or ſworn aſſiſtants to govern the iſland.

JURY-*maſt*. An appellation given by the ſeamen to an extemporaneous ſort of a maſt, patched up of yards, or other pieces of timber, and ſet up in the room of a true maſt, loſt in a fight, or by a ſtorm.

JUTTAL. An Indian coin, uſed at Carwar, 48 of which make a pagoda, or 7 s. 8 d. ſterling.

JZELOTTE. A ſilver coin current at Conſtantinople, worth about 1 s. 6 d. ſterling.

K.

KAN

KABAK, is a term in Muſcovy for the public places where wine, beer, brandy, tobacco, playing-cards, and ſome other merchandiſe, are ſold for the benefit of the Czarina, who has reſerved the ſale thereof for herſelf throughout the whole extent of her territories. Theſe kabaks are of two ſorts; the grand ones, where all theſe merchandiſes are ſold by wholeſale; and the ſmall ones, where they are ſold by retail.

KABESQUI. A ſmall copper coin ſtruck and current only in Perſia, worth about a halfpenny.

KALENBURG. A town of Denmark, 60 miles W. of Copenhagen. See *Denmark*.

KALI. A plant growing on the ſea-coaſts, and as ſome ſay, even in the ſands of the ſea, whoſe aſhes are of great uſe in the making of glaſs and ſoap.

The name kali, or alkali, was given it by the Arabians; among the naturaliſts it is alſo called ſalicornia and ſoda; in Engliſh glaſs-wort, and ſalt-wort. See *Glaſs*.

Kali grows in great abundance in Egypt and Syria; alſo in Languedoc and Provence in France, where it is cultivated by the farmers, who ſow whole fields of it to good effect; for when it is burnt, the aſhes made into a lye, and boiled with oil, make the beſt ſoap. See *Soap*.

Out of the ſame aſhes, called alſo pulverine, is extracted a ſalt, called alkali ſalt, which mixed with a ſort of ſand, makes the fine glaſs called cryſtal.

The manner of preparing or procuring the aſhes in Languedoc is thus: when the tree is grown up to its pitch, they cut it down and let it dry; afterwards they burn and calcine it in certain pits like lime-kilns, dug in the ground for that purpoſe, which are covered up with earth, ſo as no air may come at the fire. The matter by this means is not reduced into aſhes only, but made into a very hard ſtone, like rock ſalt, which they are forced to break with hammers to get it out; and this matter they call ſalicor, or ſoda in the ſtone.

They make ſuch quantities of it here, that they export it into ſeveral other countries, but principally into Italy, where the Venetians manufacture it into thoſe beautiful glaſſes which they ſend into moſt countries in Europe: however, the ſoda made here is inferior to that brought from Alicant. The beſt is in little dry ſonorous lumps, of a blueiſh grey colour, and full of little eyes or holes.

KAMINA-MASLA, or *Butter of Stone*, is a term among the Muſcovites for a kind of mineral, or medicinal drug, found in the higheſt mountains, and on the hardeſt rocks of Siberia.

This drug is the effect of the greateſt heat of the ſun, which attracts it by perſpiration from ſuch compact ſtones as appear to contain the leaſt moiſture; adhering thereto like a kind of lime, which the inhabitants ſcrape off after it has received a perfect concoction; for it diſſolves in water like ſalt, and is as ſtrong as copperas.

The Ruſſians attribute ſeveral virtues to this drug, and uſe it for the cure of ſeveral diſorders, particularly the diſſentery: it is alſo of ſervice in venereal injuries; but ſo violent in ſome remedies where it is an ingredient, that none but Muſcovite conſtitutions have ventured upon ſo ſtrong a purgative.

KAN, or *Khan*. The name of an officer in Perſia, anſwerable to that of governor in Europe: there being kans of provinces, countries and cities, who have different additions to diſtinguiſh them.

KANTERKAAS. A kind of cheeſe made in Holland, green and white, round, and of other forms: but cumin ſeeds are uſually mixed with the white ſort, for heightening the taſte; though they are not then reputed kanterkaas, and pay different duties of exportation.

KEE

KARA-GROHE. See *Cara-Grouch*.

KARATA, by ſome called *Caraguata-Macca*, a kind of aloe growing in America, whoſe leaves when boiled are made into a thread, of good uſe for making cloth, fiſhing-nets, and the like. Its root or leaves, thrown into the river, ſtun the fiſhes to that degree, that they are eaſily taken with the hand: its ſtalk when dried and burnt ſerves for tinder, and when briſkly rubbed on a harder wood, takes fire and conſumes itſelf.

KARDEL, or *Quarteel*. A kind of caſk, or ton, uſed in the whale-fiſhery for holding the blubber, and containing ſixty or ſixty-four gallons Engliſh meaſure.

It alſo ſignifies the train-oil caſks, uſed particularly at Hamburg, containing about fourteen gallons.

KARKRONY. A building, where the royal manufactures of Perſia are carried on, for making their tapeſtries, ſilks, velvets, taffeties, coats of mail, ſabres, bows, arrows, and other arms. There are alſo painters in miniature, goldſmiths, lapidaries, and other artificers.

KARL. The male kind of hemp. See *Hemp*.

KATTEQUI. A blue cotton cloth, brought from the Eaſt Indies, particularly from Surat; the pieces of which are only 2 ells $\frac{5}{8}$ in length, and $\frac{5}{6}$ in breadth.

KAYAGE. The money or toll paid for loading or unloading wares at kays.

KAYSER-*Groſs*. A coin current at Franckfort, for 1 $\frac{3}{4}$ d. ſterling.

KAY, or *Key*. A wharf, or place by the water-ſide, in a ſea-port, for the loading and unloading of merchandiſe. See *Wharf*, and *Quay*.

KEBER. The name of a ſect among the Perſians, who, for the generality, are rich merchants: but, though they inhabit the middle of Perſia, and are found in great numbers in the ſuburbs of Iſpahan, it is not known whether or no they are originally Perſians, as having nothing in common with them except the language. They are diſtinguiſhed by their beards, which they wear very long, and by their dreſs, which is quite different from the reſt, being in effect heathens; but in great reputation for the regularity of their life.

KEBULA. A name given in Aſia to the fruits called in Europe myrobalans; being called kebula from Cabuleſtan, from whence they are brought in great quantities. See *Myrobalan*.

KEDDING. A ſea-term, uſed when a veſſel is brought up or down a narrow river by the wind, tho' the tide is contrary to it.

To do this, the ſeamen ſet their fore-ſail, fore-top-ſail, and mizzen-ſail, and let her drive with the tide, that they may ſlat her about. If ſhe comes too near the ſhore, they have a little anchor ready, called the kedger, or kedge-anchor, with a hawſer faſtened to it from the ſhip, which they drop in the midſt of the current, whereby they wind her head about, and then take up the anchor again.

KEDGER. The anchor of a ſmall ſhip.

KEEL. The loweſt piece of timber in a ſhip, in the bottom of her hull, one end thereof being let into the ſtern-poſt, and the other into the ſtem: into which all the ground timbers and hooks are faſtened, and bolted fore and aft.

When a ſhip has a deep keel, ſhe is ſaid to have a rank keel, which ſerves to keep her from rolling.

Falſe KEEL, is a ſecond keel, which is ſometimes put under the firſt, to make the veſſel deeper.

KEELAGE. A duty paid by ſhips at their entrance into ſome ports.

hyſteric; and from it they draw a ſpirit called gin, a tincture, an elixir, extract, and a ratifia. See *Geneva*.

It is ſaid it will laſt a hundred years without corrupting; the chemiſts add, that a coal of juniper, covered with aſhes of the ſame kind, will keep on fire an entire year.

JUNIPER-*gum*, is the ſame as artificial camphor. See *Camphor*.

JUNTA, called alſo *Junto* and *Junčto*. A council or company of ſeveral perſons meeting for the diſpatch of any buſineſs: the term being particularly uſed in the Spaniſh and Portugueſe affairs.

In Portugal they have three conſiderable juntas; the junta of commerce, that of the three eſtates, and that of tobacco. The firſt was eſtabliſhed by King John IV. being a council of marine. The ſame King aſſembled the ſtates of his kingdom to create the tribunal of the junta of the three eſtates; and King Peter II. created the junta of tobacco in 1675, which conſiſts of a preſident and ſix counſellors.

IVORY. The tooth, or tuſk, of an elephant, growing on each ſide of his trunk, ſomewhat in form of a horn, which is much eſteemed for its colour, its poliſh, and the fineneſs of its grain when wrought.

Great quantities of ivory are brought from ſeveral parts of the Eaſt Indies: but the ivory of the iſle of Ceylon, and that of Achem, have this peculiarity, that they never become yellow.

Ivory is alſo abundantly got in all parts of the African coaſt; but eſpecially at Rio Freſca, the rivers of Gambia, Senegal, and the ivory coaſt. See *Guinea*.

Beſides the great conſumption of ivory for ſeveral works and ornaments, it is alſo of ſome uſe in medicine, being raſped into a kind of powder for aſtringent ptizans. ſpirit and volatile ſalt are likewiſe extracted from it, puted good in maladies of the heart and brain; laſtly, burning and calcining it, it is ſuppoſed to have the virtues with coral.

But there is alſo a kind of ivory got from the teeth ſome other animals beſides the elephant.

Black IVORY, or *Ivory black*, is the native ivory burnt, taken out in leaves or ſhivers when become black: ground with water, and made up in little cakes or troc uſed by the painters.

Muſcovite IVORY, is a ſort of ivory dug out of the earth ſome parts of Muſcovite Tartary; particularly the banks of the rivers Lena and Tenicia. Theſe teeth uſually white, and ſometimes black: their weight 200 to 300 lb. they are uſed for the making of and other works, like elephants teeth; but the trade is in Muſcovy, few of them being ſent abroad.

JURATS, magiſtrates, in the manner of aldermen, the government of ſeveral corporations: as the and jurats of Maidſtone, Rye, and Winchelſea: Jerſey has a bailiff and twelve jurats, or ſworn aſſi to govern the iſland.

JURY-*maſt*. An appellation given by the ſeamen to temporaneous ſort of a maſt, patched up of yard other pieces of timber, and ſet up in the room of maſt, loſt in a fight, or by a ſtorm.

JUTTAL. An Indian coin, uſed at Carwar, 48 of make a pagoda, or 7 s. 8 d. ſterling.

JZELOTTE. A ſilver coin current at Conſtanti worth about 1 s. 6 d. ſterling.

KAN, or *Khan*. The name of an officer in Perſia, anſwerable to that of governor in Europe: there being kans of provinces, countries and cities, who have different additions to diſtinguiſh them.

KANTERKAAS. A kind of cheeſe made in Holland, green and white, round, and of other forms: but cumin ſeeds are uſually mixed with the white ſort, for heightening the taſte; though they are not then reputed kanterkaas, and pay different duties of exportation.

KEE

KARA-GROHE. See *Cara-Grouch*.

KARATA, by ſome called *Caraguata-Macca*, a kind of aloe growing in America, whoſe leaves when boiled are made into a thread, of good uſe for making cloth, fiſhing-nets, and the like. Its root or leaves, thrown into the river, ſtun the fiſhes to that degree, that they are eaſily taken with the hand: its ſtalk when dried and burnt ſerves for tinder, and when briſkly rubbed on a harder wood, takes fire and conſumes itſelf.

KARDEL, or *Quarteel*. A kind of caſk, or ton, uſed in the whale-fiſhery for holding the blubber, and containing ſixty or ſixty-four gallons Engliſh meaſure.

It alſo ſignifies the train-oil caſks, uſed particularly at Hamburg, containing about fourteen gallons.

KARKRONY. A building, where the royal manufactures of Perſia are carried on, for making their tapeſtries, ſilks, velvets, taffeties, coats of mail, ſabres, bows, arrows, and other arms. There are alſo painters in miniature, goldſmiths, lapidaries, and other artificers.

KARL. The male kind of hemp. See *Hemp*.

KATTEQUI. A blue cotton cloth, brought from the Eaſt Indies, particularly from Surat; the pieces of which are only 2 ells $\frac{5}{8}$ in length, and $\frac{5}{6}$ in breadth.

KAYAGE. The money or toll paid for loading or unloading wares at kays.

KAYSER-*Groſs*. A coin current at Franckfort, for 1 $\frac{3}{4}$ d. ſterling.

KAY, or *Key*. A wharf, or place by the water-ſide, in a ſea-port, for the loading and unloading of merchandiſe. See *Wharf*, and *Quay*.

KEBER. The name of a ſect among the Perſians, who, for the generality, are rich merchants: but, though they inhabit the middle of Perſia, and are found in great numbers in the ſuburbs of Iſpahan, it is not known whether or no they are originally Perſians, as having nothing in common with them except the language. They are diſtinguiſhed by their beards, which they wear very long, and by their dreſs, which is quite different from the reſt, being in effect heathens; but in great reputation for the regularity of their life.

KEBULA. A name given in Aſia to the fruits called in Europe myrobalans; being called kebula from Cabuleſtan, from whence they are brought in great quantities. See *Myrobalan*.

KEDDING. A ſea-term, uſed when a veſſel is brought up or down a narrow river by the wind, tho' the tide is contrary to it.

To do this, the ſeamen ſet their fore-ſail, fore-top-ſail, and mizzen-ſail, and let her drive with the tide, that they may ſlat her about. If ſhe comes too near the ſhore, they have a little anchor ready, called the kedger, or kedge anchor, with a hawſer faſtened to it from the ſhip, which they drop in the midſt of the current, whereby they wind her head about, and then take up the anchor again.

KEDGER. The anchor of a ſmall ſhip.

KEEL. The loweſt piece of timber in a ſhip, in the bottom of her hull, one end thereof being let into the ſtern-poſt, and the other into the ſtem: into which all the ground timbers and hooks are faſtened, and bolted fore and aft.

When a ſhip has a deep keel, ſhe is ſaid to have a rank keel, which ſerves to keep her from rolling.

Falſe KEEL, is a ſecond keel, which is ſometimes put under the firſt, to make the veſſel deeper.

KEELAGE. A duty paid by ſhips at their entrance into ſome ports.

KEELSON. The loweſt piece of timber within the ſhip's hold.

KEEPING *of Books*. See *Book*-keeping.

KEER. See *Ceer*.

KEG. See *Cag*.

KELLA. An Arabian meaſure for ſilks, being about 4 ½ Engliſh yards.

KEMEAS. A taffety, with ſilk flowers, brought from the Eaſt Indies.

KEN. A long meaſure uſed at Siam, being 3 feet.

KENK. A ſea-term for a rope or cable, that doubles, and does not run freely upon the pulley.

KEPATH. A ſmall weight, uſed by the Arabs, being the half of a grain, 12 kepaths making the Arabic dram.

KERMES. A kind of huſk, or excreſcence, reſembling a berry, growing on an ever-green of the oak kind, of conſiderable uſe both in phyſic and dying:

The kermes, or kermes berry, called alſo ſcarlet grain, by the French vermillion, or grain de gall, or vermeil, is a kind of neſt of an inſect, about the ſize of a juniper-berry, round, ſmooth, and gloſſy, of a beautiful red colour, and full of a mucilaginous juice, of the ſame dye; found adhering to the bark, on the ſtem and branches of a ſort of ſcarlet-oak, called by botaniſts *aculeata cocci-glandifera*; growing in Spain, Languedoc, and other warm countries. The kermes-berry is of a vinous ſmell, a bitter, tough, agreeable taſte; and its pulp, or juice, pregnant with many minute ova of animalcules: the origin of the kermes is ſuppoſed owing to the pricking of the ilex by a little maggot, to depoſit its ova, which raiſes a little tumor, or bliſter, that fills with juice, and as it ripens becomes red. Hence, when the kermes is dried, there comes out of it an infinite number of little inſects, and flies, ſo ſmall that they are ſcarce ſenſible; inſomuch that the whole inward ſubſtance ſeems converted into them: but, to prevent this inconvenience, they uſually ſteep the kermes in vinegar before it is dry.

They draw the juice or pulp from the kermes, by pounding it in a mortar, and then ſtraining it thro' a ſieve: of which they make a ſyrup, by adding a ſufficient quantity of ſugar. Sometimes they dry the pulp ſeparate from the huſk; which pulp thus dried, they call paſtel of kermes.

The kermes grain is of great uſe in phyſic: it is a cardiac, deſiccative, aſtringent, fortifies the ſtomach, and prevents abortion; of which is made that celebrated confection called alkermes.

It is however of greater uſe in dying ſcarlet; for which uſe the manner of preparing it is as follows. The grain being taken when ripe, they ſpread it on linen; and at firſt, while it abounds moſt in moiſture, turn it twice or thrice a day, to prevent its heating, till ſuch time as there appears a red powder among it: this they ſeparate, by paſſing it through a ſearce; and then again ſpread abroad the grain on a linen, till they perceive the ſame redneſs of powder, when they repeat the ſifting: thus they proceed, while they diſcover any red powder on the ſurface of the grain, which is ſtill paſſed through the ſearce, till it yields no more. In the beginning, when the ſmall red grains are found to move, as they will do, they are ſprinkled over with ſtrong vinegar, and rubbed between the hands; for if this precaution was not taken, out of every grain would be formed a little fly, which would ſkip and fly about for a day or two, and at laſt, changing its colour, fall down dead.

The grain being quite emptied of its pulp, or red powder, by the proceſs above-mentioned, is waſhed in wine, and then expoſed to the ſun: after this it is put into ſmall bags, and along with it the proportion of red duſt, that it had afforded.

According to M. Marſigli's experiments made at Montpelier, the kermes berry has the effect of galls, when mixed with vitriol, and makes good ink: mixed with oil of tartar, or lime water, its colour turns from a vermillion to a crimſon. In a decoction of turnſole flowers, it retains its proper colour. They have not been able to get any fixed eſſential ſalt from it, but a volatile ſalt it yields in abundance; which in M. Marſigli's opinion, would have a better effect in medicine if taken in a liquid, than when incloſed in conſerves and confections, which hinder its action.

KERSIES. A kind of woollen cloth, manufactured in Yorkſhire, and exported to Italy, Portugal, Spain, and other places.

KETCH. A kind of ſhip or veſſel. See *Bomb*-ketch.

KETSERI. A ſort of peaſe, with which the Engliſh and Dutch, eſtabliſhed on the Malabar coaſt, drive on a conſiderable trade for the other parts of the Indies not productive of vegetables.

KEUB. A long meaſure uſed at Siam, containing 12 nious, or the Siameſe ſpan; 2 of which make 1 ſok, and 2 ſoks 1 ken, or 3 Engliſh feet.

KEUBTOUAT. A long meaſure uſed by the Arabs, being equal to the European geometrical pace; or containing 3 ackdams, or feet.

KEURMEESTERS, is a term at Amſterdam for the inſpectors appointed by the burgo-maſters for examining certain kinds of merchandiſes, and taking care that they are of a good quality; as alſo that the trade thereof is carried on with fidelity: it being according to the reports and teſtimony of the keurmeeſters, that the burgo-maſters, and other judges, uſually decide the conteſted matters which are laid before them.

KIAM. A great river of China, in Aſia, which, riſing near the weſt frontier, runs generally eaſt, paſſing thro' the provinces of Suchuen, Huquam, Kiamſi, and Nanking; and diſcharging itſelf into the gulph of Nanking, a little below that city, being a very rapid ſtream, and ſo deep that the Chineſe pretend they cannot fathom it.

KIEL. A city of the duchy of Holſtein, in the circle of Lower Saxony in Germany, ſituated on a bay of the Baltic, in 10 deg. of E. lon. and 54 deg. 32 min. of N. lat. See *Denmark*.

KIEN-TCHEOU. A ſilk ſtuff much eſteemed in China, and manufactured from the ſilk of wild ſilk-worms, gathered in the woods, particularly in thoſe of the province of Canton: this ſilk being of a grey colour without any luſtre; yet of a high price, and dearer than the moſt beautiful ſatins.

KIERIVAN. The proper name in Perſia for what in England is commonly called a caravan. See *Caravan*.

KILDERKIN. A kind of liquid meaſure, which contains two firkins, or eighteen gallons of beer meaſure, and ſixteen of ale meaſure.

KILIA, or *Kily*. A town of Turky, in the province of Beſſarabia, ſituated on the Danube. See *Turky*.

KINGAN. A ſort of flowered ſtuff, the ground-work of which is blue, manufactured in Japan; being one of the principal merchandiſes ſold by the Japoneſe to the inhabitants of Jeſſo.

KINGSTON. A port-town of Jamaica, in America, ſituated in 77 deg. of W. lon. and 17 deg. 32 min. of N. lat. on the north-ſide of the bay of Port-royal, which is the town where moſt of the ſhipping of Jamaica load and unload their cargoes; conſequently a place of good trade, and much reſorted to by merchants and ſeamen.

KINSALE. A port town of Ireland, in the province of Munſter, and county of Cork, ſituated in 8 deg. 20 min. of W. lon. and 51 deg. 32 min. of N. lat. on the river Bandon, near the ſea, 14 miles S. of the city of Cork, being an excellent harbour, and a good town of trade.

KINSU. A plant which grows in China, making fine of very fine flax, of which linens are manufactured much eſteemed upon account of their quality, for not only keeping the body cool in ſummer; but alſo as a preſervative againſt, and cure for the itch. It is found only in the province of Xanſi, near the city of Kingiang, and its ſcarcity makes it dear.

KINTAL, or *Quintal*. A weight of one hundred pounds more or leſs, according to the different uſage of divers nations. See *Quintal*.

KIPPER-*time*. A ſpace of time between the feſtival of the finding of the Holy croſs, May the 3d, and Twelfth day, during which ſalmon-fiſhing, in the river Thames, from Graveſend to Henley, is forbidden, by rot. parl. 50 Edward III. See *Fiſhery*.

KIRKCUDBRIGHT. A port-town of Scotland, in the county of Galloway, ſituated on a bay of the Iriſh ſea, in 4 deg. 5 min. of W. lon. and 54 deg. 38 min. of N. lat. 60 miles W. of Carliſle, and 83 S. W. of Edinburgh.

KIRMANT. A port-town of Turky, remarkable for its dreſſed hides. See *Turky*.

KISHMISH. A Perſian weight, about 7 lb. avoirdupois.

KISTE. A liquid meaſure uſed by the Arabs, containing about an Engliſh quart wine meaſure.

KITAI. A kind of damaſk made in China, and ſent by the Tartars, who live near the great wall of China, to Siberia, where the Muſcovite women purchaſe it for veils to cover their faces through modeſty: though the Muſcovite caravans, which go to Pekin, and paſs through Siberia, alſo ſupply them with the ſame commodity.

KITAI, is alſo a kind of ſtuff mixed with cotton, ſome red, others blue, and of various colours, brought alſo from China.

KLICKER. A ſhoe-maker's journeyman, or ſaleſman's ſervant, who ſtands at the door to invite cuſtomers to buy goods.

KNEES, in ſhip-building, thoſe crooked timbers, that are bolted into the beams and futtocks, and bind them together.

KNIGHTS, in a ſhip, two thick ſhort pieces of timber uſually carved in the figure of ſome head, having in each four ſhivers; three for the halliards, and one for the top-ropes to run in. One of them ſtands abaft the main-maſt, and for that reaſon is called the main-knights. The other ſtands abaft the fore-maſt, on the ſecond deck, and is called the fore-knight.

KNOTS, of the log-line, at ſea, are the diviſions of it, being uſually ſeven fathoms, or forty-two feet aſunder; but they ſhould be fifty feet; and, then as many knots as the log-line runs out in half a minute, ſo many miles the ſhip ſails in an hour, ſuppoſing her to keep going at an equal rate, and allowing for yaws and lee-way.

KOLDING, or *Celding*. A port-town of Denmark, in the province of North Jutland, ſituated in 9 deg. 45 min. of E. lon. and 55 deg. 30 min. of N. lat. on the bay of the little Belt, 32 miles E. of Rypen. See *Denmark*.

KONGEL. A port-town of Sweden, in the province of Gothland, ſituated in 11 deg. of E. lon. and 58 deg. 15 min. of N. lat. on the Categate ſea, 12 miles N. of Gottenburg.

KONIGSDALLER. A ſilver coin current in ſeveral parts of Germany, particularly upon the frontiers of France, and worth about two ſhillings ſterling.

KOP. The ſmalleſt corn meaſure uſed at Amſterdam, 8 of which make 1 vierdevat, and 4 vierdevats 1 ſchepel, or ſack, weighing 112 lb. avoirdupois.

KOPPING. A Daniſh town, on the iſland of Arroe.

KORATES. Coarſe cotton cloths, brought from the Eaſt Indies, particularly from Surat; the piece containing 3 ells 2-9ths in length, and 2-3ds in breadth.

KOSSENBLADEN. A coarſe ſtuff, proper for the Negroe-trade at Congo and Loango, where the Dutch ſell great quantities of them.

KOUAN, or *Chouan*. A light greeniſh grain, bordering upon a yellow, of a ſaline and poignant taſte, uſed for the making of carmine.

KOUM-POULATI. A ſort of excellent ſteel, brought from Koum in Perſia, otherwiſe called Damaſcus ſteel. See *Damaſcus* ſteel.

KREUX, or *Cruitzer*. A copper coin current in Germany. See *Cruitzer*.

KRUYS-BRANDS. A particular ſort of herring of the Dutch fiſhery, called alſo *Bartholomi brands*.

KUR. The ancient Cyrus, a river of Perſia, which riſes in the mountains of Georgia, in Dageſtan; runs S. E. by Teflis; paſſes on between Chirvan and Ganges, and, uniting its ſtreams with the river Arras, the antient Arraxes, falls into the Caſpian ſea, ſouth of Baku.

L.

LABDANUM. See *Ladanum*, and *Lapdanum*.

LABIAU. A port-town of Pruſſia; ſituated in 22 deg. 15 min. of E. lon. and 55 deg. of N. lat. on the Curiſhaff, a bay of the Baltic ſea.

LABIZA. A kind of amber, or *Succinum*, oozing from an inciſion in a tree of the growth of Carolina: which is yellow like the true *Succinum*, and hardens ſo much from being expoſed to the air, that bracelets and collars can be made out of it: for which reaſon the name *Labiza*, given to it by the Indians of that part of America, ſignifies a jewel, and they therefore wear it as their greateſt ornament; eſteeming it one of their moſt precious commodities: and it is ranked by Europeans among aromatic gums and perfumes.

LABOURER. A perſon who is employed daily or weekly, for the price of his labour, on whom depends the greateſt part of the manufactural arts relating to trade. The price of every thing is valued by the labour whereby it is produced; but labour in England is different from what it is in other parts of the world, eſpecially in America, where the price of a negroe is valued according to his ability for labour. No labourer can earn ſo much as a mechanic; and the plenty or ſcarcity of money regulates the price of labour; whereby ſome nations are able to underſell others in their manufactures: but all taxes load the price of labour; therefore the high taxes in Great Britain load the Britiſh manufactures, and give foreign nations an opportunity of ſelling them at a cheaper rate. See *Manufacture*.

LABRADOR, called alſo *New Britain* and *Eſkimaux*. A country in North America, ſituated between 59 and 79 deg. of W. lon. and between 50 and 64 of N. lat. See *Britiſh* America.

LAC Lunæ. See Mineral *Agaric*.

LACCA, *Laque*, or *Lake*. A ſort of gum, or rather wax; which is hard, red, brittle, and tranſparent; brought from the Eaſt Indies, particularly Malabar, Bengal, and Pegu; being uſed in dying ſcarlet, painting, and other purpoſes.

Authors differ as to the production of this curious drug; but, examined chymically, it is apprehended to be a mean mixture between a gum and a reſin, more abundant in ſalt than oil.

To prepare it for uſe, it is firſt ſeparated from the branches to which it adheres; then pounded in a mortar, and thrown into boiling water; and when the water is well dyed, freſh is poured on, till ſuch time as it tinges no more: part of the water thus tinged is evaporated in the ſun; after which the thickened tincture is ſtrained through a linnen cloth.

There are ſeveral kinds of lacca, uſually reckoned ſix or ſeven; beſides which, there are ſeveral paſtes, uſed by painters, that go by this name, or that of laque: this gum boiled in water with acids, making a beautiful red dye. The beſt kind of lacca is that which is clear, tranſparent, can diſſolve readily, without a mixture of black gum, and which being chewed tinges the ſaliva with red.

Artificial LACCA, or *Laque*, is alſo a name given to a coloured ſubſtance, drawn from ſeveral flowers; as the yellow, from the juniper flower; the red, from the poppy; and the blue, from the iris, or violet: the tinctures of theſe flowers being expreſſed by diſtilling them ſeveral times in aqua vitæ, or by boiling them over a ſtove-fire in a lixivium of pot-aſhes and alum.

Artificial LACCA, is alſo made of Braſil wood, boiled in a lixivium of the branches of the vine; adding a little cochineel, terra merita, calcined alum, and arſenic incorporated with the bones of the cuttle-fiſh pulverized, made up into little cakes, and dried: but if it be very red, the juice of citron is added to it; and oil of tartar is added to make it brown.

Dove-coloured, or *columbine* LACCA, is made with brazil or Fernambuc ſteeped in diſtilled vinegar, for the ſpace of a month, mixed with allum incorporated in cuttle-fiſh bone.

LACE, is a work compoſed of ſeveral threads of gold or ſilver; lace is alſo made of ſilk, or flax, interwoven with each other, and wrought upon a pillow with bobbins, by following the points, or pricks of a deſign, or pattern, by the means of ſeveral pins, which are placed, and displaced, according as the bobbins are made to act.

Laces are manufactured purſuant to ſeveral qualities and faſhions; as lace in the form of net-work, and cross bars; lace with large and ſmall flowers; middling and fine; looſe and cloſe; very high or raiſed; leſs high; low, and very low; ſome intirely of gold-thread, or entirely of ſilver thread, or partly of gold, and partly of ſilver; others of ſilk of different colours, and others of very white flax thread: The uſe of lace being generally to adorn cloaths, linnen, women's head-dreſſes, and the like; but that wove of ſuperfine white thread, is worn by ladies upon their headcloaths, ruffles, and other parts of their dreſs, and is eſteemed the moſt curious: that of ſilk, being for other purpoſes, is ſeldom ſo valuable. Gold and ſilver lace is worn by people of quality; and there is alſo worſted lace of ſeveral colours, ſuch as footmen wear upon their liveries.

The French gold, and ſilver laces, are almoſt entirely manufactured at Paris and Lyons, and in ſome neighbouring places of theſe two cities.

Thoſe of ſilk, eſpecially the fineſt, are made at Fontenay, Puiſieux, Morgas, and Louvrer in Pariſis: the common and coarſe of the ſame kind are, for the better part, manufactured at St. Denis, Montmorency, Villiers-le-Bel, Cercells, Ecouan, St. Brice, Groſlait, Giſors, St. Peter in the fields, Eſtrepagny, Doumiſnil, and in ſome other neighbouring places of theſe little towns and villages: but it is particularly at Louvre in Pariſis, that black ſilk laces for womens ſcarfs are manufactured.

The countries, and chief places, from whence laces of flax white-thread are brought, are Antwerp, Bruſſels, Mechlin, Louvain, and Ghent, in the Auſtrian Netherlands; Valenciennes, Liſle, and ſome other places of the French Netherlands: Charleville, Sedan, the county of Burgundy, and Lorraine; Liege, Dieppe, Havre-de-Grace, Honfleur, Harfleur, Pont-l'Eveque, Giſors, Feſcamp, Caen, and other towns of the province of Normandy; Arras, Bapaume, and other parts of the country of Artois; le Puy in Velay, ſome places of Auvergne, and Picardy; Louvre in Pariſis, St. Denis, Montmorency, Villiers-le-Bel, and others. The uſual height or depth of thread lace, is four lines augmenting imperceptibly to four inches; the pieces containing from three ells and a half to eight in length. The fineſt and moſt beautiful is that of the Auſtrian Netherlands; next, that of French Flanders; and laſtly, that of Havre, Honfleur, and Dieppe: the laces manufactured in other parts being, for the most part, coarſe, and not much valued; though the trade and conſumption thereof is very conſiderable.

The greateſt part of the lace manufactured in France as well gold as ſilver, ſilk, and thread, are for home conſumption; ſcarce any being ſent abroad but lace, eſpecially black, of which conſiderable parcels are ſent into Spain, Portugal, the Spaniſh Weſt-Indies, Germany, and Holland.

There is a kind of white-thread-flax lace particularly deſigned for the Spaniſh Indies, and called by the French *Dentelle ſans fond*, that is, lace without bottom; be-

ompoſed of large flowers, without net-work, and croſs
ars: but this kind, which was formerly in great vogue
n France, is now much aboliſhed, though ſtill manufac-
ured in Flanders. See *Embroidery*.
e-LACE, is lace made of bobbins.
ir-LACE, is a fillet for horſes.
e LACE, is lace whoſe ground is a ribband of thread.
d *and ſilver* LACE. The allowance on gold and ſilver
ace, thread, and fringe exported, was granted by the
oth of Q. Anne; and by the 3d of George the 1ſt
ontinued for ever; whereby, upon ſufficient ſecurity be-
ore ſhipping, that the goods ſhall not be relanded in Great-
Britain, and oath that they were actually made of plate
ire ſpun upon ſilk, the exporter thereof, to foreign parts,
s to have the following allowances,

Gold lace, thread, or fringe, the pound avoir-dupoiſe wt. - -	0	6	8
Silver lace, thread, or fringe, the pound avoir-dupoſe wt. - -	0	5	0

To be paid out of the duties on gilt and ſilver wire, by
he collector, or the commiſſioners, by a debenture from
he collector of the cuſtoms, expreſſing the kinds and
quantities, and the ſhipping teſtified by the ſearcher.
CE, is alſo the name of a very uſeful ſtring, or line,
ometimes made round, like a cord, and ſometimes flat,
ike a narrow ribband; ſometimes of thread, and ſome-
imes of ſilk; applied to garments, in which flat holes
re made on purpoſe to draw it through, to cloſe, or
make the garment ſit tight and ſtrait to the ſhape of a
perſon, as women's ſtays, children's coats, and the like.
k-LACE, is an ornament for women's necks, common-
y made of glaſs beads, of different colours; but for la-
dies, of mother of pearl, diamonds, or other precious
ſtones; as well as of amber, jet, and coral.
ACRE. A money of accompt uſed at Surat, and in o-
ther parts of the Eaſt Indies; worth 100,000 rupees, or
250 l. ſterling.
DANUM, called otherwiſe *Labdanum* or *Lapdanum*,
though there is a wide difference between the two drugs,
is a gummous or reſinous matter, oozing out of the leaves
of a ſhrub called *ciſtus ladanifera*, very common in the
hot countries of the Levant, and of which there are va-
rious kinds.
Dioſcorides ſays, they gather the ladanum by means of
goats, browzing on the leaves of this ſhrub, and returning
to the ſtable with their beards loaded with a fat ſubſtance,
which the peaſants rake off with combs made for that
purpoſe: this matter they thus collect into lumps, and as
it is mixed with the goats hair, and other impurities, call
it ladanum in the beard, or natural ladanum: others are
ſaid to draw cords over the leaves, and other parts of the
ſhrub, and ſcraping off what had ſtuck to the cords,
make up the ladanum, into little balls.
Tournefort aſſures us, that the common way of gather-
ing the ladanum, is by bruſhing it off the leaves with a ſort
of whip, compoſed of many laſhes or ſtraps: and after it is
ſcraped off the ſtraps, they make it into cakes of diffe-
rent ſizes.
Ladanum is uſed in phyſic, to ſoften, digeſt, deterge,
attenuate, and reſolve; that which is brittle, of an aſh co-
lour, and ſweet ſcented, being the beſt.
Pietro della Valle tells us, he was informed by the Indi-
ans, that ladanum is formed like dew, and falls from hea-
ven like manna; that it is gathered on the leaves of a plant
a palm and a half high; and that after gathering they boil
it, whereby it becomes as ſoft as wax. See *Manna*.
quid LADANUM, more properly called clear or purified
ladanum, is a preparation of the natural ladanum by melt-
ing and purifying it from hairs; which is ſometimes ſold
for a ſort of black amber.
ADING. The cargo, goods, or burden, which is put
on board a ſhip. See *Bill* of lading.
ADOG. A kind of herring fiſhed for in the lake Lado-
ga, in Muſcovy, from whence it is denominated. It is ſal-
ted and caſked, much after the manner of the herring fiſhed
for in the ocean; and though its commerce is conſidera-
ble, yet it is not ſufficient for the conſumption of the Muſ-
covites upon account of the multiplicity of their lents,

which occaſions alſo a great conſumption of the Engliſh and Dutch fiſhery.

LADOGA *Lake*, is ſituate in Ruſſian Finland; having a communication with the gulph of Finland, by the river Neva.

LADRONE *Iſlands*. See *Marian* Iſlands.

LAGA. A ſort of red, and black bean; growing in ſome parts of the Eaſt Indies; and ſerving in ſeveral places as a weight for gold, and ſilver: but the Maleze call it conduri.

LAGAN, or *Lagon*, in the Britiſh ancient ſea-laws, ſhipwrecked goods, left by the ſea, lying on the ſand, either aſhore or out at ſea. See *Wreck*.
Some ſuppoſe that the word denotes goods tied together with a buoy, or the like, to hinder their ſinking to the bottom, that they may be found again. See *Jetſon* and *Flotſon*.

LAGIAS, very beautiful painted cloths, manufactured and ſold in the kingdom of Pegu; which are ſo much prized, that by way of excellence they are called lagias of the King. Other kinds manufactured in the kingdom, and ſcarce leſs beautiful than the lagias, are the torpitis, corpis, and the pintadis.

LAGOON, or *Lagune*, among the Spaniards, ſignifies a lake, or baſon of water.

LAGOS. A port-town of Portugal, in the province of Algarva; ſituated in 9 deg. 27 min. of W. lon. and 36 deg. 45 min. of N. lat. where the Engliſh fleets bound for the Straits, frequently take in freſh water.

LAHOLM. A port-port of Sweden, in the principality of Gothland, ſituated in 13 deg. 15 min. of E. lon. and 56 deg. 45 min. of N. lat. near the entrance of the Baltic.

LAKE. A collection of ſtanding water, incloſed within the cavity of ſome inland place, of a conſiderable extent and depth. According to ſome authors, thoſe only are properly called lakes which receive and emit rivers: however, lakes may be divided into four kinds: ſuch as neither emit nor receive rivers: ſuch as emit rivers; without receiving any: ſuch as receive, without emitting any: and ſuch as receive and emit them.
Of the firſt kind ſome are perennial, others temporary: the temporary owe their origin, moſt of them to rain, and to the cavity, or depreſſion of the place where they are lodged.
The inhabitants of the Eaſt Indies make artificial lakes, which they wall about to catch the rain in wet ſeaſons, and preſerve it for uſe in dry ones: the names of whoſe makers are held in the higheſt veneration; and an opulent man cannot do a greater and more charitable act towards his countrymen: there are ſeveral of this kind of lakes, formed by the inundations of the ſea and rivers; particularly the Nile and Niger, which, when they retire within their banks, leave floods of water behind; and the inhabitants take care to encloſe them, to ſerve as a magazine for the enſuing months.
The generation of perennial lakes may be alſo referred to rain, where the cavity is ſo deep as to receive a quantity in winter, more than the heat of the ſun will exhale in ſummer; though it is probable many of theſe lakes have their ſprings at bottom, by which they are continually ſupplied. To this claſs may be referred the turloughs, or land-lakes, in Ireland; which are lakes one part of the year, and the other part ſmooth fields: at the bottom of theſe turloughs are found holes, through which the water ſprings in winter, and ſinks towards ſummer.
The ſecond ſpecies of lakes, which emit without receiving rivers, is very numerous; they owe their origin to ſprings, the cavities where the ſpring is found not being able to contain all the waters it yields.
The third kind, that is, thoſe which receive rivers without emitting any, apparently owe their origin to thoſe rivers which in their progreſs from their ſource falling into ſome ample cavity, are collected together, and form a lake of ſuch dimenſions, as may loſe as much by exhalation as it continually receives from its ſprings; or to a river flowing on a ſoft ſpongy ſoil, which imbibes the water, and tranſmits it to the neighbouring grounds. But the number of theſe is ſmall.

Of

Of the fourth ſpecies, which both receive and emit rivers, are three kinds; as the quantity of water they emit is greater, equal, or leſs than that they receive, if the quantity they emit be greater, it is plain they muſt have a ſpring at the bottom; if leſs, there muſt be ſome ſubterraneous ducts, or elſe the earth muſt be ſpongy; if it be equal, it is ſuppoſed they have neither hidden ſprings, nor canals; but of theſe lakes there are a great number, and thoſe very conſiderable.

The generality of lakes conſiſt of freſh waters, as moſt of thoſe which are ſupplied either from ſome ſpring, far from the ſea, or a river, or from rain: ſome few of ſalt water, as thoſe produced by the inundation of the ſea, or by its emiſſion through ſome duct of the earth, or that have ſalt ſprings at bottom.

Dr. Halley is of opinion, that all great perennial lakes are ſaline, either in a greater or leſs degree; and that this ſaltneſs increaſes with time; on which foundation, he propoſed a method for determining the age of the world.

The large lakes wherewith northern nations abound ſerve for very good purpoſes; inaſmuch as the warm vapours ariſing from them, ſerve for a defenſative againſt the pinching cold of thoſe climates; for it is owing to them that Ireland and Scotland are leſs affected with froſts than much warmer countries.

Some of theſe lakes are ſo large as to be called ſeas; as the Caſpian ſea, the ſea of Galilee, and the dead ſea: the other moſt conſiderable lakes are thoſe of Leman at Geneva, of Conſtance, of Ladoga, and Onega, in Europe; beſides which there are ſeveral in many other parts of the world; particularly the lakes of Canada in North America.

LAKE. See *Lacca*.

LALAND. An iſland of Denmark, in the Baltic, ſituated in 12 deg. of E. lon. and 55 deg. of N. lat. S. of Zeland, from which it is ſeparated by a narrow channel.

LAMINA. A thin plate of metal, ſlate, or board.

LAMIS, is a term at Smyrna for one of the ſorts of gold Venetian cloths, imported there by Venetian ſhips.

LAMP. A machine to hold oil and cotton to burn and give light, of great uſe in all countries.

LAMP-*black*. See *Black*.

LAMPARILLAS. A ſort of ſlight camblet manufactured in Flanders, particularly at Liſle and its neighbourhood; being of ſeveral faſhions, ſome plain, others flowered, and others ſtriped. Their uſual breadth is 3-8th or 1-4th and 1-half of the Engliſh ell: their length is undetermined, and their deſtination is chiefly for Spain.

LAMPASSES, painted callicoes, brought from the Eaſt Indies; particularly from the Coromandel coaſt; of which there is a pretty good trade; eſpecially at the Manillas.

LAMPSACUS. A port-town of the leſſer Aſia, ſituated in 28 deg. of E. lon. and 40 deg. 12 min. of N. lat. at the entrance of the Propontis.

LANCASTER. A port-town of Lancaſhire; ſituated in 2 deg. 44 min. of W. lon. and 54 deg. of N. lat.; 200 miles N. W. of London.

LANCH. See *Launch*.

LAND. Subſidies, fifteenths, and tenths, were the ancient ways and means in England of ſupplying the government: though what eſtates, and in what manner land was thereby rated, is very uncertain: but the value of land is at preſent only nominal: to prove which,

It won't be ſuſpected to be an under computation to reckon the rental of England at	£ 20,000,000
The exports and freights at -	8,000,000
The expences of the people of England are computed at - - -	64,000,000
The general amount of taxes, and part of their conſequences, is - - -	£15,289,375
If our exports and freights make 1-8th of the expences of the people, they muſt be computed to pay 1-8th of the laſt article, which makes - - - - -	1,911,171
Which being deducted, the remainder is what falls on land. . - -	13,378,204

Mr. Locke, in his conſiderations, &c. Page 95, treating of taxes on commodities ſays, "It is in vain, in a country whoſe great fund is land, to hope to lay the public charge of the government on any thing elſe; for there at laſt it will terminate. The merchant, do what you can, will not bear it; the labourer cannot, and therefore the land-holder muſt. If foreign trade will pay but 1-8th, land muſt pay the remaining 7-8ths, which amounting to 13,378,204l. and falling on a rental of 20,000,000l. is above 13s. in the pound tax upon all the lands of England; ſo that land with the preſent taxes at 20s. *per* acre, or without the preſent taxes at 7s. *per* acre, are equal, and the land more reduced by taxes and monopolies, than by any poſſible free importation; and the prohibition of importing Iriſh cattle, called a remedy, is only a forwarding the general decay of trade, and conſequently the general decay of rents, which actually happened after paſſing this prohibitory law, as Roger Coke informs us in his treatiſe, That the church and ſtate of England are in equal danger with the trade, publiſhed in 1671; in page 64. His words are, that "the ends deſigned by the acts againſt the importation of Iriſh cattle, of raiſing the rents of the lands of England, are ſo far from being attained, that the contrary has enſued. And here I wiſh a ſurvey were taken how many thouſand farms are thrown up ſince this act; how many thouſand farms are abated, ſome above 1-6th, others above 1-4th; others above 1-3d; ſome I know, which after two years lying waſte, are abated one half."

Lord Coke, Inſt. 4. p. 33. and 34, values a ſubſidy at 70,000l. and tenths and fifteenths at 20,000l. and ſays they were four ſhillings in the pound upon land, and 2s 8d. upon perſonal eſtates.

It ſeems probable, that for a long time there had been no ſurvey made of the land in England till 32 Hen. VIII. and that for ſome ages they had governed themſelves by the ancient books. But the affairs of that King required then a great ſum of money, the parliament charged land with 12d. *per* pound, and perſonal eſtates with 6d. and the King had liberty to name commiſſioners of his own. The aſſeſſors were to be upon oath, and had power to examine upon oath all perſons of the true value of their eſtates, real and perſonal.

The ſame thing was done 34 and 37 Hen. VIII. and 3 Edw. VI. and 3 Edw. VI. and 4 and 5 Phil. and Mary. And in theſe times there was in a manner a new ſurvey made of all the land in the kingdom, and thereupon the ſubſidies that came after, raiſed larger ſums than formerly. For we find, from the accounts in the exchequer, that from 1 Eliz. to 29 inclusive, the ſubſidies, one with another, amounted to at leaſt 100,000l. but from 31 Eliz. to 18 Jac. I. in which time we cannot find there was any regular and ſtrict ſurvey made, the ſubſidies fell to 70,000l. or thereabouts; for which no reaſon can be aſſigned, land improving all the while, but that, when there had been no ſurvey made for a long while, and the aſſeſſors were left at large, the people naturally returned to the rates in the old books.

How ancient the inequality is between the taxes in the north and weſt, and the home counties, ſo much complained of, cannot eaſily be traced, acording to Davenant for in an aſſeſſment of 400,000l. 17 and 18 Car. I. we find the rates upon the northern and weſtern counties to lye juſt as they do in our preſent aſſeſſment; and tho' there might ſome reaſon to eaſe the north in that tax, becauſe those parts had been great ſufferers by the Scotch army; yet 1642, when that act paſſed, the ſword of civil war was not as yet drawn; and the weſt and other counties had not yet at all been harraſſed; ſo that the favour which the north and weſt have met with in land taxes, is a little older than the civil war, and may be attributed to that care which the great number of members they ſend up, have always had of their concerns in parliament.

When the civil war broke out, the common-wealth chiefly ſubſiſted by exciſes, for they could gather land taxes only where they were ſtrongeſt

In 1647, their authority was generally owned over all the nation, and then they began to raiſe land-taxes regularly by a monthly aſſeſſment.

When the war was over, there was real reaſon to ease the north and weſt, and accordingly the parliament con-

ſidered what conties had leaſt felt the war; thoſe in their aſſeſſments they rated higheſt, and they ſpared ſuch places as had been moſt harraſſed by the armies of either ſide; and this was the diſtinction they made, and not as is vulgarly thought, that of aſſociated or nonaſſociated counties; for moſt counties of England, during that war, had been ſome time or other aſſociated, and by ordinance of parliament.

But ſtill perhaps it had not fared ſo well with the north and weſt, notwithſtanding their ſufferings, if their cauſe had not been maintained in the houſe of commons by a ſufficient number of friends and advocates.

The places which had been leaſt ſenſible of thoſe calamities, or were ſooneſt rid of them, and that had been under the wings of the parliament, and their army, were London and Middleſex, Surry, and Southwark, Hertfordſhire, Bedfordſhire, Cambridgeſhire, Kent, Eſſex, Norfolk, Suffolk, Berks, Bucks, and Oxfordſhire.

And they kept to the ſame meaſure of favouring the diſtant counties, and laying the chief burthen upon thoſe neareſt London, as long as the authority of the commonwealth laſted.

When King Charles the ſecond was reſtored, the northern and weſtern gentlemen were ſtrong enough in the houſe of commons to get continued the method of aſſeſſment then in practice, which was ſo favourable to them; and in the act 12 Car. II. for raiſing 70,000 *l.* for one month, 'tis particularly provided, that it ſhall be raiſed in ſuch proportion as the laſt 70,000 *l. per* month was raiſed by ordinance of ſtate; ſince which time the counties diſtant from London, have continued in the conſtant poſſeſſion of being favourably handled in all aſſeſſments.

The firſt attempt of reducing aſſeſſments to ſome equality, was made in the year 1660.

The houſe of commons, as may be ſeen from their journals, had then in debate the ſettling 100,000 *l. per annum*, in compenſation of the court of wards and liveries; and a committee was ordered to frame and bring in an equal apportionment of the ſaid ſum upon all the counties of England; which was done accordingly, and delivered to the houſe November the 8th, 1660, and is as follows.

	£.		£.
Yorkſhire		Hereford -	1600
W. Riding 2520		Warwick - -	1800
N. Riding 1930	5800	Worceſter - -	1800
E. Riding 1340		Bedford - -	1400
Devon -	5000	Stafford - -	1400
Eſſex -	4800	Nottingham - -	1400
Kent -	4800	Derby - -	1400
Suffolk - -	4800	Lancaſhire - -	1600
Norfolk -	4800	Cheſhire - -	1400
Somerſet -	4000	Rutland - -	380
Briſtol city -	250	Huntingdon - -	900
Lincolnſhire -	4000	Northumberland -	700
Hampſhire - -	3000	Durham - -	700
Cornwall -	2400	Cumberland - -	490
Wiltſhire -	2700	Weſtmorland - -	300
London - -	4000	Monmouth - -	800
Middleſex - -	3000	Angleſea - -	260
Dorſetſhire -	2000	Brecknock - -	450
Northampton - -	2500	Cardigan - -	350
Glouceſter - -	2500	Carmarthen - -	450
Hertford - -	1800	Carnarvon - -	260
Buckingham - -	1900	Denbigh - -	450
Eſſex - -	2600	Flint - - -	260
Surry - -	1800	Glamorgan - -	700
Cambridge and Iſle of Ely - -	1800	Merioneth - -	220
Shropſhire - -	1900	Montgomery - -	550
Berkſhire - -	1700	Pembroke - -	500
Oxfordſhire -	1700	Radnor - -	240
Leiceſter - -	1800	Total is	£. 100,020

This apportionment was many months in forming, and made, no doubt, with great deliberation and judgment, ſince all the moſt conſiderable men of thoſe times were of that committee.

'Tis apparent, that in the aſſeſſment of the rates upon each county, and by comparing the ſums, it may be ſeen, that they chiefly governed themſelves, by the proportions which had been obſerved in rating the ſhip-money.

They had before them the aſſeſſment of the 400,000 l. 17 and 18 Car. I. which, becauſe it was made in parliament, they would, no doubt, have followed, if they they had not judged it partial.

But it ſeems they rather choſe to follow the rates obſerved in aſſeſſing the ſhip-money, as having been laid by perſons who had not the ſame reaſon and intereſt to favour one country more than another.

Ship-money was an arbitrary and illegal tax; therefore it concerned the contrivers of it to lay it as equally upon the nation as poſſible; for it would have been a double grievance to the people, if it had been impoſed, both againſt law, and alſo with partiality. On the contrary, it imported the miniſters of that time to give their new invention all the fair colours imaginable, and to make that, which was unjuſt in its nature, at leaſt juſt and equal in its manner; and no doubt, in the rating of it, they had duly weighed and conſidered the ſtrength and weakneſs, riches and poverty, trade and fertility, and every circumſtance of each particular county; with ſome regard alſo to the proportion it bore in the ancient ſubſidies.

And, upon theſe grounds, it is more than probable the committee of the houſe of commons proceeded in 1660, when they made the ſhip-money their model and pattern of a fair and equal aſſeſſment.

Since the wars with France, land has been taxed in different manners, by an aſſeſſment, and by a pound rate; but both ways, it will perhaps appear, that the North and Weſt have not borne their due ſhare and proportion of the common burthen.

The firſt aid given upon land, to Will. and Mary, was by a monthly aſſeſſment of 68,820 l. 19 s. 1 d. *per* month: ſince which time, land-taxes have been continued as one of the principal branches of the royal revenue.

The land tax, when at 4s. in the pound, produces 2 millions; being paid by ſome to the full, but by many not to above 2 s. in the pound, and that without any reaſon, but becauſe the eſtates happen to be in different counties, which were variouſly affected to a new King, when the preſent aſſeſſment was made, whereby ſome members of the community being ever ſince put undeſervedly in a worſe condition than others, are a dead weight againſt even our moſt neceſſary enlarged expences; wrong policy, that increaſes diſſenſion always in times of difficulty. The tediouſneſs of the coming in of this tax, which is generally two years, is a great diſadvantage; in times of ſafety creates annual expenſive loans, but in times of the greateſt danger, leaves us quite in diſtreſs; it is the higheſt impropriety to call that the aid of the preſent year which is to be paid in the two next enſuing. This tax has beſides been attended with a very bad conſequence to the nation, in having made a diſtinction where there is no difference, that is, of landed and trading intereſts. Country gentlemen, finding the land-tax a heavy burden on them, thought to eaſe themſelves by loading the trader, whom they looked upon with a jealous eye, thinking his ſituation eaſier; whereby that trade which had raiſed the value of their eſtates, and which only could ſupport the increaſed value, being deprived of their protection, and cramped with duties without mercy on all occaſions, has indeed been brought ſufficiently low, and is bringing down with it the rents of their lands; and they may ſee the fatal error when it is perhaps too late, trade being like a coy dame, difficult to be brought back when ſlighted.

Mr. Locke, in his conſiderations of the conſequences of the lowering of intereſt, and raiſing the value of money, page 86, aſſerts it to be an undoubted truth, that the land-holder is more concerned in trade, and ought to take a greater care that it be well managed, than even the merchant himſelf; for he will certainly find that when a decay has carried away one part of our money out of the kingdom, and the other is kept in the merchants or tradeſmen's hands, that no laws he can make, nor any little arts of ſhifting property among ourſelves, will bring it back to him again; but his rents will fall, and his in-

come every day leſſen, till general induſtry and frugality, joined to a well-ordered trade, ſhall reſtore to the kingdom the riches and wealth it had formerly.

The reaſons why the decline of foreign trade ſinks the value of land are aſſigned by the author of the Eſſay of the cauſes of the decline of the foreign trade, to be as follows.

Firſt, By ſinking the markets at home.

For the produce of land being rendered exceſſively dear, Foreigners will not take its ſuperfluities; and labour being by the ſame cauſes rendered exceſſively dear too, we cannot manufacture or improve that produce, nations that can afford cheaper ſupplying the markets abroad; ſo that the produce of the lands not being carried off as uſual, muſt become a dead ſtock on the farmer's hands, and cauſe great quantities to be crowded into the markets, where being encouragement but for few buyers, the price naturally falls: as for inſtance, the declining demand for our woollen goods abroad, falls the price of wool at home.

Suppoſe that in 1699 we exported to Turkey 40,000 cloths, the value of raw wool in each being 2 l. amounts to	£. 80,000
Suppoſe that in 1738 we exported to Turky 8,000 cloths, the value of raw wool in each being 1 l. 10 s. amounts to	12,000
The difference of the value of wool exported in thoſe two years,	£. 68,000

Wools of this value lying yearly on hand, muſt make a glut; the farmers puſh to ſell at market, but in vain, unleſs at under-prices; for the wool-ſtaplers, finding the demand decreaſe, decreaſe in number themſelves; ſome break; ſome leave off trade; ſome take to other trades; for many ſellers with great ſtocks on hand, and few buyers, naturally fall the markets; and the landlords preſſing the tenants for rent, and threatening to ſeize, if payments are not made, the wool muſt be ſold at any rate to raiſe money; and there being yearly 68,000l. leſs money brought into the nation to be laid out in wool than in former times, the price muſt be ſtill lower on that account; the lower the produce ſells, the leſs rent the farmer can give for land; the worſe the markets, the greater arrears of rent the farmer runs into; and taxes, monopolies, &c. making labour and neceſſaries grow dearer, and the decay of foreign trade making the wool ſell cheaper, muſt break him in the end, and then the farm is thrown on the landlord's hands, who unwilling to fall the rent, keeps it in the mananement of ſtewards or bailiffs, whoſe profit and charges ſeldom make it pay the old rent, but generally ends in mortgaging the land, or ſelling it; and as theſe caſes grow more frequent, more eſtates will be at market, and conſequently the leſs prices they will fetch.

Secondly, by increaſing the number of poor to burden the land.

The poor, wanting employment, muſt be ſupported by the land; if foreigners give them work, they give them bread; but when trade cannot maintain them, land muſt. When the poor rates are heavier than the tenant can bear, the landlord muſt pay them, either by allowance in the rent, or by taking the farm into his own hands; or elſe by the breaking of his tenant, who has paid that money to the poors rates his landlord ſhould have received.

Suppoſe in 1699 the labour of the above 40,000 cloths to have given employment to - - -	40,000 people
Suppoſe in 1738 the labour of the above 8,000 cloths to have given employment to - -	8,000 people
The difference is	32,000 people
Suppoſe theſe 32,000 people to have earned by their labour formerly from foreigners 6 l. *per annum* each, it amounts to	£. 192,000
But, wanting employment, they come on the pariſh at 1 s. 6 d. *per* week each, which for one year amounts to	124,800
The difference to the landholder in one year is - -	£. 316,830

For as the land, by the decay of foreign trade, receives not the firſt ſum, and is by the ſame cauſe ſaddled with the latter, it makes an annual difference of the above two ſums to the landholders in this ſingle branch of labour; and is the ſame in proportion for all other decayed branches of trade.

Thirdly, by decreaſing the ſtock of people.

For as employment leſſens, the moſt induſtrious, rather than ſtarve here, will fly to other countries where trade can maintain them; ſo the conſumption of theſe being taken away, the demand at market muſt grow leſs, and of courſe rents muſt; yet the farmers charges muſt grow greater; for the fewer hands, the higher wages are; this muſt break him in the end, and produce all the conſequences following that misfortune. Beſides, 'tis men that trade, and bring in money; therefore the fewer they are, the leſs money will be brought in; and the leſs money, the leſs rent can be given for land.

Fourthly, by decreaſing our riches.

This is a conſequence of the above three remarks; for having fewer goods capable of being exported, by reaſon of their dear price, and our manufactures declining, muſt in time be loſt; therefore the importation of foreign goods muſt naturally increaſe, and more money go out to pay for them.

It is laid down as an undoubted truth, that nations which have no mines of gold and ſilver, have no means to get them but by foreign trade; and according to the degree of thoſe metals they poſſeſs, the prices of their commodities, and therewith the value of their lands, riſe and fall in proportion.

The Brittannia Languens, page 12, ſays, If there were but 500 l in England, an ox could hardly be worth a penny; therefore the rent muſt bear its proportion to the riches. This appears from hiſtory, for in the year 960 land ſold at 1 s. *per* acre. The reaſon that land then bore ſo low a price, was, the low price the produce ſold at; for in the year 1000, an ox ſold for 2 s. 6 d. a cow for 2 s. a ſheep for 1 s. and ſwine for 8 d. This could be only owing to the little foreign trade the nation then had, and conſequently to the little quantity of gold and ſilver trade had then brought in.

But if it ſhould be aſked, what is the reaſon that at preſent all things are naturally ſo much advanced in price, to what they were in thoſe days? the anſwer is, that the quantities of gold and ſilver brought to Europe ſince the progreſs made by the Spaniards and Portugueſe in America, have made thoſe metals more common and of leſs value than formerly; ſo that 20 s. will hardly purchaſe what 1 s. would before the diſcovery of the Weſt-Indies. The Spaniards and Portugueſe do not throw away their gold and ſilver for us to pick up; we have no mines of theſe metals, therefore could not get ſuch quantities as we have but by our trade to Spain and Portugal, or to thoſe countries that had an over-balance upon them, and were over-balanced by us.

So that the preſent natural price of land, and its produce, is the proportion of gold and ſilver that foreign trade has brought into and left in the nation: if the preſent quantity was to be doubled by foreign trade, the natural price of land, and its produce, muſt be ſo too: for, according to the price the farmer can ſell his commodity at market, ſo can pay for the rent of land, and no otherwiſe. If our foreign trade decays till the preſent money in the nation be half ſwept away, the produce of the land muſt fall to half the natural price it does now, and land muſt let for half the rent it naturally bears now; but if we ſhould go on declining, till we have no more money left in the nation than there was in 961 or 1000, the prices of land and its produce, can be no more than they bore in thoſe days; taxes, &c. deducted.

Therefore, if the gentlemen have a mind to raiſe or ſink the value of their lands, the encouraging or diſcouraging our foreign trade is the only means to do either; ſo cloſely united are land and trade; their true intereſts are the ſame; they muſt ſtand or fall together.

The ſum of all is this; That what foreigners take from others inſtead of us, what the poor have given them inſtead of buying, the ſcarcity of people, and the ſcarcity of money, ſinks the value of lands.

axes, monopolies, ill judged laws, and national debts, e the cauſes of the decline of our foreign trade; the cline of foreign trade cauſes the above four calamities; d they ſink the value of lands. The taxes, monopolies, judged laws, and national debts, are the cauſes of all; refore they are the cauſes of the decline of the value lands. See *Tax*.

D *Carriage*, inwards and outwards; in the Britiſh cuſms, are as follows: if outwards, foreign goods ſent om one part of the kingdom to another, muſt have cerficates from the cuſtom-houſe officers whence they are nt; or they may be ſtopped, till proof is made that the ties have been paid.

inwards, though ſuch certificate is obtained, there is occaſion to deliver it to the cuſtom-houſe when the oods come to the intended port, unleſs they are to be exrted from thence, and the duties drawn back.

D-*Fall*. A ſea term, ſignifying to fall in with the nd. Good land-fall is when a ſhip makes or ſees, the nd, as ſhe expected, according to her reckoning: and the ntrary is called a bad land-fall.

D-*locked*. A ſhip is ſaid to ride land-locked, when ſhe ſurrounded with land; that is an anchor in a place here there is no point open to the ſea; ſo that ſhe is ſafe om the violence of winds and tides.

D-*mark*. A ſteeple, tree, beacon, or other remarkle thing ſet up on the ſea-ſhore; to ſignify to ſhips at , when they are approaching near to the land.

NDRESS. A woman whoſe particular employment to waſh linnen for other people.

NDSCROON. A port-town of Sweden, in the proince of South Gothland and territory of Schonen; ſituatd in 14 d. 20 m. of E. lon. and 55 deg. 42 min. of N. lat.

D-*waiter*. A cuſtom-houſe officer, appointed to inſpect ch goods as are ſent on ſhip-board, and to ſee that the ties are paid. See *Tide*-waiter and *cuſtoms*.

NGLAND. An iſland of Denmark, in the Baltic, ſiated in the ſtrait called the great Belt, between Zeland d Funen, in 11 deg. of E. lon. and 55 deg. of N. lat.

NGREL *Shot*, is a ſort of ſhot ſometimes uſed at ſea; ade of two bars of iron, with a joint or ſhackle in the iddle, whereby it can be ſhortened, and ſo put more ommodiouſly into the gun; having at each end half a llet, either of lead or iron; which ſhot, when diſcharg, flies out at length, and ſo does more execution aong the enemies rigging.

NNERS, in a ſhip, are ſmall ropes which are reeved the dead men's eyes of all the ſhrouds and chains, to icken, or ſet the ſhrouds tight; alſo thoſe that ſet the ays of the maſts tight; likewiſe the rope that faſtens e ſtopper of the halliards.

NTEAS. Large Chineſe barks, uſed by the Portueſe of Macao for the trade of Canton; being about 7, or 00 tons, in which the Portugueſe factors reſide as long s the fair of Canton continues; becauſe they are not ermitted to paſs the night on land, nor advance higher p the river.

NTOR. See *Banda* Iſlands.

PDANUM. A kind of fat adhering to the beard f goats, eſpecially of thoſe that brouze upon the ſhrub alled by botaniſts *ciſtus ladum*, which has long green eaves, ſtrait, rough, and ſticky; growing abundantly in ot countries. See *Ladanum*.

There are three kinds of lapdanum; natural, or in the eard; liquid, called black balſam; and torſe or twiſted; r rather, there is but one, having different names, purſuant to its qualities or figure.

Lapdanum, in the beard, is this unctuous matter, as it is athered from the beards of goats by a wooden comb.

Liquid lapdanum, or black balſam, is this ſame fat liquified, purified, and depoſited in little thin bladders: which, to be good, ſhould be of a pretty ſolid conſiſtence, s black as jet, and of a ſweet agreeable ſmell, reſembling hat of ambergreaſe; wherefore it is ſold ſometimes for lack amber, this new title inhancing its value.

Lapdanum in torſe, or twiſted, is but the thick ſubſtance f the liquid in rolls: thus it it preferable to that in maſs, hough of whatever quality lapdanum in rolls is, it proves lways to be a very indifferent commodity; but the two ther kinds enter the compoſition of the moſt excellent erfumes. See *Ladanum*.

LAPIDARY. An artificer who cuts precious ſtones; which is an art of great antiquity; but, like others, its original was very imperfect: the French have ſucceeded in it the beſt, and the lapidaries of Paris, who have been a corporation ſince the year 1290, have carried it, eſpecially cutting of diamonds called brilliants, to its laſt perfection.

There are various machines uſed in the cutting of precious ſtones, according to the quality of the matter to be cut: the diamond, which is extremely hard, is cut and formed on a wheel of ſoft ſteel, turned by a kind of mill, with diamond duſt tempered in oil of olives; which ſerves to poliſh them as well as to cut them.

Oriental rubies, ſaphires, and topazes, are cut and formed on a copper wheel, with oil of olives, and diamond duſt; though they are poliſhed on another copper wheel with tripoly and water.

Emeralds, hyacinths, amethyſts, garnets, agats, and other ſtones leſs hard, are cut on a leaden wheel, with ſmalt and water, and poliſhed on a tin wheel with tripoly.

Turquois of the old and new rock, lapis giraſol, and opal, are cut and poliſhed on a wooden wheel with tripoly.

LAPIDARY, is alſo uſed for a virtuoſo ſkilled in the nature and qualities of precious ſtones; or a merchant who deals in them; in which ſenſe the Great Mogul is ſaid to be one of the greateſt lapidaries in the world.

LAPIS, in a general ſenſe. See *Stone*.

LAPIS *Aſbeſtos*. See *Aſbeſtos*.

LAPIS *Calaminaris*. See *Calaminaris*.

LAPIS *Dentalis*. See *Dentalis*.

LAPIS *Infernalis*. A cauſtic ſtone prepared various ways; ſometimes of ſtrong ſoap lees evaporated to a dryneſs, and the remainder kept in a glaſs well ſtopped from the air. Sometimes it is made of calcined vitriol, tartar, and ſal armoniac, and boiled in quick lime water to a ſtrong lixivium, then ſtrained and evaporated till dry.

LAPIS *Lazuli*. See *Lazuli*, and *Azure*.

LAPIS *Medicamentoſus*, or the medicinal ſtone, is a compoſition of roch allum, litharge, colcothar of vitriol, armenian bole, and vinegar, boiled to the conſiſtence of a hard ſtone; being uſed to faſten the teeth, preſerve the gums, heal and dry up ulcers and wounds; as alſo in injections, and compoſitions for ſore eyes.

LAPLAND, the moſt northerly part of Europe, is ſurrounded by the frozen ocean on the N. E. and W. lying between 10 and 35 deg. of E. lon. and 69 and 72 of N. lat. The N. E. part is ſubject to Ruſſia, and called Ruſſian Lapland: the N. W. part is ſubject to Denmark, and called Norwegian Lapland: and the other part is called Swediſh Lapland. The trade of the laplanders is chiefly in furs, particularly the ſkins of ermines and martens: but they are a rude and uncivilized people. See *Ruſſia*, *Denmark*, and *Sweden*.

LAQUE. See *Lacca*.

LAQUERED *Goods*, are thoſe which are varniſhed with lacca, in imitation of Japan-work.

LARBOARD. The left hand ſide of a ſhip, when a perſon ſtands with his face towards the head. See *Starboard*.

LAREDO. A port-town of Spain, in the province of Biſcay; ſituated in 3 deg. 40 min. of W. lon. and 43 deg. 30 min. of N. lat.

LARGE, among ſailors, when a ſhip goes neither by nor before the wind, but quartering as it were between both.

LARIN, is equally throughout the Eaſt a money of accompt, and a current coin; both of the value of about 6 d. ſterling: the greateſt currency of the larins being in the Perſian gulph, along that of Cambay, and in ſome neighbouring places of theſe two gulphs.

LARTA. A port-town of European Turky, in the principality of Epirus, ſituated at the entrance of the gulph of Venice, in 21 deg. 15 min. of E. lon. and 39 deg. of N. lat.

LASCAR, an Indian, or Chineſe ſailor, or fiſherman.

LASH, or *Lace*, in the ſea-language, ſignifies to bind, or make faſt.

Laſhing is chiefly uſed for binding up to the ſhip's ſides, muſkets, butts of water or beer, or pieces of timber to make ſpare top maſts.

LASHERS, are properly thoſe ropes only which bind faſt the tackles, and the breeches of the ordnance, when they are haled or made faſt within board.

LASK-

LASKING. A ſea term, for going large, or veering.

LAST, or *Leſt*, in general, ſignifies the burden or load of a ſhip.

LAST, is alſo uſed for a certain weight and meaſure, various in different countries; though in general it is eſtimated at 4000 pounds weight.

A laſt of cod-fiſh, white herrings, meal and ſoap-aſhes, is 12 barrels; of corn or rape-ſeed, ten quarters; of gunpowder, 24 barrels, or 2400 pounds weight; of red herrings, 20 cades; of hides, 12 dozen; of leather, 20 dickers; of pitch or tar, 14 barrels; of wool, 12 ſacks; of ſtock-fiſh, 1000; and of flax or feathers, 1700 pounds weight.

LASTAGE, or *Leſtage*, is a duty exacted in ſome fairs and markets, for carrying things bought where a perſon pleaſes; but, according to ſome authors, it is properly that cuſtom paid for wares ſold by the laſt.

In a law of Richard II. laſtage is taken for the ballaſt or lading of a ſhip. See *Ballaſt*.

LAST-*Gelt*, is a term in Holland, for a duty levied upon every ſhip going in or out; whereby ſhe pays in proportion to the quantity of laſts ſhe contains.

This duty is about 6d. ſterling *per* laſt going out, and entring: with regard to which it ſhould be obſerved, that this duty being once paid, the ſhip that has acquitted it remains free a whole year; that is, ſhe can perform as many voyages as poſſible during the ſpace of 12 months, without being liable to the ſaid duty.

LAST-*Gheldt*. A duty at Hamburg, upon the commodities and foreign veſſels that arrive there, or depart from thence. The 41ſt article of the treaty of marine and commerce, concluded at Paris the 28th of September 1716, between France and the Hans-towns, diſcharges explicitly from this duty, under whatever term it may be exacted, the French ſhips that trade to Hamburg.

LATH, in building, a long thin, narrow ſlip of wood, nailed on the rafters of a roof, to ſuſtain the covering.

Laths are divided into three kinds, with regard to the different woods they are made of; heart of oak laths, ſap laths, and deal laths; the two laſt being uſed only for ceiling and partitioning, and the firſt only for tyling.

Laths are alſo diſtinguiſhed with regard to their length, into 5 foot, 4 foot, and 3 foot laths; though the ſtatute allows but of two lengths, as thoſe of 5 and 3, each of which are to be an inch and half in breadth, and half an inch in thickneſs.

LATHE, or *Leathe*. A very uſeful engine for the turning of wood, ivory, metals, and other materials.

LATITUDE. The diſtance of a place from the equator, or an arch of the meridian intercepted between the zenith of the place and the equator: hence latitude is either northern or ſouthern, according as the place whoſe latitude is ſpoke of, is on this or that ſide of the equator; thus London is ſaid to be in 51 deg. 30 min. of northern latitude.

Circles parallel to the equator are called parallels of latitude; becauſe they ſhew the latitudes of places by their interſection with the meridian.

If through the poles of the world we conceive innumerable great circles drawn, theſe are called ſecondaries of the equator; by whoſe help, the poſition of every point, either on earth or in the heavens, with regard to the equinoctial, that is, the latitude of any point, is determined.

One of thoſe ſecondaries paſſing through any place on the earth's ſurface, is called the meridian of that place, and on it the latitude of that place is meaſured.

The latitude of a place, and the elevation of the pole of that place above the horizon, are terms uſed indifferently for each other; as the latitude and elevation of the pole are always equal.

The knowledge of the latitude of a place is of the utmoſt conſequence, both in geography, navigation, and aſtronomy; the methods of determining it both by ſea and land being as follows.

The altitude of the pole is always equal to the latitude, for which reaſon the latitude might be beſt found by obſerving the pole's height; but the pole being only a mathematical point, and no ways obſervable by the ſenſes, its height cannot be determined in the ſame manner as that of the ſun and ſtars; for which reaſon another manner has been contrived.

In order to this a meridian line is firſt drawn, and a quadrant placed on this line, ſo as its plane may be in the plane of the meridian; then ſome ſtar is taken near the pole, or the pole-ſtar, which never ſets; and both its greateſt and leaſt altitude is to be obſerved. See *Quadrant*.

The latitude may alſo be found, by having the declination of the ſun or a ſtar, and meridian altitude taken with a quadrant or aſtrolabe: the method of which is this. Obſerve the meridian diſtance of the ſun from the vertex or zenith, which is always the complement of its meridian altitude; and add to this the ſun's declination, when the ſun and the place are on the ſame ſide of the equator; or ſubtract the declination, when on different ſides; the ſum in the former caſe, and the difference in the latter, will be the latitude required. But when the declination of the ſun is greater than the latitude of the place, which is known from the ſun's being nearer to the elevated pole than the vertex of the place is, as it frequently happens in the torrid zone; then the difference between the ſun's declination, and his zenith diſtance, is the latitude of the place.

If the ſun or ſtar have no declination, but move in the equinoctial that day, then the elevation of the equator will be equal to his meridian altitude; and conſequently his meridian altitude is the complement of the latitude to 90. This latter method is beſt accommodated to the uſes of navigation, as being practicable at ſea; but the former preferable at land.

LATTIN, *Latton*, or *Leton*, is properly yellow copper, or rather red copper, prepared with calamine; being commonly made of the Swediſh or Hungarian copper, by mixing therewith a like weight of mineral calamine brought from Aix la-Chapelle, Limbourg, and Namur; which is almoſt of the colour of the iron mineral.

LAVANDER. A plant with blue flowers, in the form of a grain, of an agreeable aromatic taſte and ſmell; from which an oil is extracted, confounded by ſome with that of aſpic, becauſe the aſpic plant is a ſpecies of lavander.

LAVATORY, or *Lavadero*. A name given to certain places in Chili and Peru, where gold is got out of earth by waſhing. See *Gold*.

Sometimes very conſiderable pieces are found in lavatories, particularly pieces of 24 ounces each. There are ſeveral lavatories, where pepitas, or pieces of virgin gold are found of a prodigious ſize; among others they tell of one that weighed 512 ounces, bought by the Count de Moncloa, viceroy of Peru.

Nine or ten leagues to the eaſt of Coquimbo, are the lavatories of Andacoll, the gold whereof is 23 carats fine; their work here always turns to great profit, except when the water fails them; the natives maintaining that the earth produces gold continually; becauſe, after having been waſhed 60 or 80 years, they find it impregnated afreſh, and draw almoſt as much out of it as at firſt.

LAUDANUM. A name given by chemiſts to certain preparations, chiefly extracts of opium, by reaſon of their excellent qualities. See *Opium*.

There are divers kinds of laudanum; as Sydenham's liquid laudanum, tartarized liquid laudanum, and others.

LAUNCH, in the ſea-phraſe, is to put out: thus they ſay, *launch the ſhip*; that is, put her out of the dock, or off of the quay.

LAVOT. A corn meaſure uſed at Cambray; 4 of which make about 7 Engliſh buſhels.

LAUREL. A tree ſo well known as to need no deſcription: the berries whereof are of ſome uſe in phyſic, dying, and among farriers; which ſhould be choſen new, odorous, clotted, of a ſolid conſiſtence, and of a green colour, inclining to yellow; but that which is green, ſmooth, and liquid, ſhould be rejected, as undoubtedly ſophiſticated. The oil of laurel is uſed ſucceſsfully againſt cold humours, and in ſome other remedies; but its greateſt conſumption is by farriers.

LAURENCE, or *St. Laurence*. A great river of Canada in North America. See *America*.

AURENCE is alſo a name given by the Portugueſe to
e iſland of Madagaſcar. See *Madagaſcar*.
VKS, is a term at Peterſburg for the ſhips belonging
the chief market of this new city, which the Czar
ter Alexowitz raiſed on the Baltic ſea with great
pence and magnificence, where all the trade of Peterſ-
rg is carried on. In 1710 this market-place was con-
med by a conflagration, with almoſt all the goods in
; but it was rebuilt with more magnificence, and ſe-
red with leſs apprehenſion from accidents by fire.
VN, is a certain kind of white, clear, thin, and very
e linen, manufactured moſt commonly in Sileſia in
ermany; as alſo in Valenciennes, Cambray, Arras,
paume, Vervins, Peronne, Saint Quintin, Noyon,
d other parts of the province of Hainault, Cambreſis,
rtois, and Picardy, ſubject to France.
here are three kinds of lawn, plain, ſtriped, and
nked: the plain are either 14 ells long, and 3-4ths
oad, or 12 or 13 ells long, and 2-3ds broad; the
iped and pinked being 3-4ths broad, and 14 ells
ng.
W of the ſtaple, or *Law merchant*, is a ſummary ſort of
w, originally differing from the common law, though
w adapted, and become a part of the laws of Great Bri-
in; one point of it conſiſting in this, that if there be two
int merchants of wares, and one of them dies, his ex-
utor ſhall have the moiety; which is not allowed in
e caſe of others, who are not merchants.
the land. A ſea-phraſe, uſed for ſailing out of ſight
land; in ſuch caſes they ſay, *they have laid the land*;
d if another point of land excludes the ſight of the
rmer, they ſay, *they have ſhut the firſt land in*.
ZARETTO, in ſome countries, eſpecially at Leghorn,
d in other parts of Italy, is an edifice appointed for
rſons coming from places ſuſpected of the plague, to
rform quarentine in; where ſhips are unladen, and their
ews laid up for 40 days, more or leſs, according to the
ne and place of departure. See *Quarentine*.
ZULI, or *Lapis Lazuli*. A ſort of precious ſtone, of
blue colour, veined and ſpotted with white and yellow;
ing the ſame with what is otherwiſe called azure ſtone;
which is prepared the fine pigment called ultrama-
ne. See *Azure*, and *Ultramarine*.
is found in mines of gold, ſilver, and copper, as alſo
pits of marble; but the laſt is that generally in uſe;
hich, to be good, ſhould be able to reſiſt fire and ſmoke,
d to come out of them with new luſtre.
aturaliſts diſtinguiſh three kinds of lapis lazuli: the firſt
lled old rock; which is pure, ſmooth, a fine blue, with
autiful yellow ſtreaks like veins of gold, which are
equently no more than veins of pyrites. The ſecond
lled the new rock, is ſtuffed with common ſtones, its
lour weaker, and its price lower. Theſe two kinds
e brought from Perſia and Siam. The third kind is
ought from the mountains of Auvergne in France, be-
g mixed with the common rock whence it is dug;
d is of a pale blue, ſprinkled with greeniſh ſpots, and
eins of pyrites; which, when ſufficiently charged with
ots of green, is ſold for the Armenian ſtone. See *Ar-
enian*.
The lapis lazuli is of ſome uſe in medicine, prepared
y calcining and waſhing it ſeveral times; after which it
akes an ingredient in the famous confection of al-
ermes; ſometimes, notwithſtanding all its lotions, it
ontinues purgative, by reaſon of the vitriolic matter it
ontains.
A. A river which riſes near Luton in Bedfordſhire, runs
E. by Whetamſtead in Hertfordſhire, then E. through
ertford and Ware, then S. dividing Eſſex from Hert-
rdſhire, and afterwards Eſſex from Middleſex, falling
to the Thames a little below Blackwall; by which river
reat quantities of corn and malt are brought to Lon-
on out of Hertfordſhire.
AD. A coarſe, heavy, impure metal; of all others the
oſteſt and moſt fuſible when purified, called by chemiſts
aturn.
ead is found in various countries; but abounds parti-
ularly in Great Britain, eſpecially in Derbyſhire, Flint-
ire, and Montgomeryſhire. It is alſo found in ſeveral
kinds of ſoils and ſtones; ſome of which beſides contain gold, ſome ſilver, others tin.

Lead is a metal of much uſe, eaſily melts, mixes with gold, ſilver, and copper, and communicates its humidity to them; but, not being able to endure the violence of the fire which they undergo, it retires, and carries with it all that was heterogenous in them, ſo as neither gold nor ſilver are refined without lead; to which may be added, that the coarſer kind of precious ſtones boiled in lead are thereby rendered much more brilliant. See *Plumbery*.

Engliſh, Iriſh, and Scotch lead, by an arret of council of the 6th September 1701, was enranked amongſt contraband goods in France, and ratified as ſuch by another arret of the 3d March 1722, in favour of German lead, and other leads imported from the North.

LEAD-*duſt*, is a preparation uſed by potters, made by throwing charcoal-duſt into melted lead, and ſtirring them a long time together; to ſeparate the coal again, they only waſh it in water, and dry it afreſh; its uſe being to give a varniſh and gloſs to their works.

Burnt LEAD, *Plumbum uſtum*, is a chemical preparation uſed in medicine, made of plates of lead melted in a pot with ſulphur, and reduced by fire into a brown powder.

White LEAD, uſed by painters, is only thin plates of lead, diſſolved with vinegar.

Litharge of gold or ſilver, is only the lead uſed in purifying copper. See *Litharge*.

Red LEAD, is a preparation of mineral lead calcined and rubified, uſed by painters, potters, and phyſicians.

By the help of chemiſtry there are alſo extracted from lead, ſalts, balſams, oils, vinegar, a magiſtery, and other things diſguiſed under the name of Saturn, to amuſe the ignorant. See *Minium*.

Salt, or *Sugar of* LEAD, is an eſſential ſalt of vinegar, incorporated with the proper ſubſtance of lead, or ceruſs diſſolved in ſpirit of vinegar.

Balm of LEAD, or *Saturn*, is an oil drawn from the ſalt of lead by diſtillation, after having diſſolved it in ſpirit of turpentine.

Magiſtery of LEAD, is the calx of lead purified and ſubtilized; being made of lead diſſolved in *aqua fortis*, pouring a filtrated ſalt water into it; whence reſults a magiſtery extremely white, which, when ſoftened by ſeveral lotions, is mixed with pomatums for the face and complexion.

Black LEAD, is a kind of mineral ſtone, of a black colour, but ſilvered and ſhining, found chiefly in lead mines, and appearing to be nothing elſe but lead not yet arrived at maturity; much uſed for pencils, or crayons for deſigning, being melted like the common lead.

LEAD *company*, was incorporated by letters-patent of the 3d of William and Mary, dated the 4th of October 1692, by the appellation of The governor and company of ſmelting down lead with pit-coal and ſea-coal; whereby they were impowered to raiſe a joint ſtock for the effectual carrying on the buſineſs of ſmelting, or refining lead from the ore with ſea-coal, inſtead of wood.

This corporation is under the direction of a governor, deputy-governor, and 12 aſſiſtants, who manage their affairs at a convenient houſe in Ingram's court, Fenchurch-ſtreet, London.

LEAF, or *beaten gold*. See Leaf *Gold*.

LEAGUE. An extent of ground, conſidered lengthwiſe, ſerving to meaſure the diſtance of one place from another; and containing more or leſs geometrical paces, according to the different uſages and cuſtoms of countries.

A ſea-league is uſually reckoned 3000 geometrical paces, or three Engliſh miles: the large leagues of France are uſually 3000, and in ſome places 3500 paces; the mean or common league is 2400, and the ſmall league 2000.

The Spaniſh leagues are larger than the French, 17 Spaniſh leagues making a degree, or 20 French leagues, or 69½ Engliſh ſtatute miles; the leagues of Germany and Holland contain 4 geographical miles each.

The Perſian leagues are nearly the ſame with the Spaniſh, that is, they are equivalent to 4 Italian miles; and the Perſians mark their leagues by trees, as the antient Romans by ſtones.

In Japan, the league conſiſts of 1800 fathoms, diſtinguiſhed by little hillocks, raiſed on purpoſe by the road ſide. See *Mile*.

LEAGUE, is alſo a covenant, entered into by one prince or ſtate with another; and though leagues are commonly offered, either for conqueſt, or maintaining a ballance in power, yet they may be for a general peace, and the ſecurity of trade.

A truce is a league, or ceſſation from war, for a certain time agreed upon by both ſides. Treaties made with enemies for a time only, called truces, are ſaid to be general, for all the ſtates or countries of the one, or the other prince, for all perſons, and all ſorts of commerce; or elſe they are particular for certain places and perſons, and for their commerce. But ſometimes a truce holds the place of a peace, ſuch having been made between princes equal in power, unwilling to quit any thing of their rights by peace, yet deſiring to live quietly in the ſtate wherein they are, ſatisfying by this means the point of honour.

LEAKAGE. The ſtate of a veſſel that leaks: it denotes alſo an allowance of 12 *per cent.* to merchants importing wine, out of the cuſtoms thereof; and of two barrels in 22 of ale to brewers, out of the exciſe.

LEATHER. The ſkin or hide of a beaſt, tanned or otherwiſe dreſſed, and fitted for various purpoſes. See *Hide*, and *Skin*.

Leather is a great article of trade; as it employs the butcher, tanner, tawyer, leather-dreſſers, curriers, glovers, harneſs-makers, coach-makers, ſadlers, breeches-makers, gilt leather-makers, ſhoemakers, and bookbinders.

LEATHER *Crope*. A ſort of tanned hides. See *Hide*.

LEATHER *Mill*. See *Mill*.

LEATHERSELLER, is a perſon who buys large quantities of ſkins, or prepared leather, and ſells them to the different manufacturers.

LEATHERSELLERS *company of London*, was incorporated by letters-patent of the 22d of Henry VI. in 1442, by the name of The wardens and ſociety of the myſtery or art of leatherſellers of the city of London.

They conſiſt of a prime and 3 wardens, 26 aſſiſtants, and 156 liverymen; who, at their admiſſion, pay a fine of 20 l. each; and have a ſtately hall in Little St. Helen's, wherein they manage their affairs.

By a grant of Henry VII. the wardens of this corporation, or their deputies, were impowered to have the inſpection of ſheep, lamb, and calves leather throughout the kingdom, for the more effectually preventing frauds in theſe ſeveral commodities.

LECH. A river of Holland, formed by the river Rhine; which runs from E. to W. through the provinces of Guelderland and Utrecht; and, uniting with the waters of the Maes, falls into the German ſea, near the city of Briel.

LECTH. A manner of accompting in the Eaſt Indies, particularly in the Mogul's territories, which ſignifies 100,000.

LEDGER, in merchants accompts. See *Book*-keeping.

LEDGES, in ſhip-building, are thoſe ſmall pieces of timber, which come thwart the ſhip, from the waſt-trees to the roof-trees, to bear up the nettings and gratings.

LEE. A term variouſly uſed at ſea; though its general uſe is to ſignify the part towards, or oppoſite the wind. Thus, the

LEE *ſhore*, is that on which the wind blows; ſo that to be under the lee ſhore, is to be cloſe under the weather ſhore, or under wind.

A LEE *the helm*, ſignifies, put the helm to the leeward ſide of the ſhip.

Take care of the LEE *hatch*, is a word of command to the man at the helm, to take care that the ſhip goes not to the leeward of her courſe.

LEEDS. A town of Yorkſhire, ſituated on the river Aire, 20 miles S. W. of York; where there is one of the greateſt markets for woollen cloth in Great Britain; great quantities being bought up every week by the merchants, and ſent into Ruſſia, Germany, and other foreign countries. The town is very populous, and they employ all the villages in the neighbourhood in this manufacture.

LEEFANGE, in a ſhip, is that rope which is reeved into the cringles of the courſes, when they would hale in bottom of the ſail to lace on the bonnet; very uſeful in a ſtrong gale to take in the ſail.

LEERWICK. A town of Scotland, in Main-Land, of the iſlands of Shetland, in the county of Orkney, markable for its herring-fiſhery.

LEES. The groſſeſt and thickeſt parts of wine, oil, other liquors; or the ſediment found at the bottom the veſſel.

A kind of gravelly ſand is made with the lees of burnt and prepared, uſed by dyers, and others.

Vinegar-makers make a great trade of the lees of dried, and made into cakes, after having ſqueezed out remains of the liquor in preſſes.

LEEWARD *Iſlands*. See *Caribbee* Iſlands.

LEEWARD *ſhip*, is one that is not faſt by the wind, which ſails not ſo near the wind, nor makes ſo g way as ſhe ſhould.

To lay a ſhip by the lee, or *come up by the lee*, is to her ſo, that all her ſails may lie flat againſt her ma ſhrouds, and that the wind may come right upon broadſide.

LEEWAY, or *leeward way of a ſhip*, is the angle by the line on which the ſhip ſhould run according to courſe, or the point of the compaſs ſteered upon, and real line of the ſhip's way.

All ſhips are apt to make ſome leeway; ſo that in ing up the log-board, ſomething muſt be allowed for way; the ordinary rules being theſe. 1. If the ſhip upon a wind, allow one point for leeway. 2. If wind blow hard, ſo that one top-ſail is forced to taken in, allow two points for leeway. 3. If it ſo hard, that both topſails muſt be taken in, and the runs high, allow three points for the leeway. 4. If fore-ſail being furled, ſhe try under a main-ſail, or zen, ſhe will make her way four points before the be But, 5. If under a mizzen only, ſhe will make her about two points before the beam. 6. If ſhe lie a with all her ſails furled, ſhe will make her way one p before the beam.

LEGEND, in coinage, denotes the words or letters, graven about the margins of coins; thus the legend French crown is, *Sit nomen Domini benedictum*; and of a moidore, *In hoc ſigno vinces*.

LEGIS. The beſt Perſian ſilk next to the cherbaſſy; being three ſorts, the Vourine the fineſt, the Bourmio next degree, and the Ardaſſine the coarſeſt.

Theſe different kinds of ſilk are either exported Bander-Abaſſi in the Perſian gulph; or from the towns of the Levant, particularly from Smyrna.

LEGHORN. A port-town of Italy, in the duchy of cany, ſituated in 11 deg. of E. lon. and 43 deg. 30 of N. lat. See *Italy*.

LEGUME, denotes beans, peas, vetches, &c. other called pulſe: antient writers on huſbandry conſider turneps, and all grains and roots for family-uſe, as legu

LEIPSIC. A city of Germany, in the circle of Saxony, remarkable for its conſiderable trade; being tuated in 12 deg. 40 min. of E. lon. and 51 deg. min. of N. lat. See *Germany*.

LEITH. A port-town of Scotland, 2 miles N. of burgh, which it ſerves for a port; its ſituation being 3 deg. of W. lon. and 56 deg. of N. lat.

LEMAN *Lake*, ſometimes called the *lake of Geneva*, city ſtanding at the weſt end of it, is bounded by S zerland on the N. and E. by Savoy on the S. and France on the W. being 60 miles long, and 12 bro and in ſome places 400 fathoms deep; abounding variety of excellent fiſh. It reſembles the ſea in the lour of its waters, and the ſtorms raiſed in it. In ſ mer it has ſomething like a tide, occaſioned by the m ſnow, which runs into it more plentifully from the A that ſurround it, at noon-day, than in the morning evening. The river Rhone runs through it, and bri with it a vaſt quantity of water in ſummer, when ſnows melt; and then both the lakes and rivers of S zerland are much higher than in the winter.

LEMMON. A common fruit, chiefly imported f Spain and Portugal; as alſo from Barbary.

LEMMONADE. A drink prepared of water, ſugar, and citron, or lemmon juice. This factitious liquor is ſo popular in Paris, that it has given its name to a new eſtabliſhed company, called *lemonadiers*.

LEMNIAN *earth*, *Terra Lemnia*. A medicinal aſtringent ſort of earth, of a fatty conſiſtence, and reddiſh colour; uſed in the ſame caſes as bole; brought from the iſland of Lemnos, from whence it is denominated. Many form it into round cakes, and impreſs a ſeal upon it; whence it is alſo called *terra ſigillata*.

LEMNOS. An iſland of the Archipelago in European Turky, ſituated in 26 deg. of E. lon. and 39 deg. of N. lat. See *Turkiſh* iſlands.

LENA. A great river, which riſes in Siberia, in Aſiatic Ruſſia; and running north from the latitude of 55 to 72, falls into the frozen ocean; by which river the Ruſſians ſeem to have ſome expectations of finding a way to Japan and China.

LENTISCUS. The wood of an evergreen tree of the ſame name, of ſome uſe in phyſic as an aſtringent and corroborative; being uſed alſo for tooth-picks.

It contains a kind of gum, or reſin, much like maſtic, or rather the maſtic itſelf, or incenſe of Perſia, ſo highly commended by Strabo. See *Maſtic*.

It has nearly the ſame properties with the ſaunders; but has more of the turpentine in it, and ſometimes paſſes by urine. See *Santalum*.

LEOGANE. A town belonging to the French, in Hiſpaniola. See *French* America.

LEON. A city of Mexico, capital of the province of Nicaragua; having a very extenſive trade, ſituated in 91 deg. of W. lon. and 11 deg. 30 min. of N. lat.

LEONDALE. A coin current in ſeveral parts of the Grand Signior's territories, and ſo called from a lion impreſſed on one of its ſides; being worth about 20 d. ſterling.

LEPANTO. A port-town of European Turky, ſituated in 23 deg. of E. lon. and 38 deg. of N. lat: on the north ſide of the gulph of Lepanto, in the province of Livadia.

LERINS. Two iſlands on the coaſt of Provence, in South France, 5 or 6 miles ſouth of Antibes; the one called St. Margaret, and the other St. Honorat.

LESBOS, or *Metelin*. An iſland of the Archipelago, in Aſiatic Turky, ſituated in 26 deg. 30 min. of E. lon. and 38 deg. 30 min. of N. lat. See *Turkiſh* Iſlands.

LESSOW. One of the Daniſh iſlands. See *Denmark*.

LETTON. See *Latten*.

LETTER. A writing from one perſon, addreſſed and ſent to another, whereby mercantile buſineſs is ſupported through the remoteſt parts of the world.

The rates of poſt-letters, as by the ſtatute of the 9th of Queen Anne, and other things in that act relative to merchants, are as follows.

Foreign European Letters and Packets.

And from thoſe towns not exceeding a hundred Engliſh miles, and the contrary - -	0 6	1 0	1 6	2 0
From New-York to Charles-town, the chief town in Carolina, and the contrary - - -	1 6	3 0	4 6	6 0
From Charles-town aforeſaid, to any place not exceeding ſixty Engliſh miles, and the contrary -	0 4	0 8	1 0	1 4
And all letters and packets from Charles-town aforeſaid, to any place not exceeding a hundred Engliſh miles, and thence back - -	0 6	1 0	1 6	2 0

And all letters, and packets of letters, directed to or from on board any ſhip in any port within his Majeſty's dominions, pay one penny over and above the rates chargeable by this act.

Penny-poſt letters within the bills of mortality, and 10 miles round from the general letter-office in London, pay as before this act was made.

Note, That by a proviſo in the aboveſaid act, all merchants accompts, not exceeding one ſheet of paper, and all bills of exchange, and invoices, and bills of lading, are allowed without rate; and alſo all covers of letters, not exceeding a quarter of a ſheet of paper, ſent by the way of Vienna, Marſeilles, Venice, or Leghorn, to be ſent to or from Turky, are to paſs without rate.

No packet is to be carried out of Great Britain in foreign ſhips.

The poſt is to pay nothing for paſſing ferries in North America.

Inland letters are to pay where delivered; and the two univerſities to pay as before the making of this act.

All letters on board any ſhips that may touch in any port, are, under the penalty of 5 l. for every offence, to be delivered to the deputy poſtmaſter of ſuch place, who is to pay to the perſon delivering the ſame one penny *per* letter.

Carriers, coaches, and watermen, are not to carry letters, unleſs they concern the goods carried by their carts, waggons, or pack-horſes, at the ſame time.

Note, The ſafe carriage of letters is a thing of ſuch vaſt conſequence to the trading part of a nation, and of ſo intereſting a nature to thoſe who negotiate any kind of buſineſs, that the robbing of the mail under any pretext whatſoever is made death by the law.

The days of ſending letters to foreign parts are,

Monday, to France, Italy, Spain, Flanders, Germany, Sweden, and Denmark.

Tueſday, to Holland, Flanders, Sweden, Denmark, Germany, and all parts of England, Ireland, Scotland, and Wales.

Thurſday, to France, Spain, Italy, and all parts of England and Scotland.

Friday, to the Netherlands, Germany, Sweden, and Denmark.

Saturday, to all parts of England, Ireland, and Scotland. To Portugal once a fortnight, and to the Weſt Indies the laſt Thurſday in every month.

The days foreign mails are due at London.

Tueſday and *Friday*, from Holland and France.

Monday and *Thurſday*, from Flanders.

Monday, *Wedneſday*, and *Friday*, from Ireland.

Once a week from Portugal, Spain, &c.

LETTER *of Advice*, is when one merchant draws bills upon another, and writes him word concerning it.

LETTER *of Attorney*. A writing authoriſing one perſon to do ſome legal act for another; as to receive debts, to ſue a third perſon, and the like.

LETTER *of Credit*. A letter which a merchant or banker directs to his correſpondent abroad, ordering him to credit the bearer as far as a certain ſum. See *Credit*.

LETTER *of Exchange*. See *Bill* and *Exchange*.

LETTER *of Licence*, in trade, is an inſtrument or writing, granted to a man who has failed, or broke, ſigned and ſealed by his creditors; which letter uſually gives a longer time for payment; ſo that the debtor having ſuch an aſſurance, may go about his buſineſs without fear of an arreſt.

LETTERS *of Mart*, or *Marque*, are letters under the privy ſeal, granted to the King's ſubjects, impowering them to take, by force of arms, what was formerly taken from them by the ſubjects of ſome other ſtates contrary to the law of mart. See *Marque*, and *Repriſal*.

LETTERS *Patent*, or *Overt*, are writings ſealed with the great ſeal of England, whereby a man is authoriſed to do, or enjoy any thing, which of himſelf he could not do. See *Patent*.

They are ſo called by reaſon of their form; as being open, with the ſeal affixed, ready to be ſhewn for the confirmation of the authority given by them.

Common perſons may grant letters-patent; but they are rather called patents, than letters-patent; yet, for diſtinction, thoſe granted by the King are ſometimes called letters-patent royal. See *Monopoly*.

LETTERS *of Reſpite*. Letters iſſued out by a prince, in favour of honeſt unfortunate debtors, againſt too rigorous creditors, whereby payment is delayed for a certain term. They are ſtill in uſe in France, and ſome other countries, and take their name *a reſpirando*, becauſe they give the debtor a breathing while.

Numeral LETTERS, are thoſe uſed inſtead of cyphers, to expreſs numbers. The Roman numerals are C, D, I, L, M, V, X; which are all formed by deſcribing a circle and drawing two lines through it, croſſing each other at right angles in the center.

LETTER *founder*. A perſon that caſts or makes letters or types for the printers. See *Stationer*'s company.

LETTER *of Requeſt*. See *Marque*.

LETTERHOUT. A kind of reddiſh wood, bordering upon a violet colour, brought by the Dutch into Europe from China, where it is uſed in ſeveral kinds of inlaid work. Their profit by its ſale is very extraordinary, for they purchaſe 100,000 lb. for a crown, and ſell it afterwards for 100, and never leſs than 50 crowns.

LEVANT. The eaſt part of the Mediterranean, bounded by Natolia, or the Leſſer Aſia, on the north; by Syria and Paleſtine, on the eaſt; by Egypt, and Barca, on the ſouth; and by the iſland of Candia, and the other part of the Mediterranean, on the weſt. See *Turky*.

LEVANT, is alſo the name of one of the iſlands of Hieres on the coaſt of Provence in France. See *French* iſlands.

LEUWEDAALDERS. A ſilver coin, ſtruck in Holland

r the commerce of Smyrna, and worth about 3 s. 7 d. erling.

VARDEN. A city of the United Provinces, capital f the province of Weſt Friezland, ſituated in 5 deg. 35 in. of E. lon. and 53 deg. 20 min. of N. lat.

VISBOURG. Capital of the iſland of Cape Breton in orth America, ſituated in 61 deg. 30 min. of W. lon. d 46 deg. 50 min. of N. lat.

WIS *Iſland*. The moſt N. W. of any of the Weſtern ands of Scotland, ſituated in 8 deg. odd min. of W. n. and between 58 and 59 deg. odd min. N. lat. the and being exceedingly well ſituated, both for the her- ng and cod fiſhery.

WIS *Iſland*, or the *Iſland of St. Lewis*, is alſo an African and, in the mouth of the river Senegal, where the French ve a ſettlement.

WIS *Port*. See *Port* Lewis.

YDEN. A city of Holland, ſituated on the old chan- el of the Rhine, near the ſouth-end of the lake called arlem-meer, in 4 deg. of E. lon. and 52 deg. 12 min. N. lat.

ZON. One of the Philippine iſlands, ſituated in 123 g. of E. lon. and 11 deg. of N. lat. See *Philippine* lands.

ARD. A French coin, four of which are worth about halfpenny ſterling.

BANUS *Mountains*, in Aſiatic Turky, are ſituated be- ween Syria and Paleſtine; extending from Sidon on the evant ſea, eaſtward beyond Damaſcus; much taken no- e of for the fine cedars they produce.

BAW, A port-town of Poland, in the duchy of Cour- nd, ſituated on a bay of the Baltic, in 21 deg. of E. n. and 56 deg. 40 min. of N. lat.

BBY. A ſort of flax, cultivated with great care by the habitants of Mindanao, one of the Philippine iſlands; th which, but chiefly its oil, they drive on a great de to the Sunda iſlands, with the Chineſe, and even th the Spaniards, when not at war with them.

BRA denotes the antient Roman pound, which was uſed France for the proportions of their coin, till the time Charlemagne, or perhaps till that of Philip I. in 1093; eir ſols being ſo proportioned, as that 20 of them were ual to the libra; but by degrees it became a term f compt, and every thing of the value of 20 ſols, was lled a livre. See *Livre*.

BRA *penſa*, in the Engliſh law-books, denotes a pound of oney in weight.

was uſual in former days, not only to tell the money, t to weigh it; in regard many cities, lords, and bi- ops, having their mints, coined money, and often very d; for which reaſon, though the pound conſiſted of ſhillings, they always weighed it.

ENCE. An inſtrument duly ſigned and ſealed by per- s authoriſed by public authority, to ſell goods about ſtreets; to ſell wine, ſpirituous liquors, and beer; to ve hackney-coaches; to carry chairs; to hawkers of ws-papers, and other things of the like nature. See *awkers*.

ENCE, *letter of*. See *Letter* of licence.

ENTEN. A term in Holland, for the paſſports given the cuſtomhouſes, for loading and unloading ſhips, and d-carriages; but it alſo ſignifies ſometimes the duties importation and exportation.

HEN. A plant proper for dying red, found com- only upon the rocks of Amorgos, and thoſe of Nicouria, hich are of the number of the Turkiſh Archipelago nds.

his plant grows in greyiſh bunches, about two or three hes long, divided into ſmall ſlips, almoſt as ſlender as air; the whole plant being ſolid, white, and of a ſa- e taſte.

e Engliſh buy up great quantities of it. It is ſent o abundantly to Alexandria, and is ſold uſually for 10 wns the quintal; or 2 l. 10 s. ſterling the hundred.

or *Lye under the ſea*. Sailors ſay a ſhip *lies under the* when her helm being made faſt a-lee, ſhe lies ſo a- , that the ſea breaks upon her bow, or broad-ſide.

GE. A city of Germany. See *Germany*.

EY. A river of Ireland, riſing in the county of Wicklow; then running weſt through that county into Kildare, turns north-eaſt, runs through the county of Dublin; and having paſſed by the metropolis, falls into the Iriſh channel a little below it.

LIFTS, in a ſhip, are ropes belonging to the yard-arms, to cauſe them to hang higher or lower, as occaſion requires; but the top-ſail lifts ſerve for ſheets to the top-gallant yard.

LIGHTER. A large broad boat, or floating veſſel, which goes with ſails and oars, common on the river Thames; where it is uſed for the carriage of timber, coals, and ballaſt. Lighters are of ſeveral kinds; as, a ballaſt gin; a cloſe lighter; a kiele; a camel; a hoy; and an open lighter.

LIGHTERAGE. See *Wharfage*, and *Cuſtoms*.

LIGHT-HOUSE, is a fire lighted in the upper part of an elevated tower on the coaſt, or at the entrance of ports and rivers, to guide ſhips in the night-time; whence it is commonly called *pharos*. The Schagen of Denmark, and the tower of Cordovan upon the river of Bourdeaux, are very uſeful light-houſes for thoſe who ſail in theſe quarters. The pharos of Genoa is well known in the Mediterranean. The pharos of Alexandria, built by Ptolemy Philadelphus, was formerly ſo famous that it gave its name to ſeveral others; and the celebrated Coloſſus of Rhodes was formerly the moſt renowned in the world.

In the treatiſe of naval trade it is ſaid, that a light-houſe, or beacon by ſea, is very neceſſary in thoſe parts where there are bars, or entrances into harbours; that there muſt be high-tide to carry ſhips over them.

Light-houſes and ſea-marks are of various kinds; as ſometimes large trees or buoys, muſt be allowed to be proper cautions to ſtrangers and others, that they may not precipitately run on rocks or ſands to their ruin and deſtruction: and in the reign of King Charles II. care was taken for erecting light-houſes and lanthorns, and other ſpecial ſea-marks; but more eſpecially for the building that moſt excellent light-houſe near Goldſton by Yarmouth; which, for its height, curioſity, and form, was then reckoned not inferior to any, but rather excelling all or moſt in any country whatſoever.

In the 4th and 5th years of Queen Anne, an act paſſed for the rebuilding of a light-houſe on the Ediſtone, by the maſter, wardens, and aſſiſtants of Trinity-houſe of Deptford Strand; and that after the ſame was rebuilt, and a uſeful light therein, there ſhould be paid to them by the maſters and owners of Engliſh ſhips and barks paſſing by the ſaid light-houſe, except coaſting veſſels, one penny *per* ton inward, and one penny a ton, if outward bound; of which the merchant is to pay a moiety, and the owner of any ſhip the other moiety; and by ſtrangers two pence *per* ton of the burthen of the ſhip or veſſel; and every coaſter two ſhillings only, for each time they paſs by the ſaid light-houſe. See *Ediſtone*.

The ſaid duties are to be received by ſuch perſon or perſons, as the ſaid maſter, wardens, and aſſiſtants of Trinity-houſe ſhall appoint; and where ſuch ſhips, barks, or other veſſels ſhall arrive, load or unload; and on non-payment, to be recovered in any of the courts at Weſtminſter.

By the 3d George II. it was enacted, That all powers, liberties, privileges, and authorities granted in letters-patent of her Majeſty Queen Anne, bearing date the 13th day of July, in the 13th year of her reign, to William Trench, Eſq; for erecting a light-houſe on the iſland or rock called Skerries, lying in the ſea near Holyhead, in the county of Angleſea; and the ſaid light-houſe, with its rights, members, and appurtenances, ſhould be valid and effectual, and continue for ever, veſted in Sutton Morgan, his heirs and aſſigns; to the intent that he and they ſhould keep the light-houſe in good repair, and in the night-ſeaſon maintain a proper fire therein, ſo as the trade and navigation in the channel may be effectually preſerved.

That the ſaid Sutton Morgan might demand and receive from the maſters and owners of every ſhip, hoy, bark, catch, veſſel, or bottom, paſſing, croſſing, or ſailing in or through St. George's channel, by Holyhead or Wicklow, to or from any port, creek, or place in Great Britain ſouthward of Holyhead from or to Wicklow, or any port or place northward thereof in the kingdom of Ireland; or that ſhould paſs, croſs or ſail from any port, creek, or place northward of Holyhead, either

from any foreign or other port, and ſail between Holyhead and the Calf of Man, or any way in St. George's channel, to the ſouthward of Dublin; and likewiſe from all coaſters, paſſing to or from any port, creek, or place in Great Britain, north of Holyhead, from or to any port, &c. ſouth thereof, one penny *per* ton coming into, and the like ſum going out of the ſaid ports, places, creeks, or harbours, in Great Britain or Ireland; and double ſuch duties for any foreign ſhip or veſſel, &c. paſſing, croſſing, or ſailing, in like manner, according to their burthens. But ſhips loaden with coals, or the greateſt part of their loading being coals, paſſing from England to Ireland, ſhould only pay one voyage in every year.

That if any maſter, or other perſons having the command of any ſhip, &c. ſhould refuſe to pay the duties, the ſaid Sutton Morgan, his heirs, &c. may ſeize any of the goods, guns, tackle, &c. of any ſuch ſhip or veſſel, and keep the ſame till the duties aforeſaid are paid; and in caſe of any delay in payment, for the ſpace of three days after ſuch ſeizing, he might cauſe the ſame to be appraiſed by two ſworn appraiſers, and afterwards ſell the goods, and therewith ſatisfy himſelf for the duties, together with the charge of ſeizure, &c. rendering the overplus to the owner.

There are large lanthorns ordered by ſtatute, with duties payable for maintaining them, to be erected at the head of ſome keys; ſuch as at the harbour of Minhead in Somerſetſhire, on the river Severn, &c.

LIGHTS *aboard ſhips*. See *Signals*.

LIMA. The capital of the province of Lima, and of the whole empire of Peru, ſituated in 76 deg. of W. lon. and 12 deg. 30 min. of S. lat. See *Spaniſh* America.

LIME, *Calx of ſtone*. A white ſoft friable ſubſtance, prepared of ſtone, marble, free ſtone, chalk, or other ſtony ſubſtance, by burning in a kiln.

The great uſe of lime is in the compoſition of mortar for building; the fire taking away all its humidity, and opening its pores; ſo that it becomes eaſily reducible to powder, and miſcible with ſand.

Quick LIME, is that, ſuch as it comes out of the kiln or furnace.

Slaked LIME, is that diluted, or drenched in water, and reſerved for the making of mortar.

The beſt lime is that made of the hardeſt, firmeſt, and whiteſt ſtones; and which is ſlaked at its coming out of the furnace.

Sir H. Wotton looks on it as a great error in the Engliſh to make lime of refuſe, and ſtuff without choice; whereas the Italians at this day, and much more the antients, burnt their firmeſt ſtones, and even fragments of marble where it was plentiful, which in time became almoſt marble again for its hardneſs, as appears in their ſtanding theatres, and other places.

There are two kinds of lime in common uſe in England; the one made of hard ſtone, the other of a ſoft calcarious or chalky ſtone; whereof the former is much the ſtrongeſt.

That made of ſoft ſtone, or chalk, is beſt for plaiſtering of ceilings and walls within doors; and that made of hard ſtones for buildings, and for plaiſterings without doors.

Good lime may be alſo made of milſtone, not coarſe and ſandy, but fine and greaſy, as alſo of all kinds of flints; though it is hard to burn them, unleſs in a reverberatory furnace, as being apt to run to glaſs.

Dieuſſant recommends lime made of ſea-ſhells as the beſt; but Goldman finds fault with it, as being impatient of moiſture, and therefore eaſily peeling off from the outſides of walls; it is however the common lime uſed in the Indies.

Before the ſtones are thrown into the kiln, they ſhould be broke in pieces; otherwiſe the air contained in their cavities, too much expanded by the heat, makes them fly with ſo much violence as to damage the kiln; and, according to Alberti and Palladio, lime will not be ſufficiently burnt in leſs than 60 hours intenſe heat.

The marks of a well burnt lime, according to Alberti, are, that its weight be to that of the ſtone in a ſeſquialterate proportion; that it be white, light, and ſonorous; that when ſlaked, it ſtick to the ſides of the veſſel. To which Boeckler adds, that when ſlaked it ſhould ſend forth a copious thick ſmoke; and Dieuſſant, that it requires a great deal of water to ſlake it.

To preſerve lime ſeveral years: ſlake, and work it up; dig a pit under ground, into which let it paſs through a hole open at the bottom of the veſſel. As ſoon as the pit is full, cover it up with ſand, to prevent its drying; thus keep it moiſt till it be uſed.

Boeckler gives another method: cover a ſtratum of lime two or three feet high, with another of ſand of the like height; pour on water enough to ſlake the lime, but not to reduce it to duſt after ſlaking. If the ſand cleave in chinks, as the ſmoke aſcends, cover them up, ſo as no vent may be given thereto. This lime, he adds, kept 10 or 12 years, will be like glue, and will further be of particular uſe in painting walls, as being no way prejudicial to the colours.

Lime is much uſed by tanners, ſkinners, &c. in the preparation of their leather. It is alſo of ſome medicinal uſe, being applied externally in deſiccative and epulotic medicines.

LIME-*water* is ſaid to be an excellent remedy, taken internally in cachexies, green ſickneſs, dropſy, ſcurvy, obſtructions of the liver, ſpleen, and other diſorders.

It is made by pouring ſix pounds of hot water on one of quicklime, leaving them to ſoak and macerate for the ſpace of 24 hours.

LIME-*ſtone*, *Lapis calcarius*, is a ſoftiſh ſtone, of a coarſe grain; and being burnt in a kiln, makes an ingredient in mortar and plaiſter.

Bird-LIME. See *Bird*-lime.

LINE, in geography and navigation, is uſed by way of eminence for the equator, or equinoctial line.

The line in the heavens is a circle deſcribed by the ſun in his courſe on the 21ſt day of March, and the 21ſt of September. The line on the earth is an imaginary circle anſwering to that in the heavens. It divides the earth from eaſt to weſt into two equal parts, and is at an equal diſtance from the two poles; ſo that thoſe who live under the line have the poles always in their horizon. See *Pole*.

Latitudes commence from the line. See *Latitude*.

Seamen uſe to chriſten their freſh men and paſſengers the firſt time they cut the line.

Ship of the LINE, is a veſſel large enough to be drawn up in the line, and to have a place in a ſea fight, or the line of battle. See *Ship*.

LINE *of demarcation*, or *Alexandrian line*, is a meridian paſſing over the mouth of the river Marignon, and between the capes of Houmas and Malabrigo; ſo called from Pope Alexander VI. who, to end the diſputes between the two crowns of Caſtile and Portugal, about their boundaries, in 1493, drew an imaginary line on the globe, which was to terminate the pretenſions of each; by which partition the Eaſt Indies fell to the lot of the Portugueſe, and the Weſt Indies, then newly diſcovered, to the Caſtilians.

LINE, denotes alſo a ſmall French meaſure, containing the 12th part of an inch, or 144th part of a foot. See *Inch*. Geometricians, notwithſtanding its ſmallneſs, conceive the line ſubdivided into ſix points; the French line anſwering to the Engliſh barley corn. See *Meaſure*.

LING. A ſort of cod-fiſh, ſalted chiefly for the uſe of ſhips, commonly called old ling. See *Fiſh*.

LINK. A ſort of taper or flambeau, made of tow and melted pitch and roſin, to go in the rain or wind without in a dark night.

LINNEN, or *Linen*. A name given to a ſort of texture of interwoven threads, made of flax, hemp, or cotton; of which there are many ſorts, particularly cambrics and muſlins, the former being manufactured in ſeveral parts of Europe, eſpecially Flanders and Germany; the latter in the Eaſt Indies.

The greateſt trade for Dutch linnens, uſually called Holland, is carried on at Haerlem, where they are almoſt all ſent raw from the places of their manufacture to be bleached. This ſort of linnen, whoſe materials are of flax, is very cloſe, ſmooth, and firm, though very fine; but the most eſteemed are manufactured in the province of Frizeland

the pieces being 3-4ths and two fingers in breadth, and 29 or 30 ells in length.

Silesia linnens usually contain 10 ells in length, and 2-3ds in breadth.

At St. Gall, in Switzerland, an abundance of fine, middling, and coarse linnens, are manufactured; the pieces containing 11 or 12 ells in length, and 2-3ds and a half in breadth.

At Ghent, Courtray, Bruges, and Ypres, in Flanders, very fine and white linnens are manufactured; being 3-4ths in breadth, and from 35 to 40 ells in length.

Several provinces of France have linnen manufactures, especially Hainault, Artois, Cambresis, Picardy, the Isle of France, Anjou, Bretagne, Normandy, le Perche, le Maine, and Champagne; there having been such an abundance of regulations from time to time for their manufacture, length, breadth, and stamps, that it is very difficult to determine them.

The linnen manufactory in Scotland is very considerable: but of late years Ireland has made such improvements in the linnen manufacture, that it is now become the staple commodity of the country; and it stands fair to make a much more considerable progress, by a new invention of printing linnens with copper-plates, instead of those of wood; which was rejected in England; though the inventor hath met with proper encouragement in Ireland, where the linnen board have settled 200 l. a year upon him, to encourage him in his undertaking, which is nobly supported.

Linnen is of general use; but the manufacture of Indian cotton cloth has not succeeded in Europe. Great Britain pays large sums, on the balance of trade, for foreign linnens; though this may be greatly prevented by a proper encouragement of the growth of flax in England, Scotland, and Ireland, as also in the northern colonies of America.

By the statute of the 10th of Queen Anne, linnens chequered, striped, printed, painted, stained, or dyed, imported; after payment of the duties, are to be marked or stamped with a seal or mark, to denote the same; which stamps or seals are to be provided by the commissioners of the customs, and may be altered as occasion requires; but the counterfeiting them is felony: and people selling linnen knowingly with such counterfeit stamps, their aiders, abettors, and assistants, are to forfeit 100 l. and to stand in the pillory for two hours.

If designed to be again exported, before shipping, notice must be given to the proper officer appointed by the commissioners of the customs, when and where they are to be packed up; who is to take off the seals, and return an account of the kinds and quantities to the officer appointed to receive the same.

By an act passed in the 10th Anne, linnen in Scotland, exposed to sale, or designed to be exported, not marked with a stamp of a royal burgh, &c. the penalty is 5 s. per piece.

Counterfeiting such stamp incurs a penalty of 50 l. or a year's imprisonment, if the offender prove insolvent.

By an act passed in the 3d George I. Irish linnen imported into Great Britain may afterwards be exported to the British plantations in America duty free.

The bounty on British and Irish linnens exported, was granted by the statutes of the 15th and 16th of George II.

The Bounty.

For British and Irish linnens, not striped or chequered, nor made into buckrams nor tillettings, exported from Great Britain to Africa, America, or Portugal, or to Spain, when it shall be lawful to export such linnens to that kingdom, there shall be paid, without fee, reward, or any deduction whatsoever, for every yard of the value of 6 d. and not exceeding the value of 12 d. -	0 0 1
For ditto, under the value of 6 d. -	0 0 0½

Upon the exporter's expressing in his entry, and endorsing on the cocket the true quantity and value of the said linnens, and producing a certificate from the searcher, verifying the shipping thereof; and likewise giving security for double the value of the goods, and 100 l. that they shall not be relanded in Great Britain, Ireland, or the Isle of Man; and making oath of the respective values of the said linnens, and that they were made in Great Britain or Ireland; and, if Irish, that they are the property of persons usually residing in Great Britain.

To be paid out of the new duty on cambrics.

The proper officers may open all such linnens; and if, upon examination, it shall appear they are of greater value than 12 d. *per* yard, the exporter or proprietor shall, on demand made in writing by the customer or collector, and comptroller, deliver such goods into his Majesty's warehouse, for the use and benefit of the crown; and thereupon the customer or collector shall, out of any money in his hands belonging to the crown, pay the exporter 13 d. *per* yard, taking a receipt for the same in full satisfaction for the said goods. And the commissioners of the customs are to cause the said goods to be sold for the best advantage; and, out of the produce, the money so advanced, is to be repaid to the customer or collector, to be replaced to the fund from whence the same was borrowed; and the overplus is to be paid into the exchequer towards the sinking fund, by the title of *The additional duty on cambrics.*

But if the exporter refuses to deliver the linnen so undervalued, and to receive the 13 d. *per* yard in full satisfaction for the same; or if any linnens are entered at 3 d. *per* yard or upwards, in order fraudulently to obtain a bounty of 1 d. instead of 0½ d. *per* yard, and on examination shall be found to be under the value of 6 d. *per* yard; or if they are under a wrong denomination, or are ever less than in the denomination, or are less in quantity than expressed in the endorsement on the cocket; all such goods are forfeited, and the merchant to lose the bounty. But if the goods are found to be right entered, the officer is, at his own charge, to cause the same to be repacked; which charge may be allowed by the commissioners, if they think it legal.

If any of the above mentioned linnens are landed in Great Britain, Ireland, or the Isle of Man, they are to be forfeited; and every person concerned therein is to forfeit 12 d. for every yard relanded. Any person falsely making any oath, directed to be made on account of this bounty, is to be imprisoned 12 months, and to forfeit 200 l. one moiety of the respective forfeitures, as any other incurred by means of this bounty, to be paid to the use of his Majesty, and the other to the person who sues for the same.

By the same acts, bonds taken, and debentures made out, on account of this bounty, are not chargeable with the stamp-duties.

The business of smuggling cambrics and French lawns is become so practicable, that instead of its being attended with dangers and uncertainties, there is not perhaps any branch of trade carried on with less hazard, or more advantage. Several persons make it their business to visit Cambray, Valenciennes, and the towns adjacent, to buy goods at the best hand, ship them, and get them insured by the master of the vessel belonging to this, or almost any other trade to England. The premium is, on an average, about 1-7th of the commodities; an expence very easily borne, as they are subject to no duties or difficulties on their arrival in England; and it is very evident, that at this time the tradesmen in London might be served with cambric and French lawns on lower terms than before the farcical prohibition, were not the profits to the importer of those goods greater than any fair merchant ever reaped from the trade of France. Nor perhaps is the trade of the East India company altogether free from evils of this sort.

The muslins brought by that company about eight or nine years ago were such as are daily smuggled from Holland and France; when those that the fair trader is obliged to buy at the company's sales are perhaps such as no body else would encumber their ships with. About the time above mentioned, nankeens were sold for 6 s. 6 d. *per* piece; they are now so high as 10 s. 6 d. and very bad. The smugglers from Amsterdam and Rotterdam deliver them in London at 10 s. and a much better commodity. India dimitties is an article that always was marketable in England;

land; but they have not been imported of late by the company; which occaſioned them to be ſmuggled from Holland. See *Hemp*, *Flax*, *Cotton*, *Yarn*, *Sail-cloth*, *Cambrics*, and *Muſlins*.

LINNEN *Board*, is a ſociety of noblemen, gentlemen, and merchants, eſtabliſhed in Dublin for promoting the linnen manufactures of Ireland; who have granted many conſiderable premiums for its improvement, which has rendered it of great advantage to that country, from whence many thouſands of yards are yearly imported into England.

Mr. Cary, in his Diſcourſe on trade, p. 191. has a particular eſſay intitled, Some conſiderations relating to the carrying on the linen manufacture in the kingdom of Ireland; to which the reader is referred, as it is too long to be inſerted in this work. See *Ireland*.

LINNEN *Draper*, is a tradeſman of conſiderable ſtock, and a very uſeful member of ſociety; for, by his retailing of linnen cloth of all ſorts, he employs a great number of hands both in Scotland and Ireland; he alſo vends the linnens of Germany, France, and Holland, which Great Britain receives partly in return for its woollen manufactures exported to ſome of thoſe countries; but there are alſo wholeſale linnen drapers, ſometimes called Hamburg merchants, who ſupply the retail dealers with goods all over the kingdom.

LINNEN *Mill*. See *Mill*.

LINGOT. See *Ingot*.

LINGUET. A ſort of ſattin, ſent from France to Smyrna.

LINSEED, *Lint*, or *Line-ſeed*, is the ſeed of flax; being a ſort of grain, which enters the compoſition of ſeveral medicines; yielding, by expreſſion, an oil that has moſt of the qualities of nut-oil, and is accordingly ſometimes uſed inſtead thereof in painting, and to burn. That drawn without the aſſiſtance of fire, is of much eſteem in medicine, and ſuppoſed good in the cure of catarrhs, coughs, aſthma's, and other diſeaſes of the breaſt. See *Flax*.

LINUM *Catharticum*, or *Mountain flax*. A medicinal plant, much uſed by common people, being a rough harſh purge, and powerful detergent; as alſo an evacuater of viſcid and watery humours from the moſt remote lodgments, which makes ſome fond of it in rheumatiſms; but it is only fit for robuſt conſtitutions.

LINUM *Vivum*, or *Incombuſtibile*. A foſſile, ſtony ſubſtance, of a whitiſh colour, and woolly texture, ſeparable into threads, or filaments; capable of being ſpun and wove into a ſort of cloth, which will endure the fire without conſuming. See *Aſbeſtos*.

LINTHEES. A kind of ſilk ſtuff manufactured in the province of Nankin in China, and ſent in great quantities by the Dutch to Japan.

LIPARI *Iſlands*, are ſituated in the Mediterranean, 40 min. north of Sicily, between 13 and 16 deg. of E. lon. and in 36 deg. of N. lat.

LIQUID *Amber*. See *Amber*, and *Balſam*.

LIQUID *Confects*. See *Confects*.

LIQUID *Laudanum*. See *Laudanum*, and *Opium*.

LIQUID *Meaſures*. See *Meaſure*.

LIQUID *Storax*. See *Storax*.

LIQUID *Sulphur*. See *Sulphur*.

LIQUIDATION. The act of reducing and aſcertaining either ſome dubious diſputable ſum, or the reſpective pretenſions which two perſons may have to the ſame ſum.

LIQUOR, or *Liquour*. Any moiſt, juicy, or fluid matter that is drinkable; among brewers, the hot water before it is run over the malt, is peculiarly ſo called; and with the diſtillers, all manufactured ſpirits, whether brandy, beer, geneva, or other cordial waters, are called *liquors*.

LIQUORICE, *Liquoritia*, called alſo *Glycyrrhiza*, and *Radix dulcis*. A ſweet taſted root, of conſiderable uſe in medicine, againſt coughs, and other diſorders of the breaſt and lungs. The ſhrub which bears it is cultivated in ſeveral parts of England, particularly about Pontefract in Yorkſhire: in ſome provinces of France, Spain, Germany, and Muſcovy; and eſpecially in Perſia, where it thrives better than any where elſe; there being ſome on the banks of the Carafa, Kenki, and Kerniarpa, whoſe roots are thicker than the arm, and whoſe juice, in reſpect of ſtrength and virtue, are preferable to others. New green liquorice ſhould be choſe ſmooth, and even about the thickneſs of the middle finger; ruddy without yellowiſh within, eaſy to cut, and of an agreeable ſmell. This root being boiled a long time in water, till the fluid has got a deep yellow tincture, and the water at length evaporated over a moderate fire, there remains a black ſolid ſediment, which is alſo called liquorice, or liquorice juice, or ſometimes Spaniſh juice; which ſhould be choſen black without ſide, and of a ſhining black within, eaſy to break, and of an agreeable taſte; the whitiſh and yellowiſh liquorice juice are good for nothing, being uſually no other than compoſitions of ſugar, ſtarch, a little gum tragacanth, and liquorice powder.

The native liquorice juice is very ſweet upon the palate, even more than ſugar or honey; and is yet accounted a great quencher of thirſt; on which account Galen preſcribes it in dropſies. It is very balſamic and detergent, inſomuch that there is ſcarce any medicinal compoſition for diſeaſes of the breaſt, in which it is not an ingredient.

LIS. A river of the Netherlands, which riſes at Liſburgh in Artois, and running north-eaſt into Flanders, paſſes by Aire, St. Venant, Menin and Courtray, uniting its waters with the Scheld at Ghent.

LISATZ. A ſort of cotton cloth, of various qualities, brought from the Eaſt Indies, Perſia, and Mecca.

LISBON. The capital of the kingdom of Portugal, ſituated on the north bank of the river Tagus, in 9 deg. 25 min. of E. lon. and 38 deg. 45 min. of N. lat. See *Portugal*.

L'ISLE. The capital of French Flanders, ſituated in 3 deg. of E. lon. and 50 deg. 42 min. of N. lat. See *French Netherlands*.

LISSA. An iſland in the Gulph of Venice, ſituated in 7 deg. of E. lon. and 42 deg. 50 min. of N. lat. ſubject to Venice.

LIST, in manufactures, denotes the border of a ſtuff, or that which bounds its breadth on each ſide: all cloths and ſtuffs of ſilk, wool, or cotton, having liſts, which contribute to the goodneſs of the ſtuff, and farther ſerve to ſhew their quality; ſo that it is has given occaſion to ſeveral regulations relative to their matter, colour, and work.

LITHARGE. A metaline ſubſtance, formed of the ſpume of ſilver, or other metals; uſed in the compoſition of plaiſters, to give them a due conſiſtence.

There are two kinds of litharge; the one natural, the other artificial. The natural is a mineral, ſometimes found in lead mines, reddiſh, ſcaly, brittle, and ſomewhat reſembling white lead: but this kind is ſo rare that the ſhops ſell only the artificial, which is of two kinds, that of gold, and that of ſilver, or rather it is the ſame, with this difference, that the one has undergone a greater degree of fire than the other.

Naturaliſts are not well agreed about the artificial kind; ſome conſider it as a metalic ſcum, raiſed on the ſurface of lead, when melted, after having ſerved to purify gold, ſilver, or copper. Others conſider it as a metalic ſoot, or ſmoke, ariſing from thoſe metals mixed with the lead uſed in purifying them, which, ſticking to the top of the chimnies of furnaces, is formed in a kind of ſcales. Others conſider it as the lead itſelf, uſed in refining of thoſe metals, and eſpecially copper, which laſt opinion appears the moſt credible; and the rather on account of the great quantities of theſe litharges brought from Poland, Sweden, and Denmark, where copper mines are much more frequent, than thoſe of gold and ſilver. The droſſy or recrementitious parts, fixing to the ſides of the teſt, are the litharge; and, according to the degree of calcination, become of divers ſhades of red colour: the deep being litharge of gold, and the paler litharge of ſilver.

Litharges are deſiccative, deterſive, and cooling, making the conſiſtence of ſeveral plaiſters. Potters uſe them to give a beautiful gloſs to their ware; though they are alſo uſed by painters, dyers, ſkinners, and glaziers: beſides when mixed with wine, they give it a bright ſprightly colour, but render it extremely unwholſome.

THOCOLLA. A cement uſed by lapidaries, to faſten precious ſtones, in order to cut them: which is compoſed of reſin and brick-duſt: for diamonds they uſe melted lead, putting them into it before it is quite cold: but for other cements they mix marble duſt with ſtrong glue; and to faſten their ſparks, add the white of an egg and pitch.

THONTHRIPTICS. Medicines proper to diſſolve the ſtone in the bladder and kidneys.

TRON. A meaſure uſed in France for grain, peaſe, beans, and other legumes; ſalt, flour, cheſnuts, and ſuch like; 16 of which make a buſhel.

VERPOOL. A port-town of Lancaſhire, ſituated on a bay of the Iriſh channel, in 3 deg. of W. lon. and 53 deg. 28 min. of N. lat.

VERY-*men*. Are ſuch members of a corporation, as are advanced above the yeomanry, and intitled to wear a livery gown on extraordinary occaſions. See *Company*.

VRE. An imaginary money of accompt, uſed in France, of two kinds; livre tournois, and livre pariſis.

The livre tournois, is 20 ſols tournois, or 9 $\frac{3}{4}$ d. ſterling, and each ſol is of 12 deniers tournois, or $\frac{19}{80}$ d. ſterling.

The livre pariſis is 20 ſols pariſis, each ſol pariſis being worth 15 deniers tournois; ſo that 1 livre pariſis is worth 25 ſols tournois.

The livre of Venice is about 7 d. ſterling; that of Bologna is 1 s. ſterling; that of Leghorn is 8 $\frac{2}{3}$ d. ſterling; that of Genoa is 10 $\frac{2}{3}$ d. ſterling; and that of Savoy, 1 s. 3 d. ſterling.

XIVIOUS, or *Lixiviate*, in chemiſtry, is underſtood of ſalts extracted from burnt vegetables by lotion.

ixivious Salts, are the fixt ſalts of plants, and other things, extracted by calcining the plants, or reducing them to aſhes, and afterwards making a lixivium of thoſe aſhes with water.

Mr. Boyle obſerves, that the difference between lixivious and urinous ſalts, conſiſts in this, that the former change the diſſolution of ſublimate in common water, into a yellow colour, which the latter do not.

XIVIUM *Lye*. A liquor made by the infuſion of wood-aſhes, which is more or leſs pungent and penetrating, as it is more or leſs impregnated with ſalts and fiery particles.

What is left after the evaporation of ſuch a liquor is called a lixivious ſalt; ſuch as all thoſe are, which are made by incineration.

Lixiviums are of great uſe, not only in medicine, but alſo in bleaching, and ſugar works. See Pot-*Aſhes*.

ZARD. A cape or promontory of Cornwal, 15 m. S. of Falmouth, and 10 miles S. of Helſton, from whence ſhips bound to the weſtward uſually take their departure.

ZARD, is alſo a cotton cloth manufactured at Cairo in Egypt; ſome of theſe cloths are alſo met with at Aleppo, where they are called lizals; both of them making a part of the European trade.

LAMAS. A kind of Peruvian ſheep, called by the Americans of Peru llamas, by thoſe of Chili Chillehueques, and by the Spaniards carneros de la terra.

Theſe animals have the head ſmall in proportion to the body, which partakes of the form of a horſe and ſheep; their upper lip is like that of a hare, their neck long, and bent downwards, like that of a camel, and the hoof like that of a ſheep.

They feed upon a fine kind of a ruſh called ycho, and carry a hundred weight; but never travel in the night time. Their wool has a ſtrong and diſagreeable ſmell, tho' long, pretty fine, mixed with white, grey, and red, and employed for the ſame ſtuffs and manufactures as the Vigonia wool.

, is a term among the Chineſe for a ſort of gauze made at Canton, of three ſorts, which diminiſh gradually in length: the los of the third kind, being 12 ells in length, and 23 inches in breadth.

OAD *of hay*. See *Truſs*.

AD, among the miners in Derbyſhire, is nine diſhes of lead-ore.

AD-*ſtar*, the ſeamen's name for the pole or north ſtar.

ADSMAN, or *Lodeſman*, is he that undertakes the care of the ſhip after the pilot has brought her into the haven. See *Pilot*.

LOAD-*manage*, is the hire, ſometimes ſo called, which the pilot of a ſhip receives of the maſter, for conducting the ſhip up the river, or into port. See *Pilot*.

LOAD *ſtone*. See *Magnet*.

LOAM, or *Lome*, the common ſuperficial earth, conſiſting of clay, with a ſmall admixture of ſand in it. The word, it muſt be obſerved, is uſed with great uncertainty by ſome authors, for the black mother-earth, called mould; and by others for a reddiſh earth uſed in building.

LOAN. The intereſt, premium, or reward, given for the uſe of a certain ſum of money, for a certain time; alſo the act of lending money or any other thing to another perſon for a limited time.

When the reduction of the intereſt of money was propoſed in the Britiſh parliament, an honourable gentleman was pleaſed to ſay, "That the natural intereſt of money "ſhould always depend upon the proportion between the "quantity of money already lent at intereſt, and the "quantity wanted to be borrowed; ſo that public loans "of all kinds ſhould tend towards the enhancing the "natural intereſt of money, and public payments ſhould "as neceſſarily tend towards its reduction. Therefore, "from the preſent low rate of intereſt upon the public "ſecurities, notwithſtanding our being now very near as "much in debt as we were at the end of the war, he "would venture to ſay, the natural intereſt upon all ſorts "of ſecurities would have been at, or below 3 *per cent*. "if we had paid off the greateſt part of our old, without contracting any new debt: and if we had done ſo, "he was convinced that the trade of the kingdom would "have been in a much more flouriſhing ſtate than it is "at preſent, and the nation much better able to ſupport "its friends, or to avenge itſelf upon its enemies." See *Intereſt*, and National *Debt*.

LOANDO. The capital of all the Portugueſe ſettlements in Angola, in Africa, ſituated in 14 deg. of E. lon. and 7 deg. of S. lat.

LOANGO. Capital of the province of Loango in Africa, ſituated in 11 deg. of E. lon. and 2 deg. 30 min. of S. lat. See *Guinea*.

LOBSTER, and *Lobſter-fiſhery*. See Lobſter-*Fiſhery*.

LOCHTA. A port-town of Sweden, ſituated on the Bothnic gulph, in 22 deg. of E. lon. and 65 deg. of N. lat.

LOCK. An inſtrument to faſten doors with, of a curious contrivance. When applied to a river it means where flood-gates, &c. ſtop the current or ſtream, or at leaſt reſerve a quantity in a canal, to ſwell or increaſe the natural depth and courſe of the river, and render it more fit for navigation.

LOCKER. A ſmall hole, or convenience to put things in, made along the ſides of a ſhip.

LOCKRAMS. A coarſe hempen cloth, chiefly manufactured in Lower Bretany in France; the piece containing 30 ells in length, and 2-3ds in breadth, of which the Engliſh buy up large quantities.

LODESMAN. See *Loadſman*.

LOFTS. Upper rooms, particularly warehouſes, for wool, and malt.

LOG. A ſea-term, ſignifying a ſmall piece of timber, of a triangular figure, on board a ſhip; into one end of which a convenient quantity of lead is caſt, to make it ſwim upright in the water: the other end being faſtened to the

LOG *line*. A little cord, or line, faſtened to one end of the log, and wound round a reel, fixed for that purpoſe in the gallery of the ſhip.

This line from the diſtance of about 10 fathom of the log, has certain knots or diviſions, which ought to be at leaſt 50 feet from each other: though it is the common practice at ſea, not to have them above 42 feet aſunder. See *Knot*.

The uſe of the *log* and *line* is to keep account, and make an eſtimate of the ſhip's way, or diſtance run; which is done by obſerving the length of the line unwound in half a minute's time, told by a half minute glaſs; for ſo many knots as run out in that time, ſo many miles the ſhip ſails in an hour.

Thus if there are four knots veered out in half a minute, the ſhip is computed to run four miles an hour.

To heave the LOG, as ſailors call it, they throw it into the water, letting it run till it comes without the eddy of the ſhip's wake; then one holding a half minute glaſs, turns it up juſt as the firſt knot turns off the reel, though ſome turn the glaſs as ſoon as the log touches the water. As ſoon as the glaſs is out, the reel is ſtopped; when the knots run off are told, and their parts eſtimated.

The log ought to be heaved every hour, or every two hours.

But this is a very precarious way of computing, and muſt always be corrected by experience and good ſenſe; there being a great deal of uncertainty, both in the heaving of it, in the courſe of the currents, and in the ſtrength of the wind, which ſeldom holds to the ſame tenor for two hours together; this being the interval between the times of uſing the log in ſhort voyages; though in longer ones they heave it every hour. Yet this is a more exact way of computing than any other in uſe; much preferable certainly to that of the Spaniards and Portugueſe, who gueſs at the ſhip's way, by the running of the froth or water by the ſhip's ſide; or to that of the Dutch, who uſe to heave a chip over board, and to number the paces they walk on the deck, while the ſhip ſwims between any two marks or bulk-heads on the ſide.

LOG-*board*, is a table divided into four or five columns, whereon are marked the reckoning of every day, from whence they are entered into the log-book, or traverſe book, ruled and columned juſt as the log-board is; whence it may be tranſcribed into the journals, and how much the ſhip gains in her courſe be eſtimated daily.

In the firſt column of the log-board is entered the hour of the day, from 1 to 1: in the ſecond, the rhumb, or the direction of the veſſel, with regard to the points of the compaſs: in the third, the number of knots run off the reel each time of heaving the log: in the 4th, the wind that blows: and in the 5th, obſervations on the weather, variation of the compaſs, and other matters.

LOG-*wood*, commonly called *dyers wood*, becauſe uſed by them in dying black; is chiefly brought from Campeachy and Honduras, in America. See *Indian* wood.

The logwood cutters were originally ſettled at the bay of Campeachy; but, being diſturbed there by the Spaniards, they removed to the bay of Honduras, where they ſupport themſelves by force of arms, being upwards of 1200 merchants and ſervants.

The country of Honduras where the Engliſh cut their logwood, is all a flat, and the greateſt part of it a moraſs, with ſeveral large lagunes, which in the rainy times are almoſt all overflowed. In the dry time of the year, the logwood cutters ſearch for their work, that is, where there are a good number of logwood-trees, and then build a hut near them, where they live during the time of their cutting. When they have cut down the tree they log it, and chip it, which is cutting off the bark and ſap; they then lay it in heaps, cutting away the underwood, and making paths to each heap, that when the rains come in, which overflow the ground, it ſerves as ſo many creeks or channels, where they go with ſmall canoes, or dories, and load them, bringing them ſometimes to the Bareaderas, 30 miles, from whence the people who buy it fetch it. Some of theſe trees grow very tall and ſtreight, tho' moſt of them are low and crooked: they bear a ſmall leaf, ſomething like the white thorn, and the underwood is alſo prickly: they bloſſom, and bear ſeed, which, by falling off, ſows the ground, from whence the young trees ſpring up, and the overflowing of the ground brings the ſoil over them, which makes them take root and grow a great pace. The general price of the wood at the Bareaderas is about 4 l. 10 s. *per* ton. The wood-cutters are generally a rude drunken crew, ſome of them have been pirates, and moſt of them ſailors. The logwood cutters during the floods generally live at the Bareaderas, which are 42 miles up the river, where they have built their huts upon pretty high banks, which juſt keep them out of the water in the time of the floods. As ſoon as they have notice of the arrival of any ſhip or veſſel at the mouth of the river, they flock down on board, in order to purchaſe ſuch things as they want, and are ſure to provide [a] ſtore of ſtrong liquor. The commodities which [ſuit] them are ſtrong liquors of all ſorts, proviſions, ſmall [arms], gun-powder, ſmall ſhot, cutlaſſes, hangers, axes, ozenbrigs [for] and ſhoes. Ozenbrigs is their general wear, and [alſo] all their cloathing, except hats and ſhoes: their pavilions [for] are alſo made of ozenbrigs; without which there is [no] poſſibility of living, there being ſuch multitudes of biting and ſtinging flies, as muſkitoes, galley-nippers, bottle-aſſes, and the like.

The Engliſh have an undoubted right to cut logwood [on] the coaſt of Honduras and Yucatan: but the Spaniards have always endeavoured to ruin this trade, which was one occaſion of the late war between the two crowns, and the Spaniards are now as buſy as ever in interrupting the Engliſh logwood cutters.

By an act paſſed in the 13th and 14th years of the reign of Char. II. logwood, or blockwood, may be imported by any perſons, and freely uſed in dying.

In the years 1713, 1714, 1715, and 1716, the quantity of logwood imported into Great Britain amounted to 14,965 tons, being on an average 3741 tons, which could not be leſs than 60,000 l. a year; though the price was then reduced from 40 l. to 16 l. *per* ton, and before the Engliſh were ſettled in the bay it was worth 100 *per* ton.

LOIRE. The fineſt river of France, riſing in the mountains of the Cevennes, running north and north-weſt thro' Lionnois and Orleannois, and paſſing by Nevers and Orleans; after which it runs due weſt by Tours, Angers and Nantz in Britany, and falls into the bay of Biſcay 40 miles below Nants; the whole courſe of the river being computed to be about 500 miles.

LOME. See *Loam*.

LOMMOND. A lake of the county of Lenox, in Scotland, which runs almoſt the whole length of the county and has ſeveral iſlands in it.

LONDON. The metropolis of Great Britain, where the firſt meridian is fixed in the preſent maps, lies in 51 deg. 30 min. of N. lat. 300 miles S. of Edinburgh, 200 miles N. W. of Paris, 180 W. of Amſterdam, 500 S. W. of Copenhagen, 600 N. W. of Vienna, 1300 N. W. of Conſtantinople, 800 N. E. of Madrid, 800 N. W. of Rome, and 270 S. E. of Dublin. It includes Weſtminſter and Southwark; much the greater part lying on the north ſide of the river Thames, being about 17 miles in circumference, and containing about a million of inhabitants.

This city is the moſt opulent place of trade in the whole world: but ſome landed men ſay, that the immoderate growth of London undoes and ruins all the country.

It may therefore be well worth the inquiry of thinking men, what truth there is in this common and received notion, that the growth of London is pernicious to England; that the kingdom is like a rickety body, with a head too big for the other members.

For ſome people, who have thought much upon the ſubject, are inclin'd to believe, that the growth of the city is advantageous to the nation, and they ſeem to ground their opinion upon the following reaſons:

That no empire was ever great, without having a great and populous city.

That the Romans drew all the conquered cities of Italy into Rome.

That the people of Attica were no better than a crew of rude herdſmen; and neither flouriſhed in war, nor in civil arts, till Theſeus perſuaded them to inhabit Athens.

That the greatneſs of London will beſt preſerve the conſtitution, becauſe, where there is a great and powerful city, the prince will hardly enterpriſe upon the liberties of that people; in the ſame manner, a rich and powerful city ſeldom rebels upon vain and ſlight occaſions.

On theſe grounds, and many others, ſome people are apt to think the growth of London not hurtful to the nation; but, on the contrary, to believe that there is not an acre of land in the country, be it never ſo diſtant, that is not in ſome degree bettered by the growth, trade, and riches of that city.

LONDON *Aſſurance Office*. See *Inſurance*.

ONDON-*Bridge Water-works.* See *Water*-works.

ONDONDERRY. A city of Ireland in the province of Uiſter, ſituated near the mouth of the river Mourn, in 7 deg. 40 min. of W. lon. and 54 deg. 52 min. of N. lat.

ONG-*Boat*, is the largeſt and ſtrongeſt boat belonging to a ſhip, that can be hoiſted aboard of her: its uſe being to bring any goods, proviſions, or the like, to or from the ſhip; or on occaſion, to land men any where, and particularly to weigh the anchor.

ONG-*Cloth.* White or blue India cottons brought from the Coromandel coaſt, of which the Engliſh and Dutch buy up great quantities for their India trade, particularly for the Manilles.

ONG-*bow-ſtring-makers*, is a perſon whoſe buſineſs conſiſted in making bow-ſtrings.

ONG-*bow ſtring-makers of London*, is a company by preſcription, and not by charter, therefore may juſtly be deemed an adulterine guild: however it has obtained a coat of arms; and, in point of precedence among the city corporations, has the 82d place; the fraternity conſiſting of 2 wardens, and 19 aſſiſtants, but they have neither hall nor livery.

ONG-*Iſland.* See *Britiſh* America.

ONG-*Ell.* See *Meaſure.*

ONG-*meaſure.* See *Meaſure.*

ONGITUDE *of the earth*, is ſometimes uſed to denote its extent from weſt to eaſt, according to the direction of the equator; whereby it ſtands contradiſtinguiſhed from latitude of the earth, which denotes its extent from one pole to the other.

NGITUDE *of a place*, in geography, is its diſtance from ſome firſt meridian, or an arch of the equator, intercepted between the meridian of the place, and the firſt meridian. See *Meridian.*

ONGITUDE, *in navigation*, is the diſtance of a ſhip, or place, eaſt or weſt, from another, counted in degrees of the equator: but if this diſtance be counted in leagues or miles, or in degrees of the meridian, and not in thoſe proper to the parallel of latitude, it is uſually called departure. See *Departure.*

To diſcover an exact method of finding the longitude at ſea, is a problem that has extremely perplexed the mathematicians of theſe two laſt ages, and for whoſe ſolution great rewards have been publickly offered by the Engliſh, French, Dutch, and other nations; this being the only thing wanting to render navigation perfect. Various are the attempts that authors have made for this purpoſe, and various the methods they have propoſed, but ſtill without ſucceſs; all their ſchemes being found either falſe, precarious, impracticable, or in ſome way or other defective, ſo that the palm is ſtill unaſcertained.

What moſt aim at, is a method of determining the difference of time between any two points on the earth, for every 15 deg. of the equator anſwering to an hour; that is, one degree to 4 minutes of time, and one minute of a degree to 15 ſeconds of time; the difference of time being known, and turned into degrees, will give the longitude; and ſo on the contrary.

This ſome have pretended to effect by clocks, watches, and other automata; but always in vain, no time-keeper, excepting a pendulum, which cannot be applied at ſea, being ſufficiently ſure and exact for the purpoſe.

Others, with more probability, and to better purpoſe, ſearch for a means to find the longitude in the heavens: for, if the exact times of any celeſtial appearance be known for two places, the difference of thoſe times gives that of the longitude of thoſe places. Now in the ephemerides, the motions of the planets, and the times of all the celeſtial phenomena, as the beginning and ending of eclipſes, conjunctions of the moon with other planets, its entrance into the ecliptic, &c. are accurately calculated for ſome one place; therefore, if the hour and minute be known, wherein any of the ſame phenomena are obſerved in an unknown place, the difference between the hour and minute of that place, and that other to which the tables are calculated, conſequently the difference of their meridians, and their longitude from each other are known alſo.

Now the difficulty here does not conſiſt in the exact finding of the time, which is eaſily had from the altitude or azimuth of the ſun; but the defect lies in the paucity of proper appearances, capable of being thus obſerved: for all ſlow motions, as that of Saturn, are at once excluded, as ſhewing but little difference in a conſiderable ſpace of time; and it being here required, that the phenomenon be ſenſibly varied in two minutes time, an error of two minutes of time producing another of 30 miles in the longitude. Now there are no phenomena in the heavens that have theſe requiſites, excepting the ſeveral ſtages of an eclipſe of the moon; her longitude, or place in the zodiac, her diſtance from the fixed ſtars, or appulſe to them, her ingreſs into the ecliptic, or the points of her orbit, where that cuts the ecliptic; and the conjunction, diſtance, and the eclipſes of Jupiter's ſatellites. Of each of which in their order. 1. The method by the eclipſes of the moon is very eaſy, and ſufficiently accurate, were there but eclipſes every night. At the moment wherein we ſee the beginning, or middle of a lunar eclipſe by a teleſcope, we have nothing to do but take the altitude or azimuth of ſome fixed ſtar, from which the hour and minute are eaſily found, or without the altitude, if the ſtar be in the meridian. This hour and minute, therefore, thus found, and compared with that expreſſed in the tables, gives the longitude.

2. The moon's place in the zodiac is a phenomenon more frequent than that of her eclipſes; but then the obſervation thereof is difficult, the calculus intricate and perplexed, by reaſon of two parallaxes; ſo that it is ſcarce practicable to any tolerable degree of accuracy. Indeed, by waiting till the moon comes into the meridian of the place, and then taking the altitude of ſome remarkable ſtar, the altitude being ſuppoſed to be firſt known; from this altitude, and the latitude, we ſhall be able to find the time pretty accurately, tho' it will be better to do it by ſome ſtar in the meridian. Now the time being found, it will be eaſy to find what point of the ecliptic is then in the meridian, or mid-heaven. Thus we ſhall have the moon's place in the zodiac, correſponding to the time of our place: then, in the ephemeris, we find what hour it is in the meridian of the ephemeris, when the moon is in that part of the zodiac: thus we ſhall have the hour and minute of the two places for the ſame time, the difference of which will give the difference of longitude.

3. In regard there are many times when the moon cannot be obſerved in the meridian, there is another ſtill more frequent phenomenon, from which the longitude is ſought, that is, the moon's appulſe and receſs from the fixed ſtars: for from thence the moon's true place may be inveſtigated for the given time of obſervation. But this method by reaſon of the parallaxes, and the ſolution of oblique ſpherical triangles, and the various caſes, is ſo very difficult and perplexed, that mariners will ſcarce be able to make uſe of it, nor does it ſeem neceſſary here to give the praxis thereof. Thoſe however who are diſpoſed to uſe it, will find very great help in it from a ſtarry zodiac, publiſhed under the direction of doctor Halley, containing all the ſtars to which the moon's appulſe can be obſerved.

4. To find the longitude by the moon's ingreſs into the ecliptic, obſerve the moment of that ingreſs; then in the ephemeris, ſee what hour it is in the meridian of the ephemeris, when that ingreſs happens. The difference between theſe times gives the difference of longitude.

5. The phenomena of Jupiter's ſatellites are generally preferred to thoſe of the moon, for finding the longitude, by reaſon the former are leſs liable to parallaxes, and further afford a very commodious obſervation, in every ſituation of that planet above the horizon. Their motion is very ſwift, and muſt be calculated for every hour; and for that reaſon are not found in the common ephemerides, but are had elſe where.

Now to find the longitude by means of theſe ſatellites, with a good teleſcope, obſerve a conjunction of two of them, or of one of them with Jupiter, or any other the like appearance, and at the ſame time find the hour and minute from the meridian altitude of ſome ſtar: then conſulting tables of the ſatellites, obſerve the hour

and

and minute wherein ſuch appearance happens in the meridian of the place to which the tables are calculated. The difference of time as before will give the longitude. All methods which depend on the phenomena of the heavens having this one defect, that they cannot be obſerved at all times; and being, beſides, difficult of application at ſea, by reaſon of the motion of the ſhip; there are ſome who leaving the moon and the ſatellites, have recourſe to clocks and other automata: which could they be made perfectly juſt and regular, ſo as to move with the ſun, without either gaining or loſing, and without being affected with the change of air and of climates, the longitude would be had with all the eaſe and accuracy imaginable; nothing more being required but to ſet the machine by the ſun at the time of departure, and when the longitude of any place is deſired, to find the hour and minute from the heavens, which is done at night by the ſtars, and in the day by the ſun; for the difference between the time thus obſerved, and that of the machine, gives the longitude: but no ſuch machine has been yet diſcovered; wherefore recourſe has been ſtill further had to other methods.

Mr. Whiſton and Mr. Ditton have propoſed a method of determining the longitude, by the flaſh and report of great guns. Sounds, it is known, move pretty equally in all their ſtages, whatever the ſonorous body be that occaſions them, or whatever the medium that conveys them. If then a mortar or great gun be exploded at a place whoſe longitude is known, the difference between the time wherein the flaſh, which moves, as it were, inſtantaneouſly, is ſeen, and the ſound, which moves at the rate of four ſeconds in a mile, is heard, will give the diſtance of thoſe places from each other; whence if their latitudes be known, the difference of longitude will be likwiſe known.

Again, if the hour and minute of the exploſion be known, for the place where it is made, by obſerving the hour and minute from the ſun or ſtars, at the place whoſe longitude is required, the difference between thoſe times will give the difference of longitude.

Again, if the ſaid mortar be loaden with an iron ſhell full of combuſtible matter, and poſited perpendicularly, it will carry the ſame a mile high, which will be ſeen near 100 miles; if therefore neither the ſound ſhould be heard, nor the flaſh ſeen, the diſtance of any remote place from the place of the mortar, may be determined from the altitude of the ſhell above the horizon of the place unknown, and the diſtance and latitudes known, the longitude is eaſily found.

According to this ſcheme, it was propoſed to have ſuch mortars fixed at proper diſtances, and at known ſtations, on all the frequented coaſts, iſlands, capes, &c. and to be exploded at certain hours, for the obſervation of mariners.

This method, tho' good in the theory, yet is found uſeleſs in the practice, as being extremely troubleſome, and yet precarious. It ſuppoſes that ſounds may be heard forty, fifty, or ſixty miles, of which, it is true, we have inſtances, but they are very rare, and ordinarily the report of a cannon is not heard above half ſo far; and ſometimes much leſs. It ſuppoſes again, ſound to move always with equal velocity; whereas in fact its velocity is increaſed or diminiſhed as it moves with or againſt the wind. It ſuppoſes again the ſtrength of powder uniform, and that the ſame quantity carries the ſame range; the contrary whereof is known to every gunner. We ſay nothing of thick cloudy nights, when no lights can be ſeen; nor of ſtormy nights, when no ſound can be heard, even at inconſiderable diſtances.

There is another method of finding the longitude propoſed by the ſame Mr. Whiſton, that is, by the inclinatory or dipping-needle, which ſee under the article *Dipping-needle*.
